MUʾIZZI, AʾMIR ABU ʿABD ALLĀH MUḤAMMAD b. ʿAbd al-Malik, one of the most famous of Persian court poets. His place of birth is not exactly known. According to most of the sources he was born in Samarkhand about 440 (1048—1049) but Nasā and Niṣḥāpūr are also mentioned. The son of a little known poet ʿAbd al-Malik Burhānī, who was attached to the court of the Salmāqān ʿAlī Ardān (1063—1072), he was introduced to Sulṭān Malik-Shāh (1072—1092) by Amir ʿAli b. Fārāmūz, ruler of Yard (443–488 = 1051/1502—1092), made a favourable impression on the sultan and received from him the taqṣīqūς of Muʿizzī, which comes from the šīb of Malik-Shāh, Muʿizz al-Dīn. He enjoyed even greater distinction under the last great Salmāqān ruler Sandjar (1118—1157) and was appointed his malik al-ṣaʿāʿīr and the head of a regular establishment of poets, sandjarī, in 1105. He is reputed to have become fabulously wealthy from the splendid gifts of the ruler and he received a salary paid out of the revenues of Isfahān. Nevertheless, he continually tried to increase his fortune and, as he himself tells us, never wrote a single panegyric without making certain in advance that his work would be well paid. According to the Oriental sources, he came to a tragic end, being accidentally killed by Sulṭān Sandjar, while practising archery in his tent. This is not possible however, as Muʿizzī himself mentions this incident in his Diwān and says that, although he suffered a long illness as a result of being struck by the arrow, he completely recovered in the end. This event took place in Marv, about 764 (1051—1052), but he lived for another 46 years and died in 512 (1117—1118). There is an elegy written on the occasion of his death in the Diwān of Malik al-Dīn Sanʿāt Muʿizzī is one of the most brilliant writers of šība in the old Ghurānī style (ʿUnṣūrī) but his art was finally displaced by Anwarī's new style and came to be forgotten.

MUḤĀBALAH, Gr. μοιχαλασθής, in the Almagist ἀντίστροφοσ, Lat. oppositus, the term in astronomy for the opposition of a planet and the sun or of two planets with one another. In opposition the
difference in longitude between the two heavenly bodies is 180°; while the modern use is to take no note of the deviations of latitude from the ecliptic. al-Battānī expressly emphasizes (Opus astronomicon, ed. Nallino, ii. 196) that we can only have the true muqābalah when both bodies are either in the ecliptic itself or are in equal ecliptical latitudes, when opposition can occur and when they are diametrically opposite one another in the heavens (cf. "ışıkçığ"."). Opposition with the sun can only occur for the moon and the outer planets (in ancient astronomy only for Mars, Jupiter and Saturn), not for the two inner ones, Mercury and Venus. When an outer planet is in opposition to the sun, its conditions of visibility are at their best: at midnight it passes through the meridian and is above the horizon the whole night. When the moon is in opposition to the sun we have the full moon; the usual technical expression for this in Arabic astronomy is al-āıkāhāl which is derived from the same root as muqābalah (Greek ἡ παράστασις) and is rendered by Plato Tiburtinus and other mediaeval translators by proxenable; but we not uncommonly find the general term muqābalah applied to the opposition of the sun and moon, while on the other hand we never find al-āıkāhāl used in the general sense of opposition of the planets (cf. al-Battānī, ii. 349, s. v. bāb I).

Al-muqābalah, opposition, forms along with al-tārīb faqatūrā (Gr. τριγώνον, Lat. triangulum, trigonum, trigonion, etc.), al-āıkāhāl (Gr. ἡ τριγώνων, Lat. hexagonum, hexagonum, sexaginta, sexaginta sexaginta), the four astrological aspects (ażkāl, sīr, ışıkçığ, Gr. σχηματικά, σχηματικά, etc.) are applied to the ecliptical differences in longitude of two planets to the amount of 90°, 120° or 60° respectively. The ışıkçığ also play a part in the astrological arrangement of the signs of the zodiac (burūjūd) (cf. the astrological atlas of al-Battānī, ii. 194). It should be noted that the conjunction of planets (muqābalah, Greek συμπέρασμα; for moon with sun [new moon] always ṣarfīmī) is not included among the ışıkçığ, nor the position when the difference of latitude is 30° or 150° (cf. al-Battānī, op. cit.).

In horoscopes muqābalah and tārīb are as a rule regarded as unfavourable in principle, taḥtīkāt and tāsīt on the other hand as favourable.

(Willy Hartner)

**MUKADDAM (a.).** "placed in front". Applied to persons the word means the chief, the one in command, e.g. of a body of troops or of a ship (captain). Dozy, Suppl. s. v., gives a number of police appointments which have this name. In the deriv. orders the word is used for the head of the order or the head of a monastery.

As a neuter noun the word is a technical term in logic and arithmetic. In logic it means the _prōtasis_ in a premise in the form of a conditional sentence, e.g. "if the sun rises (it becomes day)", where this whole sentence is to be regarded as premise of a syllogism. But as every sentence can be a premise, muqābalah is really identical with the condition in the conditional sentence. In arithmetic _muqābalah_ means the first of two numbers in a proportion, i.e. 3 (5) or in other words the divisor in a divided in a simple division. —

In logic and in arithmetic the portion following the _muqābalah_ (in brackets above) is called _tārīb_.

(M. Plessner)

**AL-MUKADDASĪ, SHAMS AL-DIN ABD AL-ʿABD ALLAH MUHAMMAD B. ABD BAKR AL-BANNA' B. AL-SHAYH BIL MUKADDASĪ AL-MARKHUB B. L-BASHSHARI as he is called on the first page of the Berlin manuscript (Cat. Ahlwardt, N°. 6034), is the author of the most original and at the same time one of the most valuable geographical treatises in Arabic literature. The name-form al-Mukaddasī, denoting his origin from Jerusalem, goes back to Sprenger, who brought the Berlin manuscript from India and made this author first known in Europe (A. Sprenger, _Die Post- und Reisereisen des Orients_, Leipzig 1844, p. xviii.), but the form al-Makdisi is probably more correct as Jerusalem is commonly spelt al-Makdis (Yaṅut, Makīyīm, iv. 590). Yaṅut always quotes him as al-Bashshārī.

Biographical dates on the life of this author are only to be found in the text of his treatise. In 356 (966), when he was at Mecca, he was about twenty years of age; it is probable that he lived at least as late as 1000, as the last datable information in the treatise belongs to the end of the ivth (xiiith) century. His grandfather Abū Bakr al-Banna' was an architect in Palestine and had made for Ibn Tullīn the gates of the town of Ḍakā. His mother's family was originally from Byār in Kūm, from where his grandfather Abū Tāyib b. al-Ṣawī (in B.G.A., iv., p. vii., l. 12 "paternus" is to be corrected into "maternus") emigrated to Jerusalem. Muhammad b. Abīd himself shows also a good knowledge of architecture, besides a good literary and general erudition.

The geographical treatise is known from two old manuscripts which form the basis of the Geoe's edition in the B.G.A., iii. Leyden 1877 and of his revised edition of 1906. The Berlin manuscript has the title _Aḥsan al-Ṭahżīb fi Muṭṭaf al-ʿĀbīl_ (in B.G.A., iv., p. vii., l. 12 "paternus" is to be corrected into "maternus") emigrated to Jerusalem. Muhammad b. Abīd himself shows also a good knowledge of architecture, besides a good literary and general erudition.

The geographical treatise is known from two old manuscripts which form the basis of the Geoe's edition in the B.G.A., iii. Leyden 1877 and of his revised edition of 1906. The Berlin manuscript has the title _Aḥsan al-Ṭahżīb fi Muṭṭaf al-ʿĀbīl_, while the Constantinople manuscript (Aya Sofia, N°, 297 bis; cf. Ritter, in Ill., xix., 43), written in 658 (1260), is only indicated as _Kitāb al-ʿĀbīl_. The Leyden manuscript (Cat., v. 191) is a modern copy of the Constantinople one, while another Berlin manuscript (Cat. Ahlwardt, N°. 6033) is a bad copy of the other Berlin manuscript. The date of composition is not certain. The text itself states that it was completed in 375 (985) (E. G. A., iii. 9), but as has been said, information of a later date has been added, while Yaṅut (i. 653) gives the year 378 (988). The manuscript (Constantinople) is somewhat less extensive than Berlin) and de Geoe, hesitatingly, considers the dedication of as the older one. It is dedicated to a certain Abū ʿAbd al-Mukaddasī, but for the dates and mentions the Sāmānids as the most important dynasty; B, on the contrary, does not contain the dedication and is more orientated towards the Fatimids.

The general scope of the work proves beyond doubt that it is based on the same geographical tradition as the treatises connected with the names
al-Balkhi — al-Iṣṭakhrī — Ibn Hawkal; the same
is proved by the fact that the maps accompanying
both manuscripts show the still rather primitive
type of the Iṣṭakhrī maps (the Markāsī maps have
been published by K. Miller, in *Mappeae Arabicae*,
vol. i.—v., Stuttgart 1926—1931). In this last
respect al-Makdisī’s work does not really reflect
the considerable progress of geographical know-
ledge that is manifested in the text. As in the
texts of al-Iṣṭakhrī and Ibn Hawkal the object is
to treat only the Islamic world (*mamlukat al-Islām*)
of the ivth (xth) century and that after a division in
to regions (*āḏāli‘n*) which, on the whole, is the
same as that of the two authors mentioned; the
order is not always the same, but the distinction
between western and eastern regions is maintained.
The treatment is often more detailed than with
the earlier authors, while the disposition of the
geographical matter is the same, each region ending
with a survey of the distances between the different
towns. In how far al-Makdisī is dependent on al-
Iṣṭakhrī and Ibn Hawkal remains to be examined.
His introductory chapters show not a few original
features and are especially valuable for information
about earlier geographical authors. As de Goeje
has already remarked, this information is more
accurate in the reduction C than in B: if the latter
reduction is really later it would seem that the
rather depreciating judgment he gives therein of
al-Balkhi, al-Djaihani and others (p. 4) must be
explained by the change of the author’s political
predilection in favour of the Fatimids and occi-
dental Islam. Al-Makdisī’s style and language is
sometimes difficult, owing to his expressly stated
devour to adapt himself in the description of
each region to the special idiom used in that
region. Moreover, the reading of his text is several
times made unpleasant by the boisterous way in
which the author speaks of the merits of his work.
A English translation of part of the treatise was
published by G. S. A. Rankinger and R. F. Azoo
in the *Bibliotheca Indica*, Calcutta 1897—1910,
vol. i.—iv.

**Bibliography:** The author and the work are discussed by de Goeje in the introduction to vol. iv. of the *B.G.A.*, p. vi.—viii.; further cf. Brockelmann, *G.A.L.*, i. (J. H. Kramers)

[**AL-MUKADDIM** [See Allāh, II.]]

**MUKALLA** (Makalla), a seaport on the south coast of Arabia, 2½ miles N.W. of the
cape of the same name. The town lies between
two bays at the foot of a reddish limestone cliff,
which rises to a height of 500 feet behind the town;
four towers for the defence of the town are built
upon it. On the west side a wall runs from the
cliff to the shore with only one gate in it. The
only buildings of any size are the great mosque on
the coast with a minaret which can be seen from
a great distance, and the sūfī’s palace; the other
buildings are mainly huts with a few houses
of stone. The palace is a great six-storey building
with decorated windows which stands on a kind
of platforms. In the centre of the town is a large
cemetery with the tomb of Wali Ya’qūb; in the
modern western part of the town is the bazaar
which is provided with all kinds of goods and
has some modest industries which provide the
native population with baskets, pipes of a kind
of limestone, silver powder-horns and muskets
without stocks. There is a yard in the harbour
where the native sailing-boats are built. The
country around is not fertile: a mile to the west
however is an oasis belonging to the ruler, which
is watered by a stream which also provides the
town’s water supply. The climate of Mukalla is
very dry, the coast hot; only from October to
April and in June and July do fresh breezes and
showers temper the heat. The population varies
between 6,000 and 12,000.

Mukalla is the only place between ‘Aden and
Maskat that deserves the name of harbour. It
cannot however be used as an anchorage during
the southwest monsoon: in this period its place
is taken by Burām, 16 miles southwest. The trade
with India, Somaliland, the Red Sea and Maskat
is considerable. The exports are mainly gum-arabic,
skins, honey from the Yeshbom valley, senna and
some coffee; the imports are cotton goods, metals,
pottery from Bombay, dates and dried fruits from
Maskat, coffee from ‘Aden, sheep, goats and frankin-
cense from the African coast. The fisheries also
give a considerable yield while amber is obtained
in considerable quantities. Parsis and bairains from
Bombay play a leading part in the trade and
Hindustān is spoken almost as much as Arabic.
Since 1881 Mukalla has been under the al-Ka‘ītī
dynasty with which England concluded a treaty
granting a protectorate on May 1, 1888. According
to Ibn al-Mudjhāwīr, the old name of the town was
al-Mukānnā, and the natives also call al-Mukalla,
like al-Shīhr. Bender al-Akhāf or Sūq al-Akhāf.
The port has steam-ship communication with ‘Aden;
most of the traffic is borne by native sailing-boats
of 100—300 tons, which are busiest at the time of
the date harvest.

[**AL-MUKALLAD** R. AL-MUSAYYIH, ḤUSAYN AL-
Dawla Abū Ḥassan, an ’Uṣūl id. After the death in 386 (1996) or 387 (1997) of the ʿUṣūl
emir Abu ’l-Dhawwād Muḥammad b. al-Musayyih
[cf. PAH AL-DAWLA], a quarrel arose between
his brothers, ‘Ali and al-Mukallad, each of whom
claimed power. ‘Ali was the elder: but al-Mukallad
wrote to Bahāʾ al-Dawla and promised him an
annual tribute and then told his brother that Bahāʾ
al-Dawla had appointed him governor of al-Mawṣil
and asked ‘Ali’s help to take the town. Bahāʾ al-
Dawla’s general in al-Mawṣil, Abū Djaʿfar al-Ḥadi-
Muñán, a steppe lying to the south of the lower course of the Araxes, one part of which (about 5,000 square kilometres) belongs to Russia (U.S.S.R.) and the other (50 x 70 X c. 50 kilometres) to Persia. The steppe which covers what was once the bottom of the sea has been formed by the alluvial deposits from the Kur (in Russian Koura) and its tributary the Araxes. The latter has several times changed its course and one of its arms flows directly into the gulf of Kžil-Aghız. In the interior the only water in Múñán is from a number of springs, but it is covered with tall and shows traces of the old system of irrigation. Múñán has a very mild climate in winter (Kazwini calls it waṭrān ḏijhān) and in the spring is covered by a rich carpet of verdure but in summer the heat makes it a regular hell and it is infested with snakes. Most of the time, however, there is in June the snakes literally covered the ground - cf. Abí Hamíd al-Ghānaṭí in Kazwini, p. 379).

The name. The old Arabic transcription (Balûghuri, Tabari) is Muñán (without article) but quite early in certain manuscripts of the Arab geographers we find Mughan (probably a popular etymology muğhan “magnificent”) which becomes general in the Mongol period. M. L. D. R., 1895, p. 633 connects the name of Muñán with that of the mentioned people by classical writers as inhabiting this region: Hecataeus, fragment 170; in Maqādis al-ʿArāj, Ponponne Mela, book iii., ch. vi. “Moghi (ad Hyrcanium fretum Albani et Moschi et Hyrcani).” This tribe is to be connected with the Caspian who lived in this region; cf. Hubeschmann, Die altarm. Ortsnamen, 1904, p. 269; cf. in Yakuti, iv. 676 the genealogy intendent by Ibn al-Kalbi, according to which Muğhan and Džulan — both inhabitants of Tabaristan — were the sons of Kamāshah (I) + Yāfiq b. Núj; cf. Genesis x.), The Chronicle of Theophanes, p. 353, has Bawadza (var. Bawazza), the Armenian geography Mukan, the Georgian Chronicle Mowakan (another Mowakan lay near the confluence of the Alazan with the Iora).

History. The Byzantine general Leontius in 678 subdued Iberia, Albania, Bukania (cf. above) and Media. The district of Muñán was conquered in 21 (642) by an officer of Surāqa Bukan who addressed a letter guaranteeing peace to “the people of Muğhan of the mountains of al-Kabdi” (Caucasus; Tabari, i. 2660). According to Baladhuri, p. 327, 329, in 25 (645) Walid b. ʿUṯka undertook a campaign against the people of Muğhan (ahl Muğhan), of al-Bahr (cf. ʾUṯma and the Taḥán ( = Taḥhan)). Another campaign of Salīd b. ʿAbdAgainst the people of Muğhan and Džulan, although successful, entailed severe losses. According to Yakut, ed. Houtsma, ii. 395, 396 in 123 the future Caliph Marwan II b. Muhammed undertook a campaign in Džulan and Muñán. Muğhan figures several times as a stronghold of Bābak (Tab., i. 1174, 1175). In the third (ninth) century Ibn Khudadkhish, p. 119, mentions one ʿAbdulla (I) as chief of Muğhan. According to al-Maṣʿūdī, Marāfī, ii. 5, in his time the Sharwān (cf. et. Muṣṭā), had conquered the states (manākha) of Lāyarim (several variants) and al-Muğhāniya. It appears from Ibn Miskawaih (ed. Margoliouth, i. 399) who mentions the isphahān of Muğhan b. Dālīna as ally of the Gīl chief Lāskarī b. Mardī, who rebelled against the Dāistan in 326 (937), that Muğhan enjoyed a certain degree of autonomy. In 339 (950) the Kurd Dāim sent his vizier “into the mountains (sūl) of Muğhan to entrench himself.” In 349 Muğhan appears as a centre of rebellion (Ibn Miskawaih, ii. 136. 178—179). The poet Kaftī mentions the rising of the isphahān of Muğhan against the Bawāḏāts Wahrāḏān (344 = 954). Kīrāwī, ʿAbdāl-khāniy gūmnā, Ẓahrā-i, 65, 123). Later we hear of Muğhan mainly as an excellent area for the winter pasturage of the conquering nomads. In Yakut’s (iv. 676) time the majority of the people of Muğhan were still Turkomans. In the history of the Khārzimshāh Dżalāl al-Din, Muğhan is constantly mentioned. The sūlān sends his humble there, keeps his baggage and mobilizes his troops there (Nasavi, Sīr, p. 210, 280, 366 etc.) But in 617 (1220—1221) the Mongol generals Džebhe and Sulubī spent the winter in Muğhan (Dżwawī, i. 116), and Kazwini, p. 379 says that Mongols took Muğhan for their winter pastures, and drove out the Turkomans. In the time of Tīmūr, Muğhan must have been included in the region of Karaḵāw near the Fergana region, which was conquered in 1340. Tīmūr restored an old canal which was given the name of his tribe Bākrā. The canal led the Araxes at Khašḵāi Campūn and at a distance of 15 farsakh ended at Sardjābš ān (sic). Since in order to give the necessary instructions, Tīmūr (who was to the north of the Araxes) had to cross the river (Zafār-nāma, i. 395), we may suppose that the canal lay to the south of the Araxes, i.e. in the steppe of Muğhan. It must correspond to the Vegin Gaur arch of which traces can still be seen for a length of about 35 miles. Sardjābš ān might correspond to Carcel on the Russian map (according
to the involved description by Monteith, the Barlas canal is issued in the neighbourhood of Kara-su¹. The canal is in any case quite distinct from another canal which Timir traced in 806 to the north of the Araxes towards the town of Balaakan (Talish.

In the Safavid period (and perhaps already under the Karakoyunlu) Mughan became the possession of the Şīrī Turkoman tribes who formed the principal support of the dynasty and became known as Şāhisewān. By article ii. of the treaty of Gulistan of 1813 the steppe of Mughan was divided between Russia and Persia. The boundary line was more precisely defined in article iv. of the treaty of Turkmenāājī. In 1854 Russia forbade Persian nomads to cross into Russian territory. Towards the end of the sixteenth century the project of irrigating the land of Mughan was conceived and realised between 1902 and 1907.

The four systems of canals were to make 200,000 hectares cultivable, particularly for cotton. From 1854 the steppe was occupied solely by nomads who were Russian subjects. But in 1917 there were already 46 Russian villages with 17,000 inhabitants while the Turkish nomads who had become settled on the banks of the Kur and of the Araxes numbered 35,000 souls. As a result of the tragic events of 1918, the whole of the Russian population had to leave Mughan and the canals became silted up. Between 1920 and 1924 the work of restoration was carried out and the fugitives began to return. The total area of irrigated land in Mughan is estimated at 253,000 hectares, while immediately to the north of Mughan the steppe of Mīl (Mil-i Balaakan), "the tower of Balaakan"; cf. Khanīwī, Mem. sur les inscriptions musulm. au Caucaus, in J.A., Aug. 1862, p. 72) has another 165,000 irrigated hectares.

Historical geography. The Arab geographers are fairly well acquainted with Mughan (cf. the Bibliography). In the Mongol period, Mughan must have comprised all the lands to the north of the Salafī range (which is a western outlier of Russian Talish) and forms the watershed between the middle course of the Kara-su and the Bolgarn), to the east of the lower course of the Kara-su (where it follows the northern direction) and to the south of the Araxes. Towards the east Mughan stretched to the Caspian Sea and included the coastal region of Russian Talish. The mountainous part of the latter, held as a vice, must also have belonged to Mughan. The same condition must have existed in the Arab period for the curious expression of Ibn Miskawishi, ii. 136 referring to the Lybāl Mukan can only refer to the mountainous part of Russian Talish.

We may note Mukaddas's remark (p. 380) who among other wonders mentions, one marhala (7—8 farsaks = 20—25 miles) distant from Mukan, an imposing fortress called al-Hira (which below are houses and palaces in which there are large quantities of gold (ţahab asim) in the form of birds and wild beasts and "many kings made plans to seize it but never succeeded in reaching it"). Mukaddas does not definitely say that the fortress belongs to Mukan and evidently speaks of it by hearsay. Is this a reference to Shinānd-šāla (which is about 50 miles = 2 marhala to the south of the presumed site of the shahrītān of Mughan)? On this imposing mountain (6,000 feet high) can still be seen ruins of important fortifications (Radde, p. 135: "ruins of a strong castle... many ruins of brick buildings"). Finally in a Persian translation of Istakhri, p. 186, 17, we read: "The Gils and the Mukan are tribes on foot who rarely go on horseback" which can only refer to a few remnants of the old population settled in upper Talish (where the highlanders are very distinct from the lowlanders.

(M. V. MINORSKY)

AL-MUKÂNTÂRÂT. [See ĀṢṬÂRÂ.]
It did little to help his fame also that he is said to have told pious stories [cf. *Kisas* in the mosque, at a time when this was strictly forbidden. In politics he is said to have belonged to the Zaidiya, in theology to the Murtadha [q.v.]

Mukaffat's literary activity was somewhat comprehensive, yet until quite recently nothing was known of his works. Only since 1912 has a Qur'an commentary by him been known in the MS. Or. 5633 of the British Museum, the genuineness of which however Goldzder did not think beyond doubt. The *Fihrist* gives a list of his works: Hadji Khalifa also gives some of them. They deal mainly with the language and exegesis of the Qur'an, but a pamphlet against the Kadiariyya is also mentioned. This is however hardly in keeping with another story, according to which he wrote a pamphlet against Djahm [q.v.], and the latter wrote against him.

(M. PRESSNER)

AL-MUKÂTÂTAM, the part of the range of hills west of the Nile, which lies immediately to the east of Cairo and from which the mountains take a north-easterly direction, bordering the Nile delta to the south-east. It reaches a height of about 600 feet and consists, as does the greater part of the north African mountains, of limestone (cf. *Description de l'Egypte*, *Etat moderne*, Paris 1822, 1/1 751).

The name Mukattam (the *Tagel al-Arūr* records also the popular form al-Mukattab) does not go back to a pre-Muhammadan nomenclature, nor is it considered, in spite of its correct Arabic formation, as a true Arabic word, for the geographers (cf. *Yakut*, iv. 607 sqq.) give, hesitatingly, different explanations of its meaning. The name occurs for the first time in the historical tradition of the Egyptian Arabs, as found in the *Fihteh Mīsīr* of Ibn `Abd al-Hakam (cf. Torrey's edition, New Haven 1899, p. 156 sqq.), in half legendary tales in which also al-Mukattab [q.v.] plays a part. Some of these traditions give it an eponymous hero, Mukattam b Miṣr b. Baisar b. Ḥamīn, and lay stress on the special sanctity of the mountain, declaring that, in some way, it is connected with the mountain of Jerusalem. As in the last mentioned traditions Ka'b al-Athār [q.v.] is named as final authority; it seems probable that the origin of the name must be sought in Jewish legendary traditions (for Jewish traditions about mountains, cf. the Midrash *Thillon* on Psalm ix. 17) and that the name has been fixed only in course of time in the ill-defined mountainous region to which it is attached since the flourishing times of al-Fārābī and al-Khārīrī. The vagueness of the geographical description has survived in the Arabic geographical sources, which either call Mukattam the entire eastern mountain range as far as Uswān (Waqt), or even represent under the name Mukattam the whole of the mountain system that runs over the inhabited world from China to the Atlantic Ocean (Ibn Hawkal and others). Moreover several geographers give the legendary statement that in the Mukattam are mines of emerald and other precious stones, while in reality it contains only stone quarries, but these were used already in very ancient times. Mārkīz, *Khitat*, ed. Būlla, i. 123 gives a fairly complete survey of the different traditions and opinions.

It may be thus assumed that the Mukattam acquired a real geographical identity only after the foundation of al-Fustat. Its geographical situation, viz. its proximity to the bank of the Nile, has deeply influenced the territorial expansion of this town and later of Cairo [q.v.]. Parts of the town and famous sites are situated on the western spurs of al-Mukattam, such as the mosque of Ibn Tūlūn and the citadel of Saladin. The elevation of Ibn Tūlūn's mosque bears,however, the special name of Djabal Yṣḥāq. The cemetery of al-Karāfī belongs likewise to the Mukattam and it is with this cemetery that are connected the ancient traditions already mentioned, in which al-Mukawkas plays a part. Al-Mukawkas informs, 'Amr b. al-As that the mountain, in which the earthy vegetation is destined to bear the plants of Paradise and the caliph 'Umar, informed by 'Amr, decides that by these plants of Paradise can only be meant Muslims who have died. Accordingly, tradition records a number of ghābūs which are buried in al-Karāfī. On the summit of al-Mukattam was built in the Fātimid period the mosque of al-Diyāyyā, by Badr al-Dinālī in 478 (1085); for this reason the mountain is also called Djabal al-Diyāyyā. On the southern slopes, towards Ḥalīn, lay the Chishtī mosque Dair al-Kuṣar (description by al-Shaḥbūsī towards 1000; cf. Sachau, in *Abh. Pr. Ab. Wiss.*, 1909), an historical, or perhaps legendary feature, connected with al-Mukattam is that the Fātimid caliph al-Hakam is said to have disappeared mysteriously, in the night of 27th Shawwāl 411 (Feb. 25, 1021), when he had gone for a ride in the Mukattam. Finally it may be mentioned that the Mukattam has given its name to one of the three genuine modern Arabic newspapers published at Cairo.

(J. H. KRAMER)

AL-MUKAWKAS, AL-MUKAWKAS, the individual who in Arab tradition plays the leading part on the side of the Copts and Greeks at the conquest of Egypt. The Prophet is said to have sent a letter to him in the year 6 A.H. In the address on this letter, the text of which is given in Ibn `Abd al-Hakam (ed. Torrey, p. 46), al-Makrizī (*Khitat*, i. 29), al-Suyūtī (*Ishārāt al-Muḥādara*, i. 58) and al-Manṣūfī (p. 29), as well as in an entirely different version in *Pseudo-Wāhidi* (p. 10), and also in the accounts of the incident in the Arab historians, the position of Mukawkas is described in the following phrases: 1. *Ṣaḥīḥ al-Ishā'ārīya* (Navawi, p. 577; Ibn `Abd al-Hakam, p. 45, 52; Abū Ṣalih, p. 35 [100]); Ibn Kathīr, iii. 1 fol. 159 sqq., along with *No. 7* in Ibn Sa'd in *Weilhausen*, *Kittim* und *Vorderasien*, iv. 5 (99); 2. *Maṭūk al-Iṣā'ārīya* (Ibn `Abd al-Hakam, p. 49; al-Suyūtī, i. 60; Pseudo-Wāhidi, p. 25; Ibn Hīṣam, p. 971); 3. *Ṣaḥīḥ Miṣr* (Abū l-Fida', i. 149); 4. *Maṭūk Miṣr* (al-Manṣūfī, p. 7; cf. al-Makrizī, *Khitat*, i. 163, 22 sq.); 5. *Maṭūk Miṣr wa l-Iṣā'ārīya* (Pseudo-Wāhidi, p. 10); 6. *Ṣaḥīḥ Miṣr wa l-Iṣā'ārīya* (Pseudo-Wāhidi, **π** [100]).
All these epithets do not doubt mean simply the actual ruling authority in Egypt, whose true title was not known to the Arabs. If we remember that in the year 6 (628) the Persians were masters of Egypt, we can hardly give much credence to the story of the Arab historians. This is evident from the statement recorded by Manafi' (p. 30) that Egypt was under the rule of Mukawbas continuously from the lifetime of the Prophet, through the caliphate of Abu Bakr to the beginning of the caliphate of 'Omar. Muhammad's letter to Mukawkas was long ago declared not to be genuine by E. Amelineau (Fragmenta coptica, p. 392) and Wellhausen (Studien und Vorarbeiten, iv. 90) although they did not doubt the fact of the embassy to him: later Butler (Conquest, p. 523) and Th. Noldeke (Z. D. M. G., xlviii. 160) still believed in the embassy although the latter granted the possibility that tradition might have transferred the name known from the time of the conquest to the man to whom Muhammad sent the letter, while for example, S. Lane-Poole (Egypt in the Middle Ages, p. 6, note 2) supposes that the Mukawbas of 628 and the Mukawkas of the conquest are two different people. This suggestion however is disposed of by the fact that the Mukawkas of the letter is called in Ibn Kathir the patronymic has been corrupted through مَعِكَّبَةُ التًْفَٰيْن. In Abu 'l-Fida', Nawawi only gives Diuradj, i.e. the same as the Mukawkas of the conquest; for we need not heed the patronymic of Mukawkas given by Pseudo-Wajidi (p. 10) while the epithet al-Farkab al-Nuni, which al-Masudi, Tanbih, p. 261, 3, has taken in an obviously corrupt form from an old source, is the Karkab al-Yunani of the Mukawkas of the conquest. In view of the many serious contradictions, which the transposing of Mukawkas into the period of Persian rule in Egypt offers, there is no alternative but to regard with Caetani, Annali dell' Islam, iv. 90 the story of Muhammad's embassy to Mukawkas as legendary and devoid of any historical value (cf. also G. Rouillard, p. 157 and note 2). The genuineness of the parchment found in a monastery at Aghmat by the French Egyptologist E. Barbethelamy in 1852, which was thought to be the original of Muhammad's letter to Mukawkas and was actually put among the relics of the Prophet in the old Serail, thus disappears (cf. the publication by Belin, in J.A., 1854, p. 542—548 and Dindorf edition, in Hilal, xiii./2, 1904, p. 103 sq.). Its falsity had already been recognised by J. Karbach (Beiträge zur Geschichte der Masjidaden, Leipzig 1874, p. 35, note 47 and Mittheilungen des K. K. Oester. Museums, ix. (1884), p. 183) (cf. also Noldeke-Schwy, Geschichte des Qur'ans, i., Leipzig 1909, p. 190) As a matter of fact palaeographical grounds are clearly against any assumption of a date in the first century for this document.

The same discrepancies, which we find in the transmission of the name and title of the Mukawkas of Muhammad's letter are found in the Mukawkas of the conquest. In the historians we find the following names:

Taking first of all the name of his grandfather, J. v. Karbach's theory (p. 2) to dispose of apparent contradictions in the statements about the patronymic by assuming a double name Minā Farqāb proves unnecessary, when we see the name unequivocally given in No. 2. When Karbach (p. 3) preferred the rendering Farkāb for Karkab, he was at least able to quote the form ٍثْرُبِق in the Codex Parisinus of Ibn Taghibirdi, but I cannot agree with Amelineau in supporting Karbach's proposal (Fragmenta, p. 394 sq.) to equate this name with Mukaqabas, especially if we remember the variant ٍثْرُبِق of the Ḥabā', and Noldeke must be right when he (Z. D. M. G., stxviii. 161) restores this to the پَرَكَبَمъ rejected by Karbach. The form ٍثْرُبِق (unpointed hámza) however has so far been found in only one papyrus, the more usual form being ٍثْرُبِمْس (Z. D. M. G., i. 158). Butler's conjecture (p. 523) on the name ٍثْرُبِق seems to me as improbable as Karbach's identification. He calls attention to Abū Sa'īd's observation (p. 67 [156]) that ٍثْرُبِق is a corruption of Gregorios and supposes that Karkab is a corruption of Karkar so that Ibn Karkab would be an error for Ibn Karkar and mean "son of Gregory". Casanova's proposal (in Butler, p. 523) must be dismissed as still more improbable, viz., that Ibn Karkab is a corruption of Abū Kīrūs. The office filled by Mukawkas is described by the sources in the following terms: 1. ٍشَهِب مَيْسُ (al-Balāḏūrī, p. 226); 2. مَلِك سَلِّم مَيْسُ (al-Masūdī, Ḥabīb, i. 162, 24; Ibn Dukkmān, v. 118) 3. أمīl al-Khabīr bi-Mīr (Ibn Hādjar, iii. 1090); 4. أمīl al-Sal̤īr̤ Mīr (Ibn 'Abd al-Hakam, p. 64, note 9; al-Makīn, p. 29); 5. أمīl垛ٍلَّ-كِهْرَبَد بِمِيْر (Euthychius, ii. 302). If the three first terms only mean the ruler of Egypt in general, the two last named limit the sphere of activity of Mukawkas to the administration of taxation and the expression given in 4 may be taken as synonymous with amīr "governor". In this connection we have the very clear evidence of Ibn 'Abd al-Hakam, p. 37 and Ibn Dukkmān, v. 119 who preserve the statement that Mukawkas was appointed by the emperor Heraclius as governor of Egypt and entrusted with the waging of war and the levying of taxation. Abū Sa'īd's statement (p. 30 [81 sqq]) that Mukawkas, Djuradj b. Minä had rented the taxes of Egypt from Heraclius for ١٠٠,٠٠٠,٠٠٠ dinārs fits in with this. This makes intelligible the statement of Euthychius (ii. 302) who calls Mukawkas controller of the land taxes (اٍمٍيٍلَّ-إلَکَرٍبٍ) and traces his attitude to the Arabs to his embezzling the taxes raised, and further explains the description of Mukawkas (مَعَكَّبَةُ التًْفَٰيْن) as تَجَّاَرِشُ مِنْهُ مَلِكَيْنَ in the Vita of Apa Samuel published by Amelineau (p. 367), to which we may add the statement of the Ethiopic Syraxar that Mukawkas had been Patriarch and financial controller of Egypt.
M. J. de Goeje and J. v. Karabacek have laid special stress on this side of the activity of Mukawkas and identified the prefect George mentioned in John of Nikit (p. 559), whom de Goeje regards as prefect of Lower Egypt and Karabacek (p. 8) as pagarch of Babylon, with Mukawkas, who is called in the sources George son of Menas. A. J. Butler (note 4 to Abū Ṣāliḥ, p. 81), Mihne and Lane-Poole have followed de Goeje while Amelineau (Fragments coptes, p. 404: Samuel de Qalqulayn, p. 24 and Résumé de l’histoire de l’Égypte, p. 243) wished to identify Mukawkas with the Patriarch George who was appointed by the emperor Heraclius as successor or deputy to Cyrus during the period of the latter’s stay in Constantinople (cf. John of Nikit, p. 256). In contrast to these attempts at identification, which are in more than one respect in contradiction to the sources, the most probable solution of the Mukawkas problem is the identification of Mukawkas with the Patriarch and governor Cyrus of Phasis, who was sent in the year 631 A.D. by Heraclius to Alexandria where he died on March 21, 642. While Zotenberg (in his edition of John of Nikit, p. 576, note 2) had already pointed out that the main features of the activity of Cyrus are found in the Arabic stones of Mukawkas, although no doubt the legend mixes up the activities of several individuals under this name, F. M. Esteves Pereira, (Vida de Aba Samuel, p. 41—53) completely proved the identity of the two. Independently J. Krall in an unpublished article for the Mitteilungen aus der Sammlung des Papyrux Erzherzog Rainer, on the authority of three new fragments of the Vita of Apa Samuel, had come to the same conclusion. The full study of the whole problem by A. J. Butler, the main result of which, the identity of Mukawkas with the Patriarch Cyrus, has been adopted by B. Evets (Patrologia Orientalis, i. 491, note 1), by M. Guidi in his doctoral thesis, C. H. Becker and O. Braun in his article on the Vita of Apa Samuel, in the Kirchliche Handlexikon, ii., col. 530 and others, has been critically examined by L. Caetani (Annali dell’Islam, iv. 56 sqq.). The decisive evidence for the identity of the two individuals is found in the History of the Patriarchs of Severus of Ashmunain (ed. Evets, p. 490 sqq.; ed. Seybold, p. 106 sqq.) in which there are references to the Patriarch and governor of Heraclius in connection with the flight of the Patriarch Benjamin once as Cyrus (عمر) then a few lines later as al-Makawkaz or al-Muṣṭakwās: the synaxars in this connection also give the name al-Muṣṭakwās (cf. E. Amelineau, Fragments coptes, S. 397, note 1; p. 398, note 1; p. 406, note 1 and the edition by R. Basset, Patrologia Orientalis, xi. 562) and the Arabic text of ibn Abi Ḥakam (Amelineau, p. 400, note 1); of peculiar importance is the text edited in R. O. C. cvi, 393, where the combined name of Cyrus al-Muṣṭakwās appear. There is the additional fact that the period of ten years which, according to the history of the Patriarchs, lay between the flight and return of the Patriarch Benjamin coincides within a year with the period of office of Cyrus (631—642) in Egypt, whom the Christian sources describe as an “unbeliever” (πασέδης, Amelineau, Fragments coptes, p. 364, 366); kafir in Severus of Ashmunain, p. 495 [108], godless and sinful Kauchios (ιατρός πασέδης ἀπαράδατας, Vienna Coptic fragments of the Vita of Apa Samuel in Krall, Kauchios frequently in Amelineau), decent Antichrist (Παντεχριστὸς ἀπάθανος in Amelineau, p. 366 sqq.) and Pseudoarchiepiskopos (Ibid., p. 365). The double position of Cyrus or Mukawkas as supreme head of the administration and archihop, of which we have ample evidence (cf. G. Rouillard, p. 230, note 1), is quite certain from the testimony of Severus (p. 490, 495 [106—108]) and the Arabic and Ethiopic synaxar (Amelineau, p. 406, note 1) and also by the Vita of Samuel (Amelineau, p. 367), was quite unknown to the Muslim Arabic sources. Noldeke has already called attention to this remarkable fact (p. 160) and may set a crux for the identification of the two figures. There was however no necessity for the Arabs to refer to his position in the church. He was only of importance to them as head of the administration. If one wants to, one can see an indication of his ecclesiastical dignity in the wish expressed by Mukawkas during the negotiations with ʿAmr regarding the capitulation of Alexandria (in Ibn ʿAbd al-Ḥakam, ed. Torrey, p. 72) that he might be buried in the Church of St. John (cf. theticon Amelineau, p. 400 sqq.). How much the Christian sources differ in their ideas of the personality and position of Mukawkas may be gathered from the description of the death of Mukawkas. According to Severus of Ashmunain (ed. Evets, p. 495; Seybold p. 108), the governor and Patriarch of Alexandria poisoned himself after the occupation of Alexandria lest he should be put to death by ʿAmr, while John of Nikit (p. 335—378) says that Cyrus weakened by vexation at the faithlessness of ʿAmr caught dysentery and died. According to Caetani, the contradictions and obscurities on the part of the Arab historians show that they did not consider who Mukawkas exactly was, but simply used the name as the family name of the chief personage in Egypt at the time of the Muslim conquest. Evidently all who negotiated with ʿAmr in the name of the Copts are included in one individual The unanimous with which Mukawkas is described as a Copt and the different names given him suggests that Mukawkas conceals not only Cyrus but also other Egyptian negotiators e.g. perhaps the commander of Babylon, George, and the bishop of the same town, Menas. The Arabs must have made one out of these two negotiators and given him like Cyrus the name Mukawkas. Of the attempts to explain this name, Karabacek’s (p. 8) معاقب is as little probable as Amelineau’s explanation (p. 407—409) which makes Kauchios “the man from Kaukhion”. We would rather think with Butler and Guidi of a connection with καυκακος, which indicates the home of Cyrus. But even this explanation is by no means certain and the connection of Mukawkas with Cyrus has again (in Canterelli) given rise to serious doubts. Nau, p. 111 has compared Mukawkas with ʿAwwad. His name survived in the Kūm al-Muṣṭakwās in the area of old Cairo (Ibn Dukmāk, iv. 53). Bibliography: Ibn ʿAbd al-Ḥakam, Kitāb Futūḥ Misr wa-ʿAlḥāthā, ed. Ch. C. MUKHADRAM (A.), the term applied to
an individual whose life fell within the
periods of both paganism and Islam. Various
explanations are given of the origin of the name.
Some derive it from nāḥa muḳhānāra ("cropped ear") and say the meaning is that
they were cut off from the Dāhilīya by Islam (cf.
nāḥa muḳhānāra "a she-camel with cropped ears"). It is said that the tribes who adopted Islam cropped
ever their she-camels differently from what
they had done in the pagan period. A man who had
therefore seen both the pagan and Muslim styles
was called muḳhādram. Others derive the word
from wā ḍhāriṯ ("a well") which contains much
water" and explain that a man who has lived in
both Dāhilīya and Islam was called muḳhādram,
since he was fully acquainted with both periods.
The term muḳhādram is occasionally found with
the same application and the explanation given
is that the individuals had mixed paganism and
Islam. Some commentators describe muḳḥāḏmaṯn
only those who adopted Islam after the death of
Muhammad.

The word muḳhādram is particularly used to
describe one of the four classes into which the
Arab philologists divide the poets. One who was
devoted to this work was called in the period of the Dāhilīya, but who lived to see Muhammad and his mission
and some even adopted Islam. Among these for example were Labūd, al-ʾAṣāḥī and Kaʿb b. Zuhair.
These poets are still completely immersed in the
poetic tradition of the Dāhilīya. The new outlook
was late in finding its way into poetry so that the
change is not yet reflected in the poets who were
Muhammad’s contemporaries. The scheme of the
kaṣida of the pagan poets with its fixed themes and
stereotyped images also holds for the muḳḥāḏmaṯn
and in their poems one can hardly find the
slightest hint that they were contemporary with
the great religious change in Arabia. The only
exception is the kaṣīdas composed in honour of
Muhammad. Like the kaṣīda of Kaʿb b. Zuhair
called after its opening words Ṣūbā RETURN,
and the panegyric on the Prophet by al-ʾAṣāḥī. While
these still follow the scheme of the kaṣīda as regards form they reflect Muhammadan points of view
and legal ordinances and also use Kurānic phrases.

(UN LICHENSTADTER)

MUHKIL AS AL-DAWLA. [See AL-MUKALLAD.]
Mithdjan, was his second cousin (al-Mukhtar's grandfather father Mas'ud being the son of 'Amr b. 'Umar b. 'Awf; cf. Wustenfeld. Hist. Tafs., G. 19). He is said to have been born in 622 (Tabari, i. 1264) a statement which has perhaps no real foundation (cf. Tabari, ii. 2: in 49, he was a "young man", and is explained and based on the fact that his adversary 'Abbâl b. al-Zubair was in the same year. His father having died the death of a hero at the battle of the Bridge in 63 against the Persians, the orphan was brought up by his uncle Sa'd b. Mas'ud who became governor of al-Madâin under the caliph 'Ali. Al-Mukhtar was his deputy when Sa'd left al-Madâin to go after the Kharijis who had left 'Ali's camp in 57 (Tabari i. 3366; al-Dinawari, p. 218). His early life and his family traditions therefore made him a partisans of 'Ali: al-Tabari (it. 2) however says that when 'Ali's son al-Husayn took refuge with al-Mukhtar's uncle when fleeing from Mu'awiyah in 40, the nephew proposed to surrender him to his rival and he was reproached with this disloyal act 25 years afterwards by the Shi'is. This is all we know of the early days of one who was destined to become the champion of the extreme Shi'is: his refusal to bear witness before Ziyâd b. Abîhi against Hûdî b. 'Adî, who was accused of having attempted an anti-Umayyad rising at Kûfâ in 51 (Tabari, i. 134), shows however that his feelings were already pro-'Alid. It is only when, after the death of Mu'awiyah, the hopes of the partisans of 'Ali's family began to rise again, that al-Mukhtar emerges from obscurity; he took part in the rising of Muslim b. 'Akhill in 61 and imprisoned and was restored to him the security of Ibrahim b. al-Ashtar, son of 'Ali's famous general, who kept up his father's traditions. The latter hesitated long before accepting al-Mukhtar's proposals and only agreed on receiving a letter, undoubtedly a forgery, in which Ibn al-Hanafiya introduced al-Mukhtar to him as his plenipotentiary (amîh) and minister (wa'lîni). The rising then began (14 Rabi' i. 66): the resistance of the chiefs of the tribes (the Ashrâf), who while opposed to the Umayyads and former fighters by the side of 'Ali, had long lost their enthusiasm for the cause of his family, was overcome by the onslaught of the troops, composed for the most part of adventurers and mauwâtîs led by Ibn al-Ashtar, a most capable warrior. The Zubairid governor fled (he was at this time 'Abbâl b. Mut'î b. al-Kunfadh), the Ashrâf capitulated and al-Mukhtar, undisputed lord of Kûfâ, rapidly extended his power over Mesopotamia and the eastern provinces, to which he at once appointed governors: the south alone, with Basra, remained to Ibn al-Zubair.

Al-Mukhtar had naturally to give the Aishî positions of authority in his organisation but he could not completely gain their confidence. Although old partisans of 'Ali, or sons of partisans, they were moderates who distrusted al-Mukhtar as an extremist and demagogue: indeed, the favour which the latter showed to the mauwâtî, who formed his real support, threatened to overthrow the system on which the political and economic supremacy of the Arabs over the native population was based, for not even the conversion of the latter to Islâm had made them equal to their conquerors. Al-Mukhtar therefore was faced with the necessity of deciding for one or other. He preferred the mauwâtî party, probably more from genuine conviction than for political reasons: he must have believed that the triumph of the Mahdi whom he foresaw would make all believers equal without distinction. During the absence of the army which had gone under Ibn al-Ashtar to fight 'Abbâl al-Malik's troops, the Ashrâf made an attempt to overthrow al-Mukhtar who was forced to temporize with them; but succeeding in informing Ibn al-
Aštar of his difficulty, the latter returned to Kufa and completely routed the enemies of al-
Mukhtar. This was the signal for putting into
execution the latter's full Shi'a programme; all
those who had taken part in the murder of al-
Ijjasun, or had neglected to defend him, were
put to death. This bloody deed seemed to have
divine approval, for two days later the Syrian
army which had set out for the ʿIrāq was completely
routed on the banks of the Ḥarrar of Ibn al-
Ashtar, and its leader ʿUbayd Allāh b. Ziyad, who
had defeated and killed al-Ḥusain, was killed in
the battle (Muḥarram 67). In the fanatical enthu-
siasm of these days in which the Shi'a cause seemed
to have won a definite success there took place
episodes of great religious interest although un-
fortunately not yet clearly explained, notably the
worship of the empty chair (Tabari, ii. 702–706;

But in spite of his successes at home and abroad,
al-Mukhtar was threatened by the presence in
Iṣṭa of the brother of ʿAbd Allāh b. al-Zubair, Muḥāfīz, whose army, organised by al-Muhallab b. Abī Ṣafira, hardened in the war with the Ḵānjūds and strengthened by the accession of the Ḵūfa ʿAshraf who had left the town, was one to be feared.
Indeed, the ʿAshraf troops were defeated by it at
Mukhtar's later at Harāza; they suffered a complete rout, mainly because of
the absence of Ibn al-Ashtar who was in the north
at al-Mawṣil and whom al-Mukhtar either through
distrust of him or through excess of confidence in
himself had neglected to recall. Al-Mukhtar who
had taken refuge in the citadel of Kufa held out
there valiantly for four months. Finally abandoned
by most of his men, he was slain in a desperate
sortie (Rāmaḍān 14, 67). His body was mutilated,
his hand suspended at the gate of the great mosque
(although it was only taken down many years later by
al-Daḥiqād) ; one of his wives, who would not
disown him, was executed in brutal fashion, although
she was the daughter of al-Nuʿmān b. ʿAbd Allāh
b. Ṣafira, who had been governor of Kufa under Muḥāfīz. A great many of al-Mukhtar's followers were also executed.

The nature of the movement led by al-
Mukhtar has been variously judged by modern
historians. The historical tradition which grew up
in Kufa, especially in the milieu of the Ḵānjūds, is
naturally hostile and regards him as an adventurer and
false prophet. His conduct was undoubtedly
somewhat crooked occasionally; the way in which
he exploited the name of Ibn al-Ḥanafīyya (who
never wished to be completely compromised in
the business of the Mahdi) was not quite fair.
But neither these doings nor his double dealing
with regard to the Ḵānjūds (they paid him back
however only too well) are sufficient to convict
him of bad faith. They were tactical expedients
which every one who wants to stir the masses is
justified in employing for the triumph of his cause.
It seems certain that al-Mukhtar sincerely believed
in his mission, and his equilibrating ideas about the
maswīlī, although premature, were, as the future
was to show, the only ones which could secure to
Islam its later expansion and transform it from
the exclusively Arab movement it was at first into
a world wide civilization. What is still and will
remain mysterious in the personality of al-Mukhtar
(Wellhausen rightly observes that "demonic"
traits like his are always problematic), is the
manner in which he arrived (no doubt through a
spiritualism within himself) at the religious and eschatol-
ological conception of the Shi'a of which he was
the creator and which is infinitely greater than the
expiratory sacrifice of the ʿaswāūbin of Sulaymān
b. ʿArif. It is owing to this conception that the
importance of the movement started by al-Mukhtar
is far greater than the ephemeral political success
which he enjoyed; in the popular enthusiasm which
welcomed his propaganda we see the germ of the
ideas which transformed the Shi'a from a
political movement to a religious doctrine. In what
measure these ideas were in existence before al-
Mukhtar, in what relation they stood to that enig-
matical personage ʿAbd Allāh b. Sāḥa' and his
disciples are points that are still obscure. But if
he was not the inventor of the doctrine of the
Mahdi, it was undoubtedly he who in locating in
a real person, Muhammad b. al-Ḥanafīyya, the
mystical figure of the Messiah, the restorer of the
true religion, gave it the stamp which was hence-
forth typical of Imāmī doctrines.

The name Maḥdiyya is borne by one of the
many Shi'a subdivisions given in the lists of the
writers on heresies; but it is doubtful if it ever had
a real existence as an organised sect, especially as the
sources which mention it do not clearly distinguish
it from the Kāsīfīyya [q. v.] and the Khān-
ṣabīyā [q. v.], which seem very likely to be the
leading successor of the teachings of
al-Mukhtar.

Bibliography: The principal and almost
the only source for the history of al-Mukhtar
is al-Tabari (ed. de Goeje, ii. 530–752 and
passim, which is based for the most part on
the statements of eye-witnesses of the events.
The secondary sources add practically nothing
new; they are quoted in Caetani, Chronographia
islamica, a. 64 § 13, 65 § 6, 66 §§ 5–7, 9–12,
67 §§ 2, 4, 42 (a few details also in the biography
of Muhammad b. al-Ḥanafīyya in Ibn Sa'd, v.
71–77); H. D. van Gelder, Mohāfīz de valschhe
Prophet, Leyden 1883; J. Wellhausen, Die ʿulā-
apel, Oppositionsparteien unter Islam, vol. 3

KHĀNṢĪYA AND KHĀNṢABĪYĀ (add al-Nawbahkāt, 
Fīrāk al-Shīʿa, ed. Ritter [Bibli. Islamica, iv.,
1931], p. 20–39). (G. LEVI DELLA VIDA)

MUKHTAR PASHA, GHIZā ṬAHMAD, a Tur-
kish general and statesman, was born in
Sept. 1832, the son of a high official in Brussa,
and received a military training there and in
Constantinople (officer in 1854). He took part in
the Crimean War, from 1850 taught in the Mekteb-i
Ḥarbiye as professor of the art of war and in 1855
was tutor to the prince Yusuf Ṭuz al-Din. After
holding a command in Albania (1867–1870) he
distinguished himself under Redif Pasha in the
Yemen campaign, the conduct of which he took
over in 1871 as General of Division and Pasha.
On his return he was given the title of muṣūrīk.
In the Herzegovina he was defeated in 1876 at
the Duga Pass. After the declaration of war by
Russia (April 24, 1877) he was given the supreme
command on the Caucasus front, where after at
first having to retire to Koprukey, he counter-
attacked at Dajar (June 21) and Ziwin (June 25)
and forced the Russians under the Armenian
generals Loris-Melikoff and Ter-Hugassoff, to eva-
cuate Ottoman territory and occupied Skhum.
Successes in August on the Yaghañ Dagh and at Kfi-il-Tepe (near Bash Gedikler) earned him the title of honour of Ghhazi [q.v.] but did not prevent the collapse of the army in Oct.—Nov. [cf. DEVK DOUX, KARS AND ERZERUM]. Appointed Commander-in-Chief of the Artillery, he restored peace in Crete in 1878; in 1879—1885 he served as commissioner on the Greek frontier. As a result of the Anglo-Turkish agreement of Oct. 24, 1885, he became the first High Commissioner of the Porte in Egypt, holding the post till 1906 and playing a part in the Taha affair. In this period he busied himself with the question of reforming the calendar; he advocated a uniform Hijra solar year for all Muslims (see Ehid).

From Dec. 1908 Vice-President of the Ottoman Senate, he proposed in the National Assembly of April 27, 1909 to give prince Reshid the name Mehmed V in memory of the first conqueror (Fatih) of Constantinople [see MUHAMMAD II] (communication of Abd al-Rahmân Sherefi to Martin Hartmann); he himself led the deputation which announced his accession as Sultan-Caliph and brought him to the War Ministry to receive the oath of allegiance [cf. BABA]. On Oct. 14, 1913 he succeeded Abd al-Saad Pasha [q.v.], President of the Senate and on July 22, 1912 as grand-vizier in the cabinet of the "Greatest One" (Buyukle). Under pressure from the association of old-Hungarian officers (Kalâihatârâr) he persuaded the Senate on Aug. 4 by a bold interpretation of the constitution to declare the session of Parliament closed. He endeavoured to free the army and civil service from politics, obtained an amnesty for Albania, recalled Ahmad Izzet Pasha from the Yemen, instituted the Naval Medal and Medal of the Red Crescent, obtained favourable terms in the treaty of peace with Italy (Oct. 18, 1912) but could not avert the catastrophe in the Balkan War. On Oct. 29, 1912 he retired in favour of Kılım Pasha, but remained a member of the Senate till 1918, in which on Feb. 12, 1917 he advocated the adoption of the Gregorian calendar and rejection of the Christian reckoning for the financial year. He died on Jan. 21, 1919. Mahmud Mukhtar Pasha is his son.

MUKHTARı, SIR JIJU AL-D-IN UMMAN B MUHAMJAD AL-MUKHTARİ AL-GHAZNAWI, court poet of the later Ghaznavids Ibrahim b. Mas'ud II (1059—1099) and Mas'ud III b. Ibrahim (1099—1114). He lived for a considerable period in Kirmân, where he wrote panegyrics on the Saljuk Arslân-Shah b. Kirmânshah (1101—1141). The great poet Maqal al-Din Sanâî showed him the greatest reverence and celebrated him in a long bawda as the best poet of his time. He could not have been Sanâî's teacher, as the Bankiropre Catalogue (i. 32) says, since he must have been only a year or two older than Sanâî. His influence however is quite marked in many of Sanâî's works. One of Mukhtarî's philosophical bests may be regarded as one of the finest examples of the old Persian school of poetry since maqâla on it were written by the best poets such as Khâkânî, Amir Khusraw, Athâr-i Ashkân, 'Abd al-Rahmân Idrîsî and Nawâî. His chief work is a large Dīwān of lyrics, the majority of which are panegyrics in the style of the old Ghaznavid poets like 'Umar-i Farrâgh, and dedicated to Ar-rân-Shah, Bahram-Shah, Aqâ al-Dawla Bahram-Shah, and a number of viziers. Besides, these kâlâs there were in the Dīwān a few short mazhâras, one of which of an astronomical nature seems to have had a great influence in later poetry. We should probably also ascribe to his poet the authorship of the Shahriyâr-nâma, an imitation of the Shahnâmâ, the hero of which Shahrysân son of 'IZâd son of Suhru, i.e. a great-grandson of Rustam, and the action of which is laid in India. The poem is dedicated to Mas'ud III; in the preface the poet says that he has worked at it for three years and hoped for a present worthy of this labour. If he does not receive this, however, he will not write a satire this seems to be a direct reference to Firduwâi. The year of Mukhtarî's death is not exactly known; 530 (1135); 534 (1139) 534 (1144) and 554 (1154) are mentioned. The last date seems to be the right one.

AL-MUKHTAR. [See ALLAH, II.]

MUKRâ, a district and village in the Yaman, a day's journey south of Sanâ'. The Arab geographers mention a cornelian mine here. The name is also given to a mountain in the Yaman Surf according to Sprenger; we cannot connect the Hayiar tribe of this name with the Mosîrs of Pomeiy.

MUKTADÀB, name of the thirteenth metre in Arabic prosody, very little used; in theory it consists of three feet, with two successive maf'ûluin, in each hemistich; but in practice it has only two.

There is one and one dark: maf'ûlu in maf'ûlu: maf'ûlu = faqâla. However, maf'ûlu should lose its f (ma•fûlu = faqâla) or change its u to w, which is very frequent (ma•fûlu = fa•wâl). Maf'ûlu can never retain its f (mas'taun = mas'taun).

she was neglected by the caliph. Malikshah, who wished to prevent the caliph interfering in affairs of state, endeavoured to induce him to leave Baghdad and take up his residence in another town. This plan however came to nothing through the death of the sultan in Shawwal 485 (Nov. 1092) and al-Mu' tadir was left in peace in the capital. About this time the power of the Saljuks reached its greatest height and in all the lands conquered by them the spiritual supremacy of the caliph was recognised. Al-Mu' tadir died suddenly on 15th or 19th Muharram 487 (4th or 8th Feb. 1094) at the age of 38. He was perhaps poisoned by Malikshah's son and successor, Barkiyai'uddin [q. v.] whom he had offended by confirming the selection of his minor brother Mamshid as sultan.

**AL-MU' TAFIR.** [See also, I.I.]

**AL-MUKTA DIR.** Bu'llāh, Abū l-Fadl Dārāf, Abū 'Abbas al-Muktafī, 'Abbāsīd caliph, son of al-Mu'tasid and a slave named Slaghba. After the death of his brother al-Muktafī in Dhū l-‘Ilādha 295 (Aug. 908), al-Mu' tadir who was only 13 at the time was proclaimed caliph. Many however preferred Abū 'Abd Allāh, son of the caliph al-Mu'tazz, and after the murder of the vizier 'Abd Allāh b. al-Hasan b. Abū 'Abd Allāh al-Muktafī was declared to be deposed and Ibn al-Mu'tazz elected caliph. The eunuch Mu'nis [q. v.] came forward to save al-Mu' tadir; Ibn al-Mu'tazz was slain and al-Mu' tadir retained the caliphate. He showed very little independence however and allowed himself to be guided, sometimes by the Abbasids and sometimes by the viziers among whom special mention may be made of the intriguing Ibn al-Furāt [q. v.] and the brave Ibn al-Dījarah [q. v.]. Al-Mu' tadir's caliphate was therefore marked by a gradual decline. In his reign the dynasties of the Fātimids [q. v.] and Ḥamādhānīs [q. v.] became independent. The Ḥarmānjans also rebelled once more. In the years 307 (919—920) and 311 (925) Baṣra was plundered by the Ḥarmānjān chief Abū Tāhir Sulaimān [cf. AL-DJANXIR] and at the end of the year 311 (925) he fell upon the pilgrimage caravan returning from Mecca. In Dhū l-‘Ilādha of the following year (925) he attacked the caravan which was going on the pilgrimage to Mecca from Baghdad and put it to flight. He next plundered al-Kufa and then returned to Buhrain. An army sent against the Ḥarmānjans under the command of Mu'nis arrived only after they had retired. In 314 (926—927) 'Uṣuf b. Abu l-Sā'dī was summoned from Abdār Bahjūdijān to help, but Sulaimān defeated him in Shawwal of the following year (Dec. 927) and took him prisoner. The caliph's troops did not dare to give battle and in Muharram 316 (March 928) Sulaimān seized the town of al-Raḥaba. After an unsuccessful attack on al-Raḥja he retired; in 317 (929—930), or, according to others, in 316, he plundered Mecca and carried off the Black Stone.

On the Byzantine frontier both sides continued their raids with varying fortunes. In 305 (917) the Byzantines made an offer of peace and after two years peace was definitely concluded, but hostilities very soon broke out again. In 314 (926—927) the Byzantines ravaged the district of Malatya and in the following year they crossed a considerable part of Armenia. After taking several Armenian cities which belonged to the Arabs (316 = 928—929) and occupying northern Mesopotamia (317 = 929—930) they lost all their gains in 319—320 (= 931—932). In Muharram 317 (Feb. 929) a rebellion broke out in the capital. Al-Mu' tadir was forced to abdicate but was brought to a place of safety by Mu'nis, while the soldiery plundered the palace. His brother Muhammad was summoned to be Commander of the Faithful in his stead with the style al-Kāhir; but since the chief leader of the rebels, the head of police Nāzūk, could not satisfy the demands of the troops for higher pay, al-Kāhir was deposed after a few days and al-Mu' tadir placed on the throne once more. In Baghdad the confusion increased and in 320 (932) the catastrophe came. The enemies of Mu'nis took advantage of his absence to persuade the caliph that Mu'nis intended to dethrone him and when Mu'nis approached at the head of his army, al-Mu' tadir was persuaded with great reluctance to take the field against him; he fell at the beginning of the encounter (27th Shawwal 320 = Oct. 31, 932). See also the article MUHAMMAD F. YUSUF.

(K. V. Zettersten)

**AL-MU' TAFIR.** Abū l-‘Alā' Abū 'Abd Allāh Muḥammad, 'Abbāsīd caliph, born on 12th Rabi` II 486 (April 9, 996), son of al-Mustazhir and a slave girl. After the deposition of his nephew al-Rashid, al-Mu' tadir was acknowledged as caliph on the 8th Dhū l-Ḥijja 530 (Sept. 17, 1136). While the Saljuks were fighting among themselves, he did his best not only to maintain his independence but also to put down the revolts after the other in the Ḥarak fell into his hands. In 543 (1148) a number of emirs announced their allegiance to Sultan Mas'ūd and marched on Baghdad but dispersed after several encounters with the caliph's troops. According to some sources, the same thing took place again next year. In Rajab 547 (Oct. 1152) Mas'ūd died, and was succeeded by his nephew Malikshah who was deposed in a few months and succeeded by his brother Muhammad. In the meanwhile the caliph seized the two towns of al-Ḫilla and Wāsīt. In the following year Sultan Sanjar who lived in Kūrsān was attacked and taken prisoner by the rebel 'Uḫuzz [q. v.] whomupon his emirs proclaimed Mas'ūd's
brother Sulaimānšāh sultān. In Muharram 551 (Feb.—March 1156) the latter was recognised by the caliph on condition that he did not interfere in the affairs of the Trājik. Although al-Muktāfi supported him he was defeated in Djamād II (June—July) of the same year by his nephew Muhammad and the latter’s auxiliaries. In Dhū l-Ḥijjah (Jan.—Feb. 1157) Sulṭān Muhammad advanced on Baghdaḍ to take vengeance on the caliph. The latter had to retire to the eastern part of the town and was besieged there for several months. In Rabī‘ I 552 (May 1151) however, the sultān suddenly raised the siege because Allah is advancing on Hamadhān. As the latter therefore retreated, hostilities automatically ceased and Muhammad was said to have made peace with al-Muktāfi. The latter twice besieged Taḥkīt in vain; on the other hand, he succeeded in taking Liḥf. The Crusaders continued their hostilities in al-Muktāfi’s caliphate. The most powerful pillar of Islam was the Aṭṭāb of al-Mawṣil, Fāṭimād al-Din Zangī, and his son Nūr al-Dīn Muḥammad in Syria. Al-Muktāfi died in 2nd Rabī‘ I 555 (March 12, 1160).

(K. V. ZETTERSTÉEN)

AL-MUKTĀFI B‘LLĀH, ABū MUḤAMMAD ‘ALI b. ‘Abdallāh. Aḥbārī caliph, son of al-Muṭṭadī and a Turkish slave named Grek (Arabic Dijājk). In 281 (894—895) he was appointed by his father governor of al-Rayy and several towns in the neighbourhood, and five years later he was made governor of Mospotamia and took up his quarters in Raḥkā. After the death of al-Muṭṭadī on 22nd Rabī‘ II, 289 (April 5, 902), he ascended the throne and at once won the good-will of the people by his liberality and by destroying the subterranean dungeons in the capital. He proved a brave and fearless leader who fought with success against the many enemies of the caliphate. The Karmāṭians were ravaging Syria: one town after another fell into their hands and Damascus itself was plundered. On the 6th Muharram 291 (Nov. 29, 903) the general Muḥammad b. Sulaimān finally succeeded in inflicting a crushing defeat on them and they scattered in all directions. Muḥammad then turned his attention to Egypt where he put an end to the rule of the Ǧumlūnids. Many of their followers joined him and after the Ǧumlūnids Ḥādīn b. Khumār wasa had been slain, the capital had to surrender (Ṣafār, 292 = Jan. 905) and Ǧalāl al-Nāṣā’īrī appointed governor of Egypt. An attempt to restore the Ǧumlūnids was easily crushed (293 = 905—906). About this time the Karmāṭians again began to be troublesome and at the beginning of the year 294 (Oct.—Nov. 906) they attacked the great pilgrim caravan returning from Mecca, massacred the men and carried off the women and children. In Rabī‘ I of the same year (Dec. 906—Jan. 907) they were defeated near al-Kādisiyah by the caliph’s troops under Wasaf b. Shawaṭagīn. The war with the Byzantines was also vigorously pursued. In 291 (903—904) a Greek named Leo who had adopted Šīrāz undertook a number of raids on the Greek coasts with his fleet of 54 ships. The Byzantines however had the advantage by land. In 292 (904—905) Marāsh, al-Maṣṣaṣṭa and Tarsūs were taken by the Greek general Andronicus and in the following year the Byzantines advanced as far as Ḥalab. Then the Muslims gained the upper hand and Andronicus went over to them. Al-Muktāfi died in Dhū l-Ka‘da 295 (Aug. 908) at the age of 31. cf. also the article al-‘ABBAS B. AL-HASAN B. AHMAD.

(K. V. ZETTERSTÉEN)

AL-MUKTĀNAH, BAKR B. AL-DĪN, a Druze missionary and author, with his teacher Ḥamza (b. ‘Alī, q. v.) founder of the theological system of the Druses [q. v.], the fifth minister of the Druze theology, with several titles of honour, in addition to the above two: al-Dānāl, al-Anṣār, al-Tālī, al-Kiyāl, al-Muṣārīṣ etc. His "secular" name was Abū l-Ḥasan ‘Alī b. Ahmad al-Samākī. Of his life practically nothing is known. As Arab historians are silent about him (Silvestre de Sacy, Exposé de la religion des Druses, ii. 320), his own writings are almost the only source. According to the Druze tradition, he was kāfi in Alexandria in al-Hākin’s time (fifth century), and in Mittelmäer zum Persischen Golf, ii. Berlin 1939, p. 135). As his works reveal quite a good knowledge (not without misunderstandings) of Christian religion and literature, he may have been born a Christian, probably in Syria. Only for the period of his teaching do we have chronological exactness. His ṭalīlāt of inv.-tute is dated on the 13th Shab‘ān of the third year of Ḥamza’s mission i.e. 411 (1020) (S. de Sacy, op. cit., i. 474—475: ii. 309. 313; transl. ibid., ii. 297—309). The earliest of his known writings is of the tenth year of Ḥamza, 418 A. H. (ibid., ii. 326). In consequence one must assume that he came to the front after the disappearance of al-Hākin and Ḥamza. His activity was not a continuous one and he had even to live for a time in concealment (about the year 17—18 of Ḥamza; see S. de Sacy, op. cit. ii. 364), whether in Egypt or Syria is not certain (H. Gay, La nation druze, p. 114). The latest date known in his writings is the 26th year of Ḥamza, i.e. 433—434 (1042) (S. de Sacy, op. cit., i. 496; ii. 379). His farewell epistle dates from that year; according to it he had retired into concealment (ibid., i. 514—515; ii. 358); nothing more is known of him. The "Druze theology" does not agree with these dates; it gives 17 years as the period of his activity (H. Guys, op. cit., p. 107). Ph. Hittite’s assertion (The Origins of the Druze People, p. 11) that he died in 1031 is due to a misunderstanding.

Druze tradition not unjustly ranks him with Ḥamza and regards him as the greatest theological writer, to whom four of the sacred books are ascribed (M. v. Oppenheim, op. cit., i. 135—137). These are not books
in the proper sense but collections of separate tracts, usually in the form of epistles, directed to followers of the Druses teaching or of other creeds in various lands (Byzantium, Syria, Egypt, Arabia, India). They are to this day frequently read by the Druses in their khawalīwāt; commentaries were written on some of them by the last independent Druse theologian ʿAbd Allāh al-Tanlukhī (d. 1450; on him see Ph. Hitti, op. cit., p. 53; M. v. Oppenheim, op. cit., i. 137). Of the some 102 Druse treatises so far known in Europe, 70 are ascribed by S. de Sacy to al-Muktān (op. cit., i. 484 and 496). Except for a few short texts published by S. de Sacy along with other writings of Him (see Bibliography), most of the tracts have been printed, namely the Kitāb al-Bādʿ by Chr. Seybold (s. Böhl) and al-Risālat al-Kuṭṭāntiyyā, sent in 1028 to the Byzantine Emperor Constantine VIII., by J. Khalil and L. Ronzevalle (s. Böhl. and extracts in Hitti, op. cit., p. 64—67). Others are accessible only in translations and extracts (esp. in Silvestre de Sacy; al-Risālat al-Mūshtiyā, a synopsis in Hitti, op. cit., p. 68—70). As with other Druse writers, the style is very obscure and artificial, frequently embellished with rhymed prose.

Silvestre de Sacy, whose book still is the most important collection of material, regards al-Muktān as "un enthousiaste de bonne foi" (op. cit., i. 508). It is highly desirable that some one should devote a special study to his life and work, paying particular attention to the authenticity of his works and to a critical edition of them.

MULAH. [See Mawla.]

MULK (A.), royal power, is used in the Kurān with reference to God and to certain pre-Islamic personages, who all appear in the Old Testament, and in the former case is synonymous with malakīt; the latter word however occurs only four times in the Kurān and always with a dependent genitive (kul shāʿ or al-samanāwīt wa l-arḍ) while mulk is often used absolutely. To God alone belongs mulk. He has no associate therein; to Him belongs mulk over heaven and earth as well as over the judgment. He gives mulk to whom He will; the unbelievers have no share in it. Shaitān promised Adam imperishable mulk and tempted man with this promise to eat of the kibdawat al-khaid (Sūra xx. 118). Nāmis endeavours to claim for himself God's mulk against Ibrahim (ii. 260) but God gives mulk to the family of Ibrāhim (iv. 57). Yūsuf thanks God in prayer for the mulk which He has given him (xxi. 102). Fir'awn boasts of his right to the mulk Mīyār (xiii. 50); God wills to give Ťāltū mulk over the recalcitrant Israelites and to send the ṭābūt as a sign (ii. 248 sqq.). Dūwil's mulk is mentioned in ii. 252 and xxviii. 19 and Sulāmān's ii. 96; the latter prays for it (xxviii. 34).

That the conception of mulk was not carried over into Muslim law generally has been explained in the article MULAH; an exception is Egypt during the Ayyūbīd period and in quite modern times. Cf. also the article Tahlīl and G. Richter, Studien zur Geschichte der älteren arz. Fürstenspiegel (Leips. Som. Studien, N. F., iii., 1932), esp. p. 6.

MULTĀN is an ancien town of the Pandāşād situated in 30° 12' N. and 71° 31' E., and has been known at various times as Kāshfpūr, Hanspūr, Bagpūr, Sānhā or Sanāhpūr, and finally Mūlāshān, of which Multān is a corruption. This name is derived from that of the idol and temple of the sun, a shrine of vast wealth, which the Arabs, who plundered it, named dār al-hāšāb, or the house of gold. It remained the Arab capital, and the outpost of Islam in India, for three centuries but by A.D. 900 its rule had become independent of Baghdad. At this time it was seized by ʿAbd Allāh the Karmāyat, and became a stronghold of the Karmāyat heretics, who were crushed and expelled by the orthodox Mahmūd of Ghazān. The town and province remained nominally subject to his descendants until Khusrāw Mulk, the last of them, was carried into captivity by Muizz al-Dīn Muhammad b. Sām, when it became a province of his Indian empire. On his death the governor, Nāṣir al-Dīn Kābāḍ, attempted to establish its independence of Dīhil, but Kābāḍ al-Dīn Aībak reduced him to obedience, and the province remained nominally subject to Dīhil from 1026 to 1438 when Shāhī Yūsuf Kūra′iš became independent ruler of Multān and was followed by the kings of the Langūth tribe, who reigned until 1527. The town was occupied both by Tūmīr in 1397 and by Tūbdīr in 1528.

The province was one of the ḫulūs of Akbar's empire, and remained nominally subject to his successors until 1572, when its allegiance was transferred to Kābul. It was threatened by the Sikhs as early as 1771, but was not annexed by them until 1818, when Rāngājī Singh took the city by storm. It was not affected by the first Sikh war, but the murder of two British officers by Multādī led to the second Sikh war, and the city was captured on January 3, 1849. Its fortifications were dismantled in 1854 and its garrison was disarmed in the mutiny of 1857.

MUMTAŻ, BARHEWUDAR B. MAMūD TURK-MĀN FĀRĀḤI, a Persian writer, a contemporary of the Ṣafawīd Sūlān Ḥusayn (1694—1722). At an early age he left his native town of Fārāh.

THE ENCYCLOPAEDIA OF ISLAM, III.
and went to Marw where he entered the service of the governor Agha Khan. After two years however, he left this post and became munshi with Hovan Kuli Khan Shamsu Kuru-bashi in I basan. At a banquet there his master's house he heard a story which attracted him exceedingly. He wrote it down and it became the foundation of a great collection, Makhzava, which contained about 400 stories and consisted of a mukaddama, eight biita and a khatima. Soon afterwards he returned to Farah, spent some time in Herat and Meyshed and then entered the service of the emir Minufr Khan b. Khaghtay whose duty it was to defend Daran and Khubushan against raids by the wild nomad tribes. His stay there was disastrous for Mumtaz, since he lost all his goods and chattels and the valuable manuscript of his Makhzava during a nomad raid; he did not have another copy of it. He resolved however to restore the book and wrote all the stories that he could remember a second time. Thus arose the second version of the Makhzava, which consists of a mukaddama, five biita and a khatima and has come down to us under the title Makhzav al-kutiib. The book is written in an exclusively artificial style. The khatima is the best part; it contains the celebrated story of Zilab and Rasu, which is very popular in Persia in a simplified form in many editions from the popular press.

MUMTAZ MAHALL, wife of Shah Jahan, and the lady for whom the Taj Mahall (q. v.) was built. She was the daughter of Abul Hasan Aqaf Khan, who was Nur Jahan's brother. Her name was Arjuman Bano, the title Muntaz Mahall being conferred on her after Shah Jahan's accession. She was a favourite wife and bore fourteen children, seven of whom grew up. She was born in 1593, married in 1612 and died, at Burhantpur in the Deccan, very shortly after the birth of a daughter in 1631. She was beautiful and amiable, and Shah Jahan loved her tenderly.

MUNADJDJIM. [See Astrology.]

MUNADJDJIM BASHI is the name by which the author of the most important general historical work written in Turkey is known. His real name was Ahmad Efendi, son of Luuf Allah, a native of Eregh near Konya. He was born in Selanik, in the first half of the 18th century, received a scholarly education and served in his youth for fifteen years in the Mewlewikhan of Kasim Pasha under Sheikh Khalil Dede (Sidgikli Victoria, ii. 287). Afterwards he studied astronomy and astrology and became court astrologer (munadijdin bashi) in 1798 (1667—1668). In 1806 (1675—1676) he was admitted to the intimate circle of Sultan Muhammad IV as munadijdin padshah. He was dismissed in Muharram 1099 (November 1687) and banished to Egypt. From here he went some years later to Mecca, where he became shaikh of the Mewlewikhan. In 1105 (1693—1694) he was obliged to move to Medina, where he lived for seven years. Soon after his return to Mecca he died there on the 29th of Ramadán 1113 (February 27th 1702) and was buried near the tomb of Khadidja.

Besides writing his historical work, Munadijdin Bashi displayed a considerable literary activity. Of his works are mentioned a Fasya on the Kur'an commentary of Baidwi, a commentary on the "Al'id al-Asqiya of al-'Idi, a Fasya-nan, a translation of the anecdotes of 'Ubaidi Zakan, and a number of treatises on geometry, mysticism and music. His Turkish divan also gives him a place in the ranks of Turkish mystical poets; his takalign was Aslih.

The general history was written in Arabic under the title Dams al-Dawla, but although manuscript of the Arabic original exist (the Semi-Khazin Edic of Ah Enawi mentions two MSS., not mentioned by Babinger, viz. one in the library of the mosque of Selim II in Adrianople and the other in the imperial palace, in the library of Ahmed III), it is much better known in the Turkish translation made by the poet Nedin [q. v.] in the xvith century under the title Selaf i al-fakhr (printed in three volumes in Constantinople in 1285). It is a world history, arranged, after the fashion of similar Arabic works, according to dynasties, with a main division into three parts: the first treating of the history of Muhammad, the second the non-Mohammedan dynasties and the third the Mohammedan dynasties. In the introductory chapters the author cites his numerous sources, not a few of which are lost in the original. Therefore the work has a special value for the knowledge of many smaller dynasties and for this reason it has been especially used by E. Schaufler for his Verzeichnis mubammadanischer Dynastien, in his Pr. Ak. W., Berlin 1923 (cf. the introduction). The last dynasty treated is that of the Ottoman Sultans; it is proportionately longer and more detailed than the history of the other Mohammedan dynasties and based on several imperfectly known sources; the last part, which ends in 1089 (1678), gives contemporary history. The Turkish translation of Nedin is very readable and not composed in the high-down literary style that prevailed in his period. For this reason it is especially praised and represented in Eminirz Teviki, Mured-i Edibir-i 'elmamüni, Constantinople 1339.

Bibliography: F. Babinger, O. G. W. and the sources mentioned there.

(II. KRAMER)

AL-MUNAFIKUN (A.), the term applied in the Kur'an to those Medinees upon whose fidelity and zeal Muhammad could not absolutely rely. The Arabs (e.g. Mubarrad, Kamel, ed. Wright, p. 153) derive the word from manafik ("one of the entrances to the hole of a fieldmouse"), but it is certainly the borrowed Ethiopic manafik "heretic" from nefasa to "split", nefasa to "be divided, irresolute". The meaning "waverer", "doubter" quite fits the usual use of the word in the Kur'an, while the usual translation "hypocrite" only suits a few passages. Another description of the same people in the Kur'an is: "those in whose hearts there is sickness (weakness, doubt)", again in contrast to the unshakably firm believers. Sometimes (ix. 68
with the campaign against the Banū Mustakhīl.

**AL-MUNDIRI** B. MUHAMMAD. [See al-MUNDIRI, II.]

**MUNDIRYA**, title of Vira lxi., which is also called al-mudhī and al-ḥaṣāyya.

**MUNGIR** (MONGHIR), the head-quarters of the Mungr District in Bihar and Orissa in India, situated in 25° 23′ N. and 86° 28′ E. on the south bank of the Ganges. The population of the district in 1911 was 2,132,893, of whom 200,339 were Muhammadans. Muhammadan historians state that Bakhtyār Khālidī was the first Muhammadan who conquered Mungr during his subjugation of Bihar about 595 (1198). Henceforth it became a place of military importance. In 1777 (1703) Nawāwī Mīr Kāsmī, the Nawāwī Sūbadār of Bengal, when he proposed to fight against the British made Mungr his military head-quarters. He founded here an arsenal under Ghūgin (Gregory) Kāsmī, his Armenian general. The gun-making industry for which the town is famous is said to date from the establishment of this arsenal.

**MUNIS DEDE** or DERMISH MUNIS, Ottoman poet at Adiānople. He belonged to the Mewlēvi Order. He received his education from the famous Enis Deed (d. 1147 = 1734). He died in 1145 (1732) in Adrianople, where he is buried.

(M. MENZEL)

**MUNIS AL-MUZAFFAR**, ABD AL-ḤASAN, principal 'Abbāsid general from 926 to 931 (909—933), and latterly virtual dictator (usual attribution of him to another Khālidī seems to rest on passage — p. 347 — in Hīlāl al-shābī's *Kitāb al-Wuzūr* [ed. Amrodo], where Nāṣr should be read for Muṣān], a eunuch (passage of Ibn Miskawayh [ed. Amrodo and Margolouth, i. 160] shows that ḥādīn in this case does not mean merely freedman, as suggested by Massignon, al-Hallaj, p. 205, no. 3), said by al-Dhahabī, *Tawāk al-Islām* (followed by Ibn Taghribirdi, *ed. Juyonb*, ii. 255) to have been 90 years old at death (though this age would seem incredibly great for a recently active commander), i.e., to have been born in 845—846, and to have held the rank of amir for 60 years.

Muḥīn first appears (if passage of al-Ṭabarī, ii. 1523, refers to him) as a ghulām of al-Muṣāfār (not yet caliph) in *Zanj* (q. v.) campaign of 267 (880—881); and is mentioned as Chief of Police in caliph's camp in 287 (900). Al-Dhahabī (also Ibn Taghrībīd, loc. cit.) states, again, that he was banished to Mecca by al-Mu'tamid, to be recalled on accession of al-Muṭakaddir (q. v.); and as Muḥīn is nowhere referred to during intervening reign of al-Mu'tafis, the statement may be true. (If so, in al-Ḥaṣāy's description, Muḥīn...
Mu'nis owed his later eminence mainly to his leading the defence, in 296 (908), of the Hasani palace at Baghdād for al-Muktaḍar against the partisans of the latter's cousin, the pretender Ibn al-Mu'tazz [q. v.]. During the caliph's youth his gratitude and that of his powerful mother for this service assured Mu'nis's position; and though later al-Muktaḍar's favour turned to enmity, by that time Mu'nis's authority was hardly in need of support, owing chiefly to his almost invariably successful generalship. For though he undertook no very important campaigns, except perhaps the repulse of the Fāṭimid al-Mahdī [q. v.] in 307 (919-920) (for which he received the ḏābāb al-Muṣafirīn), and the defence of Baghdād from the Karthānians [q. v.] in 315 (927-928), he was only once defeated — in 306 (918).

Mu'nis early fell out with the ważīr Ibn al-Furāt [q. v.], repeatedly opposing him, till in 312 (924), on Ibn al-Furāt's third term of office, Mu'nis played a prominent part in securing his dismissal and execution. He now became all-powerful, being invariably consulted on the appointment of viziers and so controlling the government. Hence the change of al-Muktaḍar's affection to dislike, first signalized (315 = 927) in an abortive plot of the caliph's to murder him. In 316 Mu'nis lent himself to al-Muktaḍar's deposition in favour of his half-brother al-Kāhir [q. v.]. He almost immediately restored him, however, thereby becoming more absolutely his master than ever. Al-Muktaḍar eventually defied Mu'nis (319 = 931), who thereupon left Baghdād. Next year, however, having meanwhile collected a strong force, he marched on the capital intending to reimpose his authority. He duly defeated the caliph's army outside the walls, but al-Muktaḍar himself was killed on the field.

Mu'nis now restored al-Kāhir. But by resuming his dictatorial ways he soon so alienated him also that he was obliged in self-defence to keep the new caliph a prisoner in the palace. He even contemplated deposing him. Al-Kāhir, however, succeeded in luring Mu'nis, together with his chief supporters, into the palace, where he shortly had them executed in Sha'ban 321 (August 933). Mu'nis's influence was on the whole exerted for good: but he was neither strong nor intelligent enough to prevent the decline of the caliphate. His example of depriving the caliph of real power was pernicious. It was to be followed all too soon by the series of adventurers who, with the style of amīr al-tamār [q. v.], were to dominate al-Kāhir's successors.

**MUNKAR WA-NAKIR** (the forms with the article are also found), the names of the two angels who examine and if necessary punish the dead in their tombs. To the examination in the tomb the infidels and the faithful — the righteous as well as the sinners — are liable. They are set upright in their tombs and must state their opinion regarding Muḥammad. The righteous faithful will answer, that he is the Apostle of Allāh; thereupon they will be left alone till the Day of Resurrection. The sinners and the infidels, on the other hand, will have no satisfactory answer at hand. In consequence of this the angels will beat them severely, as long as it will please Allāh, according to some authorities till the Day of Resurrection, except on Fridays.

In some sources a distinction is made between the punishment and the pressure (ḏaқīta) in the tomb, the righteous faithful being exempt from the former, not from the latter, whereas the infidels and the sinners suffer punishment as well as pressure (Abu Ḭa'īn al-Muṣaffā, as cited in the commentary on the Wasiyat Abī Ḥanīfā, Haidarābād 1321, p. 22).

The punishment in the tomb is not plainly mentioned in the Qur'ān. Allusions to the idea may be found in several passages, e.g. sūra xlvi. 29: "But when the angels, causing them to die, shall smite them on their faces and backs"; sūra vi. 93: "But couldst thou see, when the ungodly are in the floods of death, and the angels reach forth their hands, saying, Vield up your souls: this day shall ye be recompensed with a humiliating punishment"; sūra viii. 52: "And if thou wert to see when the angels take the life of the unbelievers; they smite their faces and their backs, and taste ye the torture of burning" (cf. further sūra ix. 102; xxi. 21; lli. 47).

The punishment of the tomb is very frequently mentioned in Tradition (see Bibliography), often, however, without the mention of angels. In the latter group of traditions it is simply said, that the dead are punished in their tombs, or why, e.g. on account of special sins they have committed, or on account of the wailing of the living.

The names of Munkar and Nakir do not appear in the Qur'ān, and, so far as I can see, only in canonical Tradition (Tirmidhi, Ḫanīfī's, N°. 70). Apparently these names do not belong to the old stock of traditions. Moreover, in some traditions one anonymous angel only is mentioned as the angel who interrogates and punishes the dead (Muslim, Imām, trad. 163; Abū Dawūd, Sunna, bāb 39; Ahmad b. Ḥanbal, iii. 233; 346; iv. 150; Ṭayālīsī, N°. 753).

So there seem to be four stages in the traditions regarding this subject: the first without any angel being mentioned, the second mentioning "the" angel, the third two angels, the fourth being acquainted with the names Munkar and Nakir.

This state of things as reflected in ḥadīth finds a similar reflex in the early forms of the creed. In the Fīḥ Akbar i., which may date from the middle of the viiiih century A.D., the punishment of the tomb appears as the only eschatological representation (art. 10). In the Wasiyat Abī Ḥanīfa, which may represent the orthodox views of the middle of the viiiih century, we find, apart from an elaborate eschatology, the two following articles (arts. 18, 19): a) We confess, that the punishment in the tomb shall without fail take place. We confess, that in view of the traditions on the subject, the interrogation by Munkar and Nakir is a reality. The term "reality" is apparently intended to oppose the
allegorical interpretation of eschatological representations as taught by the Mu'tazilis.

The Fih h A'kbar ii., which may represent the new orthodoxy of the middle of the 11th century a.d., is still more elaborate on this point (art. 233): "The appearance of the dead in the tomb by Munkar and Nakir is a reality and the reunion of the body with the spirit in the tomb is a reality. The pressure and the punishment in the tomb are a reality that will take place in the case of all the infidels, and a reality that may take place in the case of some sinners belonging to the faithful. In the later creeds and works on dogmatics the punishment and the interrogation in the tomb by Munkar and Nakir are expressed in similar ways. The Karramiya [q.v.] taught the identity of Munkar and Nakir with the two guardian angels who accompany man ('Abd al-Kahhir al-Baghda'di, qul al-Din, Stamboul 1925, p. 246). Ghazali admits the idea that eschatological representations are a reality that takes place in the malakat.

The origin of the names is uncertain: the meaning "disliked" seems doubtful. The same is the case with the examination and the punishment of the dead in their tombs is found among other peoples also. The details to be found in Jewish sources (hikhit hakhekher) are strikingly parallel to the Muslim ones.

MUNSARI, the name of the tenth metre in Arabic prosody; it has three feet to the hemistich. It has three a'ruq and four darb:

1st a'ruq: musaf'irun masfur'tun musaf'irun
2nd a'ruq: musaf'irun masfur'tun
3rd a'ruq: musaf'irun masfur'tun.

We rarely find musaf'irun in the darb of the first a'ruq. The second darb of the first a'ruq is not indicated by al-Khalil b. Ahmad but Ibn Barn notes it was much used by the muhaddil poets, among them Ibn al-Rumi. It may be noted that the second and third a'ruq are regarded as belonging to the radja metre.

Musaf'irun may lose: 1. its r except when used as the first darb in the first a'ruq; 2. its f and the foot becomes (musaf'irun =) mu'taf'irun; 3. its s and f at the same time (which is very bad) and the foot becomes (musaf'irun =) fa'taf'irun. This last change could not be undergone by the first a'ruq.

Musaf'irun loses 1. its f, which is very bad and the foot becomes (musaf'irun =) ma'saf'irun; 2. its w and the foot becomes (musaf'irun =) fa'saf'irun.

3. its f and w at the same time which is very bad and we have (mu'taf'irun =) fa'taf'irun.

Maf'irun and maf'irun may lose their f and become (ma'saf'irun =) fa'saf'irun and (mu'taf'irun =) fa'taf'irun. [Moh. Ben Chene]

MUNSHI. [See INSHI?]

MUNSIF (A.), part. active iv. of n.-f, "to be just, to act with justice", the title of a native judge of the lowest grade in India.

Bibliography: Yule and Burnell, Hebrew-Jebbon, s. v. moonsiff.

AL-MUNTAFAK, a section of the Arab tribe of the Banu 'Ukail, which is a subdivision of the great group of the 'Amir b. Sa'Ja'a [q. v.]. Genealogy: al-Muntafik b. 'Amir b. 'Ukail (Wustenfeld, Gen. Tab., D. 19). The very scanty information in Wustenfeld can be supplemented by the notice which Ibn al-Kalbi gives of the Banu 'l-Muntafik (Djamhur al-anwab, MS. Brit. Mus., fol. 130v—131r); but this little clan nowhere appears to play a great part in early history. The territory inhabited by the Banu 'l-Muntafik is the same as that of the other divisions of the Banu 'Ukail, in the southwest of Yamama; some places belonging to them are quoted by al-Bakri (Mu'izz, ed. Wustenfeld, p. 567). Yaktub (Mu'izz, ed. Wustenfeld, l. 793—794; iv. 712, l. 78: we may note that in these two passages al-Muntafik is said to be the surname of Mu'awiya b. 'Ukai while the usual genealogy makes this Mu'awiya a son of al-Muntafik), al-Handani (Qajara, ed. D. H. Muller, p. 177, l. 12—15: note the mention of gold mines in their territory). The Banu 'l-Muntafik numbered among their clients the Banu 'Athir (Wustenfeld, Gen. Tab., C. 13) whose eponym was said to have been made a prisoner by them (Kitab al-Azhh, vii. 110); one of the few episodes of the pre-Islamic period in which this clan is mentioned is the battle of Shib Dhabala where Kust b. al-Muntafik distinguished himself (ibid., x. 44; Nukhti, ed. Bevan, p. 671 l. 12—672, l. 14, where Ibn 'Ufayl should be deleted). In the history of the origins of Islam, several of them appear as ambassadors of the Banu 'Ukail to the Prophet: such were Ana b. Kais b. al-Muntafik and Laqi b. 'Amir b. al-Muntafik (Ibn Sa'd, i/ii. 45 etc.; on the latter the biographical collections have long discussions as to whether he is to be identified with this or that Muhammad: cf. among others Ibn 'Adjar, Tahdhib al-Tahdhib, viii. 450). In the period of the conquests, the Banu 'l-Muntafik settled in the marshy region between Kufa and Basra (al-Kalâshandili, Nihayat al-Árab, p. 65—66). All that we know of them after this period is the name of a few individuals who held public offices: a certain 'Amr b. Mu'awiyah b. al-Muntafik, mentioned by Tabari, i. 3284 at end, as fighting at Siffin, is said by Ibn al-Kalbi to have been governor of Armenia and Aeshabidjan under Mu'awiyah; according to Ibn al-Kalbi, 'Abd Allâh b. Mu'awiyah b. Rab'ba b. 'Amir b. al-Muntafik was governor of Marw and Ahwâz also under Mu'awiyah, and 'Abda b. Kais b. al-Muntafik of Armenia, under Yazid I. These men are not mentioned elsewhere: the same is true of the poet Djahm b. 'Awf b. al-Husain b. al-Muntafik (Ibn Haddar, Isbâ, ed. Sharifia, Cairo 1325), v. 124 follows Ibn al-Kalbi.

AL-MUNTAQIM. [See ALLAH II.]
AL-MUNTASIR (also called Mustansir) fl. LÈMÄT 'Il'JÝÁFAR MUHAMMAD b. DÝÁFAR, 'Abd al-Muttasim al-Makshih, 

son of al-Mutawakkil and his mother al-Saha.

After his father had been murdered in 241 (Dec. 856) by conspirators, among whom was al-Muntasir, the latter ascended the throne aged 25 according to the usual statement. As a ruler he was only a tool in the hands of the vizier Ahmad b. al-Khüsib and the Turkish generals. His brothers al-Mut'azz and al-Mu'ayyad were forced to renounce their claims to the throne and Wasif, the commander of the bodyguard, was sent to the Byzantine frontier. Unlike his father, he treated the 'Alids with great consideration: nothing else remarkable is recorded of him. Al-Muntasir died in Rabi' II 248 (June 861) or, according to a less trustworthy report end of Rabi' I, in Sámarrā after a reign of six months.

MURĀDI. [See ALMORAVIDS.]

MURĀD, the name of an Arab tribe. 

belonging to the great southern group of the Mudhīdī [q.v.]; genealogical tradition (Ibn al-Kalbi, Dāmmarāt al-Murād, Esqali, M., fol. iv. 114–117), which is followed by Ibn Durūd, Kitāb al-Hisāb, ed. Wustenfeld, p. 238, and also Līthān al-Arab, iv. 409) regards Murād as a nickname for this tribe. It was said to have been the first to rebel (tamarruṭa) in the Yaman: an etymology which is not convincing. Murād's own name is said to have been Yaḥūdī b. Mudhīdī and he was therefore a brother of the Ān and the Sa'd al-Adhābī (Wustenfeld, Gwalt. Tabātiln, p. 74). Although they were neighbours of the South Arabian civilization, the Murād have always played a typically Bedūn character: their country (usually called al-Dāvī and placed to the east of Nadāf and Murād) is bare and sterile (cf. the picturesque description given of it by the Kitāb al-Hisāb, with its mention of the Murād tribe, mentioned by Yāqūt, al-Madīnī, ii. 78) and its inhabitants are notorious as brigands (fath al-Murād; cf. Kitāb al-Hisāb, x. 147). The land inhabited by the Murād and by their neighbours, the Hāmādī [q.v.], had once belonged to the Ta'īy (Yāqūt, al-Madīnī, i. 129), who had left it to settle in the north of the Arabian peninsula; it is probable that it was from the old masters of the country that the Murād and the Hāmādī inherited the cult of the god Yāghūth (cf. below).

The Murād appear for the first time in history in connection with an episode, not however at all clear, of the last days of the dynasty of the Lakhdīram, the last of the king Amr b. al-Mundhir (III) b. Mā'ṣim, who excluded his half-brother 'Amr, a son of Uṣamah, sister of Hind, mother of the first-named 'Amr, from the line of the king, and declared him his chief but when he began to rule tyrannically, they killed him, which gave 'Amr b. Hind a pretext for invading the land of the Murād and putting to death the murderer of 'Amr b. Uṣamah (al-Mufaddal al-

Dārī), Amīn al-Arāb, Constantinople, 1900, p. 68–69, who gives a more satisfactory account of the passage in the narrative, from which Ibn al-Diūrī said (the same story is given by Ibn al-Kalbī, Dāmmarāt; according to Yakūt on the other hand by Huhārī b. 'Ābd yāxīlī, Murādīn, the latter's son Kāsī seems to have been the last of the powerful chiefs of the Murād at the time of the rise of Islam.

The Murād had just then suffered a disastrous defeat, which had considerably weakened them, at the hands of the Hamādī, as the result of a quarrel which had arisen in connection with the control of the worship of the god Yāghūth (cf. Wellhausen, Reste arab., Heidener, p. 19–22 and the sources mentioned by him). It is probably this defeat (Yaḥūdī al-Rāzīm), which tradition places in the same year as the battle of Badr, which made which a section of the Murād think it advisable to seek an alliance with Muhammad; but Kāsī b. al-Makshih refused to join in this. It was therefore another Murād chief, Farwā b. Musāik, who went to al-Madīna in the year 10 A.H., and concluded a treaty there with the Prophet (cf. Caetani, Annali dell' Islam, ii. 332). To what extent tradition is in saying that Farwā was given authority to levy zakāt on all the tribes of the Yaman, is very difficult to ascertain. In any case, the policy of the Murād was not oriented towards Muhammad under the leadership of Kāsī b. al-Makshih. In the great rising led by al-Awādī and the Anṣāni against Persia begun in the Yaman, the Murād were against them. But if, as tradition has it, Muhammad used his connections with some of the tribes of the Yaman to prevent al-Awādī's success, after the death of the Prophet these same chiefs refused obedience to Abū Bakr and resolutely threw themselves into the struggle against Is läm. It is again Kāsī b. al-Makshih who plays the chief part in these events. Taken prisoner, Abū Bakr granted him his life and henceforth the chief of the Murād and his tribe played their part bravely in the conquests. We find them sometimes in Syria, sometimes in the Ṭraj, and Kāsī everywhere distinguishing himself by his expediency and courage. He lost an eye at the battle of Yamīk (cf. Caetani, Annali dell' Islam, i. – v., index s.v. (p. 5 b. Hubayrah). But the account of his death in the civil war between 'All and Muḥāfīzīn is based on confusion with another man of the same name of the tribe of Badjīla (this fact, which is clearly indicated by Ibn al-Kalbī, Dāmmarāt and Taḥārī, i. 301– 

302, has already been noted by Ibn Ḥadījār, Ḥābī, ed. Sharaṣīyā, v. 281; Annali dell' Islam, i. 638 should be corrected). We also find the Murād in the conquests of Egypt (Annali, iv. 573, 21 A.H., § 101 2 120) But it was at Kufa that they settled in the 10th century. It was there that one of them, Abū al-Raḥmān b. Muḥāfīzīn, assassinated the caliph 'All. It was there also that in 60 (679) H. (cf. Ummayyād) was executed by orders of the governor 'Umayyād Allah b. Ziyād after being found guilty of conspiring with Muhammad b. 'Ākīl in favour of al-Ḫusain (Tahārī, ii. 227 sq.). He was a descendant of the poet 'Amr b. Kūtāf (R. S. O., xii. 58, 3271), one of the very few poets
of this title, which does not seem to have produced many individuals of note either during the Djihunya or under Islam. We may however mention Awais i-karan (of the Banu Karan b. Rukman b. Nabilia b. Murad: Westendt, General Taf., p. 7, 251) one of the prototypes of Muslim asceticism.

(G. LEVI DELLA VIDA)

MURAD I, according to the common tradition the third ruler of the Ottoman state, was a son of Orkhan and the Byzantine lady Nilifer. Although some Ottoman sources profess to know the year of his birth (Saghil-i ȓiyma, i. 74 gives the year 726 = 1326), this date, like all dates given by Turkish sources relating to this period, is far from certain. The name Murad (Greek sources such as Phrantzes have Ἐκδικήσω, from which later Latin sources make Amurath, while contemporary Latin sources from Italy have Morathel) must have originated in mystical circles and hardly occurs in other times. An Ṣadūl Murad lived in Orkhan's time (cf. Saghil-i ȓiyma, iv. 354; Asikhi Pasha Zade, ed. Giese, p. 200: photographs of his tomb in R. Hartmann, Im neuen Anatolien, Leipzig 1928, plates 9 and 10). The ancient Turkish chronicles often call Murad Gahi Khunklär, later Turkish historians Khuđawendiklar (q. v.).

During his father's lifetime Murad had already been entrusted with the government of In Otu and later of Brusa. His brother Sulaiman Pasha had held the more important sandjaks and was destined to become Orkhan's successor. Sulaiman's untimely death, shortly before that of Orkhan himself, placed Murad unexpectedly at the head of the Ottoman principality. This happened about 1361, the date of Orkhan's death is uncertain.

Murad I became the first great Ottoman conqueror on European soil. In this he followed the footsteps of his brother Sulaiman Pasha and of other Turkish emirs before him.

It is not yet possible to gain a clear idea of the success of the military achievements by which the Ottomans succeeded in establishing themselves firmly on the Balkan Peninsula. Even the outstanding victories are confused with each other in the Ottoman and Western sources, and the exact dating of even important events is subject to great difficulties. The Byzantine sources, the most reliable of all, are mainly concerned with the tortuous policy of the Byzantine rulers. On the other hand, many tales of a legendary character have entered the historical accounts of later times. The possession on the whole is, that the Ottoman successes were mainly due to the mutual rivalry between the then existing Balkan states, Byzantium, and the Bulgarian and Serb-Serbo kingdoms, complicated by the struggles of Venice and Genoa for an advantageous position in the Levant, and the zeal of the popes for bringing the Greek church back to Rome. This secured the Ottomans at all times allies in the Christian camp itself. Nor is it possible to ascertain which Ottoman expeditions were really planned by Murad and his councillors and which were merely successful raids by Turkish bands. All this makes it extremely difficult to form an accurate judgment of Murad's personality as a warrior and as a statesman.

Provisionally three periods can be distinguished. The first begins shortly after Murad's accession with the conquest of Western Thrace, in which were taken Corfu, Demotika (if this town had not already been taken under Orkhan), Glamulnjia, Adrianople (about 1362; cf. Eirike) and Philippopolis, mainly through the activity of the Gregorberg, Lala Shihin, and Eftim Pasha. These conquests provoked a coalition of Servians, Bosnians and Hungarians, who were beaten on the river Maritsa by Hadjijli Ilbeks. The western part of Bulgaria was raised up to the Balkan Mountains and the Byzantine Emperor John Palaeologus made his first submission as vassal to Murad. Murad himself had been on a campaign in Anatolia, which brought him as far as Togyat (q. v.) during which he consolidated the Ottoman hold on Angora (already taken by Sulaiman Pasha in 1354; cf. Wittek, Festschrift Jacob, 1932, p. 347, 351 sqq.). He then came to Rum-ill and took up his residence in Demotika, to change this town in 1366 for Adrianople, from this time on the European capital of the Ottomans. The story about a treaty between Nagusa and Murad concluded in 1365 has a legendary character (cf. Giese, Festschrift Jacob, 1932, p. 42, after Jireček). In the meantime the hostility between Byzantines and Bulgarians gave Murad the opportunity of taking Izbol (Soropolis) near Burgas, and the same hostility led to the failure, about 1366, of a crusade undertaken at the instigation of Pope Urban V by count Amadeo of Savoy to come to the rescue of the Byzantine Emperor: the expedition only drove the Turks from Gallipoli for a short time.

A second period of Murad's reign may be said to begin with the crushing of a Serbian advance on the Maritsa near Cirmen, probably in 1371. This Serbian defeat is known to the Turkish sources as ārīhildiχ and gave the Turks during the following years the important Macedonian towns of Seres, Drama and Kavalla, and at the same time the possibility of advancing west of the Vardar. These conquests were made by Evrenos and Dandarl Khalil Pasha, while Lala Shihin obtained about the same time successes in eastern Bulgaria (battle of Samakow). Then followed again some years of comparative tranquillity, in which the newly won regions were partly colonized by Ottomans; the still unsubdued northern parts of Serbia and Bulgaria were governed by the local rulers as vassals of Murad. The latter had more than once to interfere with the dynastic affairs of the Palaeologoi. After John Palaeologus had sold in 1375 the island of Tenedos to Venice, this led to an alliance of Genoa in combination with the Turks, in course of which John lost his throne and was imprisoned, until, by the favour of Murad, he became Emperor again in 1379; his dependency went so far as to help the Turks, together with his son Manuel, in the conquest of Philadelphia (Aia Shehir), the only remaining Greek fortress in Asia Minor. The end of this second period is marked by an increased activity in Anatolia. A part of the territory of the Germiyan-Oghlu (q.v.) was acquired as a wedding gift to prínce Bayázid when he married the daughter of that ruler (probably in 1381); this territorial accession was followed by the sale of the greater part of the lands of the Hamid-Oghlu to Murad and by the conquest of a part of the principality.

About 1385 there followed new conquests in Europe. Turkish troops intervened in Epirus and Albania (under Khalil Pasha), but decisive for the establishment of Ottoman power in the Balkans
was the taking of Sofia (1385?) and Nish (1386?). About the same time, the Italian republics, Genoa and Venice, obtained by treaties with Murad, concluded respectively in 1385 and 1388, commercial privileges in Turkish territory. Immediately after the successes in Serbia, probably also in 1386, Murad went to war with the Karahan-Oghlu 'Ali' al-Din, his son-in-law; this conflict had long been threatening (cf. KARANAN-OGHLU); now the Ottoman power had grown so far as to destroy the political equilibrium in Anatolia. Murad was victorious in the battle of Konya, but left 'Ali' al-Din in his possessions and set the example, henceforward traditional, of leniency in dealing with the Anatolian population. This caused a lively discontent amongst the Serbian troops who had taken part in the battle of Konya. These Serbians are said to have contributed to the anti-Turkish feeling among the Serbians in general, who, under the leadership of Lazar Gresljanowitch, and with the Bosnian king Tvrtko as a powerful ally, were preparing a last effort to free themselves from Turkish vassalage. They succeeded in defeating, an Ottoman army at Plochnik (1388). The results were meagre, however, for at the same time the Turks made new conquests in Bulgaria (Shumla and Timovo) and even raided Morea. In 1389 Murad himself marched against the Serbians and their allies and fought the famous battle of Kosowo Polje (Turkish: KÒSOWA), where he himself lost his life, although the Serbians, partly owing to treachery in their own ranks, were defeated. The most probable date is June 20, 1389 (Gibbons, cf. also Giese, in Epigraphica Orientalia, N° 34, April 1928, p. 2 sqq.). The way in which Murad was killed, during the battle, is not clear from the early sources; the later Serbian epic tradition has the well-known tale that Murad's murder is recorded by Milosch Obranowitch, Lazar's son-in-law, who, claiming to be a deserter, had obtained an audience with Murad after the battle, was admitted to his presence and killed him with a dagger. Murad's body was transported to Brusa and buried in a grave near the mosque which he had built at Cekirge in Brusa (cf. Ahmed Tewhid. in T. O. E. M., vol. vii.).

Murad I was the first ruler under whom the state founded by 'Oghlan rose to be more than one of the then existing Turkoman principalities in Asia Minor. This development is symbolised in the successive change of titles given to him in different building inscriptions dated in his reign (cf. Taeschner, in Id., xx. 131 sqq.). While the oldest inscription calls him simply Illy, like his father 'Orkan, and gives him a name (Shihab al-Dunya wa,l-Din) after the Saljuk fashion, he is already called Sultan [q.v.] in 785 (1383); while in the inscription from 790 (1388) on the Sinari built by him in Zakii, we find the style which afterwards became a tradition with the Ottoman sultans (al-monitor al-mawguzum al-ghamam al-mukarram al-sultan ibn al-sultan). It was a time when the old Saljuk traditional institutions, no longer held, and new forms of government and administration came into being, to which the example of Byzantine institutions, and also those of Mamluk Egypt may have contributed. Even if it is not true that Djandar Khair al-Din Khalil Pasha — who was appointed Murad's vizier at the beginning of his reign and died about 789 (1387) — was the first Ottoman grand vizier, it cannot be denied that the activity of this man — who by his origin belonged to a higher culture than the Ottoman — as Murad's councillor as well as his military deputy and administrator in Macedonia, makes him a true prototype of the grand viziers of a later age (cf. Taeschner and Volz, in Id., xviii. 66 sqq.). His son 'Ali Pasha, according to an order by the Sultan, was to take a prominent part during the years of Murad's reign. It is also with Khalil Pasha that the old Turkish sources connect the institution of the Janissaries as troops formed from converted Christian prisoners of war. In the administration of the timars [q.v.] a Kahan of Murad I is said to have brought improvements. Some of these measures were closely connected with the problem of acquiring a quiet and loyal population in the newly conquered Christian territories; this was not possible by Turkish colonisation only but succeeded mainly through a humane treatment of the original inhabitants, after the region had once been conquered.

The most important holdings of Murad I are all in Asia Minor. The best known are the Khâdîvendîkîr Djûmiî in Cekirge, near Brusa, where Murad himself is buried, and the Ulû Djûmiî in Brusa; further a mosque in Bilehik, the Nilûfî Umâretî in Iznik (recently described by Taeschner, in Id., xx. 127 sqq.). There is also a mosque of Murad in Serres. The old Ottoman chronicles enumerate his foundations. — On Murad I. coins cf. 'Ali, in T.E.M., xiv. 224.

Bibliography: The information given by the old Turkish chronicles (Ashik Paşa Zade, Anonymus, ed. Giese, Urduj, the translations of Leucelavius, also Destrî-nâmê Enerii, ed. Muradîn, Istanbul 1928 and this edition Medhal, Istanbul 1930) is sometimes supplemented by the later historiographers (Sale'd al-Din, 'Ali, Munejdjudji-Bashîj). The Byzantine historians (Plantezès, Ducas, Chalcondyles), however, give a far clearer survey of this period so far as it came under their attention, while documents from Venice, Genoa and Rome throw light on the diplomatic activities provoked by the advance of the Turks in Europe. Ibn Hadîr al-Askââînî, Iâbu'd-al-Ghunûr fi Anbâ' al-Umir, contains also a biography of Murad I. Further the historical works of von Hammer, Ziekenen and Jorg, and A. A. Ghibbus, The Foundation of the Ottoman Empire, Oxford 1916, p. 110 sqq.; C. Jiirek, Geschichte der Serben, Gotli 1918. (J. H. Kiemers)

MURAD II, sixth ruler of the Ottoman Empire, was born in 806 (1403—1404) and ascended the throne in May 1421, when he arrived in Adrianople some days after his father Muhammed I's death; his decease had been kept secret on the advice of the vizier 'Iwa'd Pasha until the new sultan's arrival. As crown prince he had resided at Magnisia, and he had taken part in the suppression of the revolt of Simawa Oghlu Badr al-Din. Immediately after his accession he had to face the pretender known in Turkish history as Dozme Muftaâ (q.v.) and his ally Djaunâid [q.v.]. Both were supported by the Byzantine emperor Manuel and at first were successful in the European part of the empire. Bâyazid Pagan, sent from Brusa, was defeated and killed in the battle of Sâzf Dere (between Seres and Adrianople) and the allied Greek forces took Gallipoli. Then Murad himself had to face them in Asia; he suc-
ceeded in sowing discord between Mustafa and Djinaid and defeated the first in the battle of the bridge of Ulubad. Then Murad went over, with the help of ships from the Genoese colony of New Phocæa (Yeni Foca), recovered Gallipoli, after which he entered Adrianople and killed the pretender to the throne on the banks of the river. From this siege was raised, either by the effect of Byzantine gold (through the intermediaries of the graceophil vizier Ibrahim Pasha) or as a result of the rise of a new pretender in Iznik in the person of Murad's younger brother Mustafa. The latter was at last betrayed by his former supporter Iliaş Pasha and killed. Then followed a struggle with Djinaid, who had established himself again at Aidin, but surrendered at last in 1425, after which he was killed. Murad was now at peace with all his European neighbours and vassals; the Emperor Manuel had died in 1424 and was followed by John Palaeologos, with whom peace was concluded. Several towns had been taken in the meantime in Morea, and Wallachia paid tribute. In Anatolia the War continued in 1425 with the acquisition of Ståh, ending with the acquisition of a part of his territory by Murad; after 1425 the Ottoman power was confirmed in Teke and Mentesh and the Karanân Oghlu Ibrahim, who tried to take the already Ottoman Adalia, had to retire and make peace. In eastern Anatolia Yurkedj Pasha subdued the Turkomans round Toğat and Amasia and of the region of Djanik. In 1428 there began difficulties on the Hungarian frontier. The most noteworthy exploit of this period was however the capture of Saloniki (Selanik; q.v.) in March 1430; after the Greeks had sold this town to Venice in 1427; Murad had never given up the plan of avenging that transaction. Peace with Venice soon followed.

Occasionally the Turks had taken several fortresses in Epirus and Albania, but their interest began more and more to concentrate on the north-western regions, where George Brankovitch ruled as vassal over Serbia. With the latter peace was renewed in 1432 and his daughter Mara was given to Murad, but the Turkish raids continued in Serbia as well as far into Hungarian territory. In 1438 the Turks made, together with Serbians and Wallachians, incursions in Hungary (capture of Semendra); in 1440 they beleaguered Belgrad in vain and in 1442 Turkish troops under Merzid Bey laid siege to Hermannstadt. Here they suffered a heavy defeat by John Hunyadi, who in the coming years was to act as champion of Hungary and Christian Europe. He was the leader, in 1443, of a big crusading army including Serbians, Poles, and Greeks; the Turks were thrown back at Nish, where so many had been taken. The campaign ended with a heavy defeat of the Turks at Jalowaz, between Sofia and Philippiopolis. In the same year Murad had to oppose again the Karamân Oghlu, who supported the Christian allies. But the peace with Hungary, concluded in July 1444 at Szczeged, though advantageous to Hungary, maintained the former frontiers of the Ottoman political influence: only Wallachia became tributary to Hungary.

After this peace, which was to last ten years and seemed to Murad a guarantee for the future, he abdicated in favour of his son Muhammad, leaving with him Khalil Pasha, son of Ibrahim Pasha (who had died of the plague in 1429) and Rubsaw Molla [q.v.] as councillors. He retired himself to Magnesia, but had to come back when, in September of the same year, the Hungarians, floating the peace treaty, were preparing a new crusade. They marched south of the Danube to Varna; here the army of Murad inflicted on them a crushing defeat, in which King Ladislas of Hungary was killed. Again, Murad II went back to Magnesia, but in the following year a Janissary revolt broke out in Adrianople and it was the vizier Khalil who invited Murad to return a second time, as the young Muhammad did not seem to be able to face the situation.

During the last six years of his reign Murad led again several campaigns in the Balkan peninsula. In 1446 an action was undertaken against the Palaeologoi in the Morea (destruction of the Hexamilion, capture of Corinth and Patras): in 1447 against Albania, where the activity of Skander Beg [q.v.] had begun in 1443; in 1448 he faced again a Hungarian invading army, which was beaten on the plain of Kossowa; and in 1450 he was again in Albania (siege of Croja). In that year the death of Murad II, the last Byzantine Emperor, after the death of John. Shortly afterwards, in the first days of February 1451, Murad died at Adrianople. He was buried in Brusa at the side of his mosque (cf. Ahmad Tewhid, in T.O.F.M., iii. 1856).

His reign was of extraordinary importance for the future political and cultural development of the Ottoman Empire. After the first critical years he continued his father's work of consolidation. His aim was mainly to live on peaceful terms, with the vassal princes, of whom the ruler of Smâr and the despot of Serbia gave their daughters to Murad. This peaceful policy was in concordance with his character; the Byzantine historians and other Christian sources describe him as a truthful, mild and humane ruler. His most influential viziers were not yet the renegades of later times; they belonged to the old families that had supported the cause of Murad's forefathers and were becoming a kind of hereditary nobility: Ibrahim Pasha and Khalil Pasha of the Djandal Oghulari (F. Taeschner and P. Wittek, in It., xviii. 92 sqq.), Haji Cevat Pasha (Taeschner, in It., xx. 154 sqq.), the sons of Timurtash, of Ewrenos and others. The mystical tradition was strong in his surroundings, as is proved by the great influence of a man like the Shaikh Amir Ilbârî; other shâhîgs came to his court from Persia and Mesopotamia. This determined also the direction which the classical Ottoman literature was to take in following centuries. Murad II was the first Ottoman prince whose court became a brilliant centre of poets, literary men and Muhammadan scholars (see Turks, B, ii). But also to non-Islamic envoys and visitors Murad's court seemed a centre of culture (cf. Jorga, i. 464 sqq., which description applies principally to Murad II). Amongst the sultan's buildings a mosque in Brusa (cf. H. White, Brusa, p. 51) and one in Adrianople (the U Çeherfeli Djamî), are notable and some large bridges. His army organisation is well known from a full description by Chalcondylas.

Bibliography: The older Turkish sources: Neshri (Haniwaldanus), Aşıklı Pasha Zade, Čevali, Kühl, Anonymous Giese, are completed by the Byzantine historians Phrantzes, who himself played a part in the diplomatic history of the time, Ducas and Chalcondylas, and also by
the later Ottoman authors Sa'd al-Din, 'Ali and Maneghdjim Bashî. A curious contemporary description is that of an unknown captive from Muhlenbach in Transylvania (captured 1438) in his Tractatus de mortibus conditionum et nocturna Turcorum (cf. K. Foy, in Mes O.S. iv., v.).

General later descriptions of Murad II's reign are the works of von Hammer, G. O. R., ii.; Ziaferî, i. and Jorgan, i.

(J. H. Kramers)

MURAD III, twelfth ruler of the Ottoman Empire, was born on the 5th Dhu al-Mi‘dâd 195 (4th July 1546; Siţillî xevâbanî, i. 76) as son of the later sultan Selim II and the hâji-şâhi Nûr Bânî. He arrived at Constantinople on Dec. 21st, 1574, after Selim II's death and reigned until his death on January 16, 1595 or a few days later. His reign is not characterized by great conquests in Europe. The peaceful relations with Austria were officially maintained; peace was several times confirmed (in 1575 and 1584) by a new treaty and by extraordinary Austrian embassies. Nevertheless there were continual Turkish raids into Austrian territory, especially in Transylvania 1578 — where even a new sandjak was formed — followed by triumphal processions in the capital, which the Austrian envoys were forced to witness. It was only in 1593 that a formal war broke out, in which the then grand vizier Sinan Paşa took the town of Raab (1594). There relations with Venice were of the same kind as with Austria: notwithstanding several serious naval collisions peace was maintained, mainly through the influence of Murad's hâji-şâhi Saîfyé (of the family of Bâbi) and the Kapudan Pašeys, who were Italian renegades. In the Danube principalities the never ending dynastic disputes went on; this was also the case in Transylvania. Even Poland was considered more or less as an Ottoman tributary vassal state: the Polish king, Stephan Batthyány, owed his crown to the sultan's protection and after his death (1587) the new king Sigismund began to reign by the grace of Murad. The Porte had to intervene several times in the disturbances caused by Polish cossacks in Moldavia and the Tatar Khiâne and by Tatar incursions in Poland. In the Crimea the Ottoman intervention was even stronger, because the Persian war necessitated in 1581 and 1583 expeditions by the way of Khâifa and the Crimea against Dâgiftân and Transcaucasia.

The most outstanding military exploit of the Ottoman Empire during Murad III's reign was the war with Persia, which lasted from 1577 to 1590. Persia passed, after Shah Tahmâsp's death in 1576, through serious inner troubles. This gave the Turks a favourable opportunity of enlarging their territory between 1577 and 1583, the chief theatre of the war was Georgia: Lala Mustafa Paşa won the battle of Lake Calah (August 9, 1578), after which the princes of the small Georgian kingdoms became nominally Ottoman vassals, while several towns, like Tiflis and Shaki, came under direct military occupation. In 1579 the town of Kars was fortified. That same year Sinan Paşa became serasker on the Georgian front. The completion of the conquests confronted the Ottoman armies with serious difficulties, especially after Simon, the former king of Kârtlî, had come back from exile in Persia. This made necessary the already mentioned expedition by the way of the Crimea in 1581 under Ozdemir 'Othmân Paşa who was joined in 1583, by the same way, by Džafir Paşa; they came back to Constantinople again via the Crimea and 'Othmân Paşa was received with great honour by the sultan after his return, although it would seem that the real aim of the expedition — a junction with the Turkish forces of the south — was not reached, owing to the combined efforts of the people of Georgia and Shirvan (cf. W. E. D. Allen, A History of the Georgian People, London 1932. p. 157). The second phase of the Persian war began with the taking of Tabriz in 1585 by 'Othmân Paşa, followed by other successes on Persian territory (Gandja in Transcaucasia and Nîhâwând). In 1587 Shâh Abâbî I ascended the throne: soon afterwards there began peace negotiations, ending in a peace treaty (March 21, 1590) which left Georgia, Shirwan, Karâbâgh, Tabriz and Lurîstân to the Ottoman Empire. One of the peace conditions was that the Persians should give up most of their anti-Sunni religious practices.

During Murad III's first years Muhammad Paşa Sokollî, who had continued to administer the huge Empire as grand vizier, but his once unquestioned authority began to wane under the influence of the sultan's courtiers like Şems Paşa and the defterdâr Uweis: an influential personality also was the Kâhîa'da Sa'd al-Din — the historian — and the eunuch Ghazanfer Agha. Home and foreign politics were influenced also by Murad's mother Nûr Bânî and the already mentioned hâji-şâhi Saîfyé (Bâfi), who used as a powerful agent outside the palace the Jewess Kira (Chierazza in the Italian sources). Sokollî's confidants were relegated from the capital (as the nîšâhîqî Fertîlân) or executed (like Michael Cantacuzenos). But he was still grand vizier, when he was murdered on October 11, 1579. After him the grand vizierate was changed no less than ten times under Murad III. Sinan Paşa already mentioned, held the office three times: 'Othmân Paşa, appointed in 1585, after his return from Dâgiftân, died eight months afterwards. The sultan, though well-intentioned, was too weak himself to direct a consistent policy, — as he acknowledged himself according to 'Ali (cf. Hammer, G. O. R., ii. 567) — all kinds of abuses gradually began in this epoch, especially in the administration of the sîefs (cf. Tâmkî and the enrolling of the jannâries; they are summed up in Köthe Bey's Risâla. This sultan's reign witnessed for the first time revolts of the Janissaries directed against the imperial diwân itself. The first mutiny, in April 1589, was caused by depreciation of the coinage and could be appeased only — as so often afterwards — by the sacrifice of the lives of the high officials. In 1592 there was a similar Sighâr revolt. More than one provincial rebellion had to be subdued by force: the most celebrated expedition was that of Ibrahim Paşa, the later dânîîî and favourite of Muhammad III, to Egypt and Syria in 1583; in Syria he percutently severely the Banî Ma‘ân, the leaders of the Druses, but very soon afterwards the successful career of Fâhir al-Dîn [q. v.] began.

Murad's reign can be characterized as the beginning of the internal weakening of the Ottoman power. The sultan did not possess the strong personality of his grand father; his amorous tendencies were much encouraged by his mother and his wife Saîfyé, and he had far more than a hundred
MURĀD III — MURĀD IV

children. Besides he was inclined to mysticism; he protected mystic poets and himself wrote poems under the tাতalātāt Murād, besides a mystical treatise called Fathāšt al-Šiyām (Hadījī Kūhilā, Nº, 100). His personal Shiī faith was in sympathy with the repeated outbursts of Muslim fanaticism that occurred during his reign and led to the conversion of several churches in the capital into mosques, among them the church of the Greek Patriarchs. These actions caused violent but vain remonstrations from the representatives of France and other Catholic powers. The outward splendour of the court was extravagant: the festival of the circumcision of his son Muhammad, in June 1522, seems to have surpassed all similar ceremonies in the Ottoman history (description by Leobnll). Bibleography: The Turkish contemporary sources are the historical works of 'Ali (a Nauratīn of of 'Ali is dedicated to the Georgian campaign, Péebw, Selaniki, Şoāk Zade and Hasan Rey Zade; Nāmāt al-Hadījī Kūhilā begin with the year 1001 of the hijra (October 1520). Contemporary western sources are the Relazioni of the Venetian harolo's, the diary of Gerlach; further v. Hammer, G.O.R., iv. and the historical works of Ziekenies, iv. and Jorga, iii.; E. J. W. Gibb, H.O.P., iii. 170 sqq. (J. H. KRAMERS)

MURĀD IV, fiftth son of sultan Ahmad I, and seventeenth ruler of the Ottoman Empire, was born 28th Dijumāt I 1101 (July 27, 1612) and called to the throne as a result of the mutiny of the Janissaries and Şipāhis, which had forced Muşafat I to abdicate, on September 11, 1623. When the lives of Murād and his brothers were in danger, they had been hidden by Kūhilā Pasha. But even after his enthronement Murād IV’s position was far from strong. The turbulent and continuously mutinying Janissaries and Şipāhis were the real masters of the situation and the seven grand viziers that succeeded each other between the accession and 1632 were more or less dependent on the momentary wishes of those militias. The young sultan and his mother Kosem [q.v.] were at first unable to restore the authority of the government, and more than once they were constrained to sacrifice a high official to the mutinous soldateska, amongst them the grand vizier Haz'ı Pasha [q.v.] in February 1622. Gradually the old experienced statesmen of Selim III’s time regained their influence, and sometimes the sultan was able to suppress unreliable officials; he already in April 1624 by the execution of the grand vizier Kemāneš ‘Ali Pasha [q.v.], but it was only in 1632 that he became real master of the situation; in that year he had the grand vizier Redjeb Pasha — until that time one of the most influential men at court — executed, after which began Murād IV’s personal reign of terror.

During this period from 1622—1632 the Asiatic affairs of the Empire required all the available energy of the Porte. In 1623 Baghad had fallen after many atrocities into the hands of the Persians as a result of the intrigues of the Turkish sultan Bekir; Mosul also became Persian, and the Persian army under Hācırz Pasha was powerless. Abūz Pasha [q.v.] was still in revolt at Erzerum; in 1624 an agreement was reached with him, but only in 1628 the grand vizier Khoşrew Pasha forced him to surrender, after which Abūz played a part as governor of Bosnia and of Silistria. In the meantime several vain efforts were made to recover Baghdad, by Hācırz Ahmad Pasha in 1626, and by Khoşrew Pasha [q.v.] in 1629.

From 1632 Murād IV was occupied with incredible energy in the mobilisation of all the country’s resources for the war against Persia, where Shah ‘Abbaš I had died in 1627. He suppressed with great cruelty the rebellious movements among the Janissaries and reduced their number by not applying the devetkirm for twelve years. New and more reliable troops were formed from the dījefdis, bostandjis and especially the raghāms (seymens). The necessary funds were procured by drastic financial measures. Amongst them the confiscation of large fortunes. Every attempt at opposition was cruelly suppressed; in 1633 even the Shāh al-Islām Akhī-Zaide Ḥassān was executed. In October 1635 an army under the new grand vizier Jāhād Yaḥyā Muhammad Pasha left Constantinople, and the following year important military operations took place. The Kapudan Pasha Dēfār, however, was successful in suppressing the power of the Druse Amīr Fakhr al-Dīn [q.v.] and bringing him alive to Constantinople. In 1635 Murād himself left the capital, joined the grand vizier’s army in Erzerum and conquered Erivan (August 1635). Then the undefended Tabriz was taken and destroyed, after which the sultan returned. In the following year the Persians recaptured Erivan. Finally, in 1638, Murād took the field for the second time with the grand vizier Tāfīr Muḥammad Pasha; Baghad was taken by them in December 1638, and thousands of Şipāhis were massacred. This was the end of the Persian war; in 1639 a peace was concluded, which left Baghad to Turkey and Erivan to Persia.

In comparison with the events in Asia, European affairs were of secondary importance. The peace with Austria was several times renewed (1625 at Gyarath and 1627 at Szn) although predatory raids from both sides never ceased. Serious trouble was caused in 1624 by the appearance of Cosack ships in the Bosporus; they were defeated only in 1626. Another hotbed of unrest was the Crimea, where from 1624 to 1628 the Porte had to suffer against its will the Khan Muhammad Giray and his brother Şahin Giray, who even took Kaifa for a time. After 1628 the Tatār Mirzā Kantemur (or Kantumur), chief of the Noghays, became the most powerful man in the khanate; his continual incursions caused serious conflicts with Poland (peace restored in 1634) and in Moldavia. At last Kantemur was executed at Constantinople in 1637.

The peaceful relations with Venice and the western seas powers continued; in 1624 the capitulations had been renewed, but the Porte was without authority over the Barbary states of Algiers and Tunis. England, Holland and France concluded separate treaties with their rulers in order to avert as much as possible the damage done to their trade by the ships of the corsairs. In 1638 a more serious battle took place in the Adriatic between the Venetian fleet and Barbary corsairs; at first Murād ordered the massacre of all Venetians in his Empire, but in 1639 peace was restored. In Constantinople the ministers of Holland (Haga) and England (Roe) intervened successfully in the
MURAD IV — MURAD PASHA

troubles between the Porte and the Greek Patriarchate.

MURAD IV died on February 9, 1640 and was buried in the turbe of the mosque of his father Ahmed; he was the last warlike sultan of the Empire by his energy he restored for some time its military authority, but his reforms did not last after him. Still a separate hanınn-nıme bears Murad IV's name. He was a man of considerable physical strength and of high personal erudition and he liked the company of poets. His attachment to the poet Tith [q. v.] is famous in literary tradition. The poet Nefti [q. v.] on the other hand was executed by his order. On verses written by Murad cf. Gibb, H. O. P., iii. 248 sqq.

He had four sons, all of whom died young; at his death there was only his brother Ibrahim to take the succession. His brothers Bâyazid and Sulaiman were killed by his order during the Erlivan campaign, and later also his brother Kaşım. In course of time Murad had become ever more ferocious, and he is said to have sworn in 1639 that he would subdue all his Christian neighbours (Jorga, iv. 1).

Bibliography: The chief Turkish sources are Na'im, Pecewı and Kara Celebi Zade's Rawdah al-Abrıär. Further the continuation of 'Atıjı's biographical work by Şabik-Zade (G. O. W., p. 259); Eviyi Celebi's Selvanat-nıme is also particularly rich in information about the reign of Murad IV. Of Western contemporary sources must be mentioned the Venetian Relationi and the correspondence of Sir Thomas Roe and Cornelius Haga (Rijks geschiedh. digte Publicat., x.; Bronnen tot de Geschiedenis van den Levantsech Handel, 1590—1600, II, 's Gravenhage 1910). Later treatments of this period in the general works of von Hammer (v.), Ziaielsen (iv.) and Jorga (iii.).

J. H. KRAMERS

MURAD V, Ottoman Sultan from May 31 till Sept. 7, 1876. He was born on Sept. 24, 1840 as son of Sultan 'Abd al-Madjid and was deprived of all influence on public affairs during the reign of his elder brother 'Abd al-'Atıjı, who had the plan of altering the succession in favour of his own descendants, so as to deprive Murad of his rights. Murad was called to the throne by the coup d'état of the recently established cabinet, of which Midhat Pasha [q. v.], Muhammad Rushdı and Hüsın 'Awuni were the leading members. By depositing Sultan 'Abd al-'Atıjı they hoped to eliminate the influence of reactionary elements who were opposed to their schemes of reform and they expected to find an ally in Murad. In the night from 30th to 31st May 1876 Murad was induced with some difficulty to proceed to the Seraskerate in Constantinople where he received the homage of the troops and the high dignitaries. He confirmed the cabinet in office. Very soon afterwards took place the suicide of the deposed sultan (June 5) and the murder of the ministers Hüsın 'Awuni and Rashid Pasha during a cabinet meeting in Midhat's house (June 15). These events seem to have been fatal to the mental equilibrium of the new sultan, who, already in the night of his accession, had shown signs of abnormal nervous excitement. He was unable to appear in front of his people at the selaminlik, nor could the sword-girding ceremony (kilği aàyıl) be applied to him. Midhat Pasha and his friends, although fearing that a new

change of ruler might endanger their plans, had to arrange another deposition; they had the sultan's health examined by a number of physicians and, on their report, obtained a fatwah from the Sheij 'Ali al-Halq Ehir Efendi, authorizing Murad's deposition (September 4). His younger brother 'Abd al-Hamid II became sultan and Murad went to live in the Cıraghan Palace, where he died on August 29, 1904. His confinement during 'Abd al-Hamid's reign continued to excite speculation as a yet unsolved mystery and was occasionally represented as one of the crimes of the Hamidian regime.

J. H. KRAMERS

MURAD PASHA, Turkish grand vizier under 'Ahmad I, was a Catholic by birth and was born about 1520. He served the empire as military commander and later as wali in different provinces (Egypt, Yaman, Anatolia) and was made commander by the Persians in the battle of Tabriz (Sept. 1358), where Cihfıle's army was destroyed. In 1601 he was pasha of Budın and in 1603 commander-in-chief with the Hungarian front. In these posts he repeatedly conducted for the Porte peace negotiations with Austria. He was the chief negotiator of the peace of Zsitvatorok (Nov. 11, 1606). A month afterwards (Dec. 11, 1606), after the execution of Derdüş Pasha in Constantinople, he was appointed grand vizier, being then already about 84 years of age.

As grand vizier Murad Pasha became particularly famous by his relentless persecution and repression of the many rebellions in the Asiatic provinces. In 1607 he defeated the Kurd Djanbulad [q. v.] in North Syria (battle of Urudj Owasl in Oct. 1607). After having passed the winter in Aleppo, he succeeded in crushing the forces of the arzhebel Kalender Qohlu at the pass of Goksun in Cappadocia (July 1908), where he decided the battle by his personal courage. Then he pursued from Siwas the rebel Maimûn and defeated him near Biaurlı. His habit of throwing the captured rebels into pits dug for that purpose brought him the name of Koyğdu Murad Pasha. Notwithstanding the sultan's order — provoked by his envy in the capital — that he should proceed immediately against Persia, he returned in December to Constantinople, where he was received with great honours. Poets celebrated his achievements against the rebels. In 1609 Murad Pasha went to Scutari for the Persian campaign, but he went no further that year, because he wished first to deal with two remaining dangerous rebels: Muselli-Caşh in Rı Ili and Yusuf Pasha in Aădın. By false propositions of reconciliation these two were at last induced to surrender and afterwards killed. Murad Pasha had to make use more than once of his personal influence with the sultan to restrain the latter's impatience before his plans had succeeded.
On the other hand, the sultan had to protect several dignitaries against the personal hatred of the terrible old man. In 1610 the grand vizier at last marched to Peraila and destroyed Tabriz; then he went to Eyrevan, from where he began long and extended negotiations with Shah 'Abbas. Before the following year's campaign had begun, he died (August 5, 1611). He was buried in a türbe near the mosque he had founded in the quarter Wenezjuler in Constantinople.

By his successes in restoring the internal order of the empire Murâd Paşa is considered as one of the most able grand viziers; the historians give ample proofs of his sound judgment of persons and situations. To his initiative is due a compilation of the kanuns regulating the timar administration (G. O. W., p. 141).

MURAD SÜê. [See AL-FURAY.]

MURADABAD. [See MOKÂRÂDÂB.]

MURÂDÎ, takhallus of Murâd III [q. v.] and Murâd IV [q. v.].

MURCIA (Ar. Murujâ), a town in the S. E. of Spain, 140 feet above sea level in the centre of the famous huerta de Murcia ("gardens of Murcia") watered by the river Segura (Ar. Wâdî Shûqûra [q. v.] or Wâdi-l-lâbyâd, "the white river"). The area of Murcia has a large population: over 150,000, although the town in the strict sense has barely 30,000. Murcia is the capital of the province of the same name and the see of a bishop; it has also a university. Its port, 40 miles to the south on the Mediterranean coast, is Cartagena, the Kordofâna or Kordofânat al-Khulâfâ' of the Arabs.

The situation of Murcia in the centre of very fertile gardens, forming an island of vegetation in a bare country poorly endowed by nature, had been noticed already by the Arab geographers who give more or less long accounts of it. Abu 'l-Fidâ', for example, says that it was like Seville for the number of its groves and parks (munatazâbât), among which he mentions the famous al-Rushâkâ.

Murcia in the Uniaid period was the capital of a province or kûrah which bore the name of Todmir [q. v., iv. 805]. This name which is connected with the name of Theodemir, a Visigothic chief of the region at the time of the Muslim conquest, was also applied to the town of Murcia itself, from the time when it supplanted Orihuela [q. v.] as the chief town of the region. Indeed almost all the Arab authors who speak of Murcia agree in saying that it was a comparatively recent foundation; it was built by order of the Uniaid emir 'Abd al-Rahîm II al-Hakam about the year 210 (825), according to the al-Rawâd al-mi'âr in 216 by the governor Dâhir b. Malik b. Labîd.

The land of Todmir and with it of course Murcia was much involved in the civil wars provoked by the rivalry of the Yamanîs and the Mudasirs of Spain in the period of the independent emirs of Cordova. In the reign of 'Abd Allah (275-300 = 888-912), a rebel, the renegade Dâisam b. Isâhâk, rose there with the connivance of the famous agitator Ibn Hašûn (cf. UMAIYADS II). He ruled independently all the province of Todmir until the emir of Cordova sent to suppress him in 283 (896) an army led by his uncle Hishâm b. 'Abd al-Rahîm b. al-Hakam and the general Ahmad b. Muhammad ibn Abi 'Abda. Daisam was defeated between Aledo and Lorca and the latter town besieged. The country was only definitely pacified and restored to the central power in Cordova in the reign of the caliph 'Abd al-Rahîm III and his successor al-Hakam II.

During the events which ended in the break up of Umâyяд Spain, Murcia became, like the majority of the great towns of the Peninsula, the capital of a little independent state. At first in the hands of the "Slavs" (cf. ŞAKÂLABâ) Khairân and Zuhar, along with Almeria and Jan, the principality of Murcia was then for some time attached to the kingdom of Valencia, in the reigns of 'Abd al-'Azîz al-Mansûr ibn Abi 'Amir and his son 'Abd al-Malik al-Mu'azzâr. The governor who then ruled Murcia was Abû Bakr Ahmad b. Išâk Ibn Tâhir; when he died in 455 (1063) after amassing a considerable fortune, he was succeeded by his son Abû 'Abd al-Rahîm Muhammad who soon proclaimed himself independent and repudiated the authority of the Valencia dynasty.

The principality of Ibn Tâhir soon aroused the covetousness of the minister of al-Mu'tamid [q. v.] Ibn 'Abdah, king of Seville, and an expedition was sent against Murcia with the help of an independent lord of the district, Ibn Rashîk. Ibn Tâhir was taken prisoner and shut up in Montegudo, but escaping, he reached Valencia where after acting as adviser to his khalîf Ibn Qâhî l-Nun [q. v.] and having almost succeeded him, he finally died in 508 (1119). The conquest of the kingdom of Murcia by Ibn Anmûr in the name of the 'Abbasîs took place in 471 (1078), but it was only nominal and it was Ibn Rashîk who exercised the real power instead of Ibn Tâhir.

The kingdom of Murcia was one of the first districts of the Peninsula to be conquered by the Almoravîs. Murcia was taken for Yusuf b. Tâshîfîn [q. v.] in Shawwal 484 (Nov.-Dec. 1091) by the Lammûtulan general Ibn 'Alîgha who next took Denia and Játiva. Ibn 'Alîgha remained governor of Murcia; he was replaced later by Abû Bakr b. Ibrahim Ibn Thüilât, then by a brother of the sultân 'Ali b. Yusuf, Abû Isâhâk Ibrahim.

A general rising against the Almoravids took place in Spain in the beginning of the 11th century and gave rise to the formation of a new series of kingdoms of "taifa." Murcia therefore between 1143 and 1147 was in the hands of two rival leaders, 'Abd Allah b. Iyaâd and 'Abd Allah b. Faradj, until the Valencian ruler Muhammad b. Ahmad b. Sa'd Ibn Mardânish seized it and took up his residence there. This individual, who was of Spanish origin (cf. above, ii., p. 403), soon became the powerful ruler of all S. E. Spain, between Valencia and Almeria, and instituted a series of fruitful alliances with the Christian rulers of Catalonia, Aragon and Castille. He was for long able to resist the attacks of the first Almohads 'Abd al-Mu'min [q. v.] and Yusuf [q. v.], and it was only after his death in 567 (1172) during the siege of his capital Murcia that his kingdom passed finally to the Mu'âimid sovereigns.

From the fall of the Almohad empire in Spain until its conquest by the Christians Murcia had
a very troubled existence. It was in turn the
residence (from the beginning of the 11th century)
of princes of the family of the Banū Hūd of
Saragossa: Muhammad b. Yāsuf al-Mutawakkil,
the latter's uncle, Muhammad, Abū Bakr Muhammad
al-Walī, then he passed to the Nasrids of Granada
to Abd ʿAllāh b. Abū Bakr as-Saidī. For details
of the obscure history of this period such a mono-
graph by Gaspar Remiro quoted below. According
to Ibn al-ʿAṣl (cf. M. Bencheneb, *Notes chrono-
logiques sur la conquête de l'Espagne*, in *Melanges
Rene Basset*, Paris 1923, n. 733), Murcia was
surrendered to the Christians by Abūb b. Muḥam-
mad b. Hūd, son of the governor, on Thursday
10th Shawwāl 640 (April 2, 1243). But if we may
believe the Christian chronicles it was in February
1266 that Don Jaime of Aragon took definite
possession of Murcia.

**MURDĀDH** (p.), the fifth month of the
Persian solar year running from July 19 to
Aug. 18 (Murdād nūt); Murdād also the name
of the seventh day of each month (Murdād
rū); it is the last of the series of the days which
are called after the Ame-ḥa Spentas. Murdād
(Pellevi amurdadh “immortality”) forms with Khur-
dā (q.v.) (Pellevi khuradh perfection) an
indivisible pair and the days which bear these names
come together. They denote a pair of archagels,
of whom Murdād has charge of the gifts of the
earth on which the life of man depends. The
seventh day of the month Murdād on which the
names of the day and of the month are the same
is called Murdadānah.

**AL-MURDJĪA, name of one of the early
sects of Islam, the extreme opponents of the
Khāridjītes [q. v.]. The latter thought that a Muslim
by committing a mortal sin becomes a khār. The
Murdjīa, on the other hand, were of opinion that
a Muslim does not lose his faith through sin. This
doctrine led them to a far-reaching quest in politics;
according to their doctrine, the inmām who was guilty of mortal sins did not cease to
be a Muslim and must be obeyed. The šalāt
performed behind him was valid.

Occidental and Oriental explanations of the
name show considerable divergencies (cf. e.g.
Sale, *Preliminary Discourse*, p. 229 sqq.; Goldziher,
*Richtungen der islam. Koraanübersetzung*, p. 179;
V. Kremer, *Gesch. d. herrschenden Ideen*, p. 20;
Houtmans, *Spiegel der gotse*, p. 34). It seems
to me that the origin of the name must be sought
in the term ʿirādī, in this way that Murdād is a noun
adherents of the doctrine of ʿirādī “(Abd ʿAllāh
al-Baghdādī uses the term for their doctrine) and
that this term goes back to verse 107 of sūrā ix.
The context of this verse not only explains the
term ʿirādī, but may also give an insight into the
 evolution of the ideas of the Murdjītes. In
the preceding verses Muhammad makes a distinc-
tion between two groups among the Madineh
who had forsaken him in the expedition to Tabuk
[q. v.]: some had shown ʿirādī without penitence;
they were to receive punishment in this and in
the other world (verse 102). Others had shown penitence (tawwudh); they were left to Allah's mercy
(verse 103). The third group, who had not made
penitence, were left in suspense (mudjaʿi; 
or, according to a different reading, mudjāna).
The situation in Madina after the expedition to
Tabūk was generalised by certain sects. As a matter
of fact, the third group mentioned in the passage
discussed — viz. sinners who did not show penitence
— was relegated to Hell by the Khāridjītes.
In opposition to this, the Murdjītes taught the
doctrine of ʿirādī mentioned in sūrā ix. 107 and
therefore they were called Murdīja, i.e. the
adherents of the doctrine of respite or hope; for
this term ʿirādī means; the variants murdījuna
and murdījūna are irrelevant in this respect.

In the course of time the doctrine of the Murdīja
assumed a double aspect. Their chief thesis was the
indelible character of faith, in opposition to the
Khāridjītes. Their second thesis was of an escha-
tological nature: where there is faith, sins will do
no harm. On account of the latter doctrine they
were called the adherents of promise (ʿabd al-nīfak)
in contradistinction to the Muʿtazīlīes [q. v.]
who were called the adherents of threats (ʿabd al-
aqīd). So the doctrine of ʿirādī had acquired a
triple aspect — which accounts for the divergent
explanations of the name — viz. the doctrine of faith
bearing an indelible character, an indulgent attitude
among sinners in the Muslim community, and
a hopeful prospect for them in the Last Judgment.

These are the chief tenets of the Murdīja as
they appear to us as well as to later Muslim
writers such as al-Shaghraṭāni. Earlier authors
enumerate a number of divergencies among
the different groups of Murdījītes. Al-Aṣḥārī mentions
their variety of opinion regarding faith, unbelie-
sin, tawwudh, interpretation of the Kurān, escha-
tology, mortal and venal sins, forgiveness of mortal
sins, the impeccability of the Prophets, punish-
ment of sins, the question whether there were
influs among the early generations of Islam,
redress of wrongs, the beatific vision, the nature
of the Kurān, the qudullūs of Allāh, His names and
ṣifāt, predestination.

ʿAbd ʿAllāh al-Baghdādī mentions three groups
of Murdījī: a. those who taught ʿirādī regarding
faith and free-will; to this group belonged ʿAbān
Abū Marwān al-Dimashkī, Abu ʿShaḥīr, Muhammad
b. Abu Ṣabīl al-Ḥassa; b. those who taught ʿirādī
regarding faith and compulsion (ṭabīr); c. those
who gave faith the pre-eminence before works and
works.
belonged neither to the adherents of the doctrine of free will nor to those of predetermined, so the latter group belonged the followers of Vivas b. 'Awn, Ghasāmin, Abū Thawbān, Abū Ma'dūh al-Tawmān, Bishr b. Ghayyath al-Mātars [q.v.]. The followers of Ghasāmin reckoned Abū Hanifa as one of their friends, not, however, quite rightly, according to al-Baghdādi. That Abū Hanifa shared the general views of the Murdijī, appears from his (unedited) letter to al-Batti, which is preserved in a MS. in the library of Cairo.

Although al-Baghdādi mentions a hadith in which the Murdijī are cursed, the high esteem in which Abū Hanifa stood as a dogmatist and as a doctor of the law would be in itself sufficient proof of the fact that the "sect" was not too eccentric. As a matter of fact, their political quietism was largely practised by orthodoxy itself. As regards ecclesiastical punishment, the Fiṣḥ Ḥādrun, ii. (art. 14) rejects the Murdijī doctrine of the capacity of our good deeds being accepted and of our sins being forgiven, Abū Hanifa being free to punish the sinner or to grant him forgiveness. — The same 'akīda, however, shares the Murdijī doctrine of the constancy of faith (art. 18).

(A. J. Wensinck)

MURGHĀB. [See MERW AL-SHSHIDJAKIN.]

MURDI, new, the term applied during his period of preparation to one who wishes to enter a derwīsh order [TA'RĪQA, q. v.; cf. also DERWISH] or to a guild [SIN, q. v.]. The task of the murid and his obligations to his master (sharīk, shir) and to his ideal and mystical and erotic foundations have been often and fully discussed, so that it is here sufficient to give a reference to the most important literature of modern times, which will guide one to the sources themselves. In the wider application of the word murid has become a term for mystic in general.

(M. Plessner)

AL-MURUJANI, ABU AYUB SULAIMAN AL-KHANZI, vizier of the caliph al-Mansūr. When the governor of Fars Sulaiman b. Habib al-Muhallabi in the Umayyad period had the future caliph al-Mansūr, who was accused of embezzling state funds, flogged and intended to treat him with still greater indignity, the latter was saved by Abu Ayub al-Murijani who was Sulaiman's secretary. According to another story, al-Murijani purchased him as a young boy and sent him some capacity to his brother, the caliph al-Saffah, who was so pleased with him that he at once took him into his service and promoted him there. After his manumission, Murijani was in any case appointed vizier by al-Mansūr in succession to Khālid b. Barmak. He had a great influence over the caliph: in 512 (770) however, he was arrested with his brother and the latter's sons and deprived of all his property. According to some, his crime was that he had embezzled a large sum received from al-Mansūr to make a district in Khūzestān arable and deceived the caliph when he came to inspect it by making the place look as if it were cultivated. According to others, he had a son of al-Mansūr murdered. He died in prison in 514 (770). — The nisba al-Murijani comes from Murijan, a town in Khūzestān.

MURSALAT (A.), pass. part. IV from arāda "to send". As a technical term it denotes a. an apostle of Allāh; b. traditions of which the isnād is defective in a certain sense; cf. ṢULĀH, i. c.

AL-MURSALAT. title of Ṣura lxxvii., after the first verse: "By those which are sent by Allāh, following one another in a continual series." According to some interpreters a certain group of angels is meant here; according to others, however, the mursalat are the verses of the Korān. See the commentaries on the Korān on 104 Ṣura lxxvii. 1.

MURSHIDABĀD, district in the Presidency Division of Bengal; area 2,145 sq. m.; pop. 1,372,274, of whom 713,152 are Muslims. The public offices are at Barrampur, but the old capital is at Murshidabād, which before Murshid Kuli's appointment was known as Mahbubnagar or Mahbubulbād. The district is mainly agricultural, and produces much rice, jute, etc., and is famous for its mangoes. The silk industry was formerly of great importance, but has now much declined. The district played a very prominent part in the history of Bengal, and is full of historical sites though Plassey is now outside its borders. The history of Calcutta and of the English in Bengal is intimately connected with Murshidabād. But the Nawābs are no longer of political importance.

Murtada al-Sharif Abu l-Kasim 'Ali b. al-Tahir Dhi l-Manasir Abi Ahmad al-Husain b. Mansur b. Muhammad b. Ibrahim b. Musa al-Kasim b. Djalal al-Sidid b. Muhammad al-Bakir b. 'Ali Zain al-Abidin b. al-Husain b. 'Ali b. Abi Talib, Alas al-Huda, a rab author born in 555 (969), died in 436 (1042) as Naskh of the 'Alds in Baghdad. Of his works, which are detailed in Alwahad, Verszeichnis der Handschriften, in Berlin, No. 16, we still have the following: 1. His principal work Ghurar al-Fawaid wa-dawar al-Qalii b. 'I al-Mu'asarat, usually called briefly al-Dawar wa l-Ghurar, which he finished on the 22nd flash 436. (Aug. 24, 1022) is an adab book which the discussion of verses of the Kur'an and traditions adds numerous philological and lexicographical notes and extensive references to poets and is divided into So (82) madhils, lath. Tbran 1275, 1277, pr. Cairo 1225 as the Khal al-Askali. 2. Khal al-Shafi, a defence of the unnamine of the Twelvers against the Musulim of the Mu'tazilis chief kadi of the Shafiis in Rayy Abu l-Husain 'Abd al-Ujahbahr b. Ahmad al-Asadabadi (†415 = 1024), along with an abbreviated version of the year 432 (1040) by al-Thajj al-Tsaii entitled Talikhi al-Shafi printed in one volume Tbran 1301: 3. Tahdih al-Awa'min in a collected volume Tbran 1304 (s. E. G. Browne, A Year among the Persians, p. 554); 4. al-Dhara'i'i lijilal al-Shari'a, Brit. Mus. Or. 5581 (Descriptive List, No. 21); 5. al-Mudit al-Qadisiya in the collected volume al-Dhawa'i: al-Abha in, Tbran 1276; 6. al-Insif, on the differences between the Shafiis and the other madhubs, lath. Bombay 1315. (s. Goldziher, Vorl. uber den Islam, p. 271); 7. al-Sighi'i je 'l-Shafi'i ta'a in, pr. Stanbul (Usui) 1302 in a Madjimiin, Tbran 1272 (s. Goldziher, Arabisch, zur arabischen Philosophie, u. p. xxiv, xli). He is also regarded as some by the author of the Nahj al-Balagha, a collection of reputed sayings of 'Ali, which others (so always in Yemen, according to MSS. of the Ambrosiana, see R.S.O., iii. 574) attribute to his brother al-Raji Abu l-Husain Muhammad, born in 350 (969), died 406 (1015) (s. vol. iv., p. 354 sq.); lath. Tabriz 1247, Tbran 1271, Cairo n.d., Baruti 1885 with commentary by Muhammad 'Abd (d. 1905), Cairo 1290; 1328, with footnotes by Muhammad Hasan Naiil al-Marsafi, 1925. Commentaries on it were written by: 1. his contemporary 'Ali b. al-Nasir al-Husaini entitled al-Imam Nahj al-Balagha, s. Catalogue of the Arabic MSS. in the Brit. Library, No. 413; 2. 'Ali al-Din Abu Hamid 'Abd al-Hamid b. Hilal Allah b. 'Ali l-Halidi al-Madiinib, d. 665 (1267) (C.A.L., i. 249—251, Bombay 1304; Tbran 1270, 2 vols., 1281, 10 vols. Cairo 1330, 20 vols.; 3. Kamal al-Din Mithum b. 'Ali b. Mithum al-Najjari in 776 (1374), Fikhr, Cairo, iv., b. 60; 4. 'Imad al-Din Yahyai b. Ibrahim b. Yahyai al-Ujahbahr (s. Brit. Mus. Suppl., No. 1228, iv.; his Divan in Munich, Glaser, No. 104) in the Ambrosiana, C 7, s. K.S.O., vi, 1303; 5. (Persian) Fakhir al-Din 'Ali b. Hasan al-Zawari in the reign of Shah Tahmisp 1 (930—944 = 1524—1537); s. Story, Pers. Literature, i. 14; 6. (Persian) the latter's contemporary Husain b. 'Abd al-Hak al-Halai al-Astarabadi, s. Ivanov, Cat. As. Soc. Bengali, ii. 372; Cambridge Suppl., No. 1342; Asafya, ii. 1608, No. 185. While the authorship of the Nahj al-Balagha must remain open the anthology Tasf al-Khatr al-Arab to is to be ascribed to our author and not with the Ihnen, Cat. Escr., No. 378 to his brother, as in the preface he quotes his own work mentioned under No. 7. He and not his brother as in the article Sharif Pusha is to be credited with the Mashyak al-Murd, which 'Allaki Khalifa No. 1377 ascribes as al-Madrid to the 'Ali and he is probably also the author of the Kitab al-Madrid al-Mahoriy, also ascribed to al-Radi and extant in a manuscript in the British Museum (s. Oriental Studies presented to E.G. Browne, p. 137, No. 2) and was printed at Baghdad in 1328. This also holds of the Kitab Mu'min al-Kur'an, there quoted but now lost. The Turkish commentary on it in Usui ascribed to 'Ali also credits him with the authorship.

Murtadd (A.), "one who turns back", especially from Isfin, an apostate. Apostasy is called tilidim or irddin; it may be committed verbally by denying a principle of belief or by an action, for example treating a copy of the Kur'an with disrespect.

1. In the Kur'an the apostate is threatened with punishment in the next world only; the "wrath of God" will fall upon him according to a Sura of the latest Meccan period (xxi. 105 sq.) and severe punishment (aslaha) "except he did it under compulsion and his heart is steadfast in belief". Similarly it is written in the Medina Sura iii. 8 sq.: "... This is the punishment for them, that the curse of Allah, the Angels and of men is upon them for all time (82); the punishment shall not be lightened for them and they shall not be granted allevation, (83) except for those who later repent and make good their fault, for Allah is forgiving and merciful. (84) Those who disbelieve after believing and increase in unbelief, shall not have their repentance accepted; they are the erring ones. (85) Those who are unbelievers and die as unbelievers, from none of them shall they be accepted the earth-full of gold even if he should wish to ransom himself with it; this is a painful punishment for them and there will be no helpers for them" (cf. also iv. 126; v. 59; ix. 67). Sura ii. 214 is to be interpreted in the same way although it is adduced by Shafi as the main evidence for the death penalty: "... He among you who falls away from his belief and dies an unbeliever — these, their works are fruitless in this world and the next, and they are the companions of the fire for ever".

2. There is little echo of these punishments in the next world in the Traditions (cf. Ibn Mada, Hudad, bbb 2; Ibn Haubal, i. 409, 430, 464 sq.; v. 4, 5). Instead we have in many traditions a new element, the death penalty. Thus Ibn 'AbbAs transmits an utterance of the Prophet: "Slay him, who changes his religion" or "behead him" (Ibn Mada, Hudad, bbb 2; Nasai, Tahrim al-Din, ...
Abu Daud, Hudud, bāb 15; Ibn Hanbal, i. 217, 252, 253, 322). According to another tradition of Abu Abdās and Abū Aṣma, the Prophet said to have permitted the blood to be shed of him "who abandons his religion" and separates himself from the community (Qānūn). (Bukhārī, Dāīyat, bāb 6; Muslim, Kāsimah, tr. 25, 26; Nasa'i, Tabaqat al-Din, bāb 5, 14; Kāsimah, bāb 6; Ibn Māja, Hudud, bāb 1; Abu Dāwūd, Hudud, bāb 1; Tirmidhī, Dāīyat, bāb 10; Fītan, bāb 1; Ibn Hanbal, i. 382, 444). But there was no agreement from the first on the nature of the death penalty, thus three (d. 106 = 724) and Anaā b. Mālik (d. 91 = 710) criticise Ali for having punished apostates (Bukhārī, Istiḥābat al-Murtaddīn, bāb 2; Tirmidhī, Hudud, bāb 25; Abu Dāwūd, Hudud, bāb 1; Ibn Hanbal, i. 217; according to a variant the reference is to Zindikūn or Zuqūr, who served idols; Nasa'i, Tabaqat al-Din, bāb 15; Ibn Hanbal, i. 382, 322). According to a tradition of 'Aisha's, apostates are to be slain, crucified or burned (Nasa'i, Tabaqat al-Din, bāb 11; Kāsimah, bāb 13; Abu Dāwūd, Hudud, bāb 1). On the question whether the apostate should be given an opportunity to repent, traditions differ. According to one tradition of Abu Burdā (d. 104 = 724), 'Umar b. Jishāl refused to sit down until an apostate brought before him had been slain "in accordance with the decision of God and of his apostle" (Bukhārī, Magāzhī, bāb 60; Istiḥābat al-Murtaddīn, bāb 2; Alkām, bāb 12; Muslim, Ima'm, tr. 15; Abu Dāwūd, Hudud, bāb 1; Ibn Hanbal, v. 231). In the same tradition in Abu Dāwūd however, it is added that they had tried in vain for 20 nights to convert the apostate. The caliph 'Umar is also represented as disapproving of this proceeding with the words: "Did you then not let him up for three days and give him a round loaf (ragāfī) daily and try to induce him to repent?" or "he would have repented and returned to obedience to God. O God! I was not there, I did not order it and I do not approve; see, it was thus reported to me" (Mālik, Abūiya, tr. 15). There are also traditions according to which God does not accept the repentance of an apostate (Ibn Hanbal, v. 2 sqq.) and others according to which even the Prophet forgave apostates (Nasa'i, Tabaqat al-Din, bāb 14, 15; Abu Dāwūd, Hudud, bāb 1; Ibn Hanbal, i. 247; Tabari, Tafsīr, iii. 223). 3. a. In the Fīkh there is unanimity that the male apostate must be put to death, but only if he is grown up (bāligh) and composes mensis (wālih) and has not acted under compulsion (maṣḥūr). A woman on the other hand is imprisoned, according to Hanafī and Shafi'i teaching, until she again accepts Islam, while according to al-Awārī, Ibn Hanbal (Tirmidhī, Hudud, bāb 25), the Malikis and Shafi'is (cf. Umm, i. 331, 733), Shafi'ī vigorously attacks Abu 'Ubaid who is not mentioned by name) she also is put to death. Although this punishment is not properly hadīth (cf. thereon Shafi'i, Umm, vii. 339, 285), it is regarded as such by some jurists, as it is a question of a hadīth Allah (cf. e.g. Saraqīsh, Siyar, iv. 162; therefore the execution of the punishment lies with the imām; in the case of a slave however, the māzār can carry it out, as with any other hadīth punishment. Execution should be by the sword. According to the above traditions, apostates must sometimes have been tortured to death. The caliph 'Umar I had them tied to a post and a lance thrust into their hearts (Abū Yusuf, Khuṭbā, p. 112). Shafi'ī expressly forbid any form of torture, like burning, drowning, strangling, impaling, flaying; according to him, Sulfān Baibars (708-709 = 1308-1309) was the first to introduce torture (Horner, Vorget. Geschich. ii. 198). Lane (Manners and Customs, ch. iii, near the end) records the case of a woman who was apostatised and was led through the streets of Cairo on an ass, then strangled in a boat in the middle of the Nile and thrown into the river. [The throwing of the corpse into the Nile was already usual in Cairo in the Fatimid period; cf. Mez, Renaissance d. Isl., p. 29]. In quite recent times followers of the Kādīyānī or Ahmadiyya sect in Afghanistan were stoned to death (O. M., v. [1925], 138). In former Turkish territory and Egypt as well as in Muslim lands under European rule since the middle of the xixth century, under European influence the execution of an apostate on a kādī's sentence has been abolished, but we still have imprisonment and banishment (cf. Isabel Burton, The Inner Life of Syria, London 1875, i. 150 sqq.) however in the other lands as well as the popular judgement the death penalty is sanctioned (cf. 'Alisha, Siyar, 233, 330). 4. a. Whether attempts at conversion must be made is a question of ikhtilaf. A number of jurists of the first and second (viiith and viiiith) centuries deny this (as do the Zāhirīs) or like 'Abī (d. 115 = 733) make a distinction between the apostate born in Islam and one converted to Islam; the former is to be put to death at once (so also the Shafi'is). Others insist on three attempts at conversion (relying on Sūra iv. 156; cf. Tabari, Tafsīr, v. 193 sq.) or have him in the first place imprisoned for three days (cf. above 2). According to others again, one should await the round of the five times of prayer and ask him to perform the sujud at each; only when he has refused at each is the death punishment to be enforced. If however he repents and professes Islam once more, he is released (cf. thereon Shafi'i, Umm, i. 228; Abū Yusuf, Khuṭbā, p. 109). In later times istiṣbāṣ was always applied. b. Apart from the fact that apostasy deprives the murtadd of burial with Muslim rites it has certain civil consequences. The property of the murtadd is ftā' according to Shafi'i and the Malikis; if the fugitive murtadd returns penitent, he is given back what remains (cf. Umm, i. 231 sqq., where Shafi'i opposes the contrary Hanafi view). Others, especially later Shafi'is, regard the rights
of ownership of the apostate as suspended (marshīf) and regard him as one who is under guardianship (mualāfīr); only if the fugitive apostate dies in the dār-al-harb, does his property become fai (Shirāzi, Muhādātulbab, Cairo 1343, ii. 249; cf. Shāfi', Umm. vili. 355). Among the Ḥanafis and Shāfis the estate is allotted by the kādi to the legal heirs (cf. also those in Dārmī, Fāsr, n. 42), the maulākār and umm waḥdāt are set free, even when the apostate escapes into the dār-al-harb, for this is equivalent to his death. If he comes back penitent, however, he receives of his property what still exists; the heirs however are not liable for compensation. The marriage of the murtadd is void (bāji). Of his legal undertakings the istīlād is effective (mujādā), i.e. the umm waḥdāt becomes free: the kitāb also continues. Other legal activities, like manumission, endowment, testament, sale are suspended (marshīf) according to Abu Ḥanifa; according to Abu Yūsuf they are effective as in the case of a person in good health, according to Muhammad al-Shāfi′ī only as in the case of an invalid, i.e. they cannot deal with more than one third of the estate. In the case of the female apostate however, they are always effective. If the apostate makes such legal arrangements after his flight into the dār-al-harb, they are invalid (Shāfi′ī, Fāsr, ii. 132; cf. also Abu Yūsuf, Kālājiyy, p. 111), but since according to Shāfi′ī and Malik his whole estate becomes fai, such legal arrangements are invalid; only the manumission of a slave remains suspended until his possible return penitent; in the case of his death also this slave becomes fai (cf. however above the view of later Shāfi′īs).

He is punished for crimes committed before apostasy, if he returns penitent: for crimes committed during ṣafā, no notice is taken of the ḥaṣb Alība (i.e. no ḥaṣb) but only of the ḥaṣb al-liydīd, and he must for example pay the diya (Sarkhāli, Siyar, iv. 163, 208 sq.; cf. Shāfi′ī, Umm. i. 231).

Mūsā, the prophet Moses of the Bible.

1. In the Kūrān. Muhammad regards Mūsā as his predecessor, his model, and believes he had already been foretold by Mūsā (vii. 156); his religion is also Mūsā's religion (xiii. 11). Mūsā is also conceived in Muhammad's image Charges are brought against him similar to those made against Muhammad he is said to want to pervert people from the faith of their fathers, (x. 79); he practises magic (xxviii. 18). Mūsā and Ḥārūn seem rather to be sent to the stubborn Pharaoh than to the believing Israelites. Revelation is granted him: tawāt. kitāb, fīkh, sūṣuf (ii. 50; xxi. 49; lii. 37; lxxvii. 19), Illumination, instruction and guidance. The picture of him is made up of Biblical, Haggadic and new elements. Mūsā is exposed, watched by his sister, refuses the milk of other nurses and is suckled by his own mother. Coming to the assistance of a hard pressed Israelite he kills an Egyptian but repents of this crime to which Satan had tempted him. He is pursued and escapes to Madian. At a well there he waters the flocks of the two daughters of a shahīkh. One of them invites him home modestly. He receives her as his wife at the price of 8—10 years service. This preliminary history is told in Sūra xxviii. 1—28; the mission itself is often mentioned.

Mūsā receives from the burning bush in the holy valley of Tuwan (xx. 12; lxxvii. 16) orders to take off his shoes, the message to Pharaoh, the signs of his mission, the rod, the snake, the hand that becomes white. His speech is difficult to understand (xiii. 52); Hāsūn accompanies him as a guard (xx. 30; xxv. 37). Pharaoh reproaches Mūsā with ingratitude, saying he had been brought up by them (xxvi. 17). Pharaoh assembles his magicians but their rods are devoured by Mūsā's. The magicians profess their belief in God and are mutilated in punishment (vii. 106—123; xx. 59—78; xxxvi. 36—51). Pharaoh wishes prayers to be offered to him as God, orders Hāsūn to build him a tower so that he can reach the God of Mūsā (xxvii. 38; xli. 38). Mūsā performs nine miracles (xxvii. 71—72; xxv. 59—60). When the Prophet abuses his wife, God uses the following means: 1. she is the wife of a womaniser; 2. she has white hand; 3. deluge; 4. locusts; 5. lice; 6. frogs; 7. blood; 8. darkness; 9. dividing the sea (cf. e.g. Tubari, ed. de Goeje, i. 485).

Mūsā spends 30 and 10 nights with God (vii. 138). He brings instruction and admonition on the tablets. In his absence Sāmīr makes the lowing golden calf (vii. 146; xx. 79—98). Mūsā breaks the tablets. He desires to see God. God croubles the hill to dust (vii. 139). Israel fears war and has to wander 40 years in the wilderness (v. 24—29). Mūsā's enemies, Kātūn (Korah), Pharaoh and Hāsūn, perish (xxviii. 35).

Some details differ from the Biblical story. Instead of Pharaoh's daughter, it is his wife who rescues the infant; instead of seven shepherders Mūsā assembles two. Instead of ten plagues, Muhammad speaks of nine miracles. Mūsā strikes twelve springs out of the rock, one for each tribe (xxviii. 57, a memory of the twelve springs of Elim, Exod. xiv. 27). The divergence is greater when Hāsūn is made minister of the king's household and there are new features: Mūsā repents of having slain the Egyptian. Mūsā sees the burning bush at night and desires to take a brand from its fire for his house (xx. 10; xxviii. 29). Pharaoh's magicians die for their belief in God.

The following seems to originate in Haggada: God forbids the infant to be suckled by an Egyptian mother (xxviii. 11). In the Haggada Mūsā is offered to all Egyptian suckling mothers; but the mouth that is to speak with God cannot imbibe anything impure (Sōfe, 152). That God tilts the mountain over Israel (ii. 60, 87; vii. 170) is explained from the Haggada: Israel hesitated to accept the Tora and God tilted Sinai over them: Tora or death (Sabath), ‘Abdo Zartu, 2). The turning of the sabbath breakers into apes (i. 61; iv. 50; v. 65). vii. recalls the Haggada in which the builders of the tower of Babel became apes (Sanedrin, 109). Kūrān is represented as an exceedingly rich man the keys of whose treasure can hardly be carried by many strong men (xxviii. 76, 79); the Haggada

Ibn Vie 118, the shepherds Musa. regular al-Anbiylf Sura angel added a dragon. in particular relates the wonders it performs. It shines in the darkness; it gives water in a drought, and placed in the ground it becomes a tree bearing fruit; it produces milk and honey and fragrant scent; against an enemy it becomes a double dragon. It pierces mountains and rocks; it leads over rivers and sea; it is also a shepherd's staff and keeps beasts of prey from the herds of Moses. When Musa was asleep on one occasion the rod slew a dragon, on another occasion seven of Pharaoh's assassins.

The varied Biblical, Haggadic, legendary and fairy tale features in the Islamic legend of Musa are thus blended into a very full picture and in Tählabi form a regular romance.

MUSÂ B. NUŞAIR B. 'ABD AL-KÂJJIM B. ZAΪD AL-LA'RÂMI (OR AL-BAKR) 'ABD AL-HĀJJAM, ARAB GOVERNOR, CONQUEROR OF THE WESTERN MAGHÂB AND OF SPAIN. He was born in 19 (640); his father had been in the immediate entourage of Mu'awiya (q. v.). Musa was at first appointed by the caliph 'Abd al-Malik to collect the kharâj at al-Asara, but having been suspected of embezzlement, he fled and took refuge with the caliph's brother, the governor of Egypt 'Abd al-Azîz b. Marwân; the latter took Musa to Syria to the caliph who fined him 100,000 dinars. 'Abd al-Azîz provided half of this sum for Musa and brought him to Egypt where he gave him the governorship of Ifriqiya which had been previously held by Hasân b. al-Nu'mân. The various chroniclers are not to the date of his appointment to the office but it possibly took place in 79 (698) or the following year.

Musa and his troops then entered on a career of successful conquest which ended in the conquest of North Africa and of Spain. Here we give only the most essential details. Assisted by his son 'Abd Allah b. Marwân he sent successful expeditions against Zaglûwân and Saddîmad and reduced the Hâwâra, the Zanâta and the Kutâma. The Berbers taking refuge in the west of the Maghâbir, Musa decided to bring them to submission; confirmed in his office by 'Abd al-Malik's successor al-Walîd, he continued his advance to Tangier and Sûs [q. v.] and returned to Ifriqiya leaving as his deputy in the Maghâbir his freedman Târîq [q. v.]. The latter in 92 (710-711) invaded Spain and Musa anxious about at the same time jealous of the progress made by his lieutenant crossed himself in the following year leaving his son 'Abd Allah as governor of Ifriqiya. Landing at Algeciras in Ramadan 93 (June-July 712) with his other son 'Abd al-Azîz, he refused to take the same route as Târîq and taking the towns of Sidoua (Shadûhûna; q. v.), Carmona, Sevilla and Merida, he was on his way to Toledo when Târîq came to meet him and was bitterly reproached by his master Musa and then continued his march and completely subjuga-
varre. In 95, he left Spain with immense booty, leaving his son Abd al-Aziz as governor, he reached Kairawan at the end of the year and continued by land to Syria in a triumphal procession of Arab chiefs and Berber and Spanish prisoners. The caliph al-Walid then near his end urged him to hurry while his brother and heir presumptive Sulaiman, eager to appropriate the vast wealth brought by Mūsā, tried to delay him. He arrived in Damascus shortly before the death of al-Walid and when Sulaiman assumed power he at once displayed his hatred of the conqueror. Regarding Mūsā b. Nuṣair’s stay in Syria before his death in 98 (716—717), the Arab historians give a number of details which are obviously of quite a legendary character.

**Mūsā Ǧeʿlēbī, one of the younger sons of the Ottoman sultan Ǧaṣārīd Bāyazīd.** According to some sources he was younger than his brother Muhammad I [q. v.], who is generally considered as the youngest. Mūsā had been taken prisoner in the battle of Angora (1402) and was left by Timur in custody with the Gurniyān Oghlu Yaḡūb Beg. The latter sent him afterwards to his brother Muhammad in Amasra, and for some time he became Muhammad’s helper in the re-establishment of Ottoman power in Anatolia; he is even said to have driven their brother Ǧaṣārīd from Bursa, though the current opinion is that Muhammad went there himself. When, in 1404, their eldest brother Sulaiman Ǧeʿlēbī appeared in his turn in Bursa, Mūsā first opposed him in the name of Muhammad and went afterwards, with the latter’s consent, to Europe, where he hoped to make an end of Sulaiman’s reign with the aid of Mirče of Walachia and Stephen of Hungary. At first this enterprise failed through a defeat inflicted on Mūsā near the walls of Constantinople. Sulaiman resided in Adrianople. Here Mūsā appeared suddenly in 1411 (or 1410): Sulaiman had to flee and was killed on his way to Constantinople, after which Mūsā took his place as ruler of the Ottoman territory in Europe, surrounded by the military and political councillors of Sulaiman, as Ewenos Beg and the Djandarlı Oghlu İbrāhīm Pasha. Mūsā began his short reign with great energy, recovering nearly all the Ottoman possessions in Serbia and Thessaly, and sending raiding expeditions as far as Carinthia. At the same time he adopted a despotic attitude which displeased his entourage and prepared the final victory of his brother Muḥammad. İbrāhīm Pasha, sent to Constantinople to exact tribute, went from there to Muḥammad’s court (cf. Taeüner and Wittek in *I. A. X.*, 74) and, when Mūsā soon afterwards began a siege of Constantinople, Muḥammad came to the rescue of the emperor. In this he failed for the moment and he was obliged to return to Anatolia. But in 1413 Muḥammad appeared again in Europe, having found allies in the Serbians. Meanwhile, the Turkish commanders in Serbia and Thessaly were drawn to Muḥammad’s side and even the old enemies prepared to leave Mūsā’s cause; his son and other military chiefs went over openly to Muḥammad. The latter approached Adrianople from the north and followed from here Mūsā’s army beyond Philipolis; then he joined his allies in Serbia and met Mūsā’s army on the plain of Camerun, east of Sofia. Here Mūsā’s army was defeated (July 1412) and Mūsā himself perished in the flight. His corpse was found and buried in the *türke* of Meşzād in Brusa.

**Mūsā, Abu Muḥammad al-Ḥādī, an ʿAbī b. Ḥusayn caliph.** After the death of his father on Meḥarram 22, 169 (Aug. 4, 785) al-Ḥādī ascended the throne and at once put an end to the influence of his mother al-Khā兹urah, by forbidding her to interfere in the slightest matters of state. When he proposed to exclude his younger brother Ḥusayn from the succession in favour of his son al-Qādir, he met with vigorous opposition from the Emarīkūd Yaḥyā b. Khalīl [q. v.]. When the latter boldly persisted in his opposition, he was arrested: but the caliph’s plan came to nothing for he died suddenly in Rabīʿ I 170 (Sept. 786) in Ṣāḥīdīn near Bagdad. According to the usual but not at all certain story, he was poisoned or stabbed by his mother’s orders. Al-Ḥādī who was only 26 when he died is described as brave, just, liberal and full of joie-de-vivre. The most important event of his brief reign was an ʿAlīd rising in Mecca and Medina. ʿOmar b. ʿAbd al-ʿAzīz, the governor of Medina, had punished an ʿAlīd along with some other citizens of the town for drinking wine. As a result the ʿAlīds rebelled and denounced their allegiance to the caliph. After several days fighting the ringleader of the movement, a descendant of ʿAlī called al-Ḥusayn b. ʿAlī, escaped to Mecca where he obtained a number of additional followers. Soon afterwards the pilgrims arrived; at Fakkīkh near Mecca, a battle took place and al-Ḥusayn was killed (Idhādīdja 169 = June 786). As regards the fighting with the Byzantines, the Muslims under Yaḥyā invaded Asia Minor where they took much booty.

The dispute with the latter groups also explains the very detailed stories of witnesses who had seen Musa’s corpse. Bitter differences of opinion within the family are revealed by the fact that even Musa’s son Ibrahim for a long time denied his father’s death, and also by the fact that Musa’s brother Ibrāhīm or a nephew ʿAli b. Iṣāʿ played the traitor with Harūn, inciting him by pointing out the great sums which were given to Musa as the true caliph by his followers; on the other hand, the incautious acknowledgment of Musa’s imāmate by the theologian Hishām b. ʿIṣākam is made responsible for his capture. — The kunya of Musa is Abū Ibrahim or Abū l-Ḥasan, also Abū ʿAlī; the statements regarding the number of his children vary between 30 and 60; 37 is the usual figure. Besides his successor ʿAli al-Ridā some prominence was attained by the partial imām ʿAbdād, but more by ʿAṣād, who, at the time of the great rising of Abū l-Saʿāyā in ʿAṣā, by burning the houses and followers of the ʿAbbāsid, acquired the name ʿAṣād al-Nār, “Zeal of the fire” (Tabari, ii. 986), and ʿAbdād, who on account of similar activities in ʿAṣā was called al-Dīzāzīr, “the butcher” (Tabari, ii. 986); a daughter ʿAṣāzīr, who died in Kūm, has given to this city in her tomb its most important sanctuary.

Musa himself was buried in the cemetery of the Kūrāsh in ʿAṣāl, where his grandson, the ninth imām Muḥammad al-Djwād [q. v.], was in time interred beside him; thus arose the twin sanctuaries of ʿAṣālmain [q. v.].

No. 9663), esp. fol. 108–524; comprehensive collection of Shiʿi accounts with references to the sources in Muḥammad Bākir al-Madjdī, Bīdar al-Ṭanzir, xi. (Teheran 1303, p. 230–313; Abū l-Farājī al-ʿAbhānī, Maḥkūm al-Tahdīn, Teheran 1307, p. 472–176; Ibn Ḥakīm al-Ṭawṣīʿī, Yatīq al-Bāb yallik, 1299, ii. 174 sqq. (from al-Ḥakīm), Teʿālīkh Bagdādī); ʿAbdād, Maṣūṭī (ed. Barbir de Meynard), vi. 309v. 329v.; E. de Zambart, Manuel de génieologie et de chronologie, Hanover 1927, table D. — As the importance of imāms like Musa lies less in their own personality than in the views of the dogmatists upon them, their vitae should also be compared: cf. in Kāshī, Muṣīrāt al-ʿAbbāsī al-Ridā, Bombay 1317, section Abū Mūsā b. ʿAlī b. ʿAlī, Musa, p. 344 sqq.; and also the vitae of Hishām b. ʿIṣākam, Hishām al-Ḥawālī, ʿAmār b. Musa al-Sabūūtī etc.; and the same names in the alphabetically arranged works of Nāḍīrī, al-Rūḍī, Bombay 1917: Tunis, Pfristh, Calcutta 1853–1855; Astarābādī, Manḥud al-_MAGIC (K. S. STROßMANN).

BANU MŪṢĀ, more precisely BANU MŪṢĀ B. SHĀḤIR, the usual name for the three brothers Abū ʿAlī ʿAlī al-Muḥammad, Abū l-Kāṣīm Abū l-Muḥammad Mūṣā b. Shāḥir, who made a reputation under the ʿAbbāsids from al-Maʿṣūm to al-Matavakkil as mathematicians, astronomers and technicians and also at times played a part in politics. The father is said to
to have begun life as a bandit in Khorasan, then to have become an astronomer and geometer. We have no means of testing such stories or learning how a bandit could become an astronomer. If we assume however that Mušā b. ʿAshārūb like Muḥammad b. Muṣā al-Khwārizmi joined al-Maʾmūn’s train in Khorasan as an astronomer and astrologer and then came with him to Baghdad, we can understand that al-Maʾmūn took his three sons, still young, into his service on Muṣā’s death and had them educated in mathematical sciences by the astronomer Yalzy b. Abū Maṣūr. The Band Muṣā thus at a comparatively early age were admitted to that circle of scholars who, by their thorough and expert translations, introduced Greek science to Islam and by their own researches laid the foundation for the glorious development of the sciences in the fifth (ixth) and ivth (xth) centuries. Attaining fame and fortune, they used their wealth to purchase Greek manuscripts and sent agents into the Byzantine provinces to seek for and purchase books. Of Muḥammad b. Muṣā it is related that he met Thabit b. Qurra in Harrān while on a journey and induced him to settle at the caliph’s court. It may be assumed they these scientific expeditions to seek books and scholars did not take place without the caliph’s support.

History also records political and literary feuds. A particular enmity is said to have existed between al-Kindī and the three brothers, because the caliph al-Muʿtaṣim did not entrust them but al-Kindī with the education of his son Alīmah. The feud went so far that the Band Muṣā are later said to have intrigued against the choice of Alīmah as caliph. This story can only be understood in connection with court intrigues, in which the ambitions of the brothers and the jealousy of the courtiers played the same parts as elsewhere. If all is true that is recorded of the malevolent attitude of the brothers to recognised scholars, little praise can be bestowed on their character. The stories of the huge incomes, especially that of Muḥammad b. Muṣā—he is said to have had for a time an annual income of £500,000—exceed all that even the most liberal caliph could heap upon a scholar.

The works of the Band Muṣā include translations and original works on geometrical astronomy and mechanics. Many of their works are written jointly by two or three brothers, others only by one. Muḥammad b. Muṣā is regarded as the most versatile, al-Ḥasan the best mathematician, Alīmah as specially interested in mechanical and technical problems. The astronomical and meteorological observations of the brothers were probably made mainly in Sāmarra; their tables of observations of the sun are mentioned by Ibn Vūnu, M. Curtez, H. Suter, E. Wiedemann and F. Hauser have devoted special attention to the editing and elucidation of these works that have survived in Arabic or Latin.

MUṢĀ b. UMAIR, a follower of Muḥammad of the Kūfī family of ʿAbd al-Dār. The son of rich parents, this handsome young man had attracted attention by his elegant appearance when Muḥammad’s preaching made so deep an impression upon him that he abandoned the advantages of his social position to join the despised adherents of the Prophet. Tradition dilates on the contrast between his former luxurious life and later poverty but these, like such stories in general, are somewhat suspicious, although not impossible, since the people in Muṣā’s time had not yet acquired wealth and could not have been accustomed to luxury.

When his parents endeavoured to prevent him taking part in the worship of the believers, he went with several of the faithful to Aḥṣasratī from which he returned however before the Hijra. The Prophet thought highly of him and sent him after the first meeting at ʿAkaḥa as a missionary to Medina where he won a number of followers for Islam. According to some traditions, he on this occasion, following the practice of the Jews (see MUḤAMMAD), introduced the common Friday sabbath, which however, as was noted above, was not introduced until later. Muṣā b. ʿUkba, others ascribe to the Medinese ʿAbd b. ʿUzāra, while others in an effort at harmonising say that ʿAsād conducted the common sabbath during the absence of Muṣā.

At Badr and at ʿUḥd he carried the Prophet’s banner in memory of the old privilege of the ʿAbd al-Dār; he met his death in the latter battle. With what ardour he adopted the new teaching is shown by his attitude to his mother who is depicted as a most lovable character and particularly from his words at the capture of his brother in the battle of Badr. His wife was ʿHanna bint ʿAbdAllah of the Asad.

ment which bordered on barbarity. He began his military career at the beginning of the caliphate of Marwan I by a badly planned invasion of Palestine. Later sent as governor to Basra by his brother Abi al-Ashraf, he began by putting the army against him by the redoubtable Thakafi agitator and then he-jei led them for four months in the citadel of Kufa. On the death of Muhkhar, Mus'ab ordered several thousands of his followers to be executed and by this savage act made as many enemies as the victims had relatives. He was less successful against 'Ubaid Allah b. al-Mutt [q.v.] who had been sent into the Irak to stir up a counter-revolution in favour of the Muzafirids. A similar attempt at Basra by the Manzadi Khalid b. Asid failed. But by proceeding with great severity against Khalid's followers Mus'ab alienated the most influential personages in the city.

Soon he found he had to defend the Irak which was directly threatened by the Caliph Abd al-Malik; troops were massed at Badjumaira. Mus'ab awaited the Syrian army here and then retired to Dair al-Djathall [q.v.]. His position soon became critical for the Basran troops refused to follow him. The best troops of the province were far away with Muhalali, engaged in an interminable campaign against the Khwarismids. The Zubairid's troops displayed only limited enthusiasm. His officers tried to persuade him and entered into negotiations with Abd al-Malik. The Muzafirid was not stingy in his promises. He also tried to negotiate with Mus'ab, who learning of the perfidy of his followers rejected all offers and decided to die like a brave man. Among his followers Ibrahim b. al-Ashgar alone fought vigorously in the battle; the others folded their arms during the fighting or went over to the Syrian ranks. Abd al-Malik offered Mus'ab his life for the last time with the government of the Irak, but in vain. Thrown from his horse, the Zubairid received the coup de grace from an avenging Bakri. 'Ubaid Allah b. Zaydi, the Zubairid's uncle, is said to have been killed in that battle (Djumada I, October) of 72 (691). Abd al-Malik wept for him and ordered his poets to commemorate his heroic end. Mus'ab's great generosity earned him numerous eulogies from poets. He is also famous for the fact that he had in his barem the two most independent and haughtiest women of the time, belonging to the most undoubted aristocracy of Islam, Aisha bint Talha [q.v.], the second wife of the Prophet, and Sukaina, granddaughter of Ali; feminine types, remarkable in spite of their frivolity for having bravely tried to fight against the degradation of their sex in the Muslim society.

**MUSAFIRIDS**

**AL-MUSABBIHAT**, name of a'ra's liyi', lixi, lix., lixiv. as a group, after the first word of each of them, suhba or yusubbiha. The name is old, cf. Mus'ab. Zakt, trad. 119.

**MUSAFIRIDS**: an dynasty of Dailami origin which came from Tarm [q.v.] and reigned in the fourth and fifth centuries of the Hijjat in Aharbadjan, Arran and Armenia.

Its coming to power was one of the manifestations of the great movement of Iranian liberation which formed a kind of interlude between the end of Arab domination and the first Turkish invasions. While in Khurasan and Transoxania this movement culminated in the rule of the Samanids [q.v.], in western Persia and Mesopotamia its standard-bearers were the Dailamis and to a smaller extent the Kurds (cf. V. Minorsky, *La domination des Dailamites*. Paris 1932).

The Musafirids and the Djusdidas. According to a genuine document quoted in Yakt [iii. 148-50], the Kangari family only comes into history after seizing the famous stronghold of Shamiran in the district of Tarm [q.v.] which was under Karzin. The Kangaris have therefore to be distinguished from the ruling family of Dailam, i.e. the Djusdidas of Kerdbr, of whom seven are known from between 189 and 316 (805-928), while members of the family can be traced till 434 (1042). We know that Muhammad, son of Mus'ab, the eponym of the dynasty (whose real Iranian name was Musafir of Musafir, Musafir, x. 16), had married Karshaisiya, daughter of the Djusddid Djusdian III (from 250 until after 300). From such alliances the names peculiar to the ruling family of Dailam (Dusd, Wushaden, Marzuban) became popular among the Musafirids. In 307 (919) Muhammad killed his wife's uncle 'Ali b. Wahsddan to avenge the death of his father-in-law Dusdan b. Wahsddan. Henceforth there was a breach between the two families. The last Djusdian took refuge with the Dailami chief Asfart (lord of Rayy and Karzin) who sent the Ziyadani Maradwijd against Muhammad but finding fighting they joined forces and Maradwijd slew Asfart. Muhammad was an important ruler and Musafir b. Muhalali speaks with praise of his buildings at Shamiran (1,850 houses) on which 5,000 workmen were employed (the ruins of Shamiran have been described in Brugsch, *Reise d. persis. Gesellschaft*, 1862, ii. 471-472) but he was a difficult character and did not agree even with the members of his own family.

The two branches of Musafirids. In 330 (941) his sons Marzuban and Wahsddan by arrangement with Karshaisiya, seized Shamiran and shut their father up in a fortress, after which the dynasty broke up into two branches: Wahsddan remained in the hereditary see of Tarm, while Marzuban extended his power over Aharbadjan, eastern Transcaucasia, and some districts of Armenia.

The fourth generation of the Musafirids consisted of the sons of Marzuban: Dusdan, Ibrahim, Nasir and Kay Karshaisiya and of the sons of Wahsddan (330-335): Isma'id, Nuh and Haydar (?). Marzuban. This ruler (330-346 = 941-957) is the most important figure in the dynasty. After the death in 314 (926) of the Djusd [q.v.] Vusur, Aharbadjan became the scene of the struggle between the Khwarizmi Kurd Daisam b. Ibrahim and Lashkari b. Mard, a native of Gilan, whom the Ziyarid Wushmgiar supported alternately.
Lashkari died in Armenia and Dasaim was betrayed by his vizier Abu 'Isâsid 'Ali b. Dja'far who had come to an arrangement with Marzubân for both were bâzîfîn (Ibn Miskawîlah, ii. 32). Marzubân occupied Ardabil and Tabriz and finally Dasaim surrendered to Marzubân and received from him a castle in Târûm. Marzubân extended his territory northward as far as Darband. In 332 (943–944) the Russians (Rûs) came by the Caspian and the river Kur and took the capital of Arrân [q.v.], Barda [q.v.] in spite of the resistance of the subjects of Marzubân. At the same time, the Hamdanids of Mâsûl had conceived designs on Ardhabadîand and Marzubân had to deal with a force under Abu 'Abîd Allah Hussîn b. Sa'dî b. Hamdân and the Hadhâmî Kurd Dja'far b. Shâkiya, which had reached Salmâs [q.v.] but was soon recalled to Mâsûl by Nâsîr al-Dawla. On the other hand, the Russians, decimated by disease and harassed by the Muslims, beat a retreat (cf. the sources on the Russian invasion including the Armenian historian, Moses Kalankatavtsî, in Dorn, Caşpî, St. Petersburg 1876; the text of Ibn Miskawîlah, ii. 62–67) which was translated with commentary by Yakubowski in The Travels of Ibn Farnamîd, Leningrad 1926, xxiv., p. 63–92.

A new danger arose in the south-east of the lands of Marzubân when in 335 (946) the Bûyid Rûkûn al-Dawla occupied Raiy (disputed by the Sûfîmids and Mûsâîrîds). Marzubân filled with wrath at the Bûyids decided to attack them in 336. But Rûkûn had time to get reinforcements from his brothers. In 338 (948) Marzubân, defeated near Kâzwîn, was besieged in the castle of Sumârim (in Fârs).

The fugitives from his army gathered round his father Muhammadd and occupied Ardabil while Wasûdân remained in Târûm. Muhammadd soon gave dissatisfaction to his captains and was shut up by Wâsûdân in his castle at Shisâgin (3). Rûkûn al-Dawla sent to Ardhabadîand Muhammadd b. 'Abîd al-Râzzâk, the former governor of Tüs [q.v.], who had deserted the Sûfîmids, Wasûdân released Dasaim in the hope that he would be able to organise resistance. Dasaim who had time to take Ardabil was defeated by Ibn 'Abîd al-Râzzâk but the latter disgusted by the intrigues around him returned to Raiy in 339 (949). Dasaim reoccupied Ardabil but the advance of 'Ali b. Mişkî, a supporter of Marzubân, forced him to seek shelter with the Artsrunids of Wasûrupakan [cf. wân].

In the meanwhile by an ingeniously planned coup Marzubân escaped from Sumârim and recovered all his strongholds and treasures (in 342). After a long series of adventures which brought him to Maw-ji, Baghîch and Aleppo, Dasaim in 344 (955) collected a force and read the buštâni at Sâlihas in the name of the Hamdânî of Aleppo, Yâfî al-Dawla. Marzubân quickly put down a revolt in Darbân and later drove Dasaim back, who once again sought refuge with the Artsrunids who handed him over to Marzubân under threats from the latter.

In an important passage, Ibn Hâwâkal, p. 251–255; gives the list of the tributaries of Marzubân compiled by his minister Abu 'Isâsid 'Ali (in 344). The names include those of the lords of Shirwân, Abshâz [?] uncertain name of a district north of Shirwan; cf. Marquâri, Steifzüse, p. 174: "Abshân" of Shakki [q.v.], of of Djuzar wa-Saghîyan (Gurzîwan and Sagîyân to the west of Shirwan), of Vayots-dzor (district of Siunie), of Ahar and Wâsûrakân (N. E. of Tabriz), of Bîzân (N. of Bâkî), as well as the Artsrunids, Baghrâd, and the princes of Khażan (west of Barûdâ). Wâsûdân and his nephews Marzubân died in Ramaqân 346 (Dec. 957) and while hequeating the power to his brother Wâsûdân forgot to cancel his first will by which his sons Djuştân, Ibrahim and Nâsîr were to succeed him in succession.

The commandes of the fortresses would not surrender them to Wâsûdân who returned to Târûm in disgust. Djuştân b. Marzubân was recognised by his brothers but was only interested in his harem. Marzubân's old general Djûstân b. Sharmazan set up in Urmîya [q.v.] and won to his side Ibrahim, with whom he occupied Marâgha. In 349 (960) the grandson of the caliph Mûsâîk b. 'Isâ rebelled in Girân and took the name of Mûsâîdijîr bi 'înâ. Djuştân and Ibrahim became reconciled and defeated the rebels at Mûsâîk [q.v.].

Wâsûdân began intriguing among his nephews and detached Nâsîr from Djuştân but the quarrel was of short duration. Under assurances from Wâsûdân, Djuştân with his mother and Nâsîr come to Târûm but were thrown into prison. Wâsûdân sent his son Ismâyîl to Ardhabadîand, Ibrahim who was ruling Armenia (Dwin) made a move in 349 or 350 which gave Wâsûdân an excuse to massacre his prisoners. Ismâyîl soon afterwards died at Ardabil after which Ibrahim reoccupied Ardhabadîand and laid Târûm waste while Wâsûdân sought refuge in Dâlaim. Meanwhile Wâsûdân's general Sharmazan b. Mişkî, however, succeeded in defeating Ibrahim and the latter, abandoned by all his soldiers, sought refuge with his brother-in-law Rûkûn al-Dawla, who had married a daughter of Marzubân (355 = 966).

Rûkûn al-Dawla with his usual chivalry heaped favours on Ibrahim and sent to Ardhabadîand his famous minister Ibn al-Sa'îd (Cûstâh Ra'id) who reinstated Ibrahim and subjected the Kurds and Djuştân b. Sharmazan to him. Ibn al-Amîd was who was much impressed by the wealth of Ardhabadîand proposed to Rûkûn al-Dawla to annex this province but his master recalled him to Raiy, saying that he did not wish to be accused of coveting the inheritance of one who had sought his protection. After the return of Ibn al-Amîd matters went badly and from the illusions in Ibn Miskawîlah we know only that Ibrahim was deposed and imprisoned (probably about 369 = 979, the year in which the Tattûrîb al-Imâm stops).

The end of the Musâfîrîds. In the Muslim sources the situation in Ardhabadîand till 420 is obscure but the statements of the Armenian historian Stephen Asošîk, Hist. Universelle, part ii., book iii.; H. Macler, Macles, Paris 1917, ch. 11, 12, 18, 19, 29, 38 and 41, enable us to fill the gaps. According to Kasrawî in 369 (979) Ibrahim b. Marzubân was dispossessed of his lands in Ardhabadîand by the Rawwâdî family (on which see the articles MARÂGHÎ, MARÂN, TÂHÎZ and Kasrawî, op. cit., ii.). The son of Ibrahim Abu 'Isâsid (the "Abhâdî Delmestâni" of Asošîk) retained Dwin [q.v.] and on the invitation of king Mûshel of Kars in 828–983 made an expedition into Armenia where he desecrated the churches. This Abhâdî later lost all his lands to his neighbour Abû'l-Dulâf Shâhânî, lord of Ordûbâd. He later wandered in Georgia and Armenia and even visited the Byzantine emperor.

Ross, in F.R.A.S., 1924, p. 517—019); Huart, Musafirdes de l'Adharbaïjan, in A Volume... presented to E. G. Browne, Cambridge 1922, p. 220—236; R. Varwādī, Geschichte... sünden und Sallāriden, in Islamica, 1927, iii./2, p. 168—186; Zambur, Manuel de généalogie, Hanover 1927, p. 180; Saiyid Ahmad Kasravi, Fākhr al-Dawla, Pākešt-hān-i german, Teheran, i., 1938, and passim, ii—iii, 1929—1930 (a very good book analysing all the Muslim and even some Armenian sources); Markwart, Die Entstehung... armenischen Bistümer, in O.C., xxvii./2, Ns. 80, Rome 1932, p. 150—154 (recognizes the identity of the Rawwādīs of Tabriz and Marāgha). (V. Minorsky)

**MUSAILIMA** (a contemptuous diminutive from Masmalā, which is the form of his name given in Mubārak, Kāmil, ed. Wright, p. 443; 5- Bállāshur, ed. de Goeje P., a. d. Djustan, of Tabrīz, [v. G. for Šālha], a prophet of the Banū Ḥanīfa in Yamāmā contemporary with Muhammad. His genealogy is variously given but always contains the name Ḥabīb; his ḫarijī was Abū Ḥumāma. According to the usual account, he appeared as a prophet soon after the death of Muhammad, after having visited the latter in Medina with a deputation. There is however another tradition according to which he began his prophetic career before Muhammad did, and D. S. Margoliouth has given very cogent reasons for accepting this. According to Ibn Ishaq (Ibn Ḥishām, ed. Wüstenfeld, p. 200), Muhammad's enemies reproached him with having obtained all the families of Yamāmā nāmah. Therefore we have ample evidence (Wādiyāl, trans. Wellhausen, p. 28; Ṭabarī, l. 1935, 14; Bállāshur, p. 105; Baghawi on Sīra xxv. 61) that Musailima, who preached in the name of Ṭabāt, himself called Ṭabāt. Further the story recurring in all traditions that Musailima proposed to the Medinese prophet a division of authority or a transfer of his power to him on his death (a similar story is told of the Ḥanīfa chief Ḥawīla) becomes more intelligible if this prophet already occupied in Yamāmā a position similar to that of Muhammad in Medina. It is also worth noting that the prophetic utterances attributed to Musailima recall the earliest Meccan sûras with their short chyming sentences and curious oaths and have no resemblance at all to the later Medinese sûras. In particular the fact that all the Banū Ḥanīfa followed him into battle against the Medinese shortly after the death of Muhammad shows that he must have been active for a considerable time and was not an upstart imitator of Muhammad. That the latter was the usual method of explaining the "Iṣr" Musailima, is readily intelligible, nor is it to be wondered at that orthodox tradition could not deny itself the pleasure of depicting his relations with the Tamīm prophets—Sūdāt [q. v.] in the most scurrilous fashion. Fortunately however, the otherwise little reliable Saif gives quite a different story, which although influenced by later ideas (Musaillum in order to gain followers reduces the five daily salāts to three; he has a māthaṭhānī and a nūmi; he tries in vain to imitate Muhammad's miracles etc.), gives a picture of him which is in the main correct and we can agree with Wellhausen that his utterances have a distinctly Yamāmā
colouring. According to Sāfī's account, he must have been considerably influenced by Christianity for he speaks of the kingdom of heaven and of him who will come from heaven. Like several other men of the time in Arabia of deep religious feelings he favoured asceticism. He forbade wine and marital intercourse after the birth of a son. It is interesting that Falgräve has collected a number of sayings still current under Musaili's name; unfortunately he did not trouble to record them so that we cannot compare them with what is recorded of his utterances in literature. This rival community in the heart of Arabia meant a serious danger to the young faith of 'īslām. Therefore when the first attempts to repress it had failed, Ābū Bakr sent his ablest leader Khalīl b. al-Walid against Musailima and the Banū Ḥanīfa. A battle was fought at 'Awrāb [q. v.] in 12 A.H. which at first went against the Muslims, but Khalīl's superior strategy finally prevailed and Musailima and many of his followers fell mutiny for their faith. The battle was unusually fierce and the Muslims also suffered heavily, among the fallen being a number of the most important authorities on the revelation of Muhammad.

**MUṢALLĀ (A.),** part. pass. II of ṣalā, place where the ṣalāt is performed on certain occasions. When Muhammad had fixed his abode in Madina, he performed the ordinary ṣalāt in his dīr, which was also his masjīd (not in the sense of temple). The extraordinary ṣalāt's, however, were performed on a place situated southwest of the city in the territory of the Benū Sa'īma, outside the wall, northeast of the bridge on the wall, where at present the street from the suburb al-Anbāriyya reaches the market-place Barr al-Munāshāt (cf. Burton, Personal Narrative, plan opp. i. 256; picture of the musalla as well as of the mosque of Umar situated on the place, opp. i. 329). Muhammad, al-Baladhurī al-Hijāzī, 2nd ed. plan of Madīna, opp. p. 252; part of the Barr al-Munashāt, ibid., opp. p. 264; Caetani, Annali, vol. ii. A., p. 72).

On this spot the čaudāt was performed on the 3rd Shawwāl and on the 10th Dhu 'l-Ḥijāja (Tabarī, i. 1281, 1362). On the latter day the čaudāt was combined with the slaughtering of two spotted rams (Bukhārī, Ajā'ib, bāb 6). On the two days of festival Muhammad and his followers on their way to the musallah were preceded by Bilāl who bore the spear (Ibn Sa'd, q. v.). It is also said that the čaudāt for rain was held on the musalla (copious data in Tradition, cf. Wensinck, Handbook, s. v. Rain; and do., Moham-

med en de Joden, p. 141). Further it is related that the service for the dead was performed on this spot (Bukhārī, Qudsīz, bāb 4, 61; Wensinck, Muhammad en de Joden, p. 140). Finally the musallah is mentioned as the place where executions took place (Bukhārī, Tālāb, bāb 11; Tabarī, i. 1005). The sacred character of the place appears in the fact that pregnant women were taught to avoid it (Bukhārī, Haiz, lāb 23). According to Caetani (A. H. I. § 55, note 3; cf. A. H. 2, § 24, note 1), the musallah was used more frequently. It was not only in Madina but in a large number of other places that the rites mentioned, or some of them, were performed on a musallah. According to al-Nawawī (commentary on Musli'm's Sahih, Cairo 1283, ii. 296), this was the practice of most of the capitals. The custom prevails up to the present day. According to Doubé, the North-African musallah is used for the rites of the 10th Dhu 'l-Hijāja. It is a large threshing-floor, with a wall provided with a mḥāṣib: there is also an elevated place for the ḫarāq. This is the form of the musallah in many towns of Morocco.

To the doctors of the law it was questionable whether the festal musical ceremonies should be performed on the musallah or in the mosque. There was divergence of opinion on this point, even within the Musli'm's (Abī 'Isāh al-Shirrānī, Tabarī, ed. Juybíl, p. 41, where "the field" (aṣḥāb) is mentioned side by side with the mosque; Zarkūsh, comm. on the Musnad, i. 328; Khalīl b. Ḩishām, Muḥtab, Paris 1318, p. 33 sqq.; al-Nawawī, op. cit., ii. 296).

Wensinck has conjectured that even in Islamic times rites of several kinds were performed on an open area, threshing-floor, musallah or the like. The connection between all these rites and the special place is sought by him therein, that they had a special connection with the fertile earth, of which the threshing-floor and the like were symbols.

(Ad. J. Wensinck)

**MUṢAWWIR.** [See Mūṣawwar.]

**MUṢAWWIR.** [See Mūṣawwar.]

**MUṢH.** town in Western Armenia near the southern bank of the Murūd Su (Arsanian), some 70 km. as the crow flies to the west of Khalīt. In pre-Muhammadan times it was the principal town of the district of Tarāna (Husseinhān, H. Forsch., xvi. 326; J. Saint-Martin, Monnaies Historiques et Géographiques sur l’Arménie, i., Paris 1818, p. 102). In Islamic times the name Ťarūn
MUSH — MUSHAF

(as spelled by Yākūt, iv. 534) is sometimes used for the town itself as in Ṭabarī, iii. 1408 (cf. J. Markwart, SüdArmenien und die Tigrisquellen, Vienna 1930, p. 354). The tradition of the Armenian historians connects the foundation of Mūsh with Muḥʃeṭ Manikonean, the ancestor of the powerful, originally non-Armenian family of the Manikoneans, who lived in the 6th century A.D. To him is ascribed the construction of a castle, the ruins of which are still visible on one side of the town itself, situated at the mouth of a mountain gorge and before it extends, as far as the river, a large fertile plain, the "plain of Mūsh." During the first centuries, after the Muḥʃaṭan conquest, Mūsh remained a centre of Armenian national life; from 825—851 it was the residence of the Bagratid Bagrat. After the abdication of this prince to Baghdad in 851, the inhabitants revolted and killed the Muḥʃaṭan governor Yūsuf b. Abī Saʿīd al-Marwānī (Ṭabarī, iii. 1408 sq.). Later on it was part of the vassal kingdom of the Bagratids. Occasionally it was occupied by Muḥʃaṭan adventurers, as in the days of al-Ẓafī al-Dawla (Ibn al-Ṭihīr, viii. 408) in 851. During this time, Mūsh appears for the first time in Islamic geographical literature (al-Makdisī, p. 150). In Saḵlūḏ times the influence of Būzām became stronger; the atabegs of the Armanestān dynasty disputed the territory of Khūḏāt and Mūsh with the Umayyads and even the Aḥzābī Naḏīm al-Dīn laid siege to Mūsh in 604 (1207) (Ibn al-Ṭihīr, XII. 169, 180), and in 625 (1228) Dāḏī al-Dīn Khwārezmshāh was master of the country; in that year a battle was fought by him and lost on the plain of Mūsh against the Saḵlūḏ ruler of Erzerūn (Ibn al-Ṭihīr, XII. 314; Djalalī, Taḵrīr-i Djalalī-nāma, ii. 181). This accounts for the ruined state of the town in the middle of the 6th century (Ḥamd Allāh Mustawfī). After the Mongol period Mūsh was railed by Timūr in 1386, when he invaded the possessions of the Karā Koyunlu (Ṣafār al-Dīn, lix. 419). In 1473 the power of the Ka Koyunlu ruler Urūn Ḥasan was definitely broken in Armenia and from that time on Mūsh belonged to the Ottoman Empire. At that time the population of its surroundings was already strongly mixed with Kurds and Tūrmen. The direct authority was exercised by Kurdish local chieftains, who, in the ruling system of the Empire, were subordinated, as sandjak bezir, either to the pasha of Būlūš or to that of Şan. At the beginning of the 18th century ruled the Kurdish mirvān̄īn Emīn Pāsha, who was deposed in 1828—1829 (Ritter, s. 676 and Ẓafīlī-i Ẓafīlī-nāma, i. 426). In the middle of that century, Mūsh became the chief town in the merkez kāzā Mūsh, in the sandjak Mūsh in the wilāyet of Būlūš, and in the Turkish republic it is a kāzā in the wilāyet of Būlūš. The population of the town (some 5,000 inhabitants) was, until the Great War, half Armenian and half Muḥʃaṭi; one of the Armenian churches had been converted in 879 (1571) into a mosque, according to an inscription (Ritter). The environs had also a mixed population, where, however, ancient Christian sanctuaries had long continued to exist, such as the monastery of Surb Karapet, called by the Turks Çâlîl Kûlise and described by Ewliyâ Čelebi.

During the Armenian troubles in the last years of ʿAbd al-Hamid II's reign, in 1905, there began in Mūsh a revolutionary movement of Armenian tashnâkists, which brought about an intervention of the Kurds and a suppression by government troops, in which the population suffered much. In the Great War the Russian advance in Armenia had gone as far as Mūsh, when, in accordance with the treaty of Brest-Litovsk (1917), the Russian troops retired in 1918, leaving this part of Armenia again in Turkish possession.

AL-MUSHABBIHA. See Taṣḥīḥ al-Muṣḥaf

MUSHAF (Ar.), Ethiopic loanword (cf. Nöldeke, Neu Beiträge, p. 49 sq.; the forms miṣḥaf and maṣḥaf occur also; according to some grammarians they are less correct, especially the latter), or, according to the definition of Arabic lexicographers, leaves (ṣuḥuf, plural of ẓūḥiš), when they are bound together between two covers. In a tradition on the redaction of the Kurān (q.v.) by Ḥajjāfī b. al-Yamān during ʿUthmān's caliphate, it is said indeed, that the collection of leaves that had been made by Zaid b. Ḥabhīt at ʿUmar's instigation, was copied and arranged into maṣḥīf. These were sent to all regions (as standard copies); the ẓūḥiš were re-stored to ʿUmar's daughter Ḥafṣa, in whose possession they had been ever since her father's death. Other ẓūḥiš were annihilated as often as occasion offered itself (Bukhari, Fajr al-Kurān, bāb 3; Ibn Ḥaǧr, bāb 12; Ṣafīr, sūra 9, bāb 20; Ṣafīr, sūra 9, trad. 19).

From the time of the redaction of the Kurān under ʿUthmān maṣḥīf are frequently mentioned in Arabic literature. In a tradition on ʿAmr b. al-ʿĀṣ (a well known stratagem during the battle of Śīfīn it is said that a huge maṣḥīf from Damascas was tied to the points of three lances (al-Dīnawārī, Kūḥāt al-Ahkār, al-ṣifāt, ed. Gurgav, p. 201 sq.; Naṣr b. Muṣḥafī, Wilāyat ʿṢifā, Bājrīt, 1921, p. 350; cf. p. 353); in other traditions "copies of the Kurān" in several numbers are mentioned (e.g. Ṭabarī, i. 3329). In a tradition on the ʿalāʾ it is assumed that in the mosque of Madīna the maṣḥīf had a fixed place (Buḵhārī, Sīlah, bāb 95; Muḥam- dam, ʿṣul, trad. 263, 265); nowadays this place is by the dībka (cf. Lane, Manners and Customs of the Egyptian, chap Religion and Laws; and supra, art. Maṣḥaf, i. D. f.).

It is said that ʿĀṣīa had a maṣḥīf copied for her private use by her maṭla Abū Yūhūs (Ṭirmīḏī, Ṣafīr, sūra 2, trad. 29; cf. Buḵhārī, Fajr al-Kurān, bāb 6).

Maṣḥīf were taken into the field by Muslim soldiers (cf. Tirmīḏī, Ḥadīth, bāb 28; Abu ʿIyād, Dīḥāt, bāb 155); this practice met, however, with objections (cf. Buḵhārī, Dīḥāt, bāb 129; Muḥam- dam, Imaqra, trad. 92, 93), founded on the fear that they might fall into impure hands. For a similar reason persons impure in a ritual sense were prohibited from touching maṣḥīf, save in a special cover (ṣulā ṣulā; Buḵhārī, Ḥadīth, bāb 3).

Bibliography: The lexicons, s.v.

(A. J. Wensinck)
MUSHIR (A.), councillor, Turkish pronunciation mûshîr and mişhîr (modern orthography muşir) with meaning “Marshal”. Mushir literally means “one who points out, advises”. Cf. also the article MÜ-TALâtIR.

According to some authorities, mushir was at first (before the 'Abhâdis) the title of the miniets (later waṣīr; q.v.) or secretaries of state (kâbiâ). So at least we are told by Ibn al-Tîkâkâ’ (ed. Deroenbourg, p. 206; transl. Amar, p. 244). Khalil al-Zâhâri (ed. Ravasse, p. 106 and 114) says that “formerly” an official to whom he gives fourth rank in the hierarchy, which shows he clearly distinguishes him from the waṣīr, the title of the mushir. We seem however to have very little other information about this dignitary. On the other hand, the word mushir in a non-technical sense is often found along with waṣîr of which it sometimes seems to be a doublet or synonym (cf. Mübritz, ed. Wett, iv., fasc. i., p. 20 and 74; Noldke, Die Erzählungen von Minâkinnî and seinen Ministern, Gottingen 1879, p. 53: mushîr muṣîr, waṣîr muṣîr).

We may note however that this older and broader conception did not survive. According to Ibn Khaldûn, the waṣîr is, it is true, an “assistant” to the sovereign, but to his predecessor Mâwardî (Lûtus statutis guevernementis, transl. Fagnan, p. 43 sqq.) the waṣîr is not the adviser of the imâm but his delegate.

If Ibn al-Tîkâkâ’s statement is correct we must see a survival of this older state of affairs in the usage of the Mamlik chancellery where we find among the honorific lîţâh of the waṣîr that of muṣîr al-dâvâda (or al-selâma or al-muṣîr va l-ṣalāţîn). Cf. Kalkashandî, vi. 70.

The same usage, which perhaps came from the Sâlîdîns, is still more clearly established in the Ottoman chancellery. We actually find the word mushir among the alâtâb of the Turkish waṣîr (waṣîr) and almost at the head of the formula, which shows its importance: dastûr-i muṣer, miṣhîr-i muṣfâdîzâhân, niṣâb al-ṭâmâm etc. Whence in the epitaphal style the epithets muṣhirî and muṣhirîn used along with dâštûr and dastûrâsrc or kâbiâ’ and kâbiâ’nâr to designate all that belongs to the official of the rank of waṣîr.

Mahmûd II in creating the principal ministries naturally thought of again giving a real value to this title of mushir, which he gave to the principal ministers, and in the reign of his successor 'Abd al-Madjid “the privy council (muṣlîr-i kâbiâ’, a regular council of ministers) consisted of the grand vizier, the ichâk al-ṣâlim, eleven mushir and three officials” of the first rank” (Bianchi, Le premier annuaire impériâl de l’Empire Ottoman, Paris 1848, p. 7; Bianchi translates mushir by “councillor or under-secretary of state” and has been followed by Darbier de Meynard in his Supplement, the references in which should be taken with this reservation). In 1250 (1835–1835) the title of mushir was given to the new nâṣir of the Interior (miṣhîr-i nâṣîr = the former kâbiâ’) and of Foreign Affairs (kâbiâ’îyî nâṣîr = the former reîz ul-kuṭtab; cf. Lutfi, v. 29). The sahîbîyî mushîrîyî was created in 1262 (1846) (Lutfi, viii. 87).

Mahmûd II also created the post of beylerbeyi waṣîr or chief of the imperial guard, who bore the title muṣhîr-i ‘aṣâhir-i kâbiâ’ (paşâ), an officer who took rank after the sar’oṣer or War Minister (Hammer, Hist. de l’Emp. Ott. xvi. 188 and 189). This title was soon to be contrasted with that of muṣhîr-i ‘aṣâhir-i sâlatîn by the other troops (Lutfi, v. 28).

The ministers did not long bear the title of mushir which gave place to nâṣîr, but the former of these titles, perhaps under the influence of the word “marshal”, which it more or less resembles, became a special military title. It became the highest rank in the army, corresponding to vîrûr in the civil service and to vezetkîr in the religious hierarchy. At first the title redîf-i muṣâhirî nâṣîr (cf. Lutfi, v. 68, 74) was given to the waṣîr of certain provinces, or simply mushir of such and such a province (ibid., p. 185 sgg.; vi. 103, 103; vii. 70). This corresponded to the demarcation of the army corps.

The number of mushir “marshals” soon increased and in the reign of 'Abd al-Hamîd II, there were 39 in 1890 and in 1895, 31 (see the Sâlovâmî-i taşkiri of the years 1306 and 1311). Those who had the right to this title were the sar’oṣer, the tâşkînî “'marshal” or “grand master of artillery”, the sar’u nâṣîr or “grand master of the Palace” (replacing the old cemâ civilซ at-ţik, according to Ahmad Râsîm, Ta’rîkh, l. 156 and 186), the kâbiâ’î mushîrî (as under Mahmûd II), the commanders of the seven army corps (êd êlê), the heads of the army services, the aides de camp to the sultan (faner-i êkâmê). The only duty of five of the mushîrs was to superintend the ceremonial of the Selîmlîk (selîmlîk reisi-i ‘âlama muṣîrî). The officer in charge of the police station (mûscrî) of Bandhâsh, near the Vilâd Kiosk, was also a mushîr (Jûd, vii., 1908, part 2, p. 49). Instead of sar’u nâṣîr the more usual phrase was muṣhîr-i nâṣîr (Lutfi, vii. 62).

The honorific form of address for a mushîr was devletî (devletîlî) ëñfîendêm hazâretleri. In the plural the Persian form muṣhirîn or with epithet muṣhirîn ‘î’, tâshân. The name of the office is muṣhirîyêt or muṣîrîkh, more rarely muṣhirî (Lutfi, v. 91).

The title of mushîr, which has been borne by Muṣâfî Kenneth Paşa himself, has survived in the Turkish republic but there is at present only one mushîr in office, the Chief of the General Staff, Fëwâl Paşa.

In Khotènî, Egypt they stopped at a stage where the influence of the reforms of Mahmûd II was still felt. The rû’ta mushîr there was down to the present reign exclusively the highest grade of officers but without distinction between military and civil offices. It was also in theory a civil rank (rû’ta muṣîrî) to which all the princes of the kheîtival house had a claim.

In Persian the title mushîr has been rarely used. Cf. however the case of the mushîr ed-develî (cf. the similar title above) borne by an aide-de-camp of Naṣîr al-Dîn Shâh (Feuvrier, Trois ans à la Cour de Perse, p. 135–136).

MUSHIRIK. [See Shirk.]
AL-MUSHTARI, the planet Jupiter, Pers. (Mansur < Arab. (Ahurra-mazda). The name of the planet is in Sumerian Shi-ue, later also Mu-tuk-babba, “the white star” ( = Menegaph in Hesychios; cf. Meissner, Babylonian and Assyriken, Heidelberg 1925, ii. 404); in the later Accadian period it is always identified with the numen supremum Marduk (Biblical Merodach). In Hebrew it is called Selek, in Greek — just as among the Babylonians, as the symbol of the highest deity — ἥ τοῦ Δαίμον. As a synonym of al-Mushtari we find (e.g. in Hadith) the name Bursis (e.g. Lesbian al-Arab, vi. 323).

The Arab astronomers, like Pythagoras and Ptolemy, put Jupiter in the sixth sphere (falak) from which it is set. From the interior it adjoins the outer sphere of the sphere of Mars and on the exterior the inner surface of the sphere of Saturn. The following table gives the least, mean and greatest distance of Jupiter from the centre of the earth, expressed in radii of the earth, as given by al-Battani (Opus astronomiacum, ed. Nallino, ch. 50); al-Farghani (Comment. ch. 21), Ibn Rusta (Kitāb al-Af'āl, ed. de Goeje, p. 18-20); and Abū ʿAbdullāh bar Ḥišā (Sphaera mundi, ch. 9), as well as the Hindu values given by al-Bīrūnī from the compilation by Ya'qūb b. Tārikh of the year 161 A.H., and the modern figures for these distances:

The radius of the earth is here estimated at 3,250 (al-Battāni, al-Farghani and Bar Ḥišā) and 3,818 Arab miles respectively (Ibn Rusta) while, according to al-Bīrūnī, the Hindus give it as 1,950 farsakh = 1,150 Arab miles (1 Arab. m. = 193 metres; cf. Nallino, II valore metrico del grado di meridianio). The true geocentric distances of the planet Jupiter are actually about 11\(1/4\) times greater than given by al-Battāni for example. It should however be pointed out that the relation of 37:23 \(= 11\(1/4\)\) for the greatest and least observed apparent diameter taken by this scholar, with the help of which the distance of the apogee was calculated from the estimated distance of the perigee at 8,022 radii of the earth agrees remarkably well with the modern estimate. The apparent diameter of Jupiter at the mean distance is given by al-Battāni as \(45\) of the diameter of the sun. From this and the mean distance one calculates the true diameter of Jupiter at \(4\(1/2\)\) diameters of the earth (\(= 8\(3/4\)\) radii), and its volume at 81 times that of the earth (i.e. \(4\(1/2\)\))^3. The true values are 2,560 (c. 170 times larger): diameter of Jupiter = 11.14 diameters of the earth, volume = 1,350 times the volume of the earth.

Following Ptolemy (Almagest) al-Battāni gives the greatest observed northern (geocentric) latitude as 2\(°\) 4', the greatest southern as 2\(°\) 8'. On the other hand, he points out (ch. 31 and 45) that he found the length of the apogee of the eccentric circle from his observations to be about 8\(°\) smaller (in 879 A.D., 164\(°\) 28') than it was to be expected from the Almagest, taking into account the precession.

The movement of Jupiter is as in the Almagest represented to be through four cycles ("sphere"). µýhè̄ (cf. al-Battāni, Op. astr. ch. 31). The astronomical tables take for its mean daily sidereal motion the value of 5'. Its period of sidereal revolution is given by al-Kazwini (Alā'ī, ed. Wüstefeld, i. 26) at 11 years, 10 months, 15 days.

Al-Mushtari in astrology. Al-Mushtari is the ruler (raḥīḥ) of the Butūt al-Ḳāmil (Sagittarius, night-house) and al-Ḥātī (Pisces, day-house), also night-ruler of the 1st Muthalatha (Triquetrum), which consist of al-Ḥamal (Aries), al-Ḥasad (Leo) and al-Ḳāmil (Sagittarius), whose ruler by day is the sun, and finally companion (rašīq) of the 3rd Muthalatha. It has its Šaraf (exaltation) in the 15th of al-Sawāṭīn (Cancer), its Ḥūl (the 15th of al-Ḳāmil (Capricornus), according to al-Kazwini (i. 22), "the astrologers call al-Mushtari the larger star of fortune", al-Ṣād al-akhsar, because its great influence surpasses that of Venus: they attribute it to numerous happy states and the greatest good fortune. The idea that the planet Jupiter is a star of good fortune is general among other peoples also: we also find it in Babylonia, India and China. For further details of the part played by Jupiter in Arab astrology see the works of Abu Ma'shar.

Bibliography: See that of the articles 'Uṯqūṭ and Miṣṭaḥ. (W. HARTNER)

MUSIKI, or موسیکی, or موسیقی, as it was written in the West (al-Fārābī, یہودی al-Qā'im; Schopenhauer, Raccunratta in Arabic מוסיקה, is the name given to the science of music. It is a post-classical word derived from the Greek μουσική, and was already current at the time of Ishāq al-Mawsili (d. 236 = 850) [q. v.]). In the Muḥtaṣib al-Ulūm (ivth = 6th century) muṣīqī is one of the four mathematical sciences. Its author says: "As for μουσική, its meaning is the science of the composition of melodies (στάθμη). It is a Greek word, and it is named the μουσική. And the composer of the melodies is the μουσίκος or μουσικός (p. 236)". The contemporary Khwān al-Safā' say (i. 87): "Μουσική is γήιματ, and the μουσικός (μουσικός) in Dieterici is the instrument of music (γήιματ)." Ibn al-muṣīqī was the name given by the Arabs to the Greek or mathematical theory of music as distinct from "ibn al-ṣīmā" which was the Arabian practical theory, as we know from the Kitāb al-Ẓāhīr and Yahyā b. 'Ali b. Yahyā b. Abū Mansūr (d. 300 = 912). The latter tells us (Brit. Mus. MS., Or. 2361, fol. 236v) of the "disagreement between the masters of Arabian γήιματ and the masters of [Greek] μουσική". Of course, the Arabs and Persians possessed a theory of music long before they became influenced by the translations made from the Greek.
at the end of the 7th (vith) and beginning of the 8th (Islamic) century.

The Pre-Islamic System. The source of both Persian and Arabian theory of music was an older Semitic one which had influenced, if not actually been the actual foundation of Greek theory (cf. Farmer, Hist. Music., p. 123). No Persian or Arabic technical nomenclature of a theory (i.e. speculative theory) has come down to us from pre-Islamic times, although it must have existed. Al-Farabi (d. 339 = 950) describes a musical instrument, still used in his day, called the ʿabdar al-baghdadi or al-baghdadi, the frets (ʿarṭama, a Persian word) of which gave a “pre-Islamic scale” (Kosgarten, Lib. cant., p. 89; Mafṣūth al-Lūmī. It was a quarter-tone scale which was arrived at by dividing a string into forty equal parts. The idea could be traced to Eratosthenes (Plutemy, Harm., ed. Wallis, i. 14) but probably was of far greater antiquity (Farmer, Influence of Music, in Proceedings, Musical Association, 1928, p. 121).

Although al-Farabi’s instrument did not actually give the following scale, yet the theoretical division mentioned above would produce a scale which, expressed in cyclic terms, would register:

J. P. N. Land was of opinion that the later Pythagorean lute scale of the Old Arabian School was derived from the system of the ʿabdar al-baghdadi. It is more likely however, that there was an earlier lute scale than that of the Old Arabian School, as has been hinted elsewhere (Farmer, Hist. of Arabian Music, p. 70). This was a one-octave scale fixed by the acontura (targiyā) C-D-G-a, the frets of which gave the following scale:

| Cents    | 0   | 204 | 408 | 408 | 702  |

The Old Arabian System. In the 9th (vith) century we get definite glimpses of a theory in the music of the Arabs and Persians. We read of a certain Ibn Misyafah [q.v.] (d. ca. 97 = 715) who had learned Persian music (zhāmā) and accomplishments in playing (ṣarāb) and had received instruction from Byzantine (zānī) harp players (bārṣiyā) and theorists (ʿūṣīqā). These borrowings from abroad incorporated into a system which came to be recognized throughout the peninsula (Kitāb al-ʿAṣfī, ed. ʿAṣfī, fol. 84). We are told however, that Ibn Misyafah rejected from Persian and Byzantine methods what he found to be “alien to Arabic music” (zhāmā). This would appear to show, as Land once pointed out (Remarks, p. 156), that these foreign importations “did not supercede the national music, but were grafted upon an Arabic root with a character of its own.” We know that about the same time, or perhaps slightly later (Kitāb al-ʿAṣfī, i. 98), that the Arabs adopted the Persian lute in the place of their own instrument. This latter, as we have seen, gave a one-octave scale based on the accordatura C-D-G-a, whilst the Persian lute was tuned in fourths thus: A-D-G-c, which enabled the player to attain (with a shift) the double octave. Yet only the highest and the lowest strings of their old lute needed to be altered, and these were given the Persian names of ʿayn and hamm, whilst the second and third strings retained their old Arabic names of ṣanān and ṣawṣaw. The new accordatura of the lute brought about a change in the scale (tabakī) as the following distribution of the frets shows (Brit. Mus. MS., Or. 2361, fol. 237). The lute with the Arabs was the basis of all “theory”, just as the lyre was with the Greeks.

frets of the lute (τάνειον) or pandore (τονιβίρ) by this method. Their rule for fixing the frets was based on tuning a note with its octave or as, if they termed it, its ἐξωθή or δήφ, although the latter term shows that they recognized the interval ratio 1:2. When the Greek scholiasts came to deal with the theory of music all this was changed. There came to be seen a new trend. The Scholiasts of the middle of the 13th (12th?) century, the effects of the writings of the Arab al-Makkarl, who wrote a commentary on the ancient Greeks on music, which had been translated into Arabic, began to be felt. Among these treatises were Aristotle’s Problems and De anima, the commentaries of Themistius and Alexander Aphrodisius on the latter, two works by Aristotle—including the ὀργεύε— it would seem, the two books on music attributed to Euclid, a treatise by Nicomachus, presumably the lost book, and the Harmonics of Ptolemy, all or most of which had been translated by the first half of the 13th (12th) century at least; as we know from al-Razl (Fihrist, p. 266, 269, 270; Ibn al-Kifti, p. 65; Ibn al-Musiki, S. 166; B. G. A., vii. 128; Yāsīr al-Uṣūl al-Saʿāfī, i. 102; and Farmer, Greek Theorists of Music in Arabic Translation, in Isis, xiii, p. 325).

The ‘ilm al-maḥāfīz now became one of the courses of the ʿilm al-riṣālāt or ʿidāhir, and was studied by most savants at this period although later a few sought to study the subject probably, as in Western Europe (Farmer, Hist. Facts ..., p. 184), because it was too abstruse (Ibn Khallīkān, ii. 471). The early scholiasts dealt with the theory of sound (σόον), intervals (αὐθά), genre (αὐθανόμεν), species (αὐθανόμεν), systems (ἐναντίον), sections (ὑπότομον), mutation (αὐθανόμεν) and composition (τόμον), after the manner of the Ancients, and from the above older books, we see that Euclid influenced them in this respect. To this was added rhythm (γόρι). All this was of immense value to Arab theorists and their later copists, the Persians and Turks. Instead of the old method of describing intervals according to their frets they were now given definite names and recognized by ratios. The octave became al-kall (the whole), whilst the fifth, fourth, and ditone were given identical names in Arabic. The tone was variously known as the ἐρίζον, ὁρίζον or μυδία. The semitone or μυδία ὄντων was recognized in the two forms, the ἐναντίον and ὅλον, and the ἐναντίον was the μυδία, whilst the quarter-tone was the ἑξάκοντα. In some ways the Scholiasts were frivolous and diffused in what they borrowed, although in others they were scholarly.

On the question of the physical bases of sound however, and their treatment of musical instruments, they pushed ahead of their masters.

The first to take advantage of the newfound treasures of the “Ancients” was al-Kiḍī (d. 260 = 874) [q. v.]. Seven treatises on music theory appear under his name (Fihrist, p. 255—257; Ibn al-Kifti, p. 370; Ibn Abī Uṣāiba, i. 210), and four of them seem to have survived (Farmer, History of Arabian Music, p. 127; also, some musical MSS, complaint of 911). Some of them are at Berlin (Ahlwardt, Pers., No. 5503, 5550, 5551): Kiḍī fī Iṣyāʾ al-kalārīa al-maḥāfaḍ, Kiḍī fī ʿl-Luḫân, and another without title. The fourth, the Kiḍī fī Khūṣr Twfīf al-Alḥān, is in the British Museum (Or. 2361), and is probably later than the others. In the latter we see the author’s indebtedness to Euclid and Ptolemy. He had written a Kiḍī fī Kiṣmat al-Kahīnī, presumably Euclid’s Sexto canonis. He uses a one-octave alphabetic (abjad) notation which was an improvement on Greek methods, but his pointing the way to a reform of the scale was probably of greater import to the Arabs. By introducing a fifth string on the lute, so as to reach the double octave without recourse to the shift, he obtained the Complete System (Qanāt al-Qanāt: Ptolemy’s sūṣṭa tāsī). To accomplish this a fret called the mutlāb had to be introduced at 113 cents between the mutlāb and the sabbūbā fret, which in itself created another problem, and eventually led to frets being tried between the mutlāb and the above mutlāb at 90 cents and between the mutāb and bintīr frets at 354 cents. Here was the germ of the limma, comma scale of the later ʿunār al-ḥamārī, the forerunner of the Systematic scale.

After al-Kiḍī, we have a gap of a century in actual documents. There are names of theorists in abundance but their works have not survived. Al-Kiḍī’s two disciples, Ahmad b. Muhammad al-Ṣafā, and al-Muṣalihī (d. 550 = 950) and Mansūr al-Maḥāfīz b. Tāhir, contributed works on the theory of music, the former writing six (Fihrist, p. 117, 149, 261).

More important perhaps were the three books of Mansūr b. Kusfī (d. 553 = 950) [q. v.], as well as those of Muhammad b. Zarkaṣī al-Rāzī (d. 520 = 932) [q. v.] and Kusfī b. Lajjī (in. c. 530 = 932) [q. v. (Fihrist, p. 276, 295; Ibn Abī Uṣāiba, i. 309; Kiḍī-al-Maḥāfiẓ, viii. 54; Hadjī Pāla, v. 161). The greatest of all the scholiasts however was al-Ṣafā (d. 539 = 950) [q. v. (Ibn al-Kifti, p. 277; Ibn Abī Uṣāiba, ii. 154; Stein-}

schneider, al-Ṣafā‘ī). Although we lack two of his books on music, the Kiḍī fī Iṣyāʾ al-Alḥān, yet his greatest work, the Kiḍī al-Maḥāfīz al-fiṣr, has been preserved. This treatise, so he tells us, was written because he found an “incompleteness” in what had been handed down from the Greeks. It has been called “the most important treatise on the theory of Oriental music” (cf. vol. ii. 54), but it probably deserved to rank as one of the greatest works that had been written on music. Its treatment of the physical and physiological principles of sound and music is certainly an advance on the Greeks, whilst he was the first to devote a detailed study to musical instruments, a subject on which nothing has come down from the Greeks. Al-Ṣafā was a good mathematician and physicist, and that enabled him to do justice to what the Arabs called the ‘ilm al-nazārī or speculative theory, even to not repeating the errors of the Greeks (Farmer, Hist. Facts ..., p. 292—293). Yet he was something more. He was a practical musician and could appreciate the art as well as the science, which was more than Thémidius could, as al-Ṣafā himself mentions. As a performer with a reputation (Ibn Khallīkān, iii. 509; Ramūl līḡīn al-Ṣafā‘ī, l. 83) he could bring the ‘ilm al-anfūl or practical art to bear upon the discussions. So whilst he was more thorough than the Greeks in handling the physical bases of sound, he could also make valuable contributions to physiological acoustics, i.e. the sensations of tone, a question which the Greeks left practically untouched.

By the time of al-Ṣafā further additions had been made to the scale. The principle by which the Persian and Zalzalian music frets at 303 and 355 cents had been determined, was also applied to the insertion of corresponding miyāmanab frets,
Musiki

between the mu'tah and the akhbab, at 145 and 168 cents, with the result that there were now three mu'ajabab frets known respectively as the Ancient, Persian and Zalzalian, whilst the one at 144 cents had disappeared. Here is the fretting of the lute in Al-Farabi's day:

Al-Farabi also noted the scale of the mu'tah al-khut (C scale) proceeding by a limma, limma, comma, which was probably set by Al-Kindi's speculation. It became the parent of the later theory of the Systematist School. In describing the scales of the rabab or rebec he shows one that gave the just minor third (316) and just major third (386).

The next great writer after Al-Farabi was Abu l-Wafa' al-Buzjani (d. 388 = 998) ([q.v.]), the most eminent of the Arabic writers on mathematics. His book on rhythm (ri'ah) has unfortunately disappeared, although its importance has been testified to (Tibbl. Ind., 1849, p. 93). The contemporary encyclopedists, the Ikhwan al-Safa' in their Rasid, and Muhammad b. Ahmad al-Khwairami in his Masar al-Itfan, also dealt with the theory of music. The latter does not break fresh ground although his work is helpful in controlling others. The former, however, are of considerable import because of their able and lucid treatment of acoustics. Here is an instance. According to Helmholtz (op. cit., p. 10), musical tones are distinguished by their force, pitch and quality, and the force of a musical tone, he says, increases and diminishes with the extent or so-called amplitude of the oscillations of the particles of the sounding body. Preece and Stroh refused to accept this definition and pointed out that loudness does not depend upon amplitude of vibration only, but upon the quantity of air put in vibration (P. R. S., xxviii., p. 366). The Ikhwan al-Safa' had already enunciated this opinion. "Hollow bodies" they say, "like vessels... will resound for a long time after they are struck, because the air within them reverberates time after time until it becomes still. Consequently, the wider the vessels are, the greater the sound, because more air is put in vibration" (i. 89). They also recognized the spherical propagation of sound (i. 88), which was an improvement on the Aristotelian De aulibus (802, a) which said that "the direction of sound follows a straight line" (cf. Vitruvius, De arch., v. 3).

The next writers whose works have been spared are Ibn Sinâ (d. 428 = 1037) ([q.v.] and Ibn Zaila (d. 440 = 1048). Two treatises on music stand to the credit of Avicenna, as he was known in Europe, and they are contained in the Shif'ah (India Office MS., 1811) and the Naqati (Bollingen MS. Marsh., 521) (Ibn al-Kifî, p. 413; Ibn Abi Usâibî, ii. 2; cf. Casiri, i. 271). Unlike al-Farabi, the shahid al-râsi was not a practical musician, yet his biographers claim that he dealt with questions on the theory of music which were neglected by the Greeks. He is scientific and philosophic in his approach, and even critical at times, but he displays little of that originality which is so apparent in his other writings. Ibn Zaila is his disciple and echoed his opinions, although some fresh details emerge when dealing with the practical art. He quotes from al-Kindi on the question of rhythm, and is useful on that account.

Egypt also contributed its quota of music theorists, two outstanding writers being Ibn al-Haitham (d. 430 = 1039) ([q.v.] and Abu l-Salt Umayya (d. 528 = 934). Ibn al-Haitham appears however to have written commentaries on both the Karrarphekhs and the Esaqrya al-jawhara of Euclid (Ibn al-Kifî, p. 168; Ibn Abi Usâibî, ii. 90). Although there were several Arabic commentaries on Euclid's Canon, not one appears to have survived. Yet we have two at least in Hebrew whose authors probably depended on Arabic works. One of these was Moses X. Levy (Halevy) who quotes Shem Tob b. Isaac Shoffrût, and the other was Isaiah b. Isaac (Pethar haggarth, Year i, xxix., xxi.). The Risala fi 'Musiki' by Abu l-Salt was probably of some importance since it is quoted by Jewish writers (Ibn Abi Usâibî, ii. 52; Abkhawd, Pers., no. 5536 [5]; P. Duran, Grammar, Vienna 1853, p. 37). In Syria we have Ibn al-Nakkâs (d. 574 = 1178), Abu l-Hakam al-Bahlil and his son Abu l-Majid Muhammed (d. 576 = 1180), and Al'am al-Din Kayyar (d. 649 = 1251), all of whom were interested in music theory (Ibn Abi Usâibî, ii. 144, 155, 162, 181; Ibn Khallikân, iii. 471), whilst further East we have such names as Ibn Manâ (d. 551 = 1156), Abî al-Mu'min b. Sa'îf al-Dîn (with eighth century), Fakhr al-Din al-Râzî (d. 606 = 1209) ([q.v.]), and Nasîr al-Dîn al-Tûsî (d. 673 = 1274) ([q.v.] (Ibn Khallikân, iii. 467; Bodleian MS. Osley, no. 177: Brit. Mus. MS. Or. 2972; Paris Bibl. Nat. MS. Arab. no. 2466). In the West, the two theorists of consequence are Ibn Badûja (d. 532 = 1138) ([q.v.]) whose book on music enjoyed the same reputation in the West as that of al-Farabi in the East (al-Ma'kari, Anar, i. 125), and Ibn Rashûd (d. 594 = 1198) ([q.v.]) whose commentary on Aristotle's De anima reveals that lucidity of treatment in the section dealing with the phenomena of sound that made him so famous on other questions.

The Systematist School. After Ibn Sinâ and Ibn Zaila, the most thorough exposition of the theory of music, so far as existing documents show, was made by a musician in the service of the last Caliph of Baghdaâd, named Sa'îf al-Dîn 'Abd al-Mu'min b. Fâkhir (d. 692 = 1294) ([q.v.]), the author of two estimable works, the Kiliat al-Sharafiyâ and the Kiliat al-A'zam, which almost every subsequent writer in music uses as his principal authorities. A later theorist, 'Abd al-Kâdir b. Ghâlî, frankly admitted that Sa'îf al-Dîn was the fountain head in music theory, whilst a modern has called him "the Zarlino of the Orient" (Kiesewetter, p. 13), and many commentaries have been penned on his theories. Sa'îf al-Dîn was no mean physician, and he attacks both al-Farabi and Ibn Sinâ when
he finds that their terms and definitions are inexact. Much of it may be more quilbling over verbal niceties, but it redounds to his credit that he realized that in a science we must start off with terminological exactitude. Like al-Dirâbi, he was a practical musician, and the reform of the scale, which must be attributed to him (cf. Helmholtz, p. 280), was possibly due to this fact. The Greek scholiasts had done much to stabilize Arabic music theory, yet anomalies still existed. The most notable was the Zaişalian waṣaṣ note at 355 cents together with its attendant sixth at 533 cents. These did not conform to the scholiasts' scale which produced a succession of fourths (cf. Helmholtz, p. 281). It was to remedy this defect, it would seem, that ұ́ф al-Din laid down a new theory of the scale in which the octave was divided into seventeen intervals in the succession of liyana, liyuna and comma, which enabled him to embrace the fractional Zaişalian notes of 355 and 853 cents by close approximations which worked out at 384 and 882 cents. This scale, which has been considered "the most perfect ever devised" (Parry, Art of Music, 1st ed., p. 29), gave consonances purer than our scale of equal temperament to afford us (Riemann, Catechism of Musical History, i. 65). It is no wonder therefore that Helmholtz has considered the theory of the Systematist School as "noteworthy in the history of the development of music" (p. 283). Here is the scale of ұ́ф al-Din:

After the fall of Baghdad (654 = 1256), the hub of culture moved further East, and the writings of the Systematist School have to be sought as much in Persian as in Arabic. Most of this literature has been preserved. қат al-Din al-Shirbî (d. 710 = 1310) [q. v.], who devoted a valuable ḍimma to the "science of music" in his Durr al-Tâdî (Brit. Mus., Add. 7649), was the first of these writers in Persian. He was followed by Muḥammad b. Maḥmûd al-ʿAmuli (viiith = xith century), whose Nafaṣ al-ʿAṣfarî also has a section on music (Brit. Mus., MS., Add. 16827). Another xith century Persian work deserving of mention is the Kanz al-Thaqâf (Brit. Mus., MS., Or. 2361). More important were the four works of ʿAbd al-ʿAdl b. Ḥabîbî (d. 859 = 1455) [q. v.], entitled the Īlim al-ʿAlâm, with its two commentaries the Muḥajjî al-ʿAlâm and the Muḥajjî ishtar al-ʿAlâm (Bolchain MS.), Mar-b., N. 282, Ouseley, No. 294, 385, and the Sharḥ al-ʿAdwarî. A fifth work, the Kanz al-ʿAlâm, the most precious of all since it contained noted music, has disappeared. Ḥabîbî depends on al-Fārîbî, Ibn Sinâ, and ұ́ф al-Din, but is by no means servile. What he adds to our knowledge of the music of his day concerns the practical art. Both his son and his grandson were theorists, and their works still exist, the Naḥḥawat al-ʿAdwarî and the Mokhâṣṣat al-ʿAdwarî (Nûrî ʿUmmâniyâ Library, Nrs. 3463, 3464). They were in the service of the Turkish sultâns, who were now patronising this class of savants, and we find two theorists, Khuṭâr b. ʿAbd Allâh and Ahmad Uǧûlî Shuṣurîlî, writing in Turkish, the latter translating the Kitâb al-ʿAdwarî of ұ́ф al-Din (Lavignac, No. 2978). They were eclipsed, however, by two Arabic writers, the author (cf. 855—886 = 1451—1511) of the Muḥammad b. Muḥammad b. Mârid Treatise (Brit. Mus., MS. Or. 3296), and Muḥammad b. ʿAbd al-Ḥamîd al-Łâdi (f. 886—918 = 1451—1512), the author of the Râṣîl al-Fâshîya (Brit. Mus., MS. Or. 6629). Al-Łâdi is the last writer to deal in an appreciable way with the speculative theory of music which had been suscitated by the Scholiasts (cf. Kiesewetter, p. 88).

As for the author of the Muḥammad b. Muḥammad b. Mârid Treatise, we have in him an able mathematician who places the Arabic philosophers of Nomismachus and Ibn Sinâ under consideration. He is replete with argument and carefully examines the statements of his predecessors on questions of music. We find him saying that he had put certain theories to practical test and found them wanting. He gives divisions of the string other than those laid down by ұ́ф al-Din.

The contemporary encyclopedias also contain a section on music, the most noteworthy being the Durr al-Nāṣîhî (Vienna MS., NF., No. 4) or Ṭaban al-Khiṭîbî (Bibl. Ind., 1849) of Muḥammad b. Ibrâhîm al-ʿAkînî (d. 749 = 1358), the Muḥaddis al-ʿAlâm (Brit. Mus., MS. Or. 3143) attributed to Abî b. Muḥammad al-Ḍurjânî (d. 916 = 1413), and the Uṣûl al-Ma&wîdî (Vienna MS., N. F., No. 7) of Muḥammad Šâh Čelebi b. Muḥammad al-Ḥanî (d. 839 = 1435). To al-Ḍurjânî may also be ascribed the ʿArâbî Mušâbârâ Muḥyî, the most thorough and illuminating commentary on the theories of ұ́ф al-Din Abî al-Muṭîn, and the most strikingly original treatise of the physical and physiological rudiments of sound (Brit. Mus., MS. Or. 2361).

After the close of the xith (xith) century, treatises on the ʿilm al-muṣâkihî are rare. Writers abound who profess to deal with it, but actually they are only concerned with the practical art. If any ʿilm is displayed in these later books it is the ʿilm al-muṣâfîn, and authors fill their pages with astrological tables linking up the twelve baʿrûn of the heavens with the twelve muḥāfîn, and so forth. Many treatises are written in verse, a form which, however much it may attract the pure ḍābî lover, is scarcely suitable in dealing with science. The author of one of these however, Shams al-ʿīn al-Ṣāḥîbî al-Dhâhibî (or al-Dīmâbî), is worthy of attention by reason of his use of a stave for the purpose of a musical notation, a device which may be traced to the year 1200 at least (Bolchain MS., Marsh, No. 82; Paris Bibl. Nat. MS., Arabic, No. 2480). In the West, treatises on the theory of music are scarcer still. Ibn Khālidîn (d. 809 = 1406) [q. v.] gives a glimpse of what was taught under this heading in his day (Prot., i. 410), but actual works are rare. Certain ʿAbd al-Râhmân al-Ḥâšî wrote a treatise in 1650 entitled the Kitaḥ al-ʿAlâm fi ʿIm al-Muṣâfîr fî l-Ṭâbîûn (Ahlwardt, Forz., No. 5521), but its author borrows his theory from older authorities (Farmer, An Old Moorish Lute Tutor, p. 14).
The Modern School. The chief feature of this school is the so-called quarter-tone system, and its most important theorist is Mūsāki (d. 1888) [q.v.]. The system was not invented or introduced by him as Parisot thought (Rapport, p. 21) because Mūsāki himself tells us that it existed before his day (M. F. O. R., vi. 52, 105). Nor can we say that the sixteenth century was the period of its origin (cf. Lachmann, *Grete's Dict. of Music*, in. 576) since we know that it was practised in the sixteenth century as Baron de Tott (La Borde, l. 436–439), Tardemai (l. 243) and Murat (Fétis, ii. 363) have shown. Nor can it be traced in a MS. mentioned by Villetteau, as Land suggested (Recherches, p. 77–78), because this work can be identified with a MS. entitled *al-Shad'ara dīrāt al-Akhbār* (Brit. Mus., MS. Or. 1535) in which there is no mention of the quarter-tone theory. How did the system originate? Dr. Lachmann holds that it was due to the needs of transposition (Grete's *Dict. of Music*, in. 567). On the other hand, Collangettes avers that in actual practice (for the tune is no longer fiddled) it is simply the Systematic scale to which several smaller intervals have been added (p. 419). Some of the technical terms used in the system are of Persian origin such as those for the quarter-tone, three-quarter-tone, and tone, *nirm awra*, *tīr awra*, and *bāna*. Further, as early as the sixteenth century, as we know from Ibn Ghābi, Shīhab al-Dīn al-ʿĀdil, and the author of the Muhammad b. Muʿād Hess, intervals finer even than those of the Systematic School were being used in the newly-adopted *shībāb* or modal extensions, which were not used in the time of Saʿīd al-Dīn ʿAbd al-Muʿmin, although they are part of the earlier (?) Persian system as reflected in the *Risālah* of al-ʿĀdil by ʿAbd al-Muʿmin b. Saʿīd al-Dīn (Bodleian MS., Ouseley, No. 117). A Persian origin of the quarter-tone system is, therefore, not unlikely, although Muḥammad Rāghib, a well-known writer on Turkish music, argues in favour of a Greek origin (see the Turkish journal Milli Mücadele, May–Oct. 1927, and the Türkische Post, June and Aug., 1928). In the eighteenth century we have evidence (La Borde, l. 436) that the octave was divided into twenty-four equal parts of 50 cents each producing a scale comprising three major tones of 200 cents, each divided into four quarter-tones, and four minor tones of 150 cents, each divided into three quarter-tones:

Mūsāki tells us that he was dissatisfied with the theorists of his day in regard to their division of the octave (cf. Murat's division of the octave into 55 cents). There was certainly a difference so far as Egypt was concerned, since one theorist divided even the minor tones into four parts as well as the major tones, thus giving twenty-eight intervals to the octave (Muḥammad b Ismāʿīl Shīhab al-Dīn). At any rate, Mūsāki attempted to lay down a principle that would establish the quarter-tone (*ruṭ*) system on a proper basis. His method is by no means clear (Land, *Recherches*, P. 75); Collangettes, p. 417, 418), but Ellis (J. S. A., p. 497) and Parisot (*Mus. orient.*, p. 15) believe that he was aiming at a quarter-tone of equal temperament, twenty-four to the octave, which was actually the scale (see La Borde, l. 54) that he found in use (cf. Collangettes, p. 419).

This is the same scale as the preceding with the exception that the base has been given a lower note in the system, i.e. *yakāk* instead of *rast*. The system of the quarter-tone scale generally accepted to-day throughout the Islamic Near East (Collangettes, p. 415), and even in the Middle East (Ali Naḥī Khan Waṣīr).

Although in the Muḥāfīz the little word is written about the theory of music nowadays, yet in Egypt, Syria, Persia, and Turkey, there is no lack of books on the subject, as the Bibliography will show, although many of the treatises are manuals for practitioners. Even in Turkستان, and the auspices of the Soviet, works are being published. During the last decade a great fillip has been given to the study of the theory of music by the establishment of conservatories of music in the great Islamic capitals and chief cities, notably the Dar al-Muṣīqī at Constantinople and the *Naṭījat al-Muṣīqī* at Cairo.

**Theoretical Treatises. Medieval Arabic Texts:**

MUSIKI — MUSLIM

755

(H. G. FARMER)

MUSLIM (M), part. IV of s-lm, denotes the adherent of Islam [i.e.]. The term has become current in some European languages (also in the forms moris, muslim), as a noun or as an
adjective or as both, side by side with Muslim (in different forms). It has replaced Mussulman (in different forms), except in French, where the latter term is used as a noun and as an adjective. The origin of musulman is probably muslim with the ending in of the adjective in Persian. In some countries, e.g. Germany and the Netherlands, popular etymology has taken man for the vernacular "Mann, man", whence the plural forms Moslemmnen, moslemmen etc. These forms have, however, become antiquated. In Arabic literature, the term Muslim is and has always been used to denote the adherents of Islam. See further the art. IMAN, AMIR AL-MUSLEMIN.

(A. J. WENSKIRK)

MUSLIM b. A'KIL, cousin of Husain b. Ali. The latter, taking refuge in Mecca after the death of Mu'awiya I, sent him to study in Kiṣa where the partisans of Ali were inviting him to come and proclaim himself caliph. Muslim there received promise of support from thousands of Shi'is. He wrote to Husain imploring him to hasten there and take command of the movement in person. In the meanwhile, the energetic 'Umar b. Ziyād had replaced the irresolute Mu'awiyah b. Bāshīr [q.v.]. Realising the seriousness of this change Muslim took refuge with 'Amr b. 'Urwā [q.v.]. A stratagem devised by the new governor, soon revealed his landing place. Hāni having been captured, Muslim, abandoned by all his followers, wandered from one place to concealment to another. The descendants of Aḍhāh b. Kais [q.v.] revealed the secret of his last hiding-place—a deed which earned the family the hatred of the Shi'is. The unfortunate 'Alī when discovered surrendered without resistance to the minions of 'Umar b. Ziyād. His head was sent to the caliph Yazīd I. Bibliography: Tabari, ed. de Goeje, ii, 237—329, 321—272, 281, 284—286, 292—294. For other references see the writer's Calīfat al-Yazīd, i. 136—145 (in M.F.O.E., v.).

(H. LAMMENS)

MUSLIM b. AL-ḤADJĪDĀDI ABU 'L-HUSAIN AL-KUṢAIRI AL-NIrBARI was born at Nisbar in 202 (817) or in 206 (821). He died in 261 (875) and was buried at Najafādā, a suburb of Nisbar. An anecdote regarding the cause of his death is related by Ibn Ḥaḍār (see Bibliography). His fame is based upon his Šāfī, which, along with Bukhārī's book of the same name, enjoys the highest fame among the collections of traditions. Muslim travelled widely to collect traditions, in Arabia, Egypt, Syria and Iraq, where he heard famous authorities such as Ahmad b. Ḥanbal, Harālī, a pupil of Sa'dih, and Šabak b. Qahīya. His Šāfī is said to have been composed out of 300,000 traditions collected by himself. He wrote a large number of other books, on Šāfī, traditionists and biography, none of which seems to have survived.

The Šāfī differs from the other collections of canonical hadīth in that the books are not subdivided into chapters, whereas in Bukhārī's work the traditions act as examples of the tadrīgānās. Still, it is not difficult to trace in the order of the traditions in Muslim's Šāfī a close connection with corresponding ideas of jībāh. As a matter of fact the groups of traditions have been provided with superscriptions which may be compared with Bukhārī's tadrīgānās; this was not, however, done by Muslim himself, as appears from the fact that the headings are not uniform in the different sections of the Šāfī.

A second difference between Muslim and the other collections consists in the fact that he has shown peculiar attention to the iznād, to such an extent: that a tradition in his work is often followed by several different iznād's which serve as an introduction to either the same or to a slightly different matter. Such a new iznād is indicated in the text by (ta'izzil or ḫawāla "change"). Muslim is praised for his accuracy regarding this point: in other respects, however, Bukhārī is superior to him, as is even recognised by a man so devoted to him as al-Nawawi, who wrote upon the Šāfī a commentary, which in itself is a work of immense value for our knowledge of Muslim'sology and jībāh.

Muslim has prefixed to his work an introduction to the science of tradition. The work itself consists of 52 books which deal with the common subjects of hadīth: the five pillars, marriage, slavery, capital, hereditary law, war, sacrifice, manners and customs, the Prophets and the Companions, predilection and other theological and eschatological subjects. The book closes with a chapter on the Kurān (Fusūr), the shortness of which is several times outweighed by the value of the ʿĀjīb al-Imān, which opens the work, and which is a complete survey of the early theology of Islam.

On the commentaries upon the Šāfī see Brockelmann, G. A. L., i, 160, to which may be added: a. All b. Silāhanān al-Maghribī, Washī, al-Dībājī Samh Muslim b. al-Maghribī, Cairo 1926.

(A. J. WENSKIRK)

MUSLIM b. KURAISH SHARAF AL-DIN ABDU'L-MAKARIM was the Arab family of the ʿAlāʾīs, also known as the ʿArabīs, was the most important ruler of the last great Arab dynasty in the Near East; during his reign the struggle between Fātimids and ʿAbbasids for supremacy in Syria and Mesopotamia was decided in their favour of the latter. In the year 433 (1042), the 20 year old Muslim was chosen chief of the tribe after the death of his father Kuraish b. Badrān and succeeded him as ruler of Mosul. Like most Arab rulers of the lands of the Euphrates he recognised the Fātimid caliph in Cairo as his suzerain partly because he was himself a Shīʿ, quite early in his reign he began to cherish the ambitious plan of gradually extending the rule of his tribe over Mesopotamia. Every means of extending his power was taken by him. The first opportunity occurred
when in 458 (1066) the Seldjuk Sultan Alp Arslan [3 v.] after conquering the Khwarizmians was proceeding to establish his supremacy in Syria. For this he had to entice the Arab chiefs from the sphere of influence of the Fatimid caliph and win them over to an alliance with him and to a recognition of the Abbassid caliph. He therefore concluded an alliance with Muslim and granted him several large Moslemate patronates in this alliance Muslim defeated the Banu Kilab who were vassals of the Fatimids. In 463 (1079) Alp Arslan died. The alliance was renewed with his son Sul£an Malik Shah [q. v.]. With his help Muslim was able a few years later to extend his power into Syria and take Aleppo. In 472 (1079) this town had no strong owner; the town was ruled by the Kadi al-Khuta'ti, and the citadel by one of the last Mirdasids [cf. the article HALAB]. There was a lack of provisions, as the town was continually threatened by enemies and the roads to it were cut off.

Damascus was in possession of Sul£an Tutush [q. v.], whom his brother Malik Shah had granted Syria, which was still to be conquered. It was natural for Tutush to wish to bring Aleppo also into his power but the people did not care for him because of his cruelty and greed, shut their gates against him and appealed for help to Muslim. After Tutush had withdrawn, Muslim approached the town with large supplies of provisions and after lengthy negotiations both town and citadel were handed over to him [see HALAB] and the Mirdasid chief received some smaller towns in compensation. He received a grant of confirmation from Malik Shah, who did not want his brother to become too powerful, on paying a considerable annual tribute (£ 150,000). Muslim extended his territories by adding to it Ru£at (Edessa), Harran, a number of smaller fortresses, out of which he drove the leaders of Turkish bands so that his power stretched from Northern Syria to the Euphrates. Instead of being content with this his unbounded ambition made him overestimate his strength. Like Tutush he had dreams of conquering all Syria, especially Damascus. He could not obtain the town from Malik Shah who had granted Central Syria to Tutush. He therefore again joined forces with the enemy of the Seldjuk, the Fatimid caliph, who promised to send troops to assist him to take Damascus. Muslim took advantage of the absence of Tutush who was engaged in a campaign against the Byzantines in Antioch, to advance on Damascus. He occupied several towns in Central Syria, including Baalbek [q. v.]. But the Fatimid help did not materialise and Tutush was called back by his vassals who hated Muslim. These circumstances and a rising in Harran forced him to retire. To replace Muslim who had deserted him, Malik Shah bestowed his favour on the sons of a former viceroy of the Abbassids, Ibn Dji£ar, and sent them against a supporter of the Fatimids, the Marwanid Mansur, to deprive him of his chief possession Amid. The latter found support from Muslim. They joined forces, went to Amid and withdrew into the fortified town leaving their other possessions undefended. Sul£an Malik Shah seized the opportunity to send 'Amid al-Dawla, another son of Dji£ar, to MUSUL, to take this city from Muslim who had in the meanwhile escaped from Amid. When Muslim saw that he had lost his possessions he made overtures to the Sul£an through the son of the vizier Nizam al-Mulk and humbly begged for mercy. The Sul£an, who thought Muslim no longer dangerous, pardoned him and restored his lands to him but Muslim could not be at peace. Perhaps in secret agreement with Malik Shah, he turned in 477 (1084) against a Seldjuk prince of Asia Minor, Sul£am an b. Kutalmish, who had taken Antioch from the Byzantines and demanded him from him the same tributes as the Byzantines had paid. When Sul£am an refused to pay, he advanced against him with a force of Arabs and Turkomans. In the neighbourhood of Antioch in Safar 478 (May 1085) the forces met, unexpectedly for Sharaf al-Dawla; his troops, who hated Muslim, went over to Sul£am an; Muslim was defeated and slain along with 400 of his Arabs (cf. Ibn al-Ad£am, fol. 68b). With his death the power of the 'Ukai£ids was at an end. They lost Aleppo on Muslim's death and only survived a few years longer (till 489 = 1099) as governors of MUSUL [see 'Ukai£ids]. Muslim is described as an able and just man and his tolerance of Christians was remarkable. His rule is said to have been able and orderly and indeed he did bring the finances of Aleppo into order in a very short time after taking it. In any case he had wide vision and successfully endeavoured to maintain the power of the Arab tribes in Syria and Mesopotamia. It ceased with him; Turkish generals became the rulers of Syria and Mesopotamia.

Muslim b. 'Ukba of the tribe of the Ban£ Murra, a famous leader in the armies of the Sufyanid caliphs. We know very little about the early stages of his career. We find him early established in Syria to which he probably came with the first conquerors. Completely devoted to the 'Umayyads and of great personal valor, he led a division of Syrian infantry at the battle of Siffin. But he failed in an attempt to take the oasis of Dumat al-Djanad [q. v.] from 'Ali. The caliph Mu£awiyah appointed him to take charge of the khir£afi, the finances, of Palestine, a lucrative office in which he refused to enrich himself. Muslim was prominent at the deathbed of Mu£awiyah. The caliph had charged him and De£ah£ b. Kais [q. v.] with the regency until the return of Yazid who was in Anatolia at the head of his troops. The confidence which the great Sufyan had in his loyalty is seen in his advice to his heir. “If you ever have trouble with the Hidji£aw, just send the one-eyed man of the tribe of Murra there” (Muslim had only one eye). This time had now come.

Muslim had been a member of the embassy sent to Medina to bring the Ansar back to obedience. All other efforts at conciliation having failed, Yazid I decided to resort to force. In spite of Muslim's age and infirmities, Yazid felt he was the man to command the expedition. He was obliged to travel in a litter so infirm was he. At Wadi al-Kaw£, Muslim met some 'Umayyads who had been driven out of Medina; these exiles informed him of the military situation of the town. When he reached the oasis of MUSUL, Muslim encamped on the kurra of W££m and for three days awaited the result of the negotiations begun with the rebels, Ansar and descendants of the muhajir£un of the Kuraish. On the fourth day, all overtures
having been rejected, he made his plans for battle. It was a Wednesday, the third last day of Dhu l-Hijjah 63 (Aug. 26, 27, 683). After a slight initial advantage for the Ansar, the battle ended at midday in the complete rout of the rebels. The Syrians followed them into Medina and began to plunder the city. Anti-Umayyad legend has much exaggerated the horrors and the duration of this pillaging which it extends to three days. On the day after the battle, Muslim's intervention restored order and he used the next few days in drawing up the case against and trying the principal leaders of the rebellion who had fallen into his power.

Having established order in the town, which he left in charge of Râwî b. Zinba', in spite of the aggravation of his malady, he resumed his march on Mecca to deal with 'Abd Allah b. al-Zahab [q.v.] who had rebelled against the Umayyads. Arriving at Mughandal [q.v.] he became so ill that he had to stop in obedience to the caliph Yazid's instructions, he appointed to succeed him in command of the army Husain b. al-Numair [q.v.], his second in command. He died at Mughandal, where his tomb long continued to be visited by the passers-by. Writers with Shîa sympathies are fond of twisting the name Muslim into Mursîf (criminal: an allusion to Qur'an, v. 36: vii. 79; xl. 29. 36 and poeziin). One statement which must be a ridiculous exaggeration puts his age at 90. Every thing, however, points to his having been born before the Hijra. He died a poor man. This disinterestedness is not the only feature in his character which makes us take him as one of the most representative of the types of this generation of soldiers and statesmen, whose talents contributed so much to establish the power of the Umayyads. Doyy described him as "un Bédouin mécéchant". Muslim, it is true, retained all the proverbial uncouthness (âl-fâzî) of the Banû Murra. But his whole career reveals the Murri general as a convinced Muslim of a rectitude rare in this period of unsettlement, which saw so many extraordinary vicissitudes of fortune and wavering loyalties.

Bibliography: Tabari, ed. de Goeje, i. 3283; ii. 198, 409-425, 427. Other references are given in the writer's Câhîfat daz yazîl ler., p. 223 sqq., reprint from M.F.O.B., v. 225 sqq. and in his Etude sur le règne du califat ommanîte Mâdîb mah., in M.F.O.B., i., 19, 45, 269, 367.

MUSLIM B. AL-WALID AL-ANSâRî (called Sâdîq al-Ghââini = "he who is said low by the fair countenance", as was al-Katûb [q.v.] before him), an Arab poet of the early Abâbids period, born in Kufa c. 130-140 (747-757), d. 208 (823) in Dijûrdân. His father, a murid [q.v.] of the Anşâr [q.v.], was a weaver. Nothing is known of the poet's education. He probably got his literary training not from particular teachers or from books but in the busy life of the Mesopotamian cities, the intellectual life of which had risen to a still higher level with the advent of the Abâbids. Like most of his contemporaries he earned his living as a poet by writing panegyics and was acquainted with many statesmen and emirs. Among them were the general Ya'qûb b. Mayzûl al-Shâhâflî (see Dîvân, N. 1, 6, 10, 16, 49), 'Abd b. Yazîl al-Muhallabi (N. 20), Mansûr b. Ya'qûb al-Hâmîyar (N. 31) and many others. He gradually won the favour of the influential Barmakids (at N. 17, 40, 45) and of the caliph Harûn al-Rashîd (N. 14, 41, 57); according to one story, he received his nickname from the latter on account of a verse of his (N. 3, 35; cf. also N. 3, 9). In even mention of the Abâbids in an ode (N. 57, 30). The fall of the Barmakids about 293 did not affect his career: he dedicated some of his odes to al-A'mîn (N. 7, 28, 30) but his principal patron in later times was al-Mâ'mûn's vizier Faḍî b. Sahîl [q.v.]. Through his intervention he received from al-Mâ'mûn an official post (probably gâhid b. al-bardî) in Dijûrdân. He remained faithful to Faḍî b. Sahîl until his death in 202 (818), and out of grief for him he wrote no more. There is a story told by his râwî according to which he destroyed a considerable part of his poems before his death.

As regards the matter and style of his poems, they were on quite traditional ground. In addition to his old-fashioned odes and elegies are especially interesting in this respect; in polemics with the otherwise little known p. Ibn al-Kanbar on the merits of the Anşâr and Kurâsh', he revived the coarse and bitter tone of the polemics of an al-Parâzî [q.v.], or an al-Tirmîdî [q.v.] on a similar subject. The two hundred years of development of Arabic poetry were naturally not without influence on him; in his nasaibs we frequently find the style of 'Umar b. Abî Râfî' or 'Abî 'Abbâs b. al-Ahnaf [see K. AL-AHNAF], Muslim's contemporaries. His drinking-songs deserve special mention. Although Noldke only very rarely finds in them "the natural effusion of Bacchantic joy as so frequently in Abû Nuwâs [q.v.]", Arab critics are of another opinion. These two poets are to them practically the same in this respect and we must confess they are right.

His drinking-songs are not only of great value for the descriptions of society and social life in the cities but from the point of view of poetry they are among the best of Muslim's work. If we must, as regards subject matter, number Muslim among the imitators of the old poets, in style he belongs to a more modern period. The historian of Arabic literature frequently mentions him as the first to introduce the "new style", al-halâfî, with its tropes and figures. This is however not quite such a simple point; the "new style" arose only gradually in Arabic poetry, although Muslim with his contemporaries, Rashîr b. Burd [q.v.], Abî Nuwâs etc., was one of the first who definitely struck out on the new path. The younger generation, especially Abî Tamâmî [q.v.], drove this new style to banality.

Muslim was on terms of friendship or enmity with many contemporary poets, e.g. Abû Nuwâs: Abû l-‘Atîyahya [q.v.], al-‘Abbâs b. al-Ahnaf (who maliciously called him Sâ‘îl al-Ghîlîn or Ša‘îl al-Kâz; see Dîvân, N. 44), Abû l-‘Shîr [q.v.], al-Husain al-Khâlî etc. His literary influence was not inconsiderable: Dîvîl [q.v.] was his pupil whom did not prevent him exchanging satires with Muslim). Abî Tamâmî was particularly fond of studying his poems. His Dîvân has been transmitted in very unsatisfactory fashion and was collected in alphabetical order by al-Sûbî [q.v.], but this edition has not come down to us (there are a few traces of it in the Kitâb al-‘Aghâlî); another story speaks of the collection made by the philologist al-Mubarrad. The only known European manuscript (Leiden)
on which de Goege's edition is based, contains;
only a portion of his poems (including a few
sonnets; see Barbier de Meynard, op. cit.,
7: 17 sq.); it represents an unknown edition and
is of little importance for the criticism of the text.

**Bibliography:** Ducan Poetae Abū-l-Walid
Musta'ım Abū-l-Walid Al-Mi'mar i synonymice Carv-
Kaᅀ灿, ed. de Goege. Leyden 1875 (un-
favourably without an index of rhyme); the
Canon edition of 1325 (Maţba'at Madrasat Wali-
dar Ābbās al-Awsal, 8°, p. 97) also called
Taba al-lūm, repeats de Goege's text in an
alphabetical arrangement; the Bombay lithograph
of 1603 (1886) is not accessible to me (see Re-
cher, op. cit: it claims to give a better text than
the Leyden edition; see Sarkis, op. cit.). Most
of the sources are given by de Goege in
his edition (p. 228—310); the most important
is of course the Kitāb al-Akhbār (p. 225—271).

Of others we may note: Ibn Kutaiba, Kitāb al-
Alm, ed. de Goege, p. 528—553, passim (s.
index); Ibn al-Mu'tazz, Tabākāt al-Shāhādah
al-mu'addahin (MS. Escorial, No. 279), fol. 157—
157; al-Marrubī, al-Muwaṣṣelah, Cairo 1343
(Maţba'at al-salafiyya), s. index. — Modern
literature: Th. Noelle, review of de Goege's

**MUSNAĐ**. [see Hadźicz, iv.]

**AL-MUSTAÐD**. [see Allamî, Abū Muhammad al-
Alâ al-Din, Abū Muhammad al-
Hasan. Abbaṣîd caliph, born on
23rd Sha'bân 536 (March 23, 1142), son of al-
Mustanṣijd and an Armenian slave named Gaḥda. 
After his father's death on 6th Rabi' II 566
(Dec. 20, 1170) al-Mustanṣijd succeeded him and at
the beginning of the following year was formally
recognised as caliph in Egypt also, which passed
into the hands of the Ayyūbids at this time [see
the article ṬAṬĪMES, ii. 96]. The assassins of
al-Mustanṣijd soon quarrelled among themselves.
Abū al-Dīn [q. v.] whom al-Mustanṣijd had
been forced to make vizier was dismissed by 587 (1171—
1172) and the instigation of the enm Kaimaz. In
Dhu al-Ka'da 570 (May 1175) the latter was about
to attack the treasurer Zahr ābīn b. al-
Aṯīr, but the latter fled to the caliph whereupon Kaimaz
began to besiege the palace of the latter. Al-Mustanṣijd
appealed to the people to help him: the house of
Kaimaz was pillaged and he himself fled but died
soon afterwards and Abū al-Dīn again became
vizier. Al-Mustanṣijd already had quarrelled with
Shīmā, lord of Khišīštān. In 569 (1173—1174)
a war broke out between the latter's nephew Ibn Shānḳā and al-Mustanṣijd; Ibn Shānḳā was soon
taken prisoner and put to death. The insignificant
al-Mustanṣijd died on the 2nd Dhu 'l-Ka'da or, ac-
cording to another statement, at the end of Shawwāl
575 (end of March 1180).

**MUSTAḌJĀB-KHĀN BĀḤDŪR (NAṢĪB),**
the son of the celebrated Rohān leader Ḥāfiz al-Mulk Ḥāfiz Ḥaḍīt vh Khan (1707—
1774) and author of a biography of his
father, which he wrote in Persian under the
title Gulistiání-Raḥmat. Ḥāfiz Ḥaḍīt vh Khan,
who was an Afghan of the tribe of Yūsūf-Zāi by descent,
had been since 1748 a chief in Rohīkhand (Katreh)
and throughout his life waged a bitter warfare with the Mahāstā. He fell in 1774 in a fight at
Mārānṭīr Kháta where he was fighting against the
combined forces of the Naẕwā of Oudh Ṣabī'ī
al-Mulk and the English. Warren Hastings in
acting on the Naẕwā with English troops became the subject of a judicial investigation.
Mustanṣijd  al-Khān's book describes Ḥāfiz Ḥaḍīt
Khan as a fine representative of Afghan chivalry and
contains much of value for studying the relations
between the individual Afghan tribes.

**Bibliography:** I do not know of any
publication of the original text of the Gulistiání-
Raḥmat. There is an abbreviated English
translation by Ch. Elliott, The Life of Ḥāfiz vol-
nowk, Ḥāfiz Ḥaḍīt vh Khan, written by his son
the Naẕwā Muṣṭaḍīāf Khan Ḥaḍīt and entrusted
to Gulistiání-Raḥmat, London 1831; H.
Hamilton, The East-India Gazetteer, London
1828, ii. 458; Imperial Gazetteer of India,
London 1908, xx. 135 and xx. 307 sqq.
(E. BERTHELS)

**MUSTAṬFĀ I,** the fifteenth Ottoman
Ṣūlīn, was born in the year 1000 (1591) as
son of Muḥammad III. He owed his life to the
relaxation of the Ṣūlīn authorising the killing of
all the brothers of a new Ṣūlīn and was called
to succeed his brother  Ahmad I at the latter's
death on November 22, 1617. But his weakminded-
ness — which is said to have him made escape
death on account of superstitious fear of Ahmad—
made him absolutely incapable of ruling. Ahmad's
son  Oṭhmān, who felt himself entitled to the
succession, had little difficulty in procuring Muṣṭa}while's deposition in a meeting of the Imperial Vīzīr,
by the kāẓīm, the muṣṭafī and the kā'im-
mašākīn, the grand-vizier  Khaṭīb Pahe [q. v.] being
absent. This happened on February 26, 1618.

Unexpectedly Muṣṭaṭfā I was again called to
the throne when, on May 19, 1622, the rebellion of
the Janissaries broke out against  Oṭhmān II He
was taken by force from his seclusion in the harem
and the Janissaries forced the ʿulūmī to acknowledge
him as sultan. The next day  Oṭhmān was
killed and until June the grand-vizier  Dāwūd
Pahe, the man responsible for the rebellion,
remained in power. Then he was deposed by the
ṣūlīn. The real masters were the Janissaries and
Sipāhs; several grand-viziers were nominated and
deposed again at their pleasure. The Sipāḥi
party began, after some time, to exact vengeance for 'Oğhaman and in January 1623, when Guruımı Muhammad Pasja [q. v.] was grand-vizier, Davud Pasja was killed. Soon the Janissary party came again to influence under the grand-vizier Mehmed Pasja (Feb. 3). The latter succeeded in maintaining himself until August 20; then the general feeling amongst the 'ulama and the people, combined with the steadily growing opposition in the provinces against the tyranny of the military in the capital, as manifested by the action of Saif al-Din Oghlu in Tripolis and still more by the revolt of Abaza Pasja [q. v.] in Erzurum, brought about Mere Hüsam’s deposition. The new grand-vizier, Kemâneşh Ali Pasja, together with the muftî, deposed the sultan on Sept. 10, 1623 and called Ahmad’s son Murât to the throne.

During all his reign Mustafa had continued to give signs of his complete mental aberration; he died in 1638 and was buried in the Aya Sofia. The only important international act that took place during his reign was the peace concluded with Poland in February 1623.

Bibliography: The Turkish sources for this period are the historical works of Na’îma, Hâdidji Khalîfî (Felekîmi), Peçevî, Hasan Bey Zade and Tüği. Contemporary reports in in the Memoirs of the English envoy Sir Thomas Roe. Further the general historical works of von Hammer, Zincken and Joqga.

J. H. Kramers

MUŞTAFA II, the twenty-second Ottoman sultan, was a son of Muhammad IV. Born in 1624, he succeeded to his uncle Ahmad II on February 6, 1695, at a time when the empire was at war with Austria, Poland, Russia and Venice. The new sultan in a remarkable kâtib-i sherif proclaimed a Holy War and carried out, against the decision of the Divân, his desire to take part in the campaign against Austria. Before his departure a mutiny of the Janissaries had cost him the grand vizier Defterdar Selim Pasja his life (April 24, 1693) and the campaign was led by the new grand vizier Esmâil Muhammad Pasja [q. v.]. The Turkish army operated not without success in the region of Temesvár. Taking Hissa, Lagon and Spahia, the Venetians had been beaten in February near Chios and were beaten again in September. In October Azof was delivered from the Russian siege. Next year the sultan and his army were again successful in raising the siege of Temesvár, but no part of the lost territory could be recovered from the Austrians. That year, however, the Russian took Azof. The campaign of 1696 is memorable for the heavy defeat inflicted on the Turks near Zenta on the Theiss (Sept. 11), where Esmâil Muhammad lost his life, while the sultan, who had already crossed the river, had to fly to Temesvár. The imperial party fell into the hands of the Austrians. From Temesvár Mustafa nominated Amâdja Zade Hüsam [q. v.], of the Kopru family, his grand vizier. Under this very able statesman peace was at last concluded. In 1698 the grand vizier went to the frontier, while the sultan stayed at Adrianople, but the peace negotiations were pursued more earnestly than the war. In October of that year began the peace negotiations at Karlowitz (Turk. Karlofta, see CARLOWITZ) on the Danube, where on February 26, 1699 peace was concluded with Austria, Poland and Venice. With Russia only an armistice was concluded to be followed in 1700 by a definite peace. The English and Dutch ministers took part in the negotiations as intermediaries. The peace treaty meant the loss of Hungary and Transylvania, with the evacuation of the district of Temesvár; Polaund recovered Kamianets while Venice had to cede Lepanto and some small towns in Morea. With Russia the Dnieper became the frontier.

The peace enabled the grand vizier to bring order into the affairs of state, which had suffered by the long and disastrous war. The Keis Efendi Rami and the mufti Feizullah, who had great influence with the sultan, were his collaborators. Some interior troubles were easily appeased; only in 1701 a campaign in ‚Iraq was needed to take Bâṣra from the hands of a local party that had submitted to Persia. Fortresses were put in a better state of defence and a new Kânînâ-name was issued for the fleet. Hüsam Pasja resigned his office in Sept. 1702 and died soon afterwards. His deposition was partly the work of the mufti Feizullah, who made the sultan appoint in his place Dalatban Muhammad Pasja. When the latter showed himself of too warlike a disposition and caused at the same time unrest in the capital by favouring the claims of the Tatar Khan, the influence of the mufti caused his deposition and execution (Jan. 1703). Rami [q. v.] became grand-vizier. Rami’s measures to enforce the authority of the central government were salutary but made him many enemies: moreover the Janissaries were not contented with a grand-vizier who was not a military man. The general unrest was increased by the permanent residence of sultan Mustafa in Adrianople. All these circumstances brought about in July 1705 a Janissary revolt in Constantinople, directed at first against Rami Pasja and against the mufti. The latter’s deposition was obtained without much difficulty, but the rebellion continued under the leadership and organisation of a certain Hasan Agha. A deputation of the rebels to Adrianople was imprisoned and treated in an insolent way. Too late the sultan promised to come himself to Constantinople; the ‘ulama were constrained to give a fataw authorising the sultan’s deposition. In August 1703 a rebel army went on its way to Adrianople, after having agreed on Mustafa’s brother Ahmad as successor to the throne. When Mustafa saw himself at last abandoned by his own Janissaries he resigned on August 21. He died soon afterwards on Dec. 31, 1703 and was buried in the Aya Sofia. He is rightly considered as a wise and good ruler, as is proved by his powerful choice of able statesmen. He wrote poems under the tâlkâtât of Mefînî and 1 kgâli. Under him the imperial fêyyan appeared for the first time on the Ottoman coins.

Bibliography: The chief source is the Taʾrīḫ of Râshîd, besides an anonymous historical work, used by von Hammer and only mentioned in a note by Babinger, G. O. W., p. 247 and 248. Useful information also in the history of the Crimea by Mehmed Kuğû (G. O. W., p. 235) and Saiyid Mehmed Kijî (G. O. W., p. 281). The fêyyân of the grand-vizier Rami Pasja (not mentioned in G. O. W.) has importance as containing contemporary documents. Further the general histories of von Hammer, Zincken and Joqga.

J. H. Kramers
MUSTAFÄ III. the twenty-sixth ruler of the Ottoman Empire, was one of the younger sons of Ahmad III and was born on 11th February, 1412 = January 28, 1717 (Sübûât-ı Gümählî, i. 80). When he succeeded to the throne, after 'Othmân III's death on October 30, 1757, his much more popular brother and heir to the throne, Muhammed, had recently died, in December 1756. Turkey enjoyed at that time, since the peace of Belgrad of 1739, a period of peace with her neighbours. Since December 1756 the very able Râghib Paşa [q. v.] was grand vizier and remained the real administrator of the empire until his death in 1763. Râghib had removed from the capital all those who might have counteracted his influence, taking at the same time wise financial measures and endeavouring to keep the military forces in good condition. The sultan meanwhile, who was of a vivid and active temperament, busied himself, like his predecessor, with regulations concerning the clothes of his non-Muslim subjects and the appearance in public of Muhammadan women; at this time there was also taken up again the never realized plan of linking the gulf of Iznil with the Black Sea [see ŞARBANDJ]. The Seven Years' War in Europe (1756—1763) had not remained without influence on the policy of the Porte; after long hesitation Turkey agreed at last to conclude a treaty of friendship with Prussia (March 29, 1761), Râghib himself was inclined to conclude even an alliance, but the sultan and the influential 'ulama were peacefully minded.

After Râghib's death Mustâfa began to reign himself and different grand viziers succeeded one another at short intervals. From 1765 to 1768 the grand vizier, on the throne held by Muḥsin Zâde Muhammad Paşa, under whom the disastrous war with Russia broke out. Difficulties with Russia had already commenced in 1762, when Russia had supported the ruler of Georgia against the Turkish Paşa of Akhî-khâ (Cal'drî); here, as well as in Montenegro, Russian emissaries worked in secret against the Turkish rule. Moreover the Khân of the Crimea repeatedly complained about Russian military measures on his northern frontier, while the party of the Confederates in Poland urgently appealed for the intervention of the Porte against the aggression of Catherine's government on Polish liberty. In these circumstances the Porte had no more interest in seeking the alliance of Prussia, where, in 1764, Ahmad Rasmi Efendi had gone as envoy, of which embassy he afterwards wrote his work, Şevf-i-ırâm. The sultan himself was decidedly anti-Russian, but the diplomacy of the Russian minister Obreskoff and the pacification of the 'ulama delayed the war, until, in August 1768, Mustâfa obtained from the then mufti Wali al-Dîn a fatâwa authorizing the war with Russia. War was declared only on October 6, after the dismissal of the grand vizier Muḥsin Zâde, who had advised delay until the spring. Obreskoff was imprisoned in Yedi Kule.

The war began in January with destructive raids of the Crimean Tatars in southern Russia under the newly appointed Khân Kîrîm Girây; at that time de Tott was an eye-witness with the Tartar army. In March 1769 the then grand-vizier Muhammad at Emin Paşa left Constantinople with the Holy Banners, an occasion which was with outburst of Muhammadan fanaticism against the Austrian internuncio and his party, who had come to witness the procession. While the grand vizier went to the Dobruja, the Russians made an attack on Chotin (Turk. Khočin), which they were able to take only in August. In the concluded the grand-vizier had been deposed and executed, this place was taken by Moldowandji Ali Paşa, who had encounters with the Russians on both sides of the Dniepr. Other Russian armies took Jassy and Bucarest and advanced into Transcaucasia. The year 1770 was still more disastrous for Turkey. The Russians reached, through Rumania, the Danube and in the autumn they took Kîlîn, Bender and Braila, in the immediate neighbourhood of the Turkish general headquarters in Baba Dağlı. In the same year a Russian fleet appeared in the Mediterranean; several towns in Morea were conquered and evacuated again, but the heaviest blow was the burning of the Turkish fleet in the bay of Çesme (July 1770) Moldowandji Ali—already dispossessed of his grand vizierate—was sent to strengthen, with de Tott, the defences of the Dar-danelles. But the Russian fleet had ceased to be a danger and the Danube campaign of the following spring also was rather favourable for the Turks. In the beginning of 1771 the military organisation had been improved. That year, however, the Russians forced the isthmus of Pereljop and conquered the entire Crimea. This was a definite loss for Turkey, and a great majority of the Tatars declared their allegiance to the Russian empress. The Turks were able, however, to remain in Ochâkow and Kibîrûn. In Constantinople meanwhile laborious diplomatic negotiations went on with the envoys of the European powers who offered to mediate, notably Austria and Prussia. With Austria an armistice was signed in July 1771 a secret 'treaty of subsidy' for diplomatic services, while the Porte disinterested herself completely in Polish affairs, going so far as to propose a partition of Poland. The result was an armistice, concluded in June 1772 at Giurgevo, followed by the peace congress of Focâni (August 1772), where Turkey's chief representative was the arrogant nişâbî 'Othmân Efendi. After the failure of the negotiations the armistice was prolonged and a new conference began at Bucarest in November. These negotiations were again broken off in March 1773, mainly from lack of agreement on the subject of the Turkish fortresses on the Black Sea; as to the Crimea, Turkey had already agreed to a formula such as was later adopted in the peace of Kûbûk Kânîrî. In Constantinople it was chiefly the 'ulama who had opposed the Russian peace conditions. The war in 1773 was not very eventful; the general headquarters had been transferred to Şümâna after Muḥsin Zâde had become grand vizier a second time (Dec. 1771). The Russians won a victory at Karasu in the Dobruja, but attacked Sulîstra and Warna in vain. Bairût was bombarded by Russian ships in connection with the rebellion of the Mamlûk Ali Bey [q. v.] in Egypt, who was supported by them. In the summer of 1773 sultan Mustâfa made known his desire to accompany the army against the Russians, but he was prevented from doing so by his illness and by his illness, to which he succumbed on December 24. In the succeeded by his brother 'Abd al-Ḥamîl. Mustâfa was buried in his own türbe, connected with the Lâleli Dîâmî, which he had begun to build in 1759 (Hâdiyat al-İlaâmî, i. 23).
Muṣṭafā III is praised in the Turkish sources as a good ruler. He had a special liking for religious disputations in his presence and was particularly interested in astrological calculations. He took an interest in the least important affairs and this prevented him from such a real statesmanlike insight as was much wanted in the later years of his reign. In his way he was an "enlightened despot". But even a more able ruler would probably have failed to save Turkey from her military inferiority against the Russian armies; measures of military organisation were taken with the aid of de Tott, but this could not prevent the desertion of the troops from assuming disastrous dimensions during certain episodes of the war. Besides the Lālī Dājjāmī, Muṣṭafā built the Ayazma Dājjāmī at Scutari for his mother; he caused a new suburb of Stambul to be built outside the Yeṭī Kāpu. His reign is further marked by the extremely severe earthquake that laid large parts of the capital in ruins in 1766.

**Bibliography:** The Tuḥrück of Wāṣūf [q.v.] is the chief historical source for Muṣṭafā's reign. Wāṣūf himself played a prominent part as secretary during the long-drawn-out peace negotiations with Russia. It is completed by the Tuḥrück of Enveri. The Ḫūkmār-nāme of Ḫiyāfī, son of Ḧākim Oğlu 'Alī Paşa, seems not to be preserved (G. O. W., p. 390). The well-known Ḩāmid Rasmī Efendi wrote a history of the war with Russia under the title Khiṣafāt al-Fāṭār (G. O. W., p. 310). The Tuḥrück of the learned grand vizier Rāghib Paşa (G. O. W., p. 285) give documents from the beginning of Muṣṭafā's reign. A contemporary western source is the Mémoires sur les Turcs et les Tartares of Baron Fr. de Tott, Maastricht 1785. Further the historical works of von Hammer, Zinkeisen and Jorg. (J. H. Kramers)

**MUṢṬAfĀ IV,** twenty-ninth sultan of the Ottoman Empire, was a son of 'Abd al-Ḥamīd I and was born on Şaḥādān 26, 1194/Sept. 19, 1775 (Mehmed Ṭhūreyyān, Şühlīl-i 'alāmānī, i. 51). When the anti-reform party, headed by the kaṭām-maṣām Muṣṭa Paşa and the mufṣi, and supported by the Janissaries and the auxiliary troops of the Yamaḳs had dethroned Selim III [q.v.] on May 29, 1807, Muṣṭa was proclaimed sultan. Immediately afterwards, the unpopular mizām-i ḩeṣāmī corps was dissolved and Kaṭām al-Oğlu, the leader of the Yamaḳs, was made commander of the Bospоrus fortresses. Turkey was at that time at war with Russia and England, but peace negotiations had already begun and, moreover, the foreign affairs of the empire were really governed by general European politics. A secret article annexed to the peace treaty of Tilsit (July 7, 1807) had in view — already at that time — a conditional partition of Turkey. Turkey's ally, France, tried to urge a peace with Russia and obtained a Russo-Turkish armistice at Slobo-ia (near Giangrasso), by the terms of which the Danube principalties were to be evacuated. When in the end Russia was unwilling to put into effect the terms of the armistice, relations with France became strained (departure of Sebastiani in April 1808) and new preparations for war followed, while overtures were made to England; the English admiral Codrington had already entered into negotiations with 'Alī Paşa of Yanina.

Meanwhile the kaṭām-maṣām and the mufṣi were the real rulers in Constantinople; the grand vizier Čelebī Muṣṭafā Paşa remained with the army in Adrianople and had no influence. The Janissaries and Yamaḳs, however, continued to be rebellious, measures had to be taken against them and the sultan himself went so far as to favour secret plans for restoring the mizām i ḩeṣāmī under another name. In December 1807 Müṣt Paşa was dismissed from the office of kaṭām-maṣām — on account of dis- sension with the mufṣi — and was succeeded by Ṣayyid Paşa. The latter, dismissed in his turn, fled to Bairaḳdār Muṣṭafā Paşa [q.v.], an acknowledged friend of the reform party, in Rusuḳ. From here began the action against the régime in the capital. Bairaḳdār went first to Adrianople and joined forces with the grand vizier in June 1808. They arrived in July before the gates of Constan- tineople at Dāwūd Paşa. Sultan Muṣṭafā came there on July 23 to accept their terms, which for the moment were only the destruction of the ruling party and of the Yamaḳs. On July 28 Bairaḳdār, after having seized the sultan's seal for the grand vizier, began to act on his own account. He went with his troops to the palace, where the sultan — who had left shortly before for an excursion — returned in haste. He had only the time to order the execution of Selim III but was deposed immediately afterwards by the intruders, who put his younger brother Maḥmūd on the throne. After having passed some months in confinement, he was killed by order of the new sultan on November 16, in the days of the general revolt against Bairaḳdār's régime, when the existence of the former sultan had become a real danger for Maḥmūd's position. Muṣṭafā was buried in the tuḥrück of his father 'Abd al-Ḥamīd I. near the Yeṭī Dājjāmī.

**MUṢṬAfĀ, name of several princes belonging to the Ottoman dynasty:**

1. Muṣṭafā Čelebī, eldest son of Bāyazīd I; the date of his birth is not recorded. He disappeared in the battle of Angora (July 1402). This Muṣṭafā is the first Ottoman prince to bear this name, which, like such other names as Bāyazīd and Muḥāmed, originated in mystical circles in Asia Minor in the xvirth century. According to the Byzantine sources, this Muṣṭafā is the same as the person called by the majority of the Turkish sources:

**Dozmē Muṣṭafā, who came forward in 1419 as pretender to the Ottoman throne against Muḥammad I. He was supported by Miḥtē of Wal-lachia and by the Ūṣmān Oğlu Djinād [q.v.]. Near Selanik they were beaten by Muḥammad I. Muṣṭafā took refuge in the town together with Djinād; the Byzantine commander refused to give them up to the sultan and sent them to Constan- tineople. In a treaty concluded with the emperor Manuel, the sultan promised to pay a yearly subsid to provide for the maintenance of the prisoners, while the emperor undertook to keep them in custody. This treaty was observed until Muhammad's...**
death; Mustafa was relegated to a monastery on the island of Lemnos. After Muhammad's death, however, he was released and the emperor supported him against Murad II [q.v.]. In a short time he was master of the Ottoman territories in Europe; the army sent against him under Bayazid II went over to his side at Sari Dede between Sivas and Adrianople. He was joined likewise by great feudal lords like the sons of Evrenos. He soon felt strong enough to break his alliance with the Greeks and expelled them from the recently taken Gallipoli.

After having resided some time in Adrianople, he went together with Djunaid to Asia Minor, where they met Murad's army in a battle near the bridge of Clubad. By the treacherous retreat of Djunaid, Mustafa was beaten and fled to Gallipoli and Adrianople; from here he tried to reach Wallachia, but was taken by Murad's troops and executed at Adrianople. All this happened in the first year of Murad II's reign (1421-1422).

Bibliography: Ducas and Chalcondylas relate the events before Muhammad's death; so does the chronicle of Neshri, but the other early Turkish chronicles know only of what happened in the beginning of Murad's reign. On coins struck by Mustafa: T. O. E. M., xv. 387; von Hammer, G. O. R., i.; Mehmed Zeki, Mustafî Şehzadeyî, Constantinople 1332, p. 45 sqq.

2. Mustafa, son of Muhammad I and younger brother of Murad II, was supported as pretender against the latter in 1423, while Murad besieged Constantinople. This Mustafa was about 13 years of age; he had fled to the Karanm Oghlu with his 11th Ilyas. From here he took Irap and marched against Brusa. Mustafa even went for some time to Constantinople, but Murad, raising the siege, returned to Brusa, where Mustafa was delivered to him by the treachery of Ilyas; he was executed by the sultan's orders.

Bibliography: The Byzantine writers Ducas and Chalcondylas; the old Turkish chronicles and after them the historians; von Hammer, G. O. R., i.; Mehmed Zeki, Mustafî Şehzadeyî, p. 53 sqq.

3. Mustafa, son of Sulaiman the Magnificent, was born in 921 (1515) [Mehmed Thureiya, Siddika Yoldaçoğlu, i. 79]. He had been made, in 1533, governor of Sarukhan in Magnisa; later he became governor of Konya; while Sulaiman's favourite son Muhammad was given Sarukhan. When Muhammad died in 1545, Sarukhan was given to Mustafa's younger half-brother Selim and he himself was placed in Amasia. This setting aside of the elder, more talented and more brilliant son was the work of Khurram Sultan (Roxelane), mother of Selim, and of her son-in-law, the grand vizier Rastam Pasha. Already some years before there had been signs of Sultan Sulaiman's lack of confidence in Mustafa's loyalty. When, in 1553, a new campaign had been planned against Persia, of which Rastam was to be the commander, Sulaiman decided at the last moment to accompany the army himself, being warned again against Mustafa through the intermediary of Selim's favourite Shamsi Agha. Selim joined him on the way and, when at Bregi near Konya, prince Mustafa came to pay homage to his father, he was killed by order of Sulaiman on October 6, 1553. His corpse was conveyed to Brusa and buried in the türbe of Murad II. This execution of an Ottoman prince is one of those events that made the deepest impression in the empire. It caused immediately the threatening of a Janissary revolt, which could only be appeased by the dismissal of the grand vizier Rustam Pasha.

It is said that his brother Djibhangir died soon after him of grief; a minor son of his was killed in Brusa shortly after his execution. Mustafa had also made himself believed as a patron of poets and scholars, amongst whom Surati is to be mentioned in the first place. Several poets lamented his death in elegies, in which Rustam and others were openly accused of having caused the murder; best known is the merešiye of the poet Yahya Bey. Mustafa wrote poetry under the takhalüs Müşfiil. There is further strong evidence for the probability that Mustafa wrote a history of his father's reign, a Sulaiman-name, under the pseudonym Ferdi (cf. G. O. W., p. 83).

Bibliography: The historical works of 'Ali, Solak Zade and Pecevit. The tragic death of the prince is also treated with more or less veracity in contemporary sources, as the Letters of Buseq; in later times von Hammer, G. O. R., iii.; 'Ali Djewad, Türkâhân hatî Şefiüleri: Şehzade Sulayman Mustafâ, Constantinople, n. d. (cf. Fr. Babinger, G. O. W., p. 498); Ahmad Râfî, Kadîlî Saruînât, i.; Constantinople 1413; Mehmed Zeki, Mustafî Şehzadeyî, Constantinople 1336, p. 223 sqq. (J. H. Klamaek)

MUŞTAFA KÂMİL PASHA, leader of the second nationalist movement in Egypt (on the first, see the articles 'ARAFI PASHA and KEDIVIE).

The son of an Egyptian engineer, he was born in Cairo on 1stRadjab 1291 (Aug. 14, 1874), studied at the Khedivial school of law there and after taking his examination went to study in Toulouse where in 1894 he took his "licence en droit". When still a student of 15 he began his political activity and entered into personal relations with the Kedive 'Abbas II [q.v.]. On his return from France he founded in 1894 the second Egyptian national party (al-Hizb al-Iskafî) with the object of inducing England by appeals to justice to abandon the occupation and restore the complete independence of Egypt. Later he also aimed at getting the Sûdân handed back to Egypt and tried to prepare the Egyptians by modern education for parliamentary government. As the representative of his party he spent each year a considerable time in Europe, especially France where he consort with politicians and journalists and conducted a vigorous propaganda for his object. All his life he was very friendly with the journalist Juliette Adam; he had dealings with Rochefort, Dramont, Col. Marchand, Pierre Loritz and in 1896 a correspondence with Gladstone. Later he visited Berlin, London, Vienna, Budapest, Geneva and Constantinople where he was highly thought of because he insisted on the Sûdân's suzerainty over Egypt; Sultan 'Abd al-Hamid II [q.v.] gave him in 1904 the title of Pasha. In Cairo he founded in 1898 a school for training the youth in nationalist ideas, and in 1899 started the newspaper al-Lûla (The Banner), which appeared early in 1900, had a great success and soon appeared also in English and French editions. From 1901 he published the nationalist quarterly Muhammed al-Lûla. In his speeches and articles he emphasised his aims with fiery eloquence; at the same time he expressed his approval of the building of the Turkish strategic Hijâz railway and his sympathy with the Japanese
in their war with Russia (1904—1905). Mustafa Kamil also regularly emphasised the privileged position of Muslims as belonging to the state religion and recognised the ulama as caliph and head of Islam and thus contributed to the pan-Islamic movement which began early in the twentieth century.

The ‘Entente Cordiale’ concluded on April 8, 1904 between England and France was a severe blow to him and the nationalist party; by it France, in return for a free hand in Morocco, dropped its objections to the English occupation of Egypt. The Egyptian nationalists thus lost all hope of open or secret support from the French government and were thrown upon their own resources. This situation caused Mustafa Kamil to redeem his energy and in vigorous speeches and writings against France and England, in travelling and negotiating with statesmen of different lands, he endeavoured to make Egypt’s point of view clear. As a result of the intensity of his agitation there was a breach between him and the Khedive ‘Abbas II (Oct. 1904); on the other hand, his following in Egypt rapidly increased and began to be troublesome to Lord Cromer who had so far treated the new nationalism created by Mustafa Kamil as a “quantity negligible”. The Dinka-wati (a village near Tanta in the Delta) affair gave the nationalists a great stimulus; on June 13, 1906, some Egyptian officers out shooting were said to have wounded an Egyptian woman and were attacked by felahin with clubs and one of the officers was killed. A special court set up by the felahin sentenced four felahin to death and 17 to prison or flogging and the sentence was carried out next day. The indignation in Egypt and Europe rose to great heights and even in the House of Commons the authorities were criticised. Mustafa Kamil hurried to London and discussed the matter with the Prime Minister, Sir Henry Campbell-Bannerman, whom he endeavoured to convince of the necessity of recalling Lord Cromer and giving greater freedom to Egyptians. On this occasion he mentioned as suitable representatives in a parliamentary system of government all those Egyptians who in the later political movement after the war played important parts. On his return to Egypt, through the press and mass meetings in which he urged Egyptians to unite against England, he gave a great stimulus to the nationalist movement and soon had the satisfaction of seeing Lord Cromer recalled — although he was not at all the only cause of this — and replaced by Sir Eldon Gorst. The latter adopted a milder tone with the Egyptians, was on good terms with the Khedive and endeavoured to support him with a newly founded party. Mustafa Pasha took this representative of England vigorously also, in Oct. 1907 put his national party on a broader basis and summoned it to a “national congress”, which met on Dec. 7 of the same year in Cairo; 1,017 delegates from all over Egypt appeared and after a speech by Mustafa Kamil which carried them away the latter was elected life-President of the party. This was however his swan-song — he had been ill since the summer of 1906; he died on Feb. 2, 1908 (8th Muharram 1326) at the age of 34 of a slow internal trouble (intestinal tuberculosis). The rumour spread that he had been poisoned at English instigation. His funeral was an impressive expression of the national grief.

Mustafa’s creations did not long survive him and his party, which produced no leader to equal him and was broken up by dissensions, gradually sank into insignificance. What he obtained no positive results by his agitation, he prepared the way for the third and greatest nationalist movement (under Sa‘d Zaghlul Pasha from Nov. 13, 1918). It is to his credit that he conducted his whole campaign without any appeal to force, which would have been quite useless against the British Empire, and without bloodshed.

Of his numerous writings only the more important can be mentioned; many of them were only printed after his death, some in the great (never completed) biography by his brother ‘Ali Bey Fakhmi Kamil, al-Mar’afa ‘l-Fahmiyya (1898 and 1909); Mi‘jm al-Istithal al-injiltisi (collection of speeches and essays, Cairo 1313); Difa‘ al-Miṣri fay Biladis, Cairo 1324 (1906); al Shami al-nuṣṣāhi (Cairo 1904, on the Russo-Japanese war); Lettres franco-egyptiennes (Cairo 1909; also in Arabic and English transl. His letters to Juliette Adam); Egyptians et Anglais, Paris 1906 (speech of July 4, 1895 in Toulouse); Le péril anglais, Paris 1893: What the Nationalist Party wants (Cairo 1907, speech of Oct 22, 1907).

AL-MUṢṬAFA’ I-L-DĪN ALLĀH. [See NIZAR B. AL-MUṢṬANṣIR.

MUṢṬAFA PASHA BAIRAKDĀR, Turkish grand vizzier in 1808, was the son of a wealthy Janissary at Rusuk, born about 1750. He distinguished himself in the war with Russia under Mustafa III, and acquired in these years the surname of bairakdar. After the war he lived on his estates near Rusuk, and acquired the semi-official position of a‘ŷān of Hizārgār and later of Rusuk. With other a‘ŷāns he took part in an action against the government at Adrianople, but became finally a reliable supporter of the govern-
ment. Having already received the honorary offices of ḥalqī ḥāšib and of mūr akhor, he was, in 1806, promoted to the rank of Paşa of Silistra and at the same time was appointed ṣeyhûnker on the Danube frontier against the advancing Russian army. This made him one of the most influential men in Rûm. He had become a zealous supporter of Selim III’s reform policy and, after that sultan’s deposition, it was to him that the enemies of the new reactionary government turned. In June 1808 he was joined by the disaffected ḥākim-żâlim of the grand vizierate in Constantinople, Tâyûr Paşa; from Rusuč they went to Adrianople, where they joined forces with the grand vizier Şebeli Muṣṭafâ Paşa. So the entire Rumelian army marched against the capital, where they dictated their will to sultan Muṣṭafâ IV (July 23). On July 26 Bairakdâr (or “Alemdar as he was called officially”) was appointed commander-in-chief and on July 28, after having taken by force the sultan’s seal from the weak grand vizier, he marched with his troops to the palace of the sultan, under the pretext of bringing back the holy standard of the prophet. At first he was allowed only to enter the first court of the seraglio, while sultan Muṣṭafâ—who had been absent—returned in haste from the seaside. As Bairakdâr had made known his intention of restoring Selim III to the throne, Muṣṭafâ had just time to have his predecessor killed. But immediately afterwards he was himself deposed and Bairakdâr now recognized Mahmûd II [q.v.] as sultan.

After this began the short personal regime of Bairakdâr Muṣṭafâ Paşa as grand vizier. He had a number of the supporters of the former sultan executed, arranged a magnificent funeral for Selim III and began to form a corps of troops called this time niẓâmlâ ṭasâker. At the same time he summoned a great imperial conference in the capital, to which all the high-placed officials of the empire were invited. Many of them answered the appeal and subscribed to the extensive programme of reforms which the grand vizier laid before them in a solemn meeting in the first days of October and which was also approved by of a fatwa of the muftî. But the precipitation with which the new measures were taken in hand and the tactless procedure in the abolition of long established abuses, made him ever more unpopular. The influential ‘ulama were also alienated by the exaggerated reforming zeal. His only support were his Rumelian troops and a small number of friends, such as Begli Efendi and Râmiz Paşa, together with Ḥâfiz Paşa of Karamân who had remained in the capital after the imperial conference. Matters came to a head on November 14, 1808, in the last days of Ramadân 1222, by a rebellion of the Janissaries. The night following that day they surrounded the grand vizier’s residence and set the quarter on fire. Bairakdâr, surprised by the fire, saw no way of escape; he hid himself in a tower of his palace, where his body was found three days afterwards, after the fire was quenched. The rumour had spread that Bairakdâr had escaped, which had caused much uncertainty.

The grand vizier was buried in the fortress of Vela Kule, where his bones were dug up in 1915 during railway works; they were transported to the mosque of Zeyneb Sultan.

(See Köprülü.)

Muṣṭafâ Paşa Bushâltî, the last hereditary waṣîr of Scutari (hence often called Bushâltî), the son of the celebrated Kara Mahmûd Paşa Bushâltî [q.v.], succeeded his uncle İbrahim Paşa about 1810 and received the rank of waṣîr in 1812. In 1820 the sandjak of Berat and in 1824 those of Ohrid and Elbasan were put under his government and he received the title of Serifsâker. Nevertheless, like his father he aimed at greater independence and when Mahmûd III’s reforms threatened to deprive him of his hereditary rights and privileges, he became strongly hostile to the Sultan and maintained friendly relations with the Serbian prince Miloš, the discontented Bosnians (cf. i., p. 737) and the Egyptian Mahâmed ʿAli (cf. J. Deny, Sommario des architectes turques du Caire, p. 264 and 553). He therefore maintained quite a passive attitude on the Russo-Turkish war (1828) and, towards the end of it, in May 1829, did he appear with his Albanians on the Danube (Vidin, Rahovo), then went on to Sofia and Philippopolis, but without taking any active part in the fighting.

On the conclusion of peace the Porte (beg. of 1831) demanded of Muṣṭafâ Paşa that he should hand over the districts previously held by him (Dukakan, Debar, Elbasan, Ohrid and Tugovicë) to the grand vizier Reshid Mehzîd Paşa (on him cf. Sidjill-i ‘othmânî, ii. 391) and carry through certain reforms in Scutari itself Muṣṭafâ Paşa resisted and with the financial and moral support of prince Miloš, led an army in the middle of March 1831 against the grand vizier. He was joined by the other Pashas of northern Albania and old Serbia who objected to reforms. The rebels had at first certain successes including the occupation of Sofia but they were completely routed at Prilep by the regular troops led by the grand-vizier (beginning of May). Muṣṭafâ Paşa hurried back to Scutari via Skopje and Prizren and shut himself up in the fortress. When he surrendered on Nov. 10, 1831 after six months’ siege, he was pardoned on Metternich’s intercession and taken to Constantinople.

Fifteen years later he again held various governorships, chiefly in Anatolia (from 1846), then to the Herzegovina (1853) and lastly in Medina where he died on May 27, 1860.

(See Köprülü.)
same Bosnian locality from which came the grand vizier Sokollu [q.v.], and began his service in the imperial army. He rose in rank under the grand vizier Ahmad (1533–1555), but was not in favour with the latter’s successor Rustam Paşa, who made him in 1556 ḩālī to prince Selim with the object of running him. The outcome of this nomination was the contrary of what was expected; Mustafa became the chief originator of the intrigues by which Selim came into conflict with his brother Bayazid and which ended with Bayazid’s execution in Persia [cf. Selim II]. After these events Rustam Paşa managed to relegate the intriguer in administrative functions to different parts of the empire; for eight years he was ṭūlī in Damascus. Nor was the grand vizier Sokollu favourably disposed to Mustafa, but in the beginning of 1569 Sultan Selim II called him back from ṭūlī al-ṣūd in the capital. Very soon afterwards Sokollu appointed him ṭūlī in the Yamān; Mustafa went to Cairo to take charge of his command, but here he became involved in serious disputes with the ṭūlī Sultan Paşa on the equipment of his army. The end was that Sultan Selim was appointed in Mustafa’s stead and the latter had to return to Constantinople. Sultan Selim’s protection saved him from death and in the beginning of the following year he was appointed again ṭūlī of the army destined for the conquest of the island of Cyprus. Lala Muṣṭafā Paşa led this formidable campaign with complete success; Nicéria was taken in 1570, when Famagusta surrendered in August 1571. With the surrender of this town is connected the brutal and cruel execution of the Venetian commander Bragadino. After his return he became a serious candidate for the grand vizierate, should Sokollu disappear from the scene. His only rival was Sīnān Paşa. When in 1577 the war with Persia broke out [cf. Murād III] both were appointed ṭūlīs, but, on account of Sīnān’s arrogant character, the latter’s appointment had to be withdrawn. In April Lala Muṣṭafā began his campaign in Georgia, fought the memorable victory of Ṣafira (August 1578) and took Thīn besides a number of other towns. These military glories did not bring him to the ambition of his life. After Sokollu’s assassination, Rustam’s son-in-law Ahmad Paşa had been made grand vizier and, on the latter’s death in May 1580, it was Sīnān [q.v.] who got the sultan’s seat. Lala Muṣṭafā died in October of the same year and was buried in the courtyard of the mosque at Aḥṣīb. Apart from the appositionally important events in which he played a prominent part, Lala Muṣṭafā Paşa has a particular importance in Ottoman historiography because the historian Aḥīṣ [q.v.] had been attached to his person as scribe since the beginning of his career. Therefore his able, but intriguing and reckless character is known better than that of many other Turkish state-men or generals. By his marriage with the grand-daughter of the last Māmūl Sultan Kānṣā Ḥūri he was a very wealthy man, who, notwithstanding his reputed avarice, founded several mosques (as in Erzerum) and many buildings of public utility in the different places where he resided as governor.

**Bibliography:** The chief Turkish source is, as has been said, Aḥīṣ, not only in his Kānū‘ al-Aḥkām, but also in a treatise entitled Nāḥi‘a al-Māhrūb, describing the war between Selim and Bāyāzīd (MS. unknown; cf. Bahinger, G.O.W., p. 132) and in his Nusrat-nāme, which gives a description of the Georgian campaign. Other sources are the works of Pećewi and Şahk Zade. Western contemporary sources are the Diary of Gerlač, the Letters of Busbeke and, especially for the conquest of Cyprus, the Itahan historical descriptions.

**Muṣṭafā Pasha Rashīd.** [See Rashīd, Musta‘āhāb. [See Shahtā]**

**Muṣṭa‘idd Khān, Muḥammad Sāilo, born about 1601 (1620), was brought up as an adopted son by Muḥammad Bāghkāwār Khān, whom he faithfully assisted in various capacities after the death of his patron he passed into the service of Awrangzēb. In the reign of Shāh ‘Alam Bāhūlā Shāh I (1118—1124 = 1707—1712), he became the secretary of ‘Ināyat Allāh Khān, son of Muḥammad Shukr Allāh, the minister of Bāhūlā Shāh, and by his desir Muṣṭa‘idd Khān composed the history of the reign of Awrangzēb, entitled Muṣṭa‘ār ‘Alāmātī. Part i. is a mere abridgment of Muḥammad Kāzm’s history of the first ten years of the emperor’s reign; part ii. contains the history of the last forty years of ‘Alamgīr’s reign (edited in the Bibliotheca Indica, Calcutta 1870—1871). He died at the age of seventy-five at Delhi in 1136 (1725).**

**Bibliography:** Khāl Khān, Munarrā‘-al-Luṭbū, ii. 211; Muṣṭa‘ār ‘Alāmātī, p. 255—256. 407, 462; Ouseley, Critical Essay, p. 42; Rieu, Cat. Br. Mus., p. 270; Ethé, Introd. Otto, Cat., No. 365, and Elliot-Dawson, History of India, vi. 181. (M. Hidayet Hosain, Al-Musta‘ānī bi ‘l-‘Ārā, Abu l-Anbā’-ah Ahmad b. Muḥammad, an ‘Abbāsīd caliph. His father was a son of the caliph al-Muṭaṣir, his mother a slave-girl named Muḥkārī from Slav origin. After the death in Rabi‘ II 1248 (June 862) of al-Muṭaṣir the prætorian appointed his cousin Ahmad caliph under the name al-Muṣṭān. The choice aroused discontent in Sāmārā and unrest broke out among those who supported al-Muṭazz [q.v.] which was only put down after much bloodshed by the Turkish soldiers. When al-Muṣṭān was recognised as caliph he confirmed the governor of Baghhdād, Muḥammad b. Ṭāhir [q.v.], in office. He bought all the property of al-Muṭazz and his brother al-Mu‘ayyad and then had them arrested. The Turks wanted to put them to death but they were protected by the vizier Ahmad b. Ḫu‰ul who soon afterwards fell into disgrace and was banished to Crete. In 249 (865) trouble broke out as a result of a defeat of the army by the Byzantines; the rebels were however scattered by the vizier Uṭāmish and the two Turkish generals Ḥu‰ul and Ḳaḥţa Junior. Uṭāmish was soon afterwards murdered at the suggestion of the latter. As the caliph no longer felt safe in Sāmārā he went to Baghhdād in Muharrar 251 (Feb. 865) Al-Muṭazz was then taken by his supporters out of his prison in Sāmārā and a war broke out which ended in Dhu ‘l-Hijjah 252 (Jan. 866) in the abduction of al-Muṣṭān [cf. Baghhdād]. By the arrangement made the latter was to live in Medina in future; but he was detained in Wāṣṭ and murdered in Shawwal 252 (Oct. 866) at the age of 33. See also the article Muḥammad b. Ṭābir Allāh b. Ṭāhir.**

**Bibliography:** Ibn Ḳutabah, Kitāb al-Ma‘ārif, ed. Wūtkenfeld, p. 200; Ya‘qūb, ed. Houssma, ii. 603—610; Ţabarî, iii. 150 sqq.;
Throughout his reign the actual power was entirely in the hands of al-Afjal [q.v.]. At first some successes were gained in Syria; Fāniya (Apanea) made a voluntary submission in 459, and Tyr as was recovered from a rebel governor in 490. A project of alliance with the Sāljuq of Aleppo failed after the defeat of the Egyptian army by the Crusaders in 490 (Aug. 3, 1097); and the Howārésī was entirely in the hands of Zāhir, and his successor Abū ʿAlī ʿAlī al-Mulk Baghādādī began to suffer from a chronic famine, and neither food nor money could be raised for the troops. When the Buʿyid emir b. Abī ʿAlī al-Mulk (approached [see Muʿtiz al-ʿĀlimī]) the caliph had to declare him self ready to recognize the Buʿyids as the legitimate rulers of all the provinces conquered by them, and in ʿAmmār i 334 (Dec. 945) Ahmad entered Baghādād i was given by the caliph the title of honor Marz al-Dawwār and the fullest power in all secular matters. But the new ruler suspected that the caliph was in communication with the enemies of the Buʿyids, so he had him blinded (on 22nd Rūmān i 334 = Jan. 29 or March 946) and deposed. Al-Mustakfi died in Rāʾ i 335 (Sept.-Oct. 949).

AL-MUSTAʿLĪ BI LLAḤ ABU ʿL-ʿĀSIM AHMAD bin al-Mustanṣir, ninth Fatimid Caliph, born 20th Muharram, 467 (Sept. 16, 1074) (so in all the best sources and in al-Mustanṣir's letter to Ahmad b. ʿAli al-Jalālī, quoted in Idīs, vi. 152), the youngest son of his father. At this time it was generally assumed in the Ismāʿīlī organization that the eldest son, Nizār (born 437), would, in accordance with custom, succeed his father in the imamate, although no formal investiture with the šībāt al-ʿālīd appears to have been made. The influence of the all-powerful wazir Badr al-Ḥajlamī, however, and of his son al-Ḥajlamī, was thrown into the scale in favour of Abu ʿl-ʿĀsim and al-Mustanṣir's consent obtained to the marriage of Abu ʿl-ʿĀsim with Sitt al-Mulk, the daughter of Badr (the statement in al-Fārīkī [ap. Ibn al-Kalāmī, ed. Amedroz, p. 128] that he was the son of Badr's daughter is evidently a misunderstanding). According to the tradition of the Mustašīlian Ismāʿīlīs [see Boḥrāk] Abu ʿl-ʿĀsim was invested with the succession at the time of this marriage; in another version (Ibn Muyassar, p. 66 sqq.) al-Mustanṣir confirmed his nomination of Abu ʿl-ʿĀsim to his own sister, who divulged it after his death. On the death of al-Mustanṣir on 18th Dhu ʿl-Hidayā, 487 (Jan. 10, 1094), the Shīʾite Ilād al-Ḥaḍar, al-Afjal secured the accession of al-Mustanṣir without serious difficulty. The subsequent revolt of Nizar [see Maʿr. b. al-Mustanṣir] at Alexandria failed owing to the opposition of the army, and al-Mustanṣir's succession was generally recognized, except by the Ismāʿīlīs of Persia [see al-Ḥasan b. al-SABKH].

...
to murder the heir-apparent when he entered his father's apartment. Al-Mustansir, however, heard of the plot and had the instigator and his son arrested. A few years after his accession to the throne, the Fātimids also fell within his reign although the 'Abbasids were only officially recognised as caliphs of Egypt under his successor al-Mustaṣid. In 562 (1166—
1167), Shīma, Lord of Khūzestān, invaded the Irāk and demanded from the caliph the grant of a portion of the Lower Euphrates territory as a feef. The caliph however sent an army against him. Shīma's nephew, Kifīd, was routed and Shīma returned home. Al-Mustansir died on 9th Rābi' II
566 (Dec. 20, 1179) when he was very ill, his phy-sean arranged with his chamberlain Aqād al-
bīn [q.v.]. The emir Abu Kā仿 al-Kaināz to give him a bath to hasten his end. The caliph refused to agree; he was nevertheless shut up in the bath until he died.

Al-Mustansir bi ʿLāh, Abu Ḥayr al-
Mansūr b. al-ʿAzīz, ʿAbd Allāh calīf: like
his father whom he succeeded on the 14th Rājāb
623 (July 11, 1226), he is described as a just and
devout man and was generally liked although he
played a great part in politics. He acquired herīb
by a legacy in 630 (1232—1233) and eight years
later his lands were increased by the acquisition
of the town of Ayn which he bought from its
previous owner. About this time the Mongols
began to threaten the lands of ʿĪṣām, Cingiz-Khān
[q.v.] had died in Rāmāḍān 624 (Aug. 1227) but
his sons continued his campaigns of conquest. In
635 (1237—1238) the Mongols were defeated by
the caliph's troops; the strongest defender of
ʿĪṣām however was ʿĀdil al-Dīn, Shah of Khurāsān
[q.v.]. Al-Mustansir died on 20th Dhī al-Muḥarrar 1 or 10th Dhī al-Muḥarrar 2 640 (Nov. 15 or Dec. 5, 1242). According to Ibn Khaldūn however, he did not
die till the following year. The al-Mustansīlāyī
university founded by him in Baghādād bears his
name.

Al-Mustansir bi ʿLāh, Abu ʿAbd Allāh Mājad b. Aḥmad al-ʿAzīz, eighth Fātimid Calīf, born 16th Dhī al-Muḥarrar 2, 420 (July 2, 1029)
(according to Idrīsī, on 16th Rāmāḍān = Sept. 29), succeeded his father al-Safwī [q.v.] 15th Shābīn
427 (June 13, 1036), and died 18th Dhī l-Ḥijja
487 (Jan. 10, 1094), after the longest recorded reign of any Muslim ruler and one which, besides
being marked by the most violent fluctuations of
fortune, was of critical importance in the history
of the Fātimid Ismāʿīlī movement.

Internal history. During the childhood of
Al-Mustansir the authority remained at first in the
strong hands of his father's wazir Abu ʿAlāʾ al-
Dījamārī. On his death (7th Rāmāḍān 430 =
March 28, 1040) it was seen that the evil genius
of Al-Mustansir's reign, his mother, who was a
Sūdānī slave, and her former master, the Jewish
merchant Abū Saʿīd al-Tūsītārī. When Abū Saʿīd
was assassinated in 439 (1047), after an outbreak
of rioting between the Turkish and Berber troops,
the place as the queen-mother's agent was taken
by his brother Abū Nāṣr Hārūn (see however the
documents published by Mann [Biбли..]) and the
kātib Abū Muḥammad al-Ḥasan al-Yāzūrī, who
was not only accepted also the wazīrat (7th Muḥarram
442 = June 1, 1050) and held it for eight years
[ef. AL-YAZURI]. Meanwhile there was considerable
unrest and perhaps also economic unsettlement in
the country. If a statement in al-Maqrīzī:
82 (99); ed. Wiet, ii. 4 [67]) is to be believed, the
Khurāsān of the Egyptian provinces amounted only
to one million dinārs in the time of al-Yāzūrī;
but this may have been exceptional, though it is
plain from other sources that the government had
already been forced to the familiar expedient of
confiscations and indemnities. The Delta was
disturbed by Arab risings, the most serious of
which, that of the Banū Kūra, was put down only
with great difficulty by Nāṣir al-Dawla (see below)
with the Ṭayı and other Arab troops at Kōm Sharīk in
443 (1051) (cf. Ibn al-Ṣaḍārah, p. 42 sg.; Ibn al-
Aṭīr, ix. 396 sg. and for the date Ibn al-Kalānī, p. 85). At the capital there
an increasing state of tension between the
Turkish and Berber troops and the enormous
bodies of Sūdānī slaves raised by the Caliph's
mother (cf. Maqrīzī, i. 94 [Ed. Wiet, ii. 43] and
p. 335; detailed but probably unreliable may be
also in Naṣīr al-Dīn ibn Kaviānī, p. 66). In striking
contrast to this is the magnificence of the
court and prosperity of Muḥarībūs as described
by Naṣīrī Khusrāw [q.v.]. There can be little
doubt that the source of much of this prosperity,
apart from the manufacture and supply of luxuries
to the court, is already to be sought in the
commercial relations between Egypt and the Indian
Ocean on the one hand (cf. Naṣīrī Khusrāw's
account of Aḥdāb) and Constaninople on the
other. The general insecurity deepened after the
execution of al-Yāzūrī, who was the last wazir
to attempt to control the situation. He was followed
by a rapid succession of puppeteers in office, many
of whom, despite the pompous titles duly recorded
by Ibn al-Ṣaḍārah, held the position for no more
than a few days at a time.

The Fātimid Caliphate was now destined to
fall in a few shattering years through the same
gnosis as the 'Abbasid Caliphate at Baghādād
had suffered in the early part of the previous
century. The breakdown of the civil administration
and subsequent exhaustion of the treasury gave a
free hand to the military, and the sinister policy
of the Caliph's mother brought matters speedily to
a head. In a pitched battle at Kōm al-Rīth (close
to Cairo) in 454 (1062) (sometimes confused with
the previous battle at Kōm Sharīk) the Turkish
and Berber troops led by Naṣīr al-Dawla Ibn
Hamdān, a descendant of the Hamānids of Mīzān,
defeated and drove the Sūdānīs into the Saʿīd, but
struggle continued for some years and the fronts
were not finally routed and driven out until 459
(1067); thereafter they were confined to the Saʿīd,
Additions and Corrections

p. 701², l. 48. To be added: In an early period Turkish has also known the form mudur (from Sanscrit mudra, mong. motor, cf. W. Bang and A. von Gabain, Turk. Turfan-Texte, v. 53).

p. 701², l. 66. To be added: Signature was something of a privilege. Of the surviving engravers of Istanbul two only possessed it: Yunśli, the son of a famous father of that name, and ˙Ashik. The personal seals in Latin characters, made up to this day (1933), are, with a few exceptions, barbarous.

The ethnographic museum at Ankara possesses a curious collection of metal seals provenient from the slaižas of the now dissolved tarıka of the Bektashis.

</table>
which suffered severely from their plundering and devastations. Nâṣîr al-Dawla in turn quarrelled with the Turks, and, defeated in battle by a force commanded by al-Mustansîr in person (461 = 1068—1069), appealed to the Saljûq Alp Arslân (q.v.). Without waiting for his help, however, he regarded circumstantial stories and the Dîrâsî as the aid of the Arabs and Lâwânî Berbers, reduced al-Mustansîr (it is said) to the state of a pensioner on a hundred dinârs a month, assumed the title of Sultân al-Dawla, and attempted, but unsuccessfully, to restore the 'Abbâsid âhâka. In Radjâb 465 (March 1073) he and all his house were killed by the rival Turkish faction, led by İdâneq, under whom the Caliph fared little better. Meanwhile the constant anarchy and remorseless plundering of the country by the troops brought agriculture to a standstill (although the Nile floods seem to have been uniformly good). The result was a famine which lasted from 459 to 464 (1067—1072) and became progressively more severe. During these years the country was a prey to the utmost misery; the royal city and palaces were looted, and Fustâṭ was twice plundered and even burned by Nâṣîr al-Dawla. Large numbers of the population, including even the Caliph's own family, sought refuge in Syria and 'Irâq (for the depopulation and shrinkage of Fustâṭ cf. Makrî, i. 51; Wit. i. 12; on the fate of the royal library see also Olga Pinto, Le Bibliothèque degli Arabi, Rome 1928, p. 25—26). The Sunni historians dwell on this famine with some complicity, regarding it as the retribution for the impious attack of al-Bâṣṣârî on the 'Abbâsid Caliphate (see below), and circumspect stories and the extreme destitution to which al-Mustansîr himself was reduced. That these must be accepted with some reserve is clear from such passages as Ibn Taghribîrdî, ii/ii. 186, 19—20.

At length in 465 (1073) al-Mustansîr, taking courage of despair, secretly invited the governor of Ākâk, the Armenian general Badr al-Djumâlî, to assume supreme control in Egypt. Badr accepted the commission, on condition of bringing his own troops with him, and sailing from Ākâk in the winter, reached Cairo on 25th Djumâlî I, 466 (Jan. 29, 1074). His rapid and energetic movements took the Turks by surprise, and he put to death the whole body of their leaders, together with a large number of Egyptian nobles and officials. For his further military and administrative measures, by which he restored order and relative prosperity in Egypt (the total revenue of Egypt and its remaining Syrian possessions, which in 466 had amounted to 2,800,000 dinârs, rose by 483 to 3,100,000 dinârs: Makrî, i. 100; ed. Wit. ii. 68; cf. Abû Sâlih, fol. 7b—9r) see the article BADR AL-DJUMÂLÎ. The alliance between general and caliph was cemented by the marriage of Badr's daughter to al-Mustansîr's youngest son Alâdîn, the future Caliph al-Mustâsîr (q.v.). The Fâtimid Caliphate was saved but, like its 'Abbâsid rival, at the cost of abandoning its temporal authority to a series of military commanders, entitled nurbâ al-qawâlîn, from whose control it never afterwards succeeded in emancipating itself.

Al-Mustansîr is described in contemporary sources as upright and amiable in character, just and equitable in his dealings, and true to his rule. His personality is entirely obscured by the successive waizars and generals who kept him virtually a prisoner. The statements of the later anti-Fâtimid writers must, of course, be entirely discounted; the Fâtimid sources, on the other hand, praise his sagacity and infallibility ('illum) as Imâm.

External relations. The empire to which al-Mustansîr succeeded was the most powerful Muslim state of its time. It extended from Iârîqiyâ and Sicily to Mecca and Central Syria, and maintained an active propagandist organization in Iârîq, Persia and Khorâsân (see the following section). Within a few years of his accession its territories were still further expanded by Anûsîjâqân's conquest of Sha'bân 429 (May 1038) [cf. the articles FâTIMIDS and ISLÀH] and extension of his authority even across the Euphrates, on the one hand, and on the other by the conquests of 'Alî al-Salâhi in the Yanâm, after establishing himself at Masîr in the same year (cf. SALÂHI; also H. F. al-Hamânî, in Journal of the Royal Central-Asian Society, 1931 p. 505 sqq., and in F. R. A. S., 1932, p. 126 sqq.). After the deaths of Anûsîjâqân and the waizâr al-Djâmdârî, who in spite of their rivalry zealously maintained the interest of the dynasty, the power and prestige of the Egyptian court steadily declined. The Arab tribes in Syria, though defeated in the field, remained unsubdued, and the Caliph had to be content with the little more than nominal allegiance of the Mirdâsîs (q.v.) at Aleppo. At Damascus, the rivalries between the Berber and Turkish troops and the hostility of the citizens reduced the governors to impotence. The disturbed state of Syria was the more disastrous that it made it impossible for the Fâtimid government to give effective support to the amir al-Bâṣṣârî (q.v.; see the list of war material and subventions sent from Egypt: Ibn Taghribîrdî, p. 177) in his attempt to oppose the advancing Saljûq power, with the result that his occupation of Baghdad and proclamation of al-Mustansîr in 459 (1058—1059) was speedily brought to an end. The subsequent military and economic disorders in Egypt allowed a free hand to the Turkmen (Qâhz) bands, who had appeared in Northern Syria as early as 447 (1055), though it was not until 463 (1071) that the first Saljûq armies entered Northern Syria and the Qâhz bands under Aṭâq (q.v.) occupied Palestine and began to harass Damascus. In many of the other towns and districts of Syria the authority was seized by local chiefs, such as the 'âdâb Ibn 'Amîr (q.v.; also G. Wit., in Mém. Henri Rassam, p. 279 sqq.) at Târâbulus and Ibn Abî Aṭâî at Tyre, though both of these acknowledged the spiritual authority of the Fâtimid Caliph (cf. also the account of the foundation of the castle of Saḥkhd by Hâsân b. Mîsam al-Kalbî in 466 (1073—1074), quoted from Sibt b. al-Djâwâr in Ibn Taghribîrdî, p. 253). The menace of the Saljûqids became most substantial after the arrival of Tutush (q.v.) in 470 (1077—1078), but the latter never actually organized a full campaign against the Fâtimids. On the contrary, the offensive was taken by Badr, who succeeded in restoring Egyptian control on the coast as far as Tyre, Sidon and Diabîlî in 482 (1089), but not in recovering the interior of Palestine and Damascus (lost in 468), in spite of a certain revulsion of feeling in Syria in favour of the Fâtimids. It is difficult to know how much weight to lay on the story (Ibn Taghribîrdî,

The Encyclopaedia of Islam, III.
p. 272—273) that Tutush at one time proposed to ally himself in marriage with Badr.

The success of the Saljūqids also affected the position of the Fāṭimid rulers in the Arab world. In 462 (1069) the Abāsādī Caliph was acknowledged in the Holy Cities, and after a brief return to the Fāṭimid obedience between 467 and 473 the Hidjaz passed definitely to the Abāsād cause. In the Yaman, the ṣulāḥiyya in the interior and the Zaraftids in the important commercial centre of Ṣadān maintained the suzerainty of the Fāṭimids, the latter until the Abūlābī conquest by Turānshāh in 569 (1173) (cf. the art. al-Ṣalāḥīyā).

Meanwhile the Fāṭimid empire had been similarly shorn of its possessions in the West. About 435 (1043—1044) al-Muʿizz b. Bādis [q. v.], the Zirid lieutenant of the Fāṭimid Caliph in Kāṭawān, began a series of repressive measures against the Shīʿites of Iḥrīya; in 440 he seems to have made the first overt gesture of independence, and in 444 superseded the Fāṭimid coinage; but it was not until 443 (1051) that he formally renounced the Fāṭimid suzerainty and obtained an investiture from the Abūlābī. According to the traditional account (already fully traduced in Ibn al-Nawawī), the wāzir al-Yāẓūrī in revenge launched against him the nomad bands of the Banū Ḥillāt [q. v.]; the tribes mentioned in the Egyptian sources are Zugla, Ṣiyāh, al-ʿAjūdānī, and ʿAdīyūd, who had been a cause of much trouble to the government in the Ṣadd and were now given a free hand to plunder the territories of the Zirids [cf. TUNISIA, vol. iv. 85 ff.]. As Wustenfeld has already indicated (p. 234 n.), the story as it stands is open to serious objections, and there can be little doubt that it has been amplified by popular legend. The westward movement of the Hilāl tribes began as early as 440, and there is no reason to reject the account of Ibn ʿIdhārī that it was al-Muʿizz himself who invited the Arab tribes, then in Barda, to enter Iḥrīya as his ḍiyūd (since he was not on good terms with the Ṣaḥāba), and that they, having set out in response to his invitation, began to plunder on their own account and already before the close of 443 had inflicted a severe defeat on his troops. The two parties were not, however, mutually exclusive and may be reconciled by supposing that the Banū Ḥillāt were transported in the first instance to Barda (the governor of whom had thrown in his lot with al-Muʿizz), and that their advance into Iḥrīya was facilitated, for opposite reasons, by both al-Muʿizz and the wāzir (cf. also Ibn al-ʿAthīr, ix. 387—388). During the first years of his reign, the son and successor of al-Muʿizz, Tamīnī (453—501 = 1061—1107), temporarily returned to the Fāṭimid allegiance (Ibn ʿAbdī, p. 138 n. 1), but with the conquest of Sicily by the Normans in 463 (1070), Barja became the western limit of the Fāṭimid state.

The diplomatic relations of al-Muṣtaṣfir with non-Muslim states covered a wide field. In 429 (1038) the existing treaty with the Byzantine Emperor was renewed and relativelycordial relations established. If Nasīr-ī Khuraswan (ed. Kaviani, p. 67) is to be trusted, the Egyptian government was in communication in 439 (1047) also with the Georgians, the Dalamites, the Khākhān of Turkestan and even the rūdān of Dihīr, all of whom shared with Egypt a common hostility to the Suljūqids and the Ghurānids. The friendly relations with Constantiopolis, however, were broken off in 446 (1054), when the Empress Theodora demanded an offensive alliance against the Saljūqids. Egyptian troops were despatched on an unsuccessful expedition against al-Lādiqīya, the Empress retaliated by opening negotiations with the Saljūqids, and al-Muṣtaṣfir seized the treasures of the Church of the Holy Sepulchre (al-Kunāmā). This breach with Constantinople had important consequences for the future of Egypt, since to it may perhaps be ascribed the opening up of direct commercial relations with the Italian trading cities, though documentary evidence on the point is lacking (cf. Heyd, Histoire du Commerce du Levant, i. 103, n. 1).

Religious Conditions. The wide expansion of the Fāṭimid power under al-Muṣtaṣfir is reflected also in the religious situation. Propaganda on behalf of the Fāṭimids is synonymous with the dissemination of the official state religion of the Fāṭimids, the Ismāʿīlī-Shiʿite faith. Not only in Egypt and other lands in actual subjection to the Fāṭimid authority, but in all quarters of the Islamic world, we learn of missionaries (dāʿī), who, during the long reign of al-Muṣtaṣfir struggled, in part with great success, to secure recognition of his claim to be the religious Imām. In the East, in Persia, and especially in Shirāz, at the court of the Buyid prince Abū Kalīd (q. v.), we may trace the activities at least since 429 (1037—1038) of the dāʿī Abū ʿIyāb Hībat Allah b. Mūsā al-Muʿayyad fi Din Allah [see al-Muʿayyad], doubtless the most prominent personality of his time in the Ismāʿīlī daʿwa. He endeavoured to win over the court and the Dalamite troops to the Fāṭimid cause, but was forced to leave his post in 439 (1047—1048) as the result of pro-Abūlābī policies. In the first part of his autobiography (see Bībī al-Muʿayyad) gives a detailed account of his activity, and in particular publishes his correspondence with an unnamed Sunnī from Khūṣāsa, in which he explains the religious and political principles of his mission. To what an extent the power of the Fāṭimids and the success of their emissaries in Iṣrāk and Persia was feared at Baghādād is shown by the fact that several times and latterly in 444 (1052), there was published a document, to which the Ayyūbids also subscribed, with the object of declaring false the claim of the Fāṭimids to descend from ʿAlī. At the same time the Fāṭimid cause gained also new ground in the Yaman. After the political power of the Fāṭimids had been reduced there to a minimum in the course of the fourth century, it now acquired in the Sulāḥiyy al-ʿAlī b. Muhammad a powerful supporter. He and his successors regarded themselves not only as political but also as religious representatives of the Fāṭimid Imām in the Yaman. The voluminous correspondence between the Sulāḥiyy rulers and al-Muṣtaṣfir, which is still preserved, collected in a separate work (Kitāb al-Sulāḥiyya wa l-Tamkīf wa l-Kabīb bi-Masālik al-Mustansir bi llāh, MS. Sch. Ost, St.; many of these letters are also reproduced in Idrīs, vol. vii. [see Bībī]), deals, along with political questions, in the first place with the position of the daʿwa in the Yaman and in the Fāṭimid state.

In Egypt itself, soon after the accession of al-Muṣtaṣfir, the doctrines of the moderate official Ismāʿīlīya were threatened by the appearance of extremists related to the Druzes [q. v.]. A pretender, al-Sikkīn, together with his associate al-ʿAnī, gave himself out as the returned Calif al-Hākim, but
was promptly unmasked (Idris, vi. 296) Al-Ma'ayyad, who came to Cairo in 439 and won the goodwill of Mustansir, was entrusted with the leadership of the religious mission as da'i' al-Dâ'î (it should be remarked, however, that al-Ya'zârî during his wazâ'a, held the title of al-Mustârshîd). Ibn al-Sa'irî, p. 40). In the reopened seminary in Cairo, where the da'i' of the various countries received instruction, he gave his lectures and gathered into his hands the strings of the whole da'wa. He appears to have exercised a special influence over the development of the da'wa in the Yaman, as the future Yamanite da'i' Lamak b. Malik was numbered amongst his pupils. From Persia the newly-converted Isâ-rî Khânswah [q. v.] came to Egypt, and joined his master in Baghdad. At the same time al-Ma'ayyad, so called by Mahâth, the da'i' Almâd b. Ibrahim al-Nasîhî, and the author of the Kitâb al-Majâlis al-Mustârshîyûn (lectures in which the imâmate of al-Mustansîr is demonstrated with the aid of the Isâ-rî ta'â'il), which are ascribed by the Fâtimids to Badr al-Djâmil. — For the Fâtimid propaganda in Transoxania see also Barthold, Turkestan, i. G. M. S., p. 304—305.

— F. Wustenfeld, Gesch. der Fat. Caliphen, p. 277—271; S. Lane-Poole, Hist. of Egypt in the Middle Ages, p. 136—161; J. Mann, The Jews in Egypt and Palestine under the Fatimid Caliphs, Oxford 1920—1922, ii. 75—85; ii. 79—80, 376—377; and the articles quoted above. With the names are Giauq and P. Kears).

MUSTâRSHîD (Al-Mustârshîd) the name of one of the groups into which the Arab genealogists divide the population of Arabia. The first is the 'arab 'arâb, the original Arabs of pure stock; they numbered nine (some say seven) tribes which are regarded as the descendants of Aram b. Sâm b. Nûh [q. v.] and the first settlers in Arabia: 'Abâ, Thammûl, Umayyân, 'Abâl, Tasmî, Dîjâdî, Isârî, Djâmil and Qalam. These are extinct except for a few remnants incorporated in other tribes. The second group comprises the mutsârshîb [q. v.] who are not pure blooded Arabs. They are regarded as descendants of Kahtân (the Yâkûn of the list of nations in Gen. x. 25 sqq.) and live in southern Arabia. The third group is called mustârshîb; this name is also applied to tribes who were not originally Arabs; they trace their descent from Ma'add b. 'Adnân, a descendant of Isâlî [q. v.]. All the north Arabian tribes are included among the mustârshîb, so that the Banū Kurash to which Muhamedi belonged is one of them; his genealogy is in this way traced back to Abraham and he thus thought he could prove his connection with the Biblical prophets. The old term mustârshîb, for tribes not originally of Arab descent, obtained a new meaning after the conquest of Spain. It was applied to the Christian Spaniards who adopted Islam; the term mustârshîb was corrupted to Mutasrshid [q. v.].

**AL-MUSTARSHID** bi 'l-Lah, Abu Mansûr al-Faqqû, 5 Abû bâsîd caliph, born in 486 (1003—1004), son of al-Mustârshîh and a slave-girl. Al-Mustarshid, who was proclaimed his father's successor after the latter's death on 16th Rabi' II 512 (Aug. 6, 1118), was the first caliph since the occupation of Baghdad by the Franks, who were not content with spiritual supremacy but also endeavoured to revive the caliph's authority in temporal matters. The Sâldjân sultan had died before al-Mustarshid (Dhu l-Hiddâja 511 = April 1118) and his son Mahmûd [q. v.] was appointed his successor. His uncle Sandzîr and his brother Mas'ûd ibn Sâlîh both rebelled against him, however, and the turbulent Mazyadî Dulkasî, who not content with raising trouble in the 'Irâq and had also quarrelled with the caliph. The latter defeated him in 517 (1123) and after al-Mustarshid had repelled a regular attack on the capital he was able to adopt a more independent attitude to the Sâldjân. But as his increasing power aroused the suspicions of the governor of Baghdad, the latter in Rabi' 2 (July—Aug. 1126) went to Sultan Mahmûd and asked him to put an end to the caliph's powers. Mahmûd agreed and attacked the capital. The al-Mustarshid sent an army against the Sâlîhî in order to save the town. The attempt failed however; towards the end of the year Mahmûd entered Baghdad and al-Mustarshid could not hold out indefinitely but had to make peace, whereupon the sultan appointed 'Imâd al-Din Zangi governor of Baghdad and all the 'Irâq. But in Djamâdi II 521 (July 1127) the latter was given the governorship of al-Mawâl and after Mahmûd's death (525 = 1131) the succession was again disputed. In 526 Dulkasî and Zangi undertook a campaign against Baghdad but were defeated by the caliph at the
end of Rađab (June 1132) and in the same year Masōd [q. v.] had to give him complete control of Baghdad and the surrounding country. After some time he attacked the sultan but was taken prisoner in Kurnaşūn 549 (Jan. 1135) and murdered in Dhu-l-Ka‘da of the same year (Aug. 1135) [cf. the art. DUBAI, S. SADAKA].

**MUSTAŠHAR** (a.), cōuncillor, Turkish pronunciation mustəšər, meaning "general secretary to a ministry" or "under-secretary of state". The word which means literally "one who is consulted" comes from the same root as müṣğūr [q. v.] which properly means "he who gives advice". Şāmī Bey regards the word mustəšər as a synonym of the old Turkish final. — The office was called mustəšər or more simply mustəšərī.

Like the title müṣğūr, that of mustəšərī was created by Mahmūd II. There were at first two mustəšərī in the grand-vizierate, one for foreign and the other for home affairs. The latter was later replaced by a Minister of the Interior who had in his turn a mustəšərī. The number of mustəšərī gradually increased but some less important departments had müṣğūrī "assistant, deputy" (in 1296 for example there were müṣğūrī in the finance and police departments). The office has been retained under the present republic and each ministry or wakf has its mustəšərī; that of national defence has three (for army, navy and air force).

The chief judge of Istanbul used to have a mustəšərī. According to Luṭfī Efendi, the post of mustəšərī of the Navy was created in 1253 [v., p. 91] and that of mustəšərī of the sadirgūn or of the two qāṣīrāt in 1262 (viit., p. 127). On the honorary grades of mustəšərī cf. the same author, vi., p. 66; cf. also p. 103, line 8 from below.

Mustəšərī is also the name given to the "councilor" of Turkish or foreign embassies or legations. The title of mustəšərī was also borne by the ambassador himself, sent by the Sultan of Morocco to Stamboul in 1197, is inexplicable to us (cf. Djewdet Pasha, edition 1309, ii. 251; cf. Recueil de Mémoires Orientaux de l’Éc. des Langues Orientales à Paris, 1905, p. 6).

As to the term muḥāwirī, a synonym of the preceding and from the same root, it is applied to technical advisers, whether foreigners or not; ḫāqān muḥāwirī "legal adviser".

Bibliography: Cf. the various Ottoman calendars. The historians Ahmed Djewdet and Luṭfī, following their predecessors, give no details of the administrative organisation.

**AL-MUSTA‘SIM BI’LLAH, AL-AHMAD ‘ALIY AL-‘ABBAṢID** caliph of Baghdad, born in 609 (1212/3). After the death of his father in Djuṣmād I or II 640 (Nov./Dec. 1242) he was raised to the caliph’s throne but he had neither the talent nor the strength to avert the catastrophe threatening from the Mongols; he allowed himself to be guided by bad councillors who were not agreed among themselves but working against one another. In 683 (1255/6) the Mongol Khān Ḥulāḡū [q. v.] demanded that the Muslim rulers should make war on the Ismā‘īls. The caliph did not trouble about this and in Rabī‘ I 655 (March/April 1257) a Mongol embassy came to Baghdad and demanded that al-Musta‘sim should raise the defences of the city and appear in person before Ḥulāḡū for further negotiations or send a deputy. As the caliph refused to meet these demands, Ḥulāḡū threatened him with war. After another message in which al-Musta‘sim tried to intimidate Ḥulāḡū, the latter set out against the ancient city of the caliphs. On the way he met another embassy, offering him an annual tribute but this effort to appease the cruel foe was useless and by Muhammad 656 (Jan. 1258) the Mongols were at the gates of Baghdad. Preparations for the siege advanced rapidly and after all attempts to resume negotiations had failed against the relentless Ḥulāḡū, al-Musta‘sim had to surrender on 4th Safer (10th Feb.) and the city was sacked. Ten days later Ḥulāḡū had the caliph with some of his relations put to death [cf. the art. BAGHDAD].

**MUSTAWFĪ, an official in charge of government accounts.** Under the Turkish systems, e.g. under the Ghażnavids and Sadżāds, the title was borne by a foreigner who was at the head of the diwan concerned with keeping the tally of public income and expenditure. Under the Niẓām al-Mulk the office of the mustawfī was second only to that of the vizier (Bundarlī, ed. Houtsma, p. 100) and appears to have corresponded to the diwan al-asīmān or diwan al-azīmān, the "Bureau of (Financial) Control" of the ‘Abbāsids (Tabari, iii. 523), although the Sadżāds also had a diwan of this name tenable by the mustawfī himself (Bundarlī, p. 58). The qualities requisite in him were such as to fit him for the vizierate itself (ibid., p. 166), and indeed there were duties which were common to the two offices so that the same man could act as the niẓām in both (ibid., p. 129, last line). The vizierate might be refused by a powerful mustawfī holding all the reins of government in his hands and reluctant to expose himself to the dangers inherent in the nominally more exalted office (ibid., p. 136, 141). But no officer was safe from a capricious or greedy monarch and the mustawfī Saṭī al-Dīn suffered death and the confiscation of a large part of his property at the hands of Sulfān Mas‘ūd‘ī (ibid., p. 171). It is probable that the actual head of the State mustawfī was mustawfī ‘almamlaka or something similar (ibid., p. 31), the ordinary mustawfī, or accountant, holding a subordinate position (ibid., p. 31, 3).
MUSTAWFI — MU'TA

Under the Mongols the title was given to the superintendents of provincial finances (e.g. Hamd Allah Mustawfi and his great-grandfather; cf. E. G. Browne, *Lit. Hist. of Persia*, iii. 87), and under the Assassins, Keyhān and Kādjar, the mustawfi *āt-dāimālikht filled the office of a secretary of state in charge of the public treasury accounts while the ordinary mustawfi was one of the lesser officers of the court (R. du Mans, *Estat de la Perse en 1666*, ed. Schefer, Paris 1890, p. 26, 178 sq.; A. Olearius, *Voyages and Travels*, London 1669, p. 274; Sir J. Malcolm, *History of Persia*, London 1815, ii. 437; R. G. Watson, *History of Persia*, London 1866, p. 16 sq.). Mustawfi *īt-ā-
dāimālikht might however, under the latest Kādjarā, be a title personal to a particular individual, who might be the Minister of the Interior (as in 1890) or even Prime Minister (as in 1910).

In Egypt, under the Fāṭimids and Mamluks, the mustawfi might be the head of a dīwān (as of the dīwān al-dā'īq) or hold a less exalted, but still important, position as financial controller in such matters as the ḫāṣīla, or military fiefs (cf. Makrizī, *Khībat, Balaq 1270, ii. 193, middle and p. 227, under mawṣū-l-dā'īq). The ordinary mustawfi was in fact official of the status of a clerk employed under a ḥād, or overseer, in land-survey or crop-estimation or else in a government office such as the depot of the government grain monopoly (op. cit., ed. Wiet, ii., ch. 32, p. 23—25).

MUSTAWFI [see ḤAMD ALLĀH.]

AL-MUSTAẒHIR BI LĪLĀH, ABD L-'ABĪB AHMAD B. AL-MUKTADĪ, ḤABBĀSīL QALIPI. After the death of his father in Muḥarram 487 (Feb. 1094) the young al-Mustaʿẓhir succeeded him; about this time the power of the Saljuqs was beginning to be weakened by internal dissensions (cf. SARKHIYAR). The Almoravids had already appeared on the scene in al-Muktaḍari’s reign, were able to take advantage of the situation and fighting this dangerous sect soon became one of the most important tasks of the sulṭāns and caliphs. The Crusades also began at this time. In Shāhān 492 (July 1099) Jerusalem was taken and in the following years numerous fugitives reached Baghādā who urged Sulṭān Muḥammad to take part in the struggle. He therefore sent an army under the emir Mawdūd against the Crusaders in 505 (1111/12). Al-Mustaʿẓhir, who is hardly ever mentioned in the political history of this period, died on 16 Rabī 1 512 (Aug. 6, 1118) at the age of 41.

(K. V. ZETTERSTEDT)

MUSULMAN [See MUSLIM.]

MUṬA, a town in the centre of a fertile plain in the land east of Jordan, east of the southern end of the Dead Sea, about two hours’ journey south of Kerak, celebrated for the defeat of the Muslims there in Djumādil II of the year 8. According to the Arabic account, the reason why Muḥammad sent 3,000 men to this region was that an envoy whom he had sent to the king (presumably the imperial commandant) of Būṣrah had been murdered by a Ghassānid, but the real reason seems to have been that he wished to bring the (Christian or pagan) Arabs living there under his control. If the story is correct that he chose three leaders for the expedition, Zaʿd b. Ḥārīṣa (?v.) and if he left his cousin Ḥādīfs b. Abī Tālib (?v.) and if he also felt the poet ‘Abd Allāh b. Rawāh (q.v.) he must have fully recognised the hazardous nature of the enterprise; but the tendency of the stories to describe the dangers of the expedition and the overwhelming nature of the opposing force as very great in order to put the unfortunate result of the battle in a better light is quite evident. Ibn Ḥāṣān b. Ḥārīṣ b. Muḥammad (q.v.) to the stories above mentioned fell in succession. When the Muslims arrived on the scene the Muslims found that they had been tricked and learned that no less than 100,000 Byzantine soldiers and Beduins — a much exaggerated figure which Ibn Ḥāṣān doubles — had assembled in Maʿāb, Musil (Arabia Petraea, i. 29) locates this Maʿāb, which according to Tabari, i. 2108, was not a town but a camp (jūṣāf), at Ḵādījān, a place near a spring with traces of an old Roman camp. But Abū ʿI-Fāḍil identifies it with al-Rabba which he describes as a village on the site of the former capital of the district, c. 489 sqq. Its Leo I, *Gesta Byzantium in Comitis*, 1895, p. 70 sqq. with photographs; Musil, *op. cit.*, p. 370 sqq., 381). According to the Arab story, it was the emperor Heinrich himself who assembled this great army in Maʿāb, which is of course not true. When the Muslims heard this, we are told, they lost courage and wanted to wait until the Prophet could send them reinforcements but Abū ʿI-Fāḍil b. Rawāḥa was able to fill them with such enthusiasm for a possible martyr’s death that they needed no army. According to Ibn Ḥāṣān, the latter met them at a village belonging to Balaq called Masḥārīf, but this must be a misunderstanding as this term means the Syrian fortresses on the edge of the desert. At the sight of the great force of the enemy, they withdrew to the south but fighting began at the village of Muṭa and they were routed. When the three leaders named by Muḥammad had fallen in the order indicated, they wanted Ḥārīṣ b. ʿAṣqān to take command but he gave it to Khālid b. al-Walīd who succeeded in saving the rest of the force: this was the first occasion on which his military talents benefited the Muslims; how he did it, we do not know as the stratagem related by Wāṣīd, p. 312 is not to be taken seriously. Besides the Muslim account, we have a Byzantine one, the earliest in the history of the Prophet, by the historian Theophanes, whose version bears the stamp of veracity. According to him Muḥammad sent four chiefs to the land east of Jordan against the Christian Arabs there. They went to a village named Muṣhean, which de Goeje, *Memoire sur la conquête de la Syrie*, p. 6 sqq., takes
to be a copyist's error for Mašāb, while Musil, op. cit., p. 153, identifies it with Khūbir al-Maḥma which lies in a broad depression, in order to fall upon the Arabs on a feastday (ṣuqā yū tis idhān al-ṣibaʿa aṣwān, which seems to indicate a heathen rather than a Christian population) but the exāwīt Theodoros there learned of their plans and rapidly collecting the garrisons of the fortresses, fell upon the Muslims at Muṭa and defeated them. Three of the leaders and most of the force were killed and the Muslims was who called the "sword of God", alone succeeded in escaping. The tombs of the martyrs fell there to be pointed out at Muṭa, where a mausoleum was built over them.

**MUTA (A.), temporary marriage (according to the Arab lexicographers "marriage of pleasure"), a marriage which is contracted for a fixed period on rewarding the woman.**

I. **Before Islam.** According to Ammiānus Marcellinus, iv. 4, 4, temporary marriage was in use among the Arabs already in the fourth century A. D.; but this can hardly be a reference to muṭaʾ as the woman brings a lance and tent to the man and can leave him if she likes after the period has elapsed. It is also doubtful if there is a distinct muṭaʾ character in the marriage of Hīšām with Salama bint ʿAmr, whom he married during a temporary stay in Yathrib and left with her family there after the birth of her child (Caecani, i. 111, §92). From the passage Agālān, xvi. 63 (mattāʾ ʿālīka l-talāa) as well as from Muslim traditions it may be concluded that muṭaʾ was known in the Ḫāhiliya. If we remember that the same kind of temporary marriage as the maṭbaʿa was known in Erythraea (Conti Rossini, Principi di diritto consuetudinario, Rome 1916, p. 185, 249) it seems to me certain that muṭaʾ is an old Arabian institution. (Temporary marriage is also found among other peoples: cf. Wilken, p. 21 sqq.; Westermarck, History of Human Marriage, London 1925, iii. 267 sqq.; cf. also the v. 2544-2547辈子 in Egypt, to which Grünfeld, p. 327 calls attention; in a demotic document there is a reference to such a marriage for five months: cf. Mitter-Wilken, Grundzüge der Papyruskunde, 1917, i. p. 203 sqq.).

II. In the Kurʾān there is undoubtedly a reference to this form of marriage in the Medina sūra iv. 28, although the orthodox explanation of this passage as early as the first century refers it to the ordinary nikāḥ; after giving a list of the classes of women with whom marriage is forbidden, it goes on: "And further you are permitted to seek out wives with your wealth, in modest conduct but not in fornication; but give them their reward (ματίαν; maṭiba) in keeping with your promise". After ḥimātul-tam, Ṣaʿd b. Kaʿb and Ibn ʿAbbas read the

words ḥā adūlam mutamman "for a definite period" (Tabārī, Tafāṣṣ, v. 9), a reading which naturally has not found its way into Sunni circles but is often added in Ṣaḥābī books.

III. The traditions are contradictory on the question of muṭaʾ. According to some, it was in use in the time of the Prophet and he was even said to have practised it (mattāʾahu: Tabārī, Annals, i. 1775, 1776; cf. Caecani, ii. 478, N°. 17 and 19). In return for a robe or a handful of dates one could take an unmarried woman (nūyām) for a period of cohabitation (Muslim, Nikāḥ, tr. 157; Tirmāzī, N°. 1677). Especially when a man came to a strange town he could marry a woman there for the period of his stay so that she could look after him (Tirmāzī, Nikāḥ, bāb 28).

On the other hand, according to one tradition related by ʿAli, it was forbidden by the Prophet on the day (or in the year) of Khaibar (Buḫkārī, Muslim, bāb 38; Dīwān, bāb 28, Nikāḥ, bāb 31; Muslim, Nikāḥ, tr. 31-34: Nasāʿī, Nikāḥ, bāb 71 ["on the day of Hunain" must here be a mistake for Khaibar]; Saʿīd, bāb 31; Ibn Māṭṣa, Nikāḥ, bāb 44; Tirmāzī, Nikāḥ, bāb 28; Aḥmad, bāb 6; Mālik, Nikāḥ, tr. 41; Aḥmad b. Hanbal, i. 103, 142; Taḫṣīṣ, N°. 111; Zaid, Muḥqam, N°. 718).

According to other traditions, he is said to have permitted it for a short time on particular occasions. In this connection we have a group of traditions which goes back to Sabra b. Maʿbūd; the various accounts of this, some long, some short, which supplement one another, are in part given without date (Muslim, Nikāḥ, tr. 20, 26; Nasāʿī, Nikāḥ, bāb 71; Aḥmad b. Ḫaṭib, Nikāḥ, bāb 13; Aḥmad b. Hanbal, i. 404, 405, in part referred to the conquest of Mecca (Muslim, Nikāḥ, tr. 21, 24, 25, 27, 28; Dārīmī, Nikāḥ, bāb 16; Aḥmad b. Hanbal, i. 404 sq.). Their substance is as follows: The Prophet permitted muṭaʾ; Sabra therefore went with a companion to a woman and each offered her his cloak. She chose the younger with the shalibier cloak and slept three nights with him: therupon the Prophet forbade it. According to the stories associated with the farewell pilgrimage, the woman wished muṭaʾ only for a fixed period so that ten days or nights was agreed upon, but the Prophet forbade it after the first night, saying: "Whoever of you has married a woman for a period, shall give her what he promised and ask nothing of it back and he shall separate from her; for God has forbidden this up to the day of re-correction". (For the conclusion cf. also the fragments of this in Muslim, Nikāḥ, tr. 23, 59). According to a second group of traditions which goes back to Dārīmī b. ʿAbd Allāh and Salama b. al-Akbawī, the Prophet prohibited muṭaʾ for three days on a campaign (Buḫkārī, Nikāḥ, bāb 71; Muslim, Nikāḥ, tr. 14, 15; Aḥmad b. Hanbal, iv. 47, 51; according to Muslim, Nikāḥ, tr. 19 and Aḥmad b. Hanbal, iv. 55, this was in the year of Awtā, i.e. shortly after the capture of Mecca). In Buḫkārī we have at the end: "The partnership of the two parties lasted three nights: and if they agreed to extend it, they did so, and if they wished to separate, they did so". A prohibition is given only in two versions in the group.
According to other traditions, mut'a was first forbidden by the caliph 'Omar at the end of his caliphate (Muslim, Ṣaḥīḥ Ibn Ḥaṣan, 106–11; Ahmad b. Ḥanbal, iii. 304, 380 and iii. 325, 356, 363, where there is a reference made to the two kinds of mut'a, i.e. tanāmüta* on the pilgrimage and mut'at an-nabī*). 'Omar threatened the punishment of stoning so that he regarded mut'a as fornication (Ibn Māḍījk, Ṣaḥīḥ, bāb 44: Mālik, Ṣaḥīḥ, tr. 42: Ṣa'īd b. ʻAbī Ḥamīd; Šaybānī, N. 1792). Cf. the angry exclamation of Ibn Ṭāhūr when he was asked about mut'a: "By Allah, we were not immodest in the time of the Prophet of Allah nor fornicators" (Abūzd b. Ḥanbal, ii. 95, 104).

What then is at the bottom of these contradictory traditions? While Wellhausen regards mut'a as simply prostitution and not an old Arabian custom, Castanì points out that the traditions agree in connecting mut'a with an entrance of the Prophet into Mecca and sometimes even with the hadji. It and that a three days' duration is a feature of the mut'a; taking account of other considerations, he concludes that mut'a in the pagan period was a religious prostitution on the occasion of the Meccan festival. However tempting this explanation may be, there is a complete lack of evidence for any religious prostitution in Mecca. With Wilken and Robertison Smith, we must rather regard mut'a as the survival into Islam of an old Arabian custom. The Prophet gives this custom sanction in the Qur'an and also practised it himself. The traditions, if examined carefully, only mention two cases of prohibition by the Prophet: Ḥaibar and Mecca. As both these are later than the above Qur'ānic passage (years 3–5, according to Nöldeke-Schwally, i. 158) this prohibition would be quite possible. But since on the other hand the caliph 'Omar prohibited mut'a, which there is no reason to doubt, we might regard the tradition of prohibition as representing later views, which, as is often the case, are put back to the time of the Prophet.

IV. Attitude of the fuqahā’. Ibn ʻAbās (d. 68) was an aident champion of mut'a (Buḫkārī, Ṣaḥīḥ, bāb 31; Muslim, Ṣaḥīḥ, tr. 18; Šaybānī, N. 1792; Rāzī, Muṣaffa al-Qāhīb, Cairo 1324, ill. 195). In Mecca and the Yaman, according to Ibn Ṭaḥūr (Bidāya, Cairo 1339, ill. 54), he also had followers; but before his death he is said to have been revived (Tirmīzī, Muṣaffa, bāb 28: Rāzī, loc. cit.). In later times, people still spoke desirously of a marriage by a fawāda of Ibn ʻAbās. In the second half of the first century in Mecca, fawāda were still given permitting mut'a (Muslim, Ṣaḥīḥ, tr. 29). The Qur'an commentators Muḥammad (d. 100), Saʻīd b. Ḍuḥayr (d. 95), and al-Suddī (d. 127) also referred the above verse of the Qur'ān to mut'a. Suddī says that it is a marriage for a fixed period and that it isشبه. They permit mut'a, as also does the will in the company of two witnesses; that after the expiry of this period the man has no longer any claim on the woman and that the two parties cannot inherit from one another (Ṭabarī, Taṣfiṣr., v. 8). With the second century, the contrary view begins to predominate; although individuals like Amr b. ʻAmr (d. 126), Ibn Džarajī (d. 150) and the Zaide sect of the Ḥijrūdīya permit mut'a (Ibn Ṭuṣlīḥ, loc. cit.; Ṭabarī, Taṣfiṣr., v. 8, 9). The second century, the contrary view begins to predominate; although individuals like 'Amr b. ʻAmr (d. 126), Ibn Dżarajī (d. 150) and the Zaide sect of the Ḥijrūdīya permit mut'a (Ibn Ṭuṣlīḥ, loc. cit.; van Arendonk, Ophomt etc.; Leyden 151, p. 72, note 9), al-Ṭawrī (d. 161), Ibn al-Muhārīk (d. 181) (Tirmīzī, Ṣaḥīḥ, bāb 28) and all the Sunnī schools of law as well as the Zaidīs (al-Ṭuṣlīḥ, 'Id-Ṭabī‘, Taṣfiṣr., Berlin 151, Glaser 74, fol. 539) consider mut'a forbidden. Its recognition was now limited to the Shī‘ah. And if the caliph Ma‘müd tried to introduce mut'a again, this was certainly due to his Shī‘ tendencies (Ibn Ḥallūkān, Wafayāt, ii. 218).

At the same time, we still have in the second century the opinions of a period of transition. According to Zuṣīr (d. 158), the marriage concluded under the form of mut'a was valid as a marriage but its limitation in time was invalid (Sa‘ākhī, Mabīţ, v. 153; cf. also Buḫkārī, Ṣaḥīḥ, bāb 4). According to al-Ḥasan b. Ziyād al-Luḥ‘ūr (d. 204), the mut’a was valid if the partners could not survive the time fixed, e.g. 100 years or more (Sa‘ākhī, loc. cit.).

But in spite of their refusal to recognise mut’a, the Sunnīs made concessions by which mut’a gained a footing in another form. It became the practice not to insert a definite period in the contract; any agreement made outside the contract was not affected by the law. Al-ʻAbārī (Mamākha al-Tawārīkh, ed. Lees, ii. 208 seqq.) although only the contrary is recorded in the Muṣaffa and Madschum (v. 46).

A good exposition of the two opposite points of view is given from the Sunnī side by Ṭabarī (d. 587), Badrī al-Sanūsī, Cairo 1327, ii. 272–274 and in Rāzī, op. cit., iii. 193–195 and from the Shī‘ah side by ʻAlam al-Ḥusn al-Murtadā, Ḥiṣnīr, Teheran 1315, p. 60–65. The Sunnīs refer the verse above mentioned from the Qur’ān to regular marriage and declare the adfūr to be mahār, while the Shī‘ahs base their view on this verse and consider the traditions of prohibition not to be abrogatory and do not consider ‘Omar authoritative for a prohibition. The Imāmīs even go so far as to say: "The believer is only perfect when he has experienced a mut’a" (al-Ḥurr al-ʻArabī, loc. cit.).

V. The teachings of the Imāmīs.

1. Formal. Mut’a is an irrevocable (ṣawū‘) contract which, like every contract, comes into existence through ḥālaq and ḥālaq. It may be concluded with the words nikāḥ, ṣawū‘ or tanāmüta*; but must always contain a precise statement of the period (ṣa‘īl) and a definite recompense (adfūr or mahār). This recompense may be the dowry usual in other marriages or a handful of corn, a dhārāmah or such like. The permission may vary from a day to months or even years. Witnesses are not necessary; nor need it be concluded before the ḥadi, if the partners are capable of using the formulae correctly. If the mahār is not given, the contract is invalid. If the period is not given, according to some it is a regular marriage if the word tanāmüta* was not used at the end of the ceremony; in the latter case the contract is again invalid.

2. The two partners must naturally fulfill the usual conditions for the conclusion of an agreement. The woman must further be unmarried
and chaste (‘affa) and if possible ought to know about mu’a, i.e. be a Shī‘i, and can only contract a temporary marriage with a Muslim. According to Ibrahim, (d. 812) and al-Musafī (d. 413), mu’a with an unbeliever is forbidden, even with a member of the possessors of a scripture (‘idābīyya). The navaqisb (extreme Khāridjīs) are included among the unbelievers. According to most Imāmīs (and Tā‘ī also) however, mu’a with a Christian or Jewish woman is permitted but mukā’ah with a mahfū‘iyya. Mu’a with a slave-girl is only allowed with the consent of her master. Usually the woman contracts the marriage without a wā‘il; only a virgin (bikr), according to some, requires her father’s consent (Abu l-Salih, d. 82; Ibn Bībīyā, d. 381; Ibn al-Ba‘rīdī, d. 481; cf. Ḥilmī, ii. 92). The man may in this way take other wives in addition to his four legal wives, especially on journeys. He must not, however, take two sisters at the same time, not even during the ‘idda.

3. The mu’a ends on the expiry of the period agreed upon. It cannot be prolonged by arrangement between the two parties; a new temporary marriage with a new ma‘ir must rather be contracted at the end of the period. Divorce is impossible; according to some, however, Ḥān and ẓihār are permitted.

4. There is no obligation on the man to provide food and home for the woman. The two partners cannot divorce one from another; but according to some, inheritance may be provided for in the contract. The ‘idda after the expiry of the mu’a is two periods or 45 days, i.e. the ‘idda of a slave-girl. There is, however, disagreement whether on the man’s death the period of waiting is the usual one for a wife or that for a slave. The children go with the father.

VI. Modern practice. Although these ‘Shī‘ views have a certain amount of moral support, the mu’a in many cases can only be described as legalized prostitution. It is true that in Persia such marriages are made for very long periods, e.g. 50 years, but in Persia, when on a journey, temporally marriages in any place where he is stopping for some time and in the towns and caravanserais mollahs and other brokers offer a wife to each new arrival. To make this business more profitable, the ‘idda period is evaded by concluding a second temporary marriage with the same man after the expiry of the first, for in the case of such a marriage the ‘idda is not necessary. This marriage and a woman of this kind is called in Persia ‘afq (lit. ‘form’ i.e. of the contract). Cf. Olearius [1637], Muscovite. pers. Revy, Schleswig 1858, p. 609; Chardin [1673], Voyages, Paris 1851, ii. 222–223, 225–227; Polak, Persien, Leipzig 1865, ii. 207 sqq.; E. G. Browne, A year amongst the Persians, Cambridge 1927, p. 505 sqq.; H. Norden, Persien, Leipzig 1939, p. 148, 167; and the romance of the traveller James Morier, The adventures of Hejia Bahā of Isphahan, 1824, part iii., chap. 6–8.

The constantly quoted story (first in Wilken, p. 19) of Alex. Hamilton (A new account of the East India. Edinburgh 1727, i. 51) that at the beginning of the xvith century temporary marriages were publicly negotiated in Souan (= San‘ā‘) in South Arabia and concluded before the khāf, is a very improbable one: for Hamilton knew only the coast-towns from his own observation and wrote his account of his travels later from memory. He seems to be confusing them with conditions in Persian towns, and he makes mistakes on other matters.

In Mecca, in modern as well as ancient times (for the middle ages cf. Lišān al-Arab, tav-mu‘ād bi-tawādī bi-Makka minhu), temporary marriages were concluded among the Sa`ūdīs but nothing is said of this in the marriage contract or this would make it invalid; everything necessary is arranged previously by word of mouth. On the conclusion of the contract, the man utters the tafla’ formula with a time limit. Such agreements are as a rule kept (Snouck Hurgronje, Mecca, ii. 156; d., Versp. Geschichten, vi. 150). The same artifice is used in such cases as Šaftī indicated long ago (cf. above).

It has four feet to the hemistich and two ʿarūd and four darb:

1st ʿarūd

2nd ʿarūd

Fāʿilūn fāʿilūn fāʿilūn fāʿilūn fāʿilūn fāʿilūn fāʿilūn fāʿilūn fāʿilūn fāʿilūn fāʿilūn may change to fāʿilūn (fāʿilūn =) fāʿilūn, (Moh. Ben Chexher)

AL-MUṬAḌĪD BI ʿLLĀH, ABU ʿL-ʿĂBEKS AHMAD B. TĀHĪA, ʿABBĀSĪ CL√PH, son of al-Muʿawwāf, co-regent with the caliph al-Muʾtamīd [q.v.], and a Greek slave named Dirar. Al-Muʾtaḍīd was already the real ruler in the two last years of al-Muʿawwāf’s life and after the death of al-Muʾtamīd in Radjāb 279 (Oct. 892) he ascended the throne. The new caliph who had inherited his father’s gifts as a ruler and was distinguished alike for his economy and military ability is one of the greatest of the ʿAbbāsids in spite of his strictness and cruelty. On the accession of al-Muʾtaḍīd the Ṭūlūnī Khāmīrārwāh [q.v.], wearied of the long war, concluded peace and gave the caliph his daughter in marriage. While the Khārījīs in Mesopotamia were weakened by internal dissensions, al-Muʾtaḍīd in 280 (893–894) undertook an expedition against the rebel Rāʾūn Shāḥīţān and brought them to obedience. In the next two years the allies of the Khārījī chief Hārūn b. ʿAbd Allāh were defeated and in 283 (896) the latter fell into the hands of Ḥusain b. Hādīmān, and was sent to Baghdād where the caliph had him crucified. The influence of the Ḥanīfīs now began to increase in Baghdād. The Dulāfīs [q.v.] who had given the caliphs much trouble were soon finally conquered. After al-Hārūn b. ʿAbd aṯ-Ṭāḥī called Abu Ḥālāl had been defeated and slain in Ḍhub ʿl-Ḥiḍājā 284 (Jan. 898) near Isfāhān, al-Muʾtaḍīd had the other Dulāfīs imprisoned and the family now disappears from history. The Sāmānīs increased their power at the expense of the Ṣaffārīs and the ʿAlīs. In 287 (900) the Ṣaffārī ʿAmīr b. aṯ-Ṭāḥī [q.v.] was captured and brought to Baghdād. In the same year the ʿAlīd Muhammad b. Zād, lord of Ṭabarīsān, occupied Dūrād which marched against Ḵūrāsān but was defeated by the Sāmānīs. But in the year 289 (903) Harūn and died of his wounds while Ibn Hārūn took possession of Dūrād and ʿṬabarīsān in the name of the Sāmānīs. About the same time the governor of Armenia and ʿĀjarbāḏjān Muhammad b. Ḍabīb al-Ṣāḥī endeavoured in combination with his freedman Ṭawṣīf to conquer Egypt. The latter however was taken prisoner by the caliph’s troops and as the most influential men in Tarsus had promised their help, al-Muʾtaḍīd had them arrested and the fleet there burned. Muhammad was however allowed to retain his post but died soon after wards of the plague. The Ḵᵛāṭābān [q.v.] now appeared on the scene and in the same year the Karmāshān leader al-Ṭajmāḥī [q.v.] inflicted a complete defeat on the caliph’s troops. Al-Muʾtaḍīd died in Baghdād on 22 Rabīʿ II, 289 (April 5, 902) at the age of 40 or 47. According to some he was poisoned. — Cf. also the art. ʿISMĀʿĪL B. RULIUṬ. (K. V. ZETTERSTEN)

AL-MUṬAḌĪD BI ʿLLĀH, ABU ʿAMīR ʿĀBEKS B. MUḤAMMAD B. ʿABBEKS, the most important and most powerful sovereign of the ʿAbbāsid dynasty [q.v.], who reigned over the little kingdom formed by his father Abu Ḥāʾīlīs Muhammad b. ʿAbbād, with Seville [q.v.] as his capital, at the time of the break up of the Umayyad caliphate of Spain and the rise of the reyes de taifas (mutūd al-ʿlāʾīfīf): in the course of a reign of nearly 30 years (433–460 A.H. = 1042–1069 A.D.), he very considerably increased his territory by making himself the champion of the Spanish Arabs against the Berbers in Spain whose numbers, already very large in the tenth century, had been much increased since the period of the Ṭāhirī dictators. ʿAmīr ʿĀbeeks was the most gifted of the late-μuṯaḏiḏs; he was then 26, following the usual practice of the period, assumed the title of ʿṣāḥīb, and a little later the taʿṣāf of al-Muʾtaḍīd bi ʿllāh by which he is best known. Gifted with real political ability, he was not long in revealing his character, that of an autocratic ruler, ambitious and cruel and little scrupulous in the means which he used to achieve his ends. As soon as he came to the throne he continued the war begun by his father against the petty Berber ruler of Córdova [q.v.], Maḥūmād b. ʿAbd Allāh al-Bāzīfī, then against the latter’s son and successor Ṣāḥī ʿAbd Allāh. At the same time, al-Muʾtaḍīd was extending his kingdom in the west between Seville and the Atlantic Ocean. It was with this object that he attacked and defeated successively Ibn Taʿfīr, lord (ṣāḥīb) of Mertola, and Maḥūmād b. Yāḥīya al-Ṭāḥīṣūbī, lord of Niebla (Ar. Lābīd) [q.v.] who in spite of his Arab descent had had the audacity to ally himself with the Berber chiefs. In face of these successes of the king of Seville, the other muṭūd al-ʿlāʾīfīfī who distrusted ʿAmīr ʿĀbeeks formed a kind of confederation which entered the princes of Badajoz [q.v.], Algeciras [q.v.], Granada [q.v.] and Malaga [q.v.]. This soon became a war between the ʿAbbāsid of Seville and the ʿAlīṣūbī of Badajoz al-Muʾṣaffar [q.v.]; it was to last for many years in spite of the efforts at mediation by the Dājrūrīd ruler of Cordova which only achieved their end in 951. Down to this year, while harassing the frontiers of the kingdom of Badajoz, al-Muʾtaḍīd displayed other activities; in succession he defeated Muhammad b. ʿAbd al-Bāzīfī, lord of Huelva [q.v.] and of Saltes [q.v.] (whose son was the famous geographer), the Ṣāḥīb Maḥūmād, lords of Silves [q.v.], and Muhammad b. Ṣāḥīb Ibn Hārūn, lord of Santa María de Algarve [q.v.], and annexed their territories. To justify these annexations, al-Muʾtaḍīd used a very crude pretext; he alleged that he had found the unfortunate Hīṣām II, who had really died in obscurity a few years before, and would go on till he had restored to him his former empire subdued and
pacified in its integrity. In order not to be exposed to the cruelty of the king of Seville, the majority of the petty Berber chiefs settled in the mountains of the south of Andalusia acquired in this make-believe and paid homage to the 'Abbâdîd and to the Commander of the Faithful miraculously restored to aid the cause of al-Muta'âd but at the same time cautiously concealed by him. It was labour lost for them. One day the 'Abbâdîd invited to his palace in Seville all these petty chiefs with their suites and put them to death by asphyxiating them in baths the openings in which he walled up. In this way he took Arcos [q.v.], the capital of the principality of the Banû Khîzûrân, Moron [q.v.] defended by the Banû Dâmmâr, and Ronda [q.v.], capital of the Banû Ifrîn (1053). This aroused the wrath of the most powerful Berber ruler in Spain, Bîdîs b. Ḥabbûs the Zîrid [q.v.] who ruled in Granada and who alone seemed able to resist al-Muta'âd. The latter however found that fortune favoured him in this war and a little later took Algeciras from the Hammadûd al-Kâsim b. Hammadûd. He next tried to seize Cordova and sent an expedition against it in charge of his son Ismâ'îl; the latter tried to profit by the occasion to rebel and create for himself a kingdom with Algeciras as capital. This rash plan cost him his life, which his father took with his own hand, just as before him 'Abd al-Rahmân III and al-Mansûr b. Abî 'Amîr had inflicted the supreme penalty on their unworthy sons. This was the beginning of the political career of al-Muta'âd's other son Muhammad al-Mu'tâmîd [q.v.] who was to succeed him on his death; by his father's orders he went with an army to support the Arabs of Malaga, who had rebelled against the tyrannical ruler of Bîdîs, the despotic Berber of Granada. But the latter routed the Sevillian army and al-Mu'tâmîd in sorry state reached Ronda from which he sought and received the pardon of his terrible father. The latter had long before repudiated the fiction of the pseudo-Hîgâm which he no longer needed but which was kept up by foreign monarchs and the most feared of the Spanish rulers. He had no enemies but the Berbers, Muslims like himself but much further removed from his social ideal of a Spaniard than his Christian neighbours in the north. In another land he might have been called "Bereroktonos". But the bitterness of his hatred cast a shadow over his last days: it was not without fear that he followed events in the western Maghrib, hither to the fief of Muslim Spain; at least in the sub-Mediterranean zone. The irresistible advance of the Almoravids [q.v.] following Yusuf b. Tâshfin through all Morocco would not find the straits of Gibraltar an insurmountable obstacle for long. Al-Muta'âd realised this very well. Death at least prevented him from seeing his kingdom, entirely built up by his own energy and bold initiative, pass in a few weeks into the hands of invaders, brethren of these Berbers of Spain whom he had detested and in part destroyed.

MUTAFARRIKA (A.), name of a corps of guards, who were especially attached to the person of the Ottoman Sultan in the ancient court. The name is also applied to a member of the guard. Their occupations were similar to those of the Carvâg [q.v.], not of military character, nor for court service only, but they were used for more or less important public or political missions. Like the Carvâg, the Mutafarrîka were a mounted guard. In later times there were two classes, the godsîl, or zadînîl Mutafarrîka, and the fieldless. Their chief was the Mutafarrîka Aghâî. In course of time their number constantly increased; at the end of the xvith century the maximum was fixed at 120 (G.O.R.2, ii. 890, after Râshîd), but in the beginning of the sixteenth century von Hammer gives the number 500 for the total. The Porte needed sometimes to lay stress on the importance of the office to make them acceptable as extraordinary envoys by foreign governments (G.O.R.2, iii. 929, after Râshîd).

Among those who have occupied this rank was the well-known first Turkish printer İbrahim Mutafarrîka.

Although different explanations of the title mutofarriqî are given, the most probable interpretation is, that these functionaries were not given a special duty but formed originally a corps used for "different matters". This is still the use of the word in modern Turkish.

AL-MUTAKABBIR. [See AIBN, ii.]

MUTAKALLIM. [See KÂTIM]

MUTAKARIB, name of the fifteenth mette in Arabic prosody; it contains four feet to the hemistich. There are two arâd and six dâr: fâlûn fa'âlûn fa'âlûn fa'âlûn fa'âlûn fa'âlûn fa'âlûn

1st 'arâd:

fâlûn fa'âlûn fa'âlûn fa'âlûn fa'âlûn fa'âlûn fa'âlûn

fâlûn fa'âlûn fa'âlûn fa'âlûn fa'âlûn fa'âlûn fa'âlûn

fâlûn fa'âlûn fa'âlûn fa'âlûn fa'âlûn fa'âlûn fa'âlûn

fâlûn fa'âlûn fa'âlûn fa'âlûn fa'âlûn fa'âlûn fa'âlûn

fâlûn fa'âlûn fa'âlûn fa'âlûn fa'âlûn fa'âlûn fa'âlûn

fâlûn fa'âlûn fa'âlûn fa'âlûn fa'âlûn fa'âlûn fa'âlûn

Outside of the dâr, the foot fa'âlûn often loses its f and becomes fa'âlûn; used as the first 'arâd, it further undergoes the following changes: fa'âlûn and (fa'âlûn) fa'âlûn. According to al-Khalîl, the foot which precedes the dâr cannot suffer any change. The tâdûn arâd of the first line of a piece of verse may become (fa'âlûn) fa'âlûn and (fa'âlûn) fa'âlûn. (MOH. BEN CHENER)

MUTAKâWIS, term in prosody; cf. the art. KÂFIYA.
MUT'AMAD KHAN, MUHAMMAD SHARIF, was born in an obscure family in Persia, but coming to India, he attained high honours in the reigns of Djiählung and Shāh Djiählun. He received in the third year of Djiählung a military command and the title of Mut'amad Khān (the trustworthly Lord). Subsequently he joined prince Shāh Djiählun in his campaign in the Deccan as a ḥārrāq (paymaster). On his return to court, in the 17th year of Djiählung's reign, he was entrusted with the duty of writing the Emperor's memoirs. He attained a higher rank in the service of Shāh Djiählun and was appointed annābsh (adjutant-general) in the 10th year of the new reign. He died in 1049 (1639). He is the author of a history called Ikhāl Nūmāi Djiählungī, in three volumes: 1. the history of Akbar's ancestors: 2. Akbar's reign (MSS. in the India Office Library and in the Biblioteca Indiae, Calcutta 1865 and in Lucknow, A. H. 1286).

(M. Hidayat Hosain)

Al-Mu'tamid ʿAlaʾ ʿAlāʾ, Abū ʿAbdāl-Láh Aḥmad b. Dīfāʾ, ʿAbbasīd caliph, son of Al-Mutawakkil and a slave girl named Fīṭyān from Kūfa. He ascended the throne on the deposition of al-Mu'tadil in Rajab 256 (June 870). He had no ability as a ruler, but relied on the vizier, Ubaid Allah b. Yahāyā b. Khākān and left most of the affairs of government in the hands of his brother Aḥmad Aḥmad b. Mu'awwaf. In 257/871 he was deposed by his son Dīfāʾ (July 875) who designated his son Dīfāʾ al-Mu'awwaf as his successor and governor of the western provinces and Al-Mu'awwaf as his successor and governor of the east. The able Al-Mu'awwaf soon became the real ruler and gradually restored order in the empire again while the caliph himself exercised no influence. Already in the reign of al-Mu'tadil a dangerous rising had broken out among the Zandjī, the negro slaves in the lower Euphrates valley, but it was not till 270 (883) that its leader 'Alī b. Muḥammad [q. v.] was conquered by al-Mu'awwaf. Some time after the accession of al-Mu'tamid - according to the usual statement in 259 (875) - the dynasty of the Ṭabīrīs was overthrown by Yā'qūb b. al-Laith [q. v.] and soon afterwards the Sāmānids appeared in Transoxania. On the death of Yā'qūb in 265 (879) his brother 'Amr [q. v.] submitted to the caliph and received the eastern provinces as a fief. About the same time Aḥmad b. Ṭahān [q. v.] made himself independent in Egypt and after his death (270 = 884) his son Khumārāwāh waged a desperate struggle against the ʿAbbasīd caliphate. In al-Mu'awwaf and the surrounding country the Khārījīs continued their destructive career, but were finally subdued. Peace was also often disturbed by ʿAlīd rebels and there was also the war with the Byzantines. The Fāuliqan who had stood by the Muslims faithfully were repeatedly defeated by the emperor Basil and in 265 (876) the latter retook the fortress of Lu'lu' near Tabrūz which Al-Mu'awwaf had taken. It was not till 270 (885) that the Muslims were able to inflict a complete defeat on the Byzantines. The war was however continued. After the death of Al-Mu'awwaf in 278 (891) the caliph had to proclaim the latter's son al-Mu'tamid [q. v.] as his successor instead of Dīfāʾ al-Mu'awwaf. In the following year Dīfāʾ left Sāmārā and moved the capital to Baghdad again. Here he died in Rajab 279 (Oct. 892) at the age of 48 or 50. According to some he was poisoned by al-Mu'tamid.

Al-Mu'tamid ʿAlaʾ ʿAlāʾ, the last of the dynasty which the third and last member of the dynasty of the ʿAbbadīs [q. v.] of Seville in the 11th century is best known; his real name was MUHAMMAD ibn ʿABBAD AL-MU'TAMID [q. v.]. Although of the ʿAbbadīs, he was received as successor to his predecessor, Ibn Hashim, and this town was taken by assault as was Santa Maria d'Algarve soon after (Ar. Shantamarīyul al-giwar, now Faro [q. v.]) which was held by Muhammad b. Sa'd ibn Hārūn [q. v.] (445 = 1054). The young Al-Mu'tamid, probably having been in power for a short time, took advantage of the secession of the Seville nobles and captured the city. His elder brother Ismail having been put to death in 455 (1065); cf. Al-Mu'tamid. Muhammad Al-Mu'tamid became heir-presumptive to the throne of Seville. A little later, the army which he led to the help of the Arabs of Malaga, who had rebelled against the tyranny of Badiya b. Ḥalīb, the Berber ruler of Granada of the Zirid [q. v.] dynasty, was routed by the latter and Al-Mu'tamid had to take refuge in Ronda [q. v.] which his father, at first very angry at his failure, finally sent him to his forgiveness. When the powerful ruler of Seville died in 461 (1069), his son succeeded to a considerably extended kingdom which included the greater part of the southwest of the Iberian peninsula.

A whole series of more or less romantic episodes is ascribed to the reign and life of Al-Mu'tamid. If we may believe several authors of the Muslim west, an individual called Ibn ʿAmīr, vizier and poet, exerted a very considerable influence during the greater part of the career of this prince from his governorship of Silves. Al-Mu'tamid's relations with a young slave girl al-Rumānā, gifted with considerable poetic talent, has also been the subject of much literary embellishment. It is also the name of the young woman Tumānād, that Al-Mu'tamid is said to have adopted her which comes from the same root. She became his favourite wife and presented him with several sons. As to Ibn ʿAmīr, exiled by Al-Mu'tamid, he was recalled on the accession of his patron to Seville from which he went at his own request.
to be governor of Silves before being appointed grand vizier.

In the second year of his reign, al-Mu'tamid was able to annex to his kingdom the principality of Cordova [q.v.], over which the Dajwarids had been ruling, in spite of the efforts of the king of Toledo, al-Ma'mún [q.v.]. The young prince 'Abdād was appointed governor of the old capital of the Umayyads. But at the instigation of the king of Toledo, an adventurer named Ibn 'Kāshā was able in 478 (1085) to take Cordova by surprise and put to death the young 'Abdād prince and his general Muhammad b. Martín. Al-Ma'mún took possession of the throne of the powerful kingdom. Aghmat celebrated several days for the occasion. Ibn Rashīf, who had accompanied Ibn 'Kāshā, was also killed. His death was mourned by the Christians as a setback in their efforts. Ibn Rashīf was succeeded by Ibn Bakr as vizier, a post which he held for another four years.

Al-Mu'tamid began the work of conquering Granada and taking advantage of the internal strife of the Christian princes. In 480 (1087) he sent an expedition against Seville under Ibn 'Abdād, governor of Carmona, which made him a hero in the eyes of the Christian princes. Ibn 'Abdād was able to hold the town of Cuenca, but he was forced to retreat after a siege of several days. Al-Mu'tamid then decided to send him an embassy consisting of the vizier Ibn Bakr b. Zaidīn and the kādī of Badajoz. Cordova and Granada. An agreement having been reached, not without difficulty. Yusuf b. Tāshīf crossed the Straits of Gibraltar and on the 22nd Radjab 479 (Oct. 23, 1086) inflicted on the Christian troops the disastrous defeat of Zallākā [q.v.] not far from Badajoz. We need not recall here how Yusuf b. Tāshīf recalled to Africa, could not follow up his victory as the Muslim rulers of Spain had hoped, who through the influence exercised by the Spanish fākhīs on the Almoravid, soon lost all prestige in his eyes. After his departure the Christians began again to harass Muslim citizens in their lands, to such an extent that Al-Mu'tamid had this time to go in person to Yusuf b. Tāshīf in Morocco to ask him to cross the Straits once more with his troops. Yusuf consented and landed at Algeciras in the following spring. 482 (1090). He laid siege to the fortress of Alcánta but without taking it; then stimulated by popular feeling and the advice of the fākhīs, he came to the conclusion that it would be more advantageous for him to wage the dhikād in Spain on his own account and proceeded to dethrone and dispossess the princes who had sought his intervention. With this object he sent an army to invade the kingdom of Seville under Sir b. Abi Bakr, who at the end of 1090 took Tarifa, then Cordova which was decided on, sent him an embassy consisting of the vizier Ibn Bakr b. Zaidīn, the wāli of Badajoz, and the kādī of Seville. Cordova and Granada, which was captured in spite of a heroic sortie by Al-Mu'tamid. The latter was taken prisoner by the Almoravid and sent with his wives and children first to Tangier, then to Meknes and a few months later to Aqṣām [q.v.], near Marrakesh. There he led a miserable existence for several years until his death at the age of 55 in 487 (1095).

The sad end of Al-Mu'tamid touched all his biographers, who are particularly numerous and competent in his natural gifts, poetry, talent, generosity and chivalrous spirit. He is one of the most representative types of the enlightened Spanish Muslims of the Middle Ages, patrons of letters.
al-MUTAMID — al-MUTANABBI

and scholarship, liberal and tolerant, but living in an atmosphere of luxury and ease little compatible with the care of a kingdom with frontiers open to envious neighbours on all sides. Not so great a ruler as his father al-Mutâjid, al-Mutâmid is however a much more attractive figure, perhaps just on account of his misfortunes. He is entitled to a place among the great figures of Spanish Islam, alongside of ‘Abd al-Rahmân I, al-Hakam II, al-Mansûr b. Abî ‘Amir and at a later date Isâ al-Dîn b. al-Khaṭîb.

MUTAMMIM b. NUWAIRA, a poet, contemporary with the Prophet. He was the brother of Mâlik b. Nuwaïra [q. v.], chief of the Banû Yabrî, a large clan of the Banû Tamîm. Mutammmim owes his fame to the elegies in which he lamented the tragic death of his brother Mâlik and these poems have made the latter’s name immortal. The Arabs said that the compositions of these elegies, overflowing with emotion, they regarded their author as the type of brotherly devotion.

Mutammmim does not seem to have played any prominent part before the Hîdhâr. He was eclipsed by the striking personality of his brother, to whose qualities he never hesitated to pay homage. He is represented as having been of unprepossessing appearance, one-eyed and short in stature. The Bakri chief al-Hawfâzî sang a lament of which Mutammmim treated him during his captivity. Falling in his turn into the hands of the Banû Taghîbî, Mutammmim was delivered by a stratagem devised by his brother. He seems to have adopted Islâm at the same time as his brother. Like the latter, he is numbered among the “Companions” although we never find him in direct relations with the Prophet. He escaped from the disaster in which Mâlik was overwhelmed; a few fragments of his poems suggest he did not write elegies exclusively.

But after the death of Mâlik he devoted himself to celebrating his memory and demanding vengeance for his death. Refused by the Caliph Abû Bakr, he thought he might have more success on the accession of Omar. He hurried to Madîna where he was very well received by Omar. The latter listened with delight to his elegies, regretted that he himself had not the gift of poetry so that he might worthily celebrate his brother. Zaid, who had fallen in the wars of al-Yâmama, but he refused to reverse Abû Bakr’s decision and limited himself to dismissing Khâlid b. al-Walîd, a step which probably owed something to the poetical exhortations of Mutammmim.

After this, tradition says that the poet became almost blind through weeping, and that he wandered over the many routes of Arabia, uttering his complaints everywhere. He found himself abandoned by his wives who became tired of his incurable sadness and wandering life. He left two sons, Bûwîd and Ibrîhîm, also poets. He survived Omar if, as Ibn Khallîkîn says (ed. Wustenfeld, Nö. 792), he is really the author of an elegy on the death of this caliph.

Al-MUTANABBI, “he who professes to be a prophet,” the surname by which the Arab poet Abû l-Tayyîb Abû l-Hakâm al-Mutânabbi is usually known (cf. in Ibn Khallîkîn, Hâwâazi [Cairo 1310], t. 36, two genealogies, which do not agree, going back to his great-grandfather). Abû l-Tayyîb was born in Kûfà in 303 (915) in the Kinda quarter whence the ethnic al-Kindî sometimes given him. His family in very humble circumstances claimed descent from the Yamami clan of the Dîjî and he himself all his life was convinced of the superiority of the Arabs of the south over those of the north (cf. al-Wâshîhî, Sharh Dirâs al-Mutanabbi, ed. Dieterici, p. 49; al-‘Iyâsî, al-Ur‘uf al-‘Iyâbî, p. 29 [these two works will be quoted as ‘Iyârî, and ‘Iyâbî]). The boy received his early education in his native town and soon distinguished himself by his intelligence, his prodigious memory and his precocity as a poet. He now passed under Shî‘i influences, perhaps Zandî (cf. ‘Abd al-Kâdîr al-Baghdâdî, Akhlaqîn, i. 352, 353) which affected the development of his philosophy, a subject to which we shall return. Circumstances were however to accelerate the speed of Abu ‘l-Tâyîyî’s religious development. Towards the end of 312 (924), undoubtedly under pressure from the Karâjmants [q. v.] who had just taken and sacked Kûfà, Abu ‘l-Tâyîyî and his family made a first stay of two years (cf. al-Samî‘î, Amârî, 306 n. 24; al-Bûfî, al-Sâbb al-munmârî, i. 6) in Samâwà, the region lying between the Sawâd of Kûfà in the east and Palmjirîn in the west. The Banû Kalb which led a nomadic life in these desert steppes had been much influenced by the Karâjmant dî‘ârîs. It is possible that the young poet at this time came into contact with some of these heretics. It is however not very probable,
in view of his youth, that this first contact had any definite effect upon him. On the other hand, this stay among the Beduins certainly gave Abu l-Tayyib that profound knowledge of the Arabic language of which he was later so very proud.

On returning to Kufa, at the beginning of 315 (927), Abu l-Tayyib seems to have decided to devote himself entirely to poetry. At this time he most admired the great panegyrists of the preceding century, Abū Tammām and al-Buhtūrī [q.v.]. Like them and like the majority of his contemporaries, he sees in poetry a sure means of attaining wealth and power. He at once attached himself to a certain Abu l-Fayj, of Kufa, to whom he dedicated a short poem (Wāḥ., p. 17—21; Yāz., p. 10—11). Perhaps a convert to Karmatianism, in any case a complete agnostic — the praises which he allows to be offered him show this — this individual seems to have exercised a considerable influence on the religious and philosophical development of al-Mutanabbi (cf. also Ḍahāna, i. 352 below).

Prepared by the Shī‘a atmosphere in which he had passed his childhood and by the relations he had had with the Karmatians in Samawah, Abu l-Tayyib in contact with this patron cast off religious dogmas which he regarded as spiritual instruments of oppression. He then adopted a more pessimistic philosophy, echoes of which are found throughout his work. The world is made up of seductions which death destroys (cf. Wāḥ., p. 39, l. 8—13; p. 162, l. 12—13; Yāz., p. 23 and 97); stupidity and evil alone triumph there (cf. Wāḥ., p. 161, l. 8—10; Yāz., p. 97); the Arabs — representatives of a superior race in his eyes — are overwhelmed in it by cowardly and barbarous foreigners (cf. Wāḥ., p. 148, l. 1—5; p. 166, l. 2—6; Yāz., p. 87, l. 96). In his view with which he was out of harmony, the consciousness of his talent, which Abu l-Tayyib had, developed rapidly; his vanity increased to a degree which is almost inconceivable (cf. Wāḥ., p. 60; Yāz., p. 34). His Arab particularism, as with all anti-Shū‘bīs [cf. Shī‘a], incited him to attack foreign oppressors (Wāḥ., p. 58, l. 30—31; Yāz., p. 33).

This is why, by a contradiction from which he is hardly ever free, al-Mutanabbi covered all his life long his power and power which he scorned in his heart, while he stands out from the mass of his contemporaries by his rigid melancholy and austerity (cf. al-Badi‘ī, op. cit., l. 78—81).

At first however, Abu l-Tayyib thought only of conquering the world by his poetic gifts, and to find a more favourable field for his activity he left Kufa towards the end of 316 (928), probably as a result of the town being again sacked by the Karmatians. He was naturally attracted to Baghšād (cf. al-Badi‘ī, op. cit., l. 82—83) and there became the panegyrist of a companion of his, Mansūr, and the Best Friend of the Karmatian Ali Alā‘ (cf. Wāḥ., p. 6—7; Yāz., p. 3—4). From there he went to Syria. For two years he led the life of a wandering troubadour of the period (cf. Mez, Renaissance des Islams, p. 256). It is impossible to follow him in his wanderings for his Divān, our only guide, does not present his poems in a satisfactory chronological order. Some pieces of the period are addressed to Beduin chiefs of the region of Manbij [q.v.] (cf. Wāḥ., p. 24—25, 38—39, 60—67; Yāz., l. 12—13, 22—23, 28—29); others are dedicated to men of letters of Tripolis (Wāḥ., p. 88—89; Yāz., p. 19—20); al-Lādhi‘īya (latakia) (cf. Wāḥ., p. 116—135; Yāz., p. 66—78). The poems of this period are hurriedly written and mediocre in quality, but his real genius are already apparent. With the exception of al-mawṣī‘a (lament) and some impromptu pieces they are all hastad on neo-classical lines. The influence of Abu Tammām and al-Buhtūrī preponderates.

In the course of this period of experiment, Abu l-Tayyib was irritated at not finding his merit recognised. Gradually he looks forward to his dreams of domination being realised by violence (cf. Wāḥ., p. 138, l. 3—7; Yāz., p. 79). Finally he abandoned the work of a paid panegyrist and turning to Rā‘idī, he began revolutionary propaganda, the nature of which has long been misunderstood. According to Oriental writers (al-Badi‘ī, op. cit., l. 35—30; Ibn al-Anbārī, Nikhāl al-Albābī, p. 369), Abu l-Tayyib proclaimed himself a prophet in al-Samawah, was taken prisoner by Ibn Ibrāhīm [q.v.] troops and then received his epithet of al-Mutanabbi. Kratschkowski (Mutanaibbī i Abu l‘Ab, St. Petersburg 1909, p. 9—11) does justice to these traditions, without however taking full account of some clear allusions in the Divān.

The latter contains pieces which prove that the rebellion was led by al-Mutanabbi (cf. Wāḥ., p. 49—58; Yāz., p. 28—33; 50). This rising, as usual at this period, must have been as political as well as religious. The rising began in al-Lādhi‘īya and then extended to the western borders of Samawah where the Banū Kalb constituted an element always ready to rebel. Without adhering to Karmatianism, al-Mutanabbi exploited its principles which found only too ready an echo among the marauding Beduins (cf. Wāḥ., p. 57, l. 22—23; Yāz., p. 32; allusion to the massacre of the Karmatians in ‘Amar). In 317 (930) the ambiguity of the utterances of the rebel, the opportunism of his doctrines and his conception of the imāmate on Karmatian lines, may have caused some misunderstanding of his preaching, since at this time any agitator was regarded as a Karmatian. After some initial successes, al-Mutanabbi and his Beduins were defeated; he was captured and imprisoned at Ḥims (towards the end of 322 = 933). After a trial and two years’ imprisonment (Divān, Paris MS., No. 4092, fol. 168), Abu l-Tayyib was condemned to retrace his errors and set free. From this adventure he gained only the epithet of al-Mutanabbi and the conviction that poetry alone would lead him to the realisation of his ambitious dreams.

The poems composed by Abu l-Tayyib immediately before and during his rebellion are distinguished by spontaneity of inspiration, by the liberty which the poet takes with poetic forms, by the vigour of the style, which has a much more personal character than in his first manner.

As soon as al-Mutanabbi had returned to his profession of panegyrist, he naturally resumed his wandering life (beginning of 325 = 937). For several years he led a precarious existence and had to be content to sing the praises of citizens and minor officials of Antioch, Damascus, Aleppo etc. who paid him very badly (cf. Wāḥ., p. 93—206; Yāz., p. 51—131; Vākū, Iṣra‘īl, v. 203). Little by little however, his fame grew. At the beginning of 328 (939), we find him becoming court poet to the emir Badr al-Kharshānī (the Badr b. ‘Anmar of the Divān), governor of Damascus for the amir al-unārī Ibn Kā‘īr [q.v.],
who had just taken possession of Syria. Of Arab origin, Badr was regarded by al-Mutanabbi as the Maecenas for whom he had been waiting so long. The panegyrics and occasional poems which are dedicated to this emissary reveal a sincere admiration for him and possess a sustained inspiration (cf. Wāḥ., p. 206—245; Yāz., p. 152—163). These pieces and those that precede them, after Abu l-Tayyib's return, seem to indicate the fact that the poet called the third manner of the poet. With the exception of a poem on hunting in the style of Abū Nuwās [q. v.] (cf. Wāḥ., p. 201—202; Yāz., p. 128—129) and a number of impromptu poems of no particular interest, al-Mutanabbi wrote only ḫajīdas during this period. He would seem then to have returned to his first manner, if the work of this period did not show considerable progress in form.

The friendship between Badr and al-Mutanabbi lasted only about a year and a half and as a result of intrigues of jealous rivals (cf. Wāḥ., p. 253; ibid., p. 169), Abu l-Tayyib feeling no longer safe, sought refuge in a further but called the third manner of the poet. With the exception of a poem on hunting in the style of Abū Nuwās [q. v.] (cf. Wāḥ., p. 201—245; Yāz., p. 152—169) and a number of impromptu poems of no particular interest, al-Mutanabbi wrote only ḫajīdas during this period. He would seem then to have returned to his first manner, if the work of this period did not show considerable progress in form.

From Damascus, Abu l-Tayyib went to Egypt to al-Fustāṭ [q. v.] where he obtained the patronage of the Buyyid prince Kāfūr [q. v.]. Al-Mutanabbi's career now reveals the necessities to which poets in the fourth (seventh) century had to submit. Deprived of moral and material independence Abu l-Tayyib was forced to sing the praises of a patron for whom in his heart he felt only contempt. The panegyrics which he devoted to him barely conceal his regret at losing the favour of Saif al-Dawla. They are somewhat forced and contain points against Kāfūr (cf. al-Bāḍī', op. cit., i. 125—126).

The poet perhaps only agreed to celebrate this patron because the latter had promised him the governorship of Sa'idā (Sidon) (cf. ibid., i. 115). When he saw that these promises were not being fulfilled, he tried to gain the favor of the Buyyid governor, Abū Shudja' Fādīk (ibid., i. 131—132), but the latter dying in 350 (960) and relations with Kāfūr still being strained, al-Mutanabbi had once more to decide to fly. On the day of the feast of sacrifice of this year, after writing a satire on Kāfūr, he left al-Fustāṭ secretly and crossing Arabia after great trials (cf. al-Bāḍī', op. cit., i. 139—140), he reached the ʿIrāq, spent some time in Kūf, then settled in Baghdaḍ. He perhaps thought of attaching himself to the famous Buṭrīd vizier al-Muhallabi who had gathered a very brilliant court around him. He had however to abandon hope of this in face of the hostility to him evinced by poets and scholars established at the court of al-Muhallabi, such as Ibn al-Hadhājād [q. v.] and Abu l-Farajī al-Iṣfahānī, author of the Kitāb al-Aḫānī. During his stay here, as he had already begun to do in Egypt (cf. Ibn al-Farajī, Taʾrīkh al-Andalus, No. 452), al-Mutanabbi gave lectures in which he expounded to a group of friends the work he had done till that date (cf. Dhahabi, Taʾrīkh al-ʿIlm, Paris, No. 1584, col. 265a).

The year 353 (964) was spent in this fashion. The poet perhaps also visited Kūf about this time (cf. F. Gabrieli, Vita di al-Mutanabbi, p. 60, note 4).

At the beginning of 354 (965) in any case, he left the ʿIrāq and went via al-Awāz to Arraḍān [q. v.] in Susiana where he received the patronage of the Buṭrīd vizier Ibn al-ʿAmīd [q. v.]. Al-Mutanabbi devoted some panegyrics to him (cf. Wāḥ., p. 740—741; Yāz., p. 564—565), then he left him to go to Šahrāz in Fars where he rejoined the Buṭrīd Sulṭān ʿAdūd al-Dawla [q. v.] who had expressed a desire to have him at his court.
addressing to the Būyid Sulṭan several panegyrics which are among his best work, Abu ’l-Tayyib left Shirāz for reasons not clearly known, perhaps simply out of nostalgia (cf. Wāḥīdī, p. 766, line 1–3; Yez, p. 539). He was returning by short stages from Persia to Bagdad when he was attacked by marauding Beduins near Dair al-’Ākūl [q. v.] at the end of Ramaḍān 354 (Aug. 955). He and his son were killed in the fighting and all his baggage, including the autograph MSS. of his Diwān, was scattered (cf. al-Badī’ī, op. cit., i. 227–239).

Even in his lifetime, al-Mutanabbi had been so sure of his powers that he defended his work in its entirety against the attacks of detractors no less eager to run him down. Among the latter however, the majority only criticised him as a poet because they objected to his character as a man. The criticism was therefore not distinguished by impartiality and only reflects the opinions of a coterie.

It required the death of Abu ’l-Tayyib to produce a third class of admirers who were more clear-sighted than the first and sufficiently impartial not to fall into the exaggerations of the second (cf. al-Dhūrqānī, al-Wasīṭa, p. 11–12, 45–46). It was the opinion of this new category that prevailed and when Mutanabbi’s contemporaries had all disappeared or led public life, and had succeeded decelerately favourable to Sāf al-Dawla’s bard (except al-’Askārī [q. v.] and Ibn Khalīlūn). From the fifth (eleventh) century the name of al-Mutanabbi became a synonym for “great poet”. His literary influence became one of the most considerable ever exercised on Arabic poetry. Annotated by Ibn Dīnārī [q. v.] and later by Abu ’l-’Alī [q. v.], by al-Wāḥīdī, al-Maghribī, al-Ukbarī and Ibn Sītā [q. v.], to mention only the most eminent, the Diwān of Abu ’l-Tayyib throughout the middle ages and in modern times has been made accessible to scholars and literary men from Persia to Spain by learned men, often more zealous than intelligent. Space does not permit us to estimate what later poetry owes to al-Mutanabbi. We are content to point out that in different ways all Arab panegyrists have been influenced by Abu ’l-Tayyib. At the present day he is still one of the most read in North Africa; Syria and Egypt also hold him in very high esteem and many critics have devoted studies full of praise to him. It seems however that in the last named country al-Mutanabbi attracts at least as much by the boldness of his philosophy and the arbour of his pro-Arab feelings as by his purely literary qualities.

MUTARADIF, term in prosody; cf. the art. KAFAYA.

MUTARAKIB, term in prosody; cf. the art. KAFAYA.

MUṬARJIRI, Abu ’l-Fath Nāṣīr b. ʿAbd al-Sāliḥ b. ʿAbd al-Salih b. ʿAlī al-Muṭarrīzī, grammarian, a.dīb and jurist, was born in Khwārizm in Raṣūlim 535 (1144). He was a pupil of al-Mawīkhi b. Ahmād known as ʿAbd Allāh Khwārizmī. As he was born in the same province and in the year in which al-Zamakhshārī died, he was called Khalifat al-Zamakhshārī; al-Suyūṭī’s assumption that he was a pupil of Zamakhshārī was deduced from this epithet and is of course wrong. Al-Muṭarrīzī was an adherent of the Mu’tazila. As a jurist of the Hanafī school he enjoyed particular prestige and his work al-Maṣjid li-l-Maṣḥa, a dictionary, arranged alphabetically, of terms used in tradition and of the legal terms of the jurists of the Hanafi school, was regarded by the scholars of this madhab with the same respect as the Ghārib al-Fihḍ al-Ẓāhirī of al-Azhārī by the Shāfī‘īs. For his son he compiled a lexicon of synonyms entitled al-Ḥaqq il-mā‘ūn wuṣūra faṣal al-Kinā‘ī, which the latter was to study after he had learned the Khurān by heart. It is a kind of text-book giving a comprehensive survey of the subject. In al-Muṭarrīzī’s opinion the existing works on this subject were either too big or not full enough. The work deals only with “good and usual” words, omitting the “bad and unusual” ones. Modern and ancient linguistic usage are distinguished and verses often quoted in illustration. His al-Maṣḥa fi-l-Nawḥ, which deals with the grammar of the Arabic language, was also written for his son. It was much used by students and often commented upon. Super-commentaries were added to the commentaries; one of the latter was even translated into Turkish. Al-Muṭarrīzī was also an expositor and prepared a commentary on the Maṣṣāḥat of Ḥarrī. He also was a poet, among his efforts being a poem in which he set himself to use nothing but synonyms.

In 601 (1204) he was in Bagdad where he had
disputations with the scholars of that city. In Djamâd I of 610 (1213) he died in his native town.

MU'TASIRIF. [See SANÀI]

AL-MU'TAŠIM. [See SÂNÀI]

AL-MU'TASIM, MUYHAMMAD bin Mây-üs, second ruler of the dynasty of Fârûqids [q.v.] of the kingdom of Almeria [q.v.], reigned from 433 to 484 (1051—1094). Gifted like his contemporary Al-Mu'tamid [q.v.] of Sevilla with a certain amount of poetic talent, he made his capital during his long reign one of the great centres of culture in the Peninsula. But like the other maulik al-fasâ'îd of Spain, he was for the most of his time at war with one or other of his neighbours. He was without doubt implicated in the conspiracy fomented by the Jews Yâsîf against his master Badis, king of Granada [cf. il. 170]. Later his forces took part with those of Yâsîf b. Tâshîn in the famous battle of Zallâka [q.v.]. Like the other Muslim rulers of Spain he felt in the following year the weight of the Almoravid sultan's arm. After unsuccessfui besieging the fortress of Aledo and meeting Yâsîf to act harshly against Al-Mu'tamid, whom he hated personally, he realised on his death-bed that his capital would be besieged by the Almoravids as Seville had been. This is why he advised his son and successor Ahyâd Mû'az al-Dawla to seek an asylum with the lords of
Boege (q. v.). Almeria was taken very soon after by the Almoravids. Bibliography: Ibn Bassām, al-Dhokhira; Ibn al-Kayhāb, Ḥāfa and Pīman; Ibn al-Abdār, al-Mustah fi al-siyāra, ed. Dozy, p. 172, 174; Abd al-Wahid al-Marrakushi, al-Muqadba, ed. Dozy, transl. Fagnan; Ibn Idrīsh, al-Bayān al-muqaddas, in, ed. Lévi-Provençal; Doyz, Histoire des Musulmans d'Espagne, new ed., iii. do., Recherches sur l'histoire et la littérature des Arabes d'Espagne, vol. i. (memoir on the Tughrilid). (E. Lévi-Provençal) al-MUTAWAKKIL Alassāh, Abu 'l-Fadl, b. Imaam al-Kabir, Muhammad, an Aabārī'd Caliph, born in Shavwal 206 (Feb.-March 822), son of al-Mu'tamid and the caliph al-Mutawakkil, and the slayer of Kibla' al-Mun'tashir. He ascended the throne in Dhu l-Hijja 232 (Aug. 854) on the death of his brother al-Walih. His old opponent, the vizier Ibn al-Zayyāt, soon fell a victim to the cruelty of the new caliph and a similar fate befell the Turkish general Ṭāhir, although the latter along with Wāṣif had helped him to the throne. The caliph dreaded his influence and had him thrown into prison where he died of thirst (Ḥumadād 1142 = Dec. 854-Jan. 855). From the religious point of view al-Mutawakkil was thoroughly orthodox. Soon after his accession he forbade any dispute about the Kūrān. Those who had been arrested because they would not recognize the teachings of the Mutazilah were released and in 235 (859-860) he revived and intensified the regulations for special dress for Jews and Christians which went back to the caliph Ṭāhir. The synagogues and churches recently built in Baghdaad were taken down and the Mu'tazilah chief šāh Ahmad b. Alu Du'ād (q. v.) with his sons dismissed and the office of chief šāh given to the Soonī Yābīš b. Aktham. The 'Alids also fell under his ban. In 236 (859-860) he had the main-soleum of al-Husain in Kebelī de-royed and pilgrimage to this place forbidden. The provinces were frequently ravaged by rebels and foreign foes. In Ḥanṣabīdīn in 234 (850-851) Muhammad b. Alu al-Lādīl retaliated; he had earlier been taken prisoner and brought to Samarrā but had escaped; he established himself in the strong town of Matānd. The caliph's troops could do nothing against him until Boghā al-Ḥarabī (q. v.) took command. After a long siege the latter offered him a pardon; but when Ibn al-Ḥarābī tried to escape he was seized and brought to Samarrā, where he soon died in prison. When al-Mutawakkil attempted to treat semi-independent Armanīa like a conquered province, a dangerous rising broke out there in 237 (851-852), which was suppressed in the following year, but only with difficulty, by Boghā al-Kabīr. About the same time (238), the Byzantines landed in Egypt and plundered Dammatta and in Asia Minor the war went on in the traditional fashion against the Byzantines. When the Paulician sect was persecuted by the emperors Theodora they went over to the Shihīms in masses. The Byzantines, however, succeeded in taking many prisoners. Those who would not become converted were massacred; but when al-Mutawakkil who had moved his residence in Dhu l-Hijja (Aug.-Sept. 857) to Damascus but left it after only two months, sent Boghā with the Turkish cavalry against the Byzantines, the fortune of war turned. Boghā fought with success against the enemy and in the following year the emperor Michael himself was defeated at Samosata. In 246 (860-861) the Muslim generals took a considerable number of prisoners; but no permanent change in the situation was produced. In Syria also trouble broke out. Two governors in succession were driven out of Ḥoms and only with the help of the troops from Damascus and al-Ramlā the order restored (241 = 855-856). About the same time al-Mutawakkil sent an army under command of Muhammad b. 'Abd Allāh al-Kurri against the rebel Ṭabgha. The latter were completely defeated but their leader Ṭabgha was pardoned. In the reign of al-Mutawakkil the dynasty of the Kūrānic (q. v.) was established in Byzantium. To keep the people of Egypt in order, he sent for the governor of Khurasan, Muhammad b. 'Abd Allāh b. Ṭabgha (q. v.), and when the turbulent praetorians made trouble he built a new residence at Ḥanṣabīdīn in 245 (859-860) outside of Samarrā, which was swallowed up enormous sums. Poets and scholars were rewarded with princely munificence by this caliph. The extravagance, capriciousness and cruelty of the caliph, however, made him hated, and finally he quarreled with the commander of the Turkish bodyguard. In Dhu l-Hijja 235 (July 859) he had arranged that his eldest son Muhammad al-Muntāsir should succeed him and the two other sons Abū 'Abd Allāh al-Mu'tazz and Ibrāhīm al-Mu'ayyad were each to receive a governorship with a claim to the throne after al-Muntāsir. He began to favour al-Mu'tazz however, and thus aroused al-Muntāsir's discontent. The latter conpired with a few others of the same sentiments and al-Shawwāl 247 (Dec. 861) al-Mutawakkil was murdered (s. Al-Fath b. Muqādha) Bibliography: Ibn Kūtām, Kitāb al-Ma'rūf, ed. [K. V. Zellmann] MUTAWĀTĪR (A.), part, act. vi. from berw, "what came successively." It is used as a technical term in two senses: a. In the theory of cognition it is applied to historical knowledge (khbar), if the latter is generally acknowledged; e. g. the knowledge that there is a city called Makka and that there has existed a king called Alexander. Definitions of the term show slight differences. According to al-Dārājī knowledge is mutawātir, when it is supplied by so many persons that either their number or their trustworthiness exclude doubt of its truth (Tadhīf, ed. Flugel, p. 210. cf. Spengler, Dictionary of Tekhmal Terms, p. 1471). According to Ahi Haf, 'Umar al-Ṣaff († 537 = 1142) reports are mutawātir when handed down without deviation by persons who cannot be supposed to have plotted a lie. Taftāzānī in his
commentary (p. 33 sq.) mentions two objections. The first is, that Jews and Christians accept as mutawwir reports that are rejected by Muslims. To this objection Tafżālī replies that the possibility that these reports should be mutawwir, is excluded. The second objection is, that the reports of every single reporter (ṣaḥīḥ, q. v.) represent an opinion only and that an accumulation of opinions cannot be said to afford certainty. To this Tafżālī replies that often plurality has a power of which singleness is devoid, e.g. a cord made of hair.

For the place of this source of knowledge within the theory of cognition, cf. the Supplement, s. v. 'ilm.

2. In prosody the term is applied to a rhyme in which one moving letter intervenes between the quiescents.

MUṬAWWIR, Mecca pilgrims’ guide.
The word literally means one who leads the ṣayf (q. v.). The task of the muṭawwir is however by no means limited to assisting pilgrims from foreign lands who entrust themselves to their guidance, to go through the ceremonies required at the circumambulation of the Kaʿba. On the contrary they act as guides at the ṣayf also and at all other ceremonies which are prescribed or only recommended for the ḥajj or umra (q. v.). The muṭawwirs also cater very completely for the physical welfare of the pilgrims. As soon as the pilgrims arrive in Ḍijdā, their agents are ready on the arrival of the steamers to provide all the services they require from disembarkment to departure for Mecca. In Mecca the muṭawwirs or members of their families and servants take charge of the pilgrims. During the whole of their stay they provide the pilgrims with lodging, service, food, purchases (necessary and unnecessary), attend them if they fall ill and in case of death take charge of what they leave behind them.

The muṭawwirs of course do not do all this for nothing. They are appropriately paid for their trouble and see that, if the pilgrim is rich, their friends and relations also make something out of him. Of the money which they themselves receive, they have to hand over a considerable part in the form of fees, presents etc. to the ʿulamāʾ of the gild and to the treasury, — another reason for getting as much as possible out of those entrusted to their care. It is therefore no wonder that many pilgrims have complained bitterly about the coven- tuousness of these particularly prominent representatives of the Meccan pilgrim industry. Literally the fees or guides have been fixed by a legal enactment of the Ḥajjāz government (O. M., xi. [1932], 249).

Reference has already been made to the fact that the muṭawwirs are organised in gilds; they are divided up into separate groups who sometimes have the right to exploit the pilgrims from a definite area only (e. g. Lower Egypt). All these groups together form the gild with a chief (ṣāḥib) officially designated at their head. The gild is also very exclusi- ve. "Wild" (i.e. independent) guides (jarrār) have to be content with the scanty pickings left over for them by the organised muṭawwirs.

(R. PARET)

AL-MUṬAZILA is the name of the great theological school which created the speculative dogmatics of Islam. The meaning of the name is clear from al-ʿAbābī, Murādī, vii. 22: the Muṭaṣīlīs are those who profess the doctrine of ʿIṣlāḥ, i.e. the doctrine of the muṣāṣṣa ṣain ʿaṣṣāṣāt, or the state intermediate between belief and scepticism, the fundamental doctrine of the school (see below).

A tradition which emanates from the ʿabd al-ḥāṣifī derives the name Muṭaṣīlī from a schism which took place in the circle of al-Ḥasan b. Ṭātabāi, after laying down their own peculiar dogmatics of the muṣāṣṣa ṣain ʿaṣṣāṣāt, Wāṣāl b. Aṣāf and Aṣmāb. ʿUbaid b. Ṭabābī said to have separated (i faṣūla) from al-Ḥasan’s circle to found an independent school or rather to have been expelled from it by the latter. These traditions are not entirely without historical foundation but the interpretation of the name deduced from them is certainly wrong. The Muṭaṣīlīs were proud of their name, which they certainly would not have been if it had been a nickname invented by their enemies. We have here, as the variety of versions also shows, a tendentious invention of the abn al-ʿalāmna wa l-ṣanāfol ṣaṣāʾnīs to rehabilitate al-Ḥasan and brand the Muṭaṣīlīs as heretics.

Origins and political history. There are quite definite indications that the Muṭaṣīlīs was of political origin and that it arose under the same constellation as the Shīʿi and Khārijī movements. The accession of ʿAbī ʿAlī al-Ṣādiq (Dhu l-Ḥijjah 35) is the great watershed in the currents of the history of Islam. It is well known that several notable Companions of the Prophet refused to pay ʿAbī ʿAlī the homage which he demanded or offered it reluctantly. The most frequently mentioned were Ṭaḥlah and al-Zubair but the names of many others have been preserved: Sāda b. Ṭabābī, ʿAbī Wāṣāl, ʿAbī ʿAlī al-Ṣādiq b. Muḥammad b. Maslama, Ṣaḥmā b. Zaid, Ṣabāḥ b. Suʿād and Zaid b. Ṭātabāi (al-Ṭabarī, i. 3072). Of these Ṭaḥlah and al-Zubair openly rebelled against al-Ṣādiq, the majority remained neutral. The Medinees in general followed the example of the latter and in Bāṣra al-ʿAbābī b. Kaṣr with 6,000 Tamimīs and a group of Azīdīs under ʿAbī b. Ṣamīlī also stood aside from the quarrel (al-Ṭabarī, i. 3169, 3178). In
speaking of the latter the text uses the verb *īfzāl* which still has its proper sense of “to separate from”, but which is already on the way to become a political term meaning “to take up a neutral attitude in the quarrel between ‘Ali and his adversaries”. It is always the case that the strands of Al-Walid b. ‘Abd al-Malik’s relations with the caliphate of ‘Ali and the later separate parties in the caliphate of ‘Umar b. ‘Abd al-‘Azīz (Kitab al-‘Intifār, p. 5) a party to which he may be attributed on the accession of ‘Ali separated and followed ‘Abd al-Walid b. ‘Abd al-Malik b. ‘Abd al-‘Azīz b. ‘Omar, Muhammad b. Maslama and Usama b. Zaid. These, separated (*īfzāl*) from ‘Ali and refused either to fight against him or to take his side although they had paid homage to him and had received him favourably; they were called *al-Mutanīla* and are the ancestors of all the later Mu’tazila”. The Mu’tazila as a theological school must therefore have been preceded by a political Mu’tazila, which determined its structure.

This hypothesis seems to be confirmed if we analyze carefully what is recorded of the founders of the theological school. According to a unanimous tradition, this school originated with two natives of Basra, Wāṣi‘ b. Aḥzā (q.v.) and ‘Amr b. ‘Abd al-Baṣīr (q.v.). The period of their activity covers practically the reign of the caliph Hishām and his Umayyad successors, i.e. the years 105-131 (723-48). We have a good deal of quite early information about them, not always free from lacunae, but sufficient to enable us to grasp the leading ideas in their theological work (see Bibli.). It is clear from all these traditions that the doctrine of *īfzāl* formed the starting point for the creation of the school, that Wāṣi‘ was the first to formulate it and that he later won over the minority part of the Mu’tazila. This is how Al-Khayyāt records the origin of the idea of *īfzāl*. Muslims were agreed that he who committed a grave sin deserved the name of *fāʾisik* and of *gāfīr*, but opinions varied as to the character of the individual who received these epithets. The Kūrādīs said he was an infidel. The Murāḍīs said he was a believer in spite of his *fāʾisik* and his *gāfīr*; al-Hasan al-Baṣri and his circle described him as a hypocrite (*munẓāfīsik*). Wāṣi‘ demonstrates that the description given in the Kūrān of a believer and an infidel cannot be applied to a believer who has committed a grave sin. There is therefore always an in-between stage between the two. Now it is impossible to regard him as a hypocrite as al-Hasan wants to do, for a hypocrite must pass as a believer until his hypocrisy is brought to light. The only possible course then is to put the *fāʾisik* in a special category of those who are in an intermediate state (manzilat bāna ḫ-manzilatātum). These same ideas are found in the conversation by which Wāṣi‘ is said to have won ‘Amr over to the doctrine of *īfzāl* (al-Sayyid al-Murtadā, Anṣārī, i. 114 sq. = Ibn al-Murtadā, al-Mutanīla, p. 22 sq.; source probably al-Khayyāt). There are political problems concealed behind these speculations. The doctrine of *īfzāl* bāna ḫ-manzilatātum is not the result of interest in pure speculation, but arose out of an clearly defined opinion on the individuals who took part in the quarrels that raged round the caliphate of ‘Ali. It is striking how much space is occupied by the question of ‘Ali, of Ṭalḥa, of al-Zubair and of ‘Aṣīra in the rather scanty information which we possess regarding the theology of Wāṣi‘ and ‘Amr; we cannot doubt that here they were dealing with a central problem. Wāṣi‘ and ‘Amr took neither side in the dispute (Kitab al-‘Intifār, p. 97—98). According to them, ‘Ali, Ṭalḥa, al-Zubair and ‘Aṣīra were originally true and pious believers. But the war which broke out among them divided them into two parties who could not both be right; one of these parties committed a sin which they could not know. We must therefore leave their cause to Him who knows it but in their relations with one another we cannot regard them as true believers in the strict sense of the word. As a result if one of these individuals bears witness against another of the opposite party, we cannot accept this evidence; relatively to the one, the other is *fāʾisik* and vice-versa (cf. also Baghdādī, Kitab al-Farāb, p. 100). If we may believe the *al-ḥadīth*, ‘Amr showed himself more severe than Wāṣi‘; he is said to have refused to accept the deposition made by any member of these parties against any member of the community on any matter whatever (Zutiyyī Baghdādī, xii. 178; al-Baghdādī, Kitab al-Farāb, p. 100); for he declared guilty (*īfzāl*) for it, both the parties engaged in the battle of the Camel. It is therefore not surprising that Wāṣi‘ and ‘Amr have sometimes been confused with the Kūrādīs (verse of Ḫāṣ b. Suwaid al-Da‘awī, al-Dā‘awī, Bayān, i. 13).

However, the opinion of the leaders of the Mu’tazila on ‘Ali is based on quite a different foundation. To understand the position correctly it is important to note that 1. Wāṣi‘ and the whole Mu’tazila were definitely enemies of the Umayyads and that 2. Wāṣi‘ adopted a somewhat ambiguous attitude regarding Othman and his murderers; he did not acknowledge them as caliphs. This tacitly implies a declaration in favour of the ‘Alids, the first actors in the drama played at Mecca in the year 35. Indeed Wāṣi‘ was on somewhat intimate terms with the ‘Alids of Medina (Ibn al-Murtadā, al-Mutanīla, p. 20); the Zaidīya revere him as one of their leaders, and Zaidī theology is essentially based on that of Wāṣi‘. This is true not only of the speculative theology; there is agreement also on political doctrines. The Zaidīs do not say that the first caliphs Abū Bakr and ‘Omar were usurpers as the extreme Shi‘īs do. Wāṣi‘ and with him the whole Mu’tazila regards the caliphs of ‘Umar as ‘Alids (commentary of Ibn Abī Ḥadīd on Nāḥiyy al-Balagha, Caro 1329, i. 3; he left undecided the question of knowing who had the superior claim, Abū Bakr, ‘Omar or ‘Ali, but he credited ‘Ali with a superior claim to Othman. This attitude, a little complicated as regards ‘Ali, and therefore prudent towards the extreme Shi‘īs, at the same time unrevealedly hostile to the Umayyads, can in my opinion only be interpreted in one way. All these apparently dissimilar lines converge on a common centre: the ‘Abḥāsīd movement. It is precisely Wāṣi‘s attitude which we must regard as characteristic of the partisans of the ‘Abhāsīd. The latter regarding themselves as the true ‘abḥāsīd, it was evidently in their interest to lower somewhat the preponderating position attributed to ‘Ali by the extreme Shi‘īs in order themselves to profit by the prestige enjoyed by the family of the Prophet; but on the other hand, they had every reason not to cut the links with the Shi‘īs who were indispensable as allies to them. It is obvious that in these circumstances it was particularly important for them to win over the relatively moderate Zaidī faction to their cause. In a general
way the teaching of Wāsīl on al-manzila can only be perfectly understood if we see in it the theoretical crystallisation of the political programme of the 'Abbasids before their accession to power. Everything leads us to believe that the theology of Wāsīl and of the early Mu'tazila represents the official theology of the 'Abbasid movement. This gives an unforced explanation of the fact that it was the official doctrine of the 'Abbasid court for at least a century. It seems even probable that Wāsīl and his disciples took direct part in the 'Abbasid propaganda. In his ḥudūdī, mentioned below Ṣafwān al-Anṣārī tells us that Wāsīl had emissaries (dīwān) in all parts of the Muslim world. Ṣafwān describes after them as a host of believers and ascetics, who were distinguished from other men in physiognomy and dress; they were the supporters (awrād) of God in all lands and centres in which his commandments were made manifest and in which the art of disputation (with the enemies of the faith) flourished. The period of this activity coincides exactly with that of the most intense 'Abbasid propaganda, in which all the forces working for the ruin of the Umayyads were cooperating; it is impossible not to believe there was a connection between the two. That Wāsīl did actually extend his propaganda very far to the west is proved by the fact that there existed long after the fall of the Umayyads a Wāsīl community at Tabari (Yāmūn, i. 815) numbering about 3,000 members who had allied themselves with the Bāds. They had rebelled against Mansūr under 'Īdrīs b. 'Abd Allāh al-Hassnī (al-Shahrastānī, p. 311; on these happenings see Tabari, iii. 561); they were therefore reckoned among the enemies of the first 'Abbasid caliphs. It is interesting to note that the connection between Wāsīl and the Khāridjīs, supposed by Ḥishāk b. Suwaid al-'Adawī to exist (see above) was here an actuality.

The quarrels of Wāsīl and his followers with Dījām b. Ṣafwān [q. v.] form a difficult problem which has not yet been solved. On the one hand, Dījām's theology left distinct traces on that of the Mu'tazila: the doctrine of the created spirit which was later to become fundamental in the Mu'tazila thesis was probably formulated by Dījām and in the doctrine of the divine attributes there are coincidences on both sides which cannot be accidental. On the other hand, there are many serious differences which are probably practical and political in their nature. Dījām professed in the most extreme form the doctrine of predetermination (qab). All the actions of man are involuntary. Wāsīl maintained the opposite thesis of free will. Now once again we have political problems hidden behind these theological controversies; the Umayyads in general preferred the dogma of predetermination while the opposition accepted the dogma of free will in its widest interpretation in Damascus. Ghulān al-Dimashqī, who figures among the fathers of the Mu'tazila ( Ibn al-Mu'tadād, al-Mu'tazila, p. 15—17), was put to death by the caliph Hishām for holding the doctrine of free will (al-Tabari, ii. 1733).

Once the hypothesis of a definite connection between the Mu'tazila and the 'Abbasids is admitted, the question of the relations between the Mu'tazila founded by Wāsīl and the early Mu'tazila of the period of 'Ali presents itself in a new aspect. It will be admitted that there is a striking resemblance between the attitude of these former companions of the Prophet and that of the 'Abbasids. It is true that 'Abd Allāh b. al-'Adwān entered the service of 'Ali after the death of Othmān but his real sentiments were somewhat ambiguous; he was a great friend of Othmān but a rather lukewarm partisan of 'Ali and after the latter's death he placed himself at the service of the Umayyads. His descendants did not remain at Medina, probably because the 'Abids were their rivals there; after a stay in Damascus, his son went to Humayma near 'Adhārūh and here a formal rapprochement took place in 58 between the 'Abbasids and the 'Alids (Wellhausen, Das arabisch-christlich, p. 312 ff.). Before this event, we may regard the 'Abbasid as a kind of Mu'tazila in the old sense of the word. With 'Amr b. 'Uthmān a new element enters the Mu'tazila as founded by Wāsīl. 'Amr originally was one of the āhī al-hadīth: brought up in the circle of al-Hasan al-Baṣrī, he transmitted a large number of hadīths from his master and he is remembered as one of the muhādātīn. His conversion to the doctrine of fitāḥī brought about a rupture between him and these circles; but with him is a considerable section of the Khāridjīs of the āhī al-hadīth joined the Mu'tazila, thus reinforcing the more politically inclined Khāridjīs, of which Wāsīl was the champion. Khāridjī and mu'tazīlī were soon to become synonymous terms. 'Amr seems to have been decidedly anti-'Alid (see above), in any case he preferred Abū Bakr to 'Ali (Ibn Abī Hadīd on Nahāj al-Bāṣrī, ch. 3). This attitude implies a certain predilection for Othmān, which is foreign to Wāsīl: indeed, a section of the old Baṣrīs, among them al-Dhūqīs, is said to have belonged to the party called al-ʿOthmāniyya. 'Amr's point of view was of great importance for the development of the Mu'tazila. After their final triumph, the 'Abbasids immediately dissolved the alliance with the Shīʾa, which had only been a political instrument for them. As regards the extreme Shī'a, the Rawāfīd, the Mu'tazila unreservedly followed the direction of their new masters; but it is fairly evident that some of them did not decide to break so abruptly with the moderate Shīʾa. It resulted in a schism. One section remained faithful to the alliance with the moderate Shīʾa: this section was later to form a special Mu'tazīlī school in Bağhda'd. But the Mu'tazīlīs of Baṣra with 'Amr at their head seem to have attached themselves without protest to the 'Abbasid cause. 'Amr even became the intimate friend of Mansūr and so to speak his spiritual father. In the west, the Mu'tazīlīs allied with the Khāridjīs rebelled against the 'Abbasids (see above).

Let us sum up the characteristic features of the Mu'tazila at the beginning of the 'Abbasid period. The Mu'tazila was: 1. in general devoted to the cause of the 'Abbasid caliphs, only a section being opposed to them; 2. decidedly hostile to the extreme Shīʾa, the Rāfīḍa; 3. hostile to the Dījāmiyya, by which however it was a little influenced; 4. kadari in uniting several of the old factions of this name; 5. in serious disagreement with the āhī al-hadīth, who soon declared it heretical. This position had a decisive influence in determining the structure of the Mu'tazīlī theology. The beginnings of this theology go back to Wāsīl and 'Amr and are connected with the fight against the Rāfīḍa. The extreme Shīʾa had quite early assimilated a great number of
non-Muslim beliefs; we need not doubt that Manichaeanism played a part in them; in any case certain gnostic and dualist ideas had a way into Islam through the intermediary of these Shi'is. These tendencies, very marked in Kufa, were also represented at Basra; in the house of an Ardi who was a sunni or Buddhist, Wasi and 'Amr had frequent meetings with 'Abd al-Karim b. Abi 'l-'Awdja and Salih b. 'Abd al-Muwaffiq, who professed dualist doctrines (al-thanawiya); we should probably understand by this Manichean view) and the poet Bashshar b. Huri [q. v.], (Kitab al-Adhamat, iii. 24). A serious schism broke up this curious madh'is. This event decided the whole future of the Mu'tazila. Henceforth the fight against suna- da and thanawiya is a cardinal point in the programme of the Mu'tazila. Wasi himself composed a refutation of Manicheanism which al-Balili (c. 300 A.H.) was still able to peruse (al-Mu'tazilih, p. 21). But they also found themselves compelled to combat these heresies in a positive fashion; to the doctrine of fire professed by Bashshar they offered a theology of earth, so to speak, a theology based on the natural philosophy of the time. The poems of Saffvan al-Ansari (al-Djahiz, Kitab al-Bayan, i. 16—19) afford us a specimen of this theology: here we have one of the fundamental documents for the history of Mu'tazili dogmatism. It is not yet clear whence came the philosophy put at the service of theology but its general character is apparent; it is the philosophy of the alchemists, physicists of late antiquity, a kind of summa of the scientific principles which seem to have been accepted everywhere in Asiatic Hellenism. Saffvan perhaps gives us a hint as to the circles from which it came to the Mu'tazila, when he tells us that Bashshar called Wasi and his friends Da'ijamis; this is in any case worth noting. In a general way those who handed on this natural philosophy seem to have been the school called Dabrij by Muslims. The Mu'tazila fought these Dabrij with a vigour which reveals the dependence on this heretical philosophy of which they were conscious. The true founder of the dogmatic system of the Mu'tazila was Abu 'l-Hudhail Mu'ammad b. al-Hudhail al-'Allaf [q. v.]. Abu 'l-Hudhail, his friends and pupils, continued on a large scale the polemic against Manicheaeism, a polemic which is certainly not unconnected with the persecution begun by the 'AbdulSaidis against the open or secret adherents of this religion. On the other hand, he fought the Rafa'a most vigorously, then represented by the very remarkable theologian Hisham b. al-Hakam [q. v.]; and it was through his disputes with the latter that he was led to study the books of the philosophers, which furnished him with a system of dogmatism, a little bold, but full of fertile new ideas. Besides al-Hudhail and his pupils, there was a crowd of important theologians at Basra: Mu'ammar, an independent mind whose ideas have not yet been sufficiently analysed; Hisham b. 'Amr al-Fuwatji and al-Ash'ami, advocates of Abu 'l-Hudhail and several others. Among the pupils of Abu 'l-Hudhail mention must first be made of Ibrahim b. Sajir al-Nazam [q. v.]. These theologians gave Mu'tazila dogmatism its essential character. This theology is: 1. apologetic: it aims at defending the revelation of the Prophet; as a result it is 2. strictly Kur'anic: the sacred book is the only source of the theological denominations (asma';) and of the precepts of religion (ahkam); it is 3. polemical: it vigorously invaded the domains of other religions and other Muslim parties to fight them on their own ground; it is 4. speculative: it has recourse to philosophical means to refute their adversaries and formulate its dogmas; consequently it is 5. intellectualist: it envisages the problem of religion under the purely intellectual aspect. Nothing could then be less justifiable than to regard the Mu'tazila as philosophers, free thinkers or liberals. On the contrary, they are the theologians of the strictest school; their ideal is dogmatic orthodoxy; philosophy for them is only an ancilla faedi; they are nothing less than tolerant. What they created was Muslim scholasticism.

Parallel to the school of Basra, a Mu'tazila school was founded in Baghda by Bashr b. al-Mutamir (q. v.; d. 210 = 825—826). This school was pro-'Alid ('Ali preferable to Abu Bakr), and Bashr was persecuted by Harun al-Rashid. But under Ma'mun (q. v.; 198—218 = 853—855), a decidedly pro-'Alid caliph, the school of Bashr gained a preponderating influence mainly through the theologians Thumama b. Ashras (d. 210 = 825—826) and Ibn Abi Du'd (d. in 210 = 854—55). This school particularly attacked those who upheld the doctrine of the uncreated Kur'an [q. v.]. This attack however had disastrous consequences for the Mu'tazila. Abandoned by the caliph al-Mutawakkil (232—247) who adopted the doctrine of the uncreated Kur'an, it rapidly fell from its influential position and soon found itself surrounded by implacable enemies. In the second half of the third century, Ibn al-Rawandi, a partisan of the Baghda school, made a stir when he left the Mu'tazila for the most advanced Rafa'a; a man of violent temperament, he criticised the Mu'tazila in a scathing way which did it much damage. Towards the end of the third century, the Karmatian movement came on the scene, reinforcing the extreme Rafa'a and causing trouble in every secular and spiritual sphere. In the struggle against the Karmatians it is no longer the Mu'tazila who appear at the head of the defenders of orthodoxy but the ahk al-hadith. In the year 302, Abu al-Rafa broke with the Mu'tazila of Basra, of which he had been a convinced supporter, to introduce speculative dogmatism among the ahk al-hadith, who were soon to give its character to Sunni theology.

Among the Mu'tazila theologians of the third century we may mention the following. At Basra the tradition of Abu 'l-Hudhail al-'Allaf was propagated by a flouri-sing school represented by Yu'suf b. 'Abd Allah al-Shahham, Abu 'Ali al-Ash'ari and others. Abu 'Abd b. Sulaiman was the pupil of Hisham al-Fuwatji. Ibrahim b. Isma'il known as Ibn 'Umay (d. 218) was the pupil of al-'Asam. The school of al-Nazam developed certain special doctrines which the later Mu'tazila rejected (Fadl al-Hadathali and Ahmad b. Hili, Kitab al-Ihtisar, p. 222—223); but among the disciples of al-Nazam we may find al-Is'af [q. v.]. In the second half of the century, the most important Basra theologian was undoubtedly Abu 'Ali Muhammad b. Abu al-Walab al-Djubbah [q. v.]. In Baghda we find in addition to the theologians already mentioned 'Umar b. Subaih al-Murdar, contemporary of Bashr b. al-Mutamir; then "the two Djafars": Dja'far b. Mubashshir (d. 234) and Dja'far
b. Harb (d. 236), at a later date Muhammad b. Shaddād al-Mis‘amār Zurkān (d. in 278) and Abu l-Husain ‘Abd al-Rahim b. Muhammad al-Khayyāt, the great authority on the history of the Mu‘tazila (d. at the end of the century). On the Mu‘tazila of Syria we are not well informed; and only a little better on that of Egypt. The first Mu‘tazilī here was Ibn ‘Ulaya (cf. above) who had disputations with al-Shāfi‘ī; with him Ḥāfṣ al-Fard came to Cairo; this last represented the official theology in Cairo during the miḥna of al-Waḥībī. Ḥāfṣ was declared a heretic by al-Khaṭīb (Kitāb al-Inā’ār, p. 133-134). — In Spain the Mu‘tazila teachings was disseminated by Abu Bakr Faraj al-Kurjubi who had visited the east and studied there with al-Dājīqābī; it was therefore al-Dājīqābī — at bottom al-Nazāmīyā — that was known in Spain; very soon the Mu‘tazila seems to have become undistinguishable from the Bāṭiniyā (Assu Palacios, Abenacerara y su escuela, Madrid 1914, p. 21—22).

The fourth century saw the ‘Sīra flourishing and ‘Abādshīd power disappearing; the favour of several Būyād governors now to some degree made good the loss of prestige which had been suffered by the Mu‘tazila. The schools continued their work, and the Mu‘tazila spread to the east. At Basra, al-Da‘ūdī had left a large number of disciples but his school was soon surpassed by that of his son Abū Ḥāshim [q.v.]; representatives of the latter were among others Abū ‘Alī ‘Alā‘ al-Ḥusayn b. ‘Alī al-Baṣrī (d. 369); Abu l-Husain al-Aṣrāfī (Abād b. ‘Uyūsuf b. Yaḳūb) al-Tanūkhī (d. 377), a member of the well known al-Tanūkhī family; Abū ‘Īsāḥī b. Ḥusayn b. ‘A‘īyāsah al-Baṣrī and his pupil the Kāḍī ‘Abd al-Da‘ūdī b. Abū Ḥāshim al-Hamadānī. The latter, the most remarkable of the Bāṭa’ī theologians of the period, migrated in 360 to Rāy where he founded an influential school and died in 415. In Bāghdād the school of Abū Bakr Abū Ḥāshim b. ‘Alī al-Muḥāshidī (d. 320) dominated the whole century. A very celebrated Baghdādi, Abu l-Kāsim Abu ‘Alī al-Baṣrī b. Abū Ḥāshim al-Sa‘īdī al-Kaṭbī, a pupil of al-Khaṭībī, founded a school at Aṣṣaf, where he died in 371; and among his pupils we find al-Muḥāshidī Abu l-Ḥasān. We also find the Mu‘tazila in ‘Isfahān, where Abū Bakr Muhammad b. ‘Ibrāhīm al-Zubaynī of the school of Abu l-Hudūḥī had introduced Mu‘tazila doctrines; at Kūsmīn (school of Abū Ḥāshim), Gūzān, Nishāpūr and in several towns of Kūrsūr. During the fifth century it was the theology of ‘Abd al-Da‘ūdī which dominated at Basra; one of his pupils, Abū ‘Alī‘Abd al-Ḥasān b. Abū Ḥāshim b. Mattawāh, handed down the great work on dogmatics of his master, al-Muḥīţ b. ‘I-Ta‘līfī; another theologian, Abū Ḥāshim Ṣa‘īd b. Muhammad al-Naṣabūrī (d. in 460), compiled a resume of the questions disputed in the schools of Basra and Baghdād. Several theologians of Baghdād are known; some of them must have belonged to the Zaidīya and generally speaking the Baghdād school becomes more and more merged in the Zaidīya. The last great theologian of the Mu‘tazila was al-Zamān kh shārī [q.v.] (d. in 538) but the schools continued to exist long after him, especially in the east. It was probably the invasion of the Mongols that put an end to them; the Mu‘tazila has however survived to our day in the Zaidīya.

It was not speculative dogmatism alone that formed the subject of Mu‘tazila activity. Their part in the history of the exegesis of the Qur’ān is a very considerable one; it was they who introduced the strictly grammatical method. There is a very close connection between them and the philological school of Bāṣan, the representatives of which in general taught Mu‘tazila doctrines (e.g. al-‘Aṣma‘ī). The exegetical works of the Mu‘tazila, for the most part now lost, were utilised to a large extent by their adversaries, e.g. Fakhr al-Dīn al-Rāzī. — All questions of ḥukm were vigorously discussed in the Mu‘tazila schools; the influence of the Mu‘tazila on the ma‘ṣūla al-mu‘tahāhī has still to be examined. — Lastly the science of hadītīh certainly received various stimuli from the Mu‘tazila criticism of the ahl al-ḥadīth. 

Mu‘tazila. Mu‘tazila theology is summed up under five principles (mu‘ṣūl) or fundamental doctrines which one must accept in their integrity to be recognised as a Mu‘tazili (al-Mas‘ūdī, Mu‘tazī, vi. 22). As these were probably in origin the principal points in the programme of Mu‘tazili propaganda, these muṣūl later became a kind of framework of speculative dogmatism.

1. Aṣīl al-ta‘ṣlīhīd: the strictest profession of monothelism (against any kind of dualism); denial of all resemblance between Allāh and his creatures (against the anthropomorphisms of the muḥaddithīn on the one hand and those of the Rāfī‘ī and Manīchaeans on the other); the divine attributes (against the Dāhima); integral affirmation of the Prophet but distinction between a natural theology and a revealed theology. Problems discussed here: 1. The nature of God and his attributes: a. omnipresence: God is in all places, in the sense that he directs everything (Abu l-Hudhailī al-Da‘ībī); he is not in any place (general thesis): b. perceptibility: he is not perceived by the senses (thesis generally adopted) — he is perceived by the heart (Abu l-Hudhailī) — he has a hidden nūḥiya which will be perceived in another world with the help of a sixth sense which God will then create (Ḥāfṣ al-Fard and other; thesis declared heretical); c. the attributes (eternal; names of the essence): identical with the essence (Abu l-Hudhailī; thesis generally adopted) — inherent in the essence through nāṣūl (al-Mū‘ammar) — through al-nūhī (Abu Ḥāshim) expressing positive aspects (Abu l-Hudhailī and generally) — negative (knowledge: negation of ignorance: not in any place).

2. The structure of the created world: a. starting-point anthropology treated in a positive way (exact definition of religious duties) and negative (refutation of qarnawiyya): man is the empirical phenomenon which we see, the body (qarnīm) which is composed of a certain number of indivisible entities (atoms) and which supports the accidents: life, the senses, colours etc.; nafs is mu‘nā and distinct from rūḥ (Abu l-Hudhailī) — man is composed of body (badan) and rūḥ (identical with nafs) which are mutually interpenetrant (mu‘tāla‘āt); the colours, senses, sensations, forms and spirits form different categories of ajwā‘āhar (not
he does not: general thesis; b. theodicy: could God prevent evil? yes, for he possesses a store of hidden grace which would be sufficient to destroy evil completely at once: Bigbr al-Mutanisr and several Baghdadi theologians — no, for he always does what is best and wisest for his creation: general thesis. 2. Huma power: created by God: physical evils, diseases etc. are not subject to the human will; man’s actions are movements; distinction between a:sal al-kalibb and a:sal-djazi: problem of towailid stated by Abu ’l-Hudhir and particularly discussed in the school of Baghdad; the effects of an action are attributed to him who performs it, and even after his death he remains responsible for it.

III. Asl al-wad’ wa ’l-cudb (or asl-mar’ wa ’l-askim): practical theology. Problems here discussed: a. belief and unbelief: belief consists in all the acts of obedience, obligatory or supererogatory: sins (mubr): are divided into grave (kabib) and petty (tebbal): the following are kabir: 3. the evil: he who is not a Muslim obeys God if he does something which God has commanded in the Qur’an (or la yuradu l犹h bih): Abu ’l-Hudhir and his school; 3. the creation things: are eternal, and if things are created it: put into existence after having been non-existent; several solutions of the problem: “thing” is only what exists and before the reaction the thing was not thing which implies that divine knowledge is born with the things (Djahmi thesis adopted by Hjdmn al-Fuwati) — before the creation things were posited (ghabib: as non-existent in God’s eternal knowledge but without the accidents which characterise them in existence (al-Shahids and others) — with these accidents (al-Khaliq, al-Kabibi and several theologians of Baghdad (school of wad): God created all things at one time, one in the other and these things are manifested in the created world one after the other (al-Nazz:); c. are the objects of divine knowledge and power limited? Yes (Abu ’l-Hudhir) — no (the others): d. divine power does not extend to the accidents (Mu’ammars) — to the phenomena resulting spontaneously from human action (tawallid, see under asl al-wad’): 4. Revelation: prophecy: a prophet is mstlim, i.e. free from grave sins; b. the Kur’an: created; God creates the word in a substratum (mawd ab-mustlim: the Prophet; the hush etc.). The Kur’an is miraculous in composition and style — denied by al-Nazzam; distinction (which goes back to Wasi) between mubkh, the precepts of the Kur’an which are clear and without ambiguity and mutakhab, the precepts which are not immediately clear and evident: distinction between nashih and masnab.

II. Asl al-wad’: God is just; all that he does aims at what is best for his creation (afiya): he does not desire evil and does not ordain it (amr and iri: identical). He has nothing to do with man’s evil deeds: all human actions result from man’s free will: man has a khub and an istifa kabla 1:82; man will be rewarded for his good deeds and punished for his evil ones. Problems discussed here: 1. Divine power: a. can God commit an injustice? No: al-Nazzam — yes, but
caliph, son of al-Mutawakkil and a slave-girl named Kabiha. After al-Mustanin had been forced to abdicate, al-Mu'tazz was proclaimed caliph on 4th Muharram 252 (Jan. 25, 866). When he wanted to get rid of the two Turkish generals Wasif and Bogha the younger, they got wind of his intentions and went back to Samaara. On the other hand, he succeeded in putting his brother and successor designate al-Mu'ayyid to death and throwing the third brother Abu Ahmad into prison. In the following year Wasif was killed by the troops when they mutinied for their pay and he attempted to appease them. After the death in Dhu 'l-Ka'ada 255 (Nov. 1869) of the governor Muhammad b. 'Abd Allah [q.v.], trouble broke out in Baghda and in the following year Bogha was murdered at the caliph's instigation. As the latter could not pay the troops they mutinied. Al-Mu'tazz applied to his mother who possessed immense wealth, but she refused to help him and at the end of Radjab 255 (July 869) the cruel and faithless caliph was deposed. He was put in a subterranean dungeon where he died of starvation in 3 days at the age of 24. In his reign the dynasty of the Fatimids was founded and Ya'qub b. Laith [q.v.] was defeated as governor of Sidjistan. The Kharijists sacked al-Mawri and in Asia Minor the Muslims were defeated by the Byzantines. Cf. also the articles AL-MUTAWAKKIL, AL-MUSTANIN, and AL-MUTAZAR.

MUTHALLATH, also MUTHALLATHA, pl. muthallahat; triangle; it forms the first category of plane surfaces bounded by straight lines (al-ma'tat al-mu'tatibat al-mu'tatbat) (cf. al-Kharizmi, Mafath, p. 206). Following Euclid's Elements, i., "0924—29, the Arab mathematicians classify triangles from two points of view: either according to the sides (al-far'i, pl. afar'id) into equilateral (al-mu'tatibat al-mu'tatibat) or scalene (al-mu'tatibat al-mu'tatbat) triangle, or according to the angles (al-far'i, pl. afar'id), into right-angled (al-mu'tatibat al-far'i) and acute-angled (al-mu'tatibat al-mu'atbat al-far'i), obtuse-angled (al-mu'tatibat al-mu'atbat al-far'i), and scalene (al-mu'tatibat al-mu'atbat al-far'i), or according to the angles (al-far'i, pl. afar'id), into right-angled (al-mu'tatibat al-far'i, pl. afar'id, 8 of the 89), and acute-angled (al-mu'tatibat al-mu'atbat al-far'i), obtuse-angled (al-mu'tatibat al-mu'atbat al-far'i), and scalene (al-mu'tatibat al-mu'atbat al-far'i). In the equilateral triangle the base is called al-khala, the apex al-da', the sides al-di'um (see above), in the right-angled triangle the hypotenuse is called al-ka'ira, i.e. "diameter" (because the hypotenuse represents the diameter of the circle described around the right-angled triangle); for the two sides the term al-di'um is generally used. Muthallath al-mu'tatibat as a technical term
means trigonometry (cf. Dozy, Supplement, i. 163).

MUTHALLATH (always with the feminine ending) is a technical term in astrology. Astrology divides the zodiacal circle (μνήμη [q.v.]) into four muthallathāt (Gr. τρίγωνα, Lat. trigonia, tripetron), each of which includes three signs 120° apart. These “are situated together in the trigonal plane” (παθήτης, Gr. τρίγωνα, tripetron tritropis); the word patheth itself is frequently found as a synonym of muthallathā who comes from the same root (ṭī-l-ṭāh) (cf. Dozy, op. cit., p. 162).

In star nomenclature Kiriakos Muthallath is the constellation of the (northern) Triangle (in Eunostoteles Δεσσαυρον, in Ptolemy, Τρίγωνα) which is joined in the east by Perseus, in the north by Andromeda, in the west by Pisces and in the south by Aries. According to Ptolemy (Almogest) and al-Sufli (ed. Schjellerup, p. 123 sq.), it consists of three stars of the third magnitude and one of the fifth. The star at the apex (a Trianguli) is an asterobase star and is called Rā's al-Muthallath. The latter name is found in Libros del saber de astronomia del rey D. Alfonso X de Castilla in the corrupted form “alosedales.”

AL-MUTI. [See ALLAH, i.]

AL-MUTI (lit. “the one who is asked of Al-Fauḥ), an “Abhāṣid caliph, son of al-Muktadir [q.v.], the first Caliph of his name. His reign marks a very unfortunate period in the history of the “Abhāṣids. The caliph himself had not the slightest authority; the power was in the hands of Muʾizz al-Dawla and after his death in 356 (967) in those of his son Bakhṭiyār. The “Bahṣids were growing more and more powerful and the “Sāmānids also declined to recognise al-Muti as the legitimate suzerain. The “Hamdānids were weakened by their wars with the “Buṣyids and the “Bahṣids. In “Baghdād the “Sumnids and “Shīʿis were fighting one another, and several “Shīʿi usages were introduced by the “Buṣyids who had the “Alid sympathies. At last the weak and sickly caliph was forced by the Turks to abdicate in favour of his son “Abd al-Karim al-Tāṣi (13th Dec. 197a 363 = Augst 5, 974). Al-Muti died in Mubarram 364 (September–October 974) in Damir al-ʿAkbūr. (A. J. WENSCUCK)

AL-MUTLAQ (A.), part, pass. IV from ṭā-l-ṭāh, “to tie the loose (fadd) of an animal, so as to let it free” (cf. Muslīm, Ḳīḥād, trad. 46. Al-Dawūd, Ḳīḥād, bāb 100). The term is also applied to the loosening of the bowstring (Bukhārī, Ḥṣāab, b. 170), of the garments, the hair etc. Thence the common meaning absolute, as opposed to restricted (mukāyad), and further the accusative muthallath “absolutely”. The use of the term is so widely diffused, that a few examples only can be given.

In grammar the term mafʿal mutlaq denotes the absolute object (cognate accusative), i.e. the objectivatised verb of the sentence, such as “a sitting” in the sentence: he sat a sitting.

In dogmatics the term is applied to existence. So that al-wuṣūḏ al-mutlaq denotes Allāh, as opposed to His creation, which does not possess existence in the deepest sense.

In ontology the term is also applied to existence (wuṣūḏ) in connection with the question of the nature of the latter. Here al-wuṣūḏ al-mutlaq is opposed to al-wuṣūḏ al-muṭlaqīl il-l-muṣaffāt. See the art. MANTIK, supra p. 259b.

In other surroundings the term has the meaning “general” as opposed to ḥāṣ; cf. the definition in Ḥāṣṣanī’s Ṭarifāt: Mutlaq denotes the one without specification. Cf. further the Dictionary of the Technical Terms.

On the meaning of raw mutlaq in pro(sedy, cf. Freytag, Darstellungen d. arabischen Werkschatz, Bonn 1830, p. 311.

AL-MUTTAḲ (lit. “the one who is asked of Al-Fauḥ), an “Abhāṣid caliph, son of al-Muktadir [q.v.] and a slave-girl named Khaledi. In Rahlʾ I 329 (Dec. 940) he succeeded his brother al-Raʾīsī [q.v.]; by this time the caliphate had sunk so low that five days passed after the death of al-Raʾīsī before steps were taken to choose his successor. Al-Muttaḳ at once confirmed the Amir al-ʿUmārī, Bedjken [q.v.] in office; after his death however, the Turks and Daulakhis in the army began to quarrel with one another. AbuʾAbd Allāh al-Bardī [see AL-BARDI] seized the capital but could only hold it a few weeks. He was driven out by the Daulah chief Kūrṭegov who however was soon overthrown by Ibn Rāʾīk [q.v.]. When AbuʾAbd Allāh sent his brother AbuʾHusān with an army against Baghdad, the caliph and Ibn Rāʾīk escaped to al-Mawṣil to the “Hamdānids (Ibn Hurgronje II 330 = Feb. – March 942). After the assassination of Ibn Rāʾīk the Hamdānī AbuʾMuhammad al-Ḥasan was appointed Amir al-ʿUmarī and received the hono(rific title of Nāṣīr al-Dawla. The occu-
pation of Baghdad offered him no difficulty: the Turkish general Tuzun rebelled a little later and Nāṣir al-Dawla had to evacuate the capital which was entered by Tuzun in Ramaḍān 331 (June 943) as Amīn al-Murrā. Al-Muttaḳi soon found himself forced to seek the protection of the Ḥamdīmūs again and at the beginning of the following year (autumn 943) he fled to al-Mawṣil. Then he settled in al-Raḳḳa but when Tuzun made peace with Nāṣir al-Dawla, al-Muttaḳi appealed for help to the Khishūṭūlīd of Egypt; the latter came to al-Raḳḳa in Jaḍīd 332 (March 944); the negotiations however were unsuccessful and finally the caliph put his trust in Tuzun, who after abandoning his loyalty by the most sacred oaths had him blinded (Saḥa 333 = Oct. 944). Al-Muttaḳi was then declared to have been deposed. He died in Shāfībān 357 (July 965).

**AL-MUTTAḳI AL-HINDI,** a author of several works in Arabic, whose real name was 'Āli b. Ḥusayn al-Dīn 'Abd al-Mulik b. Kān Khā Ḥuṣainī al-Kāmilī, was born at Burhānpūr in Gujāṛā of a respectable family of Dāwānpūr. He first joined the Chisti order, as a disciple of 'Abd al-Karim b. Shāhī Bādān at Burhānpūr and afterwards went to Multān where he read with Ḥusain al-Dīn al-Muttaḳi, after whom he is called al-Muttaḳi. He spent the remaining portion of his Indian life at Aḥmādābād during the reign of Mubāhrūr Shāh, but left India for Mecca after Humayūn defeated Bahādur Shāh in 941 (1534). He spent his last days in Mecca where he lived for thirty years more, during which he read Ibn Ḥaḍār al-Akāfī and others and entered the Ḥadithi and Shībāli orders. His high spiritual life and learning led many people to become his murīd (spiritual disciple). He died a highly respected saint and scholar in Mecca 975 (1567) at the age of ninety. He is the author of the following works:

1. al-Burhān fi 'Alāmāt Maḥdī āṣīr al-Ẓānim, an account of the Mahdi and of his coming at the end of the world;
2. al-Burhān al-gaḍī fi Mawṣilat al-Wall;</p>

**MUWASHSHAH** (HEPFEING), an ode or poem intended to be sung, is so called by comparison with the solghā, which is a double belt ornamented with pearls and rubies or a band of leather studded with pearls which a woman wears across her body from the shoulder to the opposite hip, thus going round the body. The muwāshšāḥ is composed of two parts one of which contains complete lines and the other hemistiches.

The muwāshšāḥ, which belongs to the "seven kinds or branches" (junūn) considered to be post-classical, is composed according to the rules of the pure syntax.

The muwāshšāḥ is divided into "stanzas", the technical name of which is not exactly settled; they are usually called ṣūrah or ṣawāf. In its most perfect form, it usually begins with one or two lines, a sort of prelude to the actual poem; this prelude is called maṭlāb, ṣawāf or ṣīra; we
also sometimes find the *tasrif*; if it is a distich, the first hemistiches of each verse rhyme together and the second hemistiches also. If A be the rhyme of the first hemistich and B that of the second, the *madhhab* or *ghusn* is of the following form:

- 2 lines: A — B
- 1 line: A — B

After the *madhhab* or *ghusn* come the stanzas proper called: *djuw* or *bait*.

The *djuw* or *bait* contains two parts: the first consisting of a varying number of hemistiches with the same or alternate rhymes, which however are never those of the *madhhab* or *ghusn*. This first part is called *dawr* or *simt*. The second part which is exactly like the *madhhab* or *ghusn*, both as regards number of lines and rhymes, is called *kafta* or *kaft*. The stanza therefore presents the following form:

First type: C — C — A — B
Second type: C — D — C — D

The rhyme or rhymes of the *dawr* or *simt* vary from one stanza to another; but those of the *kafta* are always the same as those of the *madhhab* or *ghusn*. The *kafta* is a sort of refrain which does not fail to make an impression on the listeners by the repetition of the same sounds and rhythms.

These are the most usual models of the muwashshah; but the poets, not being bound by hard and inflexible rules, have, each according to his temperament, exercised their imagination considerably in this genre.

Thus Ibn Sina al-Mulk composed a poem in which the first foot of each hemistich is *falsan* and has the same rhyme as the hemistich of which it forms part. This is the scheme:

- *madhhab* or *ghusn*: A — A — A
- *dawr* or *simt*: B — A — A
- *kafta*: A — A

The blind poet of Tudela shortened the hemistiches which gives a more lively rhythm:

- A — A
- B — B
- C — C
- A — B
- C — C

It would be wearisome to give all the forms of stanzas which are found in the muwashshah. From the point of view of metre, very great variety is found. Martin Hartmann recognised 146 which may go back to the 16 classical metres.

Three other types which are found do not seem to be derived from any well defined form:

- **mas'ā'attu** new type
- **mutas'ā'attu** type approaching the *kaftan* or *kaft*. A type which might be connected with *djuw*.

From the historical point of view, Freytag thinks that has now disappeared. There is certainly no doubt that the pre-Islamic poets composed poems similar to the muwashshah; these are known as *muwammad*; we find here again the word *simt* applied to the longest part of the stanza or couplet of the muwashshah.

The *muwammad* began with an opening line with *tasrif*; then came four hemistiches rhyming together on a different rhyme from the first line; next came a fifth hemistich rhyming with the first and completing the stanza. A new stanza followed with four hemistiches not rhyming with those of the first stanza; it ended with a hemistich rhyming with the opening line. Here is the scheme:

- A — A — A — B
- C — C — A

Imru 'l-Ḳais is said to have composed a piece of this nature but it does not seem to be genuine.

The inventor of the muwashshah is said to have been Muḥammad b. Muʿāṭa, a poet at the court of ʿAbd Allāh b. Muhammad al-Marwání who ruled in Spain (275–300 = 888–913). He was followed by Ibn ʿAbd Rabbih, author of *al-Iḥd al-faṣīḥ*. Their muwashshāh are however believed to be lost.

The first to shine in this genre was ʿUbādat al-Kazzāz, a poet of Muḥammad b. Ṣumāḥ, prince of Almeria. Al-ʿAšām al-Raṭayawī records that he heard ʿAbū Bakr b. Zuhr say: "All the composers of muwashshāh are simply children beside ʿUbādat al-Kazzāz". In the opinion of all men of letters no contemporary writer could rival ʿUbādat al-Kazzāz in the days of the *madhhab al-falṣafī*.

After him comes Abū Ḥādi Allāh Irbāʾ Raʾshah, poet of the court of Maʿmūn b. Dhuʾl-Nūn, prince of Toledo. In the time of the Almoravid dynasty there flourished a group of poets among whom may be mentioned the blind poet of Tudela, Ibn ʿAbād, ʿAbū Bakr b. al-ʿAdam, ʿAbū Bakr b. Badja.

In the time of the Almohads the most famous
composers of muwashshah were Muhammad b. Abü Faḍl and Ibn Ḥaṭīyān. At a later period we have ʿAbd al-Ḥasān b. Sulaymān, a poet of Seville and of Ceuta, Ibn Ḥalaf al-Iṣṭanbūlī (of Algiers), Ibn Ḥūzār of Bougie, the vizier and celebrated man of letters, Līsān al-Dīn b. al-Ḵāṭib.

Eastern poets have followed those of Spain. One of them, Ibn Ṣanāʿī al-Mulk al-Miṣrī (551=1088), laid the foundation of their art.

As to the subjects of the muwashshāʾ they are the same as those of the traditional ḍabāʾiḍīs: but as they are composed with the definite object of being sung with the accompaniment of stringed instruments they are usually love-poems.

On the musical origins of the muwashshāʾ see the article TIK.

AL-MUẒAFFAR, the homonym ḡābīb by which is meant the second of the ʿĀmirīd diktators of Muslim Spain is best known, the celebrated al-Maṣūmi [q.v.]. ABU MARWĀK Abū al-Maṣūmi Abū Ṣayfān Abū al-Maṣūrī. He was invested with the office of ḡābīb by the caliph Hishām II, on the death of his father, on 28th Ramadaḍ 392 (Aug. 10, 1002) and ruled as absolute master the territory of al-Andalus until his death of angina as he was setting out on an expedition against Castille on 16th Safar 399 (Oct. 20, 1008).

The relatively short period of the ʿĀmirīdate of Abū al-Maṣūk al-Muṭaffar was until quite recently almost unknown for lack of documents and in his

Histoire, Doyi had to pass it over in almost silence in view of its importance in the history of the early 11th century in Spain. I have been able in the course of recent years to fill this gap, thanks to the discovery of accounts of the ʿĀmirīdate of al-Muṭaffar in the Līkhāʾiḥa of Ibn Bassām and the Bayān of Ibn ʿĪḍāḥi and the unpublished chapter devoted to him by Ibn al-Ḵāṭib in his Fnūl al-Ṭūn. The result is the discovery that the septuagenary Abū al-Malkī was for Muslim Spain a period of peace and prosperity, a regular golden age, just on the eve of the first upheavals which preceded the collapse of the ʿAlīyād caliphate; the chroniclers compare this period to the first week of a marriage (sāḥi al-wuṣūr) cf. Dozy, Suppl. Diet. Ar., i. 626—627.

Al-Maṣūrī had actually left his son and successor an empire not only completely pacified and solidly organised but also enjoying an economic pro-pretory hitherto unprecedented. Abū al-Malkī aimed at following scrupulously the line of conduct laid down for him in father's last wishes: to preserve and justify the popularity of the ʿĀmirīd regime by peace at home and the continual harassing of the Christian foe beyond the marches (ẓanāqī). Every year of Muṭaffar's rule was therefore marked by a summer expedition (qāfūn) or a winter one (ṣaḥfī); in 393 (1003) he led his armies against Catalonia (bīlaḏ al-Ḥarām), laid waste the country round Barcelona and destroyed 35 strongholds before returning to Cordova; in 395 (1005) an expedition was led against Castille by the ḡābīb; in the following year his objective was the town of Pampeluna [q.v.], which he seems to have approached but not reached; in 397 (1007) took place, against Catalonia, the expedition known as the "victorious" (ẓāfīṭ al-nasr). Abū al-Malkī forced his way into Clunia and carried off a vast booty. This triumph earned for him the nominal suzerain the title of "Victor" (al-Muṭaffar) which henceforth replaced his previous ḡābīb of Sail al-Dawla. In the course of the winter of 398 (1007—1008) there was an expedition which ended in the capture of a castle of San Martin which has not been identified. The last expedition undertaken by him as mentioned above came to nothing because of the early death of Abū al-Maṣūmī father to the way to wage war on the infidel.

At home al-Muṭaffar maintained intact the strong administrative organisation which dated from the reign of Abū al-Raḥmān III [cf. Umayyads, i.] which al-Maṣūmī had maintained intact, while removing from it the representatives of the Arab aristocracy. On his accession to office, he won the good grace of the Cordovans by reducing taxes by a sixth. He was easily able to dispose of several conspiracies against him. He left to his brother Abū al-Raḥmān Sanche a heritage which the latter might easily have preserved if he had not at once exasperated his subjects against him by displaying a hateful partiality and attempting to arrogate to himself the caliphate completely.

MUZAFFAR AL-DIN, fifth Shāh of Persia of the Kadjar [q.v.] dynasty, was born on March 25, 1853. He was Shāh Nasir al-Din’s second son, the eldest son Zill al-Sulṭān being of lower birth by his mother. As crown prince Muẓaffar al-Din had been some time governor of Azerbaijan (a description of him as crown prince in Curzon, Persia and the Persian Question, i. 141). After his father’s assassination Muẓaffar al-Din was enthroned on June 8, 1896. With this new reign the rivalry between England and Russia for commercial and political influence in Persia became ever more apparent. The sympathy of the high officials, which was divided between the two powers, and the economic and military strength of the country was since long too weak to enable Persia to follow an independent policy. Under the relatively strong rule of Nasir al-Din popular discontent with the increasing misery had been suppressed; the new Shāh, however, though well-intentioned, did not possess the character of a strong ruler and, besides, did nothing to check the extravagancy of the court. His financial difficulties made Persia the debtor of Russia; in 1898, 1900, and 1901 considerable loans were given in Russia, guaranteed by the signatures of the custom receipts, the collecting of the custom duties being administered by Belgian officials. A good deal of the borrowed money was used for the expensive journeys to Europe undertaken by the Shāh in 1900, 1902 and 1905. In the meantime, the condition of the people became more and more miserable; headed by some influential merchants and some high ecclesiastics they protested against the heavy taxes and the tariffs as fixed in the commercial agreements with Russia and England of 1903. The growing discontent took several forms; some wished to call in the Turkish Sulṭān as Caliph and at other times there were outbursts against the Bābis in Yazd and Isfahān. Besides there were special grievances against several high officials, amongst them the chief Persian inspector of taxes. In December 1905 a popular movement took place in Teherān, with the aim of obtaining the deposition of the then grand vizier ‘Ain al-Dawla (since 1903). An ever increasing number of merchants, mulla’s and citizens took refuge (bazi) in the shrine of Shāh ‘Abd al-‘Azīm. At last the Shāh promised ‘Ain al-Dawla’s dismissal and some reforms, but in the course of the following year none of these promises were fulfilled. So in 1906 the discontentment reached again a culminating point, directed this time by some more or less secret patriotic associations. In July large crowds of the people of the capital went with the mullas to Kum, to take refuge in the sanctuary there; at the same time the British Legation accorded asylum to a considerable number of merchants and citizens. The results were that on July 30 ‘Ain al-Dawla was dismissed and that on August 5, all the demands of the protesting people were granted, including a constitution. The ecclesiastical leaders returned from Kum. There followed some friction with the government about the elections and other matters, but at last, on October 7, 1906, the first Persian Majles or National Assembly was opened by the Shāh. The new Majles had to face immediately some difficult problems and showed from the beginning its determination not to be a mere toy in the hands of the court party. Progress was hampered, however, by dissensions amongst clerical and non-clerical members of the popular party, while there were disturbances, in Tabrīz, owing to the tyranny of the crown prince Muḥammad ‘Ali. The Constitution (Kānūni-i ʿAlî; q. v.) was ratified by the Shāh only on December 30, 1906. Muẓaffar al-Din himself died on January 8, 1907 after a long illness, leaving his country to the eventful reign of Muḥammad ‘Ali Shāh.

J. H. KRAMERS

MUZAFFARIDS, a Persian dynasty. Their ancestors came from Arabia and had settled in Khurāsān at the time of the Muslim conquest, where they lived for several centuries. On the approach of the Mongols, the emir Ghiyāth al-Dīn Hūdūdī, with his three sons ‘Abī Bakr, Muḥammad and Māsūr, retired to Yazd. The two first named entered the service of the Atābeg of Yazd, ‘Ālī al-Dawla, and when Hūdūdī’s [q.v.] march on Baghdad, ‘Abī Bakr followed him with 300 horse. After the capture of Baghdad he was sent with an army to the Egyptian frontier. Here he fell in an encounter with the Arab tribe of Khaufaḏīa whereupon his brother Muḥammad succeeded him as a vassal of the Atābeg of Yazd while Māsūr remained with his father in the little town of Maḥbūb near Yazd. Māsūr had three sons, Mūḏīr al-Dīn Muḥammad, Zain al-Dīn ‘Alī and Shāfī al-Dīn Muẓaffar, the latter of whom became the ancestor of the dynasty of the Muẓaffarids. Appointed governor of Maḥbūb by ‘Yūṣuf Shāh, ‘Ālī al-Dawla’s son and successor, he cleared the hills of the robber bands from Shīrāz and when ‘Yūṣuf Shāh, who had put to death the envoy of the Ilghān Arghūn had to take to flight and went to Sīstān, Muḥammad followed him but left him on the way and went to Kumān where he was kindly received by ‘Utbūn al-Dīn Ṣarghāmatuš Kara Ḵūṭā (68 onwards) and presented to Arghūn who took him into his service. He was also on good terms with Arghūn’s successors Gaiḥkūb and Ṭahrānī. The latter appointed him amīr-i kāzīra “commander of a thousand”, and after the accession of Uljiyīt (703—1304) he was given custody of the roads from Ardshān to Kumān-shāh and from Herāt and Marw to Aḏarḵūn. Muẓaffar died on 13th Dhu’l-Qa’dā 713 (March 1, 1314). He was succeeded by his 13-year-old son Muḥārīr al-Dīn Muḥammad who is described as brave and devout but at the same time cruel, bloodthirsty and treacherous. He continued to live at the court of Uljiyīt; on the latter’s death in Shirāwāl 716 (Dec. 1316) and the accession of his son ‘Abī Sa’dī he returned to Maḥbūb. Along with the lord of the southern coast of Persia, the emir Kaḵkh surround the Malām Shāh Indīj, he very soon fell upon the Atābeg of Yazd, Ḥāfdīḏ Shāh, and succeeded in taking
the town from him (718 or 719 = 1318 or 1319). A short time after this event the people of Si-tān, the Nikāhārs, arose in rebellion; Muhammad attacked them and their leader Nawrūz was defeated and slain. The rebels however gathered together again and Muhammad had to fight no less than 21 battles before they were finally suppressed. After the death of Abū Sa'īd (730 = 1335-1336), complete chaos began and pretenders arose in different parts of the wide empire. The emir Abū Ḫaṣā b. Muḥammad Ẓāhīr Ḥāsīn endeavored to take the town of Yazd but was driven back. After some time Muḥammad took this province from the Mongol governor in Kirmān, Malik Khūth al-Dīn. In the end however, Abū Ḫaṣā succeeded in taking Shirāz and had the khutba read and coins struck in his name. In Sāḥar 748 (May—June 1347) he set out to subjugate Kirmān and laid waste Shirāz, but returned when he heard that Muḥammad was ready to offer vigorous resistance to his advance. One of the victims of Abū Ḫaṣā then undertook a campaign against Kirmān but was defeated, where-upon Abū Ḫaṣā put himself at the head of a new army and marched on Kirmān to take vengeance on Muḥammad. But this effort also failed: Abū Ḫaṣā was completely defeated and had to take to flight. In 751 (1350–1351) he went to Yazd and began to besiege the town but, returned, having achieved nothing. In spite of all his failures however, Abū Ḫaṣā never lost heart. In the following year he sent a new army under the emir Abī Ḫaṣā to Kirmān and when the latter met Muḥammad on the plain of Pand Dūghāt in Ltimmād 753 (June—July 1352) a battle resulted. Dīkās was defeated. Muḥammad followed up his victory, went to Šīrāz and laid siege to it. On the 3rd Shawwal 754 (Nov. 1, 1353), the governor had to surrender and Abū Ḫaṣā fled to Isfahān. In the following year Muḥammad took the oath of homage to the Šīrāzī caliph in Egypt. Isfahān was now besieged. But as Muḥammad had also to deal with other rebels the siege was somewhat prolonged. Resistance was in the end overcome and the town had to surrender. At the same time Abī Ḫaṣā fell into his hands and was at once executed (21st Ltimmād 757 or 758 = May 22, 1356 or May 11, 1357). After Muḥammad had defeated all his enemies and become undisputed lord of Fārs and the ʿIrāq, an envoy appeared from the ruler of the Golden Horde, Dānī Beg Kābān b. ʿUzbek Kābān, who announced that the Khān had taken Tahrīz and wanted to appoint Muḥammad jāzīzul “Marshal”. Muḥammad gave the envoy an arrogant and unfriendly answer; but when he heard soon afterwards that Dānī Beg had returned home and left the emir Abī Ḫaṣā in Tahrīz he decided to take the town. Soon afterwards the news of Dānī Beg’s death arrived; Muḥammad at once set out and met Abī Ḫaṣā at Muyāna in Alḥobarbādīn. The latter was defeated and Muḥammad entered Tahrīz. But as a large army was approaching from Baghāl he dared not risk remaining but decided to begin to retreat. In Ḥamadān 759 (Aug. 1358) he was surprised and taken prisoner by his own son Saʿīd Ḥūsūn b. Ḥāsīn who believed himself suppressed and ill-treated by his father; in combat some other relations. Muḥammad was blinded and kept in prison for several years until his death at the end of Rāzī I 765 (Jan. 1364) at the age of 65. He was succeeded, by ẒĀHĪR ḤĀSĪN who shortly before his death appointed his son ZAIN AL-ʿĀBĪDĪN ʿAlī his successor in Shirāz and gave his brother ʿĪMĀD AL-DĪN AḤMĀD b. Muḥammad the governorship of Kirmān. As soon as ZAIN AL-ʿĀBĪDĪN had begun to reign his cousin ẒĀHĪR ʿĪYĀḤ b. Sharaf al-Dīn Muẓaffār set out from Isfahān to attack him. Fortunately however, the threatened war was averted by a friendly agreement; but ẒĀHĪR ʿĪYĀḤ could not stay long in Isfahān; he was driven out by the turbulent and feckless inhabitants and fled to Yazd whereupon ZAIN AL-ʿĀBĪDĪN appointed his maternal uncle Muẓaffār-i Kāshī governor of Isfahān. In 787 (1385–1386) an envoy from TĪMŪR arrived in Kirmān bringing assurances of his peaceful and friendly intentions and Sulṭān Aḥmād hastened to offer his humble homage to the powerful conqueror. In shawwal 789 (Oct.—Nov. 1387) it was reported that TĪMŪR had invaded the ʿIrāq and that Muẓaffār-i Kāshī had given him the keys of the towns and fortresses whereupon ZAIN AL-ʿĀBĪDĪN left Shirāz and went to Baghdad while ẒĀHĪR ʿĪYĀḤ endeavored to procure suitable gifts to pacify TĪMŪR and ordered that a sufficient sum should be paid out to maintain his army. But when TĪMŪR’s officials appeared in Isfahān to take the money, they were attacked and killed by the citizens. In consequence the Mongols carried out a dreadful massacre among the people of Isfahān, in which 200,000 were said to have perished. TĪMŪR then went to Fārs and confirmed Sulṭān Aḥmād as lord of Fārs, the ʿIrāq and Kirmān, whereupon he returned to Samarqand. When ZAIN AL-ʿĀBĪDĪN had left Shirāz, he met his cousin ZAIN AL-MANṣūR b. Sharaf al-Dīn Muẓaffār at Shūstār and was at first welcomed, then suddenly attacked and imprisoned. ZAIN AL-MANṣūR was now able to occupy Shirāz without opposition, while ẒĀHĪR ʿĪYĀḤ returned to Yazd. After the former had established himself securely in Shirāz, ZAIN AL-ʿĀBĪDĪN was released by his jailers and brought to Isfahān where the people welcomed him. In the meanwhile he had been persuaded by ẒĀHĪR ʿĪYĀḤ to combine with Sulṭān Aḥmād to take vengeance on ZAIN AL-MANṣūR. The latter failed however, the allies were defeated and ZAIN AL-MANṣūR seized the whole of the ʿIrāq. When ZAIN AL-ʿĀBĪDĪN wanted to escape to Khurāsān, he was treacherously seized by the governor of al-Ray and brought to ZAIN AL-MANṣūR who at once had him blinded. The latter then tried to form a coalition against TĪMŪR. In 795 (1392) however, TĪMŪR left his winter quarters in Māzdāndān and marched on Shūstār. After storming Katāf- Sefīd which was considered impregnable he marched on ZAIN AL-MANṣūR’s capital and a battle was fought near Shirāz. Although ZAIN AL-MANṣūR’s chief emir abandoned him with most of his troops, the battle lasted till far into the night. The undismayed Muẓaffārīs fought with desperate courage, but finally fell in the melee, after fighting his way to TĪMŪR and giving him two cuts with his sword, which however the strong helmet of the Mongol leader averted. ZAIN AL-MANṣūR’s relations then submitted; nevertheless TĪMŪR a week later (Rāzī 795 = May 1393) had all the Muẓaffārīs executed.

MUZZAFA "MUZZAFA"

A term in rhetoric (badi') which means the association of two things in the relation of condition (shart) and result (jaza') and then employing the same combination for two other things in the same conditions. Here is an example from the Divan of al-Buhûri (Cairo 1329, p. 317):

Ishâ 'hura'abat yaman jaz'afat dimâhâ'â
Ishâ 'hura'abat yaman jaz'afat dimâhâ'â

"When they (the horsemen) are one day fighting and their blood flows in profusion, they remember then bombs of kinship and their tears flow abundantly." The poet associates fighting with recalling bonds of kinship in the two parts of the conditional statement, then he completes the first by adding their blood flows in profusion and the second by saying their tears flow abundantly.

(MOH. BENCHENÊER)

AL-MUZDAWIDJA, a place roughly halfway between Minhâ and Arafat where the pilgrims returning from Arafat spend the night between the 9th and 10th Ibra 'al-Hijrâ, after performing the two evening salât. On the next morning they set off before sunrise and climb up through the valley of Muhassir to Minhâ. Other names for this place are al-Madjâf al-'Arûm, from Sûra ii. 194 and Djamâ' (cf. Lailat Djamâ': Ibî Sad, ii. 129, 6); but Djamâ', according to another statement, comprises the whole stretch between Arafat and Minhâ, both included, so that Yawm Djamâ' (Kisâ' al-Mûsa, vi. 30, 11) is explained as the day of Arafat and Yi'âm Djamam as the days of Minhâ. The rites associated with the night of Muzdawidja go back to the old pagan period, which the Arabs themselves recognize when they introduce the kindling of the sacred fire in this night and say that guarding of the departure for Minhâ is a privilege of the family of Adwân.

The sacred place in Muzdawidja was the hill of Kuzâ [q.v.]. Even after Muhammad in deliberate contrast to the pagan practice had declared all Muzdawidja to be musâ'mik [cf. al-Humayd, 1, 6], this hill retained its ancient sanctity. According to Arazki, there was a thick round tower upon it on which the Muzdawidja fire was kindled; in the time of Hârûn al-Rashid it was a fire of wood; later it was illuminated with wax-candles. In the Muslim period a mosque was built about 400 yards from the tower, of which Arazki gives a detailed description while Muhammad speaks of a place of prayer, a public fountain and a minaret. Burton also mentions a high isolated tower at Muzdawidja but the illumination in the night of Muzdawidja now takes place on the mosque.

(MOH. BENCHENÊER)
AL-MUZZAMMIL, title of sūra lxviii., taken from the first verse: "O thou wrapped up", viz. Muhammad, who wrapped himself up in his garment or was wrapped up by others. For explanations of the allusion cf. Sale's note as well as the commentaries on the Qur'ān. Variants of al-muzzammi, which stands for al-muttaammi, are al-muzzamal, al-muṣammil (Baidawi).

N

AL-NABA', title of sūra lxxviii., taken from the opening verses: "Concerning what do the unbelievers ask questions of one another: Concerning the great news". According to the commentaries the great news alluded to is the resurrection, the subject of lively discussions among the Meccans.

NABATAEANS, an Arab people who lived in ancient times in Arabia Petraea. — As early as the seventh century B. C. the Nabataeans are mentioned by Assurbanipal (Keilinschr. Bibl., ii. 216 sqq.). Whether the Nebayoth of the Old Testament are to be identified with them is uncertain (against the identification: Noldeke in Schenkel's Bibellexicon, s. v. Nabatae; for it amongst others: Musli, ArabiaDeserta, New York 1927, p. 492). The Nabataeans were never completely subjected either by the Assyrians, or the Medes, Persians or the Macedonian kings (Diodor. ii. 48). In 313 B. C. Antigonus sent two expeditions against them without success. They were then a nomadic people of shepherds and traders, with a few natural fortresses like Petra, Boṣra, Salghād, al-Hījir which served as depots for their arms and riches. Living sound the Dead Sea they exploited from time to time the remunerative asphalt deposits on its eastern shore.

The Nabataeans were often on friendly terms with their neighbours; e.g. with the Jews under the Maccabees and especially with the Salamians (Arab. Sulaim; cf. Yāḳūt, Maḏ'jam, ed. Wustenfeld, ii. 594, s. v. Birma), with whom according to Stephanos' Byzantios and the testimony of the Nabataean inscriptions, they were in close alliance (cf. Sulaim in Maṣṣūr and B. Moizit, Salamit, in Pauly-Wissowa's Reallexiz., vol. i. A. col. 1824 sq.). The capital of the kingdom, called Nabata, in the inscriptions, was Petra on the Dibajal Hārm, according to Noldeke (ZDMG, xxxv. 255 sq.) Hebrew Sela', Arab. Ḥṣn Sal' in the Wādi Musā in the hills of al-Shārār (Yāḳūt, Maḏ'jam, iii. 117, 13; Mushtariḥ, p. 252, 2), while Musil (Arabia Petraea, ii. 337, note 2, p. 318) identifies this with Kṣrār es-Sel'. The ruins reveal a peculiar mixture of Nabataean and Hellenistic architecture while they have yielded remarkably few Nabataean inscriptions (on these see Dalman, Petra und seine Felshheidetumer, 1908; do., Neu Petra-Forschungen, 1912; Bachmann, Watzinger, Wiegand, Petra, 1921; A. W. Kennedy, Petra, its History and Monuments, 1925).

The Nabataean kingdom comprised the lands of southern and eastern Palestine as well as Idumaea and Petraea, from 88 B. C. also Ḥawrān; twice (85 B. C. and c. 34—62 A. D., perhaps also in the interval, cf. Mommsen, Rom. Gesch., v. 476, note 3), Damascus also belonged to it [cf. i., p. 903]. In the southwest it stretched over the ancient Midian as far as the coast of the Red Sea where ʻObodat I founded the town of Hawāra (Steph. Byz., s. v. ʻAkre, probably =Δωνηα ηπωμ, now perhaps al-Ḥawrā?), in the interior as far as al-ʻUla (Oedoc) and al-Ḥijr [q.v.] on the frontier of the Hādramaut. The Nabataeans also penetrated into the name of Arabia in the eastern Nile delta as an inscription from Tell el-Sughaft is in the Wādi Tūmilat shows (Clermont-Ganneau, Les Nabatiens en Égypte, in Recueil d'Arch. Or., viii. [1924], p. 229—257). A number of their kings can be dated with approximate exactness: ʻHārījat (Aretas) I 169 B. C., ʻHārījat II c. 110—96, 'Obodat (Obodas) I c. 90, Ṭabbāb (Rablos) I c. 87, Ṣēlēh (Maḏ'jam) c. 86—62, 'Obodat II c. 62—47?, Malık (Maḏ'jam) I c. 47—30, 'Obodat II (III?) before 25 — c. 9 B. C., Ṣēlēh IV Ḥājem-anmum (Maḏ'jam) c. 9 A. D. — 40 A. D., Malık II 40—70/71, Ṭabbāb II 70/71—106 A. D. [Maḏ'jam III, 106 A. D.]; cf. Clermont-Ganneau, Recueil, viii. 247). The real founder of their power is said to have been king Eriṭimos, who is probably the same as Ḥārījat III whose reign fell in the period of decline of the Seleucid empire (E. Taubner, in Klio, x. 251—253).

As "allies", the Nabataeans were able to maintain to some extent their independence of the Romans. At a very early date, like the Palmyrans, they attained through their trade the position of monopolists in Neearer Asia. At the beginning of the Roman empire they dropped their nomadic life and became peacefully settled. Just as in the east they have left their inscriptions particularly on the trade-routes followed by their caravans, e. g. from Petra to Damascus and Tadmor, to Forat at the mouth of the Euphrates, to Gerha (Arab. al-Djarā'ī near al-Katif), to the Sinai peninsula and Egypt and to Gaza, so we find in the Roman empire epigraphic traces of Nabataean merchants as far as Upper Egypt (Dendera), in Miletus, Rome and Puteoli. In 166 A. D. the emperor Trajan conquered Petra and made the most important part of the Nabataean kingdom the Roman Province Arabia. The remainder of the territory left to the Nabataeans in the desert suffered economic ruin about 200 A. D. when the Palmyrans gradually obtained control of the remunerative carrying trade.
The king, who was assisted by a vizier, the highest official (Greek ἱστατός), with the title "brother", had under him a number of shaikhs (شايخ) of the separate tribes (ذئب); we also find the titles eparchos and strategos. The high social position of women is noteworthy; they could possess property independently and dispose of it as they liked (Noldeke in Euting, Nabat. Inschr., p. 79 sq.); the coins often bear portraits of the queens (Kammerer, Pétra et la Nabatéenne, Paris 1929, p. 377; Brit. Mus. Cat. of Greek Coins: Arabia etc., London 1922, Plates I and II).

Our only source for Nabataean 1a w is their epitaphs, the threats of punishment in which are based on a formula of the Greek law of property and contract which elsewhere is only found in tomb-inscriptions in Asia Minor (cf. Keil, Hermes, xiii. [1908], p. 567—74).

As nomads, simple in their customs and rarely owning slaves, the Nabataeans, as a trading people, had a great respect for wealth. The mention in inscriptions of physicians, wise men and poets, shows a certain level of intellectual culture. Whether circumcision was practised amongst them is uncertain (Kammerer, op. cit., p. 375 sq.).

The Nabataean pantheon is known to us mainly from tomb and votive inscriptions. The principal god was Dusār [cf. LXX 'I-SHAR], the principal goddess Allāt [cf. AL-LAT]; the goddesses Manījū (= Aram. Māndāwāt; cf. MANAT), Kašā, Mutābula and Ḥubal (q.v.) are also mentioned. Their kings were perhaps worshipped as gods after their deaths (cf. J. S. S., ii. 354).

As Noldeke was the first to emphasise, the Nabataeans were pure Arabs as their names show, but in written intercourse they used Aramaic, the usual written and business language of Neater Asia. Many aramaisms thus entered their language in the north of the country (like ܐܪܒܐ, ܢܛܢܐ, ܡܐܒܐ, ܐܒܢܐ). Arab writers therefore even used the term "Nabataean" for "Aramaic"; in the southern Higra (al-Hidj) on the other hand, the Nabataean Arabic retained its greatest purity; the Arabic script developed out of the Nabataean cursive at the close of the ancient period (cf. ARABIA, d.).

In the Muslim period the Arabs called those inhabitants of Syria and of the Ḳrāk, who were neither shepherds nor soldiers, "Nabataeans" (Ibn al-Kalb in Yākuti, Maqqām, iii. 344), a term also applied in a somewhat contemptuous tone to the Aramaic-speaking peasants (Noldeke, in Z.D.M.G., xxv. 124). When then we find "Nabataeans" (Nabīṭ, Naḥīṭ etc.) mentioned in Maṣṣāḥa as well as on the Djiḏān, in Syria, on the Khāłḥūr and in the Ḳrāk, in Ṭamān and Bahrayn, the name is not to be taken in the ethnographical sense (Noldeke, op. cit., p. 125). As the grammarians of the Ḳrāk paid special attention to the "Nabataean" language of the Aramaic country people, by "Nabataeans" was frequently meant the inhabitants of the Ḳrāk and especially of the Ḳāṭīṭ (Noldeke, op. cit., p. 127).

The inhabitants of the district of Ḥisāma in the most northern part of the Ḳūra, once the Djuḥdham (q.v.), now the Hawawin (q.v.), are regarded as the descendants of the Nabataeans (cf. ARABIA, a.).

annâyân refers to the heathen is quite clear from Sûra iii. 19, where they are contrasted with those who have received the sacred writers. Sûra ii. 73 refers to the annâyân min Allâh al-‘îsâ; the reference is most probably (with Wellhausen, Sîrâz, iv. 13, note 2) to originally pagan Arabs who had adopted Judaism. The derivation of mûnî from Hebrew mûnît 'hâ-sîn therefore fits all the Kur'ânic passages, while that most generally adopted from Hebrew 'âm hâ-qâri' 'people of the country', a term for Jews who did not know the Jewish law, would at best fit only Sûra ii. 73, but even for this passage is not absolutely essential.

The post-Kur'ânic ideas about the prophethood of Muhammad are discussed in the article Muhammãd (cf. also Tor Andræ, Die Person Mohammeds in Lehr- und Glaube seiner Gegenwart, Stockholm 1815). The accounts of the other prophets which found a way into Islam in the post-Kur'ânic period are collected in the works on the Kitiş al-Anbâyî. These, however, are not confined to the prophets proper who appear in the Kur'ân by name or anonymously, and to other figures of Jewish and Christian Biblical and post-Biblical tradition, but deal also with the history of such personalities as Dûrdû and Bulâkû to whom there is not the slightest reference in the Kur'ân.

(N. Hofovitz)

Nâbî, Yenüf, an Ottoman poet. Yenüf Nâbî came from Urfa (Rûhû, hence Ruhâbi, not Râhâni as one often finds). From there he came in the reign of Muhammad IV to Stambul and became a favourite of the grandvizier Kara Muṣṭâfâ. He held a post as külys, made the pilgrimage after Kara Muṣṭâfâ's death and later settled in Aleppo. When the governor there, Muhammad Baḥţâdî [q. v.], became grandvizier, he took Nâbî to Stambul and gave him the post of superintendent of the department of the Anatolian chief accountant (Anadolu muḥârike-i deport), Later he gave up this office for another and died about 90 on 3rd Nâbî 1124 (April 10, 1712).

He was buried in Skutari in the Karâdi Ahmed cemetery, but in the Moskînî monastery, the description on his tombstone is given by Sa'd al-Dîn Nîzîh, Mâṣâr âlîkhâbî, Stambul 1932, p. 11.

Nâbî wrote several historical works in a florid style which was considered classical in his time and even later, such as an account of the conquest of Kameniec in Podolia (1683 = 1672) called Tağrîk-i Weûzî-i Kâmînî, Fethûnî-i Kâmînî or simply Tağrîk-i Kâmînî. He also wrote in prose and verse a description of his pilgrimage to the holy places (1689 = 1678; the work was written only in 1903 = 1882) entitled Tağfât al-Harâmîn. His very popular Dîvân with supplement earned him the title of ‘king of poets’. In his Khârîj-i qârl, usually called Khârîjîye, he gives his son Abu ‘l-Khârîjîye moral admonitions and advice. His letters (Manzûhîyât) were at one time highly esteemed and are of some historical value. He continued Wâsî’s Siyar in a Dîvân-i Siyar-i Wâsî. Printed works: Dîvân, Bûîêt 1257 and Stambul 1292; Dîvân-i Siyar-i Wâsî, Bûîêt 1248; Khârîjîye in: Consell de Nâbî Efendî à son fils Abu ‘l-Khârîjîye, publiés en ture avec la traduction française et des notes par M. Pavet de Courteille, Paris 1857;

Târîkî Kâmînî, Stambul 1828; Sûrât-i Hâdîsî-i Tâfîhîye, s.l. (= Stambul, about 1870), deals with questions of pedagogics; Tağfât, Stambul 1828; Tağfât al-Harâmîn, s.l. [Stambul] 1265.

For further information see F. Babinger, G. O. W., p. 237—239.

Nâbî Yûnuș. [See NAWAWI]

Nâbîdh (i.), a comprehensive designation for intoxicating drinks, several kinds of which were produced in early Arabia, such as mîr (from barley), bitî (from honey: Bûkûrtî, Morâdiskî, bab 60; Âshribî, bab 44; Âdu, bab 80; or from spelt: Âlbîn b. Hanîbî, iv. 402), fi-i-qârî (from different kinds of dates: Bûkûrtî, Âshribî, bab 3, 21).

Grapes being scarce in Arabia, it is said that in al-Mudîna ‘wine’ was usually prepared from kinds of dates, exceptionally from grapes (Bûkûrtî, Âshribî, bab 2, 3; Muslim, Miskûb, trad. 3, 6).

This may be true. Yet even these traditions betray a tendency connected with the general prohibition of wine included in that of intoxicating drinks. Generally speaking fi-i-qârî favours the affirmative answer and is consequently anxious to point out that the khânîr which was prohibited by Muhammad included nûbîdh.

The question was difficult in so far as these kinds of drinks were intoxicating to degrees which were born of the severe laws. Its appearance e.g. from the copious traditions in which ‘Aîsî’s words are interpreted as indicating that nûbîdh was prepared for Muhammad and at what time the beverage was done away with (cf. Khânîr), as well as the traditions in which the prohibition of certain vessels (kantam, mansî, hâmîr, etc.) was abrogated and all kinds of vessels declared allowed, provided the drinks prepared in them were not intoxicating (Muslim, Lâhîţeh, trad. 166; Âshribî, trad. 63—65, 67—75 etc.). A series of traditions which could be adduced by the Hanîfîs in favour of their view, according to which nûbîdh is not included in the prohibition of wine, is to be found in al-Nasî’s collectio, Âshribî, bab 48. Cf. further the art. Khânîr.

Side-by-side with milk and honey nûbîdh was also the beverage that was offered to the pilgrims in Mecca. The institution, al-Mâ’âsî (also the name of the building, close to Zamzam, where the distribution took place) was an official house in which the Alhadsis (Âlbîn b. Hanîbî, Musîned, i. 272; Muslim, Âdîdîs, trad. 347; Abu Dâwûd, Manâzîs, bab 90). The descriptions by Ibn Sa’d († 230 = 845) and al-Azraî († 244 = 858) give the impression of referring to the present state of things; in the time of al-Mu’âmmâd († about 1000 A. D.) the institution had already passed into desuetude.

For details, cf. the work of Gaudreay-Demombry.
NABĪDH — NĀBIGHA AL-DHUBYĀNĪ

Bibliography: cf. the Bibliography of the article KHAM; further: Fa'ā媒体报道, Calcutta 1251 (1835), vi. 607; Santillana, Il "Muḥ-

(A. J. Wensinck)

NĀBIGHA AL-DHUBYĀNĪ, a famous poet of the pre-Muḥammadan period. His real name was Ziyād b. Mu’āwiya and he belonged to the tribe of Dhubyān. He probably flourished in the second half of the century which preceded Muḥammad and died shortly before the beginning of Iṣām. Causin de Perceval (Histoire des Arabes, 2nd ed., ii. 502) puts the date of his birth in 555 A.D. and Father Cheikho (Poètes arabes chrétiens, p. 640) dates his death in 604 A.D. These dates however can only be conjectural.

The surname Nābihī has been variously interpreted by Arab writers. According to some, our poet was so called because in one of his verses he uses the verb nābihīya: "She stopped among the nations Kain b. Ḥyar and they felt the terrors of our attacks". But this verse is apocryphal and the process recalls that used to justify the etymologies of Muḥādhbih and of Mutamānnūs (q.v.). According to others, he was so called because he did not write poetry until he reached manhood or more simply because in Nābihī poetry "flowers from the spring".

We know nothing about his family; his noble birth asserted by the Kitāb al-ʿAghāni (ix. 162) and Ibn Ḫudna (ed. de Goede, p. 74) is doubtful and we know nothing definite about his childhood and youth.

At some date which is impossible to ascertain definitely, Nābihī was admitted to the court of the Lakhmid princes [cf. LAKHM] of al-Ḥira, vassals of Persia; in the reigns of the kings al-Mundhir II and al-Mundhir IV in particular this Christian semi-
Persian, semi-Arab city had become an important literary centre and the focus of a brilliant culture.

Our poet sang the praises of two sovereigns and received gifts from them but his fortunes reached their zenith in the reign of Nu’āmān Abū Kābilis whose boon companion and favourite singer he became. The poet lived on intimate terms with the king in the lap of luxury and opulence. Such favour could not fail to excite the envy and jealousy of the other courtiers: hence his enemies, notably Murra b. Ḫudna, resorted to break the king’s attachment to him. The trick attempted by his enemies was a crude one and the king was not deceived by it: the attack on the poet failed.

Far from being discouraged, Murra patiently awaited another opportunity to avenge himself: this soon appeared. According to the Kitāb al-ʿAghāni, Nābihī, who had free access to the palace of Nu’āmān, one day unexpectedly entered the apartments of queen Mutadājīrīd, famous for her beauty. Taken by surprise, she dropped her veil, showing to the delighted eyes of the poet "a part of her statue-like body". By the time she could replace it, it was too late. Struck to the heart, Nābihī composed in honour of this "beauty" his famous poem which begins with the lines: "So and leave Mayya in all haste..." (Derenbourg, iii. xxi. p. 505, n. 4). Unfortunately Nūmān did not find it prudent enough to recite it to his enemy Murra who hastened to report it to Nūmān. The latter in his anger decided on the poet’s ruin.

According to another tradition, one evening when Nābihī was seated beside the queen in company of the king and another poet, Munakkhāl al-Yaḵbūrī, Nūmān asked Nābihī to describe Mutadājīrīd to him. Nābihī at once obeyed and recited the poem which he had composed shortly before. Munakkhāl, who was said to be the queen’s lover, exclaimed: "Sir, this description is that of an eye-witness"; and the poet’s days were now numbered. Warned by his friend, the chamberlain Ḥisām, the poet hurriedly fled and sought refuge with the princes of Ghassān.

These stories, on the whole little probable, seem to have been invented to explain Nābihī’s disgrace. In his book Fi ʿl-ʿAdab al-Jāḥīṣī (Cairo 1927, p. 332), Tābī Ḫusain disputes their authenticity and acutely points out that nothing in poem viii.: "It has reached me, mayest thou avoid the censure etc." supports these stories. He supposes on the other hand, relying on this ʿaṣīdī, that the princes of Ghassān won the good graces of Nābihī at one time or other by their largesse and the poet showed his gratitude by singing their praises; this having come to the ears of Nūmān, the latter took umbrage and decided on the ruin of his favourite.

Nābihī was by no means unknown to the Ghassānids, phylarchs of Byzantium and rivals of al-Ḥira. He had been very well received by the princes al-Ḥāḥīh b. Šimār and Āl-Ḥāḥīh al-ʿAqhar. The former at the poet’s request had released a large number of the Banū Asad taken prisoner at the battle of Ḥalma; the latter, also at Nābihī’s request, had released a number of the Banū Asad and his father ʿAbū Jārā after the battle of ʿAin Uḥbāt. This leads us to say a word about Nābihī’s political activities.

The poet in the course of the wars of his tribe never lost interest in his fellow tribesmen and their allies; we have mentioned his interventions on their behalf with the Ghassānids; during the celebrated war of Dāḥī between ʿAbs and Dhubyān, it was his constant care to maintain the alliances contracted with the Banū Asad and Banū Tamīm. In the reign of the Ghassānīd Nūmān b. Ḥāḥīh Abū Karīb, he had once more to intercede on behalf of the Banū Dhubyān defeated in the battle of ʿĀḥ Ukb; later, in view of his devotion to his patron and his love for his own tribe, he appealed to Nūmān to abandon his war on the Banū Dhubyān allied with the Banū Ḥann. As a result of refusing to listen to him, the king was defeated.

At the court of Ghassān, Nābihī was overwhelmed with favours by ʿArīb b. Ḥāḥīh and later by his successor Nūmān. He celebrates the former’s generosity in a ʿaṣīdī full of gratitude (Derenbourg, iii.) and his elegy on the death of Nūmān (Derenbourg, xxiv.) is characterized by deep emotion.
In spite of his luxurious life, Nābīgha felt his heart and his thoughts turning towards al-Hira and its king. Therefore on the death of Nu'mān b. Ḥairīth Abu Karib he decided to return to al-Hira to attempt to regain the favour of the son of al-Mundhir.

Leaving that Nu'mān was ill, he set out accompanied by two Fazaris, Martyr b. Zabān and Sajīr b. 'Amr, friends of the prince; when they arrived at al-Hira, Nu'mān had recovered. Hearing of the arrival of his two friends, he had a tent of leather pitched for them and sent them a woman singer to entertain them. He himself often came to visit them. One evening at a party the singer sang Nābīgha’s poem “O abode of Malay” (Dīwān, I.), the prince delighted exclaimed: “That is an excellent poem”. The Fazaris thereupon seized the opportunity to intercede on behalf of Nābīgha and the generous prince forgave the poet. A little later Nu'mān was put to death by order of the Sāsānian king Kīṣrā Parwīz for having refused to give him one of his relatives as a wife. Nābīgha lamented his patron and retired to his tribe. We do not know when he died.

Before giving an estimate of Nābīgha as a poet, we have still to discuss his religion. Derenbourg makes him a monotheist, and in support of his opinion quotes a number of verses in which the poet speaks of God, of the feast of palms, of the cross of Zawrā. On the other hand, Cheikho thinks he was a Christian. We find, he says (Christianisme et la littérature chrétienne en Arabie avant l’Islam, Bârlût 1923, p. 426—439), in the poems of Nābīgha evidence of his belief in God, of his religion and piety, but the arguments are not numerous or of great cogency: a vague mention of God, of David and his son Solomon, of priests present at the obsequies of Mundhir, of the cross of Zawrā. As a matter of fact, Nābīgha was a pagan and there is nothing Christian in his poems. The allusions in his poems, even if we accept them as authentic, are in reality only rather faded memories of the Christian ceremonies and religious ideas current in the peninsula at this period. As to the word Allāh, it is undoubtedly the result of a substitution for al-Lāt [§v.] made at a later date by some Muslim party.

Nābīgha al-Dhubyānī holds a high position among the poets of ancient Arabia; he is unanimously placed “in the first rank of poets”.

In our opinion he possesses in a high degree the two qualities which make a great poet: sensitiveness and imagination. To sincerity of feeling, he adds splendour of imagery and freshness of expression. In him ideas and words, feeling and turn of phrase, matter and form are in perfect harmony. His satires are often bitter, ironical and scathing.

He is also an artist who skilfully uses all resources, all effects and all figures. His verse is compact, solid and uniform and readily impresses itself on the memory with the idea which it expresses. Of course it is not without its faults: we find a few weaknesses and examples of lack of care.

Ṭahā Husain (al-S̄īr al-Ḥāmil, Cairo 1926) has recently raised the question once more of the authenticity of the poems of Nābīgha and other pre-Islamic poets. Rejecting all that has been handed down about it he regards the old poetry as apocryphal. The discussion of this question however, as can readily be understood, lies outside the scope of this article.
in 129 B.C. destroyed Shechem and its temple. At a later date this always turbulent people was equally hostile to the Romans, which caused Vespasian to attack them on Garizim when a large number were slain. Christianity gradually spread in the country and Neapolis became a bishopric. The result was that the Samaritans now turned their arms against the Christians and treated them with great cruelty. After a deadly raid by them, the Byzantine emperor Zeno (474–491) had them driven from Garizim and built a church there. They wrought still greater havoc in the time of Justinian who punished them with great severity and destroyed their synagogues while he rebuilt the churches. This finally broke their spirit; many of them fled to Persia while others became Christians. Their part had been played by the time when Nablus with many other towns fell into the hands of the Muslims.

The notices of the Arab authors about the town are very scanty. They know that it was inhabited by Samaritans [cf. Al-Sakhawi] and some add that, according to the Jews, there are found nowhere else, but it should be noted that Baladhuri (ed. de Goeje, p. 138) speaks of Samaritans in Falasifa and Urduun. Ya'qubi mentions (p. 328), Nablus a town near two sacred hills with a population of Jews, foreigners and Samaritans. Below the town is a subterranean city, cut out of the rock. Mukaddasi says "Nablus lies in a valley between two hills, is rich in olive-trees and a stream flows through it. The houses are of stone and there are mills there; the mosque in the centre has a beautiful paved courtyard". In the Crusading period Nablus is mentioned as unfortified. On Jan. 23, 1120, an assembly of prelates and secular notables was held here, the object of which was thereby to renew the morals of the Christians. Idrit mentions the well of Jacob where Christ had the conversation with the woman of Samaria; a fine church had then been built on the spot. The Jewish traveller Benjamin of Tudela (1160–1173) records that there were no Jews in Nablus, but about 100 Kutaens (Samaritans) who offered burned offerings on the altar on Garizim at the passover and on other feast-days. His contemporary 'Ali al-Harawi says the Samaritans are very numerous. He, as does Ya'qubi, always writes Garizim as Kazizim, a corruption which we already have in the "Agurzen" of the pilgrim of Bordeaux. A terrible earthquake in 1202 added to the miseries inflicted on the town by the continual war between Franks and Muslims. Under the great Mamluk Sulaiman ibn-Qalawun (q.v.) it finally passed into possession of the Muslims. Ya'qubi remarks on the wealth of water and fertility of the district; here, he says, is the hill on which according to the Jews, Abraham wanted to sacrifice Isaac (not Ishmael as the Muslims say). When praying the Samaritans turn towards Garizim. Dimashki says that Nablus is like a palace surrounded by gardens; he mentions the pilgrimages of the Samaritans to Garizim where they sacrificed lambs. The Muslims had a fine mosque in the town, where the Qur'an was recited day and night. According to Khalil al-Zahrâi (d. 872=1467), the area included 300 villages.

The people of Nablus retained their unfriendly character and fondness for rebellion so that the town was less visited by pilgrims. Only the modern period has brought order and a better security, but even now the dislike of the Samaritans to strangers as spectators during their passover sacrifices may give rise to trouble.

AL-NÂBLUSI. [See AND AL-CHÂNÁNI.]

Nâdhîr (A., plural nâdhîr; Sura liii. 57), used as a noun agentis from nâdhâr, iv., with the meaning of *warner*; sometimes also as an infinitive, e.g. Sûra lxvii. 17. The plural nâdhîr is also found in the sense of an infinitive, e.g. Sûra lxvii. 6. The term occurs frequently in the Qur'an; it is even said to be synonymous with râhid; its opposite is bâghîr, mulbâghîr. Nâdhîr as well as bâghîr are applied to the prophets, the former when they are represented as warers, the latter as announcers of good tidings (cf. Sûra xvii. 106; xxvi. 58; xxxii. 44; xlviii. 8: nûbâhâthun wa-nâdhâthun). As an epithet it is used especially in connection with Noah, the great warer before the Deluge, and with Muhammad himself who thereby meant a founder of a second Noah (Sûra xxvi. 115; i. 51; lxii. 2 with Sûra xxix. 49; xxxv. 21; xxxviii. 70; lxvii. 26). Sometimes Muhammed emphasizes his being only a warer (Sûra xlvii. 8), or his being the first warer who was sent to his people (Sûra xxviii. 46; xxxiv. 43).

The term is found in hadîth apart from the common use, known from the Kur'an, in the curious expression nâdhâr 'ayyân (Buâhî, K.âb, bâb 26; I'tlâm, bâb 2; Muslim, F. âdâlî, trad. 16) with which Muhammad denotes himself. The tradition runs as follows: "Myself and my mission are like a man who went to some people saying: I have seen the army (of the enemy) with my eyes and I am the naked warer". Several anecdotic stories are told by the commentators in explanation of this expression. It is also said by some of them, that in early Arabia a man who saw an approaching danger, stripped himself of his clothes and wound them around his head in order to warn his tribespeople. — The meaning Nazirite which in several dictionaries is given to the term nadhîr in the first place does not occur in the Kur'an, nor in hadîth, nor in Lîyan al-ârâb nor in Tâdî al-ârâb; it is, however, used in translations of the Bible.

**Bibliography:** Liyan al-ârâb, vii. 54 sqq.; Tâdî al-ârâb, iii. 561 sqq.; Ibn al-Âthîr, Nîâyâ, iv. 136; Kâstâlînî, ix. 305; Nawawî's commentary on Muslim's Sahîh, Cairo 1283, v. 71.

(A. J. WENSECKE)

Nâdhîr, v. o. w., was taken over into Islam from the pre-Muhammadan Arabs and underwent modification by the new religion. The idea of dedication is associated with the root n-dâh which is also found in South Arabic, Hebrew and Aramaic and to some extent in Assyrian. An animal could
be the object of dedication among the Arabs. For example, they dedicated by *nadh*r certain of their sheep etc., for the ‘*ʿitāra* feast in Ḳaʿīb (Lūḥān al-ʿʿArab and Ḍjāhārī, s.v.): the dedication which was expressed in solemn formulae signified that the animals were removed from the mundane sphere and placed in the sacred one.

As a rule, a sacrifice was dedicated in order to obtain good fortune in a particular respect. The promise to dedicate an animal when the herd had reached the number of a hundred (Aq. *cit.*.) had an effect on the prosperity of the animals because the word anticipated the fact. According to the story, Ḥādīd al-Muḥallīb similarly dedicated a son to be slain beside the Kaʿba if he should have ten sons and they grew up (Ibn Ḥишām, p. 97 *ff.*) but for his *nadh*r 100 camels were substituted. — A childless woman could also vow if she had a son to dedicate him to the sanctuary (ʿ. *cit.*, p. 76: perhaps this story is a literary borrowing).

According to the *khiṭāl* of Māmuṁ biḥnt Karīm, her father vowed to sacrifice 50 sheep if he had a son (Ṭabarī, viii, 67; Ibn Ḥishām, bāb 19; Ibn Māḏīna, Kāṭbāt, bāb 18). If a child was sick, its mother could dedicate it by a vow as ʿ*ūmar* (from ʿ*ūmar*) if it recovered (Aznākī, p. 123 *ff.*). Escape from every difficulty was sought by a *nadh*r. During a battle a camel used to be dedicated as a sacrifice (Ṭaʿālīd-Wellhausen, p. 39). The traveller in the desert: used to make a vow on account of the danger (see the verse in Lane and Līlān al-ʿʿArab, s.v.): In distress at sea one promised offerings to God or a saint or vowed to do something oneself, such as fasting (Sūra k. 2: 233; xxix. 65: Abū Dāwūd, Amāna, bāb 20; see also Goldīhzer, Mīrū. *cit.*., p. 311). During a drought Ṭāmār vowed to taste neither *samāna* nor milk nor meat till the rain fell (Ṭabarī, ed. de Goeje, i. 2575 *ff.*).

Even if a sacrifice were promised, the vow also affected the person concerned, as we see from the fact that he had his hair shorn not only on the *ḥādīd* but also, for example, when sacrificing after a journey (Ibn Ḥishām, p. 15. 749; Ṭaʿālīd-Wellhausen, p. 324, 351, 429 *ff.*; Bukhārī, Nafṣī, bāb 125); for the cutting of the hair ended, as in the case of the Israeeleite Nazirite, the state of consecration. The vow therefore had always more or less the character of a self-dedication. This aspect was often quite prominent. Ordinary sacred duties such as participation in the *ḥādhīd* were assumed as a consecration by *nadh*r (Sūra xxii. 39) at which special obligations were assumed e.g. to go to the sanctuary on foot, or barefooted (Bukhārī, Ḍjāl *ṣaʿīd, bāb 27); Timūrīd, al-*Nadhîr* wa i-Aimān, bāb 17). The sacred condition of *ṭīkāf* was assumed as a *nadh*r: thus before his conversion Ṭāmār vowed to make a nightly *ṭīkāf* in the Meccan sanctuary (Bukhārī, Muḥāṣṣī, bāb 54; Amāna, bāb 29). Such a vow to separate oneself from everyday life in some special way was very frequent among the ancient Arabs: for Labīd (p. 17, 17) compares an antelope buck alone among the bushes to one fulfilling his vow (baḥī i-ʿ*ūmar*).

This isolation had the definite object of spiritual concentration and strengthening the soul and thereby influencing the deity. Abstinence was therefore practised in consecration for great deeds, especially in war. The Arabs touched no perfume, married no wine and avoided all pleasures when they were seeking vengeance, until they attained it (Hamāsa, p. 447, v. 3 schol.): avoidance of wine (Ḥamāsa, p. 237, v. 4 *qfr.); and women (Nafsī, p. 161: 2nd ed., p. 154) is specially mentioned. These abstentions like the ḥādīd rites and the *ṭīkāf* are also the objects of *nadh*r. The form of this vow is for example *wine and women, and *ṭīkāf* to me until I have slain 100 *ʿAads*" (ʿAqīla, viii, 67; vii., p. 65).

A definite term may be fixed, such as drinking no wine for 30 days in order to obtain vengeance (Kais b. al-Ḥaṭṭān, ed. Kowalski, iv. 28). Forms of abstinence are not to eat meat, not to wash the head, so that the ḍaʿāba is not removed (ʿ. *cit.*., ix. 149; 2nd ed., p. 141; xii. 69; 2nd ed., p. 66; Ibn Ḥishām, p. 543, 980: Ḥāfiẓīn Gncleri, ed. Wellhausen, N. v., 189), not to anoint oneself (Ṭaʿālīd-Wellhausen, p. 201). Refraining from meat, wine, ointment, washing and sexual intercourse are mentioned together (ʿAqīla, vii. 99: 2nd ed., p. 97; viii. 68; 2nd ed., p. 66; Ibn Ḥishām, p. 543: Ṭaʿālīd-Wellhausen, p. 75, 94). There is also evidence of complete fasting (Ṭaʿālīd-Wellhausen, p. 105, 302). The abstentions, the offering and the deed to be done form the content of the *nadh*r. It is said: nafsītum ʿaḥa nafṣātum nafsītum (Ṭabarī, ed. de Goeje, i. 2572 *ff.*).

A wish has been fulfilled a vow of gratitude may also be taken (Ṭaʿālīd, p. 290).

The consecration placed the person making the vow in connection with the divine powers, the *nadh*r was an ʿ*ad* (Sūra ix. 76; xxxii. 27: xviii. 10), whereby he pledged himself. A neglect of the *nadh*r was a sin against the deity (Ibn al-Kaṣ, p. 51, 10). The sacred obligation of living made this a *nadh*r (or synonymous) *nāḥf*, which one should fulfill (Ṣaʿīd), instead of wandering aimlessly (Sūra xxxii. 25; Ṭaʿālīd, p. 126; Labīd, p. 41, 1; Kumait, Ḥāfīzīn Gncleri, ed. Horovitz, p. 4, 48). The importance of the binding pledge gradually becomes more prominent (cf. Līlān al-ʿʿArab, where nafsīra is explained by ʿaṣīra, ironically Amāna, Ḥāfīzīn Gncleri, p. 7, 8); the emphasis on the material dedication gradually became less. The abstentions mentioned receive their emphasis on the one hand from works meritorious to the deity, on the other from the unpleasant deprivations, by which the person taking the vow disciplines himself. Both points of view are seen in the examples quoted. The releasing of slaves or divorcing of wives often form the subject of a kind of vow by which a man pledges himself under certain conditions. A man may also vow to sacrifice all his camels if he is lying (Hamāsa, p. 667, v. 3). The strict obligation inherent in the *nadh*r makes it closely related to the oath [see ʿKasān].

One can also bind one's family by a vow. A mother swears not to comb her hair or to seek shade until her son or daughter fulfills her wish (ʿAqīla, xviii. 205; 2nd ed., p. 205; Ibn Ḥishām, p. 319; ii. 99). The strength of this kind of "conjunction" is based on the relationship between the two partners. If a dying man vows that his tribe shall pay 50 to avenge him, this binds the tribe (Hamāsa, p. 442 *ff.*). There thus arose in Islam the problem of how far unfilled vows had to be fulfilled by the descendants (Muslim, *Adhur* trad. 1; Bukhārī, Ḥāfiẓīn Gncleri, bāb 19; cf. Goldīhzer, Ḥāfīzīn Gncleri, p. 80).
In Islam the vow and the oath are treated together. In the Kūrān it is prescribed that unconsidered expressions (šahā) in an oath may be broken and expiated (Sūra 2. 225; 9. 58). The context shows that the reference is to vows of abstinence, especially relating to food and women. Sūra ii. 226—227 in continuation says that those who bind themselves by ṭā'ūn not to touch a woman should either break the vow after 4 months or pronounce the formula of divorce. The breach of the oath then requires the kaffāra. The šahā formula is absolutely forbidden (Sūra lviii. 1—5; cf. xxxii. 4); it is a great sin in the eyes of the law, while the ṭā'ūn is not a sin (see Juynboll, Handbuch, p. 284 sqq.; Sachau, Muh. Recht, p. 13, 68 sqq.). The "release from the oath" promised in Sūra lixvi. 2 refers to a vow of continence. The same kaffāra holds for a broken vow as for an oath. It is probable in this case that we have Jewish influence (cf. Mihna, N'dārāmt) but the principle of releasing oneself from a vow by doing something else is certainly also originally Arab. But with Islam comes the view that nādir are useless because they cannot influence God (Bahkhūri, Ainān, bāb 26; Kudrā, bāb 6; Muslim, Nādir, trad. 2). Thus we find ħādīths which urge the fulfillment of vows as well as those that forbid them. Following hints in the ħādīths, we find a systematic division into vows of piety (nādir al-tabarrur), which are intended to acquire merit by a pious deed (fi'āla), and vows by oaths which, since they are conditioned, serve to incite, prevent or strengthen. The latter are called nādir al-luḍād yakārd. They are deprecated but must be treated like oaths. Their matter must not be sinful; according to some, such a vow is invalid, according to others, it is valid but must be broken. Their matter must not already be an individual duty (wāqīya 'a'id). The person taking the vow must, like him taking an oath, be mukallaf and be acting of his own free-will.

AL-NADĪM, ABU 'L-FARAJI MUḤAMMAD b. ABI YA'KūB ISHĀQ AL-WĀRAQĪ AL-NADĪM AL-BAGHDĀDI, Arabic bibliographer, compiled the Fīkhrist in 377 (987—988). Little is known about his life. According to a statement which goes back to Ibn al-Nadīmir (d. 643 = 1245) Dhalīr l-Turīkh Baghdādi (see Flugel's edition, p. xii, note 2), he died in 385, according to another statement (see Ibn Abdal-Askalānī, Liʾān al-Miṣrūn, v. 72) probably 388 (cf. the figure is damaged in the Haizarābād editions). Both dates are in contradiction to the fact that in the Fīkhrist events of 392 (p. 287, 6) and "after 400" (p. 160, 11) are mentioned, unless these are additions by another hand. A clue to the date of his birth is given from his account (p. 237, 6) of a meeting with a learned man in the year 340; this suggests 325 as the latest date for his birth. Nothing is known of his family. There is no reason to connect him with Abu Ḥakīm al-Mawṣūlī al-Nadīm (d. 255—289) or with Yahyā b. al-Nadīm, a pupil of al-Balāḍūrī (d. 279 = 892). His father was a bookseller (wāqarrād) (p. 303, 24, 318, 6, 351, 14). Whether the epithet al-Nadīm "table companion", i.e. member of the circle of a caliph or other great man, refers to the father or to a remoter ancestor is unknown. It is not impossible that it refers to the author of the Fīkhrist himself; against this however is the fact that he is usually quoted as Ibn al-Nadīm. That Baghdād, if not his birthplace, was at least his place of abode is evident from passages, like p. 337, 26, 349, 17 (see below) and the frequent mention of Baghdādīs among his acquaintances (p. 132, 6, 219, 25, 236, 12; 126, 2). He several times mentions a stay in Mōsul (p. 86, 25, 160, 21, 190, 21, 265, 23; cf. also p. 283, 9). We know nothing of other journeys by al-Nadīm (Dīr al-Rūm, p. 349; 56, 41, 12; is the name of the Latin quarter in Baghdād as V. v. Rosen has shown). His teachers and authorities also point to Baghdād. He most frequently quotes the authority of the grammarians al-S̄āfī (d. 368) (all the quotations can be found in the latter's Ablūkār al-Qawqayn al-Baghdādi). Personal relations are indicated by p. 56, 12 and the mention of his sons (p. 31, 23, 45, 11, 62, 23). Al-Nadīm also studied under Ibn al-Munāqaḍī (p. 144, 11). He gives traditions heard from Muḥammad b. Yusuf al-Naḳīt (p. 24, 12, 25, 8). He also gives traditions from Abu ’l-Farajī al-Isbāḥānī (p. 141, 17 = Kūhāb al-Aghānī, i. 5 sq.) and from Abu ’l-Fāțih al-Naḥwī (p. 145, 25) celebrated on account of his parts. He also mentions as his teacher Abu Sulaimān al-Manṣūfī (p. 241, 14) whom we know from Abu Hāfīz’s Muhāqqaqī. He was friendly also with the logician Ibn al-Dīmrāt (p. 244, 6, 245, 12) and with the Christian philosopher Ibn al-Khārīmān (p. 244, 12) and with Yahyā b. ’Adī (p. 264, 6). This circle of friends is very much in keeping with al-Nadīm’s friendly nature, the breadth of his intellectual interests, his intelligent interest in other religions and his tolerance, which finds expression in Maḥbūba’s 5 and 9 of his work. That he was a Shī’a and Mu’tazili did not escape his biographers (cf. Goldziher, in Z. D. M. G. xxxvi. 278 sqq.); thus he uses khalīfa and ūnmī in the sense of Shī’i and Sunni respectively, calls the Sunni traditionists al-Hādūyqīs (p. 234, 12), claims many of their leaders for the Zaidīya (p. 178, 20, 29), says that al-Shāfī’ī was a man of decidedly Shī’i outlook (p. 209, 13) and praises al-Wāṣlī (p. 98, 20) as a Shī’i. Shī’īs were numerous among his pupils (p. 139, 25, 154, 25) and acquaintances (p. 178, 6, 190, 21, 197, 11, 198), Al-Nadīm like his father was a bookseller. This is nowhere expressly stated but is evident from the whole plan of his work in which he faithfully records not only scientific literature but also the numerous dīwāns of contemporary poets and the vast mass of anonymous light literature, love stories, fairy tales and books of adventure, indeed even works of a popular nature neglected alike by scholars and bibliophiles, books on good manners, cookery books, books on poison, books dealing with hunting and sport, down to collections of fables, books on magic and on prophecy, in brief everything that was on the Baghdād book market in the fourth
(teeth) century. That he was a bookseller is also indicated by the frequent particulars about the size of the books dealt with (cf. especially, p. 159, 19), about copies in the hand of famous scholars, about the demand for books (p. 70, 5; 77; 14; 79, 23) and about the book trade (p. 271, 5; 359, 20). He several times mentions other booksellers (p. 264, 2; 299, 4; 355, 12).

The Fihrist exists in two recensions (on the manuscripts, see Z.D.M.G., lxxxiv. 111 sqq. and the literature there given; these may now be added a fragment in Tonk and a private manuscript in Medina). Both were made in the year 777 (987). The longer contains ten maṣāḥfāt, of which the first six deal with the literature of Islam (1. Kurʾān, 2. grammar, 3. history etc., 4. poetry, 5. dogmati, 6. law), while the last four deal with non-Islamic literature (7. philosophy and "ancient sciences", 8. light literature, 9. history of religion, 10. alchemy). The shorter version contains only the four last maṣāḥfāt of the longer one, i.e. the Arabic translations from the Greek, Syriac, Persian and Sanskrit and the other literature based on these models. It is mentioned by Ḥādījī Khālīfa (Stambul, ii. 211) under the title Fāw' al-ʿīrām. The two recensions have in common an introductory section on the various forms of writing. — A survey of the contents of the Fihrist follows the preface (see also Flügel, in Z. D. M. G., xii. 190 sqq.). The arrangement there given is strictly adhered to in the book. The special quality of the book and its value lies in the fact that it gives the Arabic literature of the first four centuries in a bibliographical arrangement while the bibliographical method is the only one used in other contemporary sources. Al-Nadīm, it is true, as rule treats of his subjects in bibliographical sketches but it is the list of works of the author that is the main thing. Sometimes, a branch of literature is treated purely bibliographically under its various branches (e.g. the literature of Kurʾānic exegesis, P. 33; 20-37; 11; also p. 87, 88, 170, 171). This arrangement was necessary with the anonymous literature, especially in the eight maṣāḥfā (p. 305 sqq.). A further step towards treatment from the point of view of the literary historian is found in the brief introductions and surveys (e.g. on the pre-Othmānic recensions of the Kurʾān, p. 26 sqq., on the beginnings of Arabic grammar, p. 30 sqq.). In the last four maṣāḥfāt, such sections (e.g. on the origins of philosophy, of medicine, of alchemy, the beginning of the translated literature, the origin of the "1,000 tales") are so extensive that they have the character of a regular history of literature to a much greater degree than the more bibliographical first six maṣāḥfāt. The ninth maṣāḥfāt occupies a special position; it is a treatise on the history of religion in which the bibliographical element is not at all prominent. — The sources used by al-Nadīm are mainly of a literary nature. He prefers to use works in copies from the hand of reliable copyists. He comparatively rarely quotes personal authority. — Although a younger contemporary of al-Nadīm's, al-Wazīr al-Maghribī (d. 418 = 1027), prepared an improved edition of the work, it seems at first to have had only slight influence. The earliest author to make considerable use of the first maṣāḥfāt (in al-Maghribī's edition) was Ẓākī (d. 626 = 1229) (see Bergsträsser, in Z.S., ii. 185). He claims to have consulted a copy in al-Nadīm's own hand, as does the lexicographer al-Saghānī, d. 659 (1252) (see Khānānī al-Adab, iii. 83 pu). Ibn al-Ḳīfī (d. 624 = 1226) and Ibn Ṭūlūn (d. 668 = 1269) copied much from the Fihrist. In later times it is only occasionally quoted, e.g. by al-Dhahabī (d. 748 = 1347) and Ibn Ḥadjar al-ʿAṣkālānī (d. 852 = 1448) and lastly by Ḥādījī Khālīfa (d. 1067 = 1656) and al-Khāfajī (d. 960 = 1561).— Al-Nadīm also wrote a Kitāb al-ʿawṣāf wa l-Tāṣbīḥāt (Fihrist, p. 12, 4) which has not come down to us.

NADIM, AḤMAD, an Ottoman poet, born in Stambul, the son of a judge named Muḥammad Bey who had come from Merzifun. His grandfather (according to Gibb, H. O. P., iv. 30) was a military judge named Muṣafā. Aḥmad Raḵīf mentions as his great-grandfather ʿAḥmad ibn ʿAḥmad as-Saqī. His grandfather was a poet named Muḥammad Paša [q. v.] and also a military judge. The genealogy given by Aḥmad Raḵīf is however wrong because he confesses Karaman Muḥammad Paša [q. v.] with Rūm Muḥammad Paša. The statement that Aḥmad Nadīm is descended from Djalal al-Din is therefore simply the result of confusion. Little is known of his life. He was a nūderī, later on intimate terms with Aḥmad III and his grand vizier Dāmād Ibrāhīm Paša [q. v.]. He probably got his labāb al-Nadīm from this friendship. Latterly he held the office of librarian in the library founded by his patron Dāmād Ibrāhīm Paša. On hearing of the end of Ibrāhīm Paša and the deposition of the sultan, Nadīm lost his life at the beginning of October 1370 (Rabīʿ I, 1143) in a horrible way; while escaping from the mob leaving the grand vizier's palace he fell from the roof and was killed. He was buried in Ayās Paša in Peres beside the historian Fīdżī Hüllū Muḥammad Agha.

Aḥmad Nadīm is regarded as one of the greatest of Ottoman poets, who is still appreciated for his pure language, free from foreign additions. Many literary historians have discussed his merits as a poet (cf. the specimens collected by Gibb, H. O. P., iv. 30 sqq.). His collected poems (Fīdżī; printed Bülāk, n. d.; a more recent critical edition with introductions by Aḥmad Raḵīf Bey and Muḥammad Fuʾād Bey appeared in 1338—1340 in Stambul; there are manuscripts of the
NADIR SHAH, king of Persia (1447—1666 = 1736—1747).

Origins. Nadir b. Imam-kuli b. Nadir-kuli belonged to the Khiiklu clan of the Turkoman tribe of the Afghans, of which a section had settled in northern Khurasan, and was born on the 28th Muḥarram 1100 (Oct. 22, 1688) at Kūbān. Entering the service of Tahmāsp II, he was called Tahmāsp-kuli Khān but after his coronation his original name was improved to Nadir, "the rare one". At an early date Nadir distinguished himself in the incessant fighting with the Turkomans of Nāṣīr, the Čimšīzāq Kinds of Khābšān (Ḳūzān), the Ozbecks, the Tartars of Marv and even against his Afghan fellow tribesmen. The little nucleus around Nadir consisted of his Afghān relatives, some Kinds of the Abār and Ashwārd, and 300—400 families of Džāyūr Turkomans with their chief Tahmāsp-kuli Wakīl. Fighting in Khūrāsān. During the Afghan invasion of Persia, Mashhad was occupied by Malik Mahmūd, a son of the Sīstān family. Nadir fought against Malik Mahmūd at first on his own initiative. When the Šafawīd Tahmāsp II, driven from his other lands, arrived in Khūrāsān, Nadir very cleverly supplanted the commander-in-chief Fath al-Khān Kāḏjār and on 16th Rabi‘ I (Dec. 22) captured Mashhad with the help of treachery. Henceforth it became his headquarters. There were already signs of a breach between Nadir and Tahmāsp II at this time.

The Shāh urged Nadir to set out against his enemies the Ghilzā’ Afghan but Nadir wished first of all to dispose of the nearer enemy, the Abdāl Afghāns of Herāt, but the campaigns of 1728 (against the Abdāl and the Turkomans) had no success. Nadir however was able to extend the sphere of his activities; he ousted from Astarābād and Māzandārān the governors appointed by Tahmāsp and came into conflict with the Russians and the Ghilzā’ Afghāns. The Abdāl. In the meanwhile trouble had broken out in Herāt between Allāh-yār Khān and Dhu ‘l-Fikār Khān. Nadir re-established Allāh-yār Khān but transplanted many tribes to Khūrāsān (1141 = 1724).

The Ghilzā’i. At this time Arsal Ghilzā’i laid siege to Sīmān while his general Sayyād had gone to Bistam. On the 6th Rabi‘ I (Nov. 27, 1729), Nadir defeated the Afghans on the banks of the river Mihmāndāst. This victory he followed up by others.

Nadir in S.W. Persia. Tahmāsp appealed to Nadir to complete the deliverance of the country. Leaving Shāhīz and crossing Lūrīstān, Nadir arrived in Būrdjānī where the Shāh sent him a crown set with precious stones and a commission (šah-nimā) as wall of all Khūrāsān along with Māzandārān, Yazd, Kirmān and Sīstān (cf. also ‘Alī Ḥāzin, p. 189). Tahmāsp also gave his sister Gwaharshād to Nadir and betrothed his other sister Fāṭima-sultān to Ridž-kuli Mirzā.

The Ottomans who then occupied the whole of western Persia and the greater part of Transcaucasia were reluctant to leave Persia. Nadir occupied Nihawānd, defeated the Turks at Malākūy, retook Hamadān and on the 27th Muḥarram 1143 (Aug. 13, 1730) Tabriz was retaken.

Nadir returns to the east. Nadir learned in Tabriz that Dhu ‘l-Fikār Abulī had driving Allāh-yār Khān from Herāt was fighting Nadir's brother Ibrahim Khān under the walls of Maḥbūb. Nadir at once set out for Khūrāsān, crossing the border of the Yomut Turkomans and towards the end of Rabi‘ II (Nov. 1730) was at Maḥbūb where he reviewed 50,000 families of the tribes transplanted from other provinces.

On the 4th Shawwāl (Apr. 12, 1731) Nadir was 3 farsakhā from Herāt. In the month of August the Abdāl restored Nadir's candidate Allāh-yār Khān but the latter regaining contact with his tribe now rebelled. It was not till Ramādān 1, 1144 (Feb. 27, 1732) that Herāt was taken.

Failure of Tahmāsp II. Taking advantage of the absence of his commander-in-chief, the Shāh resumed the initiative in the military operations and in Dżumādā 1145 (end of Dec. 1730) set out against Herāt on 17th Dżumādā I where the return of Nadir the Ottomans on Jan. 10, 1732 signed a preliminary treaty at Baghādād by which the Persians retained only the lands south of the Araxes. Later on Jan. 21—Feb. 1, 1732 the Shāh's representatives signed at Rasht a treaty with the Russians by which the latter bound themselves to evacuate the lands south of Sālīyān (on the Kur) while the return of İskāh and Darband was made dependent on the reconquest of Transcaucasia by the Persians.

Deposition of Tahmāsp II. Nadir was indignant at the peace with the Turks signed after a defeat. Setting aside the Shāh's authority, Nadir Shāh denounced the treaty and appointed his own governors everywhere. Tahmāsp was deported to Khūrāsān and his son 'Abbas III, an infant in the cradle, proclaimed king on the 17th Rabi‘ I 1145 (July 7, 1732).

First campaign against the Ottomans. Having punished the Bahkhitārīs and the Kurs, Nadir occupied Zohab and besieged Baghādād (Jan. 1733). Abūnā Pāsha made the negotiations drag on until the army commanded by Topal Ožmān Pāsha had time to come to Mesopotamia. On 6th Safar 1146 (July 19, 1733) Nadir Shāh lost the battle fought on the Tigris and returned to Hamadān via Bahrāz and Mandalīn (Mandālīn).

Arriving there on 22nd Safar (Aug. 4) Nadir set out again for Zohab on the 22nd Rabi‘ II (Oct. 2) and then attacked Memiš Pāsha who had occupied the pass of Aghdarbānd (1st Dżumādā II = Nov. 9, 1733). Then Topal Ožmān Pāsha with the bulk of his army intervened in the battle but lost it and had his head cut off. The Ottomans hastened to abandon Aghdarbānd. By the 15th Radjab (Dec. 22) Nadir was already on his way.
to Persia via Baghsay (Ba-kusaye), Bayat, Bayan and Shushiar.

Mahmud Baluc. The reason of this hurried move was the rebellion raised by Mahmud Khan Balu in S.W. Persia. Mahmud Khan was quickly driven from the pass of Shust-an and on 27th Shaban (Feb. 1, 1734) Nadir recaptured Shiraz.

Campaign in Transcaucasia. In Isfahan Nadir received the Turkish ambassador Abd al-Karim Efendi and informed him that the retrocession of Transcaucasia was a sine qua non of peace. On the other hand, prince S. D. Golitsine was received at Isfahan on May 20-31, 1734 and thereafter by Nadir's order accompanied him everywhere (his itinerary in Leich-Schnese). On the 12th Muharram 1147 (June 17, 1734) Nadir left Isfahan for Aghtaban and as the Turks did not reply, Nadir began by attacking the Daghestanian chief (Ghaz-t-Kumuk). Surkhay was the post which had appointed governor of Shirwan. Tahmasp Kuli Djalavir defeated the Daghestanians near Duzai-ban (in the district of Kabala) while Nadir cut off the retreat penetrated into the heart of the extremely difficult region of Ghazt-Kumuk. In spite of the exploits of the Abdali the success gained in Daghestan was only partial for Surkhay had escaped to the north.

On 6th Lijumaid II (Nov. 3, 1734) Nadir was before the walls of Gandja, which was defended by Ali Tasha. The siege necessitated considerable works and prince Golitsine procured Russian engineers for Nadir. On March 21, 1735 a treaty was signed at Gandja by which Russia and Persia became practically allies.

On 1st Muharram 1148 (May 26, 1735) Nadir went first to Kars but the encounter with Abd Allah Pasha Kopruluzade took place near Erivan on the plain of Baghaward; on 26th Muharram 1148 (June 17, 1735) the Ottomans were defeated. Gandja thereby upon capitulated on the 17th Safar (July 8) and Tiflis on 22nd Rabii I (Aug. 12).

Nadir returns to Daghestan. Via Tiflis [q.v.], from which 6,000 families were transferred to Khorassan, Nadir attacked the Lergi of Dapor and Tala (north of the Alazan) The Khan of the Crimea Kaplan Giray, who had in the meantime advanced as far as Darband and had placed his nominees everywhere, withdrew to the Crimea and Nadir endeavoured to pacify Daghestan but Surkhay still evaded capture.

Nadir proclaimed king. On 13th Ramaadan (Jan. 27, 1736) Nadir came to Mughan [q.v.] where in the meanwhile the governors and notables of the province had assembled. It was explained to them that Nadir, having liberated Persia, wished to retire to Khorassan and that the delegates were free to put the government in the hands of Tahmasp II or Abbass III "who were alive". Nadir finally accepted the crown but on condition that the Persians abandoned the Shia practices introduced by Isma'ili which were "contrary to the beliefs of Nadir's ancestors". The Persians were to form a fifth orthodox madshub, placed under the patronage of the Imam Djafar Sadiq. A document to this effect was sealed by the assembly. The five clauses of the treaty to be proposed to Turkey were next drawn up: 1. the Turks were to recognise the new Djafari rite; 2. the latter was to be given a place of prayer (naksh) at Mecca; 3. Persia was to send an amir al-hajj every year through Syria; 4. prisoners should be exchanged and 5. ambassadors were to be exchanged after mutual approval of the appointments. The formal coronation of Nadir took place on Thursday, 24th Shawwal 1148.

Kandahar. This principality in which Husain Khan, brother of Mahmud, still asserted himself remained the only black spot on the horizon. Leaving Isfahan on 2nd Shawwal (Feb. 3, 1737), Nadir was before Kandahar before Nawruz 1149 (March 1737) and had a new town built on the site of his camp (Surkha-Shir) which was called Nadirabad.

Kandahar capitulated on the 2nd Dhu-l-Ka'da 1150 (March 23, 1738). The citadel was dismantled. Expedition into India. So far Nadir's military expeditions had been dictated by a desire to reestablish the old frontiers of the Safawid empire. The expedition to India was provoked solely by the attraction of ill-guarded provinces and by the desire to replenish the treasury exhausted by repeated campaigns. Djazir was occupied on the 22nd Safar 1151 (June 11, 1738), Kaul on 12th Rabii' I (June 30), Djalalabad on 8th Djuumada II (Sept. 17). From the neighbourhood of the latter town, the prince Rida-Kuli was sent back to Persia to act as regent; he and his brother Nasir Allah were given crowns.

Going via Saratoba Nadir avoided the Khairan Pass and took prisoner Nasir-Khan, governor of Peshawar. On 15th Ramaadan (Dec. 27) Nadir left this town. He next took Lahore and reappointed the local governor Zakhariya Khan (a Khorasanian). (Nasir-Khan also was restored to his post). Leaving Lahore on 26th Shawwal (Feb. 6, 1739) Nadir learned that Muhammad Shah had reached Kandahar and was in a place between the jungle and the river. He succeeded in cutting Muhammad Shah off from his capital and hastened to attack the reinforcements which Sa'adat-Khan (a Khorasanian) was bringing from the province of Oush. Thus began the decisive battle of 15th Dhu-l-Ka'da 1151 (Feb. 24, 1739) in which the commander-in-chief Khan Davran was mortally wounded and Sa'adat-Khan captured. Nadir and Muhammad Shah entered the capital where Nadir's name was inserted in the Khutba and coins struck in his name. On the 15th Dhu-l-Hijja (March 26, 1739) a rumour spread that Nadir had been assassinated and the populace massacred 3,000-7,000 of his soldiers. Next morning Nadir went to the mosque and gave the signal for the massacre of the inhabitants. On 26th Dhu-l-Hijja (April 6) Nasir Allah Mirza was married to a Mughal princess. On 3rd Safar 1152 (May 12, 1739) a great council was held in Delhi in the course of which Nadir replaced the crown on the head of Muhammad Shah but the latter had in return to cede to Nadir all the provinces north of the Indus. The amount levied by Nadir cannot be estimated. According to Anandram, who was attached to the vizier's office, it amounted to 6,000,000 rupees in specie and 500,000,000 in jewels and precious stones, including the Khoi Nuri diamond and the Peacock throne. Large sums were distributed among the soldiers and the people of Persia exempted from taxation for three years. Nadir left Delhi and reached Kabul on 1st Ramaadan (Dec. 12). Now took place one of the most remarkable of his expeditions. He suddenly turned back to reduce the land of Sind Khuday-yr Khan 'Abbas (a native of Siwi, cf. Malcolm, op. cit., ii. 59) and going via Bangash, Larkana and Shahdadpur penetrated into the desert south of
the Indus and took Khudâ-yâr prisoner; he had shut himself up in Umârâkot (north of Thar and Pûnak in the province of Bombay). Having organised his Indian possessions in three provinces Nadir returned to Nadîr-alâd (via Swî and Shâh) on 7th Safar (May 5, 1740).

Nâdîr in Turkestan. Nadir returned to Herât on 10th Râbi'i I (June 5) and after a fortnight devoted to festivities set out for Bâlkh which he reached on 7th Djamâda I (July 31). Arriving before Bûkhâra on 10th Djamâda II (Sept. 22), Nadir treated Khan Abu l-Fâlid kindly and renewed his investiture by crowning him with his own hands. The Oxus was proclaimed the frontier and the Khan had to supply Nadir with 20,000 Oxâbegs and Turkmans, which indirectly left in the hands of the conqueror the control of the internal affairs of Bûkhârâ.

On the 16th Radjab (Oct. 7), Nadir had set out for Khwârizm. The fleet followed the army. The Khan Il-fars of Hazârasp retired to his fortress of Khanakh which surrendered on 24th Shabîn after bombardment. Finally Khâwa, the capital of the kingdom, also capitulated. By 4th Shawwâl (Dec. 23) Nadir had returned to Cârdjâb and entered Masghâd at the end of Shawwâl.

Nâdîr sets out again for Transcaucasia. While in India, Nadir had learned of the death of his brother Ishrâhîm Khân who had been killed by the Lâzg rebels of Dîrâ and Tala. To punish them, Nadir left Masghâd and on his way learned that the Abdâl troops who had been sent in advance had already ravaged Dîrâ, Djawâkh (?) and Aqûtîr, but the pacification of Daghestan was by no means complete.

An incident that followed marks the turning-point in the career of Nâdîr Shâh. On the 28th Safar (May 15, 1741) near Kâfâ-yâi Awlâdâ (Mazâmandârân) an unknown man concealed in the brushwood was shot at Nadir, wounding him slightly. Connecting this with events in Daghestan Mahdî Khân says that the crime was committed by a slave of the son of Dîlâwar Khân Tâfânî [?] but suspicion very soon turned upon the prince Rîshâ-Kuli who had besides not behaved well during his regency. He was sent for the time to Tîhrân while Nadir continued his march via Kazâmîn, Karâdjaâshâb, Îbâda and Khalaâ.

In June 1741, for the third time, Nadir entered Daghestan and remained there a year and a half. The shâmâl of Târbâh, the sâmî of the Karâ-Khatân and Surkhâbâi Khân of the Ghâzi Kûmân came over to Nadir but new difficulties kept cropping up. Relations with Russia became somewhat strained for the Russian representatives suspected Nadir of designs on the northern Caucasus. As a precaution the Russians in May 1742 concentrated 42,000 men at Kizlar (S. Butbow, i. 220). Cares were undermining the health and character of Nadir. At the beginning of Dec. 1742 when the camp was at Baslû the heir to the throne Rîshâ-Kuli, denounced by the author of the attempt on Nadir in Mazâmandârân, was blinded after a form of trial. Nadir himself was thoroughly upset by this incident. Rebellion was now threatening everywhere (in Khwârizm and in Bâlkh).

Third campaign against the Turks. In Dhu 'l-Kåfî I 1742, the Turkish ambassador brought from Constantinople a letter from the Sulîmân refusing to recognise the fifth maddâkh. Nadir then reminded the Sulîmân that the whole of Persian territory had not been regained from Turkey and added that he would soon take the field to make his own terms.

Nadir left Daghîstân on the 16th Dhu 'l-Hijdja (Feb. 7, 1742) and came to Kûrkûk (14th Djamâda II = Aug. 5, 1742) which capitulated as did Irijlî. On the 26th Radjab (Oct. 5) Nadir arrived near Mawjûl but the siege of this fortress was unsuccessful and on 2nd Ramaḍân (Oct. 20) he retreated to Kûrkûk and Khânaqân. Friendly relations were established with Ahmad Pâsha of Bûkhârâ. Nadir with his wives made the pilgrimage to the Shîh and Sunni sanctuaries of Mesopotamia and on the 24th Shawwâl 1156 (Dec. 12, 1743) summoned a great assembly of ecclesiastics at Nadjîf. The document drawn up by Mahdî Khân summing up the discussions confirmed the renunciation by the Persians of the heresy of Shâh Ismâîl, while the "ulama" of Mesopotamia and Transcaucasia recognised the claims of Dja'far al-Šâdîq and declared the special features (furû'âr) of the Persian beliefs compatible with Islam. The Sunni theologian 'Abd Allâh b. Husain al-Suwardi, Kâtib al-Imadîdî, al-Šâfîya li'ittifâq al-Firâq al-Islâmîya, Cairo 1324, also gives a very interesting summary of this dispute; cf. Ritter, Islam, xv., 1926, i. 106 and the detailed account by Prof. A. E. Schmidt, Is'târî sanâtîk-e-shîhtebâk otnošeniyî in the 'Irâd al-Djumân (Barthold Festschrift, Taškent 1927, p. 69-107).

Rebellions. The strange abandonment of the campaign in Mesopotamia is to be explained by the new risings in the east. Much more exciting was the rising in Fîrs led by the beglerbegi Taşî Khân, a great favourite of Nadir. He was ultimately captured and castrated. In Astarabâd the Kâdrîrs rose against the oppression of the governor's son (Janway, Hist. Account, i. 192). Nadir had to send his nephew 'Ali Kuli to Khwârizm. Finally the Ottomans of Kars disseminated in A ráhbadîjân from the new pretender Šâfî Mirzâ (Muhammad 'Ali Râfsîndânî) and then refused to begin an exchange of prisoners.

Fourth Campaign against the Turks. In the meanwhile the Pûnti equipped a new army (150,000 horse and 40,000 janissaries) which advanced on Erzerum and Kars under the command of the former vizier Yegan Muhammad Pâsha while 'Abd Allâh Pâsha Pasha at the time was in Dîyârbâkîr and Mawjûl. On the 21st Radjab (Aug. 20) came the news of the victory won by Nasr Allâh Mirzâ of 'Abd Allâh Pâsha's army (near Mawjûl) and at the same time Yegan Muhammad Pâsha died leaving his army in complete disorder. Nadir again won a brilliant victory (on the very scene of his first victory in 1735) but then, quite unexpectedly, wrote to the Sulîmân saying he was abandoning the first two clauses of Mughân. Personal fatigue may explain why Nadir could not exploit his success.

On Sept. 4, 1746, peace was signed with the Turkish envoys and on 10th Muhaarrâm 1160 (Jan. 22, 1747) the Shâh's representatives (Moûtâfâ Khân Shâmlû and the historian Mahdî Khân) set out for Constantinople with the shûl-nâmâ. Nadir denounced his famous religious clauses in favour of the Sulîmân, "the Khalîfa of the people of Islam and the glory of the Turkmân race". By the treaty the frontier was restored to 1724 of the time of Murad IV [cf. Târîkî] but in a platonist fashion, Nadir expressed the wish to receive one
of the provinces which had belonged to the
"Turkoman Sultanate". On the 10th Muḥarram, Nādir left for Kirmān marking his route by piles of skulls erected everywhere. After the Nawrūz, Nādir returned to Mashhad and devoted himself to "spilling the blood of the innocents". His conduct was now clearly abnormal. In an epilogue to his history written after the death of Nādir, Mahdi Khān records the denunciations, executions, and extortions carried out by the agents of the treasury and the ruin of the country, which had however begun before the Indian expedition (Ottor, Residentes rustic, Hanway, i. 230). The Shiʿī opposition must also have been intensified in view of the frankly Sunni turn which Nādir's "Khurāsānī" policy had taken. The rising in Sīstān, which brought matters to a head, was provoked by the activities of the tax collectors who were demanding a contribution of 300,000 tumans from the province. ʿAlī Kuli Mīrzā, nephew of Nādir, put himself at the head of the rebels. Even Tabāmasp Kuli Khān Djalāyar, the most faithful propos of the throne, wanted to proclaim one of Nādir's sons as king. The troubles spread to Khurāsān and the Kurds of Khabūshān raided the royal stables at Rādkān. Nādir marched on them but on the eve of 11th Djumdād II 1160 (June 20, 1147) he was assassinated in his camp near Fathābād by the Kāḏār and Afsārī chiefs in conspiracy with the bodyguard. Father Bazīn was a witness of the disorder which broke out in the camp after the assassination. On the 27th Djumdād II (July 5, 1152) ʿAlī Kuli Mīrzā came from Herāt and was proclaimed king. All the royal princes were massacred.

The treasure amassed by Nādir was soon scattered to the winds, the country, utterly exhausted, was in the throes of crisis. Nādir's attempts to compose religious difficulties had failed completely, but Persian territory and its periphery were cleared of enemies. But for Nādir Shāh, Persia would probably not exist, even in its present bounds.

Bibliography: Muhammad Muḥsin, muṣawwif of Nādir, Zubdāt al-Turāzbī, Brit. Mns., Or. 3498, fol. 183a (where Nādir is mentioned as Nūbirī Ṭūkī-yī Attāwardī) — fol. 190; Mahdi Khān Astarābādī, Tarīḥ-i Nādirī, a valuable work by the official historiographer (numerous MSS., and oriental lithographs uncritically edited); the French translation Histoire de Nādir Shāh by W. Jones, London 1770 — source of the majority of the later works — completely out of date; Mahdi Khān Astarābādī, Duvar-yī Nādrā, lithographed at Bombay 1280 (1853); Muhammad Khāzīm (wazir of Marw), Nādirīnāna; of this recently discovered work only volumes ii. (327 pages folio; years 1753–1743) and iii. (251 pages folio; end of the reign to the retreat of the Persians from Turkestan) are in the Asiatic Museum of Leningrad, cf. Barthold, Rev. Acad. Nauk., 1919, p. 927, and Zapr., xxv., p. 85 (according to Barthold, this work: "by the wealth of its data far surpasses... all the other sources not even excepting Mīrzā Mahdi; it will undoubtedly become the fundamental source for the study of the reign"). Shikālī ʿAlī Hazīn, Tabīb-i Atfāwardī, ed. and transl. by Helf, Leiden 1851, p. 162–288 (to the year 1154 = 1742; pro-Safawī); Khwādža ʿAbd al-Karim Khashmirī, Buṣān al-Wābi, English transl. by F. Scheltema, president of the Dutch factory at Batavia, and now done into English (this comes down to 1739) and differs from the preceding work); [A. de Claustrer, Histoire de Thamos Kouli kan, nouveau roi de Perse, on histoire de la dernière révolution de Perse arrivée en 1732, Paris 1742, republ. in 1758 (this compilation by the Lyons priest of Claustrer is quite different from the work of du Cerceau, cf. Barbier, o. l., ii. 736). The accounts of the Jesuit fathers are collected in vol. iv. of the Lettres édifiantes écrites des Missions Etrangères, new ed., Paris 1780 (the arrangement of this edition is different from that of the original edition): Relation historique des révolutions de Perse sous Thamus Kouli-kan, jusqu'à son exécution dans l'Inde, tirée de différentes lettres écrites de Perse par des Missionnaires jésuites, P. 169—330 (= 1st ed., vol. 25, p. 311); lettre du P. Sainieux (Chandernagor), Feb. 17, 1740, on the invasion by Nadir, P. 230—265 (= 1st ed., vol. 25, p. 402); Frère Bazin, Mémoires sur les dernières années du règne de Thamos Kouli Kan, p. 277—322 (= 1st ed., vol. 9, p. 14); do., Les révolutions qui suivirent la mort de Thamos Kouli-Kan, p. 322—353 (= 1st ed., vol. 9, p. 83); [Anonymous, Histoire de Thamos Kouli-Kan, roi de Perse, new ed. with supplement, Milan 1747 (reissue of Claustrer's work ?); Otter, Voyage en Turquie et en Perse (1734—1739), Paris 1748; La Mame-Clairac, Histoire de Persie depuis le commencement de ce siècle, 3 vol., Paris 1750; J. Hanway, A historical account of the British trade on the Caspian sea, 1753, s. index; do., The revolutions of Persia, London 1753, ii., p. 103, containing the history of the celebrated usurper Nadir Kouli from his birth in 1669 till his death in 1747; L. de Santa Cecilia, carimentano scalzo, Palatina, Persia, Mesopotamia, Rome 1753, ii, 152, 157, 161—162, 217; iii. 39; Col. Osgood, Abrégé historique des souverains de l'Indostan, 1772 (MS. of the Bibl. Nat., Fr. 24219).

General Kishmchev, Pokhodî Nadir Shaha v Herat, Kandahar, Indijski voytîja v Persii posle yego smerti, Tiflis 1889 (Nadir's campaigns from the soldier's point of view; cf. Zap., vi., 1892, p. 351); Sir Mortimer Durand, Nadir Shah, London 1908 (a novel, with several contemporary illustrations); do., Nadir Shah, in J. R. A. S., 1908, i. 286—298 (general sketch); Sa'di Nasiri, Ahbîrin yâdûgirî Nadîr-shah, Thiran, Madjalla-ji Sharâr, 1300, 31 pages (story in dramatic form). The career of Nadir Shah impressed the imaginations of the peoples whom he conquered. In addition to Indian and Persian panegyrics there is a poem in the Gurani dialect (spoken in Kürdîstan): on Nadir Shah and Topal 'Otbman Papsâ and a Daghastânian song collected in the district of Gbunîb: on the highlander's fight against Nadir (cf. Daghastanskiy sbornik, Makhat-Kea, 1927, iii. p. 51—53). In Europe of the xviii century it was seriously discussed whether Nadir Shah was an European adventurer: there are also several contemporary works in French, German and Portuguese, the subjects of which are the deeds real or imaginary of Nadir Shah like L'épopée de Thamos Kouli kan dans les cours de l'Europe by the Abbé Rochebrun, Cologne 1746 etc.

(V. Minorovsky)

Nadir (Nâzîr al-Sânt or Al-Nâzîr, Nûr al-Dîn) the bottom, the pole of the horizon (invisible) under the observer in the direction of the vertical, also the deepest (lowest) point in the sphere of heaven. The nadir is the opposite pole the zenith [w. v.].

The word nâzîr (from napat, "to see", "to observe") originally (and generally) means the
point diametrically opposite a point on the circumference of a circle or the surface of a sphere; we find 
muḥādaš as a synonym of nāziʿ in this general meaning [cf. also muqābala].

(Willy Harner)

NADIR (BAH. 'N), one of the two main Jewish tribes of Madina, settled in Vathib from Palestine at an unknown date, as a consequence of Roman pressure after the Jewish war. Al-Ya'kubi (ii. 49) says they were a section of the Qijihatim Arabs, converted to Judaism and first settled on Mount al-Nadǐr, whence their name; according to the Sīra (Jahayya (Cairo, iii. 2) they were a purely Jewish tribe, connected with the Jews of Khaibar. This seems the more probable, but a certain admixture of Arab blood is possible; like the other Jews of Madina they bore Arabic names, but kept aloof from the Arabs, spoke a peculiar dialect, and had enriched themselves with agriculture, money-lending, business in armour and jewels.

They were clients of the Aws, siding with them in their conflicts with the Khazzarides, and entering with them into the compact with Muḥammad known as the Constitution of Madina in 1 A. H. Their most important chief at this time was Ḫayayib b. Akhtab, whose daughter Safiya became Muhammad's wife in 7 A. H. For a list of Muhammad's worst enemies among the Banu Ḧanūfa see Ibn Ḥishām, Sīra, p. 351–352.

Their fortunes were half a day's march from Madina, and they owned land in Wādi Ḩārūn and Buwaira; their dwelling places were south of the city.

The Banu Nādir seem to have been in (commercial?) relations with ʿAbī Sufyān in before the battle of Uhud. In 4 A. H., in Rabi' I, owing to difficulties about the Banu Nādir's contribution to certain blood-money which was being collected from the whole Muslim community in Madina, Muḥammad, who had personally negotiated the matter with their chiefs, became convinced of their enmity towards himself and suspected them of intending to kill him. He decided to get rid of such dangerous neighbours, and ordered them through Muḥammad b. Maslama al-Awsī to leave the city within ten days, under penalty of death, allowing them to take with them all their movable goods, and to return each year to gather the produce of their palm-groves.

The tribe, having no hope of help from the Aws, agreed to leave, but ʿAbī ʿAlā b. Ḫayyāb al-Khazzarī, chief of the maʿnaṭiṣān, persuaded them to resist in their forresses, promising to send 2,000 men to their aid. Ḫayayib b. Akhtab, hoping the Banu Kairāja would also help them, prepared to resist, in the face of opposition from moderate elements in the tribe.

The siege lasted about a fortnight, help from the maʿnaṭiṣān was not forthcoming, and when the Muslims began to cut down their palms the Banu Nādir surrendered. Muḥammad's conditions were much harder than formerly; their immovable property was forfeited, and nothing left them but what they could take away on camels, arms alone excepted. After two days' bargaining the tribe departed with a caravan of 600 camels; some went to Syria, others to Khaibar.

The Banu Nādir's booty Muḥammad did not divide in the usual manner; the land was distributed among the muḥādašīn, so as to relieve the Anjūr of their maintenance: part of it the Prophet kept for himself.

Surʾāt al-Nādir (lxix.) was revealed upon the expulsion of the Banu l-Nādir.

From Khaibar the exiles planned with the Kurāsh the siege of Madina in Ḩud b. Ḧaḍżaḍ 5 A. H. The treasure of the Banu l-Nādir was captured by Muḥammad in Khaibar in 7 A. H.

AL-NADJAF (Masaghad 'Ali), a town and place of pilgrimage in the Irāk 6 miles west of al-Kūfā. It lies on the edge of the desert on a flat barren eminence from which the name al-Nadjaš has been transferred to it (A. Musil, The Middle Ephrathes, p. 33).

According to the usual tradition, the Imām al-Muʿminin ʿAlī b. Abī Tālib [v. q. v.] was buried near Kūfā, not far from the dam which protected the city from flooding by the Ephrathes at the place where the town of al-Nadjaš later arose (Ṭuḥaym, Muṣḥam, ed. Wustenfeld, iv. 760), also called Nadjaš al-Kūfā (Zamakhshāri, Lexicon geographical, ed. Salvador de Graue, p. 153). Under Umayyad rule the site of the grave near al-Kūfā had to be concealed. As a result it was later sought in different places, by many in al-Kūfā itself in a corner above the hāda of the mosque, by others again 2 farsaks from al-Kūfā (al-İṣchākhūrī, ed. de Goeje, B. G. A., i. 82 q.; Ibn Hawkal, ii., ii. 163). According to a third story, ʿAlī was buried in Madina near Fatima's grave (al-Muṣfi, Muṣḥam al-Dīkhab, ed. Barbier de Meynard, vii. 289), according to a fourth, at Kafr al-Imāma (Caetani, Annuale dell' Islam, x., 1926, p. 967 q.; A. H. 40, § 99). Perhaps then the sanctuary of al-Nadjaš is not the real burial-place but a tomb held in reverence in the pre-Islamic period. especially as the graves of Adam and Noah were also shown there (Ibn Batṭūta, Tāhja, ed. Defremy and Sangwintini, i. 416; G. Jacob in A. Noldeke, Das Heiligum al-Husayn zu Kerbelā, Berlin 1909, pp. 38, note 1). It was not till the time of the Ḥamālid of al-Mawṣil Abū ʿAbd Allāh al-Mawṣilī [see also ALLĀH B. ḤAMDĀN] that a large ʿabba was built by him over ʿAlī's grave, adorned with precious carpets and curtains and a āda built there (Ibn Ḥawkal, op. cit., p. 163). The ŠīṢi Bāyah ʿAdud al-Dawla [v. q. v.] in 369 (979–980) built a mausoleum, which was still in existence in the time of Ḥamād Allāh Mustawfā, and was buried there, as were his sons Sharaf and Bahāʾ al-Dawla. Al-Nadjaš was already a small town with a circumference of 2,500 paces (Ibn al-Athīr, ed. Tornberg, viii. 518; Ḥamād Allāh Mustawfā, Nizāt al-Kulīb, ed. Le Strange, p. 32: in the year 366 = 976–977). Hasan b. al-Faḍl, who died about 414 (1023–24) built the defensive walls of Māṣḥiḥ 'Ali (Ibn al-Athīr, ix. 154). The Māṣḥiḥ was burned in 443 (1051–52) by the Buyūṭid populace of Baghdad but must have been soon rebuilt. The Sālīḥ sūlān Malīkhāsh and his vizier Nizām al-Mulk who were in Baghdad in 479 (1086–87) visited the sanctuaries of 'Ali and Husain (Ibn al-Athīr, x. 103). The Ḥākān Ghāzān (1295–1304),
according to Hamd Allah Mustawfi, built in al-
Nadjaf a Dār al-Siyādā and a dervish monastery
(khanqāh). The Mongol governor of Baghdad in
1263 led a canal from the Euphrates to al-Nadjaf
but it soon became silted up and was only cleared
out again in 1508 by order of Shāh Ismā'īl. This
canal was originally called Nahr al-Shāh (now
al-ı-šah) (Luqhat al-Arab, Baghdad, ii., 1930—
1931, p. 458). This Shī‘a Safawid himself made a
pilgrimage to the masjīd of Kerbela and al-
Nadjaf. Sulaimān the Magnificent visited the holy
places in 941 (1534—1535). A new canal made in
1793 also soon became silted up, as did the
Zer al-Shāhī and al-Ijāīriya canals, the latter of
which was made by order of ʻAbd al-Ḥamīd II.
In 1912 iron pipes were laid to bring water from
the Euphrates to al-Nadjaf (Luqhat al-Arab, ii.,
458 sq., 491). A considerable part of the ʻIrāq
with Baghdad, al-Nadjaf and Kerbela was tem-
porarily conquered by the Persians in 1627.
According to the Arab geographers, al-Hira lay
on the eminence of al-Nadjaf (al-Ya‘kūbī, Kīāb
Massignon thinks (M. I. F. A. O., xxviii., 28, note 1)
that al-Hira lay on the site of the present al-
Nadjaf, while Musil (The Middle Euphrates, p. 35,
note 26) places the centre of the ruins of al-Hira
S. E. of the tell of al-Kāñārde which lies
halfway between al-Kīfā and al-Khawarınāk. Ibn
Baṭṭūṭa entered Maṣḥād ʻAli which he visited in
726 (1326) through the Bāb al-Ḥaḍra gate which
led straight to the Maṣḥād. He describes the town
and sanctuary very fully. According to al-Ya‘kūbī
(loc. cit.), the ridge on which al-Nadjaf stands once
formed the shore of the sea which in ancient
times came up to those parts of the number of its
inhabitants and its architectural beauty, Ibn Baṭṭū
ta reckoned the town among the most important
in the ʻIrāq. It has now about 20,000 inhabitants
(Persians and Arabs), has a Shī‘a college and
celebrated cemetery in the Wātāl al-Salām. Near
al-Nadjaf were the monasteries of Dair Mār Fāthīyūn
(Yaḵūt, Muǧjam, ii., 693) and Dair Hind al-Kubrā
(Yaḵūt, ii., 709), also al-Ruḥba (5 hours S. W. of
the town; Yaḵūt, ii., 762; Musil, The Middle Euphrates,
in. 110, note 61) and Kašr Abī ʻl-Khasīb
(Yaḵūt, iv., 107). The lake of al-Nadjaf marked
on many older maps has long since completely
dried up (Nolde, Reise nach Inarerabien, p. 105).

(B. HONIGMANN)

BANU NADJAH, a dynasty of Abyssinian
Mamluks at Zābīd [q.v.] from 412 to 553
(1022—1158). When the last Ziyādī [q.v.] had
been put to death in the vizierate of the Abyssinian
Nadjaf by one of his Mamluk governors Nafis, the
other Nadjaf came forward to avenge him. After
desperate fighting, Nafis was slain and Nadjaf in
Dhu l-Ka‘da 412 (Feb. 1022) entered Zābīd where
he had the viceroy built alive into a wall in exact
revenge for the Ziyādī. As his rival Nafis had
already done, Nadjaf assumed the insignia of
royalty, struck his own coins and inserted his own
name in the ka‘ba after that of the ʻAbbasīd caliph.
The latter found himself too late to come to
aid of the under the title al-Mu‘āyad Nāṣir al-Dīn. His
kingdom extended over al-Thāma, while the highlands
beyond remained divided up among petty chiefs.
When among the latter the Sulāḥī [q.v.] came
to considerable power, their relationships with the
Banu Nadjaf decisively affected the history of the
latter. The first Sulāḥī ʻAli is said to have had
this first Nadjaf poisoned about 452 (1060) through
a slave girl sent him as a present. In the con-
fusion that followed, ʻAli occupied Zābīd itself and
Nadjaf’s sons fled to the island of Dahlak [q.v.].
While the eldest Mu‘ārik committed suicide, the
other two resolved to remain on their lands: Sa‘īd
al-Akhwāl and Abu l-Tāmī Diyyā‘ī, whose
lost work al-Mufadi fi Ahārār Zābīd was the
foundation for ʻUmāra’s work (in Kai, see Bibli.).
Sa‘īd made his preparations in a place of concealment
in Zābīd and had Diyyā‘ī come later; the
two then came out openly, fell upon and killed
ʻAli the Sulāḥī, who was soon forced to recognize
Mesten probably in (1082). Zābīd is now recognised
Sa‘īd as its lord; he had appealed less to the
Sunni against the Shī‘a than to the racial feeling
of the numerous Abyssinian soldier-slaves (and
rāja ṣumān minkum wa l-i‘līzā isbecause: Diyyā‘ī in
ʻUmāra, p. 63, 3—4). But Asmī‘ī, the widow of ʻAli the
Sulāḥī who was kept a prisoner in Zābīd,
persuaded her son al-Muκarram to relieve the town (475 = 1082—1083).
The Nadjaf again escaped to Dahlak. In 479 (1086)
Sa‘īd again returned as ruler but in 481 (1088) was put to death at the
instigation of the Sulāḥī queen al-Sayyida, the
wife of al-Muκarram. Diyyā‘ī escaped to India
with his vizier Khalaf b. Tāhir, said to have been
an Umayyad, returned to Zābīd disguised as an
Indian, plotted with his compatriots and easily
regained power in 482 (1098). With his death in 498 or 500 (1105—1106) disruption set in. He himself had had domestic difficulties. He executed the kadi Ibn Abi Akama who was an ancestor who had come to the country with the first Ziyadis; his former helper Khalaif had to seek refuge in flight. A certain degree of strain in his relations with his brother Sa'id is already evident from Danish's account and there were fierce family feuds among his descendants. His son Fatik I, the son of a girl bought in India, had to defend himself against his half-brothers Ihsahim and 'Abd al-Wadid and died young in 503 (1109—1110). The latter's infant son al-Mansur was set aside by his uncles, who were quarrelling with one another, and fled to Suyida, whose favourite Muqaffar b. Abi 'l-Barakat brought him back in 504 (1110—1111) as vassal of the Sultanis.

On account of the new ruler's minority, events repeated their course under the Ziyadis. The Mamlik Ants was Mansur's vizier and he even assumed royal honours. When he attained his majority Mansur disposed of him by murdering him with his own hand in 520 (1125) after inviting him to the palace. Mansur however was at once poisoned at the instigation of the next vizier Mann Alah. In the following year, the latter defeated under the walls of Zahid Nadjaž al-Dawla, whom the Fatimidus had sent as the Sultanis power was weakening to restore their suzerainty in the land. Mann Alah had made the boy Fatik II nominal king, the son of Mansur and a slave girl 'Ala'Am who had been purchased from Anis's estate. This woman (d. 545 = 1150) endeavoured with great skill to preserve the rights of her house against the encroachments of the viziers and played among the Nadjaž a part similar to that of Salyida among the Sultanis. In particular she equipped and led regular caravans of pilgrims and thus unconsciously furthered the rise of 'Ali b. Mahdi who was finally to drive her own family from power. Mann Alah in 524 (1130) was killed in his release through a plot of 'Alam's. His successors were the Mamlikus Ruraq, and then al-Mu'adh, Against the latter 'Alam endeavoured to throw him out of the palace, but his plot was good nor on good terms. In their quarrels the various parties several times brought the petty Arab princes who lived around it against Zahid. Ikhbal had Fatik II poisoned (531 = 1137). As he had no heirs, he was followed by his cousin Fatik III b. Muhammad b. Fatik I b. Danish. The government had been in the hands of Surat since 529 (1135). His career of indefatigable activity was ended in a mosque in Zahid on the 12th Radjab 551 (Sept. I, 1156) by an assassin, a 'Khiriduj'.

On 14th Radjab 554 (Aug. 2, 1159) he entered Zahid.

The Banu Ziyad and the Banu Nadjaž continually brought up shiploads of Abyssinian slaves to recruit their troops and thus continued that mixture of races, which already existed before Islam and is still very marked in the Yaman plains. These Mamlikus however became a great danger for the Ziyads and also for the Nadjaž themselves. Najiyaž had attempted to counteract them with a bodyguard of Turkhi-Oghuz [cf. QHIZ]. But they were not suited to the climate; in particular it was impossible to establish a colony of them there permanently as their children, if they did not die, remained weaklings. The Abyssinian admixture was still further increased by the many slave-girls, who, particularly when they became mothers, exerted some political influence. The enormous harems of the notables created the most complicated family relationships. For example the settlement of the estate of the vizier Ruaq became a notoriously difficult case in the law of inheritance which occupied the ablest vizars for years until finally a very aged Hadrarmut found a solution in accordance with the Sharis.

AL-NADJASHI, designation in Arabic of the king of Abyssinia. It is a loanword from Aethiopic 1292 "king, prince" etc. In Arabic it is sometimes used as a proper noun, sometimes as a nomen appellativum. The word is also genuine Arabic, but such as it has the meaning of driver of game. It does not occur in the Koran. In Hadith it is the designation of the king of Abyssinia, just as 'Abd al-Mu'min [q. v.] and al-Mu'awwakas [q. v.] are the designations of the rulers of Kūm, Fāris and Mīsīr. In their totality they represent the Great Powers which in the time of Muhammad surrounded the territory of Islam. On the fresco in the hall of the castle of Kusair 'Amra [cf. AMRA], dating from the middle of the 11th century A.D., al-Nadjashi appears as one of the four Great Powers, the place of the Mu'awwakas being taken by Roderick the Visigoth.

In the Sour the Nadjaž occupies a place of some importance; it is one of the three chief emirates of the two hijras' to Abyssinia, with Muhammad's letter persuading him to embrace Islam with his conversion from Christianity to Islam and with his equipping two ships in behalf of the return of the emigrants to Arabia, amongst whom was Um'm Ḥabība, who was to marry Muhammad (A.H. 7).

These traditions have been critically examined by Grimm, Caetani and Mrs. Vacca. Grimm denied the historical foundation of the traditions concerning Muhammad's letters to the Great Powers. Caetani submitted the question to an elaborate enquiry. Mrs. Vacca reduces the traditions to the following historical facts: a. the return of 'Abbār b. Abi 'r-Rubī from Abyssinia in 7 A.H., when Muhammad was besieging Khiribar; b. the expedition of 'Amr b. Umayya in A.H. 6 in order to reconduct the emigrants from Abyssinia to al-Madinah; c. vague traditions concerning the emigration from Makka to Abyssinia. To these groups several episodes agglomerate, viz. a. the story that Um'm Ḥabība, Abī Sulayf's daughter and widow of 'Uthmān b. Ḥaqq, was asked in marriage by Muhammad and provided with a marriage-gift of 400 dinars by the Nadjaž; to b. the story of Muhammad's letter to the Nadjaž, his embracing Islam and his becoming
the intermediary of the conversion of 'Amr b. al-'A.

In Hādith the Nadjāshi is also mentioned in connection with the story that his death in Ramadān 9 A.H. was proclaimed, without previous intimation, by Muhāmmad, who held in the musallā [q.v.] a funeral service in behalf of this fellow Muslim. As his proper name is given Aţāma or Aţhāma b. Abţār.

The title al-Nadjāshi is also given in Arabic literature to later kings of Abyssinia, as may be seen from this article.

(A. J. Wensinck)

**AL-NAJDJASHI, KAYS B. AMIR AL-ḪAṬĪBI, an Arab poet of the seventh century A.D., lived at first in Nadjān [q.v.] and quarrelled with 'Abd al-Rahmān, son of Hassān b. Ḥabīt [q.v.], because the latter had addressed in song a married female relative of Nadjāshi in Medina. After an exchange of lampoons with his opponent from his native place, he met him at the annual fair at Ḥuṣn 'al-Nadjāshī and again in Mecca when 'Abd al-Rahmān not only proved inferior as a poet but suffered bodily injury, so that his aged father had to interfere on his behalf. Nadjāshi had a second conflict with Ibn Mubīl, the poet of the Banū Ḩadād; he was so unbridled in his defence that the caliph 'Omar punished him with imprisonment after procuring an opinion on his verses from Hassān and al-Itrāja. After 'Othmān’s assassination, al-Nadjāshi appeared in Kīfī as one of 'Ali’s poets, and for the latter exchanged political lampoons with Mūṭiwayya’s poets at the battle of Sīffin. But his disorderly life lost him the favour of 'Ali and after a drinking-bout in Ramadān he was given the thrashing prescribed by law and put in the pillory. After a conflict with Kūfān notables, in which he expressed his wrath at this punishment in satirical verses, he was expelled by 'Ali and went over to Mūṭiwayya. He then went back to his native country Yaman and died in Lāḥēj in the year 40 (669), in which year he wrote a lament on the death of Hasan.

(C. Brockelmann)

**MIR 'ABD AL-ḠĀL NADJAT, a Persian poet, born about 1046 (1636—1637), the son of a Husaini Sā'idīr Mr Muhāmmad Mā'mūn of Isfahān. He is known of his life. Only this much is certain, that he, like many other Persian poets of this time, worked in the offices of different Persian dignitaries. For example he was a *mustasfi* [q.v.] with Sadīr Ḥabīb Allāh, later occupied the same office in Astarabād and ended his career in 1126 (1714) after being for many years *mustasfi* with the Safawī princes Shāh Sulaimān (1667—1694) and Shāh Sulṭān Husain (1694—1722). He owes his fame mainly to a long poem *Gul u-Kuhšt* ("Wrestling") which he finished in 1112 (1700—

1701) and which deals with the theme of the ān-dīrām [q.v.] still very popular in Persia. As the Persian athletes still form a special closed corporation they use a special language (a kind of slang) which is full of the technical terms of their art and is not intelligible to the outsider. Nadjat used these technical terms very skillfully in his poem which makes it very difficult for laymen to understand. This produced several commentaries on his work, of which those of Ārūz, Rātan Singh Zakhmī (printed Lucknow 1258) and Gobind-rām (11th. Morādābād 1884) are the best known. Of Nadjat’s contemporaries some did not approve of his peculiar style and thought his poem degraded the poet’s art with its vulgar expressions and low humour. As a matter of fact, Nadjat’s tone differs considerably from the traditional lofty style of Persian court poetry and approaches the language of the Persian middle classes; this makes his work of considerable importance for the history of the Persian language. Besides the poem, we only know of a collection of lyrics by Nadjat of which there are manuscripts in several libraries (see below).

(E. Bertihl)

**NADJĀTI BEY, properly влекатель (Nūh, also given, is not certain), the first great Turkish lyric poet of the pre-classical period, one of the founders of the classical Ottoman poetry. Born in Adrianople (Amasîn and Kastamûnî are also given), the son of a slave, obviously a Christian prisoner of war for which reason he is called 'Abd Allāh, the name given to every one, he was adopted by a well-to-do lady of Adrianople, received a good education and was trained by the poet Şahîli. In spite of the fact that his non-Turkish origin was generally known, he was regarded as their equal in every way by the Turks in keeping with their democratic ideas. He early came to Kastamûnî and there began his poetic career and soon gained a great reputation. Two poems are said here and there to bear traces of the Kastamūnî dialect. Coming to Constanti- nople, he at once gained the favour of Sultan Mehmed II by a ḫas re: winter; in 886 (1481)
he celebrated the accession of Bayazid II in a
kājda and was rewarded by an appointment as secretary in the Divvān. He gained such favour with the Sultan that he was appointed secretary to his eldest son Abd Allah and was given the title of bey when the prince went to Karaman as governor (mutessarif). After the prince’s early death (888 = 1483) Nadjati returned to Constantinople with an elegy on the death of the prince, which showed deep emotion. After a long interval, in which he wrote a great deal but was in con-tinual need, through the influence of Mu’ayyad-Zade [q. v.] he became nizāndī to Bayazid’s younger son Mahmud when the latter went to Sârîkhân in 910 (1504). Nadjati wrote his finest verse while on the staff of this prince; this was the happiest period of his life. Mahmud also died, prematurely in 913 (1507) in Manisa, the capital of Sârîkhân, and Nadjati again lost his patron. He returned with a beautiful elegy to Constantinople and finally retired from the service of the court on a modest pension. He took a house on the Wefā Maidan where many friends gathered round him, especially his pupils, the poet and tekeredži Edirneli Sehi and the poet Sun‘ī. Nadjati died on the 25th Dhu ‘l-Ka‘da 914 (March 17, 1509). He was buried near his own house, at the monastery of Şâhîkh Wefâ and a tombstone was put up by Sehi for him.

He left a Divvān which he had collected on the advice of Mu’ayyad-Zade and dedicated to prince Mahmud. There is also attributed to him a mesneb, which is not otherwise known, entitled Musâzâro-i Gîl u-Khovr, also quoted as Lâlīa u-Maḏginûn and Mîlkh u-Mâh. Even more uncertain seems to be the existence of the mesneb mentioned by Sehi: Gîl u-Şâbâ. Nadjati is also mentioned as a translator of Persian works but his pupil Sehi says nothing of this. He is said to have translated for prince Mahmud the Kimyâ-i Fâhîd of Imam Ghâzîli (the Persian version of the Arabic Ḥyâ) and the Qâma‘ al-Hikâyât (properly Qâma‘î al-Hikâyât wa-Lawâmî al-Râkîyât) from the Persian of Damîl al-Dîn al-Awﬁ.

His Divvān which is still unprinted, gives Nadjati a very prominent place in Ottoman literature; the Divvān was regarded as a model for all Ottoman poets. Nadjati, whom İdris Bilîfî in his Hicret Bihîyet calls Khovr-evi-Şâbâ-ı Rûm and others Malik al-Şâbârâ and Tâ‘î-i Rûm (= the Piedmont of Asia Minor), was regarded as the best poet of Rûm. He does not, it is true, reach the heights that Nesîmî does but he surpasses all his predecessors, of whom Ahmed Pasha and Zâyi were the greatest, in origindity and creative power. Only Bâkî and Fûzûlî have surpassed him. The problem to be solved by Ahmed Pasha, Nadjati and Zâyi was to incorporate completely into Turkish the matter borrowed and translated from Persian literature, which was still felt to be foreign, to adapt Turkish to Perso-Arabic metres and to domesticate fully the Arabic and Persian vocabulary. This was a great achievement for the time. Nadjati brought about a great change in the literature as regards outlook, feeling and language. In him the age of Sultan Bayazid is most clearly reflected. Although he is not to be claimed as a very great poet, he was the king of the gild of poets of his time, who started a great literary movement. Nadjati combined a thorough knowledge of Persian

with a masterly command of Turkish. In the number of his ghazels he far surpasses Bâkî. His work as a poet of kaşdas was original and stimulating. He was specially celebrated for his skill in the use of the proverb.

(Th. Menzel)

NADJID. [See N.FYD.]

NADJA BEY. [See KAFIDJES.]
is an act of obedience (j'ud'; complete faith is the sum of all j'ud';. Faith may increase but never diminish, it can be completely lost only through unbelief. He who commits a heinous sin and dies impenitent is doomed to hell from which he will emerge however, unlike the complete in-fidei. Al-Nadji denied the punishment of the tomb (sukkab al-khab). probably as a result of his determination. — Al-Nadji like his master Bishr represents the reformed and modified Djamshiyah. The influence of Mu'tazila theology on this school is manifest; on the other hand, the Mu'tazila itself, especially that of Bagdad, seems to have received certain quite important stimuli from his school in spite of its opposition to it. Several of al-Nadji's doctrines are found at a later date in Al-As'aml. — The Nadjiyiyah flourished in Rany and Gurgan. It was divided into three schools: 1. the Burjighiyyah, the followers of Muslimadd b. Is' Is' Burjildd; 2. the Za'faraniyyah, the followers of a certain Abi 'Abd Allah b. Al-Za'farani; 3. the Mustadraka, a reforming party which taught paradoxical doctrines on the divine word.

(H. S. Nyberg)

Msc'Allim NADJI, properly 'Omer, an important Ottoman author, poet, critic and man of letters, who occupied a special and somewhat hybrid position in the history of the Turkish moderns and has given his name to a whole literary period. Born in 1266 (1850) in Constantinople, the third son of a master saddler 'Ali Agha (not Bey, as some literary historians say), he lost his father at the age of seven. The widow Fatme al-Zehri, who was descended from a nobility who had come to Constantinople from Rumelia, went to Varna to her brother, the Kalyobiyah Ahmad Agha. The latter in spite of his limited means, made it possible for 'Omer to be educated at the medrese and 'Omer's elder brother Sahl gave him considerable assistance. 'Omer devoted himself at first to calligraphy and for his lechery used the makhtas Khuluba. A certain Khodja Haji aroused in him a fondness for poetry and he took the makhtas Nadji for his poems (from a passage in the Makhtaval of 'Abd al-Girid). He also tried to obtain the title of hafiz, holding in the medrese a permanent influence on him. It was long before he decided to put off the turban and the jilbub. The spirit of the medrese and a certain intolerant fanaticism however never left him.

In 1284 (1867) Nadji received an appointment as second master in the Rusudye school in Varna. At an inspection the then mutanis of Varna, Kord Sad' Pasha (later Foreign Minister, President of the Council of State and several times an ambassador), made the acquaintance of the intelligent young teacher. He took him into his service as secretary, when he was moved to Tulca just before the outbreak of the Russo-Turkish war in 1877; thence he was moved to Tinnovo and later to Osman Pasha. Nadji accompanied the much travelled Pasha on his moves and journeys. After a brief stay in Constantinople, he went to Veli Shehr Fenar (= Larissa in Thessaly) where Nadji made the acquaintance of the poet and Mawlawi 'Atwi Bey, who had a very good knowledge of Persian. Nadji who, as a result, went to the court and judge of investigation had here finally to lay aside the turban. When Sad' Pasha set out on a nine months' tour of inspection in Asia Minor, the Euphrates and Erzerum, Nadji again accompanied him. He recorded his impressions in the poem Siam'i charit, where he had abandoned himself with other congenial wits to a life of dissipation at TawP Pasha, both earlier and after his return to Constantinople. The transfer of the Pasha as wali of the Aegean islands to Chios, where Nadji acted as mujtahid saved him from this. Here he was able fully to develop his literary leanings. Already in 1292 he had published poems and articles in Varna in the Tuwa newspaper of which some were even reprinted by the Constantinople paper Baister, such as his Bir Mu'alla'min Sali'in al-Adabi' from Chios he began his association with Ahmad Midhat Efendi who was then editing the Tegjiyan'i Hafizat; from his contributions in poetry and prose, which appeared in the Tegjiyan over the pseudonym Ahmad Mal' and Mal' al-Kharabat, a close friendship arose which proved of decisive influence on his future career. When Sad' Pasha went as ambassador to Berlin, Nadji declined to go with him, which was much to be regretted in the interests of his literary development. He therefore resigned his post in the Foreign Ministry and devoted himself entirely to authorship. Midhat gave him the editorship of the newly formed literary section of the newspaper. At the suggestion of Midhat, whose son-in-law he had become, he learned French although he was now over 30. When he left the Tegjiyan for literary reasons, he undertook the editorship of the Sefat newspaper.

By his great literary and critical activity, he gained an influence which can hardly be estimated high enough on the intellectual life of Turkey in his time, not least through his position as lecturer on Turkish literature at the Mektebi Sul'tan in Galata Serai and in the law school. He became celebrated under the name Mus'in (teacher) of which he was particularly proud. In 1307 (1889) he was appointed by imperial order Turkish historiographer, Tarih-novis-ii-Ati Om'arn, as a reward for his historical poem Etegheri Ghit. But he did not live to do anything serious in this field except an introduction which survives in MS. He died on 27 March Ramaadjan 1310 (April 14, 1893), at the age of 43 from heart failure, and was buried in the garden of the turbe of Sultan Muhammed.

As a literary figure, Nadji revealed two aspects. On the one hand, he was a fanatical admirer of the old literature out of which he had developed and for which he endeavoured to revive the taste of his milieu by every means, by his modest poetic talent and considerable skill in versification; on the other hand, he seemed in sympathy with the moderns but in view of his convinced belief in the decadence of western culture he had little real understanding of them.

Nadji's services to Turkish prose are undeniable. Over 50 years ago he was already writing the prose of the future, a model, clear, simple, style in the
language of a master who could not be surpassed. Two years before Serêfî's celebrated Kûshî Shèlîr (1309) with its complicated prose, Nâdîj gave a classic specimen of simple prose, in his Ömerîn Cûlûyûlgû (1307) which was only properly appreciated and imitated at a much later date. In it we find the first suggestions of Turkish realism.

The forms not cultivated by the old writers, the story and the drama, he did not, it is true, entirely omit, but apart from autobiographical sketches and a translation from Zola, he wrote no stories and he was a failure as a dramatist. In theory, it seemed sufficient to him and his followers to put French stories of crime into the oret cûnu form in order to produce regular Turkish "dramas". Here also he approximated to the moderns but did not reach their level or ability.

As a poet and artist he is weak. He lacks favour and creative fancy. He lacks that depth of feeling which carries one away; with him everything is trivial and superficial, and he never feels or expresses anything deeply. His prose style is simple and easy, the sentences short, the mode of expression concise and clear.

His main importance lies in his wide influence as a teacher, which he exercised not so much in the actual classroom as through his whole literary activity.

As a critic he confines himself to externals and goes no further.

Nâdîj's prolific versatility is best shown by a list of his works. He wrote on many subjects and frequently lacked the time for adequate preparation.

Of his poetical works, the most celebrated is the collection Atebû-pûrê (1300, 2nd edition 1303), which contains 52 poems in the new western manner. The best in it are: Tecfehî, Keßûfî, Xûnî, Şâhî, Şâtwardîn ibî Wâdî, Tesarûn, Şâûrî, Aisîsî. — Next come two collections of ghazals in the old style: Şwârî, 1301 and Fûshûn; then three historical poems: Hamîyet yahûd Mûmîn bî Esh'arî, a description of heroic deeds in Iran in the time of the last kîng Abû 'Ali Abîlālî bî Şâûrî; Zât al-Nâyâbîn in the heroic conduct of Esmâ', daughter of Abî Bakr, at the siege of Mecca with regard to her son Abû 'Ali Abîlî b. Zûbarî; Gîdrî Eròfûgî Bey, ef. above: first printed after his death in Khâzâni Funûn, 1310, ii, No. 11, 12. On the Ëfûfî-i Şâhî-sînî-mênuîe written in conjunction with A. Miûhtar ef. 'Ali Emîrî, in T.E.O., v., No. 27, 1339, p. 131; other poetical works are: Tecfehî Fond or Türkî Fond, an imitation of Rûhî-i Bağûdâdî and Ziyâ Pashû; Tahtî yahûd 'Arûz, Numûnênî, Menûzêî-i Miûnîn Nâtîjî and a collection of fugitive pieces edited by Şâhîbî Wûfî after Nâtîjî's death: Yûsûfî-i Nâtîjî, 1314.

Of his prose works the best known and most important is Sinûbêl (1299 and 1307). The first part contains poems like Kûshî bîr Mêzeû, which is very important for the development of the Turkish prose, and translations from the French. The second part: Ömerîn Cûlûyûlgû gives in unaffected style intimate memories of his childhood up to the age of eight and has several times been translated: into German by A. Meezî, Aus Miûnîn Nâtîjîs Sinûbîl: Die Geschiche seines Kindheit, Berlin 1808; into Russian: Vl. Grod-levskîj, Ëttêzî Ómara. Afkökî, raflîchîcî oèrê, Moscow 1914; and into Czech: Jan Rypka, Oumarovo Dêttêcî až do jeho omelîho roku, in Òblî. Svêtlûv Knihore, Prag. — Memories of his student years were published in the Tèrûmûnîn-i Hâjîkât and entitled Medîrênî Ëttêrîtêrî, 1302; to the same year belongs Şâmînî-far Şâyîhît (Mûmînî-i Ebn 'l-Zîyâ, No. 41): also Yâzîdî Valûnumî, 1301 (letters and verses in simple language); Khûrû Fûrûhî (verses and sayings of Arab and Persian men of letters, 2 parts). — A strongly personal note marks his Demûamî (the title is chosen in allusion to Ekrem's Zênâmê), a criticism of Memmemî-i Zâtîrîs Tâhî's Tezêrî-i Ezhîh, but it is primarily directed against Ekrem and his pronouncements on the stupidity of writing ghazels: it was so personal that its publication was officially forbidden. — Equally vigorous is the criticism of the newspaper Miûnî and its owner Miûdî Bey in Nâtîjî's Mushûfên-dêmî. — Translations and commentaries are found in Samûl-i, 1303 (first published in Yûzûd-i Müsûdî; verses of the Persian poet Şîlî-i Têrêzî with commentary): Sinîbût ëd-i-Pûrê (Persian maxims) — Religious in content are: Adîgî-i Kûmîn, 2nd ed., 1306 (translation of the treatise by Fakhrî-dîn al-Râzî on the Tâhîhî, Lûtî-i 'alîyê in the Miûthîr el-Ghâfîh, first appeared in the Têrêzîmânî); Têzêrî-i Kûrânî, Menûnî-sînî (on the Hvî-i midemûfîn at the beginning of certain Surâs); Khûrûtî at-Hûlûr, 1304, the commentary on Sûrâ cixî (Pâfûdî) translated from the Tefir-i bûhî; Esmûlî-i 'Allî, sayings of the caliph 'Ali (Mêhêkîbî-l-ebn 'l-Zîyâ, No. 1); Hûkûm al-Râzî (sayings of Saiyîd Ahmad al-Râzî): Nûmûnî-i al-Fûrûhî (wise sayings of Muslim celebrities); Vêdîtî, 1305 (Persian originals and translations); Mîtûrêm, 1304: translations from Arabic, Persian and French; Mûmînî-i Mûsûfdîxtürk, 1306: literary essays based on a collected volume in MS. by another unknown M. Mustâfar 1279; Numûnî-sî-nûhan (an abridgement from selected authors) — correspondence: Mükûtîhîn, 1303 and 1311 (correspondence with his friends and pupils); Mükübettêrî-7ê- Mustêmôvit, 1311 (correspondence with A. Miûhtar); Şûhî bêlî (correspondence with Şâhîîbî Wûfî); İnêzî, 1301 (correspondence with Bûsîhî Fu'sênî on V. Hügo). — Works on literary criticism: Miûtêllî: a collection of expositions of his critical theory which had appeared in the Tèrûmûnî and were regarded in their days as of fundamental importance; Mûmînî-far Miûtêllî, 1305—1306: a collection of the literary lectures which he had given in the Şîhânî and the Law School (58 in number, No. 1—3 even reached a third edition); Isfêtêhâtî-i cebirî, 1307 and 1314, his celebrated masterpiece on literary history, really only concerned with style; also Mükûtî-7ê Debê, 1320. — His important lexicographical works include: Kâmari-7½rmânî, 1308, only 5 parts; first appeared in the Murawwûd. Tûhâtî-i Nâtîjî = Lûgâtî-sî-mênuîe, 1317. Nâtîjî only wrote the text as far as art. Fêruz, p. 832: the remainder p. 833—1426 was prepared by his friend Mustûfêlîzîdê Yûzûdî Bey. — The biographical works are: Têrûmûnî-Êttêrîtêrî, 1307, 2 parts (biographies of 13 Ottoman poets); Esmûlî, 1308, about 50 somewhat arbitrarily chosen biographies in the style of the old Têkîre's — His only drama Hûzîm (Hûzîm Bey yahûd Hûzîm), 1326: Têrêzî Rûkîn, the translation of Zola's Thêrêzî Ruquîn: a promised
 translation of Fénélon: Terkuyt-i Benet never appeared.

The four parts of his much used Ta'lim-i Kirdat, from 1300 on, were largely responsible for the development and spread of Nädji's style in the widest circles. The first part reached the 31st edition by 1320.

Announced but never published were the following: Ahekk-i milt, Musammat-i Râghib (on Ködja Râghib), Ferai-i tişkiye, Terâmiden Terâmug.

Nädji was a contributor to a number of papers and magazines: the Terâmîn-ul Habîbat; the Şedîl-i Vaṭît, the periodicals Afzî, Gendi Kûlûm, Mîrîn ibn hatîlî, Qadîn ibn hajîsî, etc.

With Nädji neo-classicism came to an end although his followers, especially Ali Kenâl, made several attempts to revive it again in the İlibûn against H. Dîhdîl and in the Şâbik against Dînbâl Shîhîb al-Dîn. The movement did not get beyond these efforts, for his followers were as little able as Nädji himself to produce works of permanent value. The present generation has advanced quite out of Nädji's world.

(Th. Menzel)

NADJIS (A.), impure, opp. şâhîr, cf. TA'HARA. According to the Şî'ah doctrine, as systematised by al-Nawawî (Munâfiq, i. 36 sqq.; cf. Chaçali, al-Waqifî, i. 6 sqq.), the following are the things impure in themselves (nağhâtî): wine and other spiritsur drinks, dogs, wine, ma'âfî, blood and excrements; milk of animals whose flesh is not eaten.

Regarding these groups the following may be remarked. On wine and other spurious drinks, cf. the art. KHAMAR and NABIME. — Dogs are not declared impure in the Kur'an; on the contrary, in the description of the sleepers in Sûra xviii. the dog is included (verses 17, 21). In Hudûth, however, the general attitude against dogs is very strong, as may be seen in the art. KALI. Goldziher considers this change due to an attitude of conscious contrast (mutkalaňa) to the estimate of dogs in Parsism. It must not, however, be forgotten that the Jews also declared dogs impure animals, just as swine. The latter are already declared forbidden food in the Kur'an (Sûra xvi. 116: vi. 146; v. 4; ii. 168). — As to ma'ûfî, cf. the article. — Blood is mentioned in the Kur-an (Sûra xvi. 116; vi. 146; v. 4; ii. 168) as prohibited food. As to the religious background of this prohibition cf. the art. MA'TAH. — As for excrements and several kinds of secretions of the body, the theory and practice of Jews and Christians sufficiently explain the attitude of Islam in this respect. It must also be admitted, though data are very scarce, that in early Arabia religious impurity included some of these things. — Details are to be found in the large legal works of each of the madhâbhs (cf. Bibli).

Of the differences of the schools regarding this subject the most important only may be mentioned. Spirituous drinks are not impure according to the Hanafis (cf. NAZIM). Living swine are not impure according to the Malikis. — The Shi'a adds to the things mentioned above the human corpse and the infidels. The human corpse was one of the chief sources of impurity according to Jewish ideas (cf. already NUMBERS, ch. xix.). A current in early Islam tending to follow the Jewish customs in ceremonial law was very strong; the Shi'a view regarding the human corpse may be a residuum of it. — The impurity of infidels is based upon Sûra ix. 28, where the polytheists are declared to be filth (nağûf). The Sunni schools do not follow the Shi'a in the exegesis of this verse.

The nağûf sins enumerated above cannot be purified, in contradiction to things which are defiled only (mutanadîjdî), with the exception of wine, which becomes pure when made into vinegar, and of hides, which are purified by tanning. On purification cf. the art. TA'HARA, GÜSSÜ, WUROP.

NAJDJ AL-DIN KUBRA, the founder of the order of the Kubrawiya or Dhababiya, is one of the most striking personalities among the Persian Shivis of the xiii—xiv century A.D. A large number of popular legends are associated with his name, many of which are not yet forgotten at the present day in Central Asia. His importance for the development of Sufism is very considerable and in the long series of his books we find many distinguished representatives of Sufi
teaching, Nadjm al-Din, whose full name was Ahmad b. 'Umar Abu 'l-Dhannah Nadjm al-Din al-Kubra al-Khwāṣī the with the honorific title al-Tāmāt al-Kubra (the "greatest visitation": Sura Ixxix. 34) and Shāhī-

Wāli tarāḥ (the Shāhī who prepares saints) was born in the town of Khwāṣ in Khawrām in 540 (1145), spent his youth in travel during which he met in Egypt the famous Shāhī Rūzbahān al-Wazzān al-Misīṣ. He became his murid and under the supervision of the Shāhī went through a course of most rigid ascetic discipline. The youth won the favour of his teacher who gave him his daughter to wife and adopted him as a son. Nadjm al-Din spent some years in Egypt where two sons were born to him. One day he heard the news of the sudden death given by Imām Aḥā Naṣr Ḥafiẓ in Tabriz highly praised. He at once went off to Tabriz and studied there under the direction of this theologian who lived in the Khwāṣ al-Zāhida in the Sarmaodin quarter. There Nadjm wrote his first theological treatise, a kind of inaugural dissertation entitled Shāhī al-Sunnat wa 'l-Maṣūṁ. During a disputa which arose out of this work he made the acquaintance of the Shāhī Bahā Farājī Tabrātī under whose influence he decided to give up the study of theology and devote himself entirely to the contemplative life of the mystic. Bahā Farājī regarded all learning as something superfluous; in his view true knowledge could only be obtained through divine illumination. Nadjm al-Din soon recognized that he could hardly come any nearer his goal by this route. He turned to Shāhī Ammārī Yaṣīr who advised him to train as a complete Sufī in the school of Ismā'īlī Kāvīrī. Nadjm al-Din received his second maḥfīz at the hands of the latter, a so-called maḥfīz-i taqarrūk ("Shirkāt al-maḥfīzāt"). After his return to his first teacher Shāhī Rūzbahān the latter found that he had thoroughly grasped all the depths of Sufī learning and recommended him to transfer his activities to his native land of Khawrām. Nadjm al-Din settled there with his family, bought a khānsakāh and founded the order of the Kubrawiya or Ḥabashābiya. His teaching met with great success and he soon found himself surrounded by pupils among whom were the most distinguished Sufis of the xiiith–xiiiith century such as Mājīlī al-Din Baghdādī (the Shāhī of the famous poet Farād al-Dīn 'Abīrār), Sa'd al-Dīn Ḥamāwī, Bahā Kamāl Ḍandī, Shāhī Ṭafrī al-Dīn 'Alī Lālī, Sa'id al-Dīn Bahkharī, Nadjm al-Dīn Kāzī and many others. Bahā al-Dīn Wadād, the father of the great Djalāl al-Dīn Rūmī, is also said to have been his pupil, but this is hardly possible. Nadjm al-Din met his death on 10th Jumādā I 618 (1221) while taking of Khwāṣī by the Mongols. All his biographers are agreed that the Shāhī had gone out to meet the enemy in the open field and met a martyr's death with a weapon in hand. The Institute for Oriental Research in Leningrad possesses a manuscript in Eastern Turki entitled Shāhī Nadjm al-Dīn Kubrā mī Shāhī Khwāṣī-ni Khwāṣī-kil. chambā Bāgni (How Shāhī Nadjm al-Dīn was martyred and the town of Khawrām destroyed). It is a kind of historical novel dealing with the last days of Khwāṣī and its fall. Nadjm al-Dīn appears in it as the protector of the city against the Mongols. By his power he makes Khwāṣī invisible to the enemy and it only falls into the hands of the conquerors after the Shāhī decides to sur-

render it. It is possible that this book is a version of a Persian biography of Nadjm al-Dīn called Tāhlīj al-Fakhā'ir and mentioned by Ḥaḍījī Khalīfī (i. 234).

Nadjm al-Dīn was a prolific writer and left a number of valuable treatises on different questions of Sufism. The greater part of his works are written in Arabic. Ḥaḍījī Khalīfī gives the following list of his works: 1. al-Ṣa'd al-Shahrī (i. 339) — a brief exposition of the ten fundamental principles of Sufism (printed in Constantinople in 1526 with a Turkish commentary); 2. Riṣāla fi 'l-Sulāk (iii. 410–411) — or more correctly fi 'l-Dīn al-Suḥūk, described in Ahlwardt: N°. 3456; 3. Riṣāla al-Ṭarāq (iii. 418) — in Ahlwardt, N°. 3272–3273 (possibly with N°. 414). 4. Muṣallāt al-Tawārīkh (xv. 171) — unknown to me; 5. Faṣūliyy al-Dīnān in Persia — a treatise with this title is given in Flugel, Wiener Katalog, iii. 332, except that the latter is described as in Arabic; 6. Lūmāt al-Lām — or with the full title al-Khāṣif al-lūm min Lūmāt al-Lām in Ahlwardt N°. 3087; 7. Hilāvat al-Tālībīn — unknown; 8. Tafrī — probably the great commentary on the Ḥaḍījī entitled Alī al-Fakhā'ir, whose first volume I discovered in the Public Library in Leningrad (see Islamica, vol. 1, fasc. 2–3, p. 272). Nadjm al-Dīn is also known as a composer of Persian quatrains; but it is still very difficult to decide whether the quatrains attributed to him are really his. Twenty-five of these poems were published in the Comptes-rendus de l'Académie des Sciences de Russie (1924, p. 36).

The Sufi writings of Nadjm al-Dīn form a transition from the older Sufism of the first theologians (the Nadjīpur school of the xiiith–xiiiith centuries) to the later Sufism of Ibn al-Arabi and his successors (Nadr al-Dīn Ḥaqqī, Fakhr al-Dīn Ṭarāḍī). Like the earlier theologians Nadjm al-Dīn likes to deal especially with the practice of Sufism, the stations on the way to true knowledge. Metaphysical questions however are also considered by him and his works with the writings of Ibn al-Arabi form the basis for the further development of philosophical theology in the xivith century. This is not the place to go fully into his conception of Sufism; but it is not to be doubted that his teaching can hardly be neglected in a careful investigation of the history of the development of Sufism.

NADJRAN, a district (Wādī) and town in northern Yaman, according to other (Ibn Khurādādbih, B. G. A., vi. 133, 248) in southern Nadīr or in the Ḥijāz (Bakrī, Muṣā'm, p. 575). The position and course of the Wādī has not been exactly ascertained. It rises on the eastern slopes of the Yaman highlands, probably between 43°
and 44° East Long., and runs, perhaps turning north at first, mainly in a southeasterly direction behind 15° and 17° N. Lat. finally disappearing in the great sand desert. The distance from San`a' [q.v.] is put at 6-7 days' journey (E. Glasei, *Skizze der Geschichte und Geographie Arabiens*, ii. 50); according to Philip's investigations (*The Heart of Arabia*, ii. 166 sq.), it is seven days' reasonable caravan journey south of Sulayl. The older idea that the course of the Wādī Nadīrān ran N. E. (or that there was a more northerly twin Wādī Hābūn) arose out of the erroneous idea first finally corrected by Philip (op. cit., p. 165) that the Wādī Dawāsir, with which the Wādī Nadīrān was wrongly thought to be connected, runs from W. to N. E.

The Wādī Nadīrān drains a wide area of northern Yemen and ʿAsir (Hamādān, *Sijist Djamal al-ʿArab*, p. 53, 110, 114, 247). It is, and was in antiquity, celebrated for its fertility. Of European travellers only Joseph Halévy visited it in the spring of 1870. He describes (*Bullet. de la Soc. de Géogr.*, series vi., vol. xii., p. 478) the valley, some 2 miles broad, as exceedingly fertile and well cultivated with villages concealed in thick palm-groves. Stobā (xvi. 781) calls it a peaceful and rich country. To Muslim writers it is a miracle of fertility and wealth, even more so than the Yemen in general; its cereals, vegetables and fruits were unriphied (Hamādān, p. 199 sq.); there were also mines there (Baladhūrī, *Kitāb Fathāt al-Bulūdūn*, p. 14) and the staple products of the Yemen, leather and cloth, were also made there. To this day in less favoured parts of Arabia they talk of the prosperity of this Wādī (Philip, op. cit., ii. 226).

The population of the Wādī Nadīrān, according to Philip, is comparatively large; the majority belong to the tribe of Yām. But several unrelated tribes, often at enmity with one another, share in the possession of this rich country. It was so in the early Muslim period. The Bann ʿl-Ḥārīh b. Kaʿb, who appear in Ḳālidī as lords of Nadīrān, were not really such. They belonged to the large group of tribes Madāḥīd; which was represented by other tribes also. Their rivals were and are Hamādīn tribes (Hamādān, p. 115, 9) among them Māḏīhīd, important at the present day, (subdivisions Yām etc.) and Bakrī (subdivisions ʿShākir etc.); other tribes like al-ʿAṣ, al-Aʃā etc. should also be mentioned. We have no reliable information about places with a settled population. In the eastern part of the Wādī. Halévy visited a village of Ḳahfa which was afterwards put on the maps at hazard. In the immediate vicinity was another village Ṣahīla, and an hour to the west Madīnāt al-Khuddūd (see below). The Arab geographers mention village (jūrā) of Nadīrān and the names of some of them are given as well as those of districts, tributary wāds, hills and springs.

Through Nadīrān runs the very old caravan road from Hadramawt through the Ḳūḥā to the eastern Mediterranean [cf. Marīz]. Nadīrān was of some importance as the last station in the Yemen on a caravan route from the Yemen to al-Yamānā and thence to Bahriyy and the Ṣafī. During Persian rule in the Yemen and later in the Abūbāsīd period this road must have been of no less importance than the one just mentioned to Syria, which latter however owing to its importance in the early period of Islam is almost alone mentioned in Muslim literature (A. Moberg, *The Book of the Himyarites*, p. ix.; cf. also M. Hartmann, *Die sudarab. Frage*, p. 496, 509). On the road see Ibn Khudādhibī (B. G. A., vi. p. 152 sq. and 193; A. Sprenger, *Post- und Reisereisen*, p. 134-135). A series of forts served to keep it safe (Sprenger, op. cit., p. 158; Hamadhānī, B. G. A., p. 28; Yāḥūṭ, *Muḥjam*, iv., p. 541 s.v. al-Mushāʾkha and thereon lyali, *Mufaddalīya*, ii. p. 105). On the present importance of the road and of Nadīrān, see Philip, op. cit., ii. 226.

The road in those days probably went several days' journey across the desert to the Wādī Dāwāsir, which was the first station on the other side; at the present day it is an insignificant village (q.v.) corresponding to it. This road via Nadīrān is certainly that which connected the Yemen at different times with the ancient Babylonia in the east, with Syrian Christian as well as with Iranian culture.

Little is known of the town of Nadīrān. Ptolemy mentions it as a metropolis. Aelius Gallus attacked it and destroyed it (Strabo, loc. cit.; Pliny, vi. 28 [323]). From this Glasei (loc. cit., ii. 50; cf. p. 224) concludes that there was no town of Nadīrān after this but the existence of the town is proved in many ways for various later periods (see below). Now however, no town seems to bear the name. Halévy thought he had found the ruins of the old town in Madīnāt al-Khuddūd (see below), which he describes as considerable ruins on the south bank of the river bed. Of the city wall roughly built of granite the south and west sides were less destroyed than the others. A mosque, which still stood among the ruins, belonged, according to local tradition, to the early Muslim or even pre-Islamic period (J. A., ser. vi., vol. xix., p. 90 and 49). In remarkable agreement with this, Bakrī, *Muḥjam*, p. 80 says: "Al-Ukhḍūd, which is mentioned in the Kurān, was in one of the towns of Nadīrān. This city however is now in ruins and nothing is left of it but the mosque which 'Omar b. al-Khaṭṭāb built'."

On the history of Nadīrān we have only scanty and mainly legendary notes. The name occurs several times in the South Arabian inscriptions: there is one (C. I. S., iv., No. 363) reference to the "towns" of Nadīrān (aḥārār N.; cf. above the towns of Yām N.). There was the Yām. In the oldest inscription of north Arabia, the Nabataean inscription of the year 328, the name is also found.

In the tradition of the introduction of Christianity into the Yemen, Nadīrān plays a part in keeping with its importance for the communications between Yemen and Mesopotamia (see above). According to one reference (*Histoire Néostérienne*, ed. Addini Scher, i. 218 sq. = *Patriol. Orient.*, iv. 330), it was a merchant of Nadīrān who first spread Christianity there after he had been converted in al-Ḥura. Christianity is said to have received a further impetus in the time of Justinian from monophysite Christians who, expelled by Byzantine territory, came to al-Nadīrān also via Ḳīra (op. cit., i. 51 sq.).

The Christian tradition of later persecutions of the Christians in South Arabia connected with Abyssinian invasions of the Yemen is widely disseminated; Nadīrān was the principal scene of these, first perhaps under Sharābīl Yasūk in the last third of the fifth century, notably under Dīn Nuwās, who died in 525. On this tradition
which exists in many forms, Greek, Syriac and Ethiopic, see A. Moberg, *The Book of the Histori- ees*, p. xxiv.—lxiii., where the sources and other literature to be consulted are given.

Arabic literature has also something to say about these happenings, especially in the annotations of the *Kūrān* exegists on Sūra Ixxvii. 4 sqq. on the *Aqīlib al-Ukhḍīd*. But what there is of historical value in this Muslim tradition comes from Christian sources; only it is usually so distorted as to be almost unrecognisable. What it records regarding the introduction of Christianity into Naḍrān by a certain Faimyūn or 'Abd Allāh b. al-Thāmīr is on the other hand a distortion of certain episodes in a Syriac Christian cycle of legends about the Persian martyrs Petheon and Yazid and has really nothing to do with Naḍrān or Arabian (A. Moberg, *Über einige christliche Legenden in der islamischen Tradition*, p. 5, 11 sq., 22, 30 and the references given). The name Naḍrān al-Ukhḍīd from the ancient Naḍrān is of course the result of the localisation of al-Ukhḍīd in Naḍrān. Hamdānī (op. cit., p. 67, 169) mentions in the same region a Balad or town of al-Ukhḍīd; C. van Arendonk mentions a hill Ukhḍīd (*De origine van het zaïdiësche Islamaat in Yeemen*, p. 168).

It is not till the time of Muḥammad and the early Caliphs that we have really historical references to the use of these and even these to be critically used. We are told that Khaliḍ was sent with 400 horsemen to the Banū 'l-Ihdūr b. Ka'b (and the Banū 'Abd al-Madān: Ibn Sa'd, 1/1, 112, 3) in Naḍrān and made them adopt Ḩiḍr and send an embassy in homage to the Prophet (Ibn Hishām, p. 595; Ibn Sa'd, 1/1, 72). 'Amr b. Hazm was appointed amīl in Naḍrān and 'Ali was ordered to collect the zakāt there (Wādiqī bi Wellhausen, p. 417 sqq.; Ibn Sa'd, 1/1, 122). In addition to pagans and Jews there were many Christians there who formed, it seems, an autonomous community. Muḥammad received an embassy from them also and concluded a treaty with them which guaranteed the possession of their property and the free exercise of their religion in return for a fixed contribution on their part (Ibn Hishām, p. 401 sqq.; Ibn Sa'd, 1/1, 84 sqq., 35 sqq.). This treaty was confirmed by Abū Bakr and 'Omar. 'Omar however at a later date drove the Christians and Jews out of the Arabian peninsula whereupon the Christians founded a new Naḍrān in the 'Irāq, two days' journey south of Kīfā. The details are variously recorded and it is not quite clear to what extent 'Omar's orders were actually enforced. Bakr (op. cit.) says that the Jews and Christians in Naḍrān were not at all affected by the measure. In any case, at a much later date (see what follows), there were not a few Christians in Naḍrān and there are of course still many Jews in the Yaman. In the year 40 A.H. Naḍrān was defeated by Djiyār (Abū dāwūd, Tāhā, i. 3452). The scantiness of the historical tradition, fantastic accounts of the wealth of the region and the remarkable liberty enjoyed by Christians in Naḍrān gave rise to legends and inspired poets. The "material" which thus arose is very fully detailed and utilised in H. Lammens, *Le Califat de Yezid 1er* (M. F.O. R., v/ii., p. 327—369).

In the end we find Naḍrān an important fortified town, often simply called al-Hadjar (cf. Hamdānī, p. 86), mentioned in the accounts of the fighting which led to the creation of the Zādi insāmāt in the Yaman in the third century A.H. At this time there were still Christians and Jews there, who were obviously still an important element and enjoyed considerable consideration from their Muslim neighbours (van Arendonk, op. cit., p. 128 sq.). On bishops of the Naḍrānīs or in the Yaman in the 7th and 8th century from Syrian sources see Moberg, *The Book of the Historiastes*, p. liv. The tributes of Naḍrān submitted to Turkish rule as little as those of eastern and northern Yaman generally. Naḍrān now belongs to the kingdom of Ibn Sa'd.

On other places Naḍrān see Yākūt, *iv. 751.*

**Bibliography:** given in the article and in some of the works quoted there; on the history cf. especially Balādhūrī, *Fatḥī*, p. 64—68; Caetani, *Annali dell' Islam*, i/ii., p. 312 sq., 317 sqq., 321 sqq., 349—355; i/ii., 350—359.

**Nafaka.** [See Nikāh Tālāk.]

**Al-Nafī.** [See Allāh, ii.]

**Nafi' b. al-ʿAlāʾrak al-Ḥanāfī al-Ḥanṣālī, Abī Rāshīd,** according to some sources, the son of a freed blacksmith of Greek origin (Balādhūrī, ed. de Goeje, *p. 56*, chief of the extreme Khāridjītes [q.v.], who after him are called Azrāḥītēs [q.v.]. At first, after his secession to Ahwāz, Nafi' joined 'Abd Allāh b. al-Zubayr [q.v.] in Makka. Soon, however, he and his followers turned their backs on the holy city and arrived before Bāṣra, where they spread terror among the inhabitants, who left the town in multitudes. Al-Mu̇ahallab, however, succeeded in driving them back to Persia. They made a halt in Ahwāz, where they practised išrā'īl in accord with their doctrine. The bloody battle of Dālār, fought against Muslim b. Thālūs, put an end to his life (64 or 65 = 683—684).

His special doctrine comprised the following points: 1. secession (barā'a) from the quietists (al-Kāshī); 2. examination (ṣajī), to those who wanted to join his encampment; 3. declaring in-fidels those who did not perform hidjra to him; 4. declaring it allowed to kill the wives and children of opponents. This is al-ʿAshʿarī's enumeration, which differs slightly from that of al-Shābāštī (*p. 90*).

NÁFILA (A.), plur. náwâfil, part. art. fem. I from n-f-l, supererogatory work.

1. The word occurs in the Qur'án in two places. Sūra xxi. 72 runs: “And we bestowed on him [viz. İbrâhîm Isaac and Jacob as additional gift] (nâlātân).” In Sūra xxi. 61 it is used in combination with the vigils, thus: “And perform vigils during a part of the night, reciting the Qur'án, as a náfîl for thee.”

In hadîth it is frequently used in this sense. “Forgiveness of sins past and future was granted him [Muḥammad] and his works were to him as supererogatory works!” (Ahmad b. Hanbal, vi. 250). — In another tradition it is said with reference to the month of Râmâdân, that Allah “vouchsafes even before its beginning” (Ahmad b. Hanbal, ii. 524). Of peculiar importance, also in a different respect, is the following hadîth hadît: “When My servant seeks to approach to Me through supererogatory works, I finally love him. And when I love him I become the hearing through which he heareth, the sight through which he seeth, the hand with which he graspeth, the foot with which he walketh” etc. (al-Bukhârî, Kifâyât bâb 38).

Finally the following tradition may be translated: “Whoso perform the náfilah” [q. v.] in this way [viz. in the way described in the foregoing part of the tradition], receives forgiveness of past sins and his salâh and his walking to the mosque are for him a náfîl” (Muslim, Tahârâ, trad. 8; Mâlik, Tahârâ, trad. 30). In the parallel tradition (Muslim, loc. cit., trad. 7), the term is kifâyât “expiration.” — This parallelism is an indication of the effect ascribed to supererogatory works in Muslim theology, viz. the expiration of light sins (cf. al-Nawâlî on Muslim, Cairo 1283, i. 308).

Further it must be observed that in theological terminology náfîla is often applied to those works which are supererogatory in the plain sense, in contradistinction to other works which have become a regular practice. The latter are called sunna, mu'âkbâda, the former náfîla or sunna náfilah (cf. infra, sub 2).

The place of supererogatory works in theology is further accurately defined in the Wâsiyát Abî Hanîfâ, art. 7: “We confess that works are of three kinds, obligatory, supererogatory and sinful. The first category is in accordance with Allah’s will, desire, good pleasure, decision, decree, creation, judgment, knowledge, guidance and writing on the preserved table. The second category is not in accordance with Allah’s commandment yet according to His will, desire” etc.

The term for supererogatory works used here is not náfîla, but fâdîla.

2. Náfîla is used in hadîth especially as a designation of the supererogatory salâh (Bukhârî, Kifâyât, bâb 11; Tâhâdîdîdî, bâb 5, 27). Sometimes it appears in the combinations salât al-nâfilah (Ibn Mâdhîn, Tâhârâ, bâb 203) and salât al-nawâfil (Bukhârî, Tâhâdîdîdî, bâb 36).

In jîhâd this terminology is often, but not always followed, the other term for the supererogatory salâhs being salâh al-tâfaawwûn (e. g. Abû ʿIshâq al-Shârîzî, Kitiâb al-Tanbîh, ed. A. W. T. Juynboll, p. 26), a term that goes back to the Qur’án (Sūra ii. 153, 180; ix. 80), and which occurs also in canonical hadîth (Abû Dâwûd has a Kitiâb al-Tâfaawwûn in his Sunan). The whole class of supererogatory salâhs is called náwalî as well as sunan. Nâfilah, as a general designation of supererogatory salâhs, covers three subdivisions. The following juxtapositions may give a survey of the terminology:

<table>
<thead>
<tr>
<th>Nâfilah (Fatîhid al-Munawwir, i. 156, Hanâfî)</th>
<th>Sunan (Fagnan, Addition, p. 23, Mâlikî)</th>
</tr>
</thead>
<tbody>
<tr>
<td>sunna</td>
<td>náfilâ</td>
</tr>
<tr>
<td>mandâthâ</td>
<td>nâlâtâ</td>
</tr>
<tr>
<td>tâfaawwûn</td>
<td>námilâ</td>
</tr>
<tr>
<td>mu'âkbâda</td>
<td>níshâfî</td>
</tr>
<tr>
<td>râzâkâna</td>
<td></td>
</tr>
</tbody>
</table>

It may be added that the term râzâkâna is used especially for the supererogatory salâhs preceding or following the musâkâta; they belong to the first subdivision.

In Şî'î jîhâd náwalî is the widest term; by mu'râqgâhâbâl the daily and non-daily supererogatory prayers are designated.

(A. J. Wensinck)

AL-SAIYIDA NAFISA, a mausoleum outside Cairo, south of the Mosque of Ahmad b. Tüla in the direction of the sepulchral mosque of al-Shârî. Among the female saints [cf. WALT] in Cairo next to Saiyida Zainab bint Muḥammad [q. v.] and “Sitt Sekîna” (Sakalîn) “Sitt Nefîsa” takes a very prominent place. In the official recitations of the Qur‘an, the Saiyida Nafisa, where the reading is held on Sundays, takes third place among them all immediately after Imám al-Shârî and Imám al-Husaini (see Bergstrasser, in Ist., xxl [1933], 110 sqq.). The sanctuary is visited by both men and women, especially in the evening. The door leading to the sarcophagus itself is only opened once a year. The following number of other buildings besides a mosque, including a library and Süfî cells. The land around it is a much sought after place of interment.

Nafisa was a daughter of al-Hasan b. Zaid b. al-Hasan [q. v.]. She came to Egypt with her husband ʿIshâq al-Mu‘tamin, a son of Djezîf al-Sâdîk [q. v.]. She had a reputation for learning and piety. Şâhî frequently visited her to collect traditions; on his death, his body was brought to her house so that she might say the prayer for the dead over him. She had children but her descendants soon died out. She herself died in
Nafs

Nafs! (A,) soul. Nafs, in the early Arabic poetry, meant the self or person, or ruh meant breath and wind. Beginning with the Kur'ân nafs also means soul, and ruh means a special angel messenger and a special divine quality. Only in post-Kur'ânic literature are nafs and ruh equated and both applied to the human spirit, angels and djinn.

I. The Kur'ânic uses. A. Nafs and its plurals anfus and nafus have five uses: 1. In most cases they mean the human self or person, e.g., ill. 54: "Let us call...ourselves and yourselves": also xii. 54; li. 20, 21. 2. In six verses nafs refers to Allah: v. 116b: "Thou [Allah] dost know what is in myself [says 'Isa], but I do not know what is in Thyself (nafsika)"; also iii. 27, 28; vi. 12, 54 and xx. 45-5. One reference, xxv. 4 (cf. xili. 17), is to gods: "They [nafs] do not possess for themselves (anfusikum) any harm or benefit at all!" 4. In vi. 130 the plural is used twice to refer to the company of men and djinn: "We have witnessed against ourselves (anfusina)". It means the human soul: vi. 93: "While the angels stretch forth their hands [saying, Send forth your souls (anfuh)]": also l. 15; lxxiv. 16; lxxix. 40, etc. This soul has three characteristics: a. It is amrniru, commanding to evil (xii. 53). Like the Hebrew nefesh the basal idea is "the physical appetite," in Pauline usage w3kh, and in the English New Testament "flesh." It whispers (l. 15), and is associated with al-haza, which, in the sense of "desire," is always evil. It must be restrained (lxxix. 40) and made patient (xvii. 27) and its greed must be feared (lix. 9b). b. The nafs is lawwama, i.e., it upbrands (lxv. 2); the souls (anfuS) of deserters are straitened (lx. 119). c. The soul is addressed as nafjina, tranq wil (lxxix. 27). These three terms form the basis of much of the later Muslim ethics and psychology. It is not-worth that nafs is not used in connection with the angels.

B. Ruh has five uses: 1. Allah blew (nafakh) of His ruh, a., into Adam, giving life to Adam's body (xv. 29; xxxviii. 72; xxxii. 8), and b. into Maryam for the conception of 'Isa (xvi. 91 and xxxvi. 12). Here ruh equates with ruh and means the "breath of life" (cf. Gen. ii. 7), the creation of which belongs to Allah. 2. Four verses connect ruh with the anm of Allah, and the meanings of both ruh and anm are disputed. a. In xvii. 87, it is stated: "They ask thee [O Muhammad] about al-ruh; say: al-ruh min anw' rabbii, and ye are brought but little knowledge." b. In xvi. 2, Allah sends down the angels with al-ruh min amrikhu upon whomsoever He wills of His creatures to say: "Warn that the fact is, There is no God but Me, so fear." c. In xi. 15, Allah "cast al-ruh min amrikhu upon whomsoever He wills of His creatures to give warning," d. In xlii. 52: "We revealed (sawllin) to thee [O Muhammad] ruhan min amrikhu; thou knewest not what the book was, nor the faith, but We made it to be a light by which We guide whomsoever We will of Our creatures." Whatever meanings anm and min may have, the contexts connect al-ruh in a. with knowledge; in b. with angels and creatures, to give warning; in c. with creatures, for warning, and in d. with Muhammad, for knowledge, faith, light and guidance. Therefore this ruh is special equipment from Allah for prophetic service. It reminds forcibly of Bezalel, who was "filled with the spirit of God in wisdom, in understanding and in knowledge" (Exodus xxx. 30, 31). 3. In iv. 169, 'Isa is called a ruh from Allah. 4. In xviii. 4; lxxviii. 38 and lxx. 4, al-ruh is an associate of the angels. 5. In xxvi. 193, al-ruh al-amini, the faithful ruh, comes down upon Muhammad's heart to reveal the Kur'ân. In xix. 17, Allah sends to Maryam "Our ruh," who appears to her as a well-made man. In xvi. 104, ruh al-kubus sent the Kur'ân to establish believers. Three other passages state that Allah helps 'Isa with ruh al-kubus (ll. 81; ll. 254 and vi. 109). This interrelation of service and title imply the identity of this angelic messenger, who may be also the ruh of 4. Thus in the Kur'ân ruh does not mean angels in general, nor man's self or person, nor his soul or spirit. The plural does not occur.

C. Nafs, breath and wind, cognate to nafs in root and to ruh in some of its meanings, does not occur in the Kur'ân, but is used in the early poetry (F. Krenkow, The Poems of Tufail and At-Tirimmah. London 1927. p. 32). The verb tanafasa (Sura lxx. 15) is derived from that meaning, while the only other Kur'ânic forms from the same radicals are fultanafasi 'l-mutannahum (lxxiii. 26) and are derived in al-'Abari, Dhami al-Bayan, Cairo 1921, lxxv. 57, probably correctly, from nafs, "he desired".

II. The Umayyad poetry first uses ruh for the human soul (Kitab al-Idhâm. ed. 1285, xvi. 126, last line; Cheikh, Le Christianisme, Bairiat 1923, p. 338) where the Kur'ân had used nafs as in No. 5 above.

III. Of the early collections of traditions, Malik's al-Muwatta', Cairo 1359, l. 126 uses nasama, which does not occur in the Kur'ân, and nafs (ll. 262) for the soul or spirit, while Ibn 'Hambal's Musnad uses nasam (vi. 424), nafs (l. 297; ii. 364; vi. 149) and nafs and ruh (iv. 287, 296).
Muslim's al-Saḥīḥ (Constantinople 1331), viii. 44, 162 sq. and al-Dūghānī's al-Saḥīḥ, Cairo 1314, iv. 153, both use ṛūḥ and arwāḥ for the human spirit.

IV. The Tadhīb al-ʿArūṣ (v. 260) lists 15 meanings for nafs and adds two others from the Līlān al-ʿArab, as follows: spirit, blood, body, evil eye, presence, specific reality, self, tan, haghhtiness, self-magnification, purpose, disdain, the absent, desire, punishment, brother, man. It states that most of these meanings are metaphorical. The Līlān (viii. 119-126) finds examples of these meanings in the poetry and the Kurān. Lane's Arabic Lexicon faithfully reproduces the material (p. 28576).

The lexical treatments of nafs disclose these facts: 1. Any attribution to Allah of nafs as "soul" or "spirit" is avoided. 2. In man, a. nafs and ṛūḥ are identified, or b. nafs applies to the mind and ṛūḥ to life, or c. man has nafs, two souls, one vital and the other discriminative, or d. the discriminative soul is double, sometimes commanding and sometimes forbidding.

V. The influences that affected the post-Kurānīc uses of both nafs and ṛūḥ were the Christian and Neo-Platonic ideas of ṛūḥ with human, angelic and divine applications, and the more specifically Aristotelian psychological analysis of nafs. These influences are clearly shown in the records of the religious controversies.

A. Al-ʿAṣḥārī [q.v.] (H. Ritter, Die dogmatischen Lehren der Anhänger des Islam von Abu'l-Ḥasan ʿAllī ibn Ḥunayn al-ʿAṣḥārī, Istanbul 1929) reports the Rāfiḍīya doctrines of the incarnation of ṛūḥ Allāh in Adam and its transmigration through the prophets and others (p. 6, 46), as well as the conflicting positions that man is body (ḏiyūm) only, body and spirit, and spirit (Ṭūḥ) only (p. 61, 329 sqq.). His creed of the orthodox (p. 290-297) omits any statement about the nature of man.

B. Al-Baghdādī [q.v.] (al-Farāk bāḥn al-Farāḥ, Cairo 1328) records the same heretical doctrines about man's nature (p. 28, 117 sqq., 241 sqq.), says the transmigration theories, were held by Plató and the Jews (p. 254) and describes the incarnation beliefs of the Ḥulūliya sects (cf. Ḥulūl] among whom he includes the Ḥallāḏiyā (p. 247). His position is "The life of Allāh is without ṛūḥ and nourishment and all the arwāḥ are created, in opposition to the Christian doctrine of the eternity of the Father, Son and Spirit" (p. 325).

C. Ibn Ḥazm [q.v.] uses nafs and ṛūḥ interchangeably of man's soul (Kitāb al-Fīqḥ fī l-Milāḥ, 5 parts, Cairo 1317-1321; v. 66). He excludes from Islam all who hold metempsychosis views, among whom he includes the physician-philosopher Muhammad b. Zakariyyā al-Kāzī (i. 90 sqq.; iv. 187 sqq.). He rejects absolutely the doctrine of some of the Ashʿarīya of the continual re-creation of the ṛūḥ (iv. 60). He always that ṛūḥ created the spirits of all Adam's progeny before the angels were commanded to prostrate to him (Ṣūra vii. 171), and that these spirits exist in al-Barzakh [q.v.] in the nearest heaven until the angel blows them into embryos (iv. 70).

D. Al-Shahrastānī [q.v.] (Kitāb al-Mīlāḥ wa-l-Nihāl, ed. Careton, part i, London 1842) in his description of the belief of the pagan Arabs concerning survival after death does not use the terms nafs or ṛūḥ, but says the blood becomes a wahrān bird that visits the grave every hundred years. One of his most important sections (p. 203-240) deals with the orthodox and heterodox doctrines of al-ṭūḥ. Al-Hunayn [q.v.], or true believers, debate with al-Saḥīḥ [q.v.], who are dualists, eucharitians and gnostics. His account of the views of the Ṣab'a faithfully reflects the doctrines of the Ṣab'a (Rāṣūl, 4 vols., Bombay 1305), who taught that man is a whole compounded of a corporeal body and a spiritual nafs (i.ii., 14), and that the substance (ḏjuhr) of the nafs descended from the spheres (al-ṭūḥ). But al-Shahrastānī rejects the Neo-Platonic idea that human souls (nafs) are dependent upon the souls of the superhuman spirit world (al-nafṣ al-ṭūḥāmiyāt) (p. 210, 224 sqq.), and the Hermetic doctrines that the nafs is essentially evil (p. 236) and that salvation consists in the release of the ṛūḥ from material bodies (p. 226 sqq.). He applies the term ṛūḥ to all spirits, good and evil (p. 213). His description of the nature of man (p. 216 sqq.) with three souls, vegetative, animal and human, each with its own source, need, place and powers, resembles that of the Ṣab'a (Rāṣūl, ii. 48 sqq.). Indeed, the Aris and Al-Kindī reject the idea of the human soul as given in De Anima and handed down by Alexander of Aphrodisias and Porphyry, had been adopted with little modification by the Muslims philosophers, such as al-Kindī [q.v.], al-Fārābī [q.v.], each of whom wrote a Kitāb al-Nafs, Ibn Sīnā [q.v.] who wrote two, and Ibn Miskawayh [q.v.], whose Tahāfūt al-Ṭūḥāk has the same inmaterial (p. 1) and functional (p. 7) psychology for its ethical basis. Al-Shahrastānī achieved the long needed interpretation of the conflicting usages of nafs and ṛūḥ in the Greek and Christian heritage, and in the Kurān and Muslim tradition. But the philosophers, even with his support, were not able to force the Greek psychology upon orthodox Islam. The Muṭahallīmus [s. art. KALK] and the great majority of Muslims broadened the ṛūḥī terminology, but retained the traditional views of the nature of the soul as a direct creation of Allāh having various qualities.

VI. Aristotle's principle of the incorporeal character of spirit had nevertheless found a permanent place in Muslim doctrine through the influence of Islam's greatest theologian, al-Ghazālī [q.v.]. In al-Tahānawi's Dictionary of the Technical Terms (ed. Sprenger, Calcutta 1862) are extracts of the doctrines of al-Ghazālī on man's ṛūḥ and nafs. He defines man as a spiritual substance (ẓāhlor ṛūḥān), not confined in a body, nor imprinted on it, nor joined to it, nor separated from it, just as Allāh is neither without nor within the world, and likewise the angels. It possesses knowledge and perception, and is therefore not an accident (p. 547 at top; cf. Tahāfūt al-Fihās, Cairo 1302, p. 72). He devotes the second section of al-Risāla al-Laduniyya (Cairo 1327, p. 7-14) to explain the words nafs, ṛūḥ and ḥālī (heart), which are names for this simple substance that is the seat of the intellectual processes. It differs from the animal ṛūḥ, a refined but mortal body in which reside the senses. He identifies the incorporeal ṛūḥ with al-nafs al-mustajāna and al-ṭūḥ al-amālī of the Kurān. He then uses the term nafs also for the "flesh" or lower nature, which must be disciplined in the interests of ethics.

VII. This position of al-Ghazālī's was that of the theistic philosophers in general, as well as some of the Muṭahallīmus and the Shīʿa, but it has never dominated Islam. The great analytical philosopher
and theologian, Fāyḥr al-Dīn al-Rāzī, could not bring himself to accept it. In his Mushafīt al-Ghāth, v. 435, commenting on Sūra xvii. 85, he quotes as the opinion of al-Ghazālī the statement that in the latter’s Tahāfūt (p. 72; cf. also Rāzī’s Muḥājrat, Cairo 1323, p. 164), but on p. 434 (l. 9 and 8 from below) of the Mushafīt he acknowledges the strength of the corporeal doctrine, and in his Manzil Īdt al-Dīn, on the margin of the Muḥājrat, soul (nafs) is presented as blameless (ṣītīl) the view of the philosophers that the nafs is a substance (ḏawarāḥ) which is not a body (ḏārim) and not corporeal.

VIII. Al-Baidāwī’s [q. v.] system of cosmogony and psychology is given in his Jawāl al-Anwār (lithograph ed. with commentary Abu ʿI-Thānak’ al-Jsāfānī and gloss by al-Djardjant, Stambul 1305, p. 285 sqq.; Brockelmann, G. A. L., i. 418, ii. 111, printed Cairo 1323). He discusses 1. The classes of incorporeal substances, 2. the heavenly intelligences, 3. the souls of the spheres, 4. the incorporeality of human souls, 5. their creation 6. their connection with bodies and 7. their survival. His cosmogony follows: Allāh, because of his unity, created only one Intelligence (ʿāfd). This Second Intelligence, that emanated first (ḍa’īfl) from Allāh, is the cause (ʿillā) of all other potentialities and is not body (ḏārim), nor original matter (ḥayūṭ) nor form (ṣawwā). His secondary cause (ṣabāb) of another Intelligence, that emanates from the second a third intelligence and so on to the tenth (p. 288) who is the rāū of Sūra lxxviii. 38 (cf. al-Baidāwī’s Anwār al-Tanzil, ed. Flesicher, ii. 353; l. 4) whose effective influence is in the world of the elements and who is the producer of the spirits (arwāḥ) of mankind. Below these intelligences are the high or heavenly angels, which the philosophers call al-nafs al-falāḥiyā, and the low nafsān, which are in two classes: earthly angels, in control of the simple elements and the earthly souls, such as the reasoning souls (nafs nāṭḥiḥī) controlling particular persons. In addition (p. 285) there are the incorporeal substances, without effect or control, who are angels, some good (al-kurāb) and some evil (al-gharāb) and the qīnān, who are ready for both good and evil. This is the classification he refers to in his commentary on Sūra ii. 28 (ed. Flesicher, i. 47, 23). His psychology resembles that of al-Ghazālī, whom he mentions (p. 294). For the incorporeality of the soul (ḏawārāḥ al-nafs) he presents five arguments from reason, four Qurʾān verses and one tradition. His commentator remarks (p. 300) that these prove only that the soul differs from the body. He then argues that all nafsān are created when their bodies are completed. The nafs (p. 303) is not embodied and is not close to the body, but is attached as the lover to the beloved. It is connected with that rāū which comes from the heart and is generated of the finest nutritive particles. The reasoning nafs produces a force that flows with that rāū through the body, producing in every organ its proper functions. These functional powers are perceptive, which are the five external senses, and the five internal faculties of the human consciousness, imagination, apprehension, memory and reason, and the active (al-nudhirāb) which are voluntary (ṣītīyā) and natural (ḏabīyā, p. 308).

IX. The dominant Muslim doctrine concerning the origin, nature and future of al-rāū and al-
manifestation of the Divine essence. This place receives a rûh, who is Adam, the khalîfat and the perfect man. He discusses (Nyberg, op. cit., p. 129 sqq.) the essence and properties of the rûh, quoting among others the view he says is "attributed" to al-Qazwînî which is in al-Tâkhyât (as above). He finds the differences of doctrine harmless because all agree that the rûh is associated with the agent of the last tractate on the nafs and rûh (M. Asín Palacios, Tratado Acerca del Concepción del Alma y del Espíritu, in Acta du XIVe Congrès international des Orientalistes, Paris 1906, iii. 167—191) he describes how men may reach the distinction of "the perfect man" through the cultivation of the qualities of the rûh and the suppression of the nafs.

Ibn al-Arâbî's contemporary, the poet Ibn al-Fârîd (Nicholson, Studies in Islamic Mysticism, Cambridge 1921, chap. iii.), at times identifies his own rûh with that from which all good emanates (al-Tâ'âya al-کhârîja, on margin of Dânîn Ibn al-Fârîd, Cairo 1319, ii. 4 sq.) and with the "pole" (kuh) upon which the heavens revolve (p. 113, 115). Al-Kâshânî, the commentator of al-Tâ'âya, explains that this identity is with the greatest spirit (rûh al-arwaâh) and the greatest "pole." The compiler of the commentaries on the Dânîn states (ii. 196) that incarnation (kuhîli) and union (îshrâh) with Allah are impossible, but there is real "passing away" (fana) and attainment (wâliî) of the rûh and nafs in the nafs of Allâh, for His nafs is their nafs.

Abd al-Karîm al-Dîljânî carries this position of existential monism on to strict animistic pantheism. In al-Însân al-khânîl (q.v.) (Cairo 1343) the terms rûh al-kûdus, rûh al-arwaâh and rûh Allâh stand for a special one of the aspects of the Divine Reality (al-Hâkîkî), not to be embraced under the command "be" nor created. This spirit is the divine aspect in which stand the created spirits of all existences, sensible and intelligible (p. 94). Existence itself subsists in the nafs of Allâh, and His nafs is His Essence (adlîn). Moreover, each sensible thing has a created spirit (rûh) (p. 94). One of the aspects of the angel of Sûra xlii. 52, who is named the command (amr) of Allâh, and who is an aspect of Allâh as above, is given to the rûh of Muhammad, which is identified as the rûh mentioned in the verse. That angelic and divine rûh thereby becomes the Idea (khâlık) of Muhammad (p. 95 sq.) and he thereby becomes the "perfect man" (p. 96, 131 sqq.). The rûh which is the specific nature of the human nafs has five names: animal, commanding to evil, instinctive (al-mulâkhana), reviving, and tranquil. When the divine qualities actually describe the nafs, then the names, qualities and essences of the gnostic (arifî) are those of the One Known (Mā'dîrîf) (p. 150 sq.).

XI. In geomancy ("Jim al-râmîl") the first "house" (sâtî) of the umûmâtî (cf. Madâgascar, supra, iii. 73) is called nafs because it guides to problems concerning the spirit of the inquirer, and to the beginning of affairs (Muhammad al-Zanîtî, Kitâb al-Fasîl fî 'Jim al-Râmîl, Cairo n.d., p. 7; cf. Henr. Corn. Agrippae, Opera, Leyden, n. d., but early xvith cent., p. 412: Nam primus dominus personam tentat quaerentis.

AL-NAFUSA, in Berber Infesin, name of a Berber tribe. According to the common genealogical scheme (cf. Ibn Khaldûn, Kitâb al-Ibar, i. 107—117 of the text), the Nafusa are one of the four branches of the large body of the Botr, whose name derives from their chief Mâghîths al-Abtar. At present the dwelling place of the Nafusa is south-west of Tripoli, on the plateau of the same name which from the frontier between Tunisia and Tripolitania tends eastward, if taken in the largest sense, comprises the regions of Nûlt, Fassafo and Yefren. The inhabitants of these regions are generally called Nafusa, although, in a genealogical sense, this name can be applied to some groups only. Probably the name Djalal Nafusa (in Berber Drâr n Infesin), which originally belonged to a part of the plateau, was extended to the large area between Wazzen and Yefren on account of the fact, that of the tribes inhabiting it, the Nafusa were of prominent importance. This use of the name in its widest sense is also to be found in the book by Ibrahim b. Shimân al-Shamâmhi "Castles and Ways of the Nafusa plateau" (1302 = 1884—1885), in which all the territories of Yefren, Fossafo and Djalâl are mentioned.

The scarce data on the history of the Nafusa, which we possess, are to be found, for the largest part, in Arabic sources. In the Greek and Latin authors of pre-Islamic times there is no single sure allusion to them. The name occurring in Cosippus Tophanius (second song, l. 146: Quaeque nefanda colunt tristis montana Navusi), does not refer, in all probability, to a place or a tribe of Tripolitania, but rather of the Aurâs (Awras), its plateau or its neighbourhood. The fact that Navus represents a form closely connected with Nafusa, proves only that the name was widely spread among the Berbers, that it is old and may be probably connected with such words as anfûsîn, fem. anfûsîn "right, to the right hand" in Arabic.

In Islamic times the name is recorded for the first time in connection with the capture of the town of Tripoli by 'Amr b. al-Âs (22 or 23). According to Ibn Idrîs (i. 2 sqq., text) the siege of the inhabitants was called to their aid the Nafusa who came to their aid. At that time they were residing also in the vast plain of Djafara, situated between the Djabal and the Sea; one of their chief towns, if not their capital, was Sabra on the coast (Roman Sabratha, formerly Phoenician), west of Tripoli, which by Ibn Khaldûn (Ibar, i. 181, l. 8, text) is called "the city of the Nafusa." This town was taken
by surprise and plundered by a body of cavalry sent by 'Amr. This raid was probably undertaken not only to continue the conquest farther westward, but also to punish the Nafusa, whose territory 'Amr had invaded in order to conquer it (cf. al-Bakri, p. 9, 10, text), and which he had to abandon by order of the Caliph.

According to some sources, the Nafusa at that time were Christians; according to other reports, however, they were Jews. Our latest local information makes it probable that Christianity had spread widely among them; though the conversion of single groups to Judaism is not excluded. In fact traces of Byzantine basilicas have been found on the plateau, e.g. at Temezda, 'Imramen etc., which are also mentioned in some sources and which must have been used by large numbers of the indigenous population.

When the Arab had conquered North Africa, the Nafusa of Saba and of the coastal region retired, according to the common opinion, to the plateau, where they remained hostile towards the conquering forces. A fresh attack of the Tripolita population, however, makes it clear that a part of them must have stayed in their old dwelling-places where they intermarried with other tribes and, in course of time, became arabised. In fact there are tribes in the Western Djafera and in Tripoli, the town and its surroundings (the regions of al-Sahl, Taguira, etc.), that, according to the local genealogy, derive from the Nafusa. Apart from this ethnic tradition, there is the fact, recorded in several sources, that after the first case of intervention of the Nafusa in the affairs of the town of Tripoli — which may have been partly due to a Christian opposition to the Muhammadan invasion — they wanted, under successive dominations, to make their presence felt and their influence preponderant in the north-western region of Tripolitania, so that the outlines of the history of the small, but strong and civilised Berber unit may be supposed to be the following. Having its centre in the plateau, it intended to make felt, as often as possible, its dominion in the coastal region and thus keep the control of the main way of communication between Egypt and Ifrikiya, which ran along the coast and which was followed by the various expeditions to the Maghrib. Even at present such aspirations may be stirred in the minds of the most cultivated of these populations, to such an extent that even some of them have reckoned with an eventual reoccupation of their old territories in Western Djafera.

The period in which the Nafusa, according to the sources available to us, vigorous were most active and took a part in the events happening in North Africa, was that of the great Kharijij [q. v.] revolts, which began in 122 (729—740) and did not cease before the ivth (5th) century, i.e. before the era of the Fatimids. When the Wahbi doctrines began to spread among the North African populations in the second century A.D., they embraced them and so joined the rebellious movement of the Berbers against the Arab conquerors, a movement which, prepared by several other causes, found also some support in the Kharijij heterodoxy. The Nafusa embraced the Ibadhi, i.e. the more moderate form of the Kharijij doctrine, and remained ever faithful to it with heroic attachment. In alliance with other Berber tribes, either Ibadis or other branches of the sect, they repeatedly made war upon the Arab governors of Ifrikiya.

In 140 (757—758), they elected as their imam, probably with the intention of founding an Ibadite principality — an intention which manifests itself also at other times — an Arab called Abu 'l-Khaṭṭāb 'Abd al-A'īn b. al-Samh al-Muṣaffir [q. v.], one of the missionaires of Ibadism in North Africa. Under his command and in conjunction with other Berber groups, they occupied Tripolis, fought against the Susrife [cf. al-Sufiriya] Wafargjuma, who had sacked Kairawan where they had settled, and against the armies sent by the 'Abbāsids to reconquer Ifrikiya. Finally, in 144 (761—762), Abu 'l-Khaṭṭāb and a large number of his followers perished near Tanorqha (Tawurgha) in a great battle against the general Muḥammad b. al-Āsh'ār al-Khuzāʾi, the governor of Ifrikiya.

Another notorious imam of the Nafusa was a Berber Abu Ḥattīm Yaḥyā b. [q. v.], whose enterprises survive in oral tradition on the plateau, who speaks of his 175 expeditions with the Arabs. He was killed in battle in 152 (771). When the Ibadī kingdom of the Rustainids [cf. Rustam], which had Tahirt as its centre, had been founded, the Nafusa did not elect an imam of their own any more, but formed a part of this kingdom under a governor who depended upon it. Some of these governors, e.g. Abū Ḥālid 'Abd al-Ḥamid al-Djanawīn (of Iğnāvān), Abū Mauṣūr Ḥiyāb (of Tendemmira), are often praised by the Berbers of the Djafer, for their importance and ability in maintaining the interests of Ibadism, and also for their learning and piety.

The Nafusa were a valuable support of the kingdom of the Rustainids, of which they formed the eastern bulwark. Being near the territory of the Aghlabides [q. v.], they shared to some extent the vicissitudes of this state which had arisen in Ifrikiya in the beginning of the ivth century A.D. The town of Tripoli was in the possession of those princes: Western Djafera, on the other hand, till near the Sea, and probably also part of Eastern Djafera, was in the power or under the influence of the Nafusa. When Tripoli was beleaguered in 267 (880—881) by the Tulūn prince al-ABBĀS, who, having revolted against his father Almād, sought to conquer Ifrikiya at his own risks, the Nafusa were called to aid, and, appearing without delay, they defeated the army of the invaders (according to other sources, their help was invoked by the inhabitants of Lebd). This fact, which reminds of the first siege of Tripoli by the Muslims, proves clearly the influence the Nafusa possessed in northwestern Tripolitania and it accounts also for the severe blow dealt to them in 283 (896—897) by the Aghlabides, when Ibrāhīm II b. Almād, who led an expedition from Tunis to Egypt, found his passage through the coastal region of Tripolitania barred by the Nafusa. The bloody battle of Mānāt, which was followed by acts of terrible cruelty inflicted upon hundreds of Nafusa prisoners, and which is narrated in a more or less anecdotal form in the Sunni as well as in the Ibadī sources, is ascribed, ultimately, to the desire of the Caliph to punish the Nafusa who were the principal support of the heretical state of Tahirt; or to the resentment of the Aghlabides at acts of enmity committed
by the Berbers, as well as in the humiliation they had suffered when the expedition of the Tulunid al-Athas, which was directed against them, had been averted by the Nafusa, to whom this exploit became a point of glory.

In reality, however, taking into account the whole political situation as well as the historical antecedents, it is evident that that battle, which is still mentioned in the oral tradition of the Idrisites as the most terrible disaster they ever suffered, was the inevitable encounter between the Aghlabid power and the supremacy of the Nafusa exercised in the former's immediate vicinity and even in its own territory.

Many of the Aghlabids as well as that of the Rustamids had been destroyed by the Fatimids \[q.v., the Nafusa found themselves face to face with those new masters of Eastern Barbary. There exist reports of an instance of their strenuous opposition to Fatimid powers which endeavoured to subdue them in 310 (922—933), and which defeated them in the following year.

There are, however, reports concerning the part taken by the Nafusa, or at least by tribes from the plateau, in the great Khairid rebellion, which was led by Abu Vasid and which ended with the victory of the Fatimids. Probably the Idrisite populations of the Djohal, although having given up the idea of forming one large autonomous state, endeavoured to avoid any dependence upon the various kingdoms and empires which successively held the supremacy in North Africa, while the latter, on the other hand, endeavoured, as far as possible, to obtain a footing also in the mountainous region which forms the strategic key to the plain stretching towards the coast.

When the Almohades \[q.v.] undertook the conquest of Western Ifrikiya under Abd al-Mumin (554—555 = 1159—1160), the Nafusa were also subdued by his army. Their territory became the scene of violent struggles and massacres, of raids and partial conquests during the long period of the reign of the Banu Chihnya, who attempted to restore the Almoravid empire and who, from 580 (1184—1185) onwards, for nearly half a century and with varying success, fought chiefly in Oriental Barbary. In these fights Arabs of the tribe of Debba (belonging to the Banu Sulaim), took part who had come to Tripolitania during the well known invasion of the Banu Hithal and Sulaim. Some clans of the Debba, especially the Mahjamid and the Djouwi, settled in the coastal region west of Tripoli, where the Nafusa had exercised their power before. Yet the great mass of the latter must have retired to the plateau not at the time of the conquest, but in consequence of the Arab invasion.

The Nafusa remained in nearly the same attitude of defence of their independence, during the supremacy in Ifrikiya of the Hashids \[q.v., and, afterwards, of the Turks. While other populations in the neighbourhood gave up their Ibadism in order to embrace Sunnism, and consequently became arabised, the Nafusa stuck to their faith and to their Berber vernacular, withdrawing themselves to the rough coasts of their mountains, and from time to time taking part in the acts of hostility and in the rebellions which the interior opposed to the efforts of the government of Tripoli to maintain its own authority and, chiefly, to levy taxes.

In the nineteenth century, the Turks, after having re-taken in 1251 (1835—1836) the direct administration of Tripoli, had to fight long and bitterly for the conquest of the plateau of the Nafusa also. The struggle lasted, with varying success, till 1274 (1857—1858); in this period the shahkh Chihna b. Khalifa distinguished himself by courage and endurance; he is usually represented as the hero of Berber independence defended against the Turks. In reality, however, he was an Arab and the Arab tribe of the Mahjamid had the largest share in the wars, while the Berbers, according to all appearance, did not take part in them on a large scale. During the Italian occupation of Tripolitania in 1911, the Nafusa were at first hostile in accordance with their old aspiration to found an independent Idrisite kingdom which should extend up to the Sea and include the region of Sabratha. Defeated in 1913 by the valiant general Lequiio near al-Astaha they offered their submission to the Italian authorities and ever since have proved very faithful subjects. When inner Tripolitania, in consequence of the effects of the Great War, was troubled by rebels, they showed an heroic attachment to Italy, fighting her enemies under great sacrifices. When in 1922 the reconquest of the inland had begun, they voluntarily took part in it, side by side with the regular troops, with perfect loyalty.

Works in which the Nafusa are mentioned: The Arabic chronicles referring to the conquest of the Maghrib, as well as the

AL-NAFÚSÍ AND SAHIL AL-FARISI, the Abādite scholar of the Rustamid family, who lived in Tāhir in the 11th (10th) century. Some say that he was one of those who, by their learning and religious zeal helped to make that town famous. He was a complete master of Berber and served as interpreter under the imām `Atīf b. `Abd al-Wahāb in the first half of the third century A.H., or even till 258 (871—872), and under Abū Ḥātim Yūsuf b. Muḥammad who, with a short interruption, was imām from 281—294 (894—907). This shows that the Rustamid princes of Tāhir spoke Arabic, as was to be expected from their Oriental origin, and needed interpreters in their dealings with the Berber speaking peoples. When the Fatimids had destroyed the Ibadite power, Abū Sahil settled at Marsa `l-Khārez (La Calle, between Bōne and the Egyptian frontier); or at Marsa `L-Dādjudjī on the Algerian coast, between Ain Taya and Cape Djinet (cf. e.g. al-Bakrī, ed. de Slane, Algiers 1911, p. 64 sqq., 82).

al-Nāfūsī is best known as the author of a big Berber dictionary, containing religious and historical poems, both dealing probably with the doctrines and history of Ibadism. It has been lost, like so many other works of Berber Ibadites; yet perhaps parts of it may be recovered by further search in the Mzāb, at Gerba and among the Nafūsas. At any rate, Abū Sahil has an important place in the literary history of the Berbers, especially the Ibadites, who composed books on theology and law, chronicles, poetry and biographies.

Such a literary movement is usually explained by the need which the heretics felt of making clear their doctrine, especially the points in which it differed from the sunna, to the inhabitants of the interior of the Central and Eastern Maghrib, who did not know Arabic, and who must have been numerous about 1000 A.D. Yet another thing, which can be seen to-day, must not be forgotten, viz. the attachment of these peoples to their own tongue as a symbol of opposition to the Arabic speaking world in general and Muslim orthodoxy in particular. At the end of the nineteenth and beginning of the twentieth century, some Berber groups in the neighbourhood of Vefren in Tripolitania were led by Sanās propaganda to give up their old Ibadite faith and embrace orthodoxy. This change in its turn caused the Berber dialect to be less used; as if heresy were bound up with the national language, and the giving up of the heresy removed the last obstacle to complete arabisation. This assumption is confirmed by some religious poems (they deserve to be called literature) in the region of Passāp, where the love of the national language is still strong. In them the author says explicitly that he uses Berber to uphold and strengthen the Ibādite faith, which once flourished gloriously, but afterwards decreased, and is now well nigh disappeared. In past times also, the Berber literature of the Ibadites was partly a symbol of non-conformity and nationalism; so when Abū Sahil, who was rooted in Arabic civilisation by his origin, devoted himself to the study of Berber so as to become the best Berber scholar of his time and to compose in it works. He must have felt in his deeply religious mind the connection between that language and the faith he professed.

NAGPUR, a city, tāḥsīl, district, and division of the Central Provinces of British India. The modern Central Provinces and Berar, which formed part of the eighteenth century Bhonsla kingdom of Nagpur, lie between 17° 47' and 24° 37' N. and 75° 37' and 82° 24' E., with an area of 113,285 square miles, and a total population of 17,951,147. Nagpur division contains a population of 3,595,578; Nagpur district 933,168; and the city 215,003 (1931 Census Report).

The history of this area, which roughly corresponds to Gondwāna, has been profoundly influenced by the long range of the Satpura hills through which the Bhrāmpur—Asirgarh gap provided the chief route from Hindustān to the Dakhan. When the Muhammadan invaders first came into contact with Gondwāna, it contained four independent
Gond kingdoms: the northern kingdom of Garha-Mandla; two central kingdoms with their capitals at Dêogarh and Kheli respectively; and a southern state with its capital at Candâ. In the reign of Akbar the imperial forces overran the northern kingdom, forcing it to pay tribute, despite the heroic efforts of the Dowager Râmi Durgâsvât. After this, the political predominance of the Gond chiefs was shifted to Dêogarh which in its turn also suffered from the aggressive schemes of the Mughal emperors. Early in the reign of Awrangzib a punitive force under Dîlîr Kân entered both Candâ and Dêogarh, with the result that, in 1670, the ruler of Dêogarh embraced Islam as the price of the restoration of his kingdom ('Ālamgîr-nâmâ, p. 1022—27). Both these states paid tribute to the emperor through a Muslim agent stationed at Nagpur. This however was not the earliest reference to Nagpur in the Mughal period, for the Pâdshah-nâmâ of Lâhârvî describes its capture by Kân Dâwânî, in 1637 (for a still earlier identification see Hîrâ Lal, p. 10).

The most famous ruler of Dêogarh was the converted Gond chief, Bakht Buland, who visited the court of Awrangzib (Mâ'dîshî-i 'Ālamgîrî, p. 273). Because of his contumacious attitude he was replaced by another Muslim Gond named Dînîrî (ibid., p. 340). For some years after this Bakht Buland remained in imperial service, until, escaping from imperial control, he once more raised the standard of revolt in Dêogarh (Mun'âshkah al-Lukbd of Kâfi Khâtî, p. 461). Although Dêogarh was recaptured for a time by Awrangzib’s forces, Bakht Buland remained in open rebellion and was never really subdued. Eventually under this able ruler the Dêogarh state comprised the modern districts of Chhindwâra and Bêtûl, together with portions of Nagpur, Seoni, Bhandâra and Bâlaghât. The last important Gond ruler was Cânâl Sultân who died in 1739. It was he who fixed the capital at Nagpur which he converted into a walled town.

The dissensions led to the intervention of Râghudî Gânsâl, who was governing Beráîr on behalf of the Marâthâ Pâshâ. Eventually, in 1743, the Marâthâ leader took over the administration of the country. By granting a nominal authority to the Gond Râjîâ, Bûrhân Shâh, and his descendants, the Gânsâl possessed a useful pretext for disavowing, when expedient, the rights of the Pâshâ, but in practice reference was usually made to Pûna on important matters, such as the succession. Bûrhân Shâh’s descendants have continued to occupy the position of state pensioners, and the representatives of the family resides at Nagpur with the title of Râjîâ or Sanâthânâk. Râghudî’s reign witnessed a great influx of Kunbis and other Marâthâs into Nâgpur. The treacherous attitude of his successor Dāndîshî led to his defeat; by the combined forces of the Nizâm and the Pâshâ, and to his acknowledgement of the latter’s supremacy.

It was under Râghudî II that the Nâgpur kingdom attained its greatest extent and included practically the whole of the modern Central Provinces and Berâîr, together with Orissa and certain of the Cutâ Nagpur states. Unfortunately for the solidarity of his kingdom he joined forces with Sânâhâ against the British, and, in 1803, after the battles of Aâsâye and Aârâbân, was compelled to subscribe to the treaty of Dêogarh, by which he was deposed of a third of his dominions (Aitchison, i. 415—417). He was succeeded in 1816 by his son, Paskoâl, an imbecile, who was murdered in the following year by the notorious Appâ Sâhib. On the outbreak of war between the British and the Pâshâ, in 1817, Appâ Sâhib attacked the British Residency but his troops were defeated in the brilliant action at Sitâbâlî. This resulted in the deposition of Appâ Sâhib, who was succeeded by Râghudî III, on whose death, in 1853, without heirs, natural or adopted, this dependent principality was declared by Dalhouse to have lapsed to the Paramount Power.

The British administered Nâgpur by means of a Commission until the formation of the Central Provinces in 1861. Today, the city of Nâgpur supports a flourishing Muhammadan community, in the suburb of Mehdiâbâgh, the members of which are Dîâdî Bohérâs of the Shâ’ sect [ibid. bohórâs]. The members of this community live together in the buildings of the institution, where their children are educated and their women taught suitable accomplishments.

nâhîye, an administrative district in the Ottoman empire which corresponds somewhat to the Swiss canton or French commune. It is a subdivision of the kaðâ (kast, q.v.), which may be compared with the French arrondissement and is governed by a kâ-im-nâfâm [q.v. while the nâhîye is under a muâdir. This official who used to be appointed by the wâlî, the governor of the province, received his instructions from the kâ-im-nâfâm, to whom he was subordinate. The subdivisions of the nâhîye are called kârîy, i.e. village. The term nâhîye for an administrative district is of recent origin. For the earlier provincial administration which did not know this name, cf. A. D. Mordâmîn sen, Stambul und das moderne Turkenthum, N.S., Leipzig 1878, p. i sqq.

(nâhîkî, nîshâ from the pre-Islamic divine name Nâhîk noted by Wellhausen and Nohleke among the Tamils, the Nâhîk (of Madâhâdî) and in Moçu before Islam. — In Kûfa and Sâmârâ it was the name of the ‘Al Nâhîk, a family of Shî scholars of the tribe of Nâhîk; descendants of Nâhîk, grandfather of Kâmîl b. Ziyâd, a partisan of ‘Abî, also celebrated as the founder of the Kumâlîya sect (for Kâmîlîya: Ibn Sa’d, vi. 124; kâdat of Mi’dân Sâmîti in Dâshî, Hayâzîn, ii. 98). Two of its members settled in Sâmârâ (Tûsî, Fihrist, p. 203; cf. p. 179, 196; the first ‘Abî Allâh b. Muhammad (Kâshî, p. 6) was the heterodox writer of the Mimîya sect mentioned by Mas‘ûdî and Ibn Hazm whose name Friedlander, following Barbier de Meynard, had read “Bhûkî” (sic: in

**AL-NAHIL**, "the Bee", Sūra xvi. of the Kur'ān. The title is taken from verse 70: "Thy Lord has made this revelation to the Bee". Khāzin (iil. 105) says that it was also called "Sūra of the Bees" because there are differences in several passages to cattle. As to its date, it is reckoned among the later Meccan Sūras and includes several verses of Medinese origin; the commentators however are not agreed on this point.

The Sūra of the "Bees" contains four abrogated verses: verse 69 is annulled by v. 92; verse 84 by ix. 5; verse 108, part 1, annulled by the end of the same verse and by ix. 5.

**AL-NAHRI, the constellation of the River (Eridanus).** It corresponds to the Perseus, Flamen, Annnis of the ancients (cf. Aratos, Phaëthon, p. 338; Gemius, Epsagory; Poltemy, Abuensest). Aratos observes (l. 360) — probably one of the first to do so — that the river of heaven represents Eridanus (Hēd̩anos, river of the morning; or river of darkness, of the west?) turned into stars, in which Phœbus, the sun, fell, struck by the thunderbolt of Zeus, after his unsuccessful attempt to ride to heaven. (The opinions of the Greek authors varied regarding the identity of the earthly Eridanus. It is often identified as the Po (Padas), in later times however sometimes with the Rhone (Rhodanus, probably on account of the similarity of sound with "Eridanus") or even with the Rhine (Rhenuis) while Strabo denies there was such a river for he calls it "θὸν μνημόθεν ὅλιθον "the nowhere existing"). According to another view (Eratosthenes, c. 37); the constellation of the river represents the Nile since "this alone flows from the south" while the river of heaven at the time of its culmination seems to flow from the south point of the horizon to the north; a third group of authors see in it the figure of Oceanos.

While Aratos clearly names only that portion of the river of heaven which lies between Orion and Cetus (the Whale), Eratosthenes and Hyginus continue it in a southeasterly direction as far as the neighbourhood of Canopus (ζ Κανωπίς); on the other hand, Ptolemy, like all later writers, gives it its southwesterly direction and already calls the star of the first magnitude at its southern point (α Eridani, Achnar, cf. below) "δρακοντες Περσαναθ, the position of which however he gives incorrectly as he could not himself observe it in Alexandria on account of its great southern declination (θ + 100° = 67° 25').

Al-Nahr is one of the constellations of the southern heavens. In the north it is adjoined by the Bull (al-Thawr), in the east by Orion (al-Dżubur, the Giant, or al-Dżawwāl, the Bride), the Hare (al-Arnab) and the most western subsidiary stars (khabīd al-Sūrā) of the Great Dog (al-Kabīr al-Sūrā), which are now included in the constellation of the Dove and the Sculptor's Tool, in the west by the Whale (Khit or Kailus). The constellation of al-Nahr contains, according to Abi al-Rahmān al-Sūfī (210 a.h.), primary stars (i.e. those which form the figure, kawābūd min al-Sūrā); there are no subsidiary stars included in it. It begins with ζ Eridani on the left foot of Orion (ω Orionis, Rigel), winds westwards to η Eridani, then southwards to α and ν Eridani via τ, as far as τ to α 12 Eridani and finally in a southwesterly direction via δ, ε, η Eridani to ε Eridani.

The fresco in the dome of Kusair 'Amra shows in the surviving portion the constellation of al-Nahr as a narrow ribbon, which runs directly westwards from the raised foot of Orion, a little below the figure and parallel with the latter in the direction of the Whale.

The Arabs give to the inverted quadrilateral formed by α Orionis, λ, β and ν Eridani, which appears to support the left foot of Orion (Rigel) the name "fore throne (foot-stool) of Orion", Kuwāt al-Dīwān al-Mubaddala, in contrast to its "back throne", Kuwāt al-Dīwān al-mu'āzābāk or Arūb al-Dīwān. The stars ζ, ν, δ and τ·Eridani together with ι and ξ Ceti, which enclose an area with very few stars in it, are called Liṭhi al-Nā'ān, "Ostrich Nest", the numerous small stars surrounding it are called al-Balūd, "the eggs", or al-Kudil, "the egg-shells". The most southerly star in Eridanus, also the brightest (α Eridani, first magnitude), is called al-Zalīm, the "male ostrich", or Asghar al-Nahr, the "last of the river" (in the Alfonsine Tables whence comes the name still used at the present day Achnar to Acanar, between Acherion and Felixhaul (i.e. Fum al-Hāz, "mouth of the fish", a Piscis Australis) in the region of the present Phoenix) is a considerable number of stars which the Arabs called al-Riqāf, "the ostrich chicks". Al-Sūfī states that in Shirāz he observed a series of stars near the horizon which had the shape of a ship (sawrāq), (+, φ, μ, β, η, γ Phoenixis), the brightest among them (α, according to Sūfī, of third, in reality of second magnitude) forms a Piscis Austrini and η Ceti [Domeb (Dhunāb) Kāfīrān, "sail of the whale"] as approximately right-angled isosceles triangle with a line from a Piscis Australis to θ Ceti as base, the stars within which according to al-Sūfī are also to be included in al-Riqāf. The star α Phoenixis is called al-Dirādī al-thānī "the Second Frog", in contrast to the "First Frog", al-Dirādī al-nawwāl, which is represented by a Piscis.

(W. Hartner)

**NAHĪK AL-MALIK.** [See Diqla.]

**AL-NAHRAWĀLĪ (NAHRWANĪ), Arab historian. Kufa al-Din Muhammad b. 'Alā' al-Din Ahmad b. Shams al-Din Muhammad b. Kāf Khan Maḥmūd al-Makki al-Kādiri al-Makki al-Hanafi was born in 917 (1511) in Mecca, to which his father, a member of a scholarly Indian family, had migrated from Nahrawālī in Gujrat. To complete his studies which had been...**
begun under his father, he went in 943 (1530)
to Cairo, where he was taught by al-Suyūtī’s pupils,
and to Stambul. On his return home he received a
teaching appointment in the Madrasa al-Ashrafīya.
In 965 (1557) he again went to Stambul via
Asia Minor and afterwards was appointed to the
Kanbayātlya in Mecca. When in 975 (1567) the
al-Sulāmīnya Madrasa was founded for all four
orthodox rites, he went to it and later became
Mufīt of Mecca. He died in 990 (1582; according
to others in 988 or 991).
His first literary effort seems to have been a
description of his second journey to Stambul,
which has not survived. His other works cannot
be chronologically arranged with certainty. These
are the poetical anthology, intended to supply quotations
for letter-writers which in the Leyden (Cat. cod.
ar., i. 356) MS. is called Tāmībāl dāl al-Maṣūma
al-Sūrī fī l-Ahār al-faṣra al-Nādira, in the Cairo
(Fīhrī, iv. 220: ii. 68) Tāmībāl wa l-Mu-
ḥādara bi l-Ahār al-mufrada al-Nādira, and a
collection of riddles entitled Kunz al-ʿAsīma
fī Fann al-Muḥādara, which is preserved in Berlin
No. 7348, in the Escorial (Cat. Derenburg,
No. 556), in Stambul (Aḥṣif Ef., iii. 107, 289)
and in Cairo (Fīhrī, iv. 507), which is quoted by
Abd al-Kādīr al-Buḍshā (Khanārat al-Idāb,
iii. 112), and on which Muḥīr al-Dīn ʿAbd
al-Muṭin b. ʿAbd al-Bakr in 993 (1585) wrote a
commentary entitled Tārīkh al-mufrada (MSS.
in Uppsala, No. 63; Paris, No. 3417, 5; Escorial,
ep. cit., No. 536, 2; extracts in Leyden, ep. cit.,
No. 522). It is not possible also to date his
collection of biographical matter of which there
only survives the synopsis Muntakab al-Ṭuḥīb
in Leyden (ep. cit., No. 1045). His two principal historical works date from
the last two decades of his life. On 1st Ramadan 981
(May 3, 1573) he finished his history of Turkish
rule in the Yamāt entitled al-Bāb al-Yamāt fī
l-Fath al-ʿAkhbārīn; it begins with the year 900
(1494), describes the first Turkish conquest under
the vizier Sulāmīn Pașa, the return of the Zaidīs
and the second conquest by the grand vizier Sinān
Pașa, to whom the work is dedicated; an appendix
describes his conquest of Tunis and Goletta. He
prepared a second edition after the accession of
Sulṭān Murād III in 982 (1574); cf. S. de Sacy,
in N.E., iv. (1759), p. 412-521 and to the MSS.,
Paris (Blöchet, Cat. des Mis. Ar. des nouvelles
acquisitions, No. 5927), Escorial (Lévi-Provençal,
No. 1720; Cairo, Fīhrī, v. 56), also D. Lopes.
Extracts de historia da conquista da Jaman pelos
Omanenses texts ar. con trad. e notas, Lisbon 1892.
In 985 (1577) he finished his history of Mecca
dedicated to Sulṭān Murād, entitled al-Ṭāmīb al-
Balad (Baṣr) Allāh al-ḥarbām, which
Wustenfeld published in the Chroniken der Stadt
Mekka, vol. i, Leipzig 1857, and is printed Cairo
1303, 1505 (on the margin of Ahmad b. Zaini
Dahān’s Khatūṣat al-Kalām jī Bayān Umārā
al-Balad al-ḥarbām), 1316; to the MSS. given in G.
A. L., ii. 382 may be added Tubingen, No. 231;
Paris, No. 1637-1642, 4924, 5932, 5999; Leyden
(Cat. ii, No. 926-930; Cambridge (Browne,
No. 4-44); Ambrosiana, H., No. 116 (Z. D. M. G.
iv. 75); Vatican, No. 284; Sulāmānīya, Stambul
No. 815; Nūrī Qudsī al-Muḥāmida, No. 3047; Cairo
(Fīhrī, v. 32); Bankiopoe, iv. 1685; Avāfiya,
p. 178. This work was translated into Turkish
by the famous poet Bākī (q. v.) (MSS. in Gotha,
No. 158; Vienna, No. 895; Or. Ak., Krafft,
No. 260; Cambridge, Suppl., No. 72; ed. by
Gottwald, Kaisan 1280). A synopsis entitled Flām
al-ʿAṣrām fī al-ʿAṣrām bi-Bīnaʾ al-Muṣājja al-Hār-
rīm, MSS. Leyden, ep. cit., No. 931, Cairo,
Fīhrī, v. 32; Bankiopoe, xv. 1089. It was made by
his nephew Bahāʾ al-Dīn ʿAbd al-Karīm b. Mu-
ḥīb al-Dīn b. ʿAlī al-Dīn, b. 29th Shawāwī 961
(Sept. 26, 1554) at Ahmādābād in Gujārat, brought
up in Mecca by his uncle, then teacher in the
Madrasa al-Muṣājja, 982 (1575) Mufīt of Mecca,
990 (1582) Imam al-Haram, d. 15th Dhūl-l-Ḥijja
1014 (1608) (al-Muḥīb, Khatūṣat al-ʿAṣrām,
iii. 8).
His son Muḥammad in 1005 (1596) wrote a
history of Mecca and Medina and of the exploits
of Hasan Pașa who became wali of Yaman,
entitled Hāthāwī al-Inān wa l-ʿĀlam fī l-Ḥār-
rīm li l-Hārīm min al-Yaman bi-Mawāfāt
l-iʿAṣrām, 937; Cairo, Fīhrī, v. 2; v. 3.
Bibliography: Ẓahīr al-Shāfiʾī al-NaḤrawān,
p. 206 (quoted from Sarks, Muḥāmān al-Maṣūma,
p. 1871); al-NaḤrawān, al-Kawsāq, ep. cit., Berlin,
No. 9886, fol. 267; Ibn al-ʿAṣfur, al-Nūr al-awfīr (cod. Bankiopoe), fol. 194; al-Khafṣā, Ṭalḥāṣat al-Abūbaī (Cairo
1294), p. 153-157; Wustenfeld, Geschichte
schreibers, p. 534; Brockelmann, G. A. L., i. 882.
(C. Brockelmann).

NAHRWĀN, or, according to the popular
pronunciation, NĀHRWĀN (Yaḥṣūb, iv. 846 sqq.),
name of a large territory between Bāgh
dīd [q. v.] and Waṣīt [q. v.], known through the
battle between ʿAll and the Khāridjīes [q. v.]
in 38 (658).

NAḤW (Ar.), lit. direction, path, also intention,
but gradually acquired the special meaning of
grammar. The Arab philologists divide it into
two branches: accidents, tan al-tarq or tarf,
comprising the theory of verbal stems and their
conjugation, the formulation of nouns and adjectives,
the formation of the plural and of the feminine,
etc., i.e. with individual word-forms only, and
syntax, tan al-naḥw in the narrower sense. The
fundamental grammatical conceptions of the Arab
philologists are taken from Aristotelian logic, which
came via S. R. scholars to the Arabs (on the
dependence of the Arabic phonetic system on the
Indian, cf. Brockelmann, G. A. L., i. 97). As
the beginnings of Arabic learning in general are lost
in obscurity, so also is the origin of the appellation
naḥw uncertain even to the Arabs themselves.
The caliph ʿAli is said to have instructed Abu l-Aswād al-Duʿālī, who is regarded as the
founder of the tan al-naḥw, how he should divide
up the subject and to have ended by saying:
naḥw, "take this path"; whereas the new science
received the name of naḥw. According to another
story, Abu l-Aswād himself laid down the
principles of Arabic grammar and said to the people:
naḥw, "follow this," from this the name
naḥw is said to be derived. The stimulus to deal with
the problems of language is said to have come
from the caliph ʿAli; he, the story goes, taught Abu
l-Aswād the fundamental principles of naḥw and
expounded to him the division of all language
into three categories: tan, jīl and ḫarf. Another
explanation as to how Abu l-Aswād came to lay
down the principles of Arabic grammar seems to
be nearer the actual facts. Ziyād b. Abī [q.v.] asked him to put on record the principles of grammar which "Alī had taught him; but he was reluctant to do this and asked the governor to excuse him this task. When however on one occasion he heard a Kurān reader make a mistake, which destroyed the sense, in reading the sacred book, he declared himself ready to carry out the task. He therefore had a clerk come to him, to whom he dictated and said: "When you see me in pronouncing a letter make the mouth completely (fataṣa), put a point above the letter; when I close it completely (damma), put a point in front of it, and when I half close it (kaṭara), put the point below the letter". In this way the invention of vowel signs is traced back to Abū 'l-Aswād.

Another story, which deals with the same question, tells how a newly converted mawla made a grammatical error in the hearing of Abū 'l-Aswād; one of the latter's household laughed at this but Abū 'l-Aswād said: "These are mawlās who long for Islam, who accepted it and thereby have become our brethren. How would it do if we were to draw up the laws of language for them? He thereupon prepared the chapter on subject and object". There must certainly be an element of at least probability in these anecdotes. By the accession of non-Arabs to Islam the danger arose that the Arabic language might be corrupted by foreign elements, where was further the demand that the sacred text of the Kurān should be read aloud without error and its meaning accurately interpreted; thus arose the necessity for a systematic investigation of the language of the sacred book and the laying down of the rules of its language, so that those ignorant of the language could guide themselves. Other anecdotes which relate to the problem of the origin of naḥfa and all of which, of course, like those already given, are to be regarded as ṣawḥī, also describe Abū 'l-Aswād as its foun[de]t, so that he may with justice be called the earliest Arabic philologist (naḥfa). None of his writings has come down to us. He is regarded as the founder of the philological school of Baṣra, the origin of which must therefore go back to a very early period (Abū 'l-Aswād died about the end of the first century a. H.). Only to mention some of the most important, to this school also belonged Abū 'Amr b. al-Aʿlā and his pupils Abū Ḫa[i]dā and al-ʿAṣmaʾī, to whom we owe most of our knowledge of the Ǧīḥiliyya, Sība[wi]h, whose great work on grammar became "the book" par excellence, Khālīlī, who is regarded as the inventor of the system of prosody, and many others. Very early there arose in the new city of Kūf a a rival to the scholars of Baṣra. There also learned men of the time with linguistic problems. While at first ideas were exchanged between the two schools, and students went from Kūf to Baṣra to study, and well known Baṣran scholars came to Kūf; gradually a considerable rivalry arose between the two. The Baṣrans laid greater stress on grammatical principles than the Kūfāns and were in general regarded as more faithful and more accurate transmitters. The questions disputed and the differences between the two schools are dealt with in a work by Abū al-Raḥmān b. Muḥammad b. ʿUbayd Allāh b. Abī Saʿīd b. al-Anbārī. To the Kūfān school also belonged al-Kisāʾī and al-Muḥaffalāl al-Dabībī. After the third century the centre of Arab learning was transferred to the capital of the Islamic empire, Bagdad. In the new Bagdad school which arose there the differences in point of view between the Kūfāns and Baṣran schools gradually disappeared.

NAṬĪB (A.), literally "substitute, delegate" (nomen agentis from ṣawḥīm to "take the place of another"), the term applied generally to any person appointed as deputy of another in an official position, and more especially, in the Mamlūk and Dīhlī Sulṭānates, to designate a. the deputy or lieutenant of the Sulṭān and b. the governors of the chief provinces (see also the article EGYPT, above, vol. ii., p. 162). In the Mamlūk system the former, entitled ʿaṭīb al-ṣaṭārīna al-maʿṣūma wa-kādī al-mamlukī al-kitābī al-ḥadīthīyya, was the Vice-Captain proper, who administered all the territories and affairs of the empire on behalf of the Sulṭān. This was, however, only an occasional office, and its holder is to be distinguished from the ʿaṭīb al-ṣaṭārīna, the temporary governor of Cairo (or Egypt) during the absence of the Sulṭān or of Damascus during the absence of the ʿaṭīb al-ṣaṭārīna. The six niyyāḥās of Syria which replaced the Ayyūbīd mamlukās—Damascus, Ḥalab, Tripolis, Ḥamā, ʿAṭāfād and al-Karāk (their number was from time to time increased by the erection of Ghaza and other districts into separate provinces) — were each administered by a ʿaṭīb al-ṣaṭārīna (also entitled kādī al-mamluki), who was an "amīr of a thousand", the ʿaṭīb of Damascus being superior to the others. At the end of the thirteenth century Egypt was also divided into three similar niyyāḥās: Alexandria (from 757), Upper Egypt (al-wadāb al-kārīr or al-kullīh) and Lower Egypt (al-wadāb al-kātīr). The plain title of ʿaṭīb was held by the citizens of the citadels of Cairo, Damascus, Ḥalab, etc., who were not under the jurisdiction of their respective governors, and by various anīrīs of lesser rank holding subordinate commands. (For an instance of more recent use, see art. ẒĀḤIR.)

In the Dīhlī Sulṭānate the ʿaṭīb was the powerful minister who was the deputy of the king himself. The earliest reference to the office seems to be the appointment of the Bāṣrī ʿAdī b. Aṭīqīn as deputy on the accession of Sulṭān Muḥammad al-Dīn Bahrām Shāh in 637 (1240) (Minhāj al-Dīn, Tabāšīr-i Naṣīrī, in Bibli. Ind., p. 191). In fact, the support of the nobles was conditional upon the appointment of this person to the deputyship. Although this was a separate office from that of the wāzīr, nevertheless under powerful ʿaṭībs, like Malik Kāfūr in the reign of ʿAlī al-Dīn Khālīfī and Khusrāw in the reign of Mubbrār Shāh, its existence was not conducive to the growth of the powers of the wāzīr.

In its most common acceptance, in Persian and Turkish as well as later Arabic, ʿaṭīb signified a judge-substitute, or delegate of the kādī in the administration of law. In modern Arabic it
means usually a Parliamentary deputy, while al-naʿib al-unmûni is the Public Prosecutor, the head of the Parquet (al-nîyâbâ al-unmûniyâ).

Na'wâb [for nawâb, intensivum of naʿib (but not employed in Arabic), a puristic correction for navaib, shortened from nawâbâh, the Arabic plural of naʿib, employed as plur. dignitatis], the term used under the Mughal rulers of India to designate a vicerey or governor of a province. It is not known when the title first became current. It is sometimes found in combination with other titles, e.g. the Na'wâb-Wâriz of Oudh, the Na'wâb-Nâjm of Bengal. The Na'wâb of Arcot (Carnatic) was a governor under the authority of the Nâjm of Hâidarâbâd.

Na'wâb (Na'wâb) is used also in Persia as a title of royal princes, and in India as an honorific, without necessarily having any office attached to it. Na'bob is an English corruption of Na'wâb, which was also applied in a derogatory sense to wealthy Anglo-Indians who had returned from the east. It has been suggested that the term first became familiar to Englishmen in the second half of the eighteenth century.

(H. A. R. Gibb) (C. Collin Davies)

Nā'īla. [See Isâf.]

Nā'īlī, properly Yenî-Zâde Muṣṭafâ Çelebi, called after his father Pirî Khalîfa also Pirî-Zâde, a celebrated Ottoman poet. He is usually described as Nâ'îlî-i Kâdîm, "old Nâ'îlî," to distinguish him from Yeni Nâ'îlî, young Nâ'îlî, the poet and mewlevî Nâ'îlî Süleyûf Efendi of Monastir, author of several Süfi works who died in 1293 (1876) in Cairo.

Nâ'îlî was one of the greatest Ottoman poets of the postclassical period, the period of the weak sultâns (Murâd IV, İbrahim and Mehemmed IV, 1058–1115 = 1648–1703), of rule by women and eunuchs (Kosem Sultan, Bektaşî Agha and Murâd Agha) and of the grand vizierate of the Kâpûlîa. He is a link between Nefî and Yahyâ and Nâbî and Nodîm. He and Yahyâ are the best poets between Nefî and Nâbî, the reviver of Ottoman literature.

Born in Constantinople, on the conclusion of his education he became secretary in the dīvân-i humâyûn and was ultimately a khalîfa in the office of the Department of Mines (ma'den kalent). As his Dīvân shows, he belonged to the Khalwetî order. He was a weak, delicate man of feeble constitution who died in 1077 (1667–1668) in exile, it is said, in a place from which he had been sent by Fâzîl Ahmed Pasha Kapûlû. Bruusâlî Mehemmed Tûhîr's statement that his tomb was in the cemetery of the Sunbuli monastery in Fânilî and that his remains were removed to the cemetery of Pera, when the road was widened, cannot be quite reconciled with the story of his banishment.

Nâ'îlî is one of the most interesting figures in the history of Turkish poetry. He did not, it is true, contribute anything essential to the actual development of Ottoman literature and gave it no new inspiration. He was an innovator but only in the field of style and language. He steadily worked to break down the rigidity and monotony of the post-classical school. His style is extremely artificial. His language is full of Persicisms but not in quite the same way as in the preceding periods. His diction is full of unusual Persian images and expressions with which he enriched the Turkish language in brilliant verses, somewhat exhausting however through the obscurity of their allusions. The fine new phrases and expressions are however not his own but are simply borrowings. Nâ'îlî succeeded in clearing away the stagnation of the literary language of the time by dropping the trite and hackneyed metaphors and phrases, which had been found in all dwâns since Bâkî; and borrowed new phrases and constructions from the Persian.

Although he wrote in Turkish his diction is purely Persian. He follows his Persian models so slavishly that his language is unintelligible to a Turk who does not know Persian. But the Ottoman poets wrote only for themselves and their equals and not for the people whom they ignored.

Nâ'îlî is the chief representative of the highly developed and marvellously elaborated literary language in which, as Gibb says, a rich and delicate Persian embroidery is harmoniously sewn upon the Turkish background, while the two languages remain sharply distinguished from one another.

Nâ'îlî's characteristics are a charming freshness of phraseology, sublety of imagination, an artificial, individual style, gracefulness, clarity and purity of language, succinctness of expression and polished style such as no poet of his time possessed. According to Mu'allîm Nâqî, no Turk can read him without enthusiastically trying to imitate him, which is however hardly possible. His language is so finished and free from all superfluity that the meaning is often obscure and unintelligible. There is however a great deal that charms the reader, especially as his language is most melodious.

As a poet he has not the same powers as he has as a master of language and style. It is his language and not his poetic conception that is his strong point. He did not seek inspiration from his surroundings, like Yahyâ, but from his Persian models.

Nâ'îlî's literary work consists only of a Dīvân, which was printed in Bulâk in 1253 (1837) (only about a third of the MSS. was printed however). It consists of four very fine hymns in honour of the Prophet (na'sî), some 20 kaşâd as the language of which resembles that of Nefî and shows the same exaggeration. The kaşâd are dedicated to Murâd IV and Mehemmed IV, to the grand-viziers Kârâ Muṣṭafâ Pasha (1048–1053), Mehemmed Pasha (1053–1055), Süleyûf Pasha (1055–1057), Süfî Mehemmed Pasha (1058–1059), to the Shâhs al-Islâm Behâ Efendi, Yahyâ Efendi, Hâfez Mehemmed Efendi, the Defterdar and others. The Dīvân also contains a touching mertbât (elegy) written in the terbi-bend manner on the death of his brother who died young, which is almost too extravagant with its effective refrain; also a takkımî, and some muâsadât in the terbiسط and terbiâb manners and a terbiâb-bend.

His most important and most characteristic work
is however over 200 ghazels in which he imitates Fuzuli. In them he continually produces new expressions, new ideas and makes new significances of words. Besides a passion kept within natural bounds and a tenderness of feeling, which reminds one of Nedim and makes a deep impression on any lover, there is an undeniable pessimism, reminiscent of Nâbi, in his outlook on life, probably as the result of political conditions and his poor health. Occasionally there is something cold and forced about him. One feels that his spirit is ill and troubled.

Nâ'îl especially influenced Thâbit and Na'îm. His principal successors as poets were Hesregli 'Arif Hikmet and Venişehirli 'Awni.

**NA'TÂMA, Muṣṭafâ,** a Turkish historian. Muṣṭafâ Na'im known as Na'im was born in 1665 (1075) in Aleppo. After becoming a te'kârdâr (halberdier) in 1100 (beg. Oct. 26, 1688) in the imperial palace, he was promoted to be a secretary in the *Dârân* under the grand vizier Kâ'îlîzâde Aḩmad Pâsha. On the 28th Dju'mâdâ I 1116 (Nov. 28, 1704) he became chief accountant of Anatolia and in 1121 (1707) he was elevated to the post of chamberlain (tekârî). He left several other offices (cf. F. Babinger, *G. O. W.* p. 245) and during the campaign in the Morea was assistant to the commander-in-chief (gefey). He died at the beginning of 1128 (Jan. 1716) at Old Patras, where he was buried in the outer court of the mosque which has now disappeared. On his tombstone cf. Brüssl Mehmêm Tâhir, *Osmanî Mu'llifîlî,* i. 151 below, and on his death the firman of the middle of Shawwâl 1128 in Aḩmad Râfiq, *Hicri on ikînike avrda İstanbul kayats* (1100–1200), Istanbul 1930, p. 52 sq.

The candid and accurate history of the Ottoman empire, which he wrote in his official capacity and which he based upon earlier histories like the works of Kara Celebi-zâde [q. v.], Me'dîhi [q. v.], Aḩmad Şîrîk al-Mânâr-zâde, Hâджî Khalîfa [q. v.] and the imperial Ottoman history mentioned at the end of his work as begun but not finished by a certain ʿIsmetti (cf. J. v. Hammer, *G. O. K.*, iii. 326), covers the years 1000 (beg. Oct. 9, 1591) to 1070 (beg. Sept. 8, 1659). The full title of this much esteemed and largely used work is *Rawdat al-Hsaîn fî Khulûsîd Ahâbir al-Khaṣkâin,* in Hâddjî Khâliî, N. 14525 called simply *Ta'rikh-i Wadeî.*

Muṣṭafâ Na'im also wrote several political treatises (Reâ'îlî cişâvî), which have survived in a collected volume. Na'im interpreted his duties as a historian very seriously and his incorruptible love of the truth secured his work a superiority over those of all other Ottoman historians of the time. On Na'im's view of the "duties of the historian" cf. his own words in A. W. Duda, *Turkische Post,* year iii., Stambul 1928, No. 324, p. 2. The original MS of his Ta'rikh is in Stambul in the collection of the Eriwan-Kosk. On the four editions and their variations cf. F. Babinger, *G. O. W.*, p. 246; on the third edition see also Ed., 1858, i. 468. A French translation (still in MS) was prepared by Antoine Galland (Fonds François, N. 12,197 in the Bibliothèque Nationale); specimens of it were published by N. Jorga in the *Actes et fragments à l'histoire des Roumanis,* i. (Bucharest 1895) p. 55.

**Bibliography:** Cf. F. Babinger, *G. O. W.*, p. 246 and particularly Yûnâ Mâzîmî, Stambul 1918, No. 55, p. 49 sqq.; Aḩmad Râfiq, *Hicri ve-Şanârîzâlî,* Stambul 1924, p. 256 sqq.; Sâlîm, *Tâdherî,* p. 681 sq. (according to whom he also studied chemistry and other arts and sciences and was a carefree jolly boon companion) and 'Ali Dânîbî, *Na'imî Ta'rikhî,* Stambul 1927. (Franz Babinger)

**NAHK[UWÁN, NAHK[UvâN,** a town to the north of the Araxes.

The town *Naţâvâa* is mentioned in Ptolemy, v. ch. 12. The Armenians explain the name of Nakchewan (Nakhawan) by a popular etymology as *nahk*[u]van* ("Noah's" first stopping-place) (although the name is apparently compounded with *-awân* "place") and locate the town in the province of Waspurakan (cf. Âyîh, i. 122), or in that of Sinikh. According to Moses of Chorene, l. ch. 30, Nakchewan was in the area populated by Median prisoners *mar* in whom we should see the ancestors of the Kurds of this region (cf. Balâdhûr, p. 208, e. tahr-er-abâh). In the early Arab sources we find the form Naşwât, Balâdhûr, p. 195, 200; Ibn Miskawaih, ii. 148; Samûtî, p. 560; Naşwât. In the Saljûq and Mongol period the predominant form is Nakdwân (as early as Ibn Khûrâbdîdbî, p. 122).

The town was conquered under Qâlbân by Hâşîb b. Mâslama It was rebuilt under Muâwiya by *Âzîz b. Hâtim.* In 87 (705) the Arabs hanged a large number of Armenian notables, whereupon the town acquired a Muslim character. For a short time (about 900) the power was in the hands of the Bağratuni, but the town was reconquered by the Sâdîqs (q. v.) and belonged henceforth to the domain of their vassal, the amir of Golbân (Ordubâd); cf. Markwart, *Sidarmenien,* Vienna 1930, preface, p. 79, 93, 99–101, 115; text, p. 300, 362, 567. It figures in the wars of the Dailami period (Ibn Miskawaih, ii. 148) and in the events of the Saljûq period (cf. Ibn al-Athir under 514 A. H.).

Nakchewan is more particularly associated with the family of Îlyezdî atâbâgh of Ağâbahârdîjan (531–632 = 1136–1225), cf. Mîrkhânâ, *Rawdat al-Safâ,* Lucknow 1894, p. 875–876 whose main centre it was, as is shown by the fine buildings a. the tomb (masâḥaf) of al-ra'is al-adjalî Rûdân al-Dîn Dîmîl.
AJHAR the 1821, the road Mukaddas I, i. 347

The Mongols the town was devastated, as is attested by Rubrub who visited it in 1553, ed. 1839, p. 384, cf. Howorth, History of the Mongols, iii. 82. The town suffered also from the wars between Turkey and Persia (under Murad IV); Ewliya Celebi, ii. 240. Tavernier (1664), ed. 1713, i. 55—55, and Chardin (1763), ed. 1795, i. 79, found it ruined. Nakhchivan was only rebuilt after 1828 when the khanates of Erivan and Nakhchivan were ceded to Russia.

Under the Persians, Nakhchivan (with the district of Az-Djurun = Ordubad) was directly under Adharbaydzhan and not Erivan. Kalb ‘Ali Khan of Nakhchivan was blinded by Aka Muhammad, founder of the Kadjir dynasty. The last chief of Nakhchivan before the Russian occupation was Karim Khan Kangarli. The title appointed by the Russians was Iljan-Khan and Shalik ‘Ali Beg. The maqall of the khane was: Nakhchewan, Alinda-bay (Armenian Ermijak), Mawzuni-khannah, Khok, Daralager, and those of Az-Djurun: Ordubad, Akulli, Dasta, Bilaw, Cinanbor. Among the dependencies of Nakhchewan, Djulfa (since 1828) was directly on the Russian-Persian frontier is very well known (Armenian O斯塔) with the ruins of the town and of an old bridge. (Zafar-nama, i. 399; puli-gasi al-Mulk) and the bridge on the Tabriz-Djulfa railway (built in 1906).

In 1834, after the Russian occupation (Dubois) the khane (the town and 179 villages) numbered 30,323 inhabitants (besides 3,341 inhabitants of Ordubad and its 52 villages). In 1896 the town numbered 7,433 inhabitants (4,512 Muslims and 2,376 Armenians) and the district (uyezd) 86,878.

In 1913 the town had 8,946 and the district 121,365. After the Russian revolution of 1917, the greater part of Nakhchewan was made an autonomous republic (area 5,988 sq.km. with, in 1926, 12,611 urban, 92,345 rural inhabitants). This republic formed a kind of dependency of the republic of Soviet Muslim republic Adharbajdzhan (Baku), from which it is separated however by the Armenian lands of the High Karabagh. Nakhchewan on the Don is the settlement of Armenian colonists founded in 1780 on the Don and is at the present day a suburb of Rostov.

NAKSHABĀDI, SHAIKH DĪVĀL-DĪN (d. 751 = 1350), a famous Persian author (not to be confused with the famous Sāfī Shahīk Abū Turāb Nakhshabād, d. 245 = 860) very little is known of his career.

His nisba suggests that he came from Nakhshabād, but he went to India where he became a murid of Ṣāfī Ṣāfī Abū Turāb Nakhshabādī. The Āḥārūr al-Ḥāyīyār of ʿAbd al-Haqq Dīlahwī (Dīlahī 1309, p. 104–107) says that he died in Bāḍiʿān after a long and contemplative life and that his tomb is there. Nakhshabādī was a prolific writer who used his knowledge of Indian languages to translate Indian books into Persian. His best known work is the Tūfīnāmā ("Book of the Parrot") very popular in India and Central Asia, based on the Sanskrit Chakravatī (partly translated into Greek by D. Galanos, Athens 1851). In the preface to this book Nakhshabādī tells us that one of his patrons showed him an old Persian translation of this work and persuaded him to do it again as the language of the old translation was to simple and artless. Nakhshabādī set to work and made a book of 52 chapters (called "nights") replacing some stories which did not seem to him sufficiently interesting by better ones.

The book, completed in 730 (1330), is in the usual form of a framework with inset stories and is characterised by unusually fine language and bold metaphors and similes. Nakhshabādī's language however seems to have been too difficult and precious for later generations as by command of the Emperor Aḥbar, Abū l-Faḍl b. Mubārak rewrote the book in a simplified version (Rieu, p. 753b).

This version however was completely supplanted by Muḥammad Kāḍīrī (11th–12th century) which reduced it to 35 chapters. Kāḍīrī's version became the foundation of a large number of translations into Hindi (Ākānī and Ghaawwānī), Bengali (Capājīrāna Munsī), Turkish (Ṣaṛf ʿAbd Allāh Efeṇī, pr. Bāḵīt 1254 and Constantinople 1256) and Kazan Tatar. There is also a metrical version in Persian by Ḥamīd Lāhīrī (Bland, in J. R. A. S., ix. 163). The same theme is taken by a number of popular versions which were disseminated in Persia in cheap lithographs under the title Cīl (Ṣiḥl) Tūfī ("40 parrots"). The text of one of these was published by Y. Zhukovski (St. Petersburg 1901).

Nakhshabādī's work was known in Europe as early as 1792 when M. Gersans published a free English translation of 12 nights. Kāḍīrī's version was translated into German by C. I. L. Ikon (Stuttgart 1822); the edition contains an essay on Nakhshabādī and specimens of his Tūfīnāmā by Kosegarten. The Turkish version was translated into German by L. Rosen (Leipzig 1858). So far no complete translation of the original work of Nakhshabādī has been published although there is a French translation in MSs. in Munich. E. Bertiels has translated the book into Russian but this version is also still in manuscript. The eighth night was published in original text and German translation by H. Brockhaus (Leipzig 1843 and in Bütter für literarische Unterhaltung, 1843, No. 242, 243, p. 969 sqq.). Nakhshabādī's other works never attained anything like the popularity of the Tūfīnāmā but have almost all come down to us. Among them are: Gūtātī: "Scattered Roses", a novel dealing with the lives of Maʿṣūm-shāh and Nūshābādī (pr. by Agha Muḥammad Kāẓīm Shīrāzī and K. F. Azoe, Calcutta 1912, in Bibl. Ind.); Dīwān u-Kullīyār ("Particulars and Generals") also called Cīl Nāmāt (Rieu, p. 749), an allegory which deals with the descriptions of the various parts of the human body considered as the noblest work of God and as proof of His greatness; Lāḏhīdāt al-Nisā, a Persian version of the Kehā-Sāstra, an Indian work on different temperaments and sexual intercourse; Sikīl al-Sulākī, a collection of sayings of celebrated mystics (Ith. Dīlahī 1895), and Nāḏīrī u-Mawṣīlī, a brief treatise of a Sāfī nature (Rieu, p. 735). His treatise Ḍhāḥara Mubākhrān ā is only known from its mention in the Aḥārūr al-Ḥāyīyār (see above). All the prose works of Nakhshabādī are embellished with ḫīṣ as scattered through them, which show that he was also an excellent poet.

(E. Bertiels)

NAKIR. [See NUNKAR.]

NAKSHBAND, MUḤAMMAD B. MUḤAMMAD BAHSH AL-DIN AL-BAGDADI (717–791 = 1317–1357), founder of the Nakhshbandi Order.

His name, which signifies "painter" is interpreted as "drawing incomparable pictures of the Divine Science" (J. P. Brown, The Darvish, 2nd ed., p. 142) or more mystically as "holding the form of real perfection in the heart" (Mītīk al-Maṣṭa' quoted by Ahlwardt, Berlin Catalogue, No. 2188).

The title al-Shīb which is given him in a dirge cited in the Kāṭhātāt means "spiritual leader". The nisba al-Uwais implies that his system resembled that of Uwais al-Kanānī. His Acta were collected by one of his adherents, Šaḥī b. Muḥarrāk, in a work called Māʾṣūmat Siḥl-bānī al-Shīb Nakshbandā, which furnished material to the author of Ruknāt al-Ḥaṣāt (583 = 1488), and from which large citations, apparently in the words of Nakshband himself, but translated from Persian into Arabic, are given in the modern work al-Hādīš al-warida fī ʾayāt-ʾīdālī al-Nakshbandīya by ʿAbd al-Majdī b. Muḥammad al-Ḥanīnī (Cairo 1306). He was born in a village at the distance of one farsakh from Bukhārā, called Kūshk Hindūwān, but afterwards Kūshk Aʿrīfān. At the age of 18 he was sent to Sammās, a village one mile from Ramīthān and three from Bukhārā, to learn Sūfism from Muḥammad Bābī al-Sammasī. In this person's system the dābr was recited aloud; Nakshband preferred that of ʿAllā al-Dawlā ʿAbd al-Khalīk al-Gūdādāwī (d. 575 A.H.), which recited it to himself; and this led to ill-feeling between him and the other adherents of al-Sammāsī, who however, it is stated, ultimately confessed that Nakshband was right, and on his deathbed appointed him his khalīfa. After this person's death he went to Samarkand, and hence
to Bukhārā, where he married, and whence he returned to his native village; hence he went to Nasaf, where he commenced studies under a khalīfa of al-Samānī, Amir Kulāl. He then lived for a time in villages near Bukhārā given as Zewartān and Anbilda, then studied with a khalīfa of Amir Kulāl named 'Arif al-Dik-kīrīn for seven years; after this he spent twelve years in the service of the Sultan Khaḥil, whose rise to sovereignty is described by Ibn Baṭṭūṭa (iii. 49), and whose capital appears to have been Samarkand. After this monarch's fall (747 = 1347) he returned to Zewartān, where he practised philanthropy and the care of animals for seven years, and road-mending for another seven. The last years of his life appear to have been spent in his native village, where according to the Ṭabīḥah he was buried. Vāṁbėry (Travels in Central Asia, 1864) gives Bāveddīn, two leagues from Bukhārā, as the name of the village which contains his tomb, "whither pilgrimages are made even from the most remote parts of China, while it was the practice in Bukhārā to go thither every week, intercourse with the metropolis being maintained by means of some 300 asses plying for hire".

The biographies bring him into connection with various places and persons. At Herāt a banquet was given in his honour by the Amir Ḥusain (b. Gilḥāy al-Din al-Ghūrī; cf. Ibn Baṭṭūṭa, loc. cit.), where in spite of the Amir's assertion that the food had been honestly obtained Nāḵshband refused it, and it had to be given away in charity. He was with this prince also at Sarḵās. Two or three pilgrimages and visits to Bāghārū, Nāḵshār and Tāyshār are mentioned. His sayings were collected by Muhammad b. Muḥammad al-Ḫusaini al-Barrānī, at the request of 'Alī al-Din Ḥāṭṭ al-Bukhārī (d. 802 A.H.). (Brit. Mus. Add. 26 294). Persian writings by him are mentioned in the Ḥadīth.

NĀḴSū (A.), pl. nāḵāṭṣ, a kind of rattle used and in some places still used by Christians in the east to summon the community to divine service. It is a board pierced with holes which is beaten with a rod. The name, which comes from the Syriac nāḵāṣ is not infrequently found with the verbs ḍarība or ṣakka in the old Arabic poets, especially when early morning is to be indicated, e. g. 'Antara, app.; Labīd, N. 19, 6; Z.D.M.G., xxvi. 269, 271; Muslims, ed. F. Vollmar, p. 172; Muslim, ed. W. F. Volz, 1867, 6; al-Ḵāṣ in Noldeke's Delectus, p. 26; Kitāb al-Ḡiṣṣā, n. 92. According to tradition, Muḥammad hesitated between this instrument and the Jewish trumpet before deciding on the call to prayer by the muʿāḍthīns [s. adḥān].

(FR. BUHL)

AL-NĀMĀRA, 1. a place in Syria. It is situated in the harra of al-Safā, on an eminence in the Wādī l-Šāhā, which runs from the Djebel al-Draṣa (Djebel al-Hawār) to the plain of Ḥuḥā, at the spot where it joins the Wādī l-Šaʿā'il. It corresponds to the Roman military post of Nanara (Waddington, Inscriptions, N°. 2270). Less than a mile S. E. of al-Namara, Dussaud found the Nabatean-Arab tomb inscription of the "King of all the Arabs," Maru 'l-Kais bar 'Amru, i.e. the Lakhdhim Imrū 'l-Kais b. 'Amru, of the 7th Kislīl 223 of the era of Boṣra = Dec. 7, 328 A.D. (cf. vol. i., p. 382).

Three other places bore the same name in ancient times:

3. Namara, a village in Batania, probably the modern Nimr al-Sawār, N. E. of Derās.

4. Namara, Nam(a)r west of Ṣanānān, between al-Hārā (Er'īn) and Qādis (Gasima), mentioned on an ancient boundary stone.

Bibliography: Clermont-Ganneau, in R. A. O., i. 3–5; Dussaud, Topographie, p. 341 (cf. Namr in Noldeke, in Z. D. M. G., xxix. 437?).

(E. Honigmann)

NĀMÍK KAMĀL BEY. [See KEMAL MEHMED NĀMPI.]

AL-NAH, the Ants, the title of Sūra xxvii. of the Kurā, the whole of which was revealed at Mecca. Noldeke puts it among the Sūras of the second period. It contains 95 verses. Its title is taken from verse 18: "When the armies reached the valley of the Ants one of them said: 'O ye ants, return to your homes lest Solomon and his armies crush you without noticing it'. It contains one verse that was abrogated (verse 94 annulled by ix. 5).

Bibliography: cf. al-NAH.

(Maurice Chemoul)

NAMRUD, also NAMRUD, NIMRUD, the Nimrod of the Bible, is associated in Muslim legend, as in Haggada, with the story of the childhood of Abraham. The Kurān, it is true, does not mention him but probably, as in many other cases, only from dislike of mentioning names. That Muḥammad was acquainted with the legend
of Namrud is evident from the following verses. “Do you not see how he disputed with Ibrahim about the Lord who had granted him dominion? When Ibrahim said: It is my Lord who gives life and death, the other replied: I give life and I slay. When Ibrahim said: God makes the sun rise in the east; do you make it rise in the west; then the liar was humbled” (II. 260). The Kur’ān exegetists are probably right when they see Namrud here disputing with Ibrahim and also when they refer to Namrud the verse: “What did Ibrahim’s people answer? They only said: Kill him, burn him; but God saved him from the fire” (xxix. 23). The legend is already richly developed in Ţabari, but it is at the beginning of the romance of ‘Antar in the Abūna dīrāṣ in which we find its most luxurious development.

ţabari already numbers Namrud among the three or (with Nebuchadnezzar) four kings who, like Sulaimān b. Dawūd and Iblīs l-Karnāin, rules the whole world. His astronomers tried to prove that the child would be born who would overthrow his kingdom and destroy his idols. Ibrahim thus becomes one of those heroes of legend who are persecuted because they are born of parents whose birth is by a tyrant, to whom they are destined to prove fatal, like Moses, Gilgamish, Semiramis, Sargon, Kargā (in the Mahābhārata), Trakhan (King of Gilgit), Cyrus, Perseus, Telephus, Aegisthus, Oedipus, Romulus and Remus, Jesus (see Frazer, Folklore in the Old Testament, ii. 437—455). Āṣā, the wife of Azār or of Tārīk (Terakh), is able to deceive Namrud and his searchers. Ibrahim is born in concealment: maturing rapidly, he engages in a religious dispute with Namrud; Namrud cannot be God for God gives life and death. Namrud replies that he can do this also for he can execute or pardon a man condemned to death. Namrud has Ibrahim thrown into the fire; it becomes a cool health-resort. An angel keeps Ibrahim cool at which Namrud marvels like Namrud the Prodigal of the Cypriot Chronicle in Byzantium. The lore of astrology, the inheritance of Idris and Hermes he acquires by force from the pupils of Idris. Ībīs teaches him magic. He has himself worshipped as a god. Then dreams, voices and omens frighten him. In spite of all Namrud’s cruel orders, Ibrahim is born, brought up and soon shatters the belief in Namrud. Namrud throws those who believe in God to the wild animals but they do not touch them. He denies them food; the sand of the desert becomes corn for them; on every grain of it is written: “gift of God”. Namrud throws Ibrahim into the fire but he is unharmed. Namrud builds a pile of fuel, the flames of which burn the birds for miles round — it is impossible to approach it. Ībīs then designs a ballista which hurls birds on to the flaming pile. Ibrahim spends the finest time of his life there under blooming trees and amid rippling brooks. Namrud then decides to attack the God of the Ganges of Heaven. Starved eagles fly up with his litter, until he hears a voice saying the first heaven is 500 years in width, it is 500 years between heaven and heaven, then comes infinity. Namrud shoots an arrow against God; the arrow comes back stained with blood. Namrud suddenly becomes grey and old and falls to the ground. But he plumes himself on having slain God. Then a gnat puts an end to his life.

The history of the Namrūd legend. Very little can have been taken from the Bible. Kubrāʾī’s expositors and collectors of legends call Namrud aṣhabār (tyrant) no doubt after the gībār applied to Namrud in the Bible (Gen. x. 6); Gellner also sees in aṣhabār amīr (xi. 62) an allusion to Namrud. Ťabari (I. 217) also describes Namrud as a muṭḥāṣābār. Muslim legend and Haggada (Tabar, Sheni on Esther I. 1.; Midr. Haggadol, ed. Schechter, p. 180—181; Gaster, Exemples of the Kabbah, N. 1) make Namrud ruler of the world.

From Haggada comes the association of Namrud with the Tower of Babel and in particular with the childhood of Abrahām, and with the latter’s rescue from the fire (Gen. Rabbi, xlix., 1). The death of Namrud caused by the gnat is also based on Haggada, which makes Titus, the destroyer of the Temple, die in this way. Nebuchadnezzar comes to a similar end (see Grünbaum, Neue Beiträge, p. 97—99). The flight to heaven especially in the romance of ‘Antar with the intervals of 500 years recall the ascent of Nebuchadnezzar in this version and it is given at greater length in the introduction to the romance of ‘Antar.

Namrud’s father Kanaʾān b. Kālīs has a dream which troubles him: it is interpreted to mean that his son will kill him. The child is born, a snake enters his nose, which is an ominous sign. Kanaʾān wants to kill the child, but his mother Sulkhaʾ entrusts him secretly to a herdsman; the latter’s flocks scatter at the sight of the black flat-nosed infant. The shepherd’s wife throws the child into the water; the waves wash him to the bank where he is suckled by a tigress. Already dangerous when quite a boy, as a young man he becomes a robber leader, attacks Kanaʾān with his bands, kills him (without knowing that he is killing his father), marries his own mother and becomes king of the country and later lord of the world. Azār (already in the Kurʾān the father of Ibrahim) builds him a marvellous palace flowing with milk, oil and honey, with mechanical singing birds in the medival epic the Idarīs of the Christ’s Triklinium in Byzantium. The lore of astrology, the inheritance of Idris and Hermes he acquires by force from the pupils of Idrīs. Ībīs teaches him magic. He has himself worshipped as a god. Then dreams, voices and omens frighten him. In spite of all Namrud’s cruel orders, Ibrahim is born, brought up and soon shatters the belief in Namrud. Namrud throws those who believe in God to the wild animals but they do not touch them. He denies them food; the sand of the desert becomes corn for them; on every grain of it is written: “gift of God”. Namrud throws Ibrahim into the fire but he is unharmed. Namrud builds a pile of fuel, the flames of which burn the birds for miles round — it is impossible to approach it. Ībīs then designs a ballista which hurls birds on to the flaming pile. Ibrahim spends the finest time of his life there under blooming trees and amid rippling brooks. Namrud then decides to attack the God of the Ganges of Heaven. Starved eagles fly up with his litter, until he hears a voice saying the first heaven is 500 years in width, it is 500 years between heaven and heaven, then comes infinity. Namrud shoots an arrow against God; the arrow comes back stained with blood. Namrud suddenly becomes grey and old and falls to the ground. But he plumes himself on having slain God. Then a gnat puts an end to his life.

The history of the Namrud legend. Very little can have been taken from the Bible. Kurāʾī’s expositors and collectors of legends call Namrud aṣhabār (tyrant) no doubt after the gībār applied to Namrud in the Bible (Gen. x. 6); Gellner also sees in aṣhabār amīr (xi. 62) an allusion to Namrud. Ťabari (I. 217) also describes Namrud as a muṭḥāṣābār. Muslim legend and Haggada (Tabar, Sheni on Esther I. 1.; Midr. Haggadol, ed. Schechter, p. 180—181; Gaster, Exemples of the Kabbah, N. 1) make Namrud ruler of the world.

From Haggada comes the association of Namrud with the Tower of Babel and in particular with the childhood of Abrahām, and with the latter’s rescue from the fire (Gen. Rabbi, xlix., 1). The death of Namrud caused by the gnat is also based on Haggada, which makes Titus, the destroyer of the Temple, die in this way. Nebuchadnezzar comes to a similar end (see Grünbaum, Neue Beiträge, p. 97—99). The flight to heaven especially in the romance of ‘Antar with the intervals of 500 years recall the ascent of Nebuchadnezzar in
the Talmud (Chagiga, p. 13b). But the flight has far more resemblance to that of Šāh Kāšūs as described by Firdawšī (ed. Mohlb., ii. 31—34).

The Namrud legend borrows from many directions. Taḥbara mentions that Namrud had been identified as the Persian Dāhšīik (Anneles, i. 253) but he refutes this idea (Anneles, i. 323, 324). Bible and the Greek epic were further developed, the marvellous increased, an early history invented, Namrud made an Osēdus, and in the Sirät d'Antar he becomes the hero of a romance. The Muslim Namrud legend then found its way into the late Jewish legend of Abraham. Bernard Chapira (see below) published once in Hebrew and once in Arabic. He is certainly wrong in taking seriously the authorship of Kašb d'Albār, this is one fiction out of many thousands. But the mutual influence of Ḥaggadah and Muslim legend is indisputable. The later Mīzrāj, as M. Grünbaum has clearly shown, Pirī K. Eīsīr, Tawma d' élīyik, Mīzrāj Ḥaggadādī, Sefir ḥayyāshū, Shēbīr Mūsār of R. Elīyah Hakkohen from Smyrna, is influenced in the sections on Abraham and Nimro by Muslim literature.

NAMĪS (A.) is a word of many meanings. In St. John’s Gospel xv. 26, the coming of the paraclete is announced. In the preceding verse a passage from the Psalms referring to the haters is quoted and in v. 26 of vāhār is given as source. The verses in the Gospel from 23 on were already known to Ibn Ḥišām in an Arabic version which came from a Syriac one as the reproduction of “paraclete” by al-μανάταμα shows. In the same source the word vāmās was left untranslated: for we find it in Ibn Ḥisāḥ in the form nūmis. Biographical tradition makes Wārākā b. Nawfāy expressly assert the identity of Muhammad with the paraclete promised by Jesus mentioned in the passage from the Gospel. The oldest forms of the tradition giving this episode represent a combination of the Gospel passage with Sūra lxvi. 6. In later developments of the tradition the idea of a paraclete gradually falls into the background till it was finally interpreted as the name of an individual and even received an epithet. Thus we read in Ibn Ḥishām, p. 153 that Wārākā replied as follows to his cousin who asked him about Muhammad’s first vision: “If thou hast reported the truth to me then truly the greatest nāmis has come to him, who used to come to Mūsā, and then he (Muhammad) is the prophet of this umma etc.” In Tābarī the “greatest nāmis” is in a gloss expressly said to be Ḫibīr.

As the personal interpretation is not sufficiently explained by meanings, known to be really old, of the true Arabic word nāmis (root n-m-s) which exists alongside of the Greek loanword, and meanings like “the trusted one, confidant of a secret” seem rather to come from the Greek loanword already known in its reference to Ḫibīr (against Dory, Supplement, s. v.), it was natural to look for a specific use of the word vāmās which admitted of a personal interpretation and could at the same time have been known to the Arabs. Nyberg was reminded by the nāmis doctrine of the Ḥabbān al-Saftā (see below) of the pseudo-Clementine writings; and, Tabari, describes the nāmis of the Wārākā tradition from the vāmās al-wānīs of the pseudo-Clementines, which according to the book Kūfrym Pēter saw revealed to Adam and afterwards again appeared to all prophets worthy of such an honour, lastly to Moses and to Jesus. However startling the agreement of the conception of nāmis al-wānīs with the later forms of the Wārākā tradition, the question still remains open, by what way a personal conception of nāmis could have entered Islam. Baumstark quoted a passage from the liturgy of St. James of Jerusalem: ḥakas, astūn dī vāmin, ṣal⇔bī ukūrūna, la tān ṭāmīmīt and observes that the liturgy was the authoritative one in the Beduin camps and must have existed in an Arabic translation. It is really quite possible to understand vāmās personally here. No explanation of our Wārākā tradition can on the other hand be obtained from Mandaean writings as Lidzbarski has already pointed out in his translation of the Gūzil, p. 247 sq.

That there is a true Arabic word nāmis has already been mentioned. The dictionaries give such varied meanings for it that we can only consider as old and original those that are confirmed by quotations. This holds for the meanings “hind place, hunter’s hut, monk’s cell” probably also for “buzzter, midge” as noun agentis from n-wās “to buzz”. On the other hand, not only the meaning “cunning” and its derivatives must be secondary, but also the already mentioned meanings referred to persons, the latter especially because the word so far as we know, is used also in the later literature predominantly in the material sense and the person connected with the idea is called Ḫibīb al-nāmis etc. (counter-example: Dory, s. v.). Just as the material meanings predominate generally, so also does the meaning of the Greek loanword predominate, apart from course of the old poetry, from which the meaning “midge” and particularly the word nāmisānī “mosquito net” have survived into the modern vernacular. Below we shall therefore deal only with the development of meaning of the Greek loanword.

The favourite form is di vāmā, with or without the addition of Ḫibī. This law is revealed through the prophets, and only men of prophetic spirit can be vāmā al-nāwis in this sense. The double character, political and religious, of the Musulm constitution naturally very much favoured this conception. Thus, for example, al-Kafiṣhāndi, ʿībīth al-dʿāšā, i, Cairo 1903, p. 280 gives as the first among the Ḫibīr sharif, ʿībīth al-nāwis al-mudawalāt bi ʿl-muhaww. Ibn Sīna expressly observes in his encyclopaedia Ṭikṣīm al-ʿUlam al-ʾAṣyīliya (in Madīmūt al-Rūṣīfī, Cairo 1328, p. 230 sq.) in treating of politics that the pertinent works of Plato and Aristotle understand
by verbs not "cunning" and "deceit", corresponding to the usage of the vernacular, but َنَمُوس, revelation, etc., for the laws of the community are dependent on prophecy and the divine law; similarly Sprenger, *Dict. of Technical Terms*, i. 40. Ābū al-Hajāyīn al-Tawhīdī devotes the fourth of his *Muḫadabāt li َنَمُوسِ اللِٰهٰ* (new ed., Cairo 1929).

Here we may mention Miskawayh's (Ibn Miskawayh) definition which is also of literary interest. In connection with his discussion of the function of the dinār as a measure of the equivalence (سُقْدَة) of service and reward, Tadhkīrāt al-Malājīa i. e.g. Cairo, Khaitiyā, 1322, p. 38), he quotes an alleged saying of Aristotle according to which the dinār is a *nāmus*. Nāmus, he adds, in striking contrast to Ibn Sina, means in Greek, *syvía* and *tadīr* [g.v.]. Aristotle says in the *Eth. Nic.*, the greatest *nāmus* proceeds from God, the second is the judge, the third the dinār; the first, as a condition for just settlement between the claims of men, is the example which the two others follow. The well-known filiation of the Muslim books on Hellenistic ethics has resulted in this explanation finding a place in later derivatives from Miskawayh's work, e.g. in *Nafīr al-Dīn al-Thamālī* (Ahlīkī al-Nāfīr), i. 2, 7 (e.g. Tabiz 1320, p. 152), also Kīnalīzāde (Alī b. 'Amr Allāh al-Hinnā), *Ahlīkī al-Dīr* (1324, i. p. 78) and each more fully than the preceding. As a result of these expositions al-Tūsī in the economic part of his book (ii. 2, p. 254) calls gold briefly the smallest *nāmus* (translation in Pleissner, *Der islamische des Kynphiskologers Fräulein*, 1928, p. 63); and Kīnalīzāde also follows him (ii, p. 7).

The *nāmus* doctrine of the Ikhwān al-Safā' can only be briefly outlined here. In part i, p. 56 (Bombay ed.), the *nāmus* is defined as a spiritual kingdom ((*(نَمُوسُ ِالْحَيَاة)) which is upheld by 8 kinds of men. God appears as the *wāqī‘* al-*nāmus*. *Ṣāḥib al-*nāmus* is from the context Muhammad, in so far as one can identify from the context any individuals in the pages of the Ikhwān al-Safā'. A few pages later Muhammad is described as the *wā’if al-*nāmus*. In part iv., p. 57, the angels appear as teachers of the *ṣāḥib al-*nāmus*. Any one who does not guide his life according to the commands and prohibitions of the latter, has no share in divine *nāmus* (p. 147). This spiritual kingdom is the element of the Ikhwān al-Safā'; they sought in the cave of their father Adam [q. v.] for a long period until the fore-ordained time (ِْمَّنَدَّ) came under the rule of the Lord of the greatest *nāmus* (Muhammad?) and they perceived their spiritual state (ِْمَلَعَّ) which was raised in the air and which Adam and his wife had been banished (iv. 107). If the Ikhwān al-Safā' by common effort and uniform self-instruction succeed in building a perfect spiritual state (ِْمَنَدَّ, cf. al-Fārābī*), this state will belong to the kingdom of the Lord of the greatest *nāmus*, who has dominion over souls and bodies (iv. 211). The *nāmus* thus even becomes a kind of divine being, where there is a discussion of the "philosophic service of God", which represents the higher stage in comparison with that of the Muslim teaching regarding obligations and duties. This philosophic service of God had been, they say, practised by the ancient Greeks on the first, middle, and last day of the month. The night of the first day was divided into three parts. The first was spent in worship of *nāmus*, the second in meditation on the *malaqīāt*, the third in humble prostration before the Creator, confession of sins and repetition of prayers by Plato, Idrīs and Aristotle until the break of day (iv. 273 sqq.). Nevertheless the *nāmus* here has not actually taken the place of God. But in several passages of the *encyclopedia* he is represented as giving names. Thus he calls the spirits of the planets angels (ii. 97; cf. iv. 244); he does the same with the natural forces (ii. 102) and (iii. 10) with the nature of origin and decay. Above the spheres (ِْمَرْضَّ) of the three kingdoms is the nature and of man is the sphere of the divine *nāmus*, whose members deal with the affairs of the *nawāmīs* and the divine revelations and which corresponds to the "surrounding" (ِْعَلَٰ) sphere of the astronomers (iv. 251). As the *nāmus* and the ability to become creative in him involves a special organisation of man, he has found an allegorical place in the physiology and psychology of the Ikhwān al-Safā'; here indeed the conception changes from page to page. Thus in the first part of the work (2nd part, p. 48) five kinds of soul are described, two above and two below that of man. The former are the soul of the angels and the divine soul (ِْمَلَعَّ), the latter is the stage of the soul of wisdom, the second that of *nāmus*-prophethood. On the very next page the one is the intellectual soul of wisdom and the other the *nāmus*-like angel soul. On p. 54 we find the following gradation: nature, soul, intellect, *nāmus*. Nature receives through the soul free-will, though the intellect the power of thought and through the *nāmus* commands and prohibitions. The parts of the soul are as follows: vegetable, animal, logical (human), intellectual (wise), *nāmus*, angelic, which latter serves the *nāmus*. Here again there is the tendency to personification. It is in keeping with this when in iv. 119 (cf. also iv. 146) the story of Socrates in prison (in agreement with the Greek tradition and mentioning the *Phaedo*) it is related that Socrates will not escape from prison for fear of the *nāmus*; he justifies his attitude with the words: "He who does not respect the *nāmus* is slain by it". When immediately afterwards the *nāmus* is identified with the *gūrūs*, it is difficult to say whether this is serious or only done out of caution. It is nevertheless remarkable that the sixth essay of the fourth part which treats of the nature of divine *nāmus*, of the qualifications for prophethood and the qualities of a prophet, does not contain the word *nāmus* at all but instead of it always has *gūrūs*. The Ikhwān have spiritual powers of their own; these form a series of four stages, the third of which is the *kuwara* *nāmusiya*; man attains it at 40 and it is the special characteristic of kings and rulers. Possessors of this power are called the distinguished and noble (ِْمُزَمِّنَّ, *kīrām*) brethren. Above it is only the *kuwara* *malaqīa* (iv. 134 sqq.).

The origin of the meaning "cunning" cannot be given with certainty; it possibly comes from the Arabic meaning "place of concealment". That it was particularly common in the spoken language is evident from the quotation given above from Ibn Sina. In any case this meaning has undergone a remarkable amalgamation with the Greek "law" in the literature of magic for the word is there used for magical formulae, particularly those which are based on illusions of the senses. The pupil of al-Ḥanīfī [q. v.] in his
DHâtîn on the latter’s Tâddîra, s.v. simîya (iii., Cairo 1924, p. 56), gives the namūs as the first section of science known by this name. But the meaning of the word is not limited to this kind of magic formulae.

Through translations from the Arabic the word entered the Hebrew literature of the middle ages with the meaning “law, religious law (of other peoples), morality, propriety”; in the latter meaning it has survived in the modern Hebrew vernacular. It is interesting to note that in the modern dialect of Mecca a similar change of meaning is found; according to Snouck Hurgronje, Melkânische Sprichwörter, N°. 10, namūs means the “spotless, honourable name” which one has among men; its opposite is ʻār, “shame”.

The word namūs also plays a considerable part as the title of books.

The “greatest namūs” also occurs as the title of a book; cf. Ivanow, Catalogue, i. 335 sq.

(M. Plessner)

NÂR. [See Dâhânnâmâ, Dâhânnâmâ.]

NÂRSHAKHĪ, Abû Bakr Muhammad b. Hajfar (d. 438 = 950), author of the “History of Bukhârâ”, the original Arabic version of which he presented to the Sîmânûn b. Nâsr in 332 (943—944). In 522 (1128—1129) the book was translated into Persian by Abû Naṣr Ahmad b. Muhammad al-Kubâwî who omitted several “tedious” passages. Then in 574 (1178—1179) Muhammad b. Ṣafār prepared a new abbreviated edition of the book which he presented to Ṣâdîr ʻAbd al-Asîz b. Burhân al-Dîn, governor of Bukhârâ. Finally an unknown author continued it down to the Mongol conquest. It was in the last form that the book was published by Scheria. The book contains many interesting notes on the situation in Central Asia before Isâm and details not found elsewhere of the Arab conquest (from MâdÂ’iri). The Persian translator added further details from the works of Abu ʻl-Hasan ʻAbd al-ʻRâjmân b. Muhammad al-Nâshâpûrî and probably from [Abû ʻIrâq] Ibâmîn [b. al-ʻAbbâs al-Ṣâli, d. in 243 (857)]. The information about the towns of the district of Bukhârâ, their monuments, their products, their old customs (such as lamentation for Siyyâwûgh, p. 21) is very interesting.

Bibliography: Description topographique et historique de Boukhara par Muhammed Merchacky suivie de textes relatifs à la Transoxiane, publ. by Ch. Scheria, Paris 1892 (Publ. de l’École des Langues Orientales Vivantes, ii. series, vol. xii., p. 1—97). There is also an edition lithogr. in Bukhârâ. The only translation so far is that into Russian by N. Lykovlîn, Tashkent 1897 (ed. by Barthold). Cf. Lercz, Sur les monnaies des Bouakkhar-Khoudakhi, in the Travées de la 3me session du congrès international des orientalistes, St. Petersburg 1879, ii. 424; Barthold, Turkestan, Engl. transl., G. M.S., p. 14; Marquart, Erâmi, s. index; Marquart, Wehrót und Arang, (1907), p. 139 and passim. (V. Minorsky)

NÂSÂ (often Nsa), the name of several places in Persia: in Khurâsân, Fars, Kirmân and Hamâdhan; cf. Yâqût, iv. 775. (According to Bartholomea, nisâya means “settlement”).

1. Nâsâ in Khurâsân was situated in the cultivated zone which lies north of the range separating Khurâsân from the Turkomân stpepes. It corresponds to the Nâsah, Nâsah or Nâsah of the classical authors, celebrated for its breed of horses (Herodoto, iii. 106; cf. Strabo, xi, ch. xiv., § 7). Alexander the Great is said to have built an Alexandropolis at Nasaia. According to Isidore of Charax, ed. W. Sohôf, Philadelphia 1914, p. 8, the tombs of the Parthian kings were in the town of Nâsâ. Rawlinson, in J.R.A.S., 1859, p. 100, believed he saw in the stock of Turkomân horse descendants of the īstân Nasaia (Avesta, Vidvátâ, i. 7 seems to have a different locality in view).

According to Ishâkhî, the town of Nasa was very like Sâragh (i.e. like the half of Marw) and had much water, many gardens and green places and the country round was very fertile. Muâkaddâsî, p. 320, 331—332 says that the ten gates of the town were buried in verder. He confirms the abundance of springs but says the water was not of good quality. Muhammad Nasawî, Sirat ʻIshâkhî al-Dîn, ed. Houdâs, p. 22, says that the place was very unhealthy on account of its very warm climate and that the Turks could only live a short time there. According to Nasawî, p. 50, the town had a strong citadel. The number of tombs of shaikhâs and famous men was so great that the Šâfs called Nasa “little Damascus”, cf. the biography of Shaikh ʻSâîd, ed. Žukowsky, p. 45) written in the 13th century.

Yâqût, iv. 776—778 places Nâsâ 5 days’ journey from Marw, one day from Abīward and 6—7 days from Nâshâpûr. Of its dependencies he mentions: i. 480: Balûz (Frâîzâ); i. 857: Taftâkî; iii. 1243: Shawristân; iii. 866: Farawâ (= Kîzîl-Arwa); iv. 208: Kauk. Durûn, with the fortress Tâq (afterwards Yazir) also belonged to Nasa, cf. Barthold, A istori o orosheniya Turkestan, p. 37—41. Cf. also the Tahrîk-i Nâdîr of Mahdi Khan (Nâdîr’s study was at Khurramâbâd, cf. under the year 1044). The ruins of the capital of Nasa are near the little town of Bagir about 12 miles from Ashkhabad and 8 from the station of Basmân on the Trans-Caspian railway.

2. The Nasa in Hamâdhan perhaps cor-
responds to the Nisāya placed by the inscription of Darius (Behistūn, i. 13) in Media. It is possible that the reference is to the plains of northern Luristan [q. v.] (Alishtar, Khawa) where the well-known bronzes of Luristan were found; cf. Minorsky, in Apollo, London, Feb. 1931.

(V. MINORSKY)

NASĀF. [See KURSHAW].

AL-NASĀFI, nisba [cf. NASAF] of several eminent persons of whom the following may be mentioned:

1. Al-`Aţībānī Mārīm B. Muḥammad B. Muḥammad B. Khālid Al-Dάğārī (d. 508 = 1114); one of the mutakallimin [q. v.], whose scholastic position is between that of the early period as represented by `Abd al-Ḵārīr al-Baghdādī [q. v.], who is still endearing to find a convenient arrangement and an adequate formulation of the contents of kalām, and the younger mutakallims who have at hand the necessary formulations for ready use. Of his works the following are known to me:

1. Tamkūl il-Ḵawādi at-Tawḥīd (Cairo, MS. 2417, fol. 1—30; cf. Fīrisr ... Misr, ii. 51), a treatise in which the contents of the creed are proved according to the scholastic method. The first chapter consists of an exposition of the doctrine of cognition, the last of the doctrine of the immanence. The work closes with a muraqqa` which contains the doctrine de Deo in an abridged form;

2. Ṭabṣirat al-Adīla (Cairo, MSS. 2287, 6673; cf. Fīrisr ... Misr, ii. 8), an elaborate work on dogmatics of nearly the same scheme as the Tamkūl; 3. Baḥr al-Kalām, printed at Cairo 1329 (1911), differs from the two foregoing works in so far as it deals with heresies and is polemical. It is identical with Muṣṣāḥaf at-Ša`lma wa `l-Dāma wa `l-Furqā al-Dallā wa `l-Muṭālā` (Leiden, cod. or. 862) as well as with ʿAṣīfīl (Berlin, No. 1941; cf. Ahlwardt, Versuchnisn, ii. 400). The work is preserved in several libraries under one of these titles (Brockelmann, G.A.L., i. 426, where the number of five works must be reduced to three).

Bibliography: in the art.; cf. also Hādījī Khāliṣa, ed. Flugel, index, No. 6453.

II. Abū Ḥafṣī Īmar Nāḏim al-Din (d. 537 = 1142), jurist and theologian. Of his works the only one edited is the ʿAṣīfīl, which has the form of a catechism. It became popular and was much commented, probably because it was the first abridged form of the creed according to the scholastic method of the new orthodoxy. In Europe it became known as early as 1843 through the edition by Cureton (The Pillar of the Creed, No. 2). For editions and commentaries on this work as well as for the other works of this scholar that have come down to us, cf. G.A.L., i. 427 sqq.

Bibliography: Brockelmann, G. A. L., i. 428 and the references given there.

(A. J. WEINSECK)

AL-NASĀFI, Ḥāfīz al-Din Abū Ṭabarakt Abū Allāh B. Ḥamād B. Ṣāḥib, an important Hāfīzī legist and theologian, born in 1294 in Sogdiana, was a pupil of Šamas al-Ṭaimma al-Kardānī (d. 642 = 1244—1245). Šāhid al-Din al-Dāfārī (d. 666 = 1267—1268) and Baḥr al-Dīn Khwāhārīṣī (d. 651 = 1253). He taught in the Madrasa al-Kutbiya al-Silāshī in Kirmān, came in 710 to Baghdād and died in 820 (August 1310); according to Kuraṣhī and Ibn Ta`ṣhirī (701: 701) apparently on his way back to Iṣfād (in Khusūṭīn), where he was buried. His pupils were Muṣṭafā al-Dīn Ibn al-Sadūṭī, author of the Majma` al-Bahrāin (d. 694 = 1294—1295), and Ḥusain al-Dīn al-Sighniqī, a commentator on the Iṣfād (d. 714 = 1314—1315) [cf. AL-MARGHINĀNĪ].

The best of his works is thought to be the Kitāb al-Manār fī Uṣūl al-Fiqḥ, a concise account of the foundations of law (Dehil 1870, Constantinople 1326 and often later); there are numerous later commentaries but he himself wrote two, one of which is entitled Kitāb al-Atanafī (2 vols., Bulāq 1316). Out of his original plan of writing a commentary on the Ḥidāyat of al-Marghinānī [q. v.] there came the lawbook modelled on it Kitāb al-Wafī, on which he composed in 683 a special commentary, the Kitāb al-Ḳāfis (delivered in lectures in Kirmān in 689). He had previously prepared a synopsis of the Wafī entitled Kanz al-Da`ash (Cairo 1311, Lucknow 1294, 1312, etc.) which Ibn al-Sadūṭī in 683 (this is no doubt the correct reading for 653 in Kaffawi) heard him deliver in Kirmān. This synopsis was used as late as the sixteenth century in Damascus and at the al-Ashtar in Cairo (v. Kremer, Mittel-Syrien u. Damaskus, Vienna 1853, p. 136; do., Egypten, Leipzig 1865, p. 51). The best known printed commentaries on the Kanz are: a. Ṭabṣir al-Ḥaṣāṣa` of al-Zalī` (d. 743 = 1342—1343) in 6 vols., Bulāq 1313—1315; b. Kanz al-Ḥaṣāṣa` of al-ʿAinī (d. 855 = 1451) in 2 vols. Bulāq 1285 and 1299; c. Ṭabṣir al-Ḥaṣāṣa` of Mollā Mīskīn al-Harawi (written in 811 = 1408—1409), Cairo 1294, 1303, 1312; d. Taṣfīl al-Raḥmān of al-Tā`i (d. 1192 = 1775), Cairo 1307; etc.; e. the most important: al-Bahr al-rāʿī of Ibn Nadūm (d. 970 = 1562—1563) in 8 vols., Cairo 1334.

He also wrote a series of commentaries, e. g. two on the Kitāb al-Wafī of Nasīr al-Dīn al-Samarrjānī (d. 656 = 1258) entitled al-Mustafā and al-Manṣūr; on the Manṣūrā of Naḍim al-Dīn Abū Ḥafṣī al-Nasafī (d. 537 = 1142—1143), on the differences of opinion between Abū Ḥanīfa, his two pupils, and al-Sāfī and Mālik, entitled al-Mustafā, as well as a synopsis entitled al-Musafīr (finished in 20th Shabān 670) by Brockelmann, G. A. L., i. 428; also on the Munawwagā` fī Uṣūl al-Dīn of Akhsikāt (d. 644 = 1246—1247; Ibn Ta`ṣhirī, Ḥādījī Khāliṣa, No. 13095). On the other hand, he did not write a commentary on the Iṣfād, as Ibn Kuftubagha and Ḥādījī Khāliṣa, vi. 484 say (cf. the story of the origin of his Wafī according to al-Ikānī (d. 758 = 1357) in Ḥādījī Khāliṣa, vi. 419). He also wrote a commentary on the Karst, Mudārik al-Tawḥīl wa Ḥaṣāṣa` al-Tawḥīl (printed in 2 vols., Bombay 1279, Cairo 1306, 1326).

His confession of faith al-ʾUmda fī Uṣūl al-Dīn (apparently also called al-Manṣūr fī Uṣūl al-Dīn: Kuraṣhī, Ibn Da`ūdī) became known quite early in Europe from Cureton's edition (Pillar of the Creed, London 1843). In it he closely follows the Ṣadūq of Naḍim al-Dīn al-Nasafī (see above) and also wrote a commentary on it: al-Fīrimd fī al-Ṭarmīd.

may be said to begin with the conversion of Ghasan [q. v.]; the chief al-Harîrî b. Djabala was an ardent monophysite and in A. D. 542 or 543 he persuaded the empress Theodora to appoint Jacob Baradæus as bishop of Edessa with a wandering commission, and Theodore as bishop of Buâra in the monophysite cause. Nestorian Christianity came to Ḥira [q. v.] at an early date. Its bishops are often mentioned from A. D. 410 till c. 1000 and a monastery was built there by 410. Three Nestorian patriarchs were buried there. Al-Mundhirî III (d. 554) [cf. LAKIEM] was a pagan though he had a Christian wife, who built the convent called (HEFFEKEN X. 127) al-Mundhirî al-Lakhmi. According to the Nestorians the monk Thaumaturgus was one of their chief apologists; but the traditions of his deeds are so full of miracle that even if we accept his story as genuine, it is impossible to believe that he was a Christian. He is said to have been a Christian from birth, and having been converted by the Nestorians, to have recovered his faith by finding his mother among their adherents. The story of his life is given in the works of several writers, and his conversion seems to have been genuine, but it is not known how he came to be associated with the Nestorians. The convent of Thaumaturgus seems to have been built on the site of a pagan sanctuary and a Nestorian bishop was appointed c. 800 A. D. [cf. ABRAHA, HILYAR, SAN'A]. From the borders Christianity percolated into the interior. Bishops are recorded at Aila [q. v.], Dûma [cf. DJAWF] and Taima', and most of the tribes in the north had some knowledge of the faith even if the saying attributed to 'Alli, “All they know of Christianity is wine-bibbing”, is exaggerated. The tribes most affected were, in the west Salih, Ghassan, Djudhâm and Lakhîm, in the east Taghlib, Bakr with 'Ubîl, Hamîf, Rab'a, Tamûn and Tanûkh, and in the centre Ta'î with Thâlab and part of Kufa'.

B. Under Islam (mediæval period).

1. History. It is generally recognised that the attitude of Muhammad towards the Christians, which had at first been favourable, changed towards the end of his life; probably when the expanding boundaries of the Muslim state brought him into contact with Christian tribes [cf. art. MUHAMMAD, iii. 735a]. The problem of subject Christians scarcely arose during his lifetime, since his relations with Christian tribes and settlements (e. g. Aila, Dûma) were generally regulated by
treaties, the best known of which is that concluded with the Christians of Nadiflan [q. v.]. By the terms of this treaty, the last of all, usually applied to keep their religion and manage their own affairs, if they paid a fixed tribute, entertained the Prophet's representatives for a month, gave certain supplies in the event of war with the Yaman, and abstained from usury. To the same period belongs the general command given in the Kur'ān (ix. 29) to fight against those who have received a book until they pay tribute (here called al-dā`īzīn, q. v.) and are humbled.

The conquests of Khalid b. al-Walid suddenly made the problem acute. During the reign of 'Umar it was solved, like all the problems of the state, in a hand-to-hand way, usually by applying the precedent of the Nadiflan treaty. Hira, the cities of Syria and Mesopotamia made individual treaties with the Muslim commanders; the terms differ in detail, but all include a fixed tribute. Muslim governors were set over the provinces and big towns, but the minor officials were not changed. The people paid much the same taxes as before and there was little interference with their social and religious life. Sometimes a church or part of one was taken and turned into a mosque; more often, probably, churches and monasteries were respected, as also were existing property rights. On the occasion of al-İfrāk there was a movement among the tribes to seize the conquered lands, and it would seem that a district was for a time assigned to the tribe Badjia (cf. Baladhuri, p. 267 sq.; Kitāb al-Umm, iv. 192), but in the end 'Umar applied the precedent established by Muḥammad on the conquest of Khaibar and left the conquered lands to their owners, to be administered as a trust for the benefit of the conquerors [see art. FA'AT]. On the other hand, he exiled the Christians of Nadiflan to al-İfrāk so that there might be but one religion in Arabia, though isolated Christians lived in al-Madinah itself. 'Umar had a Christian slave who was set free at his death (Ibn Sa'd, vi. 110), and Abū Muṣā had a Christian secretary who accompanied him to al-Madinah. 'Umar is represented, even in Christian sources, as friendly towards Christians, and in his last charge he recommended the dā`imahs to the care of his successor as the support of his families.

During the following decades the treatment and status of Christians shows many contradictions, and was often determined apparently by individual caprice. While new churches were built even in towns founded by the Arabs, such as Fustat and Basra, and the caliph even helped to restore the church at Edessa (Corp. Script. Chr. Or., ser. iii., xiv. 288), in many other places churches were destroyed, and both Muṣawiyah and 'Abd al-Malik tried to seize the cathedral at Damascus before al-Walid finally incorporated it in the mosque. Christians continued to hold high offices in the administration: Muṣawiyah had a Christian secretary, Saḏīlān, who was succeeded by his son, and 'Abd al-'Azīz had as his treasurer a wealthy Christian, Athanasius, though 'Abd al-Malik despised him of much of his wealth. State accounts in Syria and Egypt were kept in Greek until the reign of 'Abd al-Malik, and local accounts in Egypt were still kept in Greek for long afterwards. There were Christians in the Muslim armies, and some gave military service instead of tribute. When the Ḍārādīma of Mount Lebanon were defeated, a clause in the treaty stipulated that they should wear Arab dress (Baladhuri, p. 161). Yet there was some persecution of Christians, though usually of a milder version. Jews were settled in some of the conquered towns because they were enemies of the Christians (Baladhuri, p. 127). The Jacobites paid a special tax to Muṣawiyah (Corp. Script. Chr. Or., ser. iii., iv. 70), and the government sometimes prevented the election of a patriarch. The Christian Arabs of Mesopotamia formed a special category; these paid double zakāt instead of tribute, but a chief of Taghlib was savagely tortured because he would not renounce his faith. Personal relations between Muslims and Christians were often friendly. It is said of a poet that he never mentioned the wife of a Muslim or a dā`imah (Kitāb al-İfrāk, iii. 291). 'Uthmān showed great honour to Abū Zubayd, and the relations of 'Abd al-Malik with the poet al-Ḳifṭal are notorious [see art. AL-ḲIFṬAL].

From this time, however, the condition of the subject Christians began to deteriorate. 'Abd al-Malik changed the system of taxation in Egypt, Syria and Mesopotamia (Dionysius of Tell-Mahre, ed. Chabot, p. 10; Abū Yūsuf, p. 23 sq.), and introduced the personal tax on non-Muslims. In many districts the form of receipt was a leaden seal fastened around the neck or wrist. 'Umar II gave orders to dismiss all dā`imahs from government service, but such confusion resulted that the order was soon afterwards ignored. He was also the author of the famous "ordinances", in later times attributed to 'Umar I (cf. Abū Yūsuf, p. 73), which prescribed the restrictions to be placed on dā`imahs and the wearing of the sunnār (q. v.) as their distinctive badge. (According to the Nestorian Chronicle [Patr. Or., xiii. 630], this had earlier been the badge of Christian scholars.)

By the end of the second century, as may be seen from the works of Abū Yūsuf and al-Ṣaḥīfī, the customs governing the dā`imahs were more or less fixed, but insistence on them depended on the whim of the governor and the temper of the populace. It was now accepted that no new churches might be built in towns where Muslims lived, though the old might be repaired. A governor's fancy or a riot might destroy churches and there was no redress; the cathedral at Ṣan`ā', for example, was destroyed for its wealth. At least six rebellions of the Copts took place during the century. Harūn al-Raḍīd reenacted the "ordinances" forbidding Christians to be like Muslims in dress and style of riding; but during the reign of Maʿmūn, the Christian headman of Būra in Egypt wore black on a Friday and rode in state to the door of the mosque, when his deputy entered and led the prayers. Their use of horses and riding saddles began to raise objection, and restrictions were placed on religious processions; crosses were sometimes tolerated though banners were forbidden. Taxation became heavier and cases of extortion are recorded. The caliph kept a careful eye on the Church and a patriarch had to get his approval and do him homage, often at a price. A discontented Christian found it easy to get government help in making trouble for his opponents. At this time Christian doctors became prominent as favourites of the caliph and they did not always use their influence in a Christian manner. Discussions on religion took place; at one, when Maʿmūn was present, the Catholics, the Head
of the Dispersion, the heads of the Šābians, the chief priest of the fire temple and Muslim theologians took part. Many Christians were in government service or were secretaries to public men, and even the fanatical al-Mutawakkil had a Christian secretary. In 236 (850) this caliph intensified the repressive laws. A Christian had to wear a yellow ṭalasāsan and the zunnār and a woman had to wear a yellow wrap out of doors. If he rode he must have wooden stirrups and two balls on the back of the saddle. Men (or slaves) had to wear the ḡāyiSr q.v.). They were to be dismissed from the civil service. All new churches were to be pulled down and the cross might not be displayed at festivals. Their graves had to be flush with the ground. The title was levied on their houses and wooden devices fixed to them. Four years later they were forbidden to ride horses and were told to wear two yellow ẓurrā'a. These laws are the limit of legal persecution and continued to govern in theory though not always observed in practice.

Christians were always to be found in the civil service; some even were connected with the army. In Egypt it was enacted that they should be present on Fridays when the Muslims were absent (Makrizi, Khatīb, ii. 227). One was called Ṿazīr in the time of al-Mu'tamid; it seems, however, that the title had become cheap and he was only a high official (Yāḳūṭ, Tishād, ii. 130, 259). The first rulers to promote Christians to the highest rank were the Beylids [see 'Abd al-Dawla] and the Fātimids. This was quite exceptional, but their strength and influence in the administration at all times can be seen from the constant complaints of the dishonesty of Christian secretaries. More especially in the financial department they possessed a quasi-monopoly, which lasted in Egypt down to the nineteenth century.

That Muslim intolerance did grow more bitter is shown by comparing the accounts of al-Aḥṣāl in the Kitāb al-Āghāni with the remarks of Ibn Ṭaḥhik ('Umda, i. 21). In later times the rulers were often more tolerant or far-sighted than the populace; nevertheless, additional taxes were sometimes laid on the dāmmms. In Egypt an extra 1 dinār was exacted from them between 1260 and 1250, in addition to the poll-tax, which was then called ǧāliyya (Makrizi, i. 106). At intervals fresh attempts were made to impose a distinctive dress upon them. Their request to wear white turbans with a badge was refused at the instance of Ibn Ṭaḥhik [q.v.] and in Egypt blue became their distinctive colour. On the whole, they were worse off than their Muslim fellow-subjects, for, while both suffered from oppression by the ruler, they were liable in addition to be attacked by their fellow citizens. Cases of mass conversion still occurred, but the disappearance of the large Christian population of northern Mesopotamia, which continued down to the late middle ages to be the chief centre of Christianity in the Muslim dominions, is probably to be connected with the general decay of agriculture there.

2. Legal Status. Here as elsewhere the facts of history do not fit the systems of the theorists, who condemned the laxity of the people on the one hand and the highhandedness of the rulers on the other. The general legal position and the legal views of taxation are outlined in the articles Dhimm,a, Ujra, and Khārāz. To this outline some details may be added from the system of Mālik, which is less liberal than that of Abū Ḩanīfa. Mālik taught that a treaty once made with dāmmms cannot be changed. They may not enter mosques or Mecca and the blood money for them is half that for a Muslim. New churches may not be built in or near the towns of Islām though the old may be repaired. Mālik, when consulted, said that a Christian, who had blasphemed the Prophet, should be put to death, and this was done. A Muslim may not borrow from them, nor become a partner with them in business unless he is present at all transactions. Another opinion would let them be sleeping partners. A Muslim should not rent land from them as a métaier, but it is not illegal, and one who is part owner of a house with a Muslim has the right of pre-emption. One, who is trading in his own town, pays no tax beyond the general tribute; if he goes to another town and buys goods with money brought with him, he pays the trade tax (tithe), but there is no tax on the sale of these goods. Dāmmms must not kill sacrifices for Muslims; if they do, the sacrifices must be repeated. A Muslim woman should kill a beast rather than ask them to do so. If one marries a Muslim woman with the consent of her guardians, they shall all be punished, but if he pretended to be a Muslim, the marriage is invalid. They may not arrange a marriage for a Muslim woman nor a Muslim that of his dāmmi sister. Married dāmmms are divorced by the conversion of the woman. Mālik did not approve of dāmmi foster-mothers for Muslim children. If a Muslim commits adultery with a dāmmi woman, he is punished according to his law and she is handed over to her co-religionists to be dealt with according to their law. The evidence of a dāmmi is not accepted. Should he turn Muslim, his evidence is still not accepted (i.e. about things that happened while he was a dāmmi), consequently dāmmi women cannot give evidence about a birth. If a Christian buys or is given a Muslim slave, the transaction is valid, but the slave must be sold to a Muslim. Muslim law applies to all business dealings between dāmmms, except usury, though they may practise this among themselves. They may not be taught the Qurʾān. A Muslim may not prevent his Christian slave from drinking wine, eating pork and going to church. It may be noted that Māwardi admits the possibility of a dāmmi becoming Ṿazīr (qv azīr al-tanfis). One authority says that eight acts put a dāmmi outside the law: an agreement to fight the Muslims, fornication with a Muslim woman, an attempt to marry one, an attempt to turn a Muslim from his religion, robbery of a Muslim on the highway, acting as a spy or guide for unbelievers, or the killing of any Muslim.

3. Social Status. The fact that Christians, like other dāmmms, were citizens as it were at second remove, was of course reflected in their social position. The full consequences of this disability were to some extent mitigated by their numbers and influence in the public administration, and by their monopoly or quasi-monopoly of important professions. Christians were distinguished more especially as doctors (the family of Buḫṭişuʾ), Ibn Buṭlān [q.v. etc.] and druggists. A Muslim complained that he could get no patients in an unhealthy year because he spoke good Arabic and not the dialect of Ḥunjāḥib [q.v.] and
wore cotton instead of silk (Djähic, Kitāb al-Buhkārā, p. 85) and al-Ghazzālī says that in many towns the pd. actor was so rich, and it was often their improper display which provoked the mob to violence. The prohibition of usury in Muslim law operated in favour of the dhimmis as merchants and money-changers, and gave them the monopoly of such trades as those of goldsmiths and jewelers.

Apart from numerous instances of friendly personal relations between individuals, the generally good relations between the Muslims and Christians is shown by the universal celebration of the great festivals of the Christian year, and the holidays and fairs which accompanied the feasts of the patron saints at the principal monasteries (cf. A. Fischer, in Berichte über d. Verh. d. Sachs. Ak. d. Wiss. zu Leipzig, Phil.-hist. Kl., 1929). Christians took part in the intellectual life of the community, and the books they wrote are named with approval by the Muslim historians. The strict letter of the law regarding non-Muslims was not always applied. While marriage to a Muslim was always forbidden, fornication with one was not always punished with death. At times the Muslim murderer of a dhimmī was executed. Even the apostate sometime found mercy, on the ground that forced conversions were not valid. Christians kept Muslim slaves, both male and female, and acted for Muslims in business.

In spite of all this, the stigma of inferiority remained. The humiliating regulations, the need for constant watchfulness, the constant recourse to intrigue and influence to circumvent the law, the segregation of dhimmis in many cities, the poverty and powerlessness of dhimmis in the towns, were their legal disabilities; there could be no true justice for the dhimmī when his evidence was excluded from the Muslim courts, even though kāfs were enjoined not to discriminate against them in other respects, nor could there be any permanent social relationship in the absence of intermarriage. It is not surprising therefore that the Christian communities of the East gradually dwindled not only in numbers, but also in vitality and moral tone.

C. The Ottoman Empire.

Since the period of the Tanzimāt [q. v.] the Ottoman Empire has gradually abandoned the governmental traditions of Muhammadan states, and this change has fundamentally affected the treatment of its Christian subjects. On the other hand, this change was actually brought about by the very problems with which the Ottoman government became confronted through the existence of a large Christian population in its territory.

Up to the beginning of the sixteenth century the treatment of Christians in the Empire was, on the whole, in accordance with the prescriptions of the šarīʿa after the Ḩanafī madhḥab as to the treatment of dhimmis, the chief authority on these questions being the Multāṣf al-ʿAḥbar of Ibrahim al-Ḥalabi (cf. the Constantinople edition of 1390, p. 90). Christians were subject to the payment of the dziercri gebērān, more often called ḥarāddī in Turkey [cf. these two articles], whence the expression ḥarāddī-gēwr. This tax was levied in three classes, according to the financial capacity of the payers. D’Ohsson (Tableau, iii. 4 sqq.) says that in his time (about 1800) each year 1,000,000 tax-forms were issued for the non-Muslims, of which 60,000 were in the capital. The regulations as to the building and restoration of Christian churches were observed in principle; the Ḥanafī madhḥab allows the restoration of decayed churches but not of churches deliberately demolished; Sheikh ī Zāde, however, in his commentary on the Multāṣf (Multāṣf al-ʿAḥbar, printed Constantinople 1276, p. 415) complains that this distinction was not duly observed in his time (1666). From the sixteenth century indeed the building and rebuilding of churches was a subject of frequent intervention by the representatives of foreign Christian powers. The turning of churches into mosques by the Ottoman conquerors — such as the case of the Āya Sōnah — was generally in accordance with Islamic laws of war. Likewise the prescriptions about clothing were observed and from time to time reinforced; as late as the eighteenth century certain sultanāns such as ʿUlmān III and Muṣṭafā III are known to have given special attention to this point.

We also find in the Ḥanānī-nimāt — the contents of which were declared in accordance with the šarīʿa by the Sheikh al-Islām — some special clauses about non-Muslims (ḥājrā). A Ḥanānī-name of the time of Suleimān I prescribes that, in the case of certain crimes that are punished by fines, the fines of non-Muslims shall amount to only half the sum inflicted on a Muslim in each case (cf. the second Ḥanānī-name, published as appendix to T. O. E. M., iii. 3, 4, 6). The same Ḥanānī-name gives directions with regard to the inheritance of non-Muslims.

The Christians thus constituted in the Ottoman Empire, just as in other Muhammadan states, a section of the population which, so far as their relations with the Government went, had minor rights compared to Muhammadans and to which the high functionaries of the state never belonged. They were improperly designated by the term raʿīya, which word originally means all subjects of a Muhammadan ruler, in allusion to a well-known tradition which compares the ruler with a shepherd and his subjects with a flock (raʿīya, cf. al-Bukharī, Ḥadīth, bāb 11). Hence the use of the term rayās in European works when speaking of the Christian subjects of the sultan. Cavar [q. v.] was a more or less contemptuous expression in the idiom of Muslim circles.

There had been, however, since the coming into existence of the Ottoman Empire, several circumstances that presented the problem of the Christian subjects in forms quite different from those prevailing in contemporary Muhammadan states. The
beginnings of the Ottoman state itself had been anything but orthodox. Erteğrul, according to most sources, was only a converted Muslim and ‘Othmān and Orkhan, the founders of the state, had many dealings with the Christian aristocracy of Byzantium, some of whom joined readily the cause and the creed of the new conquerors. Christianity was at that time still widely spread in Asia Minor and was at first adapted to the rather unorthodox mystic form in which the Turcomans of Rûm had made acquaintance with Islām. Large parts of the population adhered for centuries to a Christian-Islamic mixture of religious convictions, such as appeared in the derwish revolt under Simawna Oghlu Bâdr al-Dîn (cf. Babinger, in Isl., xi.), and as survived in the beliefs and practices of the Bektâşis and the mixed worship of certain saints by both the Islâmic and the Christian population. Survivals of this mixed creed were also observed among the so-called Crypto-Christians of Trebizond (cf. Hasluck, in Journal of Hellenic Studies, xli. 199 sqq.). It was only after the restoration of the Empire in the xvth century that the orthodox Islāmic attitude prevailed in the government of the sulṭan, who repeatedly had to take strong measures against the heterodox elements. During this same period it was of no less importance that the Ottoman Empire came to incorporate more and more territories in Europe exclusively inhabited by Christians. With the exception of eastern Thrace, northern Macedonia, Bosnia and Crete, the new subjects were never Islamicized in great numbers; in the Empire they came to form a very considerable minority, which was counterbalanced only by the large Muhammadan population of the Asiatic territories. So long as the government and the Muhammadan ruling class were strong, this did not affect the political system. But this ruling class itself, as well as their powerful military instrument, the Janissaries, were recruited in a large measure from the Greek and Slavonic Christian population of the European provinces and often kept up friendly relations with their non-converted kinsmen (one of the many instances is that of Djiangir Khalil Pasha under Muhammad II). Accordingly much consideration was shown to large parts of the Christian population, and the more so as many Christians served on minor posts in the state chanceries, where they performed important administrative duties (Crusius, Turo- gratia, p. 14). Besides, many high-placed persons, including the sulṭan himself, had, through their harems, many Christian relations without and within the Empire. So the domestic and foreign policy of the state often brought about measures of toleration, which were not altogether in accordance with the strict demands of Muhammadan law. An outstanding example is the way in which Constantinople and its Christian inhabitants were treated after the excesses of the first days of the conquest were over. Muhammad II did all that he could to re-populate his new capital, even with Greeks, when the Muhammadan element proved insufficient; he even had a new Ecumenical Patriarch chosen not long after the conquest (cf. Fr. Giese, Die Stellung der christlichen Untertanen im Osmanischen Reich, in IsL, xix., 1931, p. 264 sqq.). Only afterwards, in the first half of the xvth century, when Muhammadan fanaticism had increased, there was a party which invoking the fact that the town had been taken by force (أنتِوان), claimed the destruction of all churches that were left to the Christians, and only with great difficulty was evidence constructed to prove that Constantinople was really taken by a capitulation (cf. J. H. Mordtmann, Die Kapitulation von Konstantinopel im Jahre 1453, in Byzantinische Zeitschrift, xxi., 1912, p. 129 sqq.). Other signs of fanaticism in the same period are i. a. the intention attributed to Selim I to convert all Christians to Islām, the wish of Murād III to turn all churches into mosques and the alleged oath of Murād IV to exterminate all Christians. Still, apart from these occasional outbursts, tolerance prevailed. In the capital a Greek Christian aristocracy and plutocracy was permitted to live in the quarter of Phanar; from their midst came influential persons such as Michael Kantsakzenos, the "pillar of the Christians" (Jorga, iii. 211) in the xvth century, and the well-known Phanariote families who later supplied dragomans to the Porte and the princes of the Danube principalities.

The official attitude towards the Christians was complete abstinence from their domestic religious and secular affairs so long as this did not affect the public order. This explains also the tolerance towards the activities of the Roman Catholic missionaries who were sent from the xvi th century onwards to convert the eastern Christians. The government took no interest in the different denominations of Christians, while their internal divisions reinforced its authority. R. Gragger in his article Türkisch-Ungarische Kulturbeziehungen (Literaturdenkmaler aus Ungarns Türkenzeit, in Ungarische Bibliothek, i. N. 14, Berlin 1927) depicts the tolerant attitude and the sometimes amused interest of the Turkish Pashas in Hungary in the religious disputes between Roman Catholics and Protestants. On the other hand, the serious domestic troubles amongst the Greeks belonging to the much decayed Ecumenical Patriarchate, as the result of which the party of the patriarch Cyrilus Lucaris took, in the first half of the xvi th century, a definite anti-Roman Catholic attitude, could not be wholly indifferent to the Porte, because from that time on the only political protector of the Greeks was the Ottoman government. Arbitrary measures, such as occasional executions of the patriach (for the first time in 1657; v. Hammer, G. O. R., i.lli. 474) and excesses in war time are not sufficient to refute the statement that the attitude of the government was on the whole tolerant.

What, at length, came to influence most deeply this attitude was the interest shown in the lot of the Christians by the governments of the Christian powers with whom the Porte began to enter into peaceful relations. In the first centuries those foreign Christians who were allowed to reside in the seaport towns fell within the category of μυστα’μιν. Legal conceptions of that time did not distinguish sharply between religious denomination and nationality, both being designated by the word millet; therefore a foreigner who embraced Islām was entirely assimilated to the Muhammadan subjects of the sulṭan. In course of time millet came to be used also for the different "national" denominations of the Christians within the Empire. The first foreign power to be interested in the Christians of Turkey was the Vatican, as was manifested several times by the inevitable participation of the Popes in the preparation of anti-Turkish crusades. The Cardinal Protettore di Levante in Rome exercised, through his vicar, considerable influence
on the Latin Roman Catholic community of Pera, which, since the conquest of Constantinople, had enjoyed, like the other Christian communities, administrative independence. This "religious protection" was not altogether in conformance with the wishes of the Christians themselves (G. Young, *Corps de Droit Ottoman*, Oxford 1905, ii. 124), but at those times the Porte followed a policy of non-intervention and did not seize the opportunity of placing these Christian inhabitants of her territory under her more direct control. The same policy made her accept without difficulty the reministrances of a second, more powerful, protector, the King of France, who already before the conclusion of the treaty of 1535 had begun to act as intermediary between the Catholics in Jerusalem and other places in the Levant and the Porte. This intervention of France— which, in the eyes of Christian Europe, served her as an excuse for her entering into diplomatic relations with the Porte— was tolerated equally in favour of other than French ecclesiastics and missionaries, and of non-French Christian prisoners. Occasionally France's protection was also invoked by other than Roman Catholics; in 1639, the Oecumenical Patriarch himself asked the French King to declare himself protector of the Eastern Church. The French capitulation of 1673 recognized at last the protectorate of the King of France over the Roman Catholic foreign Christians, though a general protectorate over all the Christians in the Empire had been demanded originally; the famous capitulation of 1740 confirmed the dispositions of that of 1673 (cf. G. Pelissier du Ruissac, *Le Régime des Capitulations dans l'Empire Ottoman*, Paris 1911, i. 80 sqq.).

A third powerful protectorate arose at this time of the Greek Orthodox Christians, arose in the xviiith century in the person of the Russian Czar. Shortly after the fall of Constantinople Ivan the Great had begun to regard himself as successor of the Byzantine Emperors and, as the power of Russia increased, the Greek orthodox Christians in the western and eastern parts of the Empire came to look upon the Czar as their natural protector. Especially the Christian institutions in Jerusalem and the much impoverished patriarchate of that town benefited by the Russian religious interest. On the other hand, Russia learnt to use her influence with the Orthodox Christians as a powerful political instrument. The peace treaty of Kâčk Kainardjie (1776) recognized at last the right of the Russian diplomatic representatives to interfere in favour of the Christians in the Empire.

With the weakening of the Empire in the xviiith century the so-called "religious protection" became a heavy burden on Turkey's inner political conditions. Especially after the disastrous happenings under Mahmut II's reign, it became clear that the old Muhammadan conception of the state, which left the non-Muslims entirely to themselves, or to others, could no longer be maintained. It was one of the chief stimuli to the introduction of the Tansımât. In order to retain as much control as possible over her Christian subjects the Porte now had to apply her governmental activity equally to non-Muslims and Muslims. Accordingly the Khâfî-i Sherif of Gûl-Khâne (1839) declared that perfect security was guaranteed to all subjects, Muslims or râdîyûs, as to their lives, their honour and their possessions. Still in the following years no important administrative measures were taken, while on the other hand the intervention of foreign powers in Christian affairs continued and led amongst other incidents to the outbreak of the Crimean War in 1853. An incident of 1843, in the meantime, had made the Porte give a formal assurance to the French and English ambassadors with regard to the non-application of capital punishment to persons who had renounced the Muhammadan creed (Young, *op. cit.*, ii. 11 sqq.).

The law of May 10, 1855 is an important landmark in the history of Ottoman policy towards the Christian subjects; this law abolished the capitulation tax for non-Muslims and envisaged the possibility of their service in the army (cf. DILMA and the *Bibliography* of this article). This legislative measure was completed by the Khâfî-i Humâyûn of February 18, 1856, which may be regarded as the Magna Charta of the rights of the non-Muslim subjects of the Empire; in this memorable edict the rights and privileges of the different religious denominations and their members were proceeded with more detail: as to their military service the edict laid down the principle that it could be replaced by the payment of an exemption tax, which, under the name of bedel, came to be regularly applied to all non-Muslims. In accordance with the contents of the Khâfî-i Humâyûn, the Ottoman legislation now began for the first time to take notice officially of the existence of the great number of Christian communities existing in the Empire. Organic statutes were elaborated for the more important of these communities (called millet): in 1860 for the Armenian Gregorian community and in 1862 for the Greek Orthodox community. In 1870 followed the capitulation of the Porte, of the Bulgarian Exarchate, while in course of time a host of laws, decrees and regulations were issued, containing more detailed provisions with regard to these and the minor communities: Patriarchates of Antioch and Jerusalem, Mount Athos, the Serbian Church, the Nestorians, the Latin communities, and the different churches united with Rome (Armenians, Chaldaens, Maronites, Melkites). This highly complicated legislation aimed at making these Christians Ottoman subjects in the full sense of the word, but met with great difficulties created by the existence of an ages-old system of autonomy and by the frequent intervention of the foreign powers. The leading principle of the government was to divest the purely religious authorities as much as possible of their power and to reinforce the power of the lay institutions. This policy led to endless troubles in which new regulations continually tried to restore order. In the constitution of Midhat Pasha (1876) Islam was proclaimed as the State religion, but immediately afterwards there follows the declaration that the profession of all recognized religions in the Empire is free and that all privileges granted to the different religious communities shall be maintained (art. 11). Art. 9 guarantees the personal freedom of all Ottoman subjects and art. 17 their complete equality before the law.

All the time during the period of reforms the Turkish government had to reckon with reactionary feelings against the changes in large sections of the Muhammadan population, which in many instances made the application of equal treatment, before the law and elsewhere, illusory. This justified to a certain extent the never ending reministrances
of the European powers, who lost no opportunity of insisting on new reforms in favour of the Christians. Art. 62 of the treaty of Berlin (July 3, 1878) stipulated again for the equal treatment by the Ottoman government of all non-Muslim subjects, amongst others that every one, without difference of religion, should be admitted as a witness before the law courts.

The effect of the foreign intervention in their favour encouraged on the other hand large sections of the Christian population to disloyal feelings and actions against their legal government. While the latter did what it could to do assimilate the different groups of the population, the factors of dissolution became at the same time ever stronger. Even the peaceful relations that had hitherto characterized on the whole the intercourse between Muhammedans and Christians—especially in the cities—began to make way for religious hatred between group and group, in which the government officials were often unable to observe the required neutral attitude. Amongst many other symptoms the Armenian troubles which began in 1889 in the Armenian vilayets—where a racial antagonism between Muhammedan Kurds and Christian Armenians had existed for centuries—were the most disastrous. They led to repeated Armenian attempts at revolt and to the notorious massacres in Constantinople of 1897.

By this development the treatment of the Christian subjects ceased to be a religious problem; it became a problem of nationality (millet in the new acceptance of the word) and of race, and at the same time one of the vital problems for the Empire. After the revolution of 1908 and the re-establishment of Miḥdat's constitution, these facts were not yet fully recognized. The Ottomanization of all subjects of the Empire was seriously attempted; the new representative bodies included a number of Christian members; occasionally there were Christian ministers. Then the world war precipitated the inevitable course of events. This time non-Muslims were for the first time incorporated in the Turkish army, but only for service behind the front. At the same time, the domestic policy of the Young Turks took a pan-Turkish turn, from which religious motives were quite absent. National Turkish feeling prevailed. The measures of deportation of Christian inhabitants from the frontier zones—measures from which the Armenians especially suffered terribly—were inspired by fear of disloyalty towards Turkey, though in their execution remnants of religious fanaticism, notably on the side of the Kurds, certainly played a large part.

The events after the armistice of Mudros have proved that a great part of the Christian population preferred independence or incorporation into a Christian state to remaining with Turkey. And the Turks themselves also were ready to part with their Christian subjects. Under these circumstances, were concluded at Lausanne, in 1923, the agreements with Greece for the exchange of the Greek population of the new Turkish state against Turks established on Hellenic territory; only Constantinople and some islands were excluded from this measure. Since by the events of the war the number of Armenians and other Christians in Asiatic Turkey had already been reduced to a very small minority, the result was that the present Turkish republic has only to deal with a Christian population of no numerical importance, most of whom live in Constantinople. The Lausanne treaty of 1923 in its articles 31-45 only the obligation for Turkey to treat the minorities on an equal basis with the Turkish subjects; it provides for their right to live after a personal legal statute of their own. Finally the treatment of Christians in Turkey has definitely ceased to be a legal problem in the old sense of the word since, by the alteration of the Constitution on April 5, 1928 the state has been completely secularized (cf. Tarîk, Istanbul 1931, iv. 213) by cancelling the article declaring that the state religion is Islam.

(AL. KRAMERS)

AL-NAṢĀRĪ, MUḤAMMAD B. AḤMAD B. `ALĪ B. MUḤAMMAD, an Arabic historian, biographer of the last Khwārimshāh Djiyāl al-Dīn Mangubītī [q. v.], was born in Khurāndiz (Vāqī, ii. 415), an estate in the district of Naṣīr [q. v.] in Khūrānd in which his family was reputed to have been already settled in the pre-Muhammedan period (Riht., ed. Houdas, p. 53). During his father's lifetime he represented him when the vizier Nīẓām al-Mulk, dismissed from office by Sulṭān Muḥammad, visited the family estates on his journey to Khwārizm and was received by him (tibîl, p. 30). He only mentions incidentally that he had stayed in his youth with Inānḵhān in Māsandarān before the latter had risen to power. When the Mongols invaded Khūrānd in 1221 he had already succeeded his father in his ancestral citadel, which he saved from sacking by payment of 10,000 ells of cloth. Nīẓām al-Dīn al-Sāmaṭānī was his guest at this time; he enabled him to escape to Khwārizm before the arrival of the enemy and in gratitude Nīẓām al-Dīn procured him a rich grant of land from Ozīlgh Shāh, son of Muḥammad (p. 57 sqq.). When in Naṣīr, the capital of his district, Naṣīr al-Dīn Ḥamzā b. Muḥammad, the representative of a local royal family, came to power as successor to his nephew Khkīyār al-Dīn (p. 99), he appointed him his māṭīb (p. 104) and in this capacity he took part in a battle fought by Inānḵhān, as governor of Khūrānd, at Nakhdjuwān near Naṣīr against the Mongols; according to the full story of the battle (p. 66), this was the only occasion on which he personally took part in a battle. When after the death of Sulṭān Muḥammad (1220) his eldest son Ghiyāth al-Dīn ascended the throne, Naṣīr al-Dīn took the side of his younger brother Djiyāl al-Dīn, and for this an expedition was sent against him under Tūlāḵ, son of Inānḵhān. To save himself he sent Naṣawī with 1,000 dinārs to Ghiyāth al-Dīn. After long wanderings and a two months' sojourn in Isfahān, he succeeded in giving the money to Djiyāl al-Dīn's minister Sharaf al-Mulk, who then wrote a despatch to Tūlāḵ ordering him to abandon the siege of Naṣīr; but this arrived too late and Naṣīr al-Dīn had already been slain (p. 109). Naṣawī did not dare to return home but went to Djiyāl al-Dīn when the latter had entered Marāgha. He was appointed by him Kāṭīb al-Inṣālā (p. 110) and henceforth accompanied him master on all his campaigns. When Dīyā al-Mulk 'Allā al-Dīn to escape the jealousy of the vizier Sharaf al-Mulk had himself appointed governor of Naṣīr he aroused such discontent there by his misgovernment that he was appointed in his stead governor of his native town with the title of vizier but had to stay with Djiyāl al-Dīn and sent a deputy to his governorship (p. 149).
When Djalal al-Din in 1230 was surrounded by the Mongols at Hant and fought his way out once again, Nasawi became separated from him and was kept a prisoner for two months in Amed but finally made his way to Maysafarikin where he learned of the sad end of his king who had been murdered by a Kurd on Aug. 16, 1231 (p. 245).

Ten years later in 659 (1241), he wrote the history of his sovereign entitled Sirat al-Sultân Djalal al-Din Mankobi. It opens with a confused and romantic account of the early history of the Mongols and begins his subject with Muhammad's campaign to the 'Iraq in 614 (1217). He relies for his facts mainly on the stories of high officials of his hero's court; as a result his interest is mainly in diplomatic documents and administrative measures while military matters, which were his hero's main occupation, are dealt with rather briefly. His model was apparently the Kitâb al-Yarnî of al-Uthbi which his master Nasrat al-Din was said to know by heart (p. 104); but he had not al-Uthbi's secure command of Arabic so that his style is fortunately much simpler and more matter of fact, in spite of all his attempts at rhymed prose and plays upon words. Persian influence on his style, which Houdas claims to notice, is on the other hand nowhere marked.

(Ch. Brockelmann)

NASHÎÅT MIRZÅ 'ABD AL-WÅHåBÅ OF ISFÅHÅN, one of the best Persian poets and stylists of the period of the early Kåfårs. He was a physician in Shiraz and in his native city, devoting many hours to literature and displayed a great facility. He wrote verse in Arabic, Persian and Turkish and was further celebrated for his great skill in qâbåså. Rumours of his poetical gifts induced the Kåfår Fåth 'Ali Shah (1797–1834) to invite him to Teherân as court poet. There Nasåht soon rose to great honour and in 1809 was appointed Munshå al-Mamlåk (secretary of state) with the title of Me'tamad al-Dawla. In this capacity he carried through several important negotiations for the Shah, such as the restoration of peace among the nomad tribes of Khorasan in 1814 and 1818. Besides his own poems, he wrote an introduction to Sahâ's famous Şåhånsåkhî-nâma and drew up a whole series of important diplomatic documents. Specially celebrated is the letter written by him to George III in which he expressed regret at the interruption of the friendly relations between England and Persia. He died in 1828–1829. He collected his poems into a book published in Teherân in 1266 (1850) under the title Gâdsâni-yt Nasåht (the "Treasury of Joy"). Nasåht's ghazels are all imitations of those of his great predecessors, particularly Hâfîz, but are distinguished by elegance and simplicity, smooth rhythm and considerable depth of feeling.

(E. Berthels)

NASHÅWÅN B. SA'ÅD B. NASÅWÅN AL-HIMÅYÅR ÅF. AL-VÅYÅN, an Arab Philologist. The notices of this individual and his career are exceedingly scanty. In Yaghût's Irshåd and in Suyûtî's Fångha he is described in laudatory terms in the usual phrases as a great scholar, authority on fiqh, philology and nask; he was also distinguished as a historian and poet and was equally versed in all the other branches of science. He compiled a dictionary entitled Shâma al-‘Ulåm wa-Dawnåh al-‘Arab min al-Kulåm in eight (according to others eighteen) volumes which his son later revised and condensed into two volumes; he also wrote a treatise on rhyme, Kitâb al-Kawåvî, and a book of a religious and philosophical nature, Kitâb Hår al-In wa-Târikh al-Sâmån. We know neither the year nor the place of his birth, nor with whom he studied nor in what places he lived. Only one story of his life has survived and that sounds improbable. Yaghût says he was a great chief who besieged cities and fortresses and ruled over a hill-tribe in the Sabr range. Al-Suyûtî takes this story from Yaghût. According to al-Suyûtî, he was a follower of the Mu'tazila. He is said to have died on the 24th Dhu 'l-Hijjå 573 (1117). The importance of Nashåwan lies in the fact that he was particularly well acquainted with the South Arabian tradition. He took up the work of his predecessor al-Hamåndåf. The task of rescuing from oblivion the legends of the South Arabian kingdoms. He uses these as the basis of his work and gives long quotations from the writings of his predecessor. His famous so-called ‘Hamåråtå Qåså, al-Kåsåtå al-Himåyårå, is based on such traditions of the Himyarite rulers; it celebrates their deeds and the splendour of the South Arabian kingdom. In the commentary on this poem the annotator gives very full notes, in which he narrates legends of South Arabian princes and their history. Von Kremer supposes, relying on internal evidence, that the author of the Qåsåtå and the commentator are the same person i.e. that Nashåwan himself wrote the commentary on his Qåsåtå. The commentator, whose name is not given, must at any rate have been very well acquainted with Himyarite tradition. In the already mentioned dictionary Shâma al-‘Ulåm, Nashåwan also uses his knowledge of South Arabian history. Whether all the facts given by him are historical cannot be discussed here; many of them are certainly based on tradition, since Nashåwan himself, as his nask shows, was of South Arabian blood. His works played a part in the struggle of the tribes of the south Arabian origin against the northern Arabs for predominance in the Muslim world.

that al-Biruni when dealing fully with the Jewish intercalation (op. cit., p. 55, 57) connects the Hebrew word for intercalary year, 'ibbîr, with meṣubhirîth "pregnant woman" and observes: "they compare the woman of a superfluous month to the year to the woman carrying something which does not belong to her body". In this connection we may recall that Tabari (op. cit., p. 91, 6) explains the Arabic nasî as nasî "pregnant woman" among other interpretations, saying nasî'at al-mar'a, "on account of the increase which the child in her means". This agreement in the two explanations, which can hardly be accidental, might really indicate that nasî in the sense of intercalation or intercalary month is modelled on the Jewish 'ibbîr and thus support al-Biruni's statement which is in itself not impossible. Caussin de Perceval ([J. A., ser. iv., vol. i., p. 349) even quotes the Hebrew nasi (prince) as a title of honour of the leader of the Sanhedrin, to whom fell the duty of dealing with the intercalation (cf. Bab. Talmud, Sanhedrin, p. 11a: "the intercalation of the year may only be done with the approval of the nasî"). According to one of the meanings of the Arabic nasî given in Tradition, it was really the "name of a man" (see above), a meaning which is all the more remarkable in this connection, as it does not suit the Kur'anic passage. There is a definite agreement in the fact that in the Jewish intercalation only the month following Adar was an intercalary month while in the Arab system, as the critical examination of Tradition — contradicting the literal interpretation of its text — shows, only the month following Duha 'Hijjâda i.e. the intercalated month in both cases was inserted between the normal last month and the normal first of the year, Nisân or al-Muharram.

Nothing certain is known about the process of intercalation among the Arabs. It can only have been periodic and irregular attempts at correction based on observation of nature, particularly vegetation. The technical part must have been exceedingly simple and primitive. The same is true of the Jewish intercalation in the older period (see Bab. Talmud, op. cit., p. 10b–13b). As the Jewish system served to move the feast of Pesâh to a suitable season of the year, the Arab system may only have been intended to do the same for the badîj and the fairs associated with it in the vicinity of Mecca. It was not intended to establish a fixed calendar to be generally observed. The Beduins had never had one and they have no use for one. According to Tradition, the management of the nasî was a prerogative of the Banî Kinâna: and indeed fairs were held on the lands of the Kinâna.

Bibliography: A. Moberg, An-nasî in der islamischen Tradition, where the most important references are given. (A. MOBERG)

NASÎB (A.), the introductory lines of the Arabic kasîda [q.v.] which are devoted to recalling the memory of a woman whom the poet loved long years before. The nasîb is, so far as we know, the only kind of love-poem which has survived to us from the Arabic literature of the pre- and early Muḥammadan period and is almost the only place where women are the subject in the poetry of the Arabs. The essential feature is that the subject of the nasîb is always the lament of a man for a lost beloved. Even in the earliest kasîdas that have survived the nasîb is already...
in the stereotyped form. It treats its subject again and again in the same way with only the slightest variations. We can distinguish three constantly recurring principal motives:

I. A Beduin on his wandering through the desert passes a spot where there are the traces of a tent-trench which has fallen in, dried camel dung, sooty stones, which once formed a cooking place, and tent-pegs. From these things he sees that this spot has been the resting-place of wandering Beduins. After some reflection he recalls that his tribe encamped here long before, jointly with another tribe, during the spring grazing and that he himself spent a happy time with his beloved. The poet usually then gives a description of the deserted camping place, the _aflāl_; it can only be traced with difficulty as the wind and the rain which has fallen upon it have obliterated it and made it almost unrecognisable. The rain has produced a rich vegetation and gazelles and antelopes with their young have found shelter there.

II. The poet recalls the day when the two tribes, his own and that of his beloved, struck camp. There had been various signs of the approaching departure. The camels were brought back from the pastures and loaded; the raven, the bird of ill omen, also foretold the separation to the poet. In his mind he again sees the camels with their litters before him and compares them to ships. The _women_ sit in the litters, among them his beloved. They go off and he follows them in spirit.

III. While grief for his lost beloved is keeping the poet awake, she sends him from far away her _dābab,_ a vision of herself. He is surprised that his delicate beloved has been able to travel so far, as she was never a good walker. The vision arouses painful memories in him and he weeps copiously as he recalls the beauty of his beloved.

Each of these three themes may be followed by a full description of the personality and journey of his beloved; she is a distinguished and modest lady, one of the noblest of her tribe; she is frequently married and sometimes even has children. Her husband is held up to ridicule. She is coquettish and likes to torment her lover. Her physical charms are described very fully and the various parts of her body celebrated in fine similes (in the style of the _wasf_, cf. the Song of Solomon and the _Alt-ägyptischen Liebeslieder_, ed. W. Max Müller). Her dress, her perfume and her jewellery are described in laudatory terms. The feelings of the lover are then detailed. Grief has made him old and grey; he is ill with longing for his beloved and after all these years his tears still flow at the thought of her.

Like all early Arabic poetry the _nasīb_ in matter and structure follows with considerable strictness a definite chain of ideas so that there is a certain uniformity about it. We constantly find the same or similar comparisons; the ideas of the different poets do not differ essentially from one another but only the form and method of expressing them. The traces of the _aflāl_ look like writing made by the _falam_ on parchment. The poet is like a gazelle or an antelope, a simile which continuously recurs with new variations. The tears of the poet run like water from a leaky skin or fall like pearls from a necklace when the string is broken and so on. In consequence of the wealth of the Arabic language in synonyms these similes have an ever-new charm in spite of the many repetitions. Stereotyped metonymies, such as we find in all branches of Arabic poetry, are also common in the _nasīb_. Thus the beloved, the _aflāl_, the showers of rain, and parts of the body etc. are designated by metonymy. The _nasīb_ usually begins (in so far as it has survived in its entirety) with formal phrases: _li-man al-diyār_ etc.; frequently it ends with _dī_ dībā “leave this”, whereupon the poet turns to the description of the camel.

The _nasīb_ had already become fixed in form in the pre-Muhammadan period, and no poet could break away from it. Gradually its contents became more and more colourful; it became more and more stereotyped and stiff. In the old Arab poetry there is already no difference between the _nasīb_ of a Beduin and that of a townman. Kās b. al-Khaṭṭām, Ḥassān b. Thābit and ʿAdī b. Zaid describe the beauty of their beloved in the same way as, for example, Imraʾ al-Kās, and they treat their separation from her just like a Beduin poet. We must remember however that in the pre-Muhammadan period even a townsmen knew Beduin life (of ʿAdī b. Zaid we know that he spent a part of the year in the desert; cf. _Kitāb al-ʿAghāni_, Cairo 1928, ii. 105). In later times however, the poets no longer knew the life of the desert from their own experience; the _nasīb_ thus became more and more stereotyped. In the end it became a matter of ridicule that every ʿaṣīda began with the lament at the _aflāl_; a critic of the ʿAbbasid period (cf. Goldzither, _Abhandlungen_, p. 144) asks whether every man with a command of language who would write a good poem must of necessity be lovesick.

From the _nasīb_ we learn of amatory relations of a kind which probably played a considerable part in pre-Islamic Arabia. These were unrestricted relations, not contracted in the forms which were already used in pre-Islamic Arabia at a marriage. They were based on natural inclination and spontaneous devotion and ended with this. As is evident from the _nasīb_ such unions were usually concluded in the spring grazing season when different tribes were encamping peacefully side by side. When the end of this fine season of the year came these love affairs also came to an end as a rule. The position and the reputation of the _khulla_ (as the beloved is often called) were not affected by this illegitimate relation; she remained in her tribe and went off with them, while a _baghiy_ did not live with her tribe.

As is the case with all Arab poetry, the question what is the oldest _nasīb_ and its origin cannot be answered. Arab tradition records that Muḥāhil was the first to put a _nasīb_ in front of a _kāfīdā_; this does not mean however that he was the first to compose one. In the _Kitāb al-ʿAghāni_ (Cairo 1928, ii. 123 sq.) we find a parallel to the _nasīb._ Al-ʿUlmānī sent to King Amunhirān a girl with an accompanying letter which described her merits of mind and body. In the tales of the _1001 Nights_ also, _nasīb_-like poems are inserted but these are all of a comparatively late period. Many parallels may be found in the _Song of Solomon_, and old Egyptian love-poems resemble in spirit and conception and frequently often in phrase the Arabic _nasīb._

**Bibliography:** cf. the references in the article _Kāsida_; I. Guidi, _Il Nasib nella Kāsida Araba_, in _Actes du XIVe Congrès International_.

---

**NASIB** 857
NASĪBIN, a town in Mesopotamia. The name is certainly Semitic origin and to be derived (with Philon Byblios in Steph. Byz.; Muller, F. H. G., iii. 571, fig. 8) from *Nasība* = *ṣṭḥ珥* (nabī). The idol of Naṣibin is said to have been called Abnil (Assemani, Bibl. Orient., i., Rome 1719, p. 27); i.e. “stone of El” (according to W. Robertson Smith, Religion of the Semites, London 1927, p. 210, note 1). On coins the usual form of the place-name is *Nasēbīn* (Uranios in Steph. Byz.: Nasībīn; Pliny, Nat. hist., vi. 42: Nesbīn); in the Scriptores Historiae Augustae and elsewhere we find the forms Nitibis, Nibitten, Nibizibi (J. Markwart, Sudarmenen u. d. Tigrisquellen, Vienna 1930, p. 259 sqq., note 1). In Armenia the town is usually called Mebin (on the form see Markwart, op. cit., p. 166 sqq., note 3); Mattēos of Edessa (ed. Waterhoffst, 2nd ed., 1898, p. 245 = Dulsaurier’s transl., p. 206) calls it *Nσpεi*, also called Mebin or *Nσpιn* (also on p. 62 *Nεpιn*).

But he also mentions a *Nσpιn*, which is the town of *Silār* (p. 157 = p. 158, ch. 46 of Dulsaurier’s translation which p. 413 wrongly connects these with our Naṣibin and Sippara) which lies on the left bank of the Euphrates on the road from Severak or Sevavarker (Arabic Suwaida) to Hīj Nawm (Armen. Harans Msroy) (Mattēos, p. 157 = 130 Dulsaurier; 186 sq. = 155 sq. Dulsaurier). This Nasibin concerns to the "town of Naṣibin on the bank of the Frat, called Naṣibin al-Rūm, 3-4 days journey from each of Āmid and Ḥarrān on the road from Ḥarrān to the land of Rūm" (Vakht, Muṣfīm, iv. 789), in Pseudo-Wägild (Futak Diyar Raba va-Diyar Babr, transl. by B. G. Niebuhr, in Schriften der Akademie von Ham., vol. i., Hamburg 1847, p. 50, 175 sqq.) mentioned along with Suwaida, i.e. Suverek, as Naṣibin al-Ṣaghir. The name of which is marked on the Turkish General Staff’s map of 1333 (1917-1918), scale 1:200,000, sheet Siverak-Khārput, 20 miles almost due west of Siverak and 1½ miles from Kanṭara at a bend of the Euphrates. The Syriac authors usually identify Naṣibin with the Sūthā of the Bible and say that Nimrod founded the town (Michael Syr., Chron., transl. Chabot, i. 20; Barbehraeus, Chron. Syr., ed. Bedjan, p. 8).

The town lay in the plain below the Māsurān ʿāmr [see TUR ĀRABI] on the river Myddions (Theophil. Simok., ed. de Boor, v. 5, 1; Muṣfīm.), the Hirmās of the Arabs, Nehr Māsū or Mašū of the Syrians (Assyr. Kharmogn); Noldeke, in Z. D.M.G., xxxii. 328, the modern Dejaghdā. The country between Naṣibin and the Tigris was called Bēḥ ʿArabaye by the Syriacs (Theophil. Simok., i. 15, 3; Ṣassābā, ii. 16, 1; v. 1, 3; 3, "Aṣābiā; G. Hoffmann, Auszuge aus syr. Akten pers. Mart., P. 23, note 170), by the Armenians Arvastan (cf. Arwastān, in J. A., 1869, p. 168; Arwastān-
of Mesopotamia. Odenathus of Palmyra in 261
again took Nisibis from the Persians and destroyed it.
(Histo. Aug., Trebellius Pollio, Triginta tyranni,
p. 13; cf. Diodor. made the town, which had
become Roman again at the peace of 297 A. D.
(Marquart. Erinnerungen, p. 169), the sole centre of
trade between Persia and the Roman empire (Petr. Patric.,
iv. 63; lvi. 22: Expositio totius mundi et gentium,
p. 22 in Riese. Geogr. lat. min., p. 105) and one of
the principal fortresses on the Mesopotamian lines
on the lines see Poidebard, Syr., x., 1930,
pp. 33–42. In the Persian wars of Constantinus,
Nisibis, Orientis prorsimus castrum (Amm. Marc.
xxv. 8, 14) was three besieged (338
and 346 and 359 A. D.) (Peeters, Anal. Hist.,
xxvii., 1920, p. 285–373). During the first siege died
the monk Jacob of Nisibis, the teacher of Ephraim,
who had built the great church in his native
town in 313 A. D. Perhaps he is to be regarded as the
founder of the "Persian school" of Nisibis,
which Ephraim transferred from there to Edessa
in 362 as a result of the persecutions by Šapūr II
(on it see I. Guidi, Gli statuti della scuola di
Nisibis, in Giornale della Societa Artistica Italiana.
iv., 1890, p. 165–195; J. B. Chap. L'ecole
Baumstark, Gesch. d. syr. Litteratur, Bonn 1922,
p. 115 sq.: Th. Herrmann, Die Schule von Nisibis
1926, p. 89 sqq.)

In the war of 359 Šapūr II at first passed by
Nisibis on his way to Tela and Amid, while the
Roman army was stationed at Nisibis (Ammian.
Marc., xx., 7, 1–6). After the death of Julian,
Jovinianus had closed among other things the great
fortress of Nisibis under the peace of 363 (Amm.
Marc., xxv., 7, 91). The inhabitants were allowed
to migrate to Amid (Amm. Marc., xxv., 8, 77–9,
6; Sozom., iii. 33 sq.; Ps.-Dionys. of Tellmaheb,
Chron., under the year 674; Syr. Vita of Ephraim,
ed. Lamy, p. 24 sq.; Faustos Byz., Venice 1832,
p. 26; Nau, in K. O. C., ii., 1897, p. 58). They
were perhaps sent on from here and settled
in the above mentioned "Little Nisibin". From this
time the fortress on the lines was Sargathon,
70 stadia west of Nisibis, the modern Serdjc-Khan
(Honigmann, Syr., x., 1929, p. 283 sq.).
The Romans made frequent attacks on the lost town
but always without success, for example in 421–
422 A. D. after their victory at Sargathon (Socrat.
Hist. Est., vii. 18), in 503 under their general
Arelabindos (Jos. Styl., ch. 5, 37, p. 44, ed. Wight
under Dux and Strateles Timostratos (Zach.
Rhet., 191, 256) and in 572 under Patriarch
Marcianus (John of Ephesus, iii., 6.). In the
sixth century the inhabitants were still inclined
to be friendly to the Romans (Ps.-Zach. Reth.,
vii. 6, p. 211, ed. Land). After the Nestorian
academy of Edessa had been transferred to Nisibis
in 489 by the Metropolitan Barsawmā as a result of
the persecutions of the Nestorians in the
Byzantine empire, the town remained for centuries
the intellectual centre of Nestoriantism (cf. also
Mas'ūdī, Kītāb al-Tambīh, ed. de Goeje, p. 150).
In the reign of Khusraw II the Church of St.
Sergius in Nisibis was built (Theophyl. Simok.
v. 1, 7). Sergius Stratelates was elected in particular
veneration by the nomad tribes of this region
(Noldeke's Šahrāb, p. 284, note 1; Peeters,
in Huchard, Vienna 1911, p. 187; Hersfeld-Sarr.
Archiv. Reise im Euphrat- u. Tigrisgebiet, i., 1911,
p. 138, note 2).

In the year 18 (639) Šā'īb b. Ghanm advanced
against Nisibin which after a brief resistance
submitted to the Arabs on the same terms as
had been granted to al-Ruha (Caetani, Annali dell'Islam,
v. 35. 37. 55. 57, year 18 A. H., § 83, 87,
127, 129; according to al-Baladhuri, ed. de Goeje,
p. 175 sq. and al-Khwārizmi, ed. Baethgen, in Abū
f. d. Kunde d. Morgenst., viii./ii. 110 sq. not till
the following year; cf. Caetani, op. cit., p. 165,
19 A. H., § 428, 43). In the reign of Ābd al-Malik
in 684 A. D. Buraida rebelled in Nisibin (Mich.
Syrian., ii. 469; Barhebr., Chron. Syr., ed. Bedjan,
p. 111; Caetani, Chronographia Islamica, i., 755,
54 A. H., § 15). An earthquake devastated the town
in 717 (al-Khwārizmi, op. cit., p. 122, year 99 A. H.);
The Metropolitan Cyriacus in 738–739 completed
the choir of the Church (Στ. οικ.) and the altar
of the Cathedral of Nisibin (al-Khwārizmi, op.
cit., p. 128, year 141 A. H.). In the period of troubles
in Mesopotamia the people of Dara, Nisibin and
Armenia had gone to the Palmyrene expeditions
(Mich. Syr., i., 103; Barhebr. Litt., p. 153). A band of
Karakants in 315 (927–928) attacked Kafartūš. Rās al-Ain and Nisibin (al-Mas'ūdī,
Kītāb al-Tambīh, p. 384).

Saif al-Dawla began his campaign against Armenia
in 328 (940) from Nisibin (Freytag, in Z.D.M.G.
x. 467). Byzantines in 531 (942) under John Kur-
kus invaded Mesopotamia and took Mašāfīrān,
Arzan and Nisibin (Barhebr. op. cit., p. 179;
Weil, Gesch. d. Chal., ii. 690). Nisibin by this
time probably belonged to the Hamdānīd Nasr
al-Dawla (Z.D. M. G., n. 482). After his death
358 (969–969) his son Abu-l-Muẓaffar Hamdān
was for a short time governor of Nisibin (Z.D.
M. G., n. 485). The Byzantines again attacked
the town under the Domestics (the Armenian Mēb)
on the 1st Maharram 352 (Oct. 12, 972) and
instituted a dreadful massacre in it (Barhebr., p. 192; Z. D. M. G., n. 456; Weil, iii. 19 sq.;
Yahyā b. Sa'id al-Antāšī. ed. Krakovský-Žasil,
wrongly makes the Emperor John Tzeschos himself
conduct the campaign: cf. against this: D. N.
Anastasićević, in Byz. Zeitschr., xxx., 1929–1930,
p. 403 sq.).

Toghlulbeg's army in 435 (1043) laid waste
the country round Nisibin (Barhebr., op. cit., p. 226).
Sūltān Ghāthī al-Dīn in 1106 sent Abū Manṣūr al-
Dujawlī, lord of al-Mawsī, to Nisibin against
the Franks (Mich. Syr., iii., 103). Soon afterwards
the Ortokīd Iğhāzī Nāṣīn al-Dīn took the town
(Mich. Syr., op. cit.; Barhebr., Chron. Syr., p. 273) and
after the Sulṭān had granted it to the emir Mawdūd
it again in 513 (1119–1220) (ibid., p. 217). But it
changed hands again very soon, when in 515
(1121–1122) Sūltān Māḥmūd gave it to the emir
Bursüklū along with al-Mawṣī. Džāzrāt b. 'Omar
and Sīndžūr (Barhebr., p. 285). The Franks in
523 (1128–1129) advanced as far as Māḥmūd, Nisibin
and Ra's al-Ain (Barhebr., p. 289). In 1134,
Zangī put down a rising in Nisibin (Mich. Syr.,
iii. 242). Bābek, installed there as governor by
Zangī himself, destroyed all the fortresses in the
neighbourhood so that Zangī might have no base
against him (Mich. Syr., iii. 264). Nūr al-Dīn of
Halab in 1171 took the town without opposition and dealt rigorously with the Nestorian Christians there. All their new buildings were destroyed the treasuries plundered and about 1,000 volumes of their writings burned (Mich. Syr., iii. 359 sq.). After his death, his nephew Saif al-Din of al-Mawṣīl seized the town (Mich. Syr., iii. 360). It surrendered to Salāh al-Dīn in 1182 (Barhebraeus, Chron. Syr., p. 260). In the following year the latter gave it to ʿImād al-Dīn Sinḏjar, Nasībin and other towns in exchange for Halab (Barhebraeus, p. 362) and he ruled there till his death in 594 (1198) (Barhebraeus, p. 398, 402). In the region of Nasībin there was fierce fighting in 582 (1186–1187) between Kurds and Turkomans (Barhebraeus, p. 370), ʿImād al-Dīn was succeeded in 1198 by his son ʿAbd al-Dīn but ʿNūr al-Dīn Arslānšāh of Mawṣīl immediately took the town from him. But when a severe epidemic wrought great havoc in his army, he abandoned it and ʿAbd al-Dīn returned thither (Barhebraeus, p. 402). ʿNūr al-Dīn in 606 (1209–1210) took a second siege of Nasībin temporarily (Barhebraeus, p. 416 sq.). Malik al-ʿAdīl took the town in 606 (1209–1210) from ʿAbd al-Dīn (Barhebraeus, p. 424). After his death (615 = 1218–1219) it passed to Malik al-Aghṣaf of Urfa (Barhebraeus, p. 424, 439).

The Arab geographers placed Nasībin in the fourth clime, the southern boundary of which ran about 12 farsakh south of the town on the direction of Sinḏjar (al-Masʿūdī, Kitāb al-Tanbih, p. 32 sq., 35, 44). According to Yāḵūt, it lay on the upper course of the Hirmās in the midst of numerous gardens. Ibn Hawḵal, who in 358 (968–969) visited a town which lay at the foot of Dījāl Bābās, speaks of the pleasant life in it, apart from the dangerous scorpions found there. Al-Makdisī describes the fine houses and baths, the market, the Friday mosque and the citadel. Ibn ʿDhibār also visited it in 580 (1184–1185) and mentions its gardens, the bridge over the Hirmās inside the town, the hospital (mārisṭān), several schools and other places of interest. In the viijth (xvith) century it was already for the most part in ruins; but the Friday mosque was still in existence and the gardens around it from which rose-water was exported (Ibn Baṣṭa). Hamm al-Mustawī, according to him, took in 930 the water and a circumference of 160 places, praises its fruits and wine but laments the unhealthy moistness of the climate, the large number of scorpions and the plague of midges.

Ḫūlūgī in 657 (1259) occupied al-Ruḥā, Nasībin and Harrān (Weil, Gesch. der Chalifen, iv. 10). The Mongol Khān Mangū Tımūr [q. v.] died, poisoned in Dījārāt b. ʿOmar, on his way from there to Nasībin on the 16th Muḥarram 681 (April 26, 1282) (Barhebraeus, p. 546 sq.). When Tımūr Khān in 1395 was on his way to ʿĪrāb ʿAbdīn, the people of Nasībin and Maṣīra hid in caves from the Mongols but were suffocated in them with smoke (App. to Barhebraeus, Chronography), ed. Wallis Budge, ii., p. xxxiv.). The Hasanibā Khurṣū of 605 pillaged Nasībin and the country around (ibid., p. xxxvi).

The town passed into the hands of the Ottomans in 1515 (v. Hammer, G. O. R., ii, Pest 1828, p. 449 sq.). It became the capital of a sandjak in the pashalik of Amid (Hādjiḏ Khaliḏa, Diwan-numa, Stambl 1732, p. 438). Later it was placed in the sandjak of Mādīn in the pashalik of Baghīdād (St. Martin, Mémoires sur l’Arménie, i., Paris 1818, p. 161 sq.). To its position on the southern border of the highlands and on the road from al-Mawṣīl to Syria it owes its great strategic and commercial importance. The building of the Baghdād railway has brought it new life; it is said now to have about 50,000 inhabitants.
the son of a Turkish slave-girl named Zumurrud.

He was the only caliph of the later period of the caliphate who was able to pursue a consistent policy. This was entirely directed towards restoring the temporal power of the caliphate. The caliph was assisted by the fact that the Seljuq empire which had previously held the secular power had begun to collapse. In the confusion which caught about its final downfall, the caliph did all he could to hasten its end and did not hesitate to support the Khwarizmshah Takasb as the strongest rival of the dying Seljuq empire in his fight against the last Seljuq Sultan Tuğhrî II. This struggle finally ended in the defeat of the Seljuqs at Kâny where Tuğhrî died fighting (Rabi' I, 590 = March 1194).

As a result of the diversity of the political aims of the two allies a quarrel broke out between the caliph and the Khwarizmshah as soon as negotiations for the partition of the Seljuq territory were begun. The caliph wished to seize the opportunity to extend his personal estates by incorporating the Persian provinces while the Khwarizmshah in the exercise of the temporal power wished to succeed to the whole inheritance of the Seljuqs. While Tuğhrî was involved in war in the east, Ibn al-Kaṣṣâb, the caliph's vizier, was able to conquer Khûzîstân and other Persian provinces (beg. of 591 = 1195). His troops were however completely routed by Tuğhrî on his return (Shi'bân 592 = July 1196) so that the caliph had to abandon his conquests. Only Khûzîstân was left to him.

In the years following, the caliph had a hand in the intrigues of local rulers in Persian 'Irâk, usually against the Khwarizmshah (from 596 = 1200 'Ala al-Dîn Muhammâd). The disputes with the latter culminated in 613 (1216) when the caliph had a supporter of the Khwarizmshah, Oghâlmîsh, vizier of the governor of Persian 'Irâk, assassinated by Isma'îlî envoys. The Khwarizmshah now began to prepare for the decisive struggle against the caliph; he prepared for war and in 614 (1217) invaded Persian 'Irâk. Here, in order to destroy the caliph as a political force also, he had his 'ulama' in a fetûh declare the caliph al-Nâṣîr unworthy of the caliphate and appointed an 'Alîid in the 'Ali's Mulk from Tîrmîzî as imâm. The caliph in vain attempted through negotiations to persuade the Khwarizmshah to retreat. Instead he advanced on Baghdàd from Hamadân. But he was unable to deal his blow at the caliph owing to an unexpected circumstance; for in consequence of the early coming of a severe winter, which destroyed his army, the Khwarizmshah was forced to abandon his march and return home with the intention of advancing on Baghdàd next year.

In order to meet the danger threatening him, the caliph however in the meanwhile began negotiations with the Mongol Cîngiz Khân in order to persuade him to attack the Khwarizmshah. In 616 (1219) the latter was attacked and decisively defeated by Cîngiz Khân before he could resume his intended campaign against Baghdàd. He died while fleeing from the Mongols on an island in the Caspian Sea (617 = 1220).

The caliph had thus achieved his immediate aim and rid himself of his most dangerous opponent for the moment. But the Mongols were approaching perilously near him, especially after the conquest of Marâgha (618 = 1221) had established them in Aḏhârbâjîân. At first however, there were only minor complications with the Mongols.

On the other hand, after the temporary withdrawal of the Mongols, the young Khwarizmshah Djalâl al-Dîn Mangubarti, Muhammâd's son and successor, attacked al-Nâṣîr and took Khûzîstân from him.

As al-Nâṣîr had concentrated his whole attention on the east where he was fighting to strengthen and increase his private domains, he took no interest in the west where Saladin was waging his great struggle with the Crusaders and gave Saladin very insufficient help in spite of several appeals from him.

Al-Nâṣîr's policy seems also to have aimed at the restoration of the internal unity of Islam in addition to restoring the temporal power of the caliphate. He himself had a leaning to the Shi'â of the Imâmî sect (Twelver-Shî'â) and invited Alîds to his court; he seems to have wished to reconcile in his person the claims of 'Abbasids and 'Alîds. He also established an agreement with the extreme Isma'îlî sect of the Assassins. In 608 (1211—1212) the Grand Master of the Assassins, Hasan III, abandoned his claims to the Imamate and paid homage to the 'Abbasid caliph.

Al-Nâṣîr's efforts to centralise round his person the order of chivalry known as the futuwa in a reorganised form are also perhaps connected with his political plans; in 578 (1182-1183) he had himself been admitted by the Shaikh 'Abd al-Dîjâbâr b. Sâlih into the futuwa order. He then only allowed those of the organisations of the order to remain in existence which acknowledged his personal control. By admission into the order he was then able to establish connections with the princes of the Muslim world, who now regarded him as the head of their order (the chroniclers tell us of this in the year 607 = 1210). Ibn al-Furtû gives us a description of the robing of a prince as an external sign of his admission into the order in the presence of the caliph's envoy (the story is reproduced in v. Hammer, in J. A., 3rd ser., vi., 1855, p. 285 sq.). The strict regulations introduced by the caliph into the futuwa order are well illustrated in the edict of 9th Safar 604 (Sept. 4, 1207), published by P. Kahle in Isla'm, 4, 1895, p. 104, and also in the Oeffentl. Verzeichn. of 25th Jumâdâ' II 603 (Dec. 26, 1206), published by A. Abulfedâ'î, in Isla'm, 1, 1894, p. 447 sq.).

Al-Nâṣîr died on the last night of Ramadân 622 (Oct. 6, 1225) at the age of about 70. Ibn al-Athîr describes him as tyrannical towards his subjects and inconsistent in his measures; his fondness for the futuwa and its sporting activities (cross-bow shooting, training carrier pigeons) seems to him a strange caprice. Ibn al-Tîjân judges him more favourably; he describes him as unceasingly engaged in the duties of a ruler and lays stress on his rich endowments, although he also mentions his fondness for money. When a medieval Muslim ruler is reproached with covetousness it usually only means that he was endeavouring to carry through a sound and cautious financial policy. Al-Nâṣîr is further reproached with having allied himself with the Mongols and thus being the cause of the great disaster which the Mongol hordes later inflicted on the lands of Islam.

Among buildings known from inscriptions to have been built by al-Nâṣîr are the Talisman Gate in Baghdàd (618 = 1221-1222; blown up in March 1917 on the retreat of the Turks from Baghdàd) and...
the sanctuary of the Mahdi (Ghaibat al-Mahdi) in Sāmarrā. Both are interesting and suggestive for his political aims, the latter as a distinctly Shī'a sanctuary for his Shī'a tendencies and the Tullusman Gard for the remarkable pictorial representation once visible upon it; the caliph seated between two dragons, the jaws of which he is tearing apart and grasping their tongues. According to M. van Berchem's brilliant interpretation, we have here the caliph represented as victorious over two enemies, who had disputed his spiritual power: the Grand Master of the Assassins Ḥasan III as for a time the representative of the most radical opposition to the orthodox 'Abdābbasī Caliphate, who had finally paid homage to the caliph in 608 and died in 618; the other, the Khwārizmshāh who had dared in 614 to set up an anti-caliph but was overcome in 617 and died a fugitive. In this connection the inscription also is interesting; in it the caliph uses the expression al-ḍaʿwa al-lāḥiyya, which is a name the Assassins gave themselves (cf. van Berchem, in J. A., ser. 9, vol. ix., 1897, p. 456 and 462), for M. van Berchem’s, in Reise in (G.M.S.), li. [q.v.]

Bibliography:

AL-NAṢĪR IBN ʿALENNĀS (the last name is also written ʿAnناس, Ṣanناس and even Ībnīnas by Ibn Ḥāṣār), fifth ruler of the Ḥammādīd dynasty, succeeded his cousin Bulukkîn b. Muḥammad in 454 (1062). His reign marks the apogee of the little Berber kingdom founded by Ḥammād (q.v.). The ephemeral rise of the Ḥammādīs was the immediate result of the downfall of their relations and neighbours, the Ţirds of Irikiyya, the first victims of the Ḥilāfī invasion. On his accession, al-NAṣīr, who lived in the Kaʿlāt Banī Ḥammād, was already ruler of a little kingdom, the chief towns of which were Asḥir [q.v.], Miliana, Algiers, Hamza (Buirra), Ngaus and Constantine. Shortly afterwards, he regained Biskra whose governor had rebelled against Bulukkîn; but his chief hope of extending his territory lay in the decline of the kingdom of Kairawān.

The abandonment of the old capital by the Ţird al-Muʿizz and his flight to al-Mahdiyya (1057) had left Irikiyya a prey to anarchy. The country districts were in the hands of the Arabs and the towns had chosen their own rulers; on all sides governors were in rebellion; leaders of the tribes imposed their authority on the threatened citizens; some towns turned to the Ḥammādīs who were able to protect them. The people of Kaṭṣīliya [q.v.] for example sent a deputation to al-NAṣīr to convey them their homage; the people of Tunis did the same. At their request the Ḥammādīs sent them as governor Ṣabd al-Ḥaḳḳ of the Ṣanḥāḏa family of the Banū Khūrāsān. The latter worked wonders; he negotiated agreements with the marauding Arabs which secured the safety of the city. Later, after casting off Ḥammādīs suzerainty, he made Tunis the capital of a kingdom.

If the arrival of the invading nomads had meant an immediate accession of strength to al-NAṣīr and an increase of population and economic activity to his capital, they were not without danger as neighbours. The Arabs soon involved him in a dangerous adventure. In 457 (1064) the Aṯḥāḥdājī, one of their tribes, asked him to help them against their enemies, their brethren the Ṣiyāḥ, who had joined the Ţirid ruler Tamīn [q.v.]. Al-NAṣīr agreed, seeing an opportunity to invade and perhaps annex Irikiyya. He put himself at the head of a large army which included Arabs, Ṣanḥāḏa, and even Zenāṭa, led by the king of Fās, al-Muʿizz b. ʿĀṭyā. The Ṣiyāḥ in their turn received subsidies and arms from al-Mahdiyya. The armies met at Sība, near the ancient Sufes. From the first the Zenāṭa of Fās won over by the enemy, gave way, which resulted in the rout of al-NAṣīr. With great difficulty he reached Constantine with 200 men, then the Kaʿlā the outskirts of which were systematically sacked by the Arabs.

After this disaster al-NAṣīr tried to make terms with the prince of al-Mahdiyya, but the negotiations failed, perhaps through the fault of the ambassador, and al-NAṣīr incited again by the Aṯḥāḥdājī, resumed hostilities against the unfortunate Ţird kingdom. He entered Laribus and Kairawān (460 = 1067) but these successes led to nothing; he had to abandon them again as he could not hold his conquests. These adventures, into which he was dragged by the Arabs and which brought him no lasting advantage, lasted for some ten years. In 470 (1077) al-NAṣīr made peace with the Ţirid Tamīn and gave him his daughter in marriage.

The Arab scourge which had ruined the kingdom of Irikiyya began now to threaten seriously the Ḥammādīd kingdom. The Zenāṭa, hereditary enemies of the Šanḥāḏa lords of the Kaʿlā, found among the immigrant nomads allies always ready to resume the conflict. In 468 (1075), the Zenāṭa chief Ibn Khīzārin, supported by the Banū Ḍādi of Tripolitania seized Mizān and Aṯḥāḏ. Al-NAṣīr succeeded in driving him back to the desert where, drawing him into a trap, he had him murdered. He sent his son al-Manṣūr against the Zenāṭa Banū Tūḏīn, who had joined the Banū Ḍādī and were lying waste the country districts of the Central Maḫṭrib. The rebels were caught and tortured.

The Aṯḥāḥdājī Arabs themselves, of whom al-NAṣīr had hoped to make valuable auxiliaries, proved most undesirable neighbours. Although he seems to have put down — not without cruelty — the majority of the revolts, life in his ancestral capital became more and more difficult from year to year. This decided him to select another. Occupying the lands of the Biḍīya Berbers, he founded there, on the site of the ancient port of Sūda, a town which was first called al-Nāṣiriyah and later became known as Bougie. There he built the so-called Palace of the Pearl (Kasr al-Jaṭīr). Having peopled his new capital he exempted the inhabitants from the kharādi and in 461 (1068) he settled there himself” (Ibn Khaldūn). The exodus of the Ḥammādīd royal family to the coast was caused by the same event as had led the Ţirds of Kairawān to move to al-Mahdiyya: the settlement of the nomad Arabs in Barbary and the insecurity which resulted in the interior. This exodus was only completed under al-NAṣīr’s successor, his son al-
Manşîr [q.v.]. The latter assumed power at his father’s death in 851 (1088).

Al-Nâşîr, the name of two Aiyûbîd s.

In this perilous position, Dâwûd appealed to another uncle al-Mâlik al-Ashraf, who administered the Aiyûbîd possessions in Mesopotamia. The latter came to Damascus but then took al-Kâmîl’s side and arranged with him a formal division of the whole kingdom. By the arrangement between the two brothers al-Ashraf was to receive Damascus and Dâwûd Harrân, al-Ra‘kî and Hims, while al-Kâmîl took southern Syria with Palestine, and Hamá was left to Dâwûd’s brother al-Mâlik al-Mu‘azzâm. But when Dâwûd would not consent to this, al-Ashraf began to besiege Damascus. After al-Kâmîl had concluded peace with the Emperor Frederick II he joined al-Ashraf and after a three months’ siege, forced his nephew to yield (Shabîn 626 = June—July 1229) whereupon al-Ashraf was recognised as lord of Damascus under al-Kâmîl’s suzerainty while Dâwûd had to be content with al-Kerák [q.v.], al-Shawbâk and several other places. In spite of this unfriendly treatment, Dâwûd remained loyal to al-Kâmîl when the other Aiyûbîd [q.v.] combined against him, and entered his service in Egypt. Soon after al-Kâmîl accompanied by Dâwûd had taken Damascus, he died in Radjab 635 (March 1238) and Dâwûd whom al-Kâmîl had appointed governor of Damascus had to return to al-Kerák. In Egypt al-Kâmîl’s son al-Mâlik al-‘Adîl was recognised as his successor and appointed his cousin al-Mâlik al-Dawûd Yânus governor of Damascus. When Dâwûd tried to assert his claims to Damascus he was defeated at Nâbulus. In the following year Yânus, who did not feel secure against Sultan al-‘Adîl, exchanged Damascus with his cousin al-Mâlik al-Sałih Aiyûb for Sindjar, al-Ra‘kî and ‘Ana. This pleased neither al-‘Adîl nor Dâwûd so they joined forces for an attack on Aiyûb. The events that followed have already been fully related in the article AL-MÂLÎK AL-SALIH NAJÂB AL-DÎN AIYÛB SO that the reader may be referred to it. After Dâwûd had lost all his possessions except al-Kerák he appointed his youngest son al-Mâlik al-Mu‘azzâm Íjâs as his deputy and died to Halâb (647 = 1249—1250) where he was kindly received by al-Mâlik al-Nâşîr Yûsûf (see below). His private fortune in the form of valuable jewels, valued at least 100,000 dinârs, he entrusted to the care of the caliph al-Mustasim, who acknowledged the receipt of them but never could bring him self to restore the treasure entrusted him. Soon afterwards Dâwûd’s two elder sons, who had felt themselves neglected, turned to Sultan al-Mâlik al-Salih Aiyûb and offered him al-Kerák in return for fiefs in Egypt which offer the latter gladly accepted. Alleging unfavourable reports about Dâwûd, al-Mâlik al-Nâşîr Yûsûf had brought him to Hims in the beginning of Shabîn 648 (Oct. 1250) and put under arrest. In 651 (1253—1254) he was released on the intercession of the caliph on condition that he was not to stay in any lands under the rule of al-Mâlik al-Nâşîr Yûsûf. He therefore wanted to go to Baghhdād but was not admitted into the city. He then lived for a time very wretchedly in the region of ‘Aina and al- Hadîthâ until he found a place of refuge in al-Anlîr. His appeals to the caliph were not answered; finally however the caliph obtained him permission to settle in Damascus. After several unsuccessful efforts to get back his property in Baghhdād which had been confiscated, he was in the desert when he was taken prisoner by al-Mâlik al-Muqthîb, then lord of al-Kerák and al-Shawbâk and brought to al-Shawbâk. As the caliph thought he could be of use to him in the impending fight with the Mongols, he sent an envoy to al-Shawbâk to fetch him; the envoy was bringing him back to Damascus when he heard of Hûtîd’s capture of Baghhdâd; he thereupon left Dâwûd who went to al-Buwaïdî, a village near Damascus. Here he died of the plague on 27th Dâjmâlād I, 657 (May 12, 1259). Abu l-Fida’i speaks highly of Dâwûd’s eloquence and poetical gifts.

route (644 = 1264) and Isma‘īl had to flee to ʿAṭābog ʿAlī of Damascus and take refuge with ʿUṣūf [see AL-MALIK AL-SALIH NASIR AL-DIN AYYUB]. In 645 (1248—
1249) the latter’s general Shams al-Din Lu’lu’ al-Armani attacked Ḥimṣ [q. v.] and after a two months’ siege forced the emir al-Malik al-Aṣhrāf to capitulate and cede the town to ʿUṣūf in return for Tell Bāṣīr [q. v.]. Two years later, the latter conquered Naṣīb, Dārā and Karkišā from the Aṭābog of al-Mawṣil Badr al-Din Lu’lu’ [see AYYUBID]. After the assassination of Tūrānghā [see AYYUBID] in 648 (1250), ʿUṣūf was made sūlṭān by the Damascenes and in Rabī‘ II (July 1250) he entered Damascus. To avenge the murder of Tūrānghā he prepared for war against Egypt and proposed an alliance with Louis IX of France; but these negotiations came to nothing. In Radijāb of this year (Oct. 1250) the Syrians were defeated by the Egyptian emir Fāris al-Din Akṭār near Ghazza. ʿUṣūf did not lose courage however but prepared for a new attack on Egypt. In the vicinity of al-ʿAbbāsā [q. v.] he met the Egyptian army (Dhū ’l-Ka‘dā 648 = beg. of Feb. 1251); victory was within ʿUṣūf’s grasp when the treachery of his Turkish mamlūks turned the scale in favour of Egypt. ʿUṣūf had to take flight, several Syrian princes were taken prisoners and Akṭār invaded Syria where he occupied Nābulus and several other important towns until a strong Syrian force finally checked his further advance. After long negotiations, peace was finally concluded at the beginning of the year 651 (1253) by which ʿUṣūf had to give up any claims on Egypt, but a year or two later war was very nearly broke out again. On the advance of the Mongols under Ḥūdghā [q. v.], ʿUṣūf endeavoured to avert the danger by showing a humble frame of mind and sent envoys with presents to the Mongol camp; but when he began to calculate on getting support from other Muslim rulers and answered a threatening message from Hīlāḡū in a challenging fashion, the latter laid siege to ʿAṭābog. ʿUṣūf seems at first to have thought of advancing against him to raise the siege. He encamped in front of Damascus and sent messengers with appeals for help in all directions but as neither Syrians nor Egyptians answered him and ʿAṭābog fell into the hands of the Mongols (652 = 1250), there was nothing left for him but to abandon Damascus and go south. Hāmāt, Ba‘albek and Damascus were taken and ʿUṣūf had finally to surrender to Hīlāḡū. The latter had him executed, probably after the defeat of the Mongols at Hīmṣ towards the end of the year 659 (1261; see also the article ʿAṭābog). According to Abū ʿl-Fida‘, ʿUṣūf was distinguished for his scholarship and poetical gifts; he was further kindly and good natured and fond of good living and so lacked the strength to maintain order in his kingdom.

AL-NĀṢIR, the name of two Mamlūk sultāns.

1. AL-MALIK AL-NĀṢIR NASIR AL-DIN MUḤAMMAD, the ninth sultān of the Bahri Mamlūks, son of Sultān Kāltūn [q. v.] and a Mongol princess named Aslān (Āshān) Ḥāṭṭūn. Born in the middle of Muḥarram 684 (Dec. 1285), he received homage as sūlṭān after the assassination of his brother al-Malik al-Aṣhrāf Khalīl in Muḥarram 693 (Dec. 1293). After the two emirs Zān al-Dīn Ktbgha al-Mansūr and ‘Alam al-Dīn Ṣanḍjār al-Ṣuddāj had agreed that the former should hold the office of administrator of the government (niyāḥat al-aṣrāf) and the latter the vizierate, these appointments were confirmed by the nine year old sūlṭān; but the agreement between the two high officials was not long maintained. When al-Ṣuddāj tried to get rid of his rival, he was unsuccessful and was himself killed. In order to get all the power into his own hands, Ktbgha pardoned the two murderers of Sultān Khalīl, who naturally felt it necessary to overthow Nāṣir in order to escape his vengeance, and when al-Khāli‘ī’s old Mamlūks mutinied out of indignation, they were brought to terms by the loyal troops. Ktbgha then succeeded without much difficulty in persuading the emirs that the political situation required a man and not a child on the throne, whereupon al-ʿNāṣir was deposed and Ktbgha proclaimed sūlṭān with the title al-Malik al-ʿĀdil (Muḥarram 694 = Dec. 1294). Two years later (Muḥarram 696 = Nov. 1296), Ktbgha shared the fate of his predecessor. He was succeeded by one of al-Khāli‘ī’s murderers, al-Malik al-Mansūr Ḥusān al-Dīn Lāḏūn al-Mansāf who was murdered in Rabī‘ II 698 (Jan. 1299). The emirs in authority then agreed to recall the 14 year old Nāṣir who was in al-Mansūr’s hands and in Dhū ‘l-Hijja 2 (Jan. 1299) he entered the capital in order to receive for the second time the diploma of sūlṭān from the caliph and the oath of fealty from the emirs. The actual rulers were now the administrator of the kingdom Sullār al-Mansūrī and the commander-in-chief of the troops, Rūkw al-Dīn Ba‘lbar al-Dirāshnagī. The most important event in the period was the war with the hereditary enemy, the Mongols. In Rabī‘ I, 699 (Dec. 1299) the Ilkhān Ḥīzān [q. v.] crossed the Euphrates and was soon before ʿAṭābog. In the same month Ṣuddāj who had left Cairo in Dhū ‘l-Hijja 698 (Sept. 1299), because the Egyptians had long been afraid of a Mongol invasion, reached Damascus. The sūlṭān encountered the much superior enemy near Ḥīmṣ, his tried emirs were defeated and the army returned to Egypt in great disorder while Ḥīmṣ fell into the hands of the Mongols. Damascus met the same fate, except the citadel which was bravely defended by its Egyptian commander Arjāwāsh. In the meanwhile the Egyptians were preparing with desperate energy to resume the struggle and in Radijāb 699 (March—April 1300) a new army left Cairo. But when the Mongols found they could not take the citadel of Damascus, they withdrew before it came to a battle and the Egyptians reoccupied Damascus, Ḥīmṣ and the whole of Syria. After an unsuccessful campaign against northern Syria in Rabī‘ II 700 (Jan. 1301) which only resulted in the pillaging of the region visited by the Mongols, Ghāṣān sent an embassy to open up peace negotiations; but as these overtures came to nothing, the decision was left to arms for the third time. In Shābān 702 (April 1303) the Mongol general Kuṭlūshāḥ (Kuṭlūghshāḥ) crossed the Euphrates and at the same time a portion of the Egyptian army under the command
of Baibars al-Djāshnagīt entered Damascus. On 24th Ramaḍān (April 20), a battle was fought on the plain of Marj al-Suffar after the rest of the Egyptian troops under Sultan al-Nasir and the caliph al-Mustakfi had joined Baibars. Nightfall put a stop to the desperate fighting but it was renewed next day and ended with the total defeat of the Mongols; 10,000 prisoners are said to have fallen into the hands of the victors. Ghazzān died soon afterwards and his successor Ulajābdī did not dare to measure his strength with his formidable opponent. For three years al-Nasir's sovereignty in Egypt was a fairly peaceful one apart from a few military enterprises of slight importance. At the beginning of the year 702 (1302), an expedition was sent against the Templars who had established themselves in the island of Arwād on the Syrian coast and harassed the mainland opposite [see Ṭartūs]. The district of Sīs [q.v.] was also invaded; its ruler had made common cause with the Ilkhān and did not send Egypt the usual tribute promptly. The Egyptian authorities were on the whole on good terms with foreign powers; on the other hand, home affairs gave cause for anxiety. After the defeat at Hims, the Beduins in Upper Egypt rebelled against the authorities and levied taxes on their own account. A large army was therefore equipped to punish the rebels. At the same time, the governor of Kūs advanced from the south and cut off their access to the southern desert. The rebellion was put down with ruthless vigour, the men massacred without mercy, the women and children taken prisoner and rivalry carried off. Many took refuge in caves difficult of access but they were suffocated with a great deal of smoke. The large Christian and Jewish elements in the population had also to suffer a great deal. Several of the Umayyads, ‘Abbdūs and Fāṭimīd caliphs had already issued special regulations affecting non-Muslims and the ‘Abbdūs al-Mutawakkil had gone furthest in this direction; in general however, such measures were only enforced for a short period and were therefore usually repeated after a time; at least this is true of Egypt. In al-Nasir’s reign many Christians were holding honoured positions as officials when suddenly some insignificant cause the secret jealousy of the Muslims flared up and in 701 (1300–1301) an edict was issued which ordered among other things that in future Christians should wear blue and Jews yellow turbans in order to be at once distinguishable from the true believers or nor were they to be allowed to carry prisoners or ride mounted. Very soon a prohibition was issued against the appointment of Christians and Jews to the offices of the sultan or of the emirs. The immediate consequence of this measure was that several churches were destroyed by the fanatical mob and the others remained closed until the authorities allowed them to be reopened at the demand of the Byzantine emperor and other Christian rulers. On the 23rd Dhu ‘l-Hijdжа 703 (Aug. 8, 1303) the whole of Egypt was affected by a terrible earthquake in which not only many private houses but also palaces and mosques were destroyed and large numbers of people perished. All traces of the catastrophe were however obliterated with the greatest energy and the emirs and well-to-do citizens vowed with one another in spending lavishly to restore the shattered buildings. After an unsuccessful attempt to escape from the tutelage of the two emirs Sallār and Baibars, both of whom aimed at the sole power and regarded each other with suspicion, the sultan, who was prevented from exerting any influence in the government, left the capital on the 24th Ramaḍān 708 (March 7, 1309) under the pretext that he wished to perform the pilgrimage to Mecca but went instead to al-Kerāk. On reaching the citadel, he told the emirs who accompanied him that he was abandoning the pilgrimage and abdicating in order to live in peace in al-Kerāk. Baibars was proclaimed his successor under the name of al-Mu’izz. Baibars’ story of his旉 dragged (May 5, 1309) while Sallār remained in office as administrator. Baibars however enjoyed no real popularity; an oppressive rise in prices made many hate him among the people who without justice blamed him for the difficult times. Sallār was intriguing secretly and al-Nasir was vigorously adding to the number of his followers in Syria. When Baibars heard that al-Nasir had entered Damascus and the Syrian emirs had gone over to him, there was nothing left for him but to abdicate and appeal for mercy to his rival. The latter pardoned him and even offered him the lordship of Sīhāywn [q.v.]. But after he had made his entry into Cairo al-Nasir had Baibars strangled (beg. of Shawwāl 709 = March 1310). Very soon afterwards, Sallār was also disposed of; he died of starvation in prison. The Mongols not long after this resumed hostilities. Two emirs who did not feel safe with the sultan went to the Ilkhān Ulajābdī and urged him to invade Syria. The Mongol expedition did not however go beyond the city of the town of ar-Rabha (Ramaḍān 712 = Jan. 1315). When the Mongols saw that their efforts were unavailing, they abandoned their plan of campaign and retired. At the beginning of the year 715 (1315) a campaign was undertaken against Malāţiya, on the course of which see the article Malāţiya. At the same time, the lord of Sīs had to cede several strongholds and increase his annual tribute. Little Armenia was several times invaded by the Mamļūks who wrought great havoc there. In Mecca the sons of the Shāhid Abū Numāy [q.v.] were engaged in a prolonged struggle for supremacy; as the Mamļūk sultāns claimed to exercise a kind of suzerainty over the two holy cities, al-Nasir intervened without however playing any very effective part. His authority was recognised in Madīna in 717 (1317) and when he intervened in the domestic troubles of the Yaman and sent troops thither to support al-Mujāhid, one of the pretenders to the South Arabian throne, he was himself invaded by the Meccans (725 = 1325). In the meanwhile, the situation had improved in favour of al-Mujāhid so that the troops sent to his help by al-Nasir had to return amid great hardships after achieving nothing. Al-Nasir also tried to extend his power into Nubia. For this purpose he sent in 716 (1316–1317) a Nubian prince named Abū ʿAllāh, who had been converted to Islam and brought up in Egypt, with an army to put him on the throne. He succeeded in driving out the legitimate heir but the latter was able after a time to return and expel the intruder Abū ʿAllāh whose tyrannical rule had made him generally hated. Al-Nasir was more successful in N. W. Africa; in 711–717 (1311–1317) he was mentioned as sūltān in the khūṭba in the pulpits of Tunis, whose ruler, the Ḥāṣif Abū Zakariyyāʾ Yahyā, owed his throne to him. In 723 (1325) he finally concluded peace with the Ilkhān
Abū Sa`īd. After the latter's death in Rabī’ II 736 (Nov. 1335), Hasan Buzurg pledged himself to recognise al-Nāṣir’s suzerainty if the latter would support him with an armed force. Al-Nāṣir, who was a better diplomat than soldier and had not the courage to intervene at this decisive moment, did not fulfil the condition. Al-Nāṣir had diplomatic relations with most of the rest of the known world and at his court appeared embassies not only from the Golden Horde, the Ikhān, the Rasūls of Yaman, the king of Abyssinia, and the Ḥafīds of Tunis, but also from the Emperor of Byzantium, the Czar of Bulgaria, the Pope, the King of Aragon, Philip VI of France and Sulṭān Muhammad b. Tughluk of Dīlī. Al-Nāṣir died in Dhu l-Ḥijjādha 741 (June 1341); he left eight sons, who reigned one after the other but were themselves ruled by the emirs who were usually quarrelling among themselves. His immediate successor on the throne was al-Malik al-Mansūr Sa`īd al-Dīn Abū Bakr, who was deposed after only two months in favour of another son of the late sulṭān. The third reign of the Christians, improved, and they alleviate their hard lot, although his efforts sometimes failed against the stubborn opposition of the Muslim clergy. The ordinances of the period when Sallyar and Baibars were the real rulers were at least not enforced to the full extent and we even find that the sulṭān put Christians, i.e. Copts, into the government offices, presumably simply because they were cleverer and more wily than the Muslims. Men of learning were treated with a benevolent interest, and the Aḥyābīd Abū 1-Fīdā` (q.v.), celebrated as a historian and geographer, was the sulṭān's trusted friend “perhaps the only one among all the nobles whom al-Nāṣir treated till his death with equal love and respect” (Weil, iv. 400). Al-Nāṣir further abolished many taxes which oppressed the people. He built canals and roads and carried out other public works for the improvement of means of transport. Architecture in particular flourished exceedingly; among the splendid buildings which date from his reign special mention may be made of al-Ḵāṣr al-Abālak, al-Mudārās al-Nāṣiriyya, and Djāmil al-Nāṣir. These works however cost large sums of money and there were really no bounds to his extravagance. He was able through his long reign to maintain the Mamlūk state in its place among the great powers, and he was also able to make his authority felt at home. In some respects he reminds one of Sulṭān Baibars 1; like the latter he was little scrupulous in his choice of means. To undeniable gifts he added suspicion, covetousness and a yeowengeful nature, and it has been observed, undeniably with justice, that al-Nāṣir inspired more awe than respect.

II. AL-MALIK AL-NĀṢIR NĀṢIR AL-DĪN HASAN, the nineteenth sulṭān of the Bahri Mamluks, son of the preceding. After the murder of his brother al-Malik al-Muẓaffar Sa`īd al-Dīn Ḥaḍḍī, Ḥasan who was then only eleven, or, according to others, thirteen years old was proclaimed sulṭān on the 14th Ramāḍān 748 (Dec. 1347). Another son of Sulṭān al-Malik al-Nāṣir Muhammad b. Kalātūn, called Ḥusayn, was also put forward but this plan fell through and he never attained the throne at a later date. More important than the elevation of this prince to the throne was of course the distribution of the high offices of state among the emirs; the emir Baibogha Arwas became administrator of the kingdom, his brother Mendjek al-Ŷusufi vizier, and the chief emir Shiḵẖū, Aṭībeh of al-Malik al-Šāliḥ Šāliḥ al-Dīn Šāliḥ (q. v.), afterwards sulṭān. Thanks to Baibogha's adroit policy, al-Nāṣir was able to survive for four years, although, except for the last few months, he exercised no influence worth mentioning on affairs of state. His reign was filled with unedifying quarrels among the ruling emirs and systematic raiding by the Beduins. The most noteworthy event of the period was however the visitation of a great part of the world by the devastating pestilence, which, known in Europe and the “Black Death”, spread from Asia through Egypt and over almost all Europe to England and Scandinavia. In Egypt the plague raged in the second half of the year 749 (1348–1349) being accompanied by a no less fatal cattle-plague. In Syria it had appeared a few months earlier. Everywhere countless men fell victims to the angel of death and it is not surprising that the political and economic life of the state was crippled. The plague only died down in the following year. In Shawwāl 751 (Dec. 1350) the sulṭān succeeded in getting rid of the most powerful emirs and taking the reins of government into his own hands, but after a very few months he was deposed and his brother al-Malik al-Šāliḥ Šāliḥ al-Dīn Šāliḥ, the eighth of the sons of Sulṭān Muhammad b. Kalātūn, was placed on the throne (Djumādā I 752 = Aug. 1351). He ruled only for three years; on the 2nd Shawwāl 755 (Oct. 20, 1354) he was dethroned and his brother al-Nāṣir restored. The real ruler at first was Shiḵẖū, but in 758 (1357) the latter was waylaid and so severely wounded that he died a few months later. His successor Šargahmish, who was suspected of having instigated the murder, did not allow the sulṭān the slightest independence, but was however arrested in Ramāḍān 759 (Aug.–Sept. 1358). In Muḥarram 761 (Nov.–Dec. 1359) the governor of Ḥalab undertook an expedition against Sīs and established Muslim garrisons in Adana and Tarsus. About the same time, the troops who had been sent to Mecca by the Egyptian government to settle the endless family feuds there were defeated by the Meccans and those taken prisoners sold in Jambū' as slaves. On hearing this the sulṭān is said to have sworn to exterminate the enemy completely, but before he could carry out this plan, he was himself deposed. For, as he wished to preserve his independence, he quarrelled with the powerful emir Yalbogha, who had reproached him with his extravagance. The latter combined with several other dissatisfied emirs and prepared to fight. Al-Nāṣir was defeated and had to abandon his plan of escaping secretly to Syria. Instead he was taken prisoner and handed over to his enemy Yalbogha (Djumādā I 762 = March 1361). His ultimate fate is unknown; according to one, in
itself quite credible, story he was strangled and his body thrown into the Nile. His mosque (Jami' al-Sultan Hanan) built in Cairo in the years 1356-1363 is considered the most important example of Egyptian-Arabic architecture.

**Al-Nâṣîr**, honorific of the fourth sovereign reign of the Maghribi dynasty of the Mu'āmins of Almôabads [q. v.], Abu 'Abd Allâh Muḥammad b. Ya'kûb al-Mansûr b. Yûsûf b. 'Abd al-Mu'min. He was proclaimed on the death of his father on the 22nd Rabî' 1 (Aug.-Sept. 1313) challenged him to do, he made war on the Karâjmans his first duty and played a considerable part at least in damming back the threatened Ismâ'îlisation of the Yaman. He died at San'da, probably in 315 (927); his tomb is there. All succeeding bearers of the title except the next one: 1. Abu 'l-Fâtîh al-Nâṣîr al-Dâlîmî, so called from his first Caspian sphere of activity, were of his family although of different lines. In the Yaman, in contrast to his predecessors, he began operations south of Shân'a, fell in 447 (1055) fighting 'Ali al-Sulâhî there and was buried near Dhamîr. The life of 3. Al-Nâṣîr Shâhî al-Dîn was marked by internal strife which ultimately caused his death. In the first half of the viii\(^{th}\) (xiv\(^{th}\)) century, several imâms had disputed the succession. About one third of the fifteenth century the father al-Mahbî 'Ali b. Muhammad attained considerable influence, which was however much reduced in the period before his death at Dhamîr in 774 (1372). Shâhî al-Dîn became sole imâm and advanced as far as the Thâmâ against the Rasûlîds [q. v.]. But when in 793 (1391) he died at Shân'a, his death was concealed for two months on account of the insecurity and his body was concealed in the castle in a coffin covered with plaster. It was only when rumours of his death reached the Kâdi al-Dawwarî in San'da that the latter arranged for his burial in Shân's. The son 'Ali b. Shâhî al-Dîn could only obtain recognition as 'Imâm of the Dîhâdî' and fell in 840 (1336), one of the many victims of the great plague. When in spite of opposition a Zâdî power was once more built up, it was destroyed by the young dynasty of the Tâhirîs from the Thâmâ (818—1517), especially by its second member 'Abd al-Wâhîb b. Dâwûd, from 883 (1478), until at the end of the xi\(^{th}\) (xvi\(^{th}\)) century Al-Hâdî Izz al-Dîn b. al-Hâsân again reestablished and extended their power. His son 4. Al-Nâṣîr al-Hâsân b. Izz al-Dîn (c. 900—929 = 1494—1523) who had primarily inherited from his father a love of learning, could only maintain a limited power in the north. He had to put up for a long time with an anti-imâm al-Mansûr Muḥammad b. 'Ali al-Sârâjî in Shân's. 5. Al-Nâṣîr al-Hâsân b. 'Ali b. Dâwûd at the end of the x\(^{th}\) (xvi\(^{th}\)) century organised in the north one of the centres of resistance to the Turks who had been penetrating into the country since 927 (1521) and 943 (1536) but was taken prisoner by them in 1024 (1616—1597). Among the pretenders within the family of al-Mansûr b. al-Kâsid (d. 1029 = 1620), the liberator from the first Turkish conquest, was 6. Al-Nâṣîr Muḥammad b. Isâk b. al-Mahdî al-Hâsân; he set up first in 1136 (1723—1724) in the north in the hills of Sûfîyân among the Banû Bakîl, then in 1139 (1726—1727) away in the south at Zafîr but had finally to submit to his cousin's son al-Mansûr al-Hâsân b. al-Kâsid b. al-Hâsân b. al-Mahdî al-Hâsân and died in 1167 (1753) as a private individual in Shân's. In 1252 (1836) the dissatisfied troops who had been discharged by the very extravagant imâm al-Mansûr 'Ali b. al-Mahdî 'Abd Allah
Nāṣir ʿAli of Sarhind (d. in Dihlī on the 6th Ramaḍān 1108 = March 29, 1697), one of the best of the Persian poets of India, who were by this time very numerous; their productions however are for the most part of little artistic value. Of his life we know only that he travelled a great deal but finally settled in Sarhind where he enjoyed the favour of the governor Saif Khān Badākshān and of the amir al-ʿUmarāʾ Dhu l-ʿFīrār Khān. His principal work is a version of the love story of Madhumaltā and Manāhīr in Persian verse, the original having been written in Hindi by Shāhī Dījmān. The same subject was taken after Nāṣir ʿAli by Mīr ʿAskār ʿĀdīl Khān Rāzī (d. 1696), one of the governors of Delhi under ʿAlāmghir (1659—1707), who called his poem Nīkr u-Mīh. Besides the poem Nāṣir ʿAli wrote a short Mathnawi, Safī in character, and a description of Kaḥfar both of which still survive. His lyrical Dīānā was collected by his friends after his death; it consisted of the usual ghazals, some Safī bānā mā and poems in praise of the Kalendar dervishes (lith. Lucknow 1844 and 1251 and Cawnpore 1862).

Bibliography: H. Ethé, G.I.Ph., ii. 252; 310; V. Ivanov, Curzon Collection Cat., N. 278—279 and Asiatic Society of Bengal Coll., N. 813—817. There are MSS. in most European libraries.

Nāṣir al-Dawla ʿAbd Allāh b. ʿAbd Allāh, a prince of the Ḥamānid dynasty [q. v.]. From the year 308 (920—921) he acted as lieutenant to his father, Abu l-Haidājā ʿAbd Allāh [q. v.], in the governorship of al-Mawsīl, and on the latter's death in 317 (929) succeeded to the leadership of the Ḥamānid family. Owing to the part played by Abu l-Haidājā in the second temporary deposition of the Ābāsids caliph al-Muqtaṣarīd [q. v.], the latter, on his restoration, attempted to put an end to the Ḥamānid's control of al-Mawsīl by appointing a governor unconnected with them. Nevertheless when this officer died during the same year al-Hasan was confirmed in all his father's holdings.

The Ḥamānids profited by the rapid decline in the power of the Ābāsids that set in from this time to extend their rule; and though they remained tributary to the caliphs, by 332 (943—944) they had secured control of most of the Ḫuzār and of northern Syria. Al-Hasan also made two unsuccessful attempts, in 322 (934) and 326 (938), to add Adharbājān to his dominions. During the early part of this period of expansion al-Hasan was much occupied in the suppression of local rebellions. He was anxious also to remain in the caliph's good graces, and for this reason declined to assist the general Muʿnis [q. v.] in his quarrel with al-Muqtaṣarīd, which ended in the latter's death. In 323 (935), however, the caliph al-Rādi attempted to displace him in the governorship of al-Mawsīl in favour of his uncle Saʿīd. Al-Hasan thereupon had Saʿīd murdered; and though al-Rādi at first sought to impose his will by force of arms, he was in the end obliged to agree to al-Hasan's restoration.

The reign of al-Rādi saw the final collapse of the traditional Ābāsíd system of government with the appointment of Ibn Rāʾik as amir al-ʿumārāʾ [q. v.]. This development resulted in a still greater weakening of the caliphs' power; and in 327 (938—939) al-Hasan made an attempt to withhold his dues, which, however, were promptly exacted by Ibn Rāʾik's successor, Badjīkam [q. v.]. In 330 (941—942), again, when the caliph al-Muttaqi [q. v.] and Ibn Rāʾik (who had meanwhile been restored) fled to al-Mawsīl from Baghdad on its occupation by the brothers al-Barūdī [q. v.], al-Hasan had Ibn Rāʾik assassinated, forced the caliph to give him the amirate together with the Ḫūdān Nāṣir al-Dawla, and later married his daughter to the caliph's son. But though he and his more celebrated brother ʿAlī, who was at the same time entitled Saif al-Dawla [q. v.], were able to restore al-Muttaqi to his capital and drive the Barūdīs back to al-Ḥasā, they were almost immediately obliged by a revolt of the Turkish troops under Tūzn [q. v.] to retire again to al-Mawsīl. Al-Muttaqi now appointed Tūzn amir in Nāṣir al-Dawla's place. But his evident helplessness encouraged Tūzn to abuse his power; and in 332 (943—944) the caliph again sought refuge with the Ḥamānids. Saif al-Dawla now tried, though without success, to defeat Tūzn in battle, while al-Hasan removed the caliph for greater safety from al-Mawsīl to Raḵkā. After some months, however, al-Muttaqi was persuaded by Tūzn's professions of loyalty into returning to Baghdad, only to be met on the way by the amir, who blinded and deposed him. On this Nāṣir again withheld Tūzn and al-Muttaqi [q. v.], the new caliph, came against him and forced him to pay. Tūzn, however, died in 334 (945—946), whereupon Nāṣir made a bid to recover the amirate. But later in this same year Baghdad was occupied by Ahmad b. Būyeh Muʿizz al-Dawla [q. v.]; and henceforward Nāṣir's career hinged chiefly upon the maintenance of his power against that of the Bahyids.

The struggle began immediately. As soon as he was established in Baghdad Muʿizz al-Dawla led an expedition against the Ḥamānids, and though Nāṣir al-Dawla forced him to return to the capital by himself occupying the east bank and blockading the Round City, in the end he drove the Ḥamānid forces out. Nāṣir retired to ʿUkbārā, and from there sued for a peace that should grant him the tributary lordship of all the country north of Taḵrīt, as well as Syria and Egypt. But a revolt among his Turkish troops forced him to flee before this was concluded, and it was only by the aid of a force sent by Muʿizz that he succeeded in suppressing it. Muʿizz's object in helping him was no doubt to preserve some order in the Ḥamānid
dominions until he should be ready to absorb them. For he now took one of Nasir's sons as a hostage for his obedience, and two years later led another expedition against al-Mawsil. This again came to nothing, however, since Muizz was obliged to make peace before attaining his object, owing to the outbreak of trouble in Persia, where his brother required his assistance. Nasir now agreed to pay tribute for Dijar Rab'a, the Dijazaria and Syria, and to have the names of the three Byzians pronounced in the jami'a after that of the caliph throughout this territory.

It was not till 345 (956—957) that further trouble arose between the rival potentates. In that year Muizz was called away from Baghdad to deal with a revolt, whereupon Nasir sent two of his sons to occupy the capital. Muizz, however, succeeded in overcoming the rebel; and on his return the Hamdanids decamped. Yet in spite of this provocation Muizz contented himself with exacting an indemnity and a renewal of Nasir's contract to pay tribute, and it was only when Nasir withheld the second year's payment that he took further steps against him. He then advanced into his territory, took al-Mawsil and Nishân, and finally sent a force to al-Râba. Nasir, who had fled first to Mayafatikin and then to Aleppo, which was now held independently by Saif, attempted to make peace. But Muizz rejected his advances, and Nasir, who had been much attached, offered to take his brother's place as tributary for al-Mawsil, Dijar Rab'a and al-Râba.

Five years later, in 353 (964), Nasir opened negotiations to recover his position as tributary for these territories. But he included in his demands one, for the recognition of his son Abu Taghib al-Ghadanfar [q.v.] as his successor, which Muizz was unwilling to grant. He again attacked the Hamdanids, occupying both al-Mawsil and Nishân, but they were more successful in withstanding him on this occasion; and an agreement was arrived at whereby Abu Taghib undertook the payment of tribute for his father's former holdings.

In 356 (967) both Muizz and Saif died. Almost the last action recorded of Nasir is the advice he then gave his sons to refrain from attacking Muizz's son and successor Bakhtiyar until the latter had made peace and returned to his own possessions. Nasir lost all interest in life, and so antagonized his family by his avarice that they resolved to take the control of affairs into their own hands. Abu Taghib, who had in any case taken his place as tributary, and his mother, Nasir's Kurdish wife Fatma bint Ahmad, contrived to gain possession of all his property and possessions; and when Nasir attempted to enlist the help of another son, they imprisoned him in the castle of al-Salâma in the fortress of Ardûnâught. He died, still in confinement, either the next year, 357 (968), or the year after.

Nasir al-Dawla's rule was disastrous for the territory over which he had control. The contemporary Ibn Hawkal [q.v.], refers in several passages to his ruinous exactions and tyrannical seizures of land (see his descriptions of al-Mawsil, Balad, Sindjir and Nishân). Ann Miskawail notes that by bringing fictitious claims against landowners he would force them to sell to him at low prices, till he became not only the lord, but also the owner, of most of the region of al-Mawsil.

Nasir-î Khusrav, whose full name was Aib Mu'in Nasir b. Khusrav b. Harîmî, one of the most important Persian poets of the xith century.

Life. Nasir was born in 394 (1003) in Kûbâdîn in the district of Balkh. The Persian historians usually call him 'Alawi which in this case can hardly mean descent from the caliph 'Alî but simply indicates his adherence to the Shi'a. His father was probably a small landowner in the vicinity of Balkh. Nasir received a good education and was early acquainted with almost all branches of the learning of his day. In the forties of the xith century we find him as an official in Marw where, according to his own confession, he led a rather dissolute life. In 1015 however, a sudden change came over him, the real reasons for which are unknown, but which Nasir himself explained by a prophetic dream. He decided to give up his position and all his pleasures and went on pilgrimage to Mecca on which he visited the Kab'a four times. This journey had important results for Nasir. He left Persia at a difficult period, when the country was being laid waste by the continued wars between the various princes. He found the same wretched picture in all the other Muslim countries which he had to traverse on his journey. Only Egypt proved a pleasing exception; there he saw prosperity, rich bazaars, harmony and tranquillity. As the Ismai'îs and the Fatimids were ruling in Egypt at this time, Nasir concluded that Iklâm had diverged from the true path and that only Ismai'îsm could save the true believers from inevitable ruin. Nasir made the acquaintance of several Ismai'îl dignitaries, joined their sect and finally received the blessing of the caliph al-Mustansir (1036—1094) in order to spread the new teaching in his native Khurasân. He was consecrated as a hujjâta, a fairly high official in the complicated Ismai'î hierarchy. Returning to Balkh he devoted himself with the greatest zeal to his new task. But the Sâldaks who ruled the land soon became convinced that Nasir's activity was a serious threat to them. He was persecuted and had to flee from Balkh. He went first to Mâzandarân but found that this also was not safe enough and was finally forced as a last resort to take refuge in the Vûmgân valley among the inaccessible mountains of Badakhshân. There in these poor and inhospitable highlands the aged poet spent his last years; there his most important works were written and there he died in 1060 or 1061 (452—453). Down to the present
day there has survived in this region a little sect known as the Nasiriya, which owes its origin to the "saint Sho Nasir" and tells fantastic stories about its founder.

Works. Nasir's works were probably very numerous but have survived only in very imperfect and corrupt form. The most important is the great philosophical Divan, which was composed in the miserable years of his exile. The artistic value of his poems is not especially high, the style is often clumsy and awkward but the philosophical matter which still awaits its investigator is of very great importance for the history of Persian literature. It is a complete encyclopedia of Isma'ili teaching but of course unsystematic and disconnected. From the linguistic standpoint also the work is of extraordinary interest. A good edition of the Persian text appeared in "The"rān in 1928. Two not very long didactic poems are appended to the Divān: Kāhānā-nāma, which puts into a whole philosophical system having an undeniable similarity with the teaching of Avicenna, and Sāfār-nāma which sharply criticises the aristocracy of the kingdom and praises the peasant, "the nourisher of every living creature".

The best known of Nasir's prose works is the Safar-nāma, a description of his pilgrimage to Mecca which is an exceedingly valuable source of the most varied information. Unfortunately this work has come down to us only in a very mutilated form and has probably been edited by a Sunnite hand. The other works of Nasir are mainly Isma'ili textbooks. Among them first place should be given to the Zād al-Musāfītnāmeh. It is an encyclopedia of a special character which deals with the most varied questions of a metaphysical and cosmological nature. A good edition of the Persian text was published in Berlin in 1923 (Kaviani). No less important is the Wadhī-i Din, an introduction to Isma'ilism, which gradually initiates the reader into Isma'ili beliefs by methodical quotations from the Kūrān cleverly put together. A number of other similar pamphlets like Umm al-Kitāb, which were quite recently fairly widely disseminated among Isma'ili of the Pamirs are credited to our author but so far nothing definite has been ascertained about their authenticity.

Although a considerable portion of Nasir's works is now available in good editions, one cannot yet assert that sufficient light has been thrown upon his striking personality. It would be particularly valuable if his philosophical system could be studied as it is of far reaching importance for the history of thought in Persia.

Schefer, Sefer Nameh (text and transl. with introduction), Paris 1881; this edition is now somewhat obsolete and it is advisable to use for the text the new edition, Berlin 1923 (Kaviani), which also gives as appendix the text of the Kūhānāt-nāma and of the Sāfār-nāma.

Translation: Guy Le Strange, Nasir-i Khusrav, Diary of a Journey through Syria and Palestine, London 1888; A. P. Fuller, Account of Jerusalem (J. R. A. S., 1872, p. 142-164); E. Berthels, Safar-nāma (Russian), Leningrad 1933. — In addition to the new edition of the Divān, already mentioned there is also oldest lithographed text, Tabriz 1280. A Tarjā'ī-hand, the authenticity of which is doubtful, has been publ. with Russian transl. by V. Zhukovski, in Zapiski (iv. 386-393). Text of the Wadhī-i Din pr. Berlin 1925 (Kaviani).

(E. Berthels)

Al-NASIRA, Nazareth, the home of Jesus, lies in a depression sloping to the south surrounded by hills in a fertile district. While the hills to the north and northeast are not very high, in the northwest the Djebel al-Sikh rises to 1,600 feet above sea-level. The name of the town, which does not occur in the Old Testament, is found in the New and in the Greek fathers of the Church in the varying forms Ναζαρης, Ναζαρης and Nazarēs with Ω, but according to Jerome it had in Hebrew a gate, which is confirmed by the Syriac Nazrat and the Arabic Nashr as well as by the Talmudic derivative form נַחֲלָר while the Christian Arabic has Ω. All these forms as well as Naξαρές (Mark i. 24) have in the first syllable an Ω obscured to σ in Talmudic. In Christian Aramaic there is a subsidiary form נזרא with Ω in the second syllable with which is connected the derivative Naξαρας (Matt. xxvi. 71; John xviii. 5), Cf. τον Ναξαρανιαν (Acta xxiv. 5). The Mandaean term Naṣorān (e.g. Dalman, Avram, Gramm. 2, p. 178; Gressmann, in Z. A. T. W., xliii. 26 sq.) is usually connected with this but Lidzbarski (Mandaische Liturgien, p. xvi. sq.; Z. S., i. 230 sqq.) wants to explain it as "observers", while Zimmern (Z. D. M. G., lxxxiv, p. 429 sqq. 76, 46) seeks its origin in the Babylonian nāšīra. That the Arabic nāṣīra, Christians, nāsūn and nāṣūnīya come from the name of the town is known to the Arab writers.

Nazareth, which in the time of Jesus was a little town of no importance (cf. John i. 47: "what good can come out of Nazareth"?; it is not even mentioned by Josephus), was not in the early Christian period one of the places of the New Testament to which large numbers of pilgrims went. According to Epiphanius, it was inhabited exclusively by Jews till the time of Constantine the Great. The number of Christians however gradually increased and was maintained after the Muslim conquest (636). In the time of Arculf (c. 670) it had two churches, and in 332 (943) Mas'ūdī mentions a church held in great veneration there, no doubt the church of St. Mary. Before Galilee was conquered by Tancred and the Crusaders, Nazareth was destroyed by the Saracens; it revived under Christian rule, especially after the bishopric of Scythopolis was transferred thither. The Russian abbot Daniel (1113—1115) has given us a very good picture of the Church of the Annunciation and of the Well of Mary there in this period. 1187, Saladin took Nazareth and at the peace between him and Richard (1192) it remained in his hands. In 1251, during the last unsuccessful crusade, Louis IX undertook a pilgrimage from 'Akka to Nazareth. Yāḳūt (623 = 1225) who relies on the Gospel story instead of Muslim legend mentions Nashira as a village 13 miles from Ṭabarīya. In 1661 (1263) the Mamlūk
Suľğan Baibars ordered the emir ‘Alā’ al-Dīn to destroy Nazareth and particularly the Church of St. Mary. Dimashqī (c. 1300) calls it a Jewish town belonging to the province of Sāfat and inhabited by Yamanīs, and Khalîl al-Zāhibī (d. 872 = 1468) numbers it among the townlike villages in Sāfat. The Christian visitors however describe Nazareth as a wretched village inhabited by very few Christians with a ruined church and complaint of the hostile attitude of the Muhammadan population. It was not till 1560 that better days dawned when the Druse chief Fāghr al-Dīn [q.v.] opened the town to the Franciscans. The Roman Catholic monastery with the Church of the Annunciation was rebuilt, although not completed till a century later. There were only a few Christians in addition to the monks in the town, until in the middle of the xviiiith century the Sheik Fāghr al-’Amīr of ‘Akka increased its prosperity after which they gradually grew in number.

In 1890 according to G. Schumacher, there were 7,419 inhabitants in the town of whom 1,825 were Muslims, 2,870 Greek Catholics and the remainder Christians of other confessions; since then the number has increased. Jews were not allowed to live there. The great monastery with the Church of the Annunciation in the southeast belongs to the Roman Catholics, the Church of the Annunciation in the northeast to the Greek Church. The Muslims have a mosque of considerable size and five walls. The well of Mary which has a dome over it and is open on one side, has its water brought from a spring below the Greek Church of the Annunciation.

**NASIRABĀD.** [See SĪSTĀN.]

**NASKH.** (A.), infin. from n-sīkh, with the technical sense of "abrogation (of a sacred text)". See ƙurʿān, 3.

**NASHK.** [See ARARIA, d.]

**AL-NÁṢIR (the vulture).** It gets its name from the fact that it tears the dead animals on which it feeds to pieces with its beak and devours them. It huts till it can no longer fly. It is said to attain the age of 1,000 years. Its eyes are so sharp that it can see its prey at a distance of 400 farsakh; its sense of smell is equally sharp but fragrant scents are so deadly to it that they destroy it. It shows great endurance in flying and follows armies and pilgrim caravans in order to fall upon the corpses of man and beast. It also follows flocks because it is particularly fond of stillborn lambs, a statement which is confirmed by Brchm who says it attacks lambs. It lays its eggs on high cliffs and is said not to sit on them but to leave them to the heat of the sun. It is however very anxious lest its eggs or young be eaten by bats and therefore covers them with the leaves of the plane-tree. The use of the gall, brain, flesh and bones in medizval times corresponds to the usage in ancient medicine.

**AL-NÁṢIR, the title of Sīrā ḍ., taken from its first verse.** The word means "help, assistance" and is often used of God's help in war and then with the meaning of "victory". Sīrā lxi. 13 is also associated with al-fāṭiḥ, cf. xviii. 13. The Sīrā clearly belongs to a later period and verse 2 in particular recalls the year 9, the Year of the Embassies. It is therefore natural to refer al-fāṭiḥ (verse 1) in keeping with the frequent use of the word to the capture of Mecca, except that it is not mentioned as a fact (as Weil, Ibn Ḥīḍām, p. 933 translates it) but is represented as an assumption, which is also true of verse 2. This is perhaps only a rhetorical figure intended to emphasise the general prevalence of the idea and does not exclude reference to a particular event.

**NÁṢR b. AHMAD b. ISMĀ’IL called al-Sā’īd, a Sāmānīd.** After the murder of his father in Djamā’ā II, 301 (Jan. 914) the eighth year old Naṣr was put on the throne and the able vizier Abū ʿAbd Allāh Muḥammad b. Ahmad al-Djaḥānī given the regency. Soon afterwards the people of Sīstān rebelled against the Sāmānīds and placed themselves under the rule of the governor Badr al-Kābir appointed by the caliph al-Muḡṭādir. At the same time the caliph’s generals al-Faḍl b. Ḥamād and Khalīl b. Muḥammad al-Marwazī occupied the towns of Ghazna and Bust which were in the possession of the Sāmānīds. When al-Faḍl fell ill, Khalīl rebelled against al-Muḡṭādir, routed the troops sent against him and went to Kirmān where he encountered a force sent against him by Badr. The battle ended in Khalīl’s defeat; he was himself wounded and taken prisoner; he died soon afterwards of his wounds. In the same year, the uncle of Naṣr’s father Ishāk b. Ahmad b. Asad rebelled in Samarqand and marched on Bukhārā, accompanied by his son (Ramāḏān 301 = April 914) but was driven back by Ḥamāyya (Hamāyya) b. ‘Alī. A second attempt also failed; Ishāk took to flight again and Samarqand fell into the hands of the government troops. He then tried to hide himself but had finally to come out of his place of concealment and throw himself on Ḥamāyya’s mercy. The latter took him to Bukhārā where he remained till his death, while his son Ḥyṣ went to Farghānā. In the year 302 (914—915) another son of Ishāk’s, Abū ʿAlī Muḥammad, stirred up trouble in Nāṣībūr in combination with al-Husain b. ’Alī al-Marwazī (al-Marwārūdā), who had rendered great service to the Sāmānīds but felt he had been neglected by them. After Muḥammad’s sudden death Ḥusayn, who was suspected of having poisoned him, went to Nāṣībūr and seized the town. In Rabiʿ I 306 (Aug.—Sept. 918) he was taken prisoner by Ahmad b. Saḥl, a tried general, who had been long in the service of the Sāmānīds, and brought to Bukhārā, while Ahmad took up his residence in Nāṣībūr. Ḥusayn was after some time released and given a position at
the court of Naṣr; for some unknown reason he was again thrown into prison and ended his days there; in the following year, Ahmad b. Saḥl deserted the Sāmānids because Naṣr had not kept his promise to him, and recognised only the caliph's authority. He went from Naisabūr to Dījrān and drove out its governor Karategin. He then returned to Khurāsān and entrenched himself in Marv; in Rajab 307 (Dec. 919) however, he shared the fate of Ḥusain. Ḥamūya cunningly succeeded in enticing him out of the town. Ahmād was defeated and taken prisoner and died a few months later in Bukhārā in prison. In Tabaristān also there was fighting. After the death of the Zaidī mām al-Ṭūlū (q.v.), al-Ḥasan b. al-Ḵāsim, called al-Dīrī al-Saghār, was recognised as his successor. In 308 (920—921) the latter sent his general Lailā b. al-Nuṣnī al-Dalāmti to Dījrān. From there he went first to Dāmghān and then to Naisabūr where he had the khitāb read for al-Ḥasan b. al-Ḵāsim (Dhu Ḳ-Ḥidjdā 308 = April—May 921), after Karategin had been put to flight. In the neighbourhood of Tūs he encountered Ḥamūya b. 'Allī whom the government of Bukhārā had sent against him. At first a considerable part of the Sāmānīd army took to flight but Ḥamūya himself stood firm and Lailā had no further success; he had to take to flight, was captured and beheaded by Ḥamūya's orders (Rabi' I 309 = July—Aug. 921). Karategin then returned; but when he left Dījrān and Abu l-Ḥusain b. al-Ḥasan b. 'Alī al-Ṭūlū seized the town, Naṣr sent 4,000 horsemen there, led by Simudār al-Dawāṭī, who at once laid siege to Abu l-Ḥusain. When the latter made a sortie with a force twice his size, he fell into an ambush but escaped to Astarābād and thence to Sāriya. Simudār then went to Astarābād; but when his efforts came to naught he bribed Abu l-Ḥusain's deputy Mākān b. Kūktī and persuaded him to pretend to vacate the town for a time and then to reoccupy it. This was done as arranged; Simudār occupied Astarābād but soon afterwards out of Dījrān. In 310 (922—923) Ilyās b. Ḩāšāk rebelled in Farghāna and went to Samarqand; this enterprise came to nothing through the ability of Abū ʿAmr Muḥammad b. Asād, who with 2,500 men prepared an ambush and scattered Ilyā's army, said to have numbered 30,000 men. After some time, the latter joined the governor of al-Shāhīd, Abu l-Faṭl b. Abī Yūsuf, but had again to take to flight and went to Kāshgār where he joined the Dīkānī Toghtāstin. After failing in an attempt to invade Farghāna he returned to Kāshghar. He was finally pardoned by Naṣr and settled in Bukhārā. About the same time Abu l-Faṭl Muḥammad b. 'Uthmān al-Baḷūnī (cf. Barānī) was appointed vizier in place of Abū ʿAbd Allāh Muḥammad b. Ahmad al-Dījātin. In the year 314 (926) Naṣr at the instigation of the caliph al-Muṣṭafād undertook an expedition against al-Raŷi where Fāṭīk, a freedman of the rebel governor Yūsuf b. Abī l-Sāḥib, was ruling. He took the town in Ḥumādā II (Aug.—Sept. 926) and returned to Bukhārā after two months' stay there. Al-Raŷi remained in possession of the Sāmānīs till the beginning of Shābān 316 (Sept. 928) when the governor appointed by Naṣr fell ill and surrendered the town to the ʿAlīd al-Ḥasan al-Dīrī and his general Mākān b. Kūktī. In 317 (929—930) or 318 (930—931) Naṣr's brothers, Yahyā, Manṣūr and Ibrāhīm, whom he imprisoned in the citadel of Bukhārā, succeeded in regaining their freedom with the help of their followers among the dissatisfied elements of the citizenry and seized the town. When Yahyā claimed the throne, Naṣr who had gone to Naisabūr at the head of a large army to assist the caliph against the rebel Asfār b. ʿShirīṭa had to return as quickly as possible and after several encounters with Yahyā was able to restore order. Yahyā was pardoned and the governorship of Khurāsān given to the emir of Ṣaghānīyān Abū Bakr Muḥammad b. al-Muṣṭafrī. On the fighting in Dījrān and Kūrmān see the article MĀKN b. KĀKTI.

The last year of Naṣr's reign was marked by a great revival of Shīʿa propaganda, which had never ceased in Khurāsān and had been particularly encouraged just at this time by the rise of the Fatimid caliphs. When the people of Naisabūr paid homage to an ʿAlīd named Abu l-Ḥusain Muḥammad b. Yahyā as caliph, Naṣr invited him to Bukhārā and when he left not only gave him a robe of honour but also granted him an annual allowance from the treasury. Husain b. ʿAlī al-Marwāzī had been converted to the Shīʿa by Fatimid emissaries in Khurāsān. He was followed by Muḥammad b. Ahmad al-Nakḥshbīdī (al-Nasāfī) who transferred his activities to Bukhārā and gained a number of proselytes among the high officials. He finally succeeded in winning Naṣr himself over to his party and in inducing him to pay the Fatimid caliph al-Kātīr [q.v.] a considerable sum to atone for the death of Husain b. ʿAlī who had pinned away in a Bukhārā prison. This naturally aroused the wrath of the orthodox clergy, who were joined by the Turkish guards and provoked a powerful reaction. Naṣr regretted his complicity and is said to have abdicated in favour of his son Nāḥī, who had not been guilty of any heresy. Naṣr's ill-health may have contributed to this decision. The details are variously recorded; in any case, the Shīʿis in Bukhārā and Khurāsān were persecuted and al-Nakḥshbīdī with several followers executed.

According to the usual statement, Naṣr died after thirteen months illness of pulmonary consumption on 27th Rajab 331 (April 6, 943); others say he was murdered like his father. According to some reports, he died earlier, on 12th Ramadan 330 (May 31, 942). This latter date perhaps refers not to his death but to his abdication. Nāḥī's formal accession in any case only took place after his father's death.

If we may believe Ibn al-ʿAthīr, Naṣr was distinguished by a singular gentleness of character; according to other sources however, this was not the case. He was also celebrated as an enlightened patron of poets and scholars and is particularly held in honour for encouraging the poet Rūḍāqī [q.v.] in every way.

(Κ. V. ZETTERSTÉEN)

NASR B. SAIYĀR AL-LAIṬHĪ, GOVERNOR OF KHURĀSĀN. As early as 86 (705) we find him distinguishing himself in the campaigns of Kutayba b. Muslim (q.v.) in Central Asia and from this time onwards his name is often mentioned in history. In 106 (724) he took part in the campaign conducted by Muslim b. Sa'd al-Kilâbi, governor of Khurāsān, against Farghāna. When the two tribes of Rabi'a and al-Azīd refused military service, Naṣr was sent with the Muḍarīs against the mutineers and defeated them at al-Barūkān near Balkh. After serving for some years as commander of Balkh he was relieved of his office but afterwards sent to it. When the governor of Khurāsān Asad b. 'Abd Allah al- Kašī (q.v.) died and the caliph Hishām b. 'Abd al-Malik sought counsel of a trusted adviser, who was acquainted with the conditions in Khurāsān, regarding the filling of the vacant post, the latter proposed among other names that of the seventy-four year old Naṣr because he was "abstemious, experienced and shrewd" (ṣafī muḍjarrāb ḍalla), and in Radjāb 120 (June—July 738) he received the diploma of investiture. He honestly endeavoured to live up to the above description of him. The old cities of Khurāsān were four in number: Merw, Nāīsībīr, Merw al-Rīthā and Herāt; there were also special commands in Balkh, Samarakand and Khwārizm. After taking over the governorship, Naṣr transferred his headquarters from the remote Balkh to the more central Merw. In 121 (738—739) he declared war on his Turkish neighbours and advanced to Samarakand. From there he penetrated to Ughurāsana and thence on to al-Shāb. The Turkish chief Kuršul, who had shortly before killed the Khākhān and was regarded, as one of the leading personalities among the Turks, along with al-Hārīth b. Suraidj, a Murdijī who had rebelled against Arab rule and taken refuge among the unbelieving Turks, endeavoured to check his progress; when the opposing forces actually met however, Kuršul was taken prisoner and killed. Naṣr then made peace with the ruler of al-Shāb on condition that he banished al-Hārīth, whereupon the latter went to Fārīst while Naṣr continued his campaign into Farghāna without winning any considerable success. The result was that he had to be content with concluding a treaty of peace. The Soghdians who had at an earlier date migrated to join their Turkish neighbours in al-Shāb and Farghāna, but found the troubled conditions prevailing after the assassination of the Khākhān intolerable and wished to return to their old Iranian home, were treated by Naṣr with a wise leniency and an agreement was come to by which the transoxianians who had been converted to Islam but had gone back to the faith of their fathers were not to be persecuted in any way, the private debts and arrears of taxes of the emigrants were remitted and the Muslim prisoners taken by them were only to be restored to liberty after the evidence of witnesses had been taken and a judicial decision given. These measures, it is true, provoked not only the displeasure of the Arab emirs in Khurāsān but also the dissatisfaction of the caliph Hishām; nevertheless Naṣr succeeded in carrying out his plans. As regards domestic politics he regulated the relations between the Muslims and those under their protection by an important reform in the system of taxation, by which he ordained that all landowners, including Muslims, should pay the land-tax (ḥarādī) while the poll-tax (ḏījya) should be imposed on non-Muslims exclusively. But the deep rooted clannishness of the Arab caused him continual difficulties. In the first four years of his tenure of office he chose his subordinates exclusively from the tribe of Mūdār; then he began to be little more broad-minded in this respect and to pay some attention to the Yanmaš and thus gradually to pave the way to a reconciliation of the tribes at feud with one another. In the year 123 (740—741) the governor of the Ḫūrāšān, Yusuf b. Ōmar al-Thakafi, endeavoured to arouse the caliph's suspicions of him; Hishām however put through his plan and left Naṣr in his post. When al-Walīd ascended the throne in Rabi'a II 125 (Feb. 743) he confirmed Naṣr in office but soon afterwards allowed himself to be persuaded by Yusuf b. Ōmar to recall him and therefore ordered him to come to Damascus and to bring with him all kinds of hunting-birds and musical instruments. Naṣr however did not hurry and before he reached the frontier of al-Īrāk, the news of the caliph's assassination reached him and he at once turned back. When al-Walīd's successor, Yazid III, appointed Manṣūr b. Djamhūr governor of al-Īrāk and Khurāsān, Naṣr refused to recognise him. In 126 (743—744) trouble broke out among the Azd and Rabi'a in Merw. When Naṣr wanted to pay the troops not in money but with the gold and silver instruments procured for the caliph al-Walīd they mutinied; Djamhūr b. All al-Kirmānī put himself at their head and appealed to their feelings by demanding vengeance for the Banū Mughallāb who had been mercilessly persecuted by the Īmāydūs, course which he knew would appeal to them. When the Mudārīs appealed to Naṣr to render al-Kirmānī innocuous, he declined at first but later yielded to them and had him arrested (end of Ramadān 126 = middle of July 744); but a month afterwards he escaped from prison. Negotiations were then opened between Naṣr and al-Kirmānī but they led to no real decision. A much more dangerous opponent was al-Hārīth b. Suraidj who at the end of Djamālādī II 127 (beginning of April 745) again appeared in Merw after a many years' sojourn among the Turks. In order to be safe from this rival, Naṣr had unfortunately secured a pardon for Hārīth and his followers from the caliph Yazid III and after his arrival in Merw he endeavoured to win al-Hārīth over by the greatest indulgence and friendliness. He even went so far as to confer on him the governorship of Transoxiana: but all his efforts were in vain; al-Hārīth adhered firmly to his Murdijī conceptions and stubbornly refused to recognise Naṣr as governor. As his following was steadily growing, he finally demanded that Naṣr should resign his office and leave the choice of his successor to a court of arbitration. Naṣr said he would agree to this, but when he declined to obey the judgment of the court insisting on his
resignation, open fighting broke out. Al-Ḫṣīrī tried to take the city by surprise but was driven back (end of Djamā'ī ii 128 = end of March 746). He then joined forces with al-Kirmānī and they attacked Naṣr with their combined strength. After several days’ fighting, the latter had to abandon Merw and retire to Naisābūr; it was not long however before the two rebels fell out. Among other things al-Kirmānī’s cruelty made him hated; in addition there were the endless feuds among the various Arab tribes. After al-Ḫṣīrī’s most influential follower Bīṣhr b. Djamūzī al-Dabha had left al-Kirmānī with 5,000 men, al-Ḫṣīrī soon followed his example but was killed in the fighting that ensued (end of Rājdāb 128 = April 746). Al-Kirmānī was now lord of Merw. The Yamanīs stood by him while the Muḍarīs sought refuge with Naṣr in Naisābūr. Naṣr’s position was thereby no means an enviable one. So long as al-Ḫṣīrī was in the hands of the Kāhriyids and the ‘Allīd rebel Abū Allāh b. Muʿṣīwīya [q.v.], Naṣr’s communications with the caliphate were cut and even after Yazīd b. ʿOmar b. Huhiba had regained al-Ḫṣīrī for Marwānī, he could not reckon on any very considerable help. There was therefore nothing left for him but to concentrate his efforts on the reconquest of the city of Merw. After repeated encounters between his troops and those of al-Kirmānī, he went there in person and pitched his camp opposite that of his opponent. The two rivals continued to fight with varying fortunes without being able to bring about a decision. Naṣr’s appeals to Marwān and Ibn Huhiba for reinforcements remained unheeded; in view however of the danger that threatened from Abū Musa [q.v.], the leader of the ‘Abbāsīd prog- paganda negotiations were begun between Naṣr and al-Kirmānī. After a son of ʿUṯmān b. Ṣurayjī had killed al-Kirmānī to avenge the death of his father, the Kāhriyīd Shābīb b. Salama took his place and in the name of the Azd concluded a truce for one year. Abū Musa was able however to bring this agreement to nothing by persuading ‘Ali b. ʿAlīddīl al-Kirmānī that Naṣr had insti-gated the murder of his father and the Azd who were devoted to him broke the truce just con- cluded and resumed hostilities against Naṣr. When Abū Musa was approached for assistance by the two combatant parties he was able to come forward as an arbiter and decided in favour of the Azd against the Muḍarī. He then entered Merw, according to the most probable statement in Rābī’ ii 130 (Dec. 747), and made the inhabi-tants swear allegiance in general terms to a caliph of the family of the Prophet without a name being mentioned. For Naṣr of this he was nothing less than a colleague but to seek safety in flight. From Merw he fled via Sarakhs and Tūs to Naisābūr, where the news reached him that his son Tamīm, whom he had sent against Abū Muslim’s general Kāhṭabā b. Shābīb al-Ṭā’ī [q.v.] had been defeated and slain at Tūs. From Naisābūr he went to Kūmīs and thence to Djurjān. Nubātā b. Ḥanṣaḷa al-Kīḥābī was here with a large army which Ibn Huhiba had at last sent him by the caliph’s orders. But Naṣr and Nubātā did not cooperate and in addition the Kāsīs went over from the former to the latter. On the 1st Dhu‘l-Hijja 130 (Aug. 1, 748) Nubātā was defeated by Kāhṭabā and fell in the battle. After his defeat Naṣr could no longer stay in Kūmīs but fled, pursued by Kāhṭabā’s son Hasan, to al-Rayā, without receiving any support from the Umayyad officials. Reaching al-Rayā, he fell ill; nevertheless he wished to continue his journey to Hamaddān but was no longer able to move without assistance; he had to be carried and died in 12th Rābī’ i 131 (Nov. 9, 749) in Sāwā [q. v.] at the age of 85. Naṣr combined with his eminent qualities as a statesman considerable gifts as a poet.

(K. V. Zetterstede)

Naṣr Allāh b. Muḥammad b. ‘Abd al-Ḥusayn Abū ‘l-Maʿāṣirī of Shīrāz, a Persian author and statesman, vizier of the Ghaznavid Khusraw Malik (1160—1185) by whose orders he was arrested and executed. Naṣr was the first Persian to succeed in giving a satisfactory Persian version of the celebrated Kāhālīa d-Dīma. His version is based on the Arabic of Abū Allāh b. Maḵāfī and was completed about 328/1144, i.e. in the time of Bahramīshāh (1118— 1152). For a long time his translation was regarded as a model of elegant Persian style which could not be surpassed and served as the basis for the metrical version by Kānīfī (658 = 1260) and for a series of Turkish translations. It was only in the xvith century when even Naṣr Allāh’s language appeared too homely and archaic that his translation was superseded by the celebrated Anwār-i Suhailī of Husain Wāṣīq al-Kāhīfī [q.v.], d. 393 (1532—1533).

Naṣr al-Dawla Abū Naṣr Ahmad b. Mar- wān, third and most important prince of the Marwānī dynasty [q.v.] of Diyar Bakr. He succeeded to the provincial sovereignty on the death of his brother, Mumāhīd al-Din Abū Maṣrāf Sāʾd, in 401(1010)—in 411—after a struggle with the latter’s murderer, and was in the same year formally recognized by the ‘Abbāsīd al-Kādīr, from whom at the same time he received his lākḥab, and by the Būyid amīr, Sulṭān al-Dawla. Though now established in the capital, Majāfīrīkīn, he was unable to obtain effective control of Āmid, the next most considerable city of the province, until 415 (1024—1025), when his tributary, Ibn Damna, who had hitherto ruled it, was assassinated: and during his reign of over fifty years, he suffered several ineffective attacks on his territory from the Uqailīs of Diyar Rābīʿa’ to whom he appears, at one period at all events, to have paid tribute (see Ibn al-Athīr, ix. 121),
and to whom, in order to compose a quarrel arising out of his divorce of a lady of that family, he was obliged, in 421 (1030), to cede Nişbid. In 433 (1041—1042) Diyar Bakr was invaded from Adharbaidjan by the bands of Ghuzz Turkmens which had pushed northwards on the advance of the Seljukid leaders into the Dibaj; and for two years parts of it were subjected to their depredations. Otherwise the province enjoyed, throughout his reign, a tranquillity remarkable in this troubled age.

The ruler of Diyar Bakr was regarded as a principal guardian of the frontier of Isfand, and as such was expected to harass the Christians whenever opportunity offered (see the letter addressed to Naşr al-Dawla by the Seljukid Tughriel-beg: Ibn al-Ajdār, ix. 275). Nevertheless Ibn Marwān's relations with the Byzantine Empire were for the most part amicable, being based on a pact of mutual non-aggression, to which both parties appealed when it was infringed. The only important breaches of this agreement occurred in 418 (1027), when Naşr al-Dawla seized Rhuhā (Edessa), which, however, was recovered by the Greeks four years later, and in 426 (1034—1035), when an attempt was made by the Christian inhabitants of that city, in league with Arabs of the Numair tribe, to invade his territories. Later their good relations were of use to the Emperor—Constantine X—who, in 441 (1049—1050) obtained Ibn Marwān's help in securing from Tughriel-beg the release of the Georgian general Lapi'riti with whom he had been in league against the Georgian king, and who had been captured the year before by Tughriel's half-brother Ibrahim Ināl. Up to 436 (1045) Armenia, which also marched in part with Diyar Bakr, was still independent of the Empire; and in 423 (1032) a Marwānid commander led a successful raid into this country. In 427 (1035—1036), on the other hand, a haqā'id caravan from northern Persia was attacked and looted near Aṣīr by Armenians of the Sunā'a tribe, upon which Ibn Marwān forced the aggressors to give up their prisoners and booty.

Early in Naşr al-Dawla's reign the north of Syria and parts of the Dijāzira contiguous to Diyar Bakr were obliged to acknowledge the suzerainty of the Fātimid caliphs, though their hold on these parts remained somewhat precarious. And his own territories were menaced by Fātimid pretensions, when in 430 (1038—1039) the governor of Damascus, Anṣūfiktin al-Dżibārī, who was then reasserting his rule in northern Syria, projected an attack on Diyar Bakr. This, however, came to nothing.

The reign of Naşr al-Dawla saw the rise of the Seljukids from complete obscurity to the empire of Persia and the 'Irāk. His first communication with them occurred as early as 435 (1043—1044), on the Ghuzz invasion of Diyar Bakr, when he addressed a letter of protest to Tughriel, who, though he was scarcely in a position to do so, undertook to restrain the marauders. (It may be noted, nevertheless, that Ibn al-Azraḳ describes this Ghuzz invasion as having been actually instigated by Tughriel, who, he says, granted the province to its two leaders in advance; cf. Amedroz, The Marwānid Dynasty of Mayyafārīqīn, in J.R.A.S., 1903, p. 137. Surely this author is mistaken in considering the date 434 as wrong, since it agrees exactly with those given by Ibn al-Athīr). Eight years later Naşr al-Dawla acceded to Tughriel's demand for recognition as suzerain; and this subservience, which was renewed in 446 (1054—1055), when Tughriel made a triumphal tour through Adharbājān and Muslim Armenia, spared Diyar Bakr the experience of a Seljukid visitation. In the following year, however, Tughriel's attention was drawn to the murder of a Kurdish chiefman by Naşr al-Dawla's son Sulaimān, his lieutenant in the Dijāzira; and in 448 (1056—1057), when the sultan was obliged to visit al-Mawājil in order to oppose a combination of Shi'i leaders headed by al-Basāṣīrī [q. v.], he forced an indemnity from Ibn Marwān by laying siege to Dijāzirat Ibn 'Umar.

Naşr al-Dawla was sagacious, or fortunate, in his choice of the three warirs who served him in turn, namely Abu l-Kāsim al-Ifahānī, to whom he owed his throne (in office 401—415 = 1010—1025), Abu l-Kāsim al-Maghibī [q. v.] (in office 415—428 = 1025—1037) and Abu Naṣr Ibn Dżahir (afterwards entitled Fakhr al-Dawla) [q. v.] (in office 430—435 = 1030—1035). It was no doubt owing in part to their abilities that the remarkable tranquillity enjoyed by Diyar Bakr during his reign was turned to advantage and resulted in an equally remarkable prosperity. This Naşr al-Dawla fostered by a reduction of taxation and by renouncing the practice of fining the rich in order to augment the revenues. Nevertheless his court is said to have surpassed those of all his contemporaries in luxury, and many instances are quoted of his profusion and generosity. Mayyafārīqīn became during his reign a centre for men of learning, poets and ascetics, as also a refuge for political fugitives. Among the latter were the Byzantine princes al-Malik al-Aziz [q. v.], who was ousted from the amirate in 436 (1044—1045) by his uncle Abū Bakr al-Din. [q. v.], and the infant heir of the Abbāsid al-Kā'im—afterwards al-Muṣtabī [q. v.]. — who was removed with his mother from Baghdād on the occasion of its occupation in 450 (1059) by al-Basāṣīrī.

Naşr al-Dawla is described as being resolute, just, high-minded and methodical, and though much addicted to sensuality, he was strict in his observance of religious injunctions. He died, aged about eighty, on 24th Shawwāl 455 (November 1061), leaving Fakhr al-Dawla still in office to secure the succession to his second son, Abu l-Kāsim Naşr, Nasr al-Din.

(HAROLD BOWEN)

NAŞR AL-DIN (pron. Nasreddin) KHODJA, the hero of the stories of wit and stupidity among the Turks, who bears a strong resemblance to the German Till Eulenspiegel, the English Joe Miller, the Italian Bertoldo, the Russian Balakirev, etc. Various opinions are current about his life. One tradition for example makes him a learned man of Hārūn al-Rašid, but another makes him a contemporary of al-Khwārizm-shīb 'Alī al-Din Takāsh (reigned c. 1172—1200). The two traditions are not to be taken seriously; at most they might be regarded as an indication that many of the jests of the Khodja date from the period of the caliphate or that some of them came through a Persian intermediary.
The other versions of the life of Nasreddin can be divided into two groups, of which the first puts him in the xivth and beginning of the xvth century (the period of Bayazid I, Timur and the eighth Karamanid 'Alâ' al-Dîn), and the second in the xivth century (the period of the Saljûq 'Alâ' al-Dîn).

The first view appears to come from the Travels of Ewliya Çelebi (ii. 16—17). There, for example, the story of Timur's meeting with the Khodja in the bath is told, when the Khodja said that he would give 40 akâb for Timur's shirt but nothing for himself. In spite of all the improbability of such an utterance and in spite of the fact that the older tezkires put this answer in Ahmadî's [q.v.] mouth (cf. also E. J. W. Gibb, Ottoman Poems, 1882, p. 166—167) Ewliya's story, was given currency in Europe by Cantimir, Dier, Goethe, von Hammer, etc. When Mehemd Temefik accepted this story of Ewliya's in his editions of the jests of Naşreddîn and Buadam (since 1853) which were later translated into German (about 1890), it was given new life and became almost the predominant opinion in Europe.

The second group of traditions champions the xiiith century as the period of Naşreddîn and relies on the following facts. Firstly the poet Lami'î (d. 1532—1533) asserted in his Lâfi'î, that Naşreddîn was a contemporary of Shâyi'ad Hamza who lived in the xiiith century; secondly in old manuscripts the Khodja is associated with the Sulân 'Alâ' al-Dîn Koprulu-Zade (see Bibli.) therefore inclines to the view that he was a contemporary of the Saljûq 'Alâ' al-Dîn. Sh. Sâmi Bey (Kâmûs al-A'tâm, vi. 4577) and P. Horn (see Bibli.) had already decided for the Saljûq and the latter definitely for 'Alâ' al-Dîn, but Koprulu-Zade supported his view by evidence, partly new, which we proceed to quote: 1. the inscription on the tomb of Naşreddîn in Aşkhehir bears the date 386, which on the supposition that it is reversed, would indicate that the Khodja died in 683 (1284—1285); 2. on two authentic charters of endowment (waqfyya) of the year 655 (1257) and 665 (1267), respectively, a certain "Naşreddîn Hodja" appears before the kâdî as a witness; 3. the statement which the former had made in a mufti of Siwri-Hišr, Hasan Efendi, made about 45 years ago in the Me'müöli-i Mevârî about Naşreddîn, agrees with this assumption. According to Hasan Efendi, Naşreddîn was born in the village of Khörtö near Siwri-Hišr in the year 605 (1208—1209), held there the office of İmâm in which he succeeded his father, and moved in 635 (1237—1238) to Aşkhehir where he died in 683 (1284—1285).

Although this evidence is by no means to be rejected off hand, it seems to have been completely neglected by other scholars (Krymski in 1927 [see Bibli.] does not even mention Koprulu's book) except for my article entitled "Je li Naşreddîn hodja "Heye"? ("Did Naşreddîn Hodja really live?") in the Christmas supplement to the Belgrade Politika (Jan. 6, 1932), where it was described as worthy of consideration, if not yet absolutely convincing.

After all these traditions and opinions, it is not a matter for surprise that some scholars (H. Ethé, R. Basset, M. Hartmann, A. Weselks [see Bibli.] have been more or less sceptical about the historicity of the Khodja.

These doubts are to some extent closely connected with the question of the origin of Naşreddîn's jests. Basset, for example, thinks (in Recherches etret al Dîjâh a.. . ) that they are a translation of the old Arabic droll stories which were current in large numbers at the end of the fourth (tenth) century about a certain Djuhâ (Djuhâ) of the tribe of Fazîra in Kfâ. Djuhâ's stupidity became proverbial among the Arabs, as is already evident from Mâdînî (d. 1124) (cf. Arabum proverbia, ed. G. Freytag, i. 403, N°, 175), and a Book of Anecdotes of Djuha (d. 688) (written by Khodja Naşreddîn's) is expressly mentioned as early as the Fihrist of al-Nâdîm (d. 995) (cf. Flûgel's edition, i. 313). This collection, which had previously reached the west through oral transmission, was translated into Turkish in the xviith or xviith century and the hero identified with a certain Naşreddîn Khodja, whose existence Basset thinks is at least doubtful.

This thesis of Basset's was not everywhere accepted without demur. Horn and Christensen (see Bibli.), for example, do not believe in a translation from the old book of Djuhâ's jests and Wesselski holds the view "that there is no evidence of the existence of any story of Djuhâ in the period before that of Naşreddîn's alleged or actual life, which could with certainty be assumed to be the source of one of the jests of Naşreddîn". M. Hartmann describes Naşreddîn's jests as the common property of the literature of the world, expressed to some extent in a specifically Turkish guise and therefore regards any question as to whether there ever was such a person as of little importance. Horn and Krymski also regard the Khodja's jests as folk stories found almost everywhere, which lacks similarly but admits that these jests form an independent collection "into which probably very many stories from the old book (of Djuhâ) have been incorporated".

Whatever the truth may be, one thing seems to be certain: the immediate source for most of the stories of Naşreddîn is to be sought, as Basset and Hartmann say, in the world of Arabic culture and travel where Djuhâ certainly is often the hero of such anecdotes. In other words, Djuhâ might be regarded as the ultimate prototype of many of the adventures of Naşreddîn. While Basset's theory then may not be correct in all details, it seems to be right in its main features, especially in the fact that it has directed the student of Naşreddîn to the influence of the rich Arabic literature of humorous anecdote. That many of these stories are originally not Arabic but Persian, Syriac, Indian, Greek, etc. is quite natural, especially when we remember that they are common to many literatures, but in this case it must often have been the Arabic version that was the source upon which the Turkish drew.

For the problem of Naşreddîn it is also important to put on record that stories of Djuhâ are very early mentioned by Persian poets and authors (Mînâ'îfi, d. 1040—1041) and transmitted (a story in Anwâr [c. 1190] three stories in Djalîl al-Dîn Rûmi [d. 1273] and a dozen stories in Uzûh-i Zakînî [d. 1370—1371]). When we remember the part played by Persian culture among the Saljûqs of Kûrm and their Ottoman successors, we cannot consider it impossible that some stories of Djuhâ may have come to the Turks through Persian literature.
This is all the more probable as Djalal al-Din Rumi himself spent the greater part of his life in Anatolia (especially in Konya) and used Djihâş (as Djihâ is called among the Persians) popularity to illustrate his mystic ideas (cf. Mathnawí, ed. Nicholson, ii. 3116 sqq.).

Particularly in view of this popularity and the fact of oral transmission, it is not impossible that the common people altered the name Djihâş (Djîhâsh) which was strange to them, into Khodja, as Basset repeatedly insists (Mélanges africains et orientaux, Paris 1915, p. 49). On the other hand, there may have been a droll Khodja named Nasreddin among the Ottomans (or Seljûks), around whom gathered humorous stories of others, in addition to his own jests, and thus became the typical representative of wit and stupidity. For this reason he was probably also credited with the tales of the simplicity of Karâkûsh [q.v.], Saladîn's steward, who had been dead since 1201.

Other jests attributed to Nasreddin go back several centuries further which is proof that they cannot originate with him. The fact that most of the jests are not original is obvious (cf. e.g. Wesselski's parallels), in spite of all the changes and transformations they have undergone among the Turks.

One of the Turkish versions (with additions) was, according to Basset, translated in the middle of the 16th (xvith) century into Arabic and thus the Turks returned to the Arabs part of what they had formerly borrowed from them. Nasreddin and Djihâş, being similar types, later became amalgamated in such a way that the Arabic editions identify the two in the title: Nâşrâdâr al-Khodja Nasr al-Dîn Efendi Djihâş. Sometimes however, the Arabs distinguish between the two by calling Nasreddin the "Rumelian Djihâş" (Djihâş al-Rîmi). This Djihâş of the Nâsâdîr easily reached the Berbers through the Arabs as Si Djeha (Djîhésh). In a similar way the Nubians procured their Djawha and the Maltese their Djihan. Whether the fool of Sicilian popular story, Giûfa or Giûch also comes from Djihâş is a further question.

On the other hand, the Turkish version of the jests of Nasreddin (under his or another name or anonymously) became known not only to the Rumanians, Bulgars, Greeks, Albanians, and Jugoslavs but also in Armenia, Georgia, the Caucasus, the Crimea, the Ukraine, Russia, Turkestan etc. On these long travels, Nasreddin naturally underwent many changes; distortions and additions were made which are quite foreign to the Turkish text, so that the number of his (or Djihâsh's) stories increased to several hundreds (in Wesselski to 515 or 555). The oldest manuscript (Leyden, No. 2715) which was already in the possession of a European in 1625, only contains 76 jests.

The first edition of the chapbook on Nasreddin, which was the foundation of many later editions, appeared in 1837 (125 jests). Mehmed Tewfik's edition (1899 = 1883) in which the coarse stories of the chapbook are omitted only contains 71 but a few months later Tewfik published a further 130 under the name Bu Adam ("This Man", i.e. the same Nasreddin) (in the final edition of 1902 Bu Adam only contains 96 stories). Anecdotes of Nasreddin were later collected by I. Kunois from the lips of the people between Aidin and Konya and separately published (Budapest 1899, with 166 stories and introduction, and in

Radloff's Proben der Volksliteratur der turkischen Sämme, vol. viii., St. Petersburg 1899). The fullest, but uncritical, Turkish edition is that of Behîr (pseudonym of Weled Çelebi), the fourth edition of which (1926) contains nearly 400 anecdotes.

The Turkish editions in the Roman alphabet are much shorter (e.g. Nasrettin Hoca Hikayeleri, 1928 [only 79 pp.] and Letatîf Nasrettin Hoca, 1929 [only 96 pp.]) or are divided into various periods of Nasreddin's life (like the Nasrettin Hoca of Kemalettin Sukru 1930—1931, in four parts).

The first European translations were based on the early editions of the Turkish chapbook: the German by Camerloher and Prelog (Trier 1857, with 126 jests) and the French of Decourdemanche (Les plaisanteries de N. hodja, Paris 1876, also containing 126 anecdotes) which was increased in the second edition (1908) by those about Karâkûsh. Decourdemanche also provided a translation based on much larger material (he drew upon unpublished manuscripts also entitled Sottistier de Nasr-Edîn-Hodja (Brussels 1878, with 321 humorous anecdotes). While the translation by Camerloher and Prelog made it possible for R. Kohlitz and his stories told of Nasreddin in European collections and to trace many of them back to an Indian origin (Orient und Occident, i. 1862), a later edition with additions in his Kleineren Schriften zur Marxenforschung, i. (1898), Decourdemanche's translation served Dragománov as the basis for his studies on the dissemination of stories of Nasreddin in the Ukraine (Kiewskaja Starina, 1886).

Later (about 1890) Mehemed Tewfik's edition, including a portion of Bu Adam was translated into German by Mullendorff (Reclam No. 2735). The remainder of the Bu Adam stories (No. 131—226) were translated by Menzel; the much too long Abenteuer Buadems (= No. 197) in the Turcibische Bibliothek (vol. xiii., 1911) and the others in the Beitrage zur Konntnis des Orients, vol. ix. (1911), p. 124—159. Nasreddin's jests have also been translated into English, Russian, Hungarian, Greek, Serbo-Croat, Little Russian, Bulgarian, etc. Wesselski's Der Hudscha Nasreddin (1911) is at present the most complete translation of these anecdotes in a number of versions (see Bibli.).

In conclusion, it may be mentioned that some anecdotes of Nasreddin were retold by A. Pann in Rumannian (1853), by Murad Efendi (= Fr. v. Werner) in German (1858), by V. Velîchko in Russian (1892), by V. Sûrat in Little Russian (1896) and by Kopolu-Ziide in Turkish verse (1918).

NAŞRANİ. [See Naşarın.]

NAŞRİDS, AR. BANU Naşr, also sometimes called Banu ’L-AHMA, a Muslim dynasty which ruled over the kingdom of Granada in the north of Spain from 629 to 897 A. H. (1231—1491).

While, thanks to the narratives of the contemporary Ibn al-Khālid [q. v.] and Ibn Khalādun [q. v.], we are very well informed about the history of the Kingdom of the Naṣrids down to the second half of the xivth century, we have for the later period only a very few sources available in Arabic — and it is not always easy to fill the gaps from Christian sources — : a few pages of al-Maṣkari’s Naṣf al-Ṭib and the short anonymous chronicle published in 1863 by Muller.

We give below a chronological list of the Naṣrids; when a date A. D. is not preceded by its equivalent A. H., this is because it is not given either by Muslim historians or Arabic inscriptions.

5. Abu ’l-Walid ʿIsmā’īl I: 713—725 (1314—1325).
10. Abu ’Abd Allāh Muḥammad VI: 761—763 (1360—1362).

20. Abu ’Abd Allāh Muḥammad XI (Boabdil): 1°, 887—888 (1482—1483); 2°, 892—897 (1487—1491).

I. Foundation of the Naṣrid kingdom. At the time when the power of the Almohads was beginning to collapse in Spain, two influential families, the Banū Mardanšah in Valencia [q. v.] and the Banū Hūd in Murcia [q. v.], took advantage of the civil strife to form for themselves little principalities in the east of the Peninsula. At the same time a member of the Arab family of the Banū ’L-įmah, settled in Arjona, a little town some 20 miles north of Jaén, who traced their descent from the chief of the Banū Kharradā, Saʿd b. ’U要害, also tried his fortune at profiting by the troubled times. He was Muhammad b. Yūsuf b. Abūd b. Naṣr and was known as al-Shāhik. In 629 (1231) he found a few supporters to proclaim him; these were mainly members of his own family and of another, related to it, the Banū Aḥsikkīlāla. The towns of Jaén, Guadix and Baza rallied in the following year to his standard. After various exploits the details of which are somewhat obscure, Muḥammad I, ancestor and founder of the dynasty of the Naṣrids, took Granada, in 635 (1237—1238) and made this town his capital. He soon decided to build a royal residence on the famous hill of the Alhambra [q. v.]; al-Hamrāʾ or Ḥamrāʾ Ǧarnāта). In the course of the following year, he made himself lord successively of Malaga and Almeria. The little town of Lorca did not come under his sway until 663 (1264—1265). Hitherto Muḥammad I had had to employ all his forces to fight against his Muslim rivals and in order to have his hands free he declared himself the vassal of Ferdinand I, king of Castille (1217—1252) to whom he undertook to pay a considerable annual tribute. He had to take part with his overlord in the capture of Seville from the Muslims in 1248 and be a passive witness of the triumphs of the armies of the king of Castille in the south of Spain. When on the death of Ferdinand I, Alfonso X succeeded him, Muḥammad I had to renew his oath of vassalage to the latter. His kingdom, “the kingdom of Granada”, was now the only area in the Peninsula ruled by Muslim princes; bounded by the Mediterranean from the Straits of Gibraltar to Almeria, this kingdom did not extend farther inland than the mountains of the Serrania de Ronda and the Sierra d’Elvira.

II. The Naṣrid kingdom in the xivth century. — Muḥammad I died in 671 (1273) and was succeeded by his son Muḥammad II, called al-Faṣīḥ, who on his accession sought an
Alliance with the Marinids who were finally putting an end to Almohad rule in Morocco. The Marinids answered his appeal. On coming to the throne Muhammad II had found himself faced with the necessity of putting down threatening rebellions; the most serious was that of the Banū Ashkilūla, governors of Malaga and Guadix. He was able to rout the rebels near Antequera, with the help of forces sent him by the Infante Don Philip and Don Nuño de Lara. On the other hand, he soon realised that the king of Castille, his suzerain, had every interest in letting the kingdom of Granada exhaust itself in internal strife. This is why the Nasrīd turned to the Marinids. In consideration for the return of Algeciras [q.v.] and Tarifa [q.v.], the sultan of Fās Abū Yusuf Ya‘qūb b. Abū al-Ḥāṣan agreed to cross into Spain where he inflicted two defeats on the Castillian troops. The chroniclers of the Marinid dynasty record the four expeditions of the king of Fās into Spain and give details of the loss of Tarifa which the Spanish leader Alonso Perez de Guzman, celebrated in legend as Guzman el Bueno, was to defend heroically a little later, in 1293. But it is from this time that the permanent intervention of the sultanāt of Fās in the affairs of the Nasrids of Granada dates; under pretence of a ḥijā‘a they were able at every opportunity to add to the confusion of a political situation already much troubled and to weigh heavily upon the destinies of the Nasrīd throne by playing a game of alliances which were often broken as readily as they were made. The kings of Granada henceforth were to have at their side a regular body of Moroccan soldiers, the ḥusūrāt (sing. ḥāṣṣi) under the command of a Marinīd shāhīd, consisting of adventurers of fortunes who had become more or less undesirable in their native land.

When he died in 707/1302, Muhammad II was succeeded by his son Mūḥammad III who was later to be known as al-Makhluq (the deposed). He was not who built the great mosque of the Alhambra. He had to put down risings by the governors of Guadix and Almeria but had to bow before the rising of a prince of his family, Abū l-Diyūyīsh Nāṣr b. Muhammad, who assumed the power in 708 (1309). Mūḥammad III abdicated and withdrew to Almuñecar [q.v.].

Nāṣr's reign was hardly any longer or happier than that of his predecessor. After a display of energy by which he forced the king of Aragon to raise the siege of Almeria and the king of Castille to raise the siege of Algeciras, he failed against a conspiracy hatched by a Nasrīd prince Ismā‘īl, who seized the power in Granada and left only the town of Guadix to Nāṣr. The latter established himself here in 713 (1314) and stayed there till his death in 722 (1322).

The fifth Nasrīd ruler, Abū l-Walîd Iṣmā‘īl I b. Faradj b. Iṣmā‘īl b. Yūsuf b. Nāṣr, was one of the most remarkable members of the dynasty. As soon as he had assumed the power, he showed a certain strength of character and did his best to put his frontiers in a state of defence. He regained for a time the old Nasrīd lands which had passed to the Marinids: Algeciras, Tarifa and Ronda. In 719 (1319) he had to meet an offensive from Castille and with the help of the Shākid al-Ghuzat, Abū Sa‘īd ‘Ummān b. Abī l-‘Ula al-Marin, he inflicted heavy defeats on his enemies at Alicum and in the Sierra de Évora. In this last battle the Infantes Don Juan and Don Pedro, guardians of king Alfonso XI, were killed. Soon afterwards, Ismā‘īl I regained the fortresses of Huescar, Orce and Galera, then that of Baza. In the following year he took Martos. In 725 (1325) he was assassinated in his palace at the instigation of one of his relations with whom he had quarrelled, the lord of Algeciras Mūḥammad b. Ismā‘īl. He left four sons of whom the eldest, Mūḥammad, succeeded him on the throne of Granada.

Mūḥammad IV was still a minor on his accession and remained for several years under the strict guardianship of his ministers, notably of the vizier Mūḥammad Ibn al-Mahṛūk. The latter, after a long struggle with the Shākid al-Ghuzat Ibī Abī l-‘Ula, was finally put to death by orders of his sovereign who then took the reins of power into his own hands. The remainder of his reign was continually troubled. The help which he sought from the Marinid Sultan Abī l-Ḥasan al‘Ali against the Christians earned him the enmity of the family of the Banū Abī l-‘Ula. In succession he lost Ronda, Algeciras, Marbella and Gibraltar and was ultimately assassinated in 733 (1333).

His brother Abū l-Ḥajjābāl Yūsuf I b. Ismā‘īl succeeded him and reigned for a considerable period. His first care was to avenge his brother by expelling from his kingdom the Banū Abī l-‘Ula who took refuge in Tunis and in giving the office of Shākid al-Ghuzat to a Marinīd lord, Yāḥyā b. ʿUmar Ibn Rahlūs. The struggle with the Christians was resumed in his reign. He sought and obtained the help of the Marinid Abu l-Ḥasan, who crossed the Straits of Gibraltar in 741 (1340) with a large force and laid siege to Tarifa. This expedition ended disastrously. The king of Castille, Alfonso XI, with his army and that of the king of Portugal inflicted a sanguinary defeat on the Muslims near the mouth of the Río Salado, on the 7th of December, 741 (Oct. 30, 1340). Abu l-Ḥasan had to take refuge in Algeciras, whence he was able to reach Morocco. Yūsuf I returned with all speed to Granada, while Alfonso XI profiting by the confusion of the Muslims seized Alcalá la Real, Priego and Benamejí. After taking Algeciras he granted the Nasrīd king a truce of ten years, at the end of which he laid siege to Gibraltar. Alfonso XI however died of the plague during the siege. Yūsuf I himself was assassinated by a madman in the great mosque of Granada on the day of the feast of the 'Breaking of the Fast' of 755 (Oct. 19, 1354). This Sultan's name will always be associated with certain monuments of the Alhambra. It was he for example who built the great gateway of the enceinte, called Bab al-Shari‘a (gate of the Esplanade; commonly called wā‘yūn (the gate of Justice), in Spanish Puerta Justicia and de la Justicia) the inscription on which records that it was finished in Rabī‘ 1 749 (June 1348; cf. my Inscriptions arabes d’Espagne, No. 171). It was also Yūsuf I who in 750 (1349) built the madrasa of Granada (ibid., No. 172).

His successor was his eldest son Mūḥammad V, who bore the honorific ṣākāb of al-Ghānī bi-līlāh. This sultan left the exercise of power in the hands of his father's old minister, the ḥādhib [q.v.], Rīdwan, who maintained peaceful relations with Castille. After a few years, a conspiracy of dissatisfied Nasrīd princes forced Mūḥammad V to abdicate and take refuge in Guadix, and afterwards in Morocco where he was well received by the Marinid sultan Abī Salīm (760 = 1359).
Isma’il II b. Yusuf I, brother of Muhammad V, a Nasrid prince devoid of personality and prestige, was put on the throne, but only for a few months. In 761 (1360) he was assassinated at the instigation of the ra’is Muhammad VI b. Isma’il b. Nasr, who seized the power; his troops soon afterwards suffered a defeat at the hands of the Christians at Guadix. He was soon overthrown by Muhammad V who had returned to Spain and asked the help of Peter the Cruel of Castile to recover the throne. Muhammad VI also appealed to the Christian ruler but the latter had him put to death in 763 (1362).

Muhammad V’s second reign lasted for good or evil another 30 years. It was mainly occupied by family quarrels and civil strife. It was at this time that the famous vizier Lišān al-Dīn Ibn al-Khaṭīb had to seek refuge in Morocco, which however did not save him from assassination. It (1392) and the throne passed to his son Muhammad VII. The latter imprisoned his elder brother Yusuf in the fortress of Salobreña and resumed the offensive against the Christians, who took the fortress of Zahara from him in 809 (1407). When he died next year his elder brother Yusuf III, the prisoner of Salobreña, assumed power and held it till his death in 820 (1417). After him his eldest son Muhammad VIII became king of Granada; he is usually called by the chroniclers al-Aisar (“the left-handed”). It was in his reign, also much troubled, that we find the family of the Banu ‘I-Sarrādīj, the Abencerrages [q. v.] and that of the Zegrīs (Arabic ḏāghrī: “man of the frontier”) beginning to play an important part in the history of Granada and the civil wars which characterise it. After various adventures, Muhammad VIII had to abandon his

is also at this date that the history of the Nasrid dynasty not only by Ibn al-Khaṭīb, but also by Ibn Khaldūn, stops. Our information about the later rulers is not only scanty but also inaccurate. The relations of the kings of Granada and of the rulers of Castile continued to be much what they had been, truces or expeditions of short duration with limited objectives. But gradually the ultimate aim of Castilian policy became apparent and generally became more and more easily attainable: the capture of Granada, which was at the same time to put an end to the Nasrid dynasty and to Muslim rule in Spanish lands. Below we give only a brief sketch of the last period of the history of the Nasrid kingdom.

III. End of the Nasrid kingdom. — Muhammad V died in 793 (1391) and was succeeded by his son Abu ‘I-Haṣṣādīj Yusuf II who reigned only a short time. He died in 794 capital for a time and went to seek an asylum with the king of Tunis, while Muhammad IX known as al-Ṣaḥīr assumed power. Muhammad VIII soon returned and his second reign was marked by the disastrous battle of Higueruela, near Granada, in which the Muslims were routed by the army of John II on July 1, 1431. Al-Aisar had to take refuge in Malaga for some months during which the throne passed to Yusuf IV b. al-Mawl, a grandson of Muhammad VI. Al-Aisar then resumed the throne for a third time but the frontiers of his kingdom were shrinking every day. The towns of Jimena, Huescar (1435) and Huelma (1438) fell into the hands of the Christian power and in 1445 Muhammad VIII was forced to abdicate in favour of his nephew Muhammad X, while the Abencerrages, gathered at Montefrío, proclaimed Abu ‘I-Naṣr Sa’d sulṭān. It was during the latter’s reign that in 1462 Gibraltar was taken by Rodrigo.
NAŞIDS (A.), etymologically: what is apparent to the eye, as a technical term: text. In this sense the word does not occur in the Kur'an nor in the Hadith. Al-Shâfi'i, on the other hand, appears to be acquainted with it. In his Râzâla he uses it chiefly in the sense of nasî' kitâb (p. 7, 16, 30, 41) or nasî' hukûma (p. 5) “what has been laid down in the Kur'an”. In other passages nasî' kitâb is distinguished from sunna (p. 21, 4, infra, 24, 71, pass., 30, 31, 65, 21). The combination nasî' sunna occurs, however, also (p. 50, 14, 65, 2).

From these passages it may also appear that Al-Shâfi'i uses the term chiefly to denote legal precepts. In accordance with this the definition of the term has given in the Li'am al-‘Arah: “The nasîs of the Kur'an or of the sunna means the precepts (ahkâm) contained in the plain words (zâhir) of these sources”.

An extension of the term has taken place chiefly in three directions, so that nasîs, apart from the general sense of text, may mean: a. the text of a precept of the law, written or not written; b. the zâhir [q.v.] of a sacred text; c. the sense of such a text. For other special meanings of the term, cf. Dozy, Suppléments aux dictionnaires arabes, s.v.

Bibliography: al-Shâfi'î, al-Rûzbâ fi 'Cifî al-Fikr, Cairo 1321; Muhammad â'âl-talabnâwî, Dictionary of the Technical Terms, ed. A. Spranger, Calcutta 1862, p. 1405 sqq.

NASSADS were the light wooden warships built in Nassau or Hohenau (Lower Austria), the “Nassauer” or “Hohenauer”, Magyar nassd, pl. nassdok, Slav. nasad, which were used on the Danube. They were usually manned by Serbian seamen who were called martâloses (from the Magyar martalics, martalics, lit. “rober”). According to a Florentine account, this Danube flotilla in 1475 consisted of 300 ships manned by 10,000 “nassadists” armed with lances, shields, crossbow or bow and arrow, more rarely with muskets. The larger ships had also cannon. About 1522 the commander of the Danube fleet was Radic Boško who reorganised it at Peterwarina (cf. K. J. Jireček, Geschichte der Serben, 1, v. 258 sq.). Through want of money, the Serbian seamen then deserted to the Turks (žibda, p. 262) who after the fall of Belgrade seized the Danube fleet and developed it into a powerful arm. About 1530 the Danube fleet consisted of 800 nassads and was commanded by the voivod Kâsim (cf. J. v. Hammer, G. O. K., iii. 85).

NASTALÍK. [See ASAALAI, i. 39th.]

NAŞUH PASHA, an Ottoman grand vizier, was of Christian descent and was born either in Gumuldjina (the modern Komotini, Thrace, Greece) or in Drama. According to some sources (e.g. Bauder and Grimestone in Knolles), he was the son of a Greek priest, according to others (e.g. Na’im, Ta’rib, first edition, p. 283: arnaud
of Albanian origin. He came early in life to Stambul, spent two years in the Old Seray as a tekerdar (halbardier) and left it as a caush. Through the favour of the sultan's confidant Mehemmed Agha he rapidly attained high office. In quick succession he became woiwod of Zila (Anatolia), master of the horse and governor of Fulek (Hungary). He married the daughter of the Kurdish Mir Sheref and thereby obtained riches as great as his power, which every one was now beginning to fear. His ambition and arrogance, his venality and cruelty knew no bounds and he was even said to be aiming at the throne. In 1015 (1606) he was to conduct the campaign against Persia, as the son-in-law of Mir Sheref and on account of his local knowledge, with the rank of third vizier and serasker, but his attention was claimed by the trouble in Anatolia which was affecting the whole of Asia Minor; through Kurd treachery he lost a battle and it was only in the autumn of 1608 that his troops joined the army of the grand vizier who received him very coolly (cf. J. v. Hammer, G. O. R., iv, 252 sq.). In 1011 (1602) Nasu§ Pasha had been appointed governor of Siwas, the next year of Halab and in 1015 (1606) of Diyarbakr. His goal was the grand viziership. He did not hesitate to ask the sultan to give him the imperial seal and the post of commander-in-chief in return for a sum of 40,000 ducats and the maintenance of the army at his own expense. Ahmad I handed on the offer to the grand vizier, who summoned Nasu§ Pasha to him and fined him that sum as a punishment (cf. J. v. Hammer, G. O. R., iv, 446 sq.). When soon afterwards the grand vizier, the Croat Kuyu§ji Murad Pasha died at the age of over 90, Nasu§ Pasha became his successor (Aug. 22, 1611). In the following year he married A§laha, the three year old daughter of Sultan Ahmd I (Feb. 1612). His arrogance now knew no bounds; all his opponents were ruthlessly disposed of. His personal qualities dazzled everyone: "Of imposing appearance, brave and eloquent, never weary of talk or action, but at the same time passionate, incontinent he could not conduct and flattering words and always intent on humbling the other viziers" (J. v. Hammer, G. O. R., iv, 472). As human life was nothing to him but wealth everything, he accumulated vast treasures. Sycophants and astrologers nourished in him the delusion that he was born to rule. The number of his enemies increased from day to day as a result of his intrigues and his ruthlessness. When on Friday the 13th Rama§an 1023 (Oct. 17, 1614) he was to accompany the Sultan to the mosque, suspecting no good, he said he was ill. The bosţandi§i batb§§ sent to him had him strangled by his own garden guards. His body was buried on the Ok Maidan. His estate which fell to the coffers of the state was enormous: pearls, jewels, carpets, cloth and bullion without number (cf. J. v. Hammer, G. O. R., iv, 474 sq. quoting Mezeryn, ii, 195). — Nasu§ Pasha left several sons; none of whom Hus§in Pasha (d. 1053 [1643]; cf. J. v. Hammer, G. O. R., v, 260 and Hadji§ji Khi§lsa, Feddlek, ii, 226) had a son named Me§med. The latter wrote a history of the Ottoman empire (Deli§i Tamwarthi§i Ati§i Qumini) from the death of Murad IV (1048 = 1639) to 1081 (1670) the original MS. of which is in Dresden (cf. F. Babinger, G. O. W., p. 211).

NATIDJA (A.) is the usual name for the conclusion resulting from the combination of the two premisses (muqaladaini) in the syllogism (biya§). It corresponds to the Stoire biya§ one word in the works of Galen known to the Arabs is applied to the various discharges from the body but also means, as with the Stoics, the conclusion. Aristotle used the word viyhe§i§ (that which concludes or completes the syllogism).

In place of the usual natida§ we also find ri§f or ra£fi (== deduction). (T. DE BOER)

NATIK. [See §A§TV.]

NAVARINO (Na§vrino), a little seaport in the southwest of Messenia not far from the ancient Pylos, opposite the promontory of Koryphasion on which there was in prehistoric times an acropolis and later a thriving classical city, an often mentioned settlement. The harbour of Navarino is one of the safest in the Greek east for it is sheltered by the island of Sphacteria, which lies right opposite it and has intimate connections with many ancient, medieval and modern events. Recent research has shown that Navarino has no connection with the Homeric Pylos. The latter was in Triphylia near the village of Kakobatos where prehistoric tombs were recently excavated. The derivation of the name Navarino cannot be given with certainty. According to Falmayer, Gesch. der Halbinsel Morea, i, 188, the name Navarino is a distinct survival of Avar rule in Morea between 587 and 587. On the other hand, Hopf thought that it owed its name to the Navarrese (cf. below). Falmayer's view has been adopted by E. Curtius, Peloponnesos, i, 86; ii, 181 and W. Miller among others. According to M. Leake, Travels in the Morea, i, 411, the name Navarino developed from §i§ ci§ 'Agia§vo§. Hopf's view is however wrong, for Navarino is mentioned before the appearance of the Genoese in the Morea. In the middle ages the country round Navarino
was called Zonglon (Zonchio), from which came the French name of the place Chinchin (Old French junc = junco). One of the earliest mentions of Navarino is in the geographical treatise, the *Nuzhat al-Muslihim* of Idrisi; he refers to the place as Irouda and adds that it has "a very commodious harbour". After the period of Frankish rule, information about Navarino becomes fuller. The Knights, who under Guillaume de Champlitte and Godefroy de Villeharduin had planned the conquest of the Morea, in 1205 took its inhabitants and governor prisoners after the capitulation of Navarino.

During the last decades of Turkish rule in the Morea, the Turkish family of Bekir-Agha of Navarino played a prominent part. Soon after the outbreak of the War of Liberation, the Greeks laid siege on March 29, 1821 to Navarino where the Turks of Arcadia (Cypris) had also taken refuge. On Aug. 7, 1821 the Turks surrendered to the Greeks who massacred them all without mercy in spite of all agreements. In the spring of 1825, Ibrahim Pasha of Egypt occupied Navarino and the neighbouring fortress in spite of a heroic defence by the Greeks.

What gave Navarino its special place in history was the naval battle fought on Oct. 20, 1827 in its harbour between the combined fleets of England, France and Russia on one side and those of Turkey, Egypt and Tunisia on the other, in which the latter were almost completely destroyed. It is calculated that the Turks lost 6,000 killed and the allied losses were only about 1,000. Soon after the battle, Ibrahim Pasha concluded a truce with Admiral Codrington.

Navarino remained in Ibrahim Pasha's hands until the spring of 1828. The French under General Maison then relieved the Egyptian-Turkish troops. Alfred Reumont gives a fine picture of Navarino under French occupation in 1832.

**NAVARINO**

During the first Russo-Turkish War in the reign of Catherine II (1768—1774) Navarino played an important part. After a stubborn defence for six days by the Turkish garrison and the Muslim civilian population, the Russians on April 10, 1770 forced the surrender of Navarino, no longer strongly enough fortified but still amply provided with munitions and artillery, to capitulate. By the terms of the treaty, the Turks of Navarino went to Chania (Crete) leaving behind them a number of Christian women whom they had imprisoned in their harem. Soon afterwards the Russians made Navarino, the fortifications of which they renovated, their principal base of operations in the Morea. Fate decided that the Russians had to evacuate Navarino again. On June 1, 1770, the Russian ships sailed from the harbour of Navarino. The Turks next day occupied the well placed fortress, which was in part burned and destroyed.

**NAVAS DE TOLOSA**

was a place in the south of Spain in the province of Jaen on the frontier of Andalusia, a short distance from the modern town of Carolina. Its site corresponds to that of a fortress called Hisn al-Khrib in the Muslim period. It was in the plain which lies in front of it that there was fought on the 15th Safar 609 (July 16, 1212) the great battle between the Christians and the Almohads which ended in the rout of the latter.

As a result of the defeat of Alarcos [q. v.], the king of Castille, Alfonso VIII, had concluded a truce with the Muslims. On its expiration at the end of the xiiith century, the Christian troops began a series of surprise attacks on the Muslim frontiers. Disturbed at this, the Almohad ruler al-Náṣir [q. v.] prepared a great expeditionary force in Morocco while on his side the king of Castille secured the help of the kings of Aragon,
Navarre and Leon, as well as of the Count of Portugal and the Pope, who preached a crusade against the infidel. The Christian troops gathered in Toledo, and the counter was a bloody one. The Muslim volunteers from Morocco and the Andalusian contingents soon lost ground and the Almohad 'abd were in their turn decimated. The victors were able to exploit their success and took Ubeda [q. v.]. Baiza [q. v.] and other strongholds. The Christian victory of las Navas de Tolosa was certainly one of the most important steps in the "Reconquesta".

E. LEVI-PROVENÇAL

NAVAR, [See NURJ.] AL-NAWAWI (or AL-NAWAWI), MUHYI AL-DIN ABD ZAKARIYA\\x27 VAYAYA B. SHARAF B. MUN [following Nawawi's own spelling, Suyufi, fol. 53b] B. HASAN B. HUSAIN B. MUHAMMAD B. DUMA B. HIJIZM AL-HIZAMI AL-DIMASHKI, a Shafi'i jurist, born in Muharram 631 (Oct. 1233) in Nawa south of Damascus in Liwa lbil. The ability of the boy very early attracted attention and his father brought him in 649 to the Madrasa al-Rawahiya in Damascus. There he first of all studied medicine but very soon went over to Islamic learning. In 651 he began the pilgrimage with his father. About 655 he began to write and was called to the al-Ashrafiya school of tradition in Damascus in succession to Abu Sulayman who had just died. Although his health had suffered severely during his life as a student, he lived very frugally and even declined a salary. His reputation as a scholar and a man soon became so great that he even dared to approach Sulaiman ibn Barbares to ask him to free the people of Syria from the war-taxes imposed upon them and to protect the teachers in the madrasas from a reduction in their income. This was in vain however, and Barbares expelled al-Nawawi from Damascus when he alone refused to sign a fatwa approving the legality of these exactions. (This action of al-Nawawi's is commented in the popular romance Srar al-Zahir Badurs, Cairo 1326, xi, 38 sqq. in which the Sultan, cursed by al-Nawawi, becomes blind for a time.) He died unmarried in his father's house in Nawa on Wednesday 24th Radjab 676 (Dec. 22, 1277). His tomb is still held in honour there. It was al-Nawawi who has retained his high reputation to the present day. He had an exceptional knowledge of Tradition and adopted even stricter standards than later Islam; for example he admits only five works on Tradition as canonical, while he expressly puts the Sunan of Ibn Madja on a level with the Musnad of Ahmad b. Hanbal (cf. Sharh Muslim, i, 5; Adhkar, p. 3). In spite of his fondness for Muslim, he gives a higher place to Bukhari (Tahdak, p. 550). He wrote the principal commentary on Muslim's Sahih (pr. in 5 volumes, Cairo 1283); as an introduction to this, he wrote a history of the transmission of this work and a sketch of the science of Tradition. He gives not only observations on the isnads and a grammatical explanation of the traditions but also comments on them, mainly from the theological and legal aspect, quoting when necessary not only the founders of the principal schools but also the older jurists like al-Awza'i, al-Ash'ar, etc. He also inserted headings (ta'jam) in Muslim's work. We may also mention his frequently annotated Kibbd al-Arduw (pr. Bulbah 1294 and often since) and portions of commentaries on al-Bukhari (G. A. L., i, 158) and Abu Daud (Ibn al-'Attar, fol. 10r); and an extract from Ibn al-Salah, 'Ulam al-Hadith with the title al-Ta'rib wa l-Tazirr, partly transl. by Maqriz in J. A., ser. 9, xvi.—xviii. and printed at Cairo 1307, with a commentary by al-Suyfi, Tadrib al-Rawi.

Al-Nawawi's importance as a jurist is perhaps even greater. In Shafi'i circles he was regarded with his Minhad al-Talibin (finished 669; pr. Cairo 1297 and greater; ed. van den Berg with French transl., Basel 1882—1884; cf. thence Snouck Hurgronje, Verehr. Geschr., vi, 3—18) as the highest authority along with al-Ra'mi and since the tenth (xvith) century the two commentaries on this work by Ibn Hadjd's Ta'hib and al-Ramt's Nibhai, have been regarded almost as the law books of the Shafi'i school. The book consists of excerpts from the Muharrar of Rafi' and, as the author himself says, is intended to be a kind of commentary on it. It certainly owes the estimation in which it is held also to the fact that it goes back via al-Ra'mi and al-Qazwini to the Imam al-Haramain. We should also mention the Kawaqif fi Mukhtarar Sharh al-Khub (on Ghazali's Wa'd) finished in 669 on which commentaries have often been written and the commentaries on Shafii's al-Muhaffidhab and al-Tanbih (G. A. L., i, 357) and al-Qazwini's al-Wasti, which do not seem to have survived, and a collection of fatawa's put together by his pupil Ibn al-'Attar (Cairo 1352).

His biographical and grammatical studies resulted in the Tahdak al-Aswad (on the names, Wustenfeld, Gottingen 1842—1847; Part 2 only in Ms. in Leyden; included by Ibn al-'Attar among the unfinished works and there are certainly gaps in it) and al-Tahib fi Adhrk an-Tanbih. To his mystical tendencies — he had attended lectures on the Kishla of al-Kusairi and transmitted it — we owe works like the Kishla al-Adhkhar on the prayers, finished in 667 (pr. Cairo 1331 and frequently), the Kishla al-Salihin (finished in 670; pr. Mecca 1302, 1312) and the incomplete Bidan fi Al-Atifin fi al-'Azub wa l-'Aqib al-Aswad (on the collection of I. Am. of C. T. A.). An almost complete list of his some 50 works is given in Wustenfeld, p. 45 sqq., those that are still in MSS. are given in Brockelmann, G. A. L., i, 394 sqq. and Index and those that are printed in Sarkis, Madqam, vol. 1876—

1579).

Bibliography: Ibn al-Atar (d. 724 = 1324), Tahdak al-Talibin fi Tarjummat Kishla. al-Imam al-Nawawi [with many notes], MS. Tubingen, No. 18; al-Schaww (d. 902 = 1496—1497), Tarjummat Kishla al-Schawu. . . . al-Nawaw, MS. Berlin, Wetzstein, 1742, fol. 140—207 (Ahlwardt, No. 1012b); al-Suyufi, Minhad fi Tarjummat al-Nawawi, MS. Berlin Wetzstein II, 1807, vol. 58—68 (Ahlwardt, No. 1012b); al-Sukki, Tahdak al-Adhkhar al-Tabrak, Cairo 1324, vi, 165—168; al-Dabhal, Tahdakar al-Atif al-Hasan, Haidarabadd. n., 259—264; al-Vad, Mir'at al-Juran, Haidarabadd 1339, iv, 182—186; the other sources are printed in Wusten-
feld. Über das Leben und die Schriften des Schiit Abū Zakariyyā jāhīn al-Nawawī, Göttingen 1849; Snouck Hurgronje, Versfr. Geschichten, ii. 387 sq. For the reference to the popular romance I am indebted to HEPFENING, Plath.

AL-NAWAWĪ MUHAMMAD B. 'OMAR K. 'ARABĪ AL-DJĀWĪ, an Arabic writer of Malay origin, born in Tanārā (Banten), the son of a village judge (panggu) after concluding his studies made the pilgrimage to Mecca and settled there permanently about 1855, after making a short visit to his native land. After he had studied and completed his education with the teachers of the holy city, he set up as a teacher himself and gained great influence over his fellow countrymen and their kinsmen. From 1870 he devoted half his time to authorship. He was still alive in 1888.

He wrote a large number of commentaries on popular textbooks, which are listed by Broekelmann, G. A. L., ii. 501 in addition to Snouck Hurgronje, Mekka, ii. 362 sqq. Of these the following may be mentioned, with some information added to what is contained in these two works.

He expounded the Kur ʿān in his al-Tāfīs al-mināt al-Mālām al-Tanzil al-musir ʿan Wa’dhī Maḥālīn al-Ta’wil, Cairo 1305. In the field of Fiḥḥ he expounded the Fath al-Kāfī of Muhammad b. al-Ḳāsim al-Ghazzī (d. 918 = 1512), a commentary on Abū ʿShādā) al-Ḳahfī’s al-Taḥkīr, entitled al-Ta’wil, Cairo 1305, 1310, and again entitled Kitāb al-Habīb, Cairo 1301, 1305, 1310. He wrote a commentary on al-Ghazzī’s Bulḥāyat al-Hidāya under the title Maṭīrī “Uṣūlīna, Bulāk 1293, 1309; Cairo 1298, 1304, 1307, 1308, 1310, 1327. — On the Manāḥīṣ al-Maṣābīḥ of Muhammad b. Muhammad al-Ṣāhirī al-Mañīb (d. 977 = 1569) he wrote al-Fath al-māqūlī, Bulāk 1276, 1292; Cairo 1297, 1298, 1306; Mecca 1316. — On the Sufiṣāt al-Sāliqī of Abū ʿAlī b. Yahyā al-Ḥadrī, he wrote the Sulfām al-Munāḏidāt, Bulāk 1277, Cairo 1315, 1328. — He wrote a commentary on the Ṣaḥīḥ of Ahmad b. Muhammad al-Zahīdī (d. 819 = 1416) put into verse by his fellow countryman Muṣṭafā b. ʿOthmān al-Djāwī al-Ḳatīrī as al-Fath al-maṣūmī on ṣalāt, alms, fast and pilgrimage under the title al-Ṭāʾif al-ṣāliḥ, Cairo 1300; the Sulfām al-Naṣīḥa of Sālim b. Ṣamīr al-Ṣāhirī in Ḥaḍramawt, ended in Batavā, was expounded under the title Kūḥīṣāt al-Sāliqī, Cairo 1292, 1301, 1302, 1303, 1305; Bulāk 1299. — On the exposition of the ṣaḥīḥ al-bukhārī by his colleague Muhammad b. Sulaimān Ḥusain Allāh entitled al-Ḳiyād al-buḥra he wrote the commentary al-Ṭāṣma al-yāmīna, Cairo 1299, 1308, 1329; Bulāk 1302.

In the field of dogmatists he annotated al-Sanjūqī’s Ṣumma al-Burāqīn (d. 892 = 1490) entitled Dhor‘āt al-yakīn, Cairo 1304; the Shāfiʿī’s Ṣaḥīḥ al-Muṣālibīn of Ahmad al-Maḥrūqī (d. 1281 = 1864) entitled Nāʾr al-ṣāliḥ, al-Maḥrūqī, Cairo 1303, 1329; al-Bahārī’s Rīṣāla fi līm al-Tawāhid entitled Tāḥram al-Durārī, Cairo 1301, 1309, Mecca 1329; the Muṣālibīn of Abu ʿIyāl entitled Kāf al-Ṣaḥīḥī, Cairo 1301, 1303, Mecca 1311; the anonymous Fath al-Rāfīqī entitled Hidāyat al-Ṣāḥīḥī in a Maḏmūna, Mecca 1304; the al-Dur al-ṣāliḥ of his teachers Ahmad al-Nahrāwī entitled Fath al-māqūlī, Cairo 1298.

In the field of mysticism he wrote a commentary on the Mawṣūma al-Hidāyat al-Asbāḥīyya of Zain al-Din al-Malābīrī (d. 928 = 1522) entitled Sūlam al-Fudālī, Cairo 1301, Mecca 1315; and on his Maṣbāḥ fi ʿĀdāb al-mānī he wrote the Kānī al-Ṭāḥīlīyān, Cairo 1320. On the Manṣūrī al-tamāmī entitled Taḥrif al-Humān of ʿAlī b. Ḥusain al-Dīn al-Humānī (d. 975 = 1567) he wrote al-Miṣbāḥ al-Zawīn, Mecca 1314. — His commentaries on stories of the life of the Prophet may be classed as edifying popular literature; such he wrote on the Mawṣūma al-Nābi under the title al-ʿArārī, Cairo 1926, which is ascribed to some Ibn al-Djāwī, by others to Ahmad b. al-Ḵāsim al-Jāhārī, entitled Fath al-Ṣālim al-Muṣālibīn ʿalā Muṣālibī al-Ṣaḥīḥī Muhammad b. Kāsim wa-yawṣummat al-Falāṣīf al-Fawāsī al-Bayān Afṣal Muṣālibī, Ibn al-Djāwī, Bulāk 1292, entitled Buḥrat al-ʿĀlamīna fi Sharī`at Muṣālibī Sālīhī al-ʿĀlamīna Bi-lBaʿlīn al-Djāwī, Cairo 1927 and Fath al-Ṣālim al-Muṣālibīn ʿalā Muṣālibī al-Ṣaḥīḥī Muhammad b. Kāsim, Mecca 1306, as well as on the Mawṣūma of Dīn al-Barzāndī (d. 1179 = 1765) entitled Tāḥīlīs al-Mushtākin, Bulāk 1292, and again under the title al-Maṣbāḥ fi ʿĀdāb al-mānī, published 1906, and on his al-Ḳarāṣīāt al-nabawīya entitled al-Durār al-baḥtīyā, Bulāk 1299. He made an excerpt from al-Ṭāṣma līna’s (d. 923 = 1517) Muṣālibī entitled al-Ṭāṣma al-Malābīrī al-Mawṣūma Muḥammad al-Sāliqī al-Adīnī, Cairo 1299.

Bibliography: In the article; cf. also J. L. Sarks, Muṣālibī al-Maḏmūn, col. 1579—1883, (C. BROEKELMANN)

NAWBA, an art-form in the music of the Islamic East similar to the European cantata or suite. There are two varieties: 1. the nawba of chamber music, and 2. the nawba of military music (for the latter see TAIL KAÂNA in the Supplement). The nawba of chamber music varies in construction according to its provenance, and does not always carry this particular name. As early as the viith century A.D. we appear to see this nawba in its nascent stage. The musicians at the court of the Caliphe under the early Abbasids performed in turn (daw'r) and succession (nawba), and by the time of al-Wathīq (d. 847) we know that a court musician had a particular day for his nawba (Kūthb al-造船, ill. 177; v. 82, 120, vi. 73; x. 123; xvii. 131; xxi. 150). Some musicians were famous because they specialized in certain genres of music, such as Ibrahim al-Mawsili in the mawāṣṣi' and Hakam al-Wādīt in the ṭazāf rhythms (造船, vi. 12, 66), and a programme made up of these diverse types of music probably led to the term nawba being transferred to the programme itself (Rihiera, Las Cantatas, p. 48).

Although we read in the Alī Lāila wa-Lāila of a nawba (ii. 54), a ṭazāf (a quick movement; cf. the modern dardf) of a nawba (ii. 87), as well as a complete nawba (iv. 173) being played, yet it is not until the xith century A.D. that we
possess precise information about the nawba and its integral parts. *Abd al- basir b. Ghaibi [*q.v.] tells us that among the ancient forms of musical composition were the nawba, *nashid* and *bashi*. The *nashid*, he says, was made up of four movements (*qādī* viz. the *kanī* or *kān*, the *qāzāl*, the *tārāna*, and the *fāṭī.* In the year 1579, whilst at the court of Djalal al-Dīn al-Husain the Djalālīrīd sultan of al-īrāq, Ibn Ghaibi introduced a fifth movement to the *nawba*, which he called the *mustaṣāl.* During this occasion, he tells us, he composed fifty *nawbāt* for the court, and the words of one of these have been preserved (fol. 90v). These five movements were instrumental as well as vocal, and besides the verse-form being specified (the *tārāna* for instance was in *rūdā*), the rhythms (*kānī* or *kān*) for the instrumental accompaniments were also prescribed, one of the *thākil* group being essential. The purely instrumental movements are also mentioned by Ibn Ghaibi including the overture called the *tīhrāw*, which even to-day is the prelude to the *nawba*. He calls it *nashīr* (**"embroideries"**), and says that the *tīhrāw* al-*falistānī* has three, five or seven sections (*sawāb*).

In days of old the *nawba* was considered the most important art-form in the music of Islamic peoples. To-day it has fallen into neglect and in some countries will probably soon disappear. Two distinct cultures may be found in the modern *nawba*, the Eastern and Western. The former is clearly a survival of that *nawba* described by Ibn Ghaibi in the xivth century A. D. The latter is claimed (Yaffi) to have had its origin in al-Andalus in the viih—ixth century, and is known to-day as the *nawba gharānī*. It is confined to North Africa, the purest type being found in the West, whilst the nearer the East is approached the more we find the influence of the Eastern *nawba*.

The *Levant*ine *nawba* to-day comprises the following movements: 1. The *tārīm*, an instrumental prelude played by the *māqallim* or *chef d'orchestre*; 2. The *bīhrāw* or *bāṣraf*, an instrumental overture; 3. The *kār*, a vocal movement; 4. The *mūrabāt*, whose name recalls the form of the xivth century *tārāna*; 5. The *nāṣīr*, also reminiscent of the *nāṣīr* of old, since its function is tonal "embroidery"; 6. The *aghrūr* *sawāt*, in slow rhythm; 7. The *ṣarīf*, comprising verses; 8. The *yārīk* *sawāt*; 9. The *bīhrāw* *sawāt*, an instrumental finale (cf. Thibaut and Lavigne, v. 2861). A shorter *nawba* is described by Ducoudray (p. 22), whilst the famous British musician Sir Arthur Sullivan has related (Fortnightly Review, 1905, p. 86) his experiences as an auditor of the *nawba*.

The various movements, especially the instrumental ones, are also cultivated in the Near East as sole items of performance, the *bīhrāw*, *tārīm*, and *ṣarīf* being special favourites. The *bīhrāw* or *bāṣraf* is still composed in sections as of old, but these are called *kīhān* instead of *buṣīdī*. Another interesting type of *nawba* in Egypt includes the dance, and an example is given in complete score by Victor Loret. It comprises seven movements: 1. The *bāṣraf*, for instruments and voices; 2. The *tūrkmānī* al-*awālāwī*, for the ballet; 3. The *salūm*, for the solo dance; 4. The *tūrkmānī al-*thānī*, for the ballet; 5. The *tākīm*, for the solo dance; 6. The *tūrkmānī al-*kāhīthī*, for the ballet; 7. The *māqīḥ* for the solo dance. The whole is accompanied by choir and instruments.

In *Western Turkey* the *nawba* of to-day shows that in the Middle East it has developed somewhat differently from that of the Levant. Here, more attention has been paid to the purely instrumental movements, and they have been kept separate. The *nawba* is here called a *maḥāmī*, a name which properly stands for "a melodic mode". It is divided into three parts, the first two being instrumental, with the old *hūgāt* or instrumental pieces, and the *naṣir* comprising vocal-instrumental pieces. The names of most of the sections of the *maḥūdīl* and *naṣir* refer to either rhythmic (*ṣūdī*) or melodic modes (*maḥāmī*), although two of them, the *tīhrāw* and the *tārāna*, retain names which occur in the xivth century Ibn Ghaibi treatise. In Būk̇hārā, only six *maḥūdī* (= *nawbāt*) appear to have survived, although the Uzbek claim that they know others. These six have recently been described by the Uzbek poet Fitrat, whilst the notation has been published by a Soviet Union official, Colonel V. A. Uspensky. There is also another but shorter type of *maḥāmī* known in Būk̇hārā, and six of these also have survived. In K̇h̄wārizm, the *maḥūdīl* of the *maḥūdī* (= *nawbāt*) differ from those of Būk̇hārā, and here an additional one has been spared the ravages of time. The K̇h̄wārizmī *maḥūdīl* are probably purer than those of Būk̇hārā because they appear to have been handed down, not *viva voce* as elsewhere, but by means of a notation which was known as early as the time of the K̇h̄wārizmī Shāh al-Andalus Muhammad (d. 1220) (cf. Pro-Musica, New York 1927, v.; _The Sad- but_, London 1924, iv.).

In *North Africa*, as already stated, a different tradition in the *nawba* has been followed. Here there are several varieties, but the most highly esteemed is the *nawba gharānī*. As the name signifies, al-Andalus is the place of origin, and this is claimed for both the words and music. Although MSS. exist which contain the words of the Granadan *nawbāt*, yet we only know the music itself from modern Moorish practice. We have of the "twenty-four *nawbāt*", which tells us that the *nawbāt* were composed in the twenty-four modes (*jūbī*). Others say that the Andalusians only possessed twelve or fourteen *nawbāt* (F. Salvador- Daniel, p. 52; Yaffi, Pref.) but it has now been shown (Farmer, An Old Moorish Lute Tutor) that there were twenty-four originally, but their names are different from those which some writers have presumed (Delphin et Guin, p. 62; Lavigne, v. 2859). The *nawba gharānī* as performed in Algeria to-day comprises the following movements: 1. The *dāirā*, a short vocal prelude. 2. The *mustahbīr*, an instrumental prelude; 3. The *tūshīya* or *tawwila* ("ornamenting"), the overture proper; 4. The *mādah* or *muṣaddar*, a vocal movement, preceded by a short instrumental prelude called a *kursī*; 5. The *bāsilī* or *bāsīlī*, a vocal movement preceded by a *kursī*; 6. The *dārīf*, also a vocal movement preceded by a *kursī*, and whose name is practically identical with that of the above; 7. The *insīrāf*, a vocal movement which is introduced by a *tūshīya*; 8. The *kāhīthī* or *mūsēlāt*, the finale (British Museum MS., Or. 7907; Yaffi, Majdūmi, cf. Lavigne, v. 2941; Delphin and Guin, p. 65). The words of the classical Granadan *nawbāt* have been edited from MSS. sources and *vià voce* by Edmond Yaffi in his Majdūmi al- Aghānī, whilst with the collaboration of Jules Rouanet he issued his Répertoire de musique arabe
et mauro which contains the music of a complete nawba gharao and sundry movements from others.

In 1865, Christianowitsch published his Esquisse historique de la Musique arabe, which also contained the major portions of seven Granada nawbas. Another type of nawba practised in Algeria, but not a secondary improvised movement, is the tâhiyâ. In Morocco the five movements of the nawba are the basîj, the kârim muawwiz, the bajâli, the jâdî, and the daraf, as well as the overture tâhiyâ.

**NAWBÂHTI.** This Iranian patronymic (moe of nay = hâbat "new fortune") was borne in Baghdad during the first two Abbâsid centuries by a family remarkable for its influence on the advancement of learning and on the political legitimacy of the Abbasid caliphate. It claimed descent (cf. Bûthuri, *Divân*, p. 115) from the Persian hero Gîw son of Gûdarz celebrated in the *Shâhâname* (cf. Jastî, Iranîshâns Nûrân, p. 59 and Christensen, *Kōyânîdâr*, p. 117). Its first known representative Nawbakht, an astrologer, owed his fortune to the future caliph al-Mansûr, to whom in prison he is said to have foretold the throne and later the victory over the caliph riding on a white horse in the same year (144 = 762) in which, having drawn up the horoscope of Baghdad, the new capital, he was granted feasts in it. His son Abû Sahl Timâdî (on this curious prenome cf. Ibn Abî ʿUṣâbil, ed. Aug. Müller, Leipzig 1884, iii., xli) [Vorwort] and H. Ritter, *op. cit.*, p. 9) (d. 1707) had seven sons by his wife Zerrin, the founders of the various branches of the Al Nawbakht in which we find theologians like Ibrâhîm b. ʿIsâk b. Abî Sahl (wrote about 961 the *Kitâb al-Yâfi*, on which a commentary by ʿAllâm al-Ḥarîrî is known).—Abû Sahl Ismâʿîl [cf. *NAWBÂHTI*], Husain b. Ruh, third wali of the Imâmîs (cf. Ibn Ruh), and Hasan b. Mūsâ (cf. *NAWBÂHTI*); astronomers like Faḍîl b. Abû Sahl (Ibn al-Nâdim, *Fihrist*, p. 275); who has been confused with al-ʿAlâmîn's (minister) and Mūsâ b. Hasan Ibn Khiyriq; secretaries of state; and finally enlightened students of poetry to whom the editors of the diwâns of Abû Nuwâs, Ibn al-Rûmî and Bûthuri went to establish the texts.

(Louis Massignon)

**NAWBÂHTI, nisha of the Nawa bâkt family.**

1. Faṣîl b. (Abî Sahl) b. NAWBAHTI (d. 200 = 815) an astronomer like his father (with whom he is confused) and, like his brother Hasan, attached to the Dâr al-Ḥikma to translate from Persian, wrote at least seven books (Ibn al-Nâdim, *Fihrist*, p. 274). All that survives of them is a fragment of the *Kitâb al-Nuwasîn* or "Yahushâfîn") in questions relating to horoscopes (*Fihrist*, p. 238-239).

2. Ismâʿîl b. ʿAlI ... b. NAWBAHTI (235-311 = 849-925), the real political leader of the Imamî party, who kept in close touch with the famous vizier ʿAlî b. al-Furûst (whose father, Muhammad Mūsâ b. Hasan, we may note, may have been a follower of the Nusairî heresy; cf. Nawbakht, *Fihrist*, p. 78), and was also a theologian (cf. Massignon, *Passion d'al-Hallaj*, p. 142-159) who disputed with the learned Thâbit b. Qurra, the Muʿtazilî Djabrîlî, and the mystic Hallâdî; he also refuted, after their deaths, Abu ʿl-ʿAtâhiya, Abu Isâ al-Wârâkî and Ibn al-Rawandi. Of his 32 works (Ibn al-Nâdim, p. 176; Türk, p. 57) only a fragment of the *Tunibî* survives (in Ibn Babawî, *Qâliba*, p. 53-56) (cf. Ibn al-Nâdim, p. 176) which gives us the first outline of the *Shî'î qâliba*.

3. Hasan b. Mehî ... NAWBAHTI d. before 310 (922), classed in this family through his mother, sister of the preceding: an Imâmî theologian, student of Hellenistic philosophy, author of 44 works (Ritter, *op. cit.*, p. 17-20; Eghbal, p. 129-134) of which there survives, besides fragments of the *Kadd ʿala l-qulub* (in Khâbî, vi. 380) and of the *Aṣ wa-a-Dîwânh* (Mârîjî, ii. 156; Ibn al-Ljâwzi, *Tallât*, p. 42-43; 47, 49, 69, 74, 81-82, 88, 91), only one complete text, of very great value for our knowledge of the sects of the Shî'î, the *Kitâb Fârak al-Shî'â*, ed. H. Ritter (Istanbul 1931, vol. iv. of the *Fihrist*).

In an interesting chapter (*op. cit.*, p. 143-161), A. Eghbal has collected the passages of the *Fihrist* and in a contemporary, Sa'd b. ʿAbd Allah ʿAsâbî (d. 999 = 914), which shows either plagiarism or the use by both of an earlier source.

(Louis Massignon)
NAWĪ, MUHAMMAD RIDĪ of Khābāshān in the vicinity of Mashhad, a Persian poet. The son of a merchant, in his youth he spent some time in Kāshān where he studied under the Mawlid Muhājīm. Moving to Marv, he became intimate with the Hákim Nūr Muhājīm Khān there. Like the majority of Persian poets of the xvth century, however, he was attracted by the brilliant court of the Moghuls and went to India where at first he found a patron in the person of Mirzā Yūsuf Khān Mashhādi but soon afterwards entered the service of Khākāshāh Mīrza ‘Abd al-Rahīm and remained with him and with prince Dānīyāl till his death, which took place in Burhānpūr in 1019 (1610). Nawī’s best work is his poem Shāh-nūdūtān (“Burning and Melting”) which has a touching theme, the devotion of a Hindu princess who accompanies her late husband in death on the funeral pyre. It is written in excessively artificial language and distinguished by the originality of its subject, which had not been taken by any Persian poet before Nawī. Nawī’s works were very highly esteemed in India, and he is said to have received 10,000 rupees, an elephant and a horse with valuable trappings for a Sāfār-nāma dedicated to the Khākāshāh. His Divān, which is entitled Lubḥ al-ล-حربih, has come down to us but has so far attracted little attention.

NAWĀRūZ (f.), New (Year’s) Day, frequently represented in Arabic works in the form Nawrūz (Kalkashandī, *Sītb al-‘Aṭbah*, ii. 408). It was the first day of the Persian solar year and is not represented in the Muslim lunar year (Masʿūdī, *Murūjī*, iv. 416 sq.). In Achaemenid times the official year began with Nawrūz, when the sun entered the Zodiacal Sign of Aries (the vernal equinox) Popular and more ancient usage however would appear to have regarded the midsummer solstice as Nawrūz (Bīrūnī, *Chronology*, transl. Sachau, p. 185, 201). It was the time of harvest and was celebrated by popular rejoicings, but it also marked the date when the āharīj was collected. The two different dates were retained in Persia proper and also in Īrān and Dījālī under Islam, and ʿAmmāz al-īṣāfānī states (*Zad al-Riḥāq*, Berlin 1340, p. 104) that Nawrūz in the first year of the Hijrī fell on the 18th Ḥāzīrān (June), which he erroneously equates with the 1st Dhu ‘l-Kaʿaṣa. Confusion arose however because the intercalation of one day every four years which allowed the date to correspond with the position of the sun was omitted in Islam (Masʿūdī, *Kītāb al-Taniḥ*, p. 215) and unscrupulous revenue officials found it to their advantage to keep to the false calendar date rather than to the correct traditional one because it permitted them to collect their dues earlier (Maṭrī, *Kītāb*, ed. Wiet, iv. 263 sq.). By the time of the Caliph Mutawakkil the date of collection of āharīj had advanced by almost two months and in 245 A.H. he fixed the date of Nawrūz as the 17th Ḥāzīrān, which approximated to the old time (Tabari, iii. 1448; Bīrūnī, *Chronology*, p. 36 sq.). The reform had no lasting effect and the Caliph Muṭṭadīd was compelled again to move the date which was fixed as the 11th Ḥāzīrān (Tabari, iii. 2142). Later again, in Sultan Malikshāh’s reform of the calendar, the Persian astronomers proclaimed the vernal equinox as Nawrūz (Ibn al-Thirī, x. 34; 457 A.H.) and the first day of the new era fell on the 10th Ṭamāzūd 471 (March 15, 1079).

Nawrūz was adopted in Egypt as elsewhere and has been retained by the Copts as the New Year’s Day (Maṭrī, *Kītāb*, iv. 241 sq.), but it now falls on September 10 or 11.

Popular festivities have marked Nawrūz wherever it has been celebrated. In Sāsānian Persia the kings held a grand feast and it was customary for presents to be made to them while the people who gathered to make merry in the streets sprinkled each other with water and lit fires. Both in Īrān and Egypt these customs persisted in Muslim times (Tabari, ii. 2163; Maṭrī, *Murūjī*, vii. 277; Maṭrī, ed. cit.; Kalīgāshādī, ii. 410) and although Muṭṭadīd attempted to prevent the customary horseplay in the streets during the midsummer satirnalis he was unsuccessful (Tabari, loc. cit.). In the various parts of the Turkish Empire the day was celebrated as a public holiday and in Persia it has throughout its history been marked by great festivities as the chief secular holiday of the year.

NAZĀR (A.) probably did not receive until the ninth century A.D. the meaning of research in the sense of scientific investigation as a translation of the Greek ἀναστήμα. With Aristotle (e.g. *Metaph.*, 1064 b 2) the philosophies were then divided into theoretical (nazārīya) and practical (ʾʿalāʾīya); the latter seek to obtain the useful or the good for man, the former pure truth, in physics, mathematics and metaphysics.

Nazar is primarily an epistemological conception and after the example of Ammonios Hermiae, a pupil of Proclus, is dealt with among the Arabs in a work prefixed to the *Isagoge* of Porphyry (Προαγωγὴ τῆς Συνολουσίας) (cf. the article ΜΑΝΤΙΚΗ). Nazar is also discussed as an activity of the human ʿakī in psychology but in this case as a rule under synonyms like ḥikr, ṭafakkur etc. (cf. NAFS).

The history of this terminology has still to be written. In the oldest, still incomplete, logic (edited by Abū Lūlā b. al-Muḥaffad or his son Muḥammad) ʿilm and ʿʿalāʾ are already distinguished as branches of philosophy (ḥikmā), but ʿʿalāʾ is defined as a ṯaḥqūq and ṭafakkur of the ʿkhāl (i.e. of the mind) (cf. G. Furlani, *Di una presunta versione araba di alcuni scritti di Porfirio e Aristotele*, in *R. R. A. L.*, ser. vi., vol. vi. [1926], p. 297).

The old speculative theologians of ʿIslam were
perhaps more familiar with the distinction *'ilm al-qiyas* than with *naẓar* or *'amāli*. The *'aql* is generally considered as a "root" of the Mu'tazilī system. The Zaidī al-Kāshī mentioned it (beginning of the third century A.D.) among his *'iqlīs: *'aql*, *kūrān* and *ṣumma* (K. Struthmann, *Die Literatur der Zaiditen*, in *itd.*, ii. [1911], p. 54). *Naẓar* was felt to be an intuition like *ra'y* and *kiyās* in *'aql*. The Hanbalī school objected to the adoption of *naẓar* but its greatest re-creative Ibn Hazm admitted *'aql* without hesitation — of course the *'aql* created and equipped by God — as a source of knowledge. Not blind belief (*taklīf*) nor deduction from the unknown (*kiyās*) were to lead to it the acceptance of the *kūrān, ṣumma* and *ṣumma*, but quite certain knowledge. There is nothing which Ibn Hazm insists upon so often and so emphasis here as this: there is no other way to certainty than that of tracing to sensory perception (*biyż*) and intuition of the intelligence (*'aql*). Indeed sensory perception is so much preferred by him that comprehension by the reason is called a *sīnīk* (*Kīhā al-Fā'īl*, i. 4—7). The philosophical point of Ibn Hazm, which requires closer investigation, recalls Hellenistic edicting according to which all human cognition arises either from sensory perception or intuition or is derived from these sources through the intermediary of proof. Many however emphasize the direct evidence of sensory perception and reason, and regard the method of proof as a difficult and uncertain one. Hence we have from the Stoics onwards the emphasis laid on general agreement (Ar. *iṣna'd* and *iṣlātim*), as a criterion of truth. Only where there is no agreement is investigation necessary.

The dualistic epistemology of the eclectics (senses X reason) was very greatly modified in Islam by the penetration of the intellectual monism in the Neo-Platonic mysticism and Aristotelian logic. While different stages in human knowledge were distinguished, true knowledge was only to be attained by rational intuition and the intermediary activity of the mind. The main thing for the Neo-Platonist was intuition ( *naẓar, baṣar*). It is remarkable how in the Neo-Platonic *Theology of Aristotle* the latter is made to say (Arabic, ed. Dietetici, p. 163):

"Plato recognised all things by *naẓar al-'aql* (intuition), *lā bi-maṣḥūk wa-kīyās*, i.e. Plato as the divine perceives everything at once like God himself and pure *'aql*: *Naẓar* in this sense of direct perception is constructed with *lā*, in other cases however with *fī*. For *naẓar fī* transmitted reflection of the human intelligence, the theology generally uses *fīr* and *ra'y* and the world of the senses, with which our soul is associated, is called *'aql al-fīrā wa l-ra'ayīya*. Following the *Theology*, the Muslim mystics generally used *naẓar* for spiritual perception (cf. L. Massignon, *Essai sur les origines du lexique technique de la mystique musulmane*, Paris 1922, index).

In *kālim* however, in the disputes of the theological sects, *naẓar* receives the dialectic meaning. Logical proof seems to have first been admitted into the *'ilm al-dīn* by the *Shāfī*. In his *Fatāwa* (ed. Ritter, ii. 51 sq.) al-Aṣārī gives a survey of the different views of the eight parties of the Rawḏāf, *fī l-naẓar wa l-kiyās*. According to him, groups 1—3 consider all cognitions (*maṣārif*) as necessary (*'ilār*) (i.e. given with the mind itself or not given) so that *naẓar* and *kiyās* can add nothing to them; these as well as group 8, which traces all knowledge to the Prophet of God and the Imāms, differ is the rest on this point. The other four recognize some kind of acquired knowledge (in both cases the reference is to the apprehension of God) as follows: 4 (the *Ashāb l-Hishām b. al-Hakam*) by *naẓar wa l-biṣālīl*; 5 (al-Hasan b. Maṣā) possibly by a kind of *kālim* which cannot be more exactly defined (cf. this *kālim* with the *kašf al-ṣīl* of the later Aṣ̄ārī school); 6 and 7 (ambiguous) by *naẓar wa l-kiyās*, with appeal to the testimony (*ḥadīṯ*) of the *'aql*. We are also told (p. 144) of a section of the Mūdārijīs that a belief (*imān*) without *naẓar* is in their opinion not a perfect belief.

Ashārī himself is probably the best evidence of the fact that the speculation of the human *'aql* was not regarded as a source (or method) of knowledge for the first time in his school but before him by several sects. *Naẓar* (like *ra'y* in *'aql*) was most probably applied to the activity of the mind of the reflecting theologian (besides *naẓar* we find synonyms like *biṣālīl, kālim, ra'y, fāhū, škrū, ṣinkūsh, ta'amūl, tālīb*; perhaps also others). The logical methods here are still affiliated with the Aristotelian (deduction by analogy) and *iṣlātim* (*proof by circumstantial evidence*). From what we know of *kiyās* in *'aql* (cf. the article *iṣlātim* al-Šīrī by J. Schacht, and Snouck Hurgronje, *Vereerl., Gesch.*, ii. 130 sq.), and of *kiyās* in medicine (see Mas'ūdī, *Paris 1861—1877*, iv. 40; vii. 172 sq.), we have probably to think of a process which is a mixture of induction and deduction, often used very arbitrarily. Analogous cases, often superficially regarded as similar (cf. *Mafṣūḥ al-ʿUmm̄* ed. v. Vloten, p. 8 sq.), were sought for, the *ila*, i.e. not the actual cause (*kaus*) but the reason (*ra'ā*) in a higher conception of method or species, under which the further cases could be grouped. For Aristotle and his followers in Islam (Farābī etc.) deduction had one meaning; they believed in causality or even in the creative activity of abstract thought. The great majority of Muslim theologians, jurists and physicians did not rise so far. It was not till the school of Ashārī that the method of *naẓar* superficially grasped penetrated into *kālim* and *kālim* was defined as *'ilm al-naẓar wa l-biṣālīl*. Rejected at first by the majority, gradually tolerated and used as an instrument against heretics and sophists, *naẓar* in the orthodox school was finally recognised as a religious obligation.

Let us now turn back to the general conception of the *'ilm naẓariyya*. Al-Farābī (d. 950) distributed them from the philosophical point of view in a special treatise (*Taḥṣīl al-ʿUmm̄*, Cairo n.d.) in a way which became the model for later times. It was he who first worked on the logic of Aristotle wherefore his school was often called that of the *Mantiqīyȳan*. He assumed with Aristotle that the *'aql* contained in itself the fundamental principles of all knowledge, the evidence of which had simply to be acknowledged. But the way of reflection and proof leads to the non-evident, the culmination of which, apodeictic proof (*burhān*), is described in the "Second Analytic." From this eminence the branches of knowledge can be surveyed. After some observations on philology (cf. the Stoics) first and most fully logic — whether as instrument of philosophy or a part of it is a matter of indifference. Logic itself is of course a *naẓar* with an object
of its own. Next come the science of physics, mathematics and metaphysics with main and subsidiary branches. Each is a nazār. But it is noted that for example among the physical sciences medicine is a mixture of theoretical and practical and similarly music and mathematical subjects. Metaphysics is however like logic purely theoretical. Finally the three practical sciences of Aristotle, ethics, economics and politics, are united under the head of political science, with the addition of ḥikma and kalām; al-Fārābī remarks that the science of kalām and the art (sināʿa) of kalām have to do partly with opinions (ʿarāʾ), partly with actions (ʿafāʾil).

In conclusion let us compare with this philosophical division that of the Aṣḥāʾī theologian Abūl-Kāhir b. Tāhir al-Baghdādī (d. 1037—1038) in his Lālī al-Dīn, Constantinople 1928, p. 8–14. After the distinction between divine knowledge and the knowledge possessed by other living creatures is laid down, the latter is classified as follows:

I. ḍarāʾī (necessary, directly evident)
   1. ṭabīḥa 2. ḥissi

II. muḥkamāt (= ʿulūm nasārīya) (acquired)
   1. ʿaḥāfa ʿamrīya

(knowledge acquired by reason and by law)

The ʿulūm nasārīya are further divided into four according to the way in which they are acquired:

1. Ṣiddātāt bi ʿašrāt min ʿiḥāfat al-ʿayn wa ʿi-nazār (speculative theology);
2. Muʿāmāt min ʿiḥāfat al-qāṣarīn wa ʿi-nāʾār (e.g. medicine);
3. Muʿāmāt min ʿiḥāfat al-ṭāhir (legal science);

Compared with the ʿašrāt monism of Fārābī this division still looks rather eclectic. But from the xth to the xiiith century s.n. philosophy and theology, without becoming one, were approaching one another more closely. Ibn Sīnā, who died upon Fārābī, was the intermediary. Ghazālī sought to combine the nasar ēlād of the Neo-Platonic mysticism with the ʿašrāt of the rationalist thinkers, and Fākhr al-Dīn al-Rāzī appropriated the methods of proof of Aristotelian logic to a much greater extent than his theological predecessors.

NAZARETH. [See Al-NAYIRA.]

AL-NĀZĪRĪ, title of sīra lxix., taken from the opening word.

NAZIM, properly Muṣṭafâ b. Ismāʿīl, a notable Ottoman religious poet. The son of a Janissary, the inspector Yeni Baghçeli Ordek Ismāʿīl Agha, he was born in Constantinople and succeeded his father in his office, after rising through all the grades in the Janissary office: he became baş móqaddar, baş khatif and finally in 1108 (1696) yeniceri khatif. He died in this year on the campaign against Belgrade.

Nazim wrote an extensive Divān, the poetical value of which is not very great but which contains much that is religious and mystical in its 550 ghaseds and about 50 tāʾrikhs of the end of the reign of Mehemd IV.

NAZIM, Yaḥyā, the most important Ottoman religious poet of his period, as is apparent from his epithet Nāṣīrī, the singer of hymns. Born in 1059 (1649) in Nazim Paşa, Constantinople, he entered the Serai as a boy where he received the education of the Enderûn and had the opportunity to acquire special proficiency in Arabic and Persian. He showed a talent for poetry and considerable musical ability. His beautiful voice and his work as a poet and composer gained him the favour of Sultan Murād IV. He was given important offices at the court as a result: the office of a ʾabāʿ in the khatif-i ʾhaṣṣar; he next became nūfusî bāgaš and pārma yeṃek-i bāgaš and attained considerable influence. He then retired of his own accord and became bāzaš bāgaš. Later he made the pilgrimage to Mecca. He remained in Medina as muṣtafa bi ʿl-mālik where he died at the age of 50 in 1139 (1726).

According to another statement (Brussa Mehemd Tāhir), he died in Adrianople.

He flourished under Mehemd IV and down to the reign of Ahmad III. He was a member of the Mewlewî order. Şahîkh Neshâṭ-i Mewlewî was his teacher in poetry and probably also in music. Nazim is the most religious poet of his period. He devoted the whole of his poetical talent to the naʿṣ, the hymn. His Divān therefore resembles a warrant of pardon (brāʿ-i ḡusfrār). He also gave special attention to the devotional forms of the tevbe and ṭāḥlīl and mumāṣafāt.

His Divān, printed in Constantinople in 1257 (1841), forms a thick volume of 500 pages, of which one third is devoted to the naʿṣ in the form of 60 ḍhānda, hundreds of ḡasht, kīfās, tevbe, ṭāḥlīl and mumāṣafāt, 60 ḍhānda and mumāṣafāt, ṭāḥlīl and a mehtebvi for the Prophet. The Divān is divided into five parts, each of which is in turn a kind of Divān in itself. He also wrote mehtebvis for Mehemd IV and Muṣṭafâ II, Ahmad III, Selim Girî Khan, Muṣṭafâ Paşa and the vizier Ahmad Pasha; also tāʾrikhs in imitation of Nefî and Nâbi and sharākîs in imitation of Nêdim.

Nazim is a clever technician who gives expression to his effort for variety and change, not only in the matter but in the form. In all his works however, a deep religious belief, even fanaticism is marked. His poems are a true reflection of the inclination of the period for religion and Şifism.

Bibliography: Feițin, Teķerie, Constantinople 1901.
Nâzım — Nâzîm

Nâzîm Farrukh Husain, a Persian poet. Mullâ Nâzîm, son of Shâh Rîdâ Sabzavârî, was born in Herât about 1016 (1607) and spent the greater part of his life there. Little is known of his career, except that he made a journey to India and, after spending several years in Jahâni-pur, returned to his native town where he died in 1651 (1701). He was court poet of the Begarbegs of Herât and his greatest work, the Yânufl u-Zalâikâhâ, begun in 1058 (1650) and finished in 1072 (1662—1663), was dedicated to one of these governors, Aâbâb Kâh Khan Shâhîmî. This, a poem of considerable length, is an imitation of Firdawsi’s work of the same name, and follows the original quite closely but endeavours to surpass it by using the most elegant language. Ethê calls the language of Nâzîm’s images distorted and thinks that some of the details put in by him can only have a humorous effect on the reader. But it must be agreed that Nâzîm judged the taste of his period very well for his work became extremely popular, especially in Central Asia. While Firdawsi’s poem is now known to only a few enthusiasts, manuscripts of Nâzîm’s Yânufl u-Zalâikâhâ are still quite common in the bazaars of the larger cities of Central Asia as are those of the even more celebrated version of the same subject by Dâmtî. His lyrical Dîwân is less well known, but it contains many excellent poems (especially stanzas) some of which are even at the present day sung by the classically trained singers of Bukhârâ and Samarqand.

(E. Berthels)

Nâzîr-âl-Mâzâlîm (A.), “reviver of wrongs”. His office “combined the justice of the kâdî with the power of the sovereign” and was instituted by the later Umayyad, who sat in person to receive petitions complaining of zulm. The early ‘Abbâsîds, from Mahdî to Mu’taﬁd, followed their example (Mawardi, p. 129; Bâhâkhî, Kitâb al-Mâzâlîm wa l-Mâsâ’id, ed. Schwally, p. 577; Ma’âdî, Mûâsîd, viii. 21; Ţâbârî, iii. 1736), but after them the duty was undertaken by the vizier, whose failure to carry it out was regarded as a serious fault (‘Arîb, ed. de Goer, p. 25). At Baghdad the Caliph Mu’taﬁd ordered the qâ’îb al-fâ’ârîm to nominate fâqîhs who were to hear pleas in each of the ma’llâhs. The court of the Nâzîr concerned itself with: a. zulm committed by the Caliph’s officers; b. injustice in the levying of taxes and c. wrongful acts of kârits in public offices. Other matters proper for the cognizance of the court were complaints by officials of non-payment of their salary or of excessive reduction of salary; the interests of âwâfî and the enforcement of decisions made by kâdîs not strong enough to have their judgments put into execution. The Nâzîr had much wider powers than the kâdî. He could postpone decision on a case in order to consider and investigate evidence, a proceeding not open to the kâdî, who is compelled to give judgment out of hand; he could use i’râb (intimidation) to overawe a defendant into admission and could refer litigants to persons of responsibility who could act as arbitrators. The officer presiding, if he was the vizier or other highly placed official deputizing as Nâzîr for the sovereign, set aside a special day or days for the review of mizâlîm. The Nâzîr al-Muluk (Siyyâsât-nâma, p. 10) regarded it as essential for the king to sit two days a week for the purpose, and in Egypt during the Fatimid rule, the vizier or the zâhîb al-bâb sat on two days of the week at the Golden Gate of the palace at Cairo. Complaints were there made orally if the petitioner lived at Fustût or Miṣr and each plain received was sent for necessary investigation to the zâhîb of the police or the kâdî of the quarter concerned. If the person against whom complaint was made lived outside the two cities the petition was presented in writing.

Bibliography: Mawardi, ed. Enger, p. 129 sq.; Almedro, ed. de Goer, iv. 90; Kuprulu-zade Derssî, ii. 371 sq.; Hettî, Mumânî, Cairo 1500, ii. 42, with commentary of al-Shîrînî on waîl ‘l-dârîm and il-kâmî fî ’l-mizâlîm.

(R. Levy)

Nâzîmî, Shâhî Mîmâd b. Ramaznî, Ottoman poet and Khalwetî Shâhîkh. The son of a merchant named Ramaznî b. Rustem, he was born in Constantinople in the Köşâ Mustafâ Paşa quarter in 1032 (1622—1623). He became a disciple of ‘Abd al-Ahâd al-Nâfî. In 1065 (1654—1655) he became shâhîkh (fâ’îd-nâzîm) in the Khalwetî monastery of Yawâshîde Mîmâd Aghâ near Shehr Emînî, later (1105 = 1693) also preacher (kâdî) at the Sultan Wallide mosque. He died in 1112 (1700) and was buried in a special târîkh. His son was ‘Abd al-Rahîmî Rafî. Nâzîmî was considered a high authority on ‘Hâdîthî. He wrote a number of works, none of which have been printed, namely: Hâdîyat al-khâdn (“Present of the Brethren”): biographies of the seven greatest Khalwetî personalities (Yânufl Mâhûmad; Muhâmmad Râkiye; Shâh-Kobâdî Shîrwânt; ‘Abd al-Majdî-i Shîrwânt; Shams al-Dînî Siwâst; ‘Abd al-Majdîl-i Siwâst; ‘Abd al-Ahâd al-Nâfî) and some accounts of their successors.

His poetical works consist of the rhymed Turkish translation of the first book of the Meftâh of Da’âl al-Dîn Kâmil, a Dîwân of the usual type (with many hymns and sacred songs); also the Mîyûr al-Târîkh (“Touchstone of the Order”).

(Menzel)

Nâzîmî, Mîmâd (according to the Siyyîlî ‘ohmânî: Nâzîmî Nişâmî), Ottoman poet of Adrianople in the period of Sulaimân al-Kânînî. He was the son of a janissary, later himself became a janissary, then shîhid and sipâhî. He died in 996 (1588) in Adrianople, where he is buried in the türbe of Shâhîd Şuhdî.
Nażmi possessed great poetic gifts and ability, which he displayed particularly in the clever and accurate imitation of other poets, in so-called nażares (pl. nażār). He also himself wrote ghazels. He rendered a great service to Ottoman literary history by collecting an enormous anthology of the best Ottoman poems, arranged under the eight principal metres. This anthology contains 4,000 ghazels by 125 Turkish poets and nażares by himself in addition: Majma‘ al-Naţār. He presented this work, which he brought down to the year 930 (1524), to the Sultan, Hammer deals fully with it, as it deserves.

He also wrote a ghazel with the rhyme eif on each bahr of the Kitâbal‘ arâfiyet of Ważîd-i Tabrizi.

MENZEL

AL-NAZZÂM, IBRÂHÎM B. SA‘ÎD B. HÎNî B. IBNÎS, a Mu‘attâlî theologist of the Baṣra school. Brought up in Baṣra, he spent the latter part of his life in Baghîdād, where he died between 220 and 230 (835—845) while still, it seems, at the height of his powers. A brilliant poet, a philologist of note, and above all an extremely perspicacious and subtle dialectician, he is one of the most interesting figures in the culture of the ‘Abâsîd period. He occupies a most important place in the development of Muslim ideas. He studied speculative theology in the madjâl of Abu ‘l-Hudhail al-‘Alîfî, from which he soon separated to found an independent school. In Baṣra he vigorously continued the struggle waged by his teacher against Manichaeanism but devoted his abilities mainly to the refutation of the Dâhrî philosophy, with which he was thoroughly acquainted. So far as we can judge, it was al-Nazzâm who began the struggle, which was continued by ‘Îsâ throughout the centuries, against the philosophy of Asian Hellenism, the classic document in which is the Taḥâfît of al-Qâhârî. In Baghîdād he engaged in lively disputations with Murûji and Dâhribi theologians, the traditionists and the fiqhârîs, submitting to a searching criticism which had considerable repercussions in the history of Sunni theology. On the other hand, his ideas seem to have had a considerable influence on the Mu‘attâlî school of Baghîdād in spite of the resistance which it offered to him. Al-Nazzâm was above all a theologian. Two tendencies dominate his thought: zeal for tawvîl, for the strictest monotheism, and real for the Kur‘ân, which compelled him to set aside any other source of theology and ethics. His interest in religion was purely intellectual and emotion seems to have played a very limited part in it. His opponents described him as a Dâhri; this is to misconceive completely the fundamental idea of his theological work; nevertheless it is quite true that it was the dispute with the Dâhribi which imposed upon him the first principles of his dogmatics and which determined their structure, so much so that ‘Îsâ in his hands assumed a rather strange form. His dogmatic extravagances brought down upon him the condemnation of almost the whole of the Muslim community and even of the Mu‘attâlî; it was however who he was the first to state several of the principal problems of Sunni theology. His writings are lost but considerable fragments have been preserved, especially in the hands of his pupil al-Dâhî. Many of the teachings which are ascribed to him are books of writers on heresies were handed down by his pupils, not always correctly, as al-Kha‘îfî tells us. The exposition of his theology given by al-Baghdâdî in his Kitâb al-Farîk probably goes back to Ibn al-Râwândî; it is a typical example of misrepresentation and deliberately false interpretation. On the main features of his theology and of his school, cf. the article AL-MU‘ATTÂLÎ.

Here we give a few observations on the problems of his theology.

1. Aṣîl al-tawvîl. Al-Nazzâm’s main interest here is to defend the Kur‘ânic doctrine of the creation against the Dâhrîs which teaches the perpetual circulation of the elements and therefore the eternity of the material world. It is with this object that he develops the doctrine of the za‘kîr and the kumûn, a strictly anti-Dâhri thesis and one already adopted by Abu ‘l-Hudhail al-‘Alîfî. His ideas regarding the body and its relations are the logical result of this teaching. The structure of these ideas is however strongly influenced by the polemic against Manichaeanism, the fundamental problems of which al-Nazzâm had studied deeply. In his positive demonstration of the domus of the creation one occasionally thinks there are traces of Aristotelianism: the creation was a setting in motion and the created world is in a continual state of movement (even rest is defined as a form of movement). God is then himself immobile but at the same time the primordial moving power. The tanâsib, the distinction between the creator and creation, is carried a considerable distance. The divine attributes are represented to us by negations. The divine word is a body (therefore created) but that of man is an accident. The Kur‘ân is miraculous because of the information it gives about the past and on account of the secrets which it reveals but not on account of its style, which men could have imitated if God had not prevented them (in reality there is no mu‘attâfî in al-Nazzâm). Al-Nazzâm fundamentally rejects the arbitrary interpretations of the Kur‘ân given by the great authorities on Tradition, an ‘Îsâ, a Kalbi, a ‘Ummâr or a Makâtîb b. Sulîmân; he demands a strictly literal exegesis. Prophethood has always been universal, i.e. all the prophets and not Muhammed alone have been sent to the whole of humanity (against the traditionists; al-Nazzâm thus did not deny the prophethood of Muhammed).

2. Aṣîl al-kâwîl. The freedom of the human will is restricted, according to al-Nazzâm in a way that anticipates the Ash‘ârî theology. All the actions of a man arise from movements, therefore accidents and movements which relate only to the man himself; the effects which are realised outside of the man are not due to him but to the natural forces which God has placed in his body (denial of tawwâlîd). Man is the rîhî, which penetrates the body; the body in its turn represents an infirmity (âfîd) of the rîhî. Now it is the body, different from man in the strict sense, which sets in motion the action of which man (i.e. the rîhî) is capable. It follows that man (the rîhî) is capable of the action before it is realised (al-sâ‘îdîn kâbîn ‘îlî); but at the moment when it is realised, the man is not capable of it.

3. Aṣîl al-wâdî ma ‘îl-kâwîl. Al-Nazzâm is very
keenly interested in practical problems of fiqh; we know his views and those of his school on the *ṣuḥa*; on fraud and on ritual purity (in which connection he gives some very curious psychological explanations). But he is particularly concerned with the *ṣuḥa*. He waged a passionate campaign against the *ṣuḥa* al-raj' wa l-biyyah, therefore against the Ḥanafis who were the representatives of the Mudjāds. He flatly refused to admit *ra'iy* and *biyyah* and did not shun even from attacking the great men among the *ṣuḥaba* who in his opinion had been guilty of using them. He was in this way led to criticise violently the institution of the *ījma* which however he admitted to a certain extent. Through all this he prepared the way for Dāwūd al-Zāhirī and the Zāhirī school.

(Ḥ. S. NYBERG)

NEBUCHADNEZZAR. [See BUKHITE NASIR.]

**NEDJD,** the highlands of *Arabia* in Nustrat to the low-lying ground along the coast (*Ṭihāma*) or the depression (*Ṣūr*). In the dialect of the Hudnailed *Najd* is pronounced *Najd*. The exact application of this original topographical conception is very differently understood and sometimes it means more generally the elevated country above the coastal plain or the extensive country, the upper part of which is formed by the Ṭihāma and the Yemen and the lower by Syria and the Ḥārak, or the part of Arabia which stretches from the frontiers of al-Yamanā to al-Mudām and thence across the desert from al-Bāṣra to Bahrāin on the Persian Gulf (*Ṣuḥa*), or Hawāk, or the territory between the Ḥārak (al-*Cchab*) and Dūh *īr* (ibn Khurāshib) and from the Ḥārak to the *Ṭihāma* (Kudāma) or the land which lies behind the so-called *Ṭīch* of Chosroes (Κισαρά) as far as the Ḥarrā (al-*Bāhili*), or lastly, the territory between the depression of the Wādī l-Rumma and the slopes of Dūh *īr* (al-*Aṣmā*). That original name was applied to the plateau only is evident not only from the definitions of the separate authors but also from the fact that Najd appears in combination with various place-names; thus al-*Aṣmā* (Yaḥṣūb, iv. 745) knows of Najd *Bark* (in al-Yamanā), Najd *Urf*, Najd Kabkab (near *Aratfī*, Najd *Māri* (in the Yemen), al-*Bark* (ib. 574) besides the last named mentions Najd in Yamanā, Yaḥṣūb (iv. 750 sqq.) further mentions Najd al-Hijāz, Najd *Alwād* in the country of the Hudnailed, Najd al-Sharā, al-*Hamdānī* (p. 55) Najd *Himyar* and Najd *Maddīd* along with a number of places not otherwise known which are combined with Najd. *Hamdānī* (p. 177) further makes a distinction between upper Najd (*Najd al-Uṣūl*) which is regarded as Najd proper (*al-Najd*) and in which he includes the district (Κισαρά) of Ḥurāmah and the town of Yabāmām, and lower Najd (*Najd al-Suṣā*) which is described as *Arūd* Najd and with the Hijāz and al-*Aṭrād* forms Central Arabia (p. 1, 5 *sg.*, 36, 13 *sg.*), the territory in which pure Arabic is spoken (p. 136, 8 *sg.*). The original meaning is also seen in the dual Najdān, which, it is interesting to note, is used for two mountains in the Ḥijāz range, as well as in the place-name Najdān Marī and in the spring pasture ground Najdān in the land of the Kitābī mentioned by the poet Ḥumādī b. *Ṭaww* (Yāḥṣūb, iv. 745).

That the wide interpretation of the name Najd above given is not unjustified is shown by the foundation in the second half of the fifth century A. D. by Ḥārūmah, chief of the Kinda, of a short lived kingdom which extended from the Syrian lines and al-medina to al-Yamanā or from the hilt of Tomiyya in the N. E. on the Wādī l-*Ramīma* to Dūh *īr*. At a later date, the whole of al-Nayzāmī belonged to the administrative district of al-Yamanā (Yaḥṣūb, iv. 746).

The widest area to which the name al-Nayzāmī has ever been applied is probably that of the present kingdom of the same name which owes its origin to the Wahhābī chief ʿAbd al-ʿAzīz b. ʿAbd al-Khāniān al-*Sīfād*, who, as Amir of Najd conquered Riyād in 1903, was chosen sultan of Najd and the adjoining lands in the summer of 1921, on Jan. 10, 1926 conquered the Hijāz and on Jan. 19, 1927 was proclaimed king of Najd and its dependencies at Riyād. The frontiers of this kingdom are: in the east, the Persian Gulf from Līfūfia and Ḥamār to Rās al-*Mīshāb*, then the neutral zone between Najd and Kuwait from this promontory to Rās al-*Kullīyā*; in the west the kingdom of the Hijāz; in the south the line which runs from the port of Ḫufūdha on the Red Sea south of Abū Ḥād in ʿAsir and south of the Wādī l-*Daʿwār* and includes Najd. The war at present going on between the king of Najd and the Imām of al-Yamanā may perhaps alter this frontier, especially as Ḫawf in the Yaman has previously been a bone of contention. The northern frontier which was delineated by treaties between the ruler of Najd with the Ḥārak and England on the one side (signed at ʿAqūr on Dec. 2, 1922) and Najd, Great Britain and Transjordan on the other (signed on Nov. 2, 1925 at Ḥaddā in the Hijāz) runs along the neutral zone between Najd and the Ḥārak (20–30° N. Lat. and 45–46° East Long.) and is then continued in the line running N. W. to the intersection of 39° E. Long. and 32° N. Lat. and leaves the Dīlah ʿAnīzeh on its north, then S. W. to the Wādī Ṣūlīd and passing through in the S. E. the point where 35° E. Long. and 30° N. Lat. intersect. The Wādī Sirāh is thus still in Najd. This line continues towards the south from 25° to 35° East Long. and crosses the Hijāz railway towards ʿAṣkhāb. The extent of the territory is estimated at 900,000 square miles and its population at 3,000,000. The capital is al-Ḥirād; the more important towns are Buraida (Berejād), ʿAneiza (ʿAnīzeh), Ḥīrīl (Ḥayīl), Ṣhaymara,
Shakri, Madjma'a, Huraimala (Harēmle), al-Hufūf and al-Kut. The population, which with the exception of al-Hasa with 30,000 Shi'is and a few Sunnis has almost entirely adopted Wahhabism, belongs to the tribes of Mu'tair (Me'er), Harb, 'Utaiba ('Aṭēbe), Subai', Dawāsir, al-‘Udhāmīn, al-'Awīzin, al-Suhūl, Beni Murra and Ba każdy.

The North-Arabian Nadjd forms a part of the great desert plateau which is formed of primary rock with overlying sandstone and volcanic outbursts and has two great mountain ranges running through it; that in the north is about 40 miles long and at its northeastern end some 4,500 feet high, known in ancient times as Djabal Tiay or Djabal Taiy, i.e. Adja' and Salmā (Hamātān, p. 125, 25, 27), is now called Djabal Shammar or Djabal Idjā (Adja').

Ammāriyya or Djjidd, which towers some 500 feet above the ridge usually 2,000—3,500 feet high. The long southern part of the Tuwaiq is intersected by numerous wadis which lead the waters that falls in the rainy season to the Rub' al-Khalī. Its most important part is the Aflādī, 40 miles long, with the oasis of Laila.

Nadjd is in the main steppe and desert. Najd and Dahna occupy the greater part of northern Nadjd while the Rub' al-Khalī joins them on the S. E. There are no perennial streams in Nadjd so that the country has to rely upon subterranean channels of supply which are at various depths and have to be reached by wells. In the oases of al-Khardj the wells are from 20 to 40 feet deep, in Aflādī 50—60 feet, in Ḥāfīl and al-Riyadh about 80 feet. Sometimes these springs form ponds, for example in al-Khardj the springs of which form three pools, the largest of which is 150 paces long and 80 broad (cf. the picture in Philby, ii., p. 34) while the springs of Aflādī feed a lake nearly a mile long and a quarter of a mile broad (Philby, ii., pl. at p. 86). These supplies sometimes dry up suddenly, probably because they have found a subterranean exit as has happened in the case of two waterholes in Aflādī and the two larger ponds in al-Khardj. The hydrographic conditions of the country are therefore exceedingly dependent on the rainfall from the summer and winter rains. The former (wasmi or maftar al-ṭaif) fall in August and September and particularly refresh the pastures which the summer sun has dried up, while the latter produce a springlike effect in the land on which they fall. The classic phrase ṣabi' ilaiḥa Nadjdīna min rabi'īn wa-qatīfīn (Bakrī, ii. 627) eloquently sums up this state of affairs. Heavy rainfalls were also observed in April 1871 in the central

Both ranges, which rise out of a tableland levelled by weathering, are of granite. The Djabal Adja' stretches from N. N. E. to S. S. W., about 35 miles S. E. of it in approximately the same direction the Djabal Salmā, in front of which in the S. W. lies the Djabal Ramān, while S. E. of the Djabal Salmā lies the Ḥarra of Faid, of volcanic origin.

S. E. of this rises the sandstone plateau, overlaid with limestone, of Djabal Tuwaiq (Ṭuqī) running N. W. to S. E., which forms the western declivity of a plateau which has come into existence through weathering and slopes towards the Persian Gulf on the one side and the sands of the desert of Rub' al-Khalī on the other. It begins S. E. of the district of al-Kasim (S. E. of the Ḥarra) and stretches E. from al-Wāshīn to al-ʿArid with the town of al-Riyād and then turns, west of the Khardj oasis, S. S. W. towards the Wašt 'l-Dawāsir. The most important peak on this edge of the plateau is the Djabal

Map of Arabia with the new frontiers of Nadjd according to Amin Rihani
Wādī 'l-Rumma and in May in 'Anēzē between Djabal Salmā and 'Anēzē (1884 Ch. Huber), and Philby (ii. 10) noticed thundershowers in May as well as drizzle, while Doughty met with hail at Khabra (near 'Anēzē) in April. That the climate here cannot have changed very much is evident from Ibn Djibair who records very heavy showers in this district in April (1884 A. D. Huber met with rain in June 1884 between 'Anēzē and Mecca, Sadlier at the end of July 1819 between al-Hasā and Darīya heavy thunderstorm and rain, which however was described by the natives as unprecedented. Philby (i. 141, 147) records thunder and rain in December. The rainwater collects in the hollows below the thick layer of sand and enables palms to grow and also, on chemically decomposed fertile soil, wheat and barley, vegetables and fruit-trees. The hot summer of course everywhere makes it necessary to water the crops from wells. On the other hand, the very frequently occurring flooding of the water-courses led in quite early times to the building of dams to hold back and store the water; such were built in the Wādī 'l-Rumma at 'Aneiza (Bakri, i. 207: Yāḳūṭ, iii. 738), Darīya (Bakri, ii. 637) and on the road from al-Yamāma to 'Aneiza (al-Hamadhāni, p. 174, 192). Doughty found remains of such dams in the Djabal Adja."

"The district of al-Sharaf is the richest part of al-Najd, and the valleys of the Wādī 'l-Dārri and Wādī 'l-Mīth are celebrated for their pastures. Here the early caliphs had vast grazing grounds (bimā) e.g. in Darīya, al-Rabāḍīa, Faid, al-Nr, Dhu 'l-Sarḥ and Nakf. The most famous was that of Darīya, where the caliph 'Omar I secured an area six Arab miles in diameter as pasture for 30,000 horses and 30,000 camels for the army. Othman extended this area until the diameter was ten miles. The 'Abbāsīd al-Mahdī abandoned it, as the policy of this dynasty was to neglect Arabia deliberately in contrast to the 'Umayyads who, for example, intensively colonised western Najd. In the sixth century A. D. Najd was still well wooded, and al-Shuraba, south of the Wādī 'l-Rumma, and Wajdra were particularly celebrated in this respect, while at the present day they only possess scanty remnants of these forests. Many areas seem to have been ruined by drought or disastrous inundations (Philby, i., p. 115; ii., p. 9); the decline of al-Yamāma is probably due to the latter cause. Crops are sometimes damaged by sharp frosts — in winter (January) the temperature sometimes sinks from a maximum of 53° F. by day to below 23° and ice and snow have been occasionally seen at the higher levels — while the summer drought with a maximum temperature of 113° destroys the crops. The two most important wādīs are the Wādī 'l-Rumma about 650 miles long, which runs right across the plateau of North Arabia, rising in the Liber of Khabra and entering the Euphrates plain at Baṣra, and the Wādī 'l-Da'wāsir. These have formed since ancient times the two main routes of traffic in Central Arabia."

"It is the object of improving agriculture that the king of Najd is endeavouring to keep the Bedu to the soil. Every tribe or clan has therefore been allotted a definite area of ground near a well where huts are being erected and the ground planted. These new settlements are called higira. In the last ten years, since the revival of Wahhābism, about 70 of these colonies with 2,000—10,000 inhabitants have been established; the most important is Irwatiyya built in 1912; Rihani (p. 198) gives a list of others. In this way not only is the cultivation of the land secured but the revenues of the state are increased; these consist of the zakāt (10% on movable property), the customs, a fifth in case of war (and formerly) £60,000 subsidy from England. The coins in circulation, in addition to the Maria Theresa dollar, are the English and Turkish sovereign, the Indian rupee and copper coins of 'Oman of the last century, 60 of which go to the dollar. The once famous gold mines of the Banū Sulaīm at al-'Aqīl, al-Mudajara and Bishā (Hamadan, p. 154, sq.) are now no longer of importance and unlike al-Yaman, the country possesses no industries."

**NEDROMA** (Ar. NADRUMA, pron. Nadruma, and sometimes Medruma, 40 miles S.W. of Tlemcen, has since the dawn of the modern period been the most important town in the hilly country between the sea on the north, the lower course of the Tāfnā on the east, the plain of Lālā Moghniya (Marina) on the south and the Algero-Moroccan frontier on the west. It is the country known since the xvi th century A.D. as the land of the Trāra, Berbers converted to Islam and Arab culture in the period of the Idrisids who were known in the middle ages as Kūmā. This little Berber bloc, speaking Arabic, forms with Nadrūma, which is as it were the heart of it, a whole homogeneous that they cannot be dealt with separately.

1. Past History. We may reject the childish etymology Nadj-Ruma as resembling Rome* given by Leo Africanus (ed. Scheler, iii. 15). Nadrūma was first of all the name of a tribe, a section of the Kūmā family of the Berber stock of the Baḥi Fāten (Ibn Khālidān, Berberes, transl. de Slane, i. 251). The name is mentioned by al-Bādžāk (ed. Lévi-Provençal, Doc. inéd. d’Hist. Almoh., Paris 1928, p. 44; transl., p. 66) where we must understand by al-bārya Nadrūma "the people of the citadel (i.e.) the Nadrūma". This passage, written in the xii th century, would tend to show how the name of the tribe of the Nadrūma became attached to the little town which was then their principal centre. Before this period however, Nadrūma was the name of the town, for al-Bakrī (xvi th century) gives it this name and gives us a brief description of it; he qualifies it as madina "town" and not as simply bārya. In the time of al-Idrīsī (cf. the Bibīl) in the xith century, the town was a prosperous one surrounded by walls and had an important market. There is no doubt also — although these two geographers do not mention the fact — that Nadrūma had a mosque. In the xii th century A.D. the Muslim geographer al-Yaḥyā b. Sulaimān, in the Arabic texts, might be Fāllašen or Fellaśen, but with difficulty “Fellousen” (cf. R. Basset, Nedjumah et les Tawar, p. 7, No. 2) on account of the present day pronunciation of the word by the natives of the country. René Basset (ibid.) thinks this town could be identified with Nadrūma. Built on the N.W. flank of mount Fellašen (modern local pronunciation) — the Fil-haouen of the maps. The Almoravids of the xii th—xii th centuries gave Nadrūma an important mosque and a pulpit, inspired, G. Marchais says, by that of the Great Mosque of the Umayyads of Córdova as that of the Almohad Kutubiya of Marrakesh was later to be. This fact alone would suffice to show the importance in the Almoravid period of this Muslim centre which must have been the greatest in the land of the Kūmā at this period.

Nadrūma had access to the sea by several small ports, the most important of which, Honain, which also served Tlemcen (cf. Marchais, Honain, in R.A., 1928, p. 333—359) was however somewhat difficult of access from Nadrūma by the very steep N.W. flank of mount Tāfnā. This town had therefore rather to use the port of Mā’in (al-Bakrī) which was only 10—12 miles away, easy of access at the end of a valley (Wādī Mā’in) north of Nadrūma. In the Almohad period Nadrūma as well as all the land of the Kūmā, where ‘Abd al-Mu’mīn, the first caliph of the dynasty, was born, must have been the object of special solicitude by these rulers, who were lords of Africa and Spain. Moreover it was on the Kūmā, the tribe in which they originated, that the Almohad caliphs relied for support — like all Muslim rulers — these Berbers were the best auxiliaries in the conquest and the most reliable supports on the throne of Marrakesh. Although the name of the Kūmā has now disappeared and has been replaced by that of Trāra, it would be too much, as we shall see, to think that the Kūmā tribes disappeared in the wars of the Almohads.

The name Trāra is quite recent; it appears, it seems, for the first time in a treaty of union — of which the Arabic text is given by R. Basset (loc. cit., App., p. 212—218) — between the Arab and Berber tribes of the N.W. of Oran and eastern Morocco, prepared in 955 (1548—1549) in anticipation of the struggle with the Spaniards, then lords of Tlemcen. In the text the Trāra are described as made up of many sections, the names of which are unfortunately not given. At later dates we again find this name of Trāra in various authors without being able to say to which it refers. As in the xih—xii th centuries, Nadrūma is still the capital and the principal town for these tribes. Most of the Trāra tribes of to-day have preserved the names which the same Kūmā tribes bore in the time of the caliph ‘Abd al-Mu’mīn.

This little Berber capital was undoubtedly never very large if we may judge by the traces still visible of its walls, which have hardly changed since the time of al-Bakrī. It appears in the history of the middle ages, as in modern times as one of the chief towns of the province of which Tlemcen was the capital, whose political and religious influence dominated it and whose destiny it followed.

When in the xii th—xii th centuries, Tlemcen being the capital of the ’Alshāwālīd kingdom, Nadrūma, a peaceful town with a temperate climate, in a charming position, overlooking the blue sea a few miles away, became the country resort of the rulers and princes of the royal house. They had a fortified palace there (the ḫarḥi) of which considerable remains of the surrounding wall still stand as well as the walls of the buildings. It commanded the town, standing quite near it on the south, and its ruins are still called ḫarḥi rrī ḥarrī. It was to this place that Aḥū Yaḥyā b. Sulaimān, renouncing the royal throne of Tlemcen to the advantage of his two younger brothers Aḥū Sa’d

It was here that his son Abū Hamāmī II (reigned at Tlemcen 1359–1359) lived with him and the latter's son was born, Abū Tāshīfīn II who debron his father and reigned after him (1359–1393). This pious withdrawal of Abū Ya'kūbī to Nadruma was only to last about four years until the conquest of Tlemcen and Nadruma by the Marinids of Fās in 1352.

No king and apparently no prince was ever buried at Nadruma. There is however the mausoleum of a saint in the midst of the ruins of the palace. The individual whose tomb it is believed to mark is called "Ṣīdī Sulān". Neither the name, nor history, which does not mention him, nor legend, which simply makes him come from Egypt at a remote period, tells us anything of value about him. Nevertheless, in view of the numerous similar examples of the creation of holy places sacred to saints by the Berbers, who are of a deeply religious nature, and in particular by the Berbers of Nadruma and the Trārā, it is easy to reconstruct the process of the formation of the mausoleum in question. The sojourn in the palace of Nadruma of a great prince who had abandoned his rank for a life of devotion must have impressed the people of the time and long afterwards the spiritual merits of this "sulān" must have been related, as one who had certainly been touched by the grace of Allāh. When many years had passed the name and story of this devout king had forgotten, the place where he had lived, this ƙaƙar ƙar-sulān, this ƙarsh as it is still called, although in ruins, impregnated with his sanctity—his baraka—remained a holy place. It was only a very short step from this to localise the centre of radiation of this baraka in a little sanctuary in which prayers could be addressed to the unknown saint who is alleged to be buried there. At the present day the little white dome covering the so-called tomb of Šīdī Sulān under a very old wild olive tree is the goal of the pilgrimage of numerous women; they come there particularly to seek the cure of a sick child; they expect to obtain this by the fumigation of the invalid with leaves from the olive-tree. Men also visit it. Every year the techniques of Nadruma (who say that Šīdī Sulān was a descendant of Bilāl, the Prophet's mu'aādādīn) go there on a mass pilgrimage and sacrifice a bull calf; they hope thereby to obtain the regular rainfall needed by the district.

If we have dealt rather fully with this feature of the religious mentality of the people of Nadruma, it is because it is a sign, among many others, of one of the most characteristic aspects of the religion of the Berbers and of those of Trārā. Maraboutism is so developed among them that René Basset in his study of Nadruma and the Trārā has collected the names and sanctuaries of 200 holy men and 9 holy women, which is a large number for so small an area. This however does not prevent the people from observing as well as they can the ritual duties of Sunni Islam and of zealously attending the many mosques in Nadruma and in all the villages of the Trārā.

It has been been mainly since the xvth century, during the great popular mystical movement which spread through all North Africa, that the people of Nadruma and the Trārā have developed this cult of saints and placed all their trust in men of religion and Sufism. Particular evidence of this was seen in the assembly of the meritants of the Wardafu, on the borders of the land of the Trārā, of the tribes of the region of Nadruma and the adjoining country when in 1548 the holy man al-Ya'kūbī, whose venerated sāwiyya [q.v.] is a little to the west of Nadruma, led them against the Spaniards who then held Tlemcen.

As a matter of fact the Spaniards who were established in Oran and Tlemcen were never able to occupy Nadruma and the land of the Trārā. The Turks who finally occupied Tlemcen and the province were not always warmly welcomed there. On several occasions the sulān sharifs of Morocco were able to advance their frontiers to the lower Tāfān. However the Turks ended by establishing their authority which lasted until the conquest of Algeria by the French. Nadruma and the Trārā did not at once accept the rule of 'Abd al-Kādir; they preferred to be under the sulāns of Modern. Later they took the side of the moro against the French and it was in these mountains that 'Abd al-Kādir often found a safe asylum when he was defeated, even after 1842 when the French occupied Nadruma, and notably in 1845 at the time of the famous affair of Šīdī Brīm (cf. P. Azan, L'Emp. Abū al-Kādir. Paris 1923, p. 207–214) a few miles west of Nadruma.

II. The Present. Nadruma, surrounded by gardens full of olive and other fruit-trees of various kinds, rises in terraces which lie on a well-marked king's back sloping from N. to S. running from the Kastā; it is enclosed in a quadrilateral of about 15 to 20 hectares, which is still marked by the traces here and there of its old walls.

This town has preserved the appearance of a city of Western Islam with the Great Mosque dominating the houses with its high square minaret. A small square (tarbūt) off which open the suks gives a little open space for this building and the central quarter which also bears the name of tarbūt. Other smaller mosques are in the different quarters but they are hardly be distinguished from the surrounding houses because they do not have minarets or only a very low one hardly rising above the roof. The chief of these mosques is the Djamī al-Kaddārin, the "mosque of the potters", which is said to be the oldest of all. It and the Great Mosque are the only two in which the Friday khusba is held. It is in the Bani Zīd quarter in the S.W. of the town. In the Rās Ez-Zāmā quarter in the S.W. are the chapels of Šīdī Bā Ali and Lālā 'Ālīya; those of the Djāmi' Ḥaddādin, D. 'Arrāya, D. Šīdī Sūyādare are in the quarter of Darb al-Sa'īk, to the north of the great mosque and town. At the hours of prayer all these mosques are filled with pious Muslims, many of whom possess a certain amount of Arab culture and religious knowledge; most of them are anxious to have a Muslim education and to give it to their children in addition to French education in the French elementary schools.

Petty traders of experience and agriculturists tilling their fields, the people of Nadruma also include a considerable number of capable artisans. We shall here confine ourselves to mentioning two of the oldest and most important local industries.
of Nadruma: that of the weavers (darrisān) and that of the potters (rudārīn).

The weavers of Nadruma have retained their ancient loom with low warp without any modern improvement not even the picker, and all the old equipment of their ancestors, notably the warper (nocrā) and spinning wheel (roddūna). On the loom, material and method of working, one may compare what is done in Tlemcen in identical fashion (cf. A. Bel and P. Picard, Le travail de la tâline à Tlemcen, Algiers 1913, p. 63 sq.).

The weavers of Nadruma now make only woollen blankets (bīrābah), white or decorated with stripes of colour, hooded cloaks with very short sleeves (djallābā), the white ḥāsh for men (particularly old men here) which is a long piece of wool without seams, which is wrapped round the body in a certain way. Nadruma makes several kinds of ḥāsh (cf. L'industrie de la tâline, loc. cit., p. 109).

The potters have for centuries from father to son had their ateliers in the upper part of the town in the S.E. beside the Kāshā. They make pots and other articles on wheels (maṭūn) of the usual type driven by the foot: cooking pots of rounded shape without handles called ṭadra (whence the name ṭadārīn given to the potters), cooking dishes for ragouts (ṭāghīn) and for barley or wheat gidgee cakes or different kinds of cakes (moṣkol), portable ovens (moladīn), ḥārrūda which is in the form of an oven with an earthenware dome above it shaped like the bottom of an inverted pot on which is poured the liquid paste of these pancakes, as thin as paper, which are often cooked in the old, acquired of their thinness are called by the Berbers in Orania ṭgī ḥūks and in Nadruma as in the towns are called by the old Arabic name of ṭadh. When required the potters of Nadruma also make other earthenware articles such as flower-pots (maṭḥa) and the musical instrument called aqwal, used by women, consisting of a large earthenware tube, one of the ends of which is closed by a skin stretched over it which is beaten.

The total population of the town of Nadruma is 7,051 of whom 6,124 are Muslims, 850 Jews and about 200 Europeans (chiefly French). The Jews do not actually have a special quarter but they are all almost entirely in the two streets of the Darb al-Ṣīk and in the quarter of the Banī Yādī quarter; they are petty traders, labourers and artisans (it is they who make the saddles for the mules and asses). The majority are of Berber origin; they are usually poor. Although they only marry with one another and live apart from the Muḥammadans, the Jews live in houses quite like those of the Muḥammadans, lead the same kind of life and use an Arabic dialect among themselves.

The negroes (lāḥūn) who are not very numerous are called gnawa (Guineans) and live in a separate quarter in the west centre of the town. They are in very humble circumstances, stokers of the bakers' ovens or the furnaces of the baths, labourers and workmen. Although regarded as Muslims, their religious life is not at all regular and they are regarded, as elsewhere, as more or less of sorcerers.

The French element is very small; it consists almost entirely of officials and their families. They live by themselves in the public buildings (schools, gendarmerie, etc.) and in European houses roofed with red tiles, which form an entire distinct quarter outside the native town (to the N. and N.E.).

Nadruma is the capital of a mixed commune. The civil administrator who lives there has under his authority the town and the Trāa tribes of the neighbourhood: Djāba, Zawiyat al-Muṣṭaliya, in the West and N.N.W., Banī Muṣīr, B. Ṭabī, B. Ṭāā, in the N.E. or E. the population of which numbers 47,224 native Muslims and 83 Europeans.

The other Trāa tribes are not under Nadruma: these are the Murda, in the extreme N.W. who belong to the mixed commune of Marna: the B. Wāṣṣās and the Uḥṣās Gharba, to that of Remchi-Montagnac.

On Thursday which is the market-day there come into Nadruma large numbers of people from all the country round; they bring in their stock, especially sheep, goats, cattle and mules and, according to the season, the produce of their fields and gardens (wheat and barley, almonds, carobs, figs, grapes, etc.) and of their flocks (wool and goat-skins, butter, curds, etc.) as well as chickens, eggs and honey. The country artisans (men and women) bring in the articles they have manufactured (articles of woven grass, walking-sticks and little articles of wood carved with the knife with Berber designs), wool, articles of terracotta, notably Berber pottery decorated with geometrical designs, made by the women of Mskrāda (and similar to the other Berber pottery made by the women of Kabylia, the Tṣūl and elsewhere).

It is on market-day that one realises that Nadruma is the economic centre of the whole district of the Trāa and sees the variety of products of the soil and industry of these Berbers.

The abundance and variety of these products are not due only to the activity of the inhabitants; the climate and the soil also help. The climate is fairly equable; tempered by the proximity of the sea it is never extreme as in the case of continental districts. For the rest, the height of the hills, while sufficient to encourage rainfall, is not very great: it does not exceed 3,500 feet at Fallausen and 1,200 at Nadruma. It is therefore only in the very hardest winters that snow for brief periods whitens the summits of the range. As to the soils of this coast range, which, between the depression of the Tifnā in the east and the neighbouring plains of the Moroccan frontier in the west, runs from the town of Tadrā (2 miles N. of Marna) to the sea, they offer a certain variety in their nature and origin. Around the primary massif, which includes the highest peaks, Fallausen and Tādrā, are several eruptive islets (granite) and hills of secondary formation (Jurassic). The lower areas, especially the plains of the N.W. as far as the coast (where there are several old eruptive mamelons) and the depressions of the S.E. and E. along the Tifnā, are middle Mesocene formations.

The mountains also possess numerous perennial springs which feed little streams which irrigate the gardens; there are also various minerals, several of which have been recently or are still being exploited by Europeans.

It is due to the quality of the clay around Nadruma and the granitic sand used for moulds that the pottery industry is one of the oldest and most prosperous in the town. The native vegetation is abundant and varied; in addition to the many varieties of trees of the highlands (notably sumach [tṣāḥ], the wood of which is exported
to Europe through the port of Nemours), we may mention many kinds of plats used for medicinal purposes or dyeing. It is for example thanks to the madder abundant in these regions and used by the natives for dyeing the dwarf palm leaf that the people of Ullasghrabā are able to make a fine and famous straw work (men's hats with high crowns and broad brims called mdall — baskets of various shapes all of dwarf palm leaves). All these articles are prettily decorated in red on the yellowish white foundation of the palm leaf; they are known and purchased by the natives of the whole of Oran and eastern Morocco.

It is also owing to the abundance of pasture in these hills that the rural dwellers, none of whom however are nomads, can raise so many flocks especially sheep. The wool from their flocks is almost entirely used in the country by the weavers of Nadrūma and by the country women who by their weaving, using the loom with a high rail like all the women in North Africa, make a considerable part of the family's woolen garments. All these women are excellent spinners; they have acquired a great reputation for the fineness of their work.

Even from chickens — to feed which the country women in the autumn collect the red fruit of the mastic which is very abundant in this country — the people, who are greedy of gain, make a profit; thousands of eggs also are exported every month from Nadrūma via Nemours, to France and particularly to England.

Bibliography: Besides the works quoted cf. especially: al-Balkī, Description de l'Afrique septentrionale, Arabic text, ed. de Slane, Algiers 1553 (reprint in 1911), p. 283; French transl. in Y. d. 1829, series v., xiii. 142—143; al-Idrīsī, Description de l'Afrique et de l'Espagne, transl. Dozy and de Goeje, Leyden 1866, text, p. 172; Fr. transl., p. 209; Leo Africanus, Description de l'Afrique, ed. Schefer, Paris 1898, iii. 12 sqq.; Marmol, L'Afrique, transl. Paris 1667, ii. 324—325; Canal, Monographie de l'Ardon. de Tiemen (in Bull, soc. d'arch. et de géol. d'Oran, 1858, viii. 62—65); René Basset, Nédrôma et les Traras, Paris 1901; A. Bel, Tiemen et ses environs: Guide illustré du touriste, Toulouse n.d., p. 92 sqq. For the history cf. the article Aïdalâwâddis, completed by that under Zâynâids, adding the reference to al-Balādqā, quoted above. For the rest and especially for the ancient period as well as for the modern, there is a very full bibliography in the notes and references in Nédrôma et les Traras by R. Basset. (ALFRED BEL)

Nefî, the greatest satirist of the Ottomans. Omar Efendi whose nom de plume (mahbâfat) was Nefî came from the village of Hasan Ka‘af near Erzerûm (Eastern Anatolia). Not much is known of his early life. He spent his early years in Erzerûm where the historian ‘Alî [q. v.], who was a defter-dâr there, became acquainted with him. During the reign of Ahmad I fate brought him to the capital Stamboul where he worked for a time as a book-keeper. He failed in an attempt to gain the sultan’s favour or that of his son, the unfortunate Othmûn II, with some brilliant kaşdâs. It was not till the reign of Murâd IV that he gained the imperial favour but his malicious, sarcastic and indecent poems soon brought him into disgrace. He was appointed to the poll-tax office and later again became a member of the sultan’s circle. His irresistible impulse to make all the notables of the empire the butt of his mockery made him a host of enemies. A satire on Bairâm Pasha, the sultan’s brother-in-law and vizier, who had succeeded in being recalled from banishment and again attaining influence, cost him his life. The mufti gave his sanction to the execution of the great poet. With the sultan’s consent he was shut up in the wood-ceiling of the serîy, then strangled and his body thrown into the sea. The year of his death is 1644 (beg. June 27, 1634), not 1645 as Hadîjî Khâhilî, Frdlktr, ii. 185 wrongly says (cf. on the other hand his Kâfîl al-Zunûn, iii. 318 and 631 where the correct date is given).

Nefî wrote Turkish and Persian with equal ease. His mastery of technique and natural poetical talent make him one of the greatest Ottoman poets; he is also undoubtedly one of the greatest, although hitherto little known satirists. The reason why he is so little known is that a scholarly edition with full annotations of his Turkish Divân entitled "Arrows of Fate", Siham-i Kača, has so far never been undertaken, so that at the present day hardly any one is able to understand the countless allusions to particular circumstances and the veiled attacks on the individuals dealt with. The publication of his poems demands a knowledge of the conditions of his period and particularly of life at court which it is hardly possible to attain and which it would be very difficult to gather from the existing sources. Many of his flashes of wit and allusions are very difficult to understand. Many of his poems are distinguished by an obscurity which can hardly be surpassed and however great may be their importance for the social history of his time, they are of little value as evidence of his poetical gifts. The "Arrows of Fate" are directed against almost every one prominent in politics and society in his time. In G. O. D., iii. 241, J. v. Hammer has compiled a list of them. Some of his poems which pillory existing institutions, like the popular saints, the Gâbour-derivishes [q. v.] etc. are of value for social history. Hardly one prominent contemporary was able to escape his scorn and ridicule. They were all made targets for his "Arrows of Fate" without mercy. He attacked the jurists (‘ulâmâ) particularly unsparingly. Nefî's Turkish Divân has been several times printed: two parts at Bâlûk in 1653 and in 1689 at Stamboul. Selections (with ample evidence of 'Abd al-‘Umâd's censorship!) were published by Abu ‘l-Diâwî Tewfîk in 1811 at Stamboul. There are MSS in European collections in London, Leyden and Vienna. Mr. Walther von der Porten now (1933) in Zurich owns two particularly beautiful and old MSS. A short Şâkî-nâme by Nefî is mentioned in the catalogue of MSS. of the Leipzig council library by H. L. Fleischer (p. 5479). On his death, cf. Farâhîzâda, Târîkh-i gûlîhî-i Mâzîrî, i., Stamboul 1652, p. 668, and Na‘îmâ, Târîkh, ii. 489.

Bibliography: In addition to the sources mentioned cf. also Gibb, Ottoman Poets, p. 208 and H. O. P., iii. 252 sqq.; the history of Na‘îmâ (i. 586) and Brulâf Mechemmed Tâhir, ‘Othmûnî Ma‘âllîsî, ii. 447 sq. (according to which parts of his Persian Divân were published in the Khâmîn-i Fûrûn).

(FRANZ BABINGER)
NEFTA, a town in the south of Tunisia, lies 15 miles W. of Tozeur on the isthmus which separates the depressions of the Shott al-Darid and the Shott Gharsa. In the middle ages it was considered one of the principal centres of the land of Kastilya [q.v.] along with al-Hamma, Ta'jayus and Tozeur, which was the capital. It was regarded as a matter of fact replaced the town of Nepte or Aggansel-Nepte. The Roman town must now be buried in the sands close to the present town. We may presume that there still existed in the early centuries of the Muslim period visible traces of the old town. Al-Baki tells us that the town was built of large blocks of stone (gibhr). The author of the Istihkār regards the wall which surrounds it as having been built by the ancients. The dam on the Wad Nefta is made of Roman blocks if it is not actually of Roman work (Tissot).

Memories of the pre-Islamic past were also found among the people of Nefta. Its large population was regarded as consisting for the larger part of descendants of Christians (Yaḥyābī, Istihkār) who must have retained their faith for a considerable period. Ibn Khaldūn (Berkhēr, i. 146, transl. i. 231) remarks on the presence of Christians in the province of Kastilya at the end of the xivth century. The outlying position of this province perhaps explains the survival of a Christian colony, which was exceptional in Barbary. It is moreover worth noting that the attitude of the people of Nefta in religious matters has often been non-conformist. In the tenth century, according to Ibn Hawqal, Khāridjīsm still survived there; in the eleventh century, according to al-Baki, the people of Nefta still preserved the Nefta so that his town is called Little Kīfaa. We shall see that at the present day it is an important centre of maraboutism.

The remoteness of the capital assured Nefta, like other towns of the Djarid, a fairly regular political independence. Like al-Hamma and Tozeur, it was long (probably from the period of anarchy which followed the Hilālī invasion) governed by a council of notables, the president of which held the position of a feudal lord, indeed prince. In the xivth century this office was held by the family of the Banū Khalaf, who claimed to be of Ghassānid Arab origin. The Banū Khalaf and the people of the oasis whom they ruled maintained regular relations with the Sulaimid Arabs of the great tribe of Kūfīn which periodically frequented the country round. A tradition of reciprocal service united these immigrant nomads and settled natives, the nomads defending at need against the attempts of the central power the settled population who in turn assured them their subsistence and the provision of their supplies. The central power when it felt sufficiently strong naturally endeavoured to bring the Djarid under its authority again. Nefta thus underwent alternatively periods of subjection and independence. In 744 (1343) the Hāfizī caliph Abū Bakr sent his son Abū l-ʿAbbās who secured the submission of the people of Nefta by cutting down a part of their palm-trees and putting to death nearly the whole of the Banū Khalaf. A century later (845 = 1441) the caliph Alū ʿOmar ʿOthman, having taken Nefta, sacked it, executed the chiefs of the Banū Khalaf and placed the town under a kālīf of his own choice. If the partial destruction of the palm-trees — a classical procedure — had brought the people of Nefta to terms, it was because these trees supplied the greater part of their income. Very abundant springs (the largest of which rising north of the town forms the Wād Nefta) assured and still assure the life of this splendid oasis. There is at the present day a forest of 273,000 palm-trees there. Nefta was however also a commercial town, a wealthy emporium of the old town Nefta at the gates of the oasis. Before the establishment of the Protectorate trade was mainly carried on at two periods of the year: at the beginning of spring, when the expeditionary force which had come from Tunis to collect taxes could guarantee the security of the routes and at the end of summer when the marauding Arabs had left the country to buy corn in the north.

Consisting of merchants and farmers with the important aristocracy of the Shorfā [q.v.], the population of Nefta (estimated at the present day at over 13,000) is distributed over eight quarters separated from one another by palm-groves. Each of the quarters has its mosque. Al-Baki tells us that Nefta in his day had already a great mosque, several smaller places of worship and many baths. The places of worship belonging to the zāwiya of the various brotherhoods are still characterized by their hemispherical or ovoid domes. The most important zāwiya is that of the Kādiriya, an influential centre of worship. The architecture of the houses, the decoration of their façades with relieves of brick, contribute to give to Nefta an imposing appearance which is also characteristic of Tozeur.

NEHĀWAND. [See Nihāwand.]

NERGISI, properly NERGISI-ZADE MEHRID Efendi, an important and distinctive stylist of the old school, poet and calligrapher. Born about 1000 (1592) in Serajevo (Bosnia Serail) the son of the nīlīd Nergis Āmīd Efendi, he received his education in Constantinople where he attached himself as a pupil to Kāfīzāde Faizi Ābd al-Hāj. On the completion of his studies he served as muṭarrīf and nīlīb in Gabela, Mostar, Yeni Pazar (Novi Pazar), Elbasan, Banyaluka and Monastir. He was on intimate terms with the Shaikh al-īlam Yahyā Efendi. He travelled a great deal. Nergis was appointed imperial historiographer (nābūsī nīmār) when Murād IV set out for Baghdad on the campaign against Enisân. He died on the march at Gebze (Gebze) on the Gulf of İzmīr as the result of a fall from his horse and was buried there (1644 = 1654). The other statement (1646 and Riyāsī) that he was buried in Ayıbāt is not at all probable.
Nergist is a great calligrapher particularly celebrated for his speed in writing. There are works written by him in several libraries.

NESHÊT KHOJŚI, SULDAMAN, an Ottoman poet. He was born in Adrianople in 1148 (1735), the son of the poet Āmist Raś Efendi, then in exile; the latter is known as Masâğîb-Šahbâyri. With his father, who had regained the sultân's favour by writing a şahâl, which met with general approval, he came to Constantinople. He also accompanied his father on a journey to the Hindûz and the young Hâdjîdji, on his way back, joined the Mewlên order in Konya. After his father's death, he devoted himself to study, especially Persian, in order to understand the Mehecnet. In Persian, which he came to love passionately, he attained a high degree of perfection with the result that he had more pupils than any other school in his house in Molla Gürânt, where he taught Persian and expounded the Mehecnet (Mehecnet-Kânsîk). He enjoyed great prestige among the people. Later he attached himself to the Nâşbîhendi Şâhîk Brusewî Emin Efendi. He held a seat and therefore took part in 1882 (1768) in the Russian campaign He could use the sword as well as the pen. Nêshêt died in 1822 (1807) and was buried outside the Top Kapû.

He received the nom de plume of Nêshêt from Djeîlî. Nêshêt was a moderate poet but an admirable teacher. No one would say an unkind word about him and they spoke of his moral excellence, which was otherwise forbidden. He wrote poetry in Turkish and in Persian. Many of his pupils far surpassed him, such as Şâhîb Liede. He left a Divân which was printed in two parts in Bâlîk (1522 = 1836). His Mehecnet-nâmê's (about 20 in the Divân) are distinctive in character; these are poems in which he bestowed epithets upon gifted pupils. In addition he left writings on the Nâşhiye: Tafsil-ı Mehrit; Târîhmat al-İsh; Masâlî al-Amâr va-Mandâl al-Âsir. His Târîh-ı Şahri-i Bâlîk-i Molla Dâmî was printed at Constantinople in 1915. A biography of him by his pupil Pertew Efendi which was continued by Emin Efendi is preserved.

(MENZEL)
NESHRI. Mehemed, an Ottoman historian, with the name of plume (makbûlî) of Neshri; his origin is not definitely known. According to Ewliya Celebi (Siyâhîname, i. 247), 'Ali, Kûkât al-Asghâr, v. 225 sketches the career of a certain Mewlana Mehemed b. Neshri among the 'ulama' of Murad II. According to him, the latter came at an early age to Brusa, studied there at the Sultan Medrese, was appointed muallim there, and died in Brusa. In view of the rarity of the name — indeed it is not otherwise known — it is probable that this Mehemed b. Neshri was the grandfather of the historian. As to the latter we know only that he was a teacher in Brusa and may be assumed that he died there in 1526 (1520).

Neshri wrote under the title LShield-i-nûmâ a history of the world in six parts, of which only the sixth, dealing with Ottoman history, seems to have survived. This, usually called TaHrîZ Ala'i OShî-nûmâ, is obviously a compilation but the question is still unsettled whether Neshri was the compiler or whether he copied a compilation already in existence in order to add it as a sixth part (Shîkm) to his own compilation on the history of the world (cf. P. Wittek, in M. O. G., i. 130, who decides for the second hypothesis). There are suspicious echoes of the work of 'Ashîk Paqsha- Zadak and of Bihishti's Chronicle (cf. F. Babinger, G. O. W., p. 43 sq.) and it should perhaps be investigated whether the madinâ Neshri made a popular version of Bihishti's TaHrîZ which was written in an elevated style, or the stylist Bihishti rewrote the work of Neshri in elegant language. The sixth part of the LShield-i-nûmâ is divided into three sections (Zahâbî: Ewliyâ-Orhun, Saidiyya of Rûm and the House of OShînûmâ. The history of the Ottomans is narrated down to the time of Bâyazid II; the work comes down only to the year 1485, that is, as far as his sources go, of which one went up to 1485. He concludes with a kâtîf in praise of the ruling sultân in the time of the reign of Bâyazid II. Neshri had considerable influence upon and later historiography and is frequently cited as a source, e.g. by 'Ali, Sa'd al-Dîn, Şolâzade and MuneddiHânî-Hasîzi. A full survey of the contents of the TaHrîZ of Neshri is given by Wittek, in M. O. G., i. 77—150. It has so far not been published. There are a number of good manuscripts in existence. e.g. in the Bibliothèque Nationale in Paris (Suppl. Turc, N°. 153, a very handsome MS.) and N°. 1183 of the Charles Schefer collection; and in Vienna, Nat. Bibl., N°. 986 (cf. Flügel, Kat., ii. 209). Specimens of his text have often been published; see a list of them in F. Babinger, G. O. W., p. 39.

NESTORIANS. Smyûd 'Imdân al-Dîn, known as Nesîmi, an early Syrian poet and mystic, believed to have come from Nesîmî near Baghchîd, whence his name Nesîmi. As a place of this name no longer exists, it is not certain whether the lakab should not be derived simply from nesîm "nephrite, breath of wind". That Nesîmi was of Turkman origin seems to be fairly certain although the "Sâyîd" before his name also points to Arab blood. Turkish was as familiar to him as Persian; for he wrote in both languages. Arabic poems are also ascribed to him. Little is known of his life; it fell in the reign of Murad I (1359—1390) of whose biographers tell us. He was at first a member of the school of Shahîk Shibiî (247—334 = 861—945) but about 840 (1401) he became an enthusiastic follower of Fâdî Allah Hurrî [q.v.] with whom he was undoubtedly personally acquainted. He championed the views of his master with ardour and at the risk of his life. The poet Reftî, author (811 = 1408) of the BâgHrî-name (copies in London, cf. Rieu, Cat., p. 164 sqq), and Vienna, cf. Flügel, Kat., p. 401 and 492 (two MSS., the second more complete), and probably a Gendâm-name (in Vienna, cf. Flügel, Kat., i. 720), a certain Shah Khândân who was a dervish mystic is mentioned as his full brother. Nesîmi met a cruel death in 820 (1417—1418) in Aleppo where he was flayed for his heretical poems on a fêtûd of the extremely fanatical muftî. He is considered the greatest poet and preacher of the Hurûfî sect. His work consists of two collections of poems, one of which, the râzor, is in Persian and the other in Turkish. The Turkish Divân consists of 250—300 qalets and about 150 quatrains, but the existing MSS. differ considerably from the printed edition (Stambul 1298 = 1881). No scholarly edition has so far been undertaken. The Persian Divân has not been examined at all. Nesîmi's spiritual influence on the dervish system of the earlier Ottoman empire was considerable. The pro-Âlîd guilds in particular honour Nesîmi as one of their masters, testimony to whose far-reaching influence is found even in the earlier European travellers like Giov. Antonio Menavino (c. 1540; cf. F. Babinger, in H. i. 164, note 1, from which it is evident that Nicolas de Nicolay copied him and therefore cannot be regarded as an independent source, as Gibb, H. O. P., i. 356 sqq. thought) and Sir Paul Ricaut (xvith century; cf. Gibb, H. O. P., i. 357 sqq.). Nesîmi's importance as a poet and mystic can only be estimated and rationalised on the high level of the older Hurûfî texts, among which a most important one is that mentioned but not recognised by W. Pertzsch, Pers. Handschr. Berlin, p. 204 sqq. No. 221 by Sayìd 'Ali al-Alî (d. 822 = 1419) because it might show the connection of the Hurûfîya with the Bekâshîya. Nesîmi's poems were made popular in earlier times, especially by the wandering Kâldar dervishes [q.v.] and were known to every one.

Bibliography: Gibb, H. O. P., i. 343 sqq.; J. V. Hammer, G. O. D., i. 124 sqq.; also the Ottoman biographers of poets who however contribute practically nothing to the life history of Nesîmi. (Franz Babinger)

NESTORIANS. The Christian community (millet) which we know as Nestorians is at the present day better known under the name of ardrat euffâ. Down to the war of 1914 they lived in the central part of Kurdistân which lies between Maysîl [see Maysîl], Wân and Urmiya [see Urmiya]. Their main nucleus was represented by the highland Nestorians, in practice independent, living in the inaccessible regions of the highlands on the middle course of the Great Zâh, Tîyârî, Tîhîma, Tkhub, Dîlîh, Dizz, Uri, Salabekan, Bîzî, etc. Outside of this national centre the Nestorians are
found scattered in enclaves among the Muḥam-
dadan population, Kurd and Persian, of the
adjoining districts: Gawar, Tergawar, Morgawar,
Shāmdīnān [q.v.]; on the plateau of Urmiya (some
sixty villages), in this town itself; finally in the
north at Salamas, Bāshḵalḵa Koshāb and in the
south in Mawṣil and around it (Aḵḵosh etc.).

Geography. It may be useful here to touch on
some of the salient features of the Nestorian country
in the strict sense, which is but very little known.
We mean by this the area on both sides of the
middle course of the Great Zḥ, in the part where
it describes an arc towards the east, between 37°
and 37° 30' N., 43° 30' and 44° E. In Layard
(Nineveh, I) we have a description of the Nestorian
districts on the right bank: the upper Tiyyār with
Cumbi and the greater part of the Lower Tiyyār
with Ashīta and Līzan. We shall give here a
general account of those on the left bank, namely,
going from N. to S. and from W. to E.: Dīz,
Kiu, the eastern part of the Lower Tiyyār, Tal,
Walto, Tḵhūna (with Tḵhūd); further to the east,
Djjūl, Bāz and lastly Iṣṭāzīn. All these districts
lie in the folds of the massif which the Turks
know by the general name of Djjūl Dēgh, but
which for the natives has a number of synonyms.
The massif of Djjūl Dēgh to some degree forms a
curve in the inverse direction of the arc of the
Great Zḥ.

History. The teaching of the Nestorians, who
were very active missionaries, was at one time
very widely disseminated in Asia. An inscription
in Chinese and Syriac was discovered at Singanfu.
At Travancore, in South India, there is still a
Nestorian community in existence. It was under the
Sāsānians that the Nestorians played an
important part. It is true that under Shāhīr II (309–
379), Yazdegird I (399–420) and Bahram V
(420–438) severe persecutions took place for various
reasons, of which the extraordinary spread of the
sect was not the least. On the other hand, pure political reasons, fear of Byzantine influence,
made the Persian government distraught of them.
We know for example, that the Byzantine emperor
demanded from Bahram V and Khusraw I the
free exercise of the Christian religion. Permanent
good relations between the Nestorian Church and the
state therefore date only from the declaration
of independence of the Eastern Syrian church
under a Catholicos of Seleucia with a monophysite
confession of faith. The most flourishing period
of Nestorianism was therefore in the reign of
Hormizd IV and at the beginning of the reign of
Khusraw II, I.e. from 578 to 605 a. n. Under
the influence of Gabriel of Siggara, who had gone
over to the monophysites, Khusraw II began to
persecute the Nestorians; one result was that from
609 to 628, the year of Khusraw's death, the
position of Catholicos remained vacant. Two events
in this period are of special importance to us.
The first was the establishment of Christianity in
Central Kurdistān, where we still find direct and
indirect traces of it at every step: churches,
monasteries, traditions, place-names. In the fifth
century the faith gained ground daily among the
people of the high plateaus of Iran proper and
among the Kurds. Pethion (4. 447) conducted a
very successful missionary campaign in these
mountains, which was crowned by his martyrdom.
Emulating him, Saba, the "teacher of the heathen",
goes among the Kurds, who were sun-worshippers.

His eloquence supported by numerous miracles
won many converts (J. Labourg, Le Christianisme
dans l'Empire Persé sous la Dynastie Sassanide,
Paris 1904). Let us not forget this first Nestorian
advance into Kurdistān. The oldest Nestorian
churches in Central Kurdistān date from the
fourth and fifth centuries. These are Mār Zaya at Djjūl;
Mār Bīšu at Iīl; Mār Sāba (ruins) at Kočānīs;
Māri Memō at Oramār. The monastery and church
of Mār Sāba at Ashīta in Tiyyār were also held
in great veneration but we do not know their date.
Secondly we must note here how relations were
established between the Nestorians and Islām (Tor
Andræ, Der Ursprung des Islams und das Christentum,
Upsala 1926). The part played by the Nestorians at a certain period under the Sāsānians explains the conversion of the Yaman to Nestorianism
at its conquest by the Persian general Wahriz in
597. It was in the Nestorian form that Christianity
penetrated into Arabia in the zone of Persian influence,
i.e. from Hexramawt to Palmrya. We know the
names of six Nestorian bishops on the eastern
shore of Arabia. The first to be founded was that of Omān (acts of Councils 424, 544,
576, 676). A Christian community on the island of Sogdērī used to receive its priests from
the Catholicos of Persia. Relations with Persia were
established by sea. By the time of Muḥammad the
South Arabian church was already Nestorian. We
have definite evidence of this in the fact that
Suyyid, prince of Ndjīrān, came with the bishop
Iṣḥāyīh to Muḥammad to seek favours. Bar Ḥebraeus
who records the incident adds that the Prophet
gave them a document ordering the Arabs to see
that no injury was done to the Christians and to
help them to rebuild their churches. The priests
and monks were to be exempt from the poll-tax,
which besides was not in general to exceed 4 _spacing
for the poor and 12 for the state. According to
another source, the bishop only wrote to Muḥammad.
A passage in a letter of Iṣḥāyīh III (647–648)
shows that the relations between Arabs and
Nestorians were very good. This may be attributed
to the fact that the Christology of the
Nestorians was much more acceptable to the
Muslims than that of the monophysites. Every Nestorian
church in the east possessed its own version of
the letter of protection alleged to have been given
by the Prophet (cf. for example that given by
George Dav. Malech in his History of the Syrian
Nation and the old Evangelical-Apostolic Church
of the East). In any case this letter did not
prevent (see below) the proclamation of the dīnāy ān
from which the Nestorians later suffered so much.
The life of the Nestorion Church during the
period from the Muḥammadan conquest to the
establishment of the Mongols need not detain us
here, as it is part of the religious history of the
Christian sects. We need only mention as particu-
larly concerning Aḏḥabīdžan that the Jacobite
and Nestorian rites were rivals there. Thus from
630 to 1265 we have a line of Jacobite bishops. We
know also (Assenman, Bibl. Or., III/II, 707) of
Nestorian bishoprics both to the east of Lake Urmiya
and also in the country of Lake Wān and Central
Kurdistān. It is not always easy to identify the
names found there. We have good evidence of
the antiquity of Nestorianism in Salamas where
there is in the burial ground of Koshrawā an
epitaph of the viiṭ century recording the name of
Khoṣrau Esḵolāy, "the student Khusraw" (cf,
Under the Mongols we find at first that the Nestorian priests (arkuata) were treated with consideration at the taking of Bagdad (Hammer, Itahan, ii. 152). We know also that Hilâgâ's wife was a Christian: at the taking of Arbil, the see of an important Nestorian metropolitan (Ithâhâbatâu) was also under it, the lances of the Mongol horsemen bore little crosses. Later, in proportion as the Mongols became converted to Islam, the Nestorians became subjected to persecution, and particularly after the invasion of Timûr they sought refuge in the mountains of Kurdistan from whom they in their turn retired to Tigris, and this movement of the sixteenth century when they spread eastwards towards the region of Urmiya and S. E. towards Mawús; Duval (op. cit., p. 9, note 4) gives notes on the different residences of the Nestorian patriarchs after the taking of Bagdad in 1258. It was under the Patriarch Simeon IV in 1450, that an innovation was introduced, making the episcopate hereditary; this produced a schism in the Nestorian community in 1551 when Sulakhâ was elected in opposition to Simeon bar Mama. From this date the term "Chaldaens" henceforth applied to these Nestorians who recognised the supremacy of Rome, while English and American writers speak constantly of the "Assyrians" and lastly the Nestorians themselves like to be called Sûrâlî. In Russian the name used was aiorti. In the second half of the sixteenth century, the bishop Mâr Ýusîf recognised the authority of Rome and received the title of Catholic Patriarch of Babylon and Chaldea, while one of his near relatives, elected patriarch of the Nestorians and remaining faithful to this rite, was enthroned under the name, henceforth hereditary, of Mâr Shîmūn and at once set out for the mountains of Central Kurdistan, where his residence was sometimes at Kûbânis and sometimes at Džïlâmerk. Thus originated this quasi-autonomous community of Nestorian highlanders in which an ecclesiastical authority exists alongside of a purely tribal organisation. Indeed while the supreme power is in the hands of a hereditary Mâr Shîmūn (passing from uncle to nephew) having the title of patriarka d-madenkha, who was consecrated patriarch by the Metropolitan Mâr Hânînî, living in Dera Resh at Shâmândîn, each tribe (shakha) had alongside of a bishop (âdshuna), the ecclesiastical chief, a màâlîk or lay chief, distinguished by peacock feathers fixed on his conical felt hat, a characteristic feature of dress. The custom of the men arranging their hair in little pigtails may also be mentioned. The màâlîk had power to declare war on another tribe and to conclude pacts of alliance.

The tribal organisation and mode of life of these highlanders have caused some writers to give them the name of "Christian Kurds" (Garzoni, Léch.)

A. Wigram in the introduction to his History of the Assyrian Church thinks that some at least of the Christians of Hakkârî [cf. Kurîn] are of Kurd origin although they deny it vigorously. On the other hand, there are Kurd tribes who remember that they were once Christians. Other writers (Grant), led astray perhaps by the theocratic aspect of Nestorian society, the names and certain Biblical traditions, see in them evidence in support of the hypothesis that the Nestorians are the descendants of the ten tribes of Israel. We know however which actually are the Jewish communities in Kurdistan, quite distinct from the Christian groups in dress and customs. Only their language is a Neo-Aramaic dialect. — The Highland Nestorians annually pay Mâr Shîmūn a contribution called rîsh d-shîta. The arrears due to the Turkish treasury were simply left to mount up. Cuinet (p. 749—751), speaking of the autonomous tribes, gives the total of arrears as already 160,000 £ in his time. There was besides somewhere in the Nestorian country (cf. Lalayan, who gives a photograph) a "rock of the collector of taxes" marking the limit beyond which this official never risked going. — The relations of the Nestorian hillmen with their Kurdish neighbours were no worse than those of the other patriarch's subjects. The interest of the tribe came before every consideration of religion, so that ad hoc alliances could be concluded between the Kurds and the Nestorians for joint action against their co-religionists.

"The grass grows quickly over the blood spilt in a just battle". A kind of fair play is therefore the ruling principle of the inter-tribal code. There are, it is true, exceptional cases. The pan-Islamism of ʻAbd al-Hamîd had his unpleasant repercussions in Kurdistan; the Turkish officials appointed there after the revolution of 1907 only complicated the position still further. Since the affairs of the Nestorians and Kurds were conducted on a tribal basis, we saw that the Nestorians themselves were open to Kurds and Nestorians indifferently, who were especially the offices of Shaikh Salim of Barzan known as the "Christian Shaikh", who was executed by the Turks in Mawús at the beginning of the War.

The Nestorians and the Dîjîhâd. Even before the official outbreak of hostilities between Russia and Turkey, in August 1914, the patriarch Mâr Shîmûn was invited by Džewdet Bey, the sâli of Wân, to come to see him. Presents were lavished upon him and assurances given that all the grievances of the Nestorians would be redressed. As a result of the proclamation of the dîjîhâd however, the atmosphere became heavy in Kurdistan. In November, Turkey entered the war and the per-scription of the Nestorians of Albâk (Bash-kala) began at once. In Persia fighting broke out between the Christians of the Urmiya region and the Bekûbîî Kurds. At the end of 1914, the Russians evacuated Urmiya and Salamas. Those Christians who did not save themselves in time by going to Džulfa perished in large numbers. As to the Nestorians of the highlands, although the massacres and deportations of Armenians were at their height, the Turks endeavoured to attach the Patriarch to their side and to secure the loyalty of the Nestorians. Complete educational freedom, good roads, subsidies and grants to the Patriarch and to the bishops and màâlîks, all these things were promised in vain. Mâr Shîmûn retired to the particularly inaccessible district of Dîz from which the Patriarch's personal bodyguard had always been recruited. About this time an "accidental" shot killed Mâr Shîmûn's uncle Nestor, who was, it was said, urging a more conciliatory policy towards the Turks. After an interview, which decided matters, with the Russian commander at Muhândîjî, near Salamas, the Patriarch on May 10, 1915, issued the order for mobilisation. The fortune of war resulted in the Nestorians, at first encouraged by the Russian successes in Wân and Urmiya at the beginning
of the summer, being left to their own resources. To be brief, with the help of the Barrâni Kurds, the Turks sacked Tskhuma, Tzyrâ, Djilli and Baz. We may note especially the destruction of the irri-
gation canals as was done in Sargon’s campaign in the same region. The famous castle of Mâr Zaia at Djilli, of the fourth century, was
desecrated for the first time in its long history. Interesting ex voto, Chinese vases, brought there in early days by missionaries, disappeared. The inviolability enjoyed by Mâr Zaia is said to have been due to a letter guaranteeing it written on a piece of cloth, attributed to the Prophet (cf. above). After this disaster the Nekestrians withdrew to their summer pastures, at a height of 10,000 feet. This trial was a painful one. Harassed by the Kurds, with insufficient food and no salt, the Nekestrians nevertheless held out. The Patriarch, taking refuge on the plateau of Shina, endured privations which were even harder for him who could not eat meat (even the mother of the patriarch appears not to eat meat). The Nekestian, rav’dut of Gavar were massacred at this time under the orders of Närî Bey. Finally in October 1915 a skillful retreat was carried through. The Kurds were actually holding the approaches to the Persian frontier. A detour was effected towards Allâkh in the north via Korranis (Berwar) and the bridges were burned after crossing the Great Zâb. The Kurds succeeded however in threatening the retreat by using the natural bridge of Hezkelan, but were driven back by Major Kohne. The Nârî Darseh, the Kurdish brave is destined to become legendary. In the month of November the exodus of the Nekestrians was completed and they were safe within the Russian lines at Salamas. The Russian authorities organised assistance for the refugees, who to the number of 40,000 were settled in the Persian districts of Khî Salamas and Urmîya where they remained till 1918. After the departure of the Russians as a result of the revolution, the Nekestrians formed detachments with the help of Russian munitions and instructors and opposed the advance into Aghardâbdian of the Turks led by ‘Alî Isâm Pâshî. Towards the end of the summer of 1918, however, when their munitions being exhausted, the Nekestrians left the region of Urmîya via Salâme-Sâin Kala-Bidjâr for Hamadân where the English forces then were. From there the refugees were sent to the concentration camp of Bakoula near Bagîdâd. The Patriarch was no longer alive. Led into an ambush by the Shâkh Kürd chief Ismâ’îl Aghâ Simkâ, Mâr Shîm’ân was treacherously assassinated at Kohne Shêhr on March 4, 1918.

The Nekestarian community is now living in scattered groups in the ‘Irâk, Persia, Syria etc. The post-war history of the Nekestrians is closely bound up with the problem of the vilayet of Mawîlî, finally attached to the ‘Irâk. The line adopted for the northern boundary of the vilayet in question, however, leaves the Nekestian districts to Turkey and it is very unlikely that they can return there. The martial qualities of the Nekestrians were used by the British authorities who raised four battalions from them, which were very useful especially at the beginning of their establishment in the ‘Irâk.

In conclusion a few words should be said about the Nekestians of the region of Lake Urmîya. Those of Salamas believe (Duval, op. cit.) that they are aborigines converted in the early centuries of our era. In 1883 there were however only fifteen Nekestian families, the remaining 3,000 having become Roman Catholics under the bishop Mâr Ishaqî (d. 1798). As to the Nekestians of the plateau of Urmîya, they preserve traditional Nestorian and Isma’îlian elements, dropping back from the mountains five or six centuries ago, which corresponds very closely to historic fact. The Nekestians of Urmîya have been the object of lively competition among the missions, of which the Presbyterian was first established (1832). The Roman Catholic Lazarists followed in 1863 and finally an Orthodox mission, the brotherhood of Cyril and Methodius, began work in 1905. At one time shortly before the War, there were also Anglican and Catherian missions. The work of the missions has made quite appreciable modifications not only in the beliefs of this ancient Christian community but also in its life and customs. Although little information has been preserved on the subject, there is reason to believe that the Nekestians of Urmîya also lived under the authority of mûllâs, who were recognised by the Shâhs as the official representatives of the community. We have seen a number of firmâns preserved in the family of Dr. Johanna Malik. They were administered according to the old collection of canon law called Sunhados of which Shamsâly Yi’sîl Kaleta published a new edition in 1916 at the American Mission Press.

This is probably only one of the versions of the Syriac, which in its popular edition with its wealth of learning. In the eyes of the Muslim authorities the Nekestians were zimmî (dhimmî; cf. dhimmâ) and their position was regulated by Muhammedan law. With the coming of the missionaries, the position gradually changed. The mûllâs were replaced by mîllet bâghi, each dependent on his respective mission. The Persian government had to appoint a serfrest, an official whose special duty was to deal with foreigners and those under their protection. During the War a national council called motovaw was organised, which dealt not only with the defence of Christian interests before the local authorities but, especially after the addition to their number of the Nekestian families, acquired a certain political character but later disappeared in the general débâcle. — In conclusion it should be mentioned that in the present article we have confined ourselves mainly to the Nekestian highlanders of Central Kurdistân. The historical phenomenon that we have been led to study in this connection is far from being so limited and simple, for it demands not only consideration of linguistic problems, the ramifications of which go back to a remote past through Aramaic, but also of facts of ethnology even less known which are implied in the idea of Nestorianism. Finally the geographical area is also enormous if we remember for which their the epigraphic material from Russian Central Asia.

NESTORIANS -- NEWŽIŽADE 'ÂṬÂĪ

NEWĪ, YAHUN R. Pier 'ÂLI R. NAŠŪH, an Ottoman theologian and poet, with the nom de plume (wâqîqâl) of Newī, was born in Malghara (Romelia), the son of Shaikh Pier 'Âli in 940 (1533). Up to his tenth year he was taught by his learned father and then became a pupil of Kâramâni-zade Mehemmed Efendi. His fellow pupils were Bâkî, the poet [q. v.] and Sâd-d al-Din, the famous historian [q. v.]. He was an intimate friend of the former. He joined the 'Ulêma', became muddariz of Gallipoli in 973 (1565) and after filling several other offices became a teacher in the Madrese of Mihr u-Mâth Sultan. In 998 (1598) he was appointed Kâfi of Baghdâd but before he could take up office Sultan Murûd III appointed him tutor to his son Mustafa and to the princes Bâyazid, Othmân and 'Abd Allah. When after Murûd III's death (1000 = 1595) the usual slaughter of the princes deprived of all the charges, he retired completely from public life and lived on a pension granted him by the new sultan. He died at Stambul in Dhû 'l-Ka'dâ 177 (June 1599) and was buried in the court of the Shâhî, Wafà mosque. His son, Newezâde 'Âṭāī [q. v.].

Newī was a man of great learning and his encyclopedic knowledge was most clearly revealed in the best known of his works, the Nasâiî al-Futun wa-Mahasîn al-Mu'ttin, in which he surveyed the twelve most important branches of learning; on it cf. [J. v. Hammer] Encyklopädische Übersicht der Wissenschaften des Orientis, part i. (Leipzig 1804), p. 22 sqq. and the German translation of the story of Shâdân and Bêghîr, ibid., p. 24 sqq. which forms the concluding section of this work. Birzâl Mehemmed Tâhir gives a list of other prose works in his Ofganim âl Mislûflük'ser, ii. 437 sqq. with references to the libraries in which they were kept. In poetry he imitated the style of his contemporary Bâkî without however reaching his level. His poems which were collected in a scarce Dhuâin (MS. in Stambul, Hamidiye library), lack ease and betray too readily the learned author who frequently makes it work difficult to understand with unusual words and obscure allusions. He tries his skill in different forms of verse, the kâsad, gharel, and metherwâl, without however attaining popularity in any one of them. His fame as a poet is completely overshadowed by that of his contemporary and friend Bâkî. Newī's high position as an author he owes to his learned work, particularly the already mentioned encyclopedia, which was very popular and is evident from the numerous MSS. still in existence in European collections (e.g. Berlin, Bologna, Dresden, Leyden, London [3 copies], Upsala, Vienna). A Sülâmînâmêne by him (Paris, Bib. Nat., cod. reg. 44, Cat. No. 308 and F. Babinger, G. O. W., p. 76) does not seem to be mentioned by his biographers. His son Newezâde 'Âṭāī wrote a very full life of him (p. 415-27 of the dha'il to Tâshkoprûzâde's work).

Bibliography: J. v. Hammer, G. O. D., iii. 105; Gibb, H. O. P., iii. 171 sqq.; Hâdîlî Khalîfa, Fedelke, i. 120 sqq., also the biographies of poets by Khânî-zade and 'Ahdî.

NEWŽIŽADE 'ÂṬÂĪ, (FRANZ BARTIGER) an Ottoman author and poet, better known as 'Âṭāī with the nom de plume Newezâde, i.e. son of Newî, was born in 971 (1565) in Stambul, as the son of the celebrated Newî [q. v.]. After the death of his father from whom he received his early education, he placed himself under Kâfaal Fâlî Allah Efendi, the compiler of an anthology, and later under Akhi-zade 'Ali al-Halim Efendi. He then joined the 'Ulêma' but did not attain any of the higher offices. After becoming a mutâlimî, he was appointed a judge and served in the capacity in a number of Rumelian towns like Lohça, Silistria, Rusçuk, Timovo, Monastir (Bitofî),
Trikkala and Çakib (Skopje). Soon after his retirement from this sphere of activity he died in 1634 (1051) in his native city of Stambul; here he was buried beside his father.

İğdı is best known for his continuation (当之无愧) in Turkish of Taşkıpuzâde’s Şahanshâh-i Mihristânî. This work, entitled Hâdi’i al-Haşât’î fi Tâmilat al-Shâhâsche in, contains, in addition to a supplement to the Şahâsche in which is placed a given to many scholars of the time of Sulaimân and Selim II, overlooked by Taşkıpuzâde, the biographies of Ottoman ‘Ulama’ and dervish shaikhs down to the reign of Murad IV (on the contents see F. Babinger, G. O. W., p. 172). Death prevented the continuing author from completing his work, which was taken up by others. İğdı’s book contains 999 biographies. It is written in a very artificial style permuted with Persian, which was popular at the time. İğdı also enjoyed a great reputation as a poet. He wrote a quintet (Khamia) on the contents of which see Gibb, H. O. P., iii. 234 sqq. The Hâdi’i al-Haşât’î, manuscripts of which are also common (cf. F. Babinger, G. O. W., p. 172) to which may now be added Stambul, Lâlî İsmâ’îl, №. 339, was printed at Stambul (157 + 771 pp. 2°) in 1268. The poetry still awaits a printer. İğdı’s significance as a prose writer is much greater than as a poet. Bibliography: Cf. F. Babinger, G. O. W., p. 171 sqq. and the works there given, especially, J. Babinger, O. D. O., 4175, Gibb, H. O. P., iii. 232 sqq.; Brockelmann, G. A. L., ii. 427 (where he is wrongly, according to F. Wüstenfeld, G. A. W., called Muhammed): Hâdidî Khalifa, reddakte, ii 168; Rüdâ, Tezkerê, p. 70 sq.; Muhibî, Ezatü’l, Cairo 1281, iv. 263.

(FRANZ BABINGER)

NEWRES, the name of two Ottoman poets.

1. Abd al-Razzâk known as Newres, or more accurately Newres-i Kadim, “Newres the Elder,” to distinguish him from Othman Newres [q. v.], came from Kırkük (near Bagdad) and was probably of Kurdish origin. He moved from Karâbâh to Istanbul at an early age to prosecute his studies. Here he became a nûderis but in the year 1159 (1746) entered upon a legal career. According to the Sâtî-i ‘â’îmestî, he held the office of şâbî in Sarajevo and Kutahya. His tongue which found particular expression in daring and malicious chronograms (tavârîk) earned him banishment to Kethimmûn (Crete) along with the poet Hashmet and then to Brussa; he was later, according to Wâsîf (Turkic, p. 211), sent back to Kutahya. In any case he died in Brussa in Shawwal 1175 (May 1764) of a broken heart and was buried in the cemetery opposite the entrance to the mosque of Fatih. From Sultan Mahomed the founder of the order of Djalwata, Abd-al-Razzâk Newres composed a Divân in Persian and Turkish (pr. Stambul 1290 and we believe 1304), and also a history of the war with Nâdir Shâh in 1143 (1730) in which he took part on the staff of Hekim-Ogлу ‘Ali Paşa. The little book called Tebrizî-i Hekim-Ogлу ‘Ali Paşa’ is written in ornate language and is of no historical value. The fair copy in the author’s hand is preserved in the Berlin Staatsbibliothek (Cod. Or. 8° 2186). Newres also enjoyed the reputation of being a distinguished mujaddîd. Excerpts from his Divân are given by J. v. Hammer in his G.O.R., ix. 643 sq. His Divân is called Mabâli’î

al-Mihkâm which gives the year 1172 (1758) for its completion (cf. however a similarly titled work in Vienna: Flügel, Cat., iii. 486, N°. 1991).

Bibliography: Cf. F. Babinger, G. O. W., p. 204 sq. with further references. The promised very full bio-bibliography of Newres Efendi by Ibn al-Amin Mahmûd Kemal Bey has not yet appeared (1933).

2. Othman, called Newres or, to distinguish him from his older namesake, Newres-i Djjedid, came from Chios. He held several military posts in the capital and died there in 1293 (1876) in retirement. He is buried in the Karâbâh Ahmed cemetery in Skutari. His collected poems have been twice printed, Stambul 1257 and Stambul 1290 (by Vüsuf Kâmil Paşa) (Divân-i Othman Newres). In 1302 there was published at the suggestion of Abd al-Râhîm Nâdir Paşa in Stambul under the title Eshker-i Nâdir specimens of his prose and verse. A Turkish translation of the Galestân by him exists in MS. Othman Newres had a very thorough command of the three languages of Islam and wrote poetry in all three. His work however is hardly of permanent value.

(FRANZ BABINGER)

NICEA. [See IZNIK.]

NIEBLA (Ar. Labâl), a little town in the S.W. of Spain, 45 miles W. of Seville on the right bank of the Guadalquivir. No one has doubted that it is less than 2,000 inhabitants and is in the judicial district of Moguer, in the province of Huelva. It is the ancient Iliopa. In the Visigothic period it was the see of a bishop, in the province of the Muslim period it enjoyed considerable prosperity It formed part of the district of al-Sharâf (Ajarafe) and was also called al-Hamrat, “the red,” no doubt from the colour of its ramparts and of the water of its river. It was particularly an olive-growing centre. The gentians was also cultivated there and deposits of alum and of sulphate of iron were worked.

Niebla was taken in 713 (149) by Abd al-Âzîz, son of Mâss b. Nuṣîr [q. v.]. In 766 (149) it was the starting point of the rising of Sa’d al-Mâṣṭarî al-Yahûbî who seized Seville but was soon defeated and slain by the troops of Abd al-Râhîm 1. The town in 30 (54) suffered from a visit of the Normans (Maghirs) [q. v.]. In 859 (157) it rebelled against the Umayyads: it was however retaken by force of arms in 304 (917) by order of Abd al-Râhîm al-Nâṣîr by his general Badr b. Ahmad. At the time of the fall of the Caliphate, it became the capital of a little kingdom formed in 1024 (414) by Abu ’l-Abâbîs Ahmad b. Yahyâ al-Yahûbî, who took the Îlahî of Ta’dj al-Dawla, which also comprised the lands of Huelva and of Djabal al-’Uyûn (Gibraltar). This prince died in 433 (1041) and was succeeded by his brother Muhammad ’izz al-Dawla. The Abâbîd sovereign of Seville al-Mu’tâdîd [q. v.] soon displayed his desire to annex the principality of Niebla and made several raids into it, ’izz al-Dawla had to abandon his capital and take refuge with the lord of Cordova Abu ’l-Walid Muhammad b. Djâwar in 443 (1051) leaving the power to his nephew Abû Naṣr Fâth b. Khâlîfah. Yahyâ al-Yahûbî Nâṣîr al-Dawla, who at first bought peace from al-Mu’tâdîd by paying him tribute but was forced two years later in 445 (1053) to abandon his
principally to the ruler of Seville and join his uncle in Cordova. Niebla passed a little later to the Almoravids [q.v.]. When the power of this dynasty was beginning to collapse in Spain, Yusuf b. Ahmad al-Birrawshi (or al-Barruzzi), who in 549 (1154) finally submitted to the Almohad general Barrāz al-Mašūfī and went five years later to Sala on the summons of 'Abd al-Mu'in. A few years later Yusuf al-Birrawshi, maintained as governor of Niebla by the Almohads, rebelled and the town was retaken in 549 (1154) by the governor of Seville and of Cordova, Yahyā b. Yaghmur, who executed 8,000 of the inhabitants. This massacre was condemned by 'Abd al-Mu'in who had Yahyā brought in chains to Morocco and then exiled to Tlemcen.

Niebla remained under Muslim rule until 1257, when it was taken after six months siege by Alfonso X and became finally Christian.

(E. LÉVI-PROVENÇAL)

**NIFFAR (Nuffar)**, a ruined site in southern Ṣirāf, in 32° 7' N. Lat. and 45° 10' East Long. (Greenew.), now in the ḏūlā of Ṣafak in the ḏūlā al-Dīnahī. Niebla, it corresponds, as J. O'Callaghan pointed out, to the first point out, to the town of Nippur well known from cuneiform inscriptions, one of the oldest and most important places in Babylonia. Its great importance was not political but religious, as the temple of the chief deity of the town formed a kind of central sanctuary or place of pilgrimage for the whole of Babylonia, to which almost all the important sovereigns of the period before Hammurapi, and Hammurapi himself, as well as the Kassite kings and many later rulers like Assurbanipal, dedicated gifts.

Nippur's period of greatest prosperity lay in the millenia before Hammurapi; but it remained an important city down to the last Babylonian and Achaemenid rulers and an important commercial centre with a very mixed population which gave it a somewhat cosmopolitan character. In the fifth century B.C., under Artaxerxes I and Darius II, we find in it an important business and banking house, the firm of Muraššīlu & Sons to whose activities many documents still bear eloquent testimony. Nippur still continued to flourish under the Seleucids and Arsacids as buildings of this period show, quite apart from the numismatic evidence. It is not directly mentioned by Greek or Roman writers, but the name of the district of Nippur may be concealed in nipparēnu, the name of a stone which Pliny (*Nat. Hist.*, xxxvi. 10, 172) says is of Persian (i.e. presumably Parthian?) origin.

In the Babylonian Talmud Nippur appears as Naphur (נֶפֶר) and Nuphar (נֵפַר); the latter form corresponds to that which is now most usual: Nuffar. In the passage in question in the Babylonian Talmud (†Yoma, 10*) we read: Kalneh (קאַלְנֶה) is Naphur (Nuphar) Nippur (נֶפֶר); the qualification Nippur (נֶפֶר) is obscure; Daiecher's explanation in O.L. *Z., xi. 529* as Nimb falls to the ground as the name of this deity is now known to read Ninurrta. The basis of the equation Kalneh (Gen. x. 10) = Nippur is not yet satisfactory. A Babylonian place-name Kalnē has so far not been found in cuneiform inscriptions.

Nippur was also an inhabited place in Muslim times; for example we find it mentioned in 38 (659) on the occasion of a rising against the caliph Ali (Tabari, ed. de Goeje, i. 3423, 3424) as well as during the Khāridji troubles (cf. cit., ii. 929, p.); also cf. Yafūk, ed. Wustenfeld, iv. 275, 798 and Ibn al-Fahš, in *D.G.A.*, v. 210. In the later middle ages we find Nifār mentioned as a *Nestorian bishopric* in the chronicles of the Patriarchs (Abūḥār Fārīška ḫūṣr al-Mazāği, ed. Gymondi, Rome 1897 and 1899) of 'Amr b. Māṭa' (p. 83, p. 95, a) and of Māṭ b. Sulaimān, in the period 900—1058 A.D. (cf. also Sachau, in *Abb. Fr. Aa.*, W., 1909, No. 1, p. 31). When the town was abandoned by its inhabitants and became completely desolate we do not know. It probably was the result of one of the Mongol invasions, that under Hulagu or that under Timur, which dealt their death-blow to so many flourishing places in Mesopotamia.

The ruins of Niffar are next to those of Babylon and al-Warks' [q.v.] the most extensive in the whole of the Babylonian plain; they cover an area of almost 180 acres. The first European to visit them was W. K. Loftus who spent some time here in 1850 and came back again in 1854 (see the *Bibl.* for his report). A year later than Loftus, in Jan. 1851, Layard was in Nifār and spent two weeks digging but with little success because Layard, paying too little attention to the difference between Assyrian and Babylonian mounds, did not dig deep enough and only turned over the cemetery of a person who had settled here only in the last centuries of antiquity, under the Assacids.

The University of Pennsylvania (Philadelphia) was the first to undertake a methodical investigation of the ruins and in four expeditions from 1888 to 1900 (1888—1889, 1889—1890, 1893—1896 and 1895—1900) under the leadership of Peters, Haynes and Hilprecht carried out excavations on a large scale. On the results of this intensive work see Hilprecht's full report in *Explorations et.*, (see *Bibl.*), p. 289 sq.

On the topography of Niffar see, in addition to the descriptions by Loftus and Layard, especially Peters, *op. cit.*, ii. 104 sq.; Hilprecht, *op. cit.*, p. 540 sq. and notably Fisher, *op. cit.*; cf. alo King, *op. cit.*, p. 85—86. The American expedition also found an ancient Babylonian plan of Nippur which Hilprecht, *op. cit.*, p. 518 (re-produced in Zehnpfund, *op. cit.*, p. 66) published; more distinct in Fisher, *op. cit.*, pl. i. This plan has been since 1926 in the possession of the University of Jena with the rest of Hilprecht's private Assyriological collection; see Zimmer, in *ZA.*, xxxvii. 224.
The sight of the ruins is very impressive; they rise like a range of hills in close formation from 30—60 feet above the plain, culminating in the cone of Bint al-Amir 95 feet high, the zigurrat of the chief temple.

The most imposing part of the whole eastern quarter is the zigurrat of Im-Kharsag, still 95 feet high, which the inhabitants for some reason now forgotten call Bint al-Amir, the "prince's daughter". The triangular mound south of the sanctuary proper marks the site of the great temple library, about a twelfth of which, yielding some 23,000 cuneiform tablets and fragments, has been excavated. The western half of the inner city contains the residential quarters with the bazaars, business houses and private dwellings. Its history is still obscure as in the course of centuries it was repeatedly resettled. In the Parthian period a large cemetery extended over a considerable part of the clay buildings which had fallen to pieces there.

In addition to the great Enlil temple E-kur there were a number of other highly venerated temples in Nippur.

According to the cuneiform inscriptions, Nippur must have in ancient times lain on the Euphrates itself or at least in its immediate vicinity (cf. e.g. O. L. Z., XX, 142, note 1); this fact forces us to the assumption that this river in the Babylonian period must have taken a much more easterly course below Babylon than in the middle ages and present day. The inner city is divided into two parts by a canal now dry but once navigable, which the natives call Shatt al-Nil. This was an important watercourse which, according to Hilprecht, was in many places at one time 20—25 feet deep and 150—190 feet broad and which the modern inhabitants rightly describe not as a mere nahr (stream, canal) but as ghab (river).

According to the mediaeval Arab geographers: Nahr al-Nil was the name of one of the canals led off from the Euphrates to the Tigris. It still survives in its entirety; as in the middle ages, it starts from Babylon and flows a little above 32° 30' N. Lat. in an almost straight line eastwards. The geographer Suhrâb (who used to be called Ibn Serapion; cf. i.v., p. 1130a) writing in the fourth (tenth) century observes that this canal bears the name Nahr al-Nil only after passing the town of al-Nil (the modern ruins Nilîye). At the present day it is called only Shatt al-Nil throughout its course. South east of Nilîye a side canal, now dry, branches off to the south for which, not only in its lower part where it flows by the ruins of Niffar but along its whole extent, the name Shatt al-Nil, the same as that of the main canal, was and is usual. Yâkît however says (iv. 77, 798) that Niffar lay not on the Nahr al-Nil but on the bank of the Nahr al-Nars, a canal dug, it is said, by the Sassanian king Narsê B. Bahram (293—303 A.D.) which leaves the Euphrates at al-Ilîha a little below the Nahr al-Nil and turns southeastward. It was presumably connected by a branch with the southern small canal of the same name which branches off from the Nahr al-Nil, so that the occurrence of the two names Nahr al-Nil and Nahr al-Nars for the river in Niffar is explained. It should be noted also that the nomenclature of the Babylonian canals changed several times already in the middle ages. On the Nahr al-Nil or Shatt al-Nil and Nahr al-Nars see Loftus, op. cit., p. 238; G. Le Strange, in J. R. A. S., 1895, S. 256, 260—261 and do., in The Lands of the East, Caliphathe, Cambridge 1905, p. 72—74; Streck, Babylonien nach den arabisch. Geographen, i. (Leiden 1900), p. 30 sq.; Hersfeld, in Sarie-Hersfeld, Archäolog. Reise im Euphrat- und Tigrisgebiet, i. (Berlin 1911), p. 234 sq.; Hasîn al-Sûdâl, Djuhrâftiyât al-Irâk al-haditha, Baghdâd 1927, p. 34, 35.

Below Niffar the Shatt al-Nil loses itself in the swamps of Hôr al-'Afek. The Shatt al-Kât very probably forms its southern continuation.

If the "Euphrates of Nippur", as it is called in the cuneiform inscriptions, really represents the old course of this river, and not simply a branch of it, the modern Shatt al-Nil with its continuation, the Shatt al-Kât, probably corresponds to the bed of the Euphrates of Babylonian times. On the great changes in their courses which the rivers of Mesopotamia have undergone, cf. especially Fisher, op. cit., p. 2 sg. Hilprecht, who is followed by others like Zehnpfund, Unger etc., thinks that the name of the canal, Kabaru (= the large) found in later texts from Nippur, corresponds to the "Euphrates of Nippur" of the older texts. He further compares it with the Kebar (72) of Ezekiel (i. 1 etc.); see Hilprecht, Explorations, p. 412 and also in Der Bbl-Tempel in Nippur, p. 10. The identification of the Kabaru with the old bed of the Euphrates, i.e. the modern Shatt al-Nil, I do not consider proved; the Kabaru may also be a canal in the neighbourhood of Nippur.

West and Southwest of Niffar lies the very extensive Hôr al-'Afek (on the meaning of Hôr see iii., p. 147b).

This mystic, whom the principal Sufi biographers fail to mention, flourished in the ivth (9th) century, and, according to Hādī al-Khalīfa, died in the year 354 (965). His nisba refers to the town of Niffar (q.v.) in Mesopotamia, and one MS. of his works assigns it that he was sitting in his residence at Niffar and Ni'il that he committed his thoughts to writing. Niffar's literary reliquiae consist of two books, the Masāwīf and the Makātabāt, together with a number of fragments. It is improbable that Niffar himself was responsible for the editing of his writings; according to his principal commentator, 'Affī al-Dīn al-Tīlmāsī (d. 690 = 1291), either his son or his grandson collected his scattered writings and published them according to his own ordering. The Masāwīf consists of 77 sections of varying length, made up for the most part of brief aphorisms touching on the main aspects of Sufi teaching, and purporting to be inspired and dictated by God; the Makātabāt is similar in content, and is divided into 56 sections. Niffar's most characteristic contribution to mysticism is his doctrine of wakifa. This term, which would appear to be used by him in a peculiarly technical sense, implies a condition in the mystic which is accompanied by direct divine audition, and perhaps even automatic script. Masāwīf is the name given to the state of the mystic in which wakifa is classed higher than mar'aifa, and mar'aifa is above šim. The wakifa is nearer to God than any other thing, and almost transcends the condition of bashāriya, being alone separated from all limitation. Niffar definitely maintains the possibility of seeing God in this world; for he says that vision (ru'yā) in this world is a preparation for vision in the world to come. In several places Niffar distinctly touches on the theory of the Mahdī, and indeed appears to identify himself with the Mahdī, if these passages are genuine; and this claim is seemingly in the mind of Žābdī, when he describes Niffar as lābī al-dā'wa wa l-ḍa'āsī. Tīlmāsī however interprets these passages in an esoteric and highly mystical sense; and it does not accord with the general character of the author, that he should make for himself such extravagant claims. Niffar shows himself in his writings to be a fearless and original thinker. While undeniably influenced by his great predecessor al-Hallāj, he acknowledges no obligations, and has a thorough conviction of the reality of his own mission.

NIĞDE, a town in the Turkish sandjak (now wilâyet) of the same name in a fertile trough on the east edge of the Central Anatolian steppe. The town is first mentioned in the Turkish period; previously the chief town of the district was Tyana (A. Tawana) but it is probable that the striking hill which commands the important road from Ciliać to Kaşarîye at its entrance to a pass over the mountains had a fortified settlement upon it in the pre-Turkish period. The old place-name may be the origin of the modern one, an older form of which was Nukde (Yăkût, ed. Wüstenfeld, iv. 811: Nakidah; Ibn Bibi and others, also in inscriptions down to the xvith century: Nakida; the modern form NİKiçe [in the new Turkish script: Nığde] is already found in Hamd Allāh Muştafawī, Nizhat, in G. M. S., xxii/1, 99). In this particular district some villages have retained their ancient names (Andaval-Anbadalis, Melegop-Malakopais) and considerable numbers of descendants of the original Christian inhabitants survived until quite recently (R. M. Dawkins, Modern Greek in Asia Minor, Cambridge 1916, p. 16 sqq.).

Nigde is first mentioned in connection with the partition of Seldjuk territory among the sons of Kılıç Arslan I (965 = 1189) when it was allotted as an independent lordship to Arslan Şah (Ibn Bibi, ed. Houtsma, Rec., iv. 11). Nigde had perhaps previously belonged to the Danishmandids but Ewliya, ii. 819, cannot be taken as evidence of this. Kaftaʻüs I granted Nigde to the Emir-i Ağhr Zain al-Dīn Bayhara (Ibn Bibi, p. 44) who shortly before his death built the important mosque of 'Ali al-Dīn here (620 = 1223). In the xith century, the town was of importance; it is divided into 45 wards. In the great military districts of the Seldjük, under Kılıç Arslan IV, Ibn at-Khattr Masʻūd held this office. At first an ally of the all powerful Muʿin al-Dīn Perwāne, with whom he killed the sultan in 1264, he endeavoured to remove the young Kān Khusraw III out of Perwāne's influence and brought him to Nigde (1276). But the help for which he had appealed to Egypt came too late and he succumbed to Perwāne who was supported by the Mongols (Ibn Bibi; Well, Gesch. d. Chalifén, iv. 80 sqq.). He built a well in Nigde opposite the 'Alī al-Dīn mosque (666 = 1268). Under the Ikhāns there ruled in their name, or in the name of their Anatolian governor Eret, Sunkur Agha who is known only from inscriptions and is, it is remarkable to note, not mentioned by Ibn Battūta who visited Nigde about 1333 (ed. De ferency-Sanguinetti, ii. 286); he made himself independent after the death of Abū Sār. He gave the town a large mosque on the wall of which facing the Bezistân is a Persian inscription, in which he grants Christian foreigners exemption from dzeye and kharāṣ (736 = 1335). The Seldjük princess Khudawand hātmīn buried in 732 (1332) in her splendid turbe built in 712 (1312) on the other hand probably did not rule in Nigde although she resided there. She was, if the lady buried beside her in 1344 was her daughter, the emir Shadja' al-Dīn who is mentioned as the father of the lady on her sarcophagus; he ruled according to al-Umar (ed. Taeschner, p. 31) in the Bulghurlagh, where a wilāyet Shadja' al-Dīn is still mentioned in Saʿd al-Dīn (i. 571 following Idris) and where lies Ulukša which, according to Hājīdī Khalīfa (Dīkānāmmā'il, p. 617), was also called Shadja' al-Dīn. After the period of Sunkūr's rule, Nigde probably passed directly to the Karamanglāha, who held it against the attacks of the Eretul 'Ali al-Dīn 'Ali (c. 1379) (A nhất b. Astdār, Resm u-Rezm, p. 141 sqq.). In 1390 Nigde surrendered with other Karamanian towns to the Ottomans but was restored to the Kār-
NIGDE — NIHAWAND

manids who defended it successfully against Kādi Būrān al-Dīn, lord of Kārašī and Siwās (Bezm u-Ražm, p. 242, 529). After Timūr’s invasion the power of the Kāramānids extended northwards as far as Dewelī Kārašīr which previously belonged to Kārašī and for a time even to Kārašīr itself. Nigde then ceased to be a frontier town. Apart from a temporary occupation by Egyptian troops in 1419 (Weil, v. 146 sqq.) it enjoyed peace and prosperity and the special care of the Kāramānids who had one of the bulwarks of their power here till the end of the dynasty. A series of buildings, the first of which not only in time but also in size and quality is the Ak-Medrese of the year 1409, is evidence of their interest in the town. Nigde surrendered in 875 (1470) to the Ottoman general İlahi Paşa who had the defences of the town restored. In 878 (1473) the Ottoman Sandjak- bey of Nigde, Koşű Bey, forced Dewelī Kārašīr which still belonged to the Kārašānoglu to surrender to prince Muştağa. The latter died on the way back at Nigde (Sa’d al-Dīn, i. 517, 550).

The sandık of Nigde belonging to the beylerbeylik of Kāramān, contained the kazas of Uğrub, Bor, Dewelū, Dewelī Kārašīr and Uklūsha. When about 1720 the grand vīzīr İbrahim Paşa transformed his birthplace of Muğkara in the kazas of Uğrub into the imposing town of Nwshērīr, the kazas for the garrisons of the fortified castles of Nigde and Dewelī Kārašīr were transferred to the new foundation (v. Hamner, C.O.R. 2, iv. 250 sqq.). At the end of the Ottoman period the sandık of Nigde, to which the kazas of Ak-serāi also belonged, contained 148,700 Muslims and 49,551 Christians the latter mainly natives and mostly speaking Turkish. Nigde was the residence of the metropolitan of Konīa. The town numbered at this time 11,526 inhabitants, in 1927 (after the exchange with Greece) only 9,463.

Nigde (now on the Kayseri-Ulukışla railway) consists of an upper town running north and south, now largely uninhabited (Tepe Wińače) at the highest point of which in the north stands the imposing chapel, and the lower town (Şehr aṬīl) which was also once surrounded by a wall. In the upper town is the “Al提供的āl-Dīn mosque, one of the oldest mosques in Anatolia, with an architect’s inscription in Persian. Before the gateway of the upper town at its south end is the Gothic mosque of Sunkur (c. 1350) showing influences from Little Armenia and Cyprus, and the bazaar. West of and below it is the Kāramānian Ak-Medrese of 1409. A little apart to the west of the town, separated by a broad road, running north and south is the modern quarter Kayabābād with a few remains of the old cemetery and a group of türbes among which that of Khuḍawād Khaṭīr of the year 1312 is prominent. Bibliography: Cauinet, Turquie d’Asie, i. 839 sqq.; Türküyênî şerî şerî wi-süstîma diqora-fiyasi Medîmûnci, N. 2: Nigde (1922); A. Gabriel, Monuments turcs d’Anatolie, i, 1931, p. 105 sqq. (historical and Muslim monuments of Nigde, Bor and Ulukışla). — Inscriptions: Khalil Edhem, in T.O.E.M., ii. 747 sqq.; iii. 821 sqq.; 873 sqq. and A. Tewfik in Gabriel, op. cit. — On the Christian monuments of the region see Rott, Kleinasiatische Denkmaler, 1908; and De Jerphanion, Églises rupestres de Cap- padoce, 1925. (Paul Wittke).

NIHĀL ČAND LĀHAWRĪ, Indian man of letters, Hindu by religion, was born in Dīhlī, but left it in early life and went to Lahore where he lived for a considerable time. Owing to this circumstance he called himself Lahawrī. Search for a livelihood led him to Calcutta. Here he was introduced to Dr. J. B. Gilehrtrst who asked him to translate into “Hindī rekhi” the story of Tādż al-Multiḳ and Bakāwāli. He consented and thus became one of the famous band of Fort William translators. He made the translation from Gulu Bakāwālī, a Persian rendering by Shāiki Ḩizzat Ullāh, 1772, of an old Hindi story, which has been reproduced in Urdu verse by Dayā Shānkar Kāw Nātin (q.v.), in his well-known maḥānī Gultār-i-Nāzīm.

Nihāl Čand called his work Madhāhab-i Yāhū. It is in very good prose mixed with verse. The name gives the date 1217 (1802). Apart from the above mentioned facts nothing is known about the writer.

NIHAWAND, a town in the old province of Hamadān, with, at the present day, 5,000—6,000 inhabitants (de Morgan), at a height of 5,860 feet on the branch of the Gāmāsi which comes from the S. E. from the vicinity of Būrāν and the Gāmāsi then runs W. to Bīshānūn. Nihawand lies on the eastern road which, coming from Kirmāngāh (Ibn Khurdādhbih, p. 193), leads into Central Persia (Iṣfahān) avoiding the massif of Alwān (Oḵūrz) which rises W. of Hamadān. Hence the importance of the town in the wars of Persia with her western neighbours.

The French excavations of 1931 (Dr. Contenau) have shown that the site of Nihawand was inhabited from pre-historic times. The ceramics ("1-bis style") which have been found there, seem to be older than those of style 1 and II of Susa, Polémy VI, 2 knows of Nihawān and according to Ibn Fāṣih, p. 258 the town already existed before the Deluge. In the Sasanian period the district of Nihawand seems to have formed the seat of the Kārīn family (Dīnīwārī, p. 99). There was a fire-temple here. According to Ibn Fāṣih, p. 259 there could be seen on the mountains near Nihawand two figures of snow in the form of a bull and a fish (similar talismans are said to have existed at Bītīl also cf. also the stelae of wūrūk ["dragons"], protectors of waters) in Armenia west of Lake Sewan which combine these symbols, Zap., xxii, 3, 1916, p. 409). The same legend is reflected in the name of the river Gāmāš (Gīwomāsh-Ab = “water of the bull and fish”; Ṣāyī is the Kurdish form of maḥāl).

Among the products of Nihawand the Arab authors mention willow-root which was used for polo-sticks (paṇāṭhī), aromatic reeds (hiba-uṭal-Īshrār or al-knāshūl-ūl-ištāhī) which were used like haṃū (a perfume put in coffins) and black clay used as wax for sealing letters. The district of Rūdrāwar was under Nihawand (cf. de Morgan, Mission, ii. 156: Rūdhrāwar) and was famous for its abundance of safron (Iṣkāhī, p. 109). For a list of the places more or less dependent on Nihawand, cf. Schwarz, Iran etc., p. 505—509.
In the Mongol period, the *Nushat al-Kušā¯b* mentions three districts of Nihāwand: Malāšīr (now Dowlatābād), Isfīdhān (= Isbīdhahān, see below) and Dījāshīk. (Nihāwand no longer forms part of the province of Hamadān; cf. Rabino, *Hamadan*, in *R. M. M.*, xlii., 1921, p. 221—227. )

Near Nihāwand was fought the famous battle which decided the fate of the Iranian plateau and in which the Kūfī Našmān b. Muqarrin defeated the Sāsānian generals. The commander-in-chief is given different names: Dhu ’l-Hādhābīn Marādnašī (cf. Bālāḏūrī, p. 309); Marquart, op. cit., p. 115 identifies him with the Marākh Khorraśādī or Fārānān (cf. Tabārī, i. 1608; the latter also gives the names of his generals: Zardāš, Bahman Dījāshy and the commander of the cavalry Anušāhak). The Arab camp was at Isbīdhahān and that of the Persians at Wāyahbūd (?). The sources do not agree about the date: Saif b. ʿOmar (Tabārī, i. 2615—2619) gives the end of the year 18 (639) or the beginning of 19 (640); cf. Wellhausen, *Shīzūn und Verboten*, vi., 1899, p. 97, while Ibn Ṣahlāk, Abū Māḥṣar wa Wāliḏī, followed by Caetani, *Annali dell’ Islam*, iv., 1911, p. 474—504 put the battle in 21.

The district of Nihāwand (formerly called Mih- Bahān) and its capital (Mih-Dīnīr) was finally incorporated in the possessions of the Bāṣṭans and called Māḥ Basra ("the Media of Baṣra"): Bālāḏūrī, p. 306).

Nihāwand is often mentioned in the period of the wars between the Ṣafawīds and the Ottomans. In 998 (1589) at the beginning of the reign of ʿAbbās I, Ǧīḏālā-Zaḏe built a fortress at Nihāwand (ʿĀdār-ār, p. 273). After the death of Murād IV a rebellion took place among the garrison of Nihāwand; the Ottomans were driven out by the Šīfī inhabitants. As a result in 1012 (1603) war again broke out with Turkey (*ibid.*, p. 460). In the spring of 1142 (1730) ʿXādir [q. v.] took Nihāwand again from the Turks.

(V. Minkovský)

**NIKĀH (n.), marriage (properly: sexual intercourse, but already in the Kurān used exclusively as the contract).** Here we deal with marriage as a legal institution; for marriage customs see *ʿirs*.

1. The essential features of the Muslim law of marriage go back to the customary law of the Arabs which previously existed. In this, although there were differences according to districts and the conditions of the individual cases, the regulations governing marriage were based upon the patriarchal system, which permitted the man very great freedom and still bore traces of an old patriarchal system. It is true that before the coming of Islam a higher conception of the marriage state had already begun to exist but the position of the woman was still very unfavourable one. The marriage contract was made between the suitor and the "guardian" i.e. the father or the nearest male relative of the bride, the latter's consent not being regarded as necessary. But even before Islam it had already become generally usual for the dowry to be given to the woman herself and not to the guardian. In marriage the woman was under the unrestricted authority of her husband, the only bounds to which were consideration for her family. Dissolution of the marriage rested entirely on the man's opinion; and even after his death his relatives could enforce claims upon his widow.

2. Islam reformed these old marriage laws in far-reaching fashion, while retaining their essential features; hence in its other fields of social legislation Muhammad's laws of marriage were a flag not only of the woman's position. The regulations regarding marriage which are the most important in principle are laid down in the Kurān in Sūra iv. (of the period shortly after the battle of ʿUyūd): "3. If ye fear that ye cannot act justly to the orphans marry the women whom ye think good (to marry), by twos, threes or fours; but if ye fear (even then) not to be just then marry one only or (the slaves) whom you possess; this will be easier that ye be not unjust. Give the women their dowry freely; but if they voluntarily remit you a part of it, enjoy it and may it prosper you. 27. Forbidden to you are your mothers, your daughters, your sisters, your aunts paternal and maternal, the daughters of your brother and sister, your foster-mothers and foster-sisters, the mothers of your wives and the step-daughters who are in your care, born of your wives, with whom ye have had intercourse — but if ye have not had intercourse with them, it is not a sin for you — and the wives of the sons, who are your offspring, also that ye marry two sisters at the same time except what is already past; Allah is gracious and merciful. 28. Further married women except (slaves) that you possess. This is ordained by Allah for you. But he has permitted you to procure (wives) outside of these cases with your money in decency and not in fornication. To those of them that ye have enjoyed give their reward as their due, but it is no sin to make an agreement between you beyond the legal due. Allah is allknowing and wise. 29. If however any one of you has not means sufficient to marry free believing women (let him marry) among your believing slaves, whom you possess; Allah best knows (to distinguish) your faith. Marry them with the permission of their masters, and give them their dowry in kindness; they should be modest and not unchaste and take no lovers". Also Sūra ii. 220 (uncertain date), the prohibition of marriage with infidels, male or female (cf. Sūra lx. 10), Sūra xxiii. 49 (probably of the year 5), an exception in favour of the Prophet, and Sūra v. 7 (of the farewell pilgrimage in the year 10) permission of marriage with the women of the possessors of a scripture. Other passages of the Kurān which emphasise the moral side of marriage are Sūra xxiv. 3, 26, 32 and Sūra xxx. 20.

In tradition various attitudes to marriage find expression; at the same time the positive enactments regulating it are supplemented in essential points. The most important is the limitation of the number of wives permitted at one time to four; although Sūra iv. 3 contains no such precise regulation, this interpretation of it must have predominated.
very early, as in the traditions it is assumed rather than expressly demanded. The co-operation of the "guardian", i.e. the dowry and the consent of the woman is regarded as essential and competition with a rival the result of whose suit is still in doubt is forbidden.

3. The most important provisions of Muslim law (according to the Shafi'î school) are the following. The marriage contract is concluded between the bridegroom and the bride's wali (guardian), who must be a free Muslim of age and of good character. The wali is in his turn bound to assist in carrying out the contract of marriage demanded by the woman, if the bridgegroom fulfils certain legal conditions. The wali should be one of the following in this order: 1. the nearest male ascendant in the male line; 2. the nearest male relative in the male line among the descendants of the father; 3. do. among the descendants of the grandfather etc.; 4. in the case of a freed woman the mawla (manumitter) and if the case arises his male relatives in the order of heirs in intestacy [cf. al-Nikâh, 6, 5]; 5. the representative of the public authority (pakim) appointed for the purpose in many countries it is the kadi or his deputy. In place of the hâkim the future husband and wife may agree to choose a wali and must do so if there is no authorised hâkim in the place. The wali can only give the bride in marriage with her consent but in the case of a virgin silent consent is sufficient. The father or grandfather, however, has the right to marry his daughter or grand-daughter against her will, so long as she is a virgin (he is therefore called wali mughbir, wali with power of coercion); the exercise of this power is however very strictly regulated in the interest of the bride. As minors are not in a position to make contracts it is the kadi or his deputy. The hâkim the future husband and wife may agree to choose a wali and must do so if there is no authorised hâkim in the place. According to the Hanafis on the other hand, every blood relative acting as wali is entitled to give a virgin under age in marriage without her consent; but a woman married in this way by another than her ascendant is entitled on coming of age to demand that her marriage be declared void (fasâlid) by the hâkim. A bridegroom who is a minor may also be married by his wali mu'dhîr. As a kind of equivalent for the rights which the husband acquires over the wife, he is bound to give her a bridewit (mahr, qadî) which is regarded as an essential part of the contract. The contracting parties are free to fix the mahr; it may consist of anything that has value in the eyes of the law; if it is not fixed at the conclusion of the contract and if the parties cannot agree upon it, we have a case for the mahr al-mithl, a bridewit fixed by the hâkim according to the circumstances of the bridegroom. It is not necessary to pay the mahr at once; frequently a portion is paid before the consummation of the marriage and the remainder only at the dissolution of the marriage by divorce or death. The wife's claim to the full mahr or the full mahr al-mithl arises only when the marriage has beenconsummated; if the marriage is previously dissolved by the man the wife can only claim half the mahr or a present (mrda) fixed arbitrarily by the man; these regulations go back to Sûra ii. 237 sq. (cf. xxxiii. 48). In form the marriage contract, which is usually prefaced by a solicitation (khitâba), follows the usual scheme in Muslim contracts with offer and acceptance; the wali of the bride is further recommended to deliver a pious address (khutba) on the occasion. The marriage must be concluded in the presence of at least two witnesses (zâhid), who possess the legal qualifications for a witness; their presence is here not simply, as in other contracts, evidence of the marriage but an essential element in its validity. On the other hand, no collaboration by the authorities is prescribed. But since great importance is usually attached to fulfilling the formalities of the marriage contract, upon which the validity of the marriage depends, it is usual not to carry through this important legal matter without the assistance of an experienced lawyer. We therefore everywhere find men whose profession this is and who usually act under the supervision of the hâkim. The part they take is to pronounce the necessary formularies to the parties or even to act as authorised agents of one of them, usually the wali of the bride. The most important impediments to marriage are the following: 1. blood relationship, namely between the man and his female ascendants and descendants, his sisters, the female descendants of his brothers and sisters as well as his sons and great-sons; 2. loss of relationship which by extension of the Qur'ânic law by tradition is regarded as an impediment to marriage in the same degrees as blood relationship; 3. relationship by marriage, namely between a man and his mother-in-law, daughter-in-law, step-daughter etc. in the direct line; marriage with two sisters or with a aunt and niece at the same time is also forbidden; 4. the existence of a previous marriage, in the case of a woman without limitation (inclusive of the period of waiting after the dissolution of the marriage, idda, q. v.) and in the case of a free man with the provision that he cannot be married to more than four women at once; 5. the existence of a threefold (al-fâlq [q. v.]) or of a hâkain [q. v.]; 6. social inequality; the man must not be by birth, profession etc. below the woman (unless both the woman and wali agree): a free Muslim can only marry another's slave girl if he cannot provide the bridewit for a free woman, and the marriage between a master (or mistress) and his slave (or her slave) is quite impossible (a master is however permitted connubial with his slave); 7. difference of religion; there is no exception to the prohibition of marriage between a Muslim woman and an infidel while the permission given in theory for marriage between Muslim men and the women of the possessors of a scripture is at least by the Shafi'îs so restricted by conditions as to be prohibited in practice; 8. temporary obstacles such as the state of i'hâm [q. v.]. On the other hand, the law knows no minimum age for a legal marriage. If a marriage contract does not fulfill the legal requirements, it is invalid; the Hanafis and especially the Malîkis but not the Shafi'îs distinguish in this case between invalid (bîgit) and incorrect (fasîl) according as the error affects an essential or an essential element in the contract; in the former case there is no marriage at all, in the second its validity may be attacked but (accorded to the Mâlikîs) consummation removes any defect. Marriage does not produce any community of property between husband and wife and the woman retains her complete freedom of dealing; but certain laws regarding inheritance come into operation [cf. al-Nikâh, 6, c]. The man alone has to bear the

THE ENCYCLOPAEDIA OF ISLAM, III.

913
expense of maintaining the household and is obliged to support his wife in a style befitting her station (nafaşā); if he should not be in a position to do so his wife may demand the dissolution of the marriage by ḥegū [q. v.]. The man can demand from his wife readiness for marital intercourse and obedience generally; if she is regularly disobedient, she loses her claim to support and may be chastised by the man. The latter however is expressly forbidden to take upon himself vows of continence (iḥā and zikār). Children are only regarded as legitimate if they are born at least six months after consummation of the marriage and not more than 4 years (the predominant Shāfī view) after its dissolution; it is presumed that such children are begotten by the husband himself; the latter has the right to dispute his paternity by ḥanā [q. v.]. Parentage can also be established by the husband’s iškār (q. v.), while both recognition and adoption of illegitimate children are impossible.

4. The laws regarding the rights and duties of husband and wife cannot be modified by the parties at the drawing-up of the contract. This can however be effected by the man pronouncing a conditional ṭalāk [cf. ṭalāk, vii] immediately after the conclusion of the marriage contract; this shift to secure the position of the woman is particularly common among Indian Muslims. For the rest the couple are left to private agreements which need not be mentioned in the marriage contract. The actual position of the married woman is in all Muslim countries entirely dependent on local conditions and on many special circumstances. It is not a contradiction of this to say that the legal prescriptions regarding marriage are most carefully observed as a rule. In spite of certain ascetic tendencies Islām as a whole has been decidedly in favour of marriage. — In modern Islām the problem of the woman’s position in marriage and polygamy is especially discussed between conservatives and adherents of modern social ideas. For the different views resulting from these conditions see the Bibliography cited below.

5. Alongside of the usual form of the old Arabian marriage which in spite of its laxity aimed at the foundation of a household and the procreation of children, there existed the temporary marriage in which the pair lived together temporarily for a period previously fixed. Such temporary marriages were entered upon mainly by men who found themselves staying for a time abroad. It is by no means certain that these are referred to in Sūra iv. 28, although the Muslim name of this arrangement (muṭa‘ [q. v.], “marriage of pleasure”) is based on the literal meaning of the verse; it is however certain from Tradition that Muhammad really permitted muṭa‘ to his followers especially on the longer campaign. But the caliph ʿOmar strictly prohibited muṭa‘ and regarded it as fornication (zina) (a group of traditions already ascribes this prohibition to the Prophet). As a result, muṭa‘ is permitted only among the Shiʿis but prohibited by the Sunnis. The latter have however practically the same arrangement; those who wish to live contrary to the law as husband and wife for a certain period simply agree to do so without superfluating it in the marriage contract.

NIKOPOLIS(S), in Turkish spelling Niğbol or Niğbili (in Ewliya Čelebi, vii, 463—بيك بول, بولون) town on the southern bank of the Danube at 43° 43′ N., 24° 54′ E. This Nikopolis, founded by Heraclius (c. 575—in642), has often been confused, especially in medieval literature, with Nikopolis ad Istrum or ad Haemus, founded by Trajan in 101 in commemoration or his victory over the Dacians (ruins recently excavated near modern Nikšip in the upper valley of the Dniestr by Mt. Haemus). The Byzantine Nikopolis is sometimes called Nikopolis Major to distinguish it from Trajan’s Nikopolis and Nikopolis Minor on the opposite bank of the Danube near the Romanian town of Tornu Magurele.

The importance of Nikopolis as a trade centre and military post is due chiefly to the command which it holds over the Osma and the Aluta, the two Danubian arteries reaching into the heart of Bulgaria and Roumania respectively. Situated on a naturally fortified plateau, it dominates the plains to the south, the Danube to the north, and the eastern gorge connecting the interior of Bulgaria with the river. The mediaval double walls and strong towers surrounding Nikopolis were destroyed by the Russians during their occupation of the city in 1810 and 1877.

Nikopolis was first captured from the Bulgarians in 791 (1380) by ‘Ali Paşâ Çenderell (see ‘Ali Paşâ). Seven years later, it was the scene of the famous battle in the Crusade which is called by its name. The acquisition of Bulgaria by the Turks and their continual irruptions north of the Danube into territories claimed by Hungary, together with a state of comparative peace in western Europe in the last decade of the fourteenth century, made it both necessary and possible for most Catholic countries to participate in the expedition. An army of about 100,000 crusaders (according to the most reliable estimates, 30,000 to 40,000) marched along the Danube, seized Widdin and Rahova, and finally set siege to Nikopolis while an allied Veneto-
Genoese fleet blockaded the city from the river. The siege lasted about fifteen days, during which Bayazid [q.v.] abandoned the siege of Constantinople, burnt the siege machinery, and summoned his Asiatic and European contingents to arms. A Turkish army of perhaps 110,000 men met at Adrianople and, marching through the Shpika Pass, descended into the valley of the Osma and pitched their camp on the southern hill commanding the Nikopolis plain.

The battle took place on Monday, September 25, 1396, and the crusaders were completely routed owing to the superiority of Ottoman tactics and the dissensions amongst the leaders of the Christian host. Bayazid divided his army into two large sections. The first, consisting of two large bodies of irregular cavalry and of irregular infantry, occupied the slope of the hill. Between the cavalry vanguard and the foot rearguard of this section, the Turks planted a field of pointed stakes. Beyond the skyline on the other slope of the hill, hidden from their unsuspecting enemy, the second and more formidable army of Bayazid with his Sipahis and Stephen Lazarovic with his Serbs, watched for the right moment to advance against the exhausted Christians. These tactics proved to be effective when the Crusaders' vanguard of French and foreign auxiliaries defeated the Turkish irregular cavalry and, after forced dismounting to uproot the stakes, routed the irregular infantry and pursued them uphill to face the new and unseen forces. Meanwhile, a stampede of riderless horses produced confusion in the Crusaders' rear which comprised the Eastern European armies. Mcrea and Lazarevic, who had no sympathy for the immediate result of the Ottoman victory was the extension of the conquests into Greece and the submission of Wallachia to Ottoman suzerainty. More important, however, was the breathing-space it gave for the consolidation of the Turkish territories in Europe, which enabled the Ottoman empire to survive the critical struggles of the next decades.

In later history Nikopolis plays only a minor part. During the wars of the sixteenth century it was thrice captured by Russian armies (Sept. 1510; July 1829; July 1877), and by the Treaty of Berlin (July 13, 1878) was included in the tributary principality of Bulgaria.

For the "Crusade of Nikopolis" a full and classified bibliography of the extensive MS. and printed sources, both Eastern and Western, is contained in A. S. Atya, The Crusade of Nicopolis (London 1934); see also the following older monographs: A. Brauner, Die Schlacht bei Nikopolis, 1396, Breslau 1876; J. Delaville Le Roulx, La France en Orient au XIVe siecle, Paris 1856; H. Kiss, A Nicopolev alkozat, Magyar Academiai eretteto, 1896; I. Kohler, Die Schlachten bei Nikopol und Warnia, Breslau 1882; F. Šišić, Die Schlacht bei Nikopolis, Vienna 1893.

NIKSR, Neo-Caesarica, first mentioned by Pliny (vi. 3) so that it presumably arose under Tiberius, lies in the Anatolian vilayet of Sivas [q.v.]. 1,450 feet above sea-level. The town is picturesquely situated at the foot of a hill, crowned by the ruins of a mediaeval castle which was erected from the material provided by the numerous buildings of antiquity there. Here in remote antiquity was Cabira and after its decline Dioskopolis founded by Pompey, later called Bebaste. In Church history Niksar is famous as the scene of a Council (314 a.d.) and as the birthplace of Gregory the miracle-worker. In the Muslim period it became important under the Seljukus of whom numerous and important buildings have survived to the present day. It became more important under the Dindirman-foys [q.v.], whose capital was Niksar, and Ahmad Gha~z took Niksar among other places. His grandson Muhammad successfully resisted a siege by the emperor Manuel in Niksar. His son Yaghban (537-562 = 1142-1166) of whom there survives an inscription of the year 552 (1157) died in 562 (1166) whereupon Niksar was taken by the Byzantine emperor Manuel (Kinnamos, p. 296 sq., 300) although only for a short time. In 1397 Niksar passed to the Otomans and gradually lost its former importance. It remained noted for its very prolific orchards, celebrated already in Karwiz's time (Asgar, i. Wasenfeld, Geschichte, 1848) the special produce of which, very large and sweet cherries, pears, figs etc., were famous at all times. Ewliya Celebi (cf. Siyafat-nama, ii. 389; v. 14; Travels, ii. 102 sqq.) who visited Niksar in 1083 (1672) describes the town in his usual extravagant fashion, mentioning 70 schools, 7 monasteries, many mills and waterwheels and 500 shops with a large number of shoe-makers. The pomegranates there, he says, are the size of a man's head and weighed 1 okka. The remains of the Muslim period so far as they bear inscriptions, have been published by Ismail Kuti~k, Krititker (Stamml CII) 1895-73. The burials (sepulchral cupolas) of Malik Gha~z and of Haidji Cikik~ are worth mentioning; among old dervish monasteries there are the Ibsit-teke and the Kolag-teke. Niksar has often been visited and described by modern travellers. The population (c. 4,000) was before the war one quarter Christian; they were mainly engaged in the silk and rice trades.

NIKŞAR — AL-NİL

W. J. Hamilton, Researches in Asia Minor, Pontus and Armenia, London 1842, p. 346; V. Cuinet, La Turquie d’Asie, i. 734 sq.

(FRANZ BĂRINGER)

AL-NİL, the river Nile. The Nile is one of the large rivers which from the beginning have belonged to the territory of Islam, and the valleys and deltas of which have favoured the development of an autonomous cultural centre in Islamic civilisation. In the case of the Nile this centre has influenced at different times the cultural and political events in the Muslim world. Thus the Nile has, during the Islamic period, continued to play the same part as it did during the centuries that preceded the coming of Islam.

The name al-Nil or, very often, Nil Miṣr, goes back to the Greek name Nείλος and is found already in early Arabic literary sources, though it does not occur in the Qur’an. (in Sūra xx. 39 the Nile may be meant by al-jumān). The Christian habit of calling the river Ghafān, after one of the rivers of Paradise, as found in the works of Ephraim Syrus and Jacob of Edessa and in the Arabic-Christian author Agapitus (Patrologia Orientalis, v. 596), is not followed by the Muslim writers, who know only the Ouxos under this name. Al-Zamakhshâri (Kitāb al-Aṣākina, ed. Salverda de Grave, p. 127) mentions as another name al-Faṣîd, no doubt a poetical allusion to the yearly flood. Already in the Middle Ages, the word baḥr having come to acquire in Egyptian Arabic the meaning of “river”, the Nile is also called al-Baḥr or Baḥr Miṣr (cf. al-Makridi, ed. Wilt, i. 248), which is also the case with several separate parts of its river system, such as Baḥr Yūsuf or Baḥr al-Ghazal. In the Delta the different ramifications of the river are occasionally also called Nile, but where necessary the main stream (צמַדַא) is distinguished from the minor branches (דֵיר or קָלַיֶק) and the canals (תַּרַחא).

The geography of the Nile is treated here only from a historico-geographical point of view so far as the knowledge of Islamic science is concerned. The geographical knowledge of the Nile among the Muslims was, so far as we can learn from their literary sources, based partly on direct observation, but for the most part on legendary or pseudo-scientific traditions which go back to local beliefs or to classical science. For a long time during the Middle Ages the limit of Islamic territory on the Nile was well fixed; it ended at the first cataract near the island of Bilâk (Philæ) to the south of Uswān (Asouán); here began, since the treaty (baḥr) concluded by ʿAbl Allâh b. ʿAbî Sârî with the Nubians, the Nubian territory, where for long centuries Christianity prevailed (al-Baladhuri, p. 236; Ibn ʿAbî al-Hakam, Fihrist Miṣr, ed. Torrey, p. 188) The first locality on Nubian territory, where tribute was paid, was called al-Kaṣr (al-Masūdî. Muṣâba, ii. 40, 41).

Historical tradition has preserved parts of the alleged correspondence between ʿAmr b. al-ʿAš, and the caliph ʿUmar on the subject of Egypt, then newly conquered; here the Nile is described as a river “whose course is blessed”, while the flood and the inundations are praised in poetical terms (“ʿUmar b. Muḥammad al-Kindī. Fighūṭ Miṣr, ed. ʿOṣrūp, p. 204; al-Dimashqī, ed. Mehrten, p. 109). The same correspondence reveals the perhaps historical fact that ʿUmar did not wish to see the Arab army established in Alexandria, because there would be then a great river between the army and the caliph (Ibn ʿAbî al-Hakam, p. 91; cf. also what is said on p. 128 about those who went to live in al-Djaza).

The principal towns by which the Nile passed in medieval Egypt in Upper Egypt, between Uswān and al-Fuṣṭâṭ, are Atīna (Edyn, on the left), Issâ (Ene, l.), Arman (l.), Kûs (r.), al-Aksur (Luxor, r.), Kif (r.), Ikhmîn (Akhmîn, r.), Usyûtî (Aswûn, Syûtî, l.), al-Uṣmûnîn (l.), Anṣînî (r. opposite al-Uṣmûnîn), Taḥtî (l), al-Kâsî (l.), Dâlîsî (l.), Anâsî (l.) and Ḫâfî (Atīnî, r.). This succession of towns is given for the first time by al-Yaḵbî (B. G. A., vii. 331—334), while Ibn Hawkâl (B. G. A., ii. 95) is the first to give a table of the distance between these towns, expressed in barsîd, the entire distance being 21 days’ journey (al-Idrîsî, ed. Dody and de Goeje, p. 52, gives 25 days’ journey for the same distance). Shortly before al-Uṣmûnîn branched off on the left the canal that conducted the water to al-Faṣîla, which is known to Ibn al-Faṣîl (B. G. A., vi. 74) as Nahr al-Lahûn and to al-Idrîsî (p. 50) as Khâlidî al-Mâhî; this canal, which according to unanimous tradition was dug by Joseph, occurs already on the MS. map of the year 479 (1086) of Ibn Hawkâl in the Seray Library of Constantine, No. 3340 (reproduction on fol. 658 of Monumenta Africæ et Aegypti by Yousouf Kamâl). It is the Baḥr Yūsuf of our days; on it was situated al-Bahnâsî. The banks of the Nile in Upper Egypt are not very completely described by the geographers; one finds repeated everywhere the assertion that the borders were established without interruption between Uswān and al-Fuṣṭâṭ (cf. al-Iṣṭakhrî, B. G. A., i. 50), but that the width of the cultivated territory varied during the river’s course, depending on the greater or lesser distance of the two mountain ranges that border the stream. Ibn Hawkâl (MS. of Constantine, cf. supra) describes two extremely narrow strips, one between Uswān and Atīna (now called Gebelein) and one between Issâ and Arman (now called Gebel Silsile). The curves in the course of the Nile, especially in the upper part of the Šafîd, are not indicated on the maps of Iṣṭakhrî and Ibn Hawkâl. The oldest extant Arab map of the Nile, however — which is at the same time the oldest Arab map that we know of — gives clear indications that a sinuous course was a known fact. This map is found in the Staatsbibliothek MS. of the year 1037 of al-Khâzârî’s Sīrat al-ʿArîf and has been reproduced in the edition of that text by H. v. Mîlîc (B. A. H. U. G., iii. Leipzig 1926). The representation of the Nile here is connected with the classical tradition of astronomical geography; al-Khâzârî himself, and after him Suhîb (Ibn Serâʿīm) and Ibn Yûnus (MS. 143. Col. of the University Library at Leyden, where on p. 136 a special table is given of the towns lying on the banks of the Nile) give exact indications as to the latitudes and latitudes of the Nile towns; but these indications need many very uncertain corrections to allow of the reconstruction of a map, as v. Mîlîc has tried to do for al-Khâzârî in Denkschr. Ak. Wiss. Wien, lix, Vienna 1916, and J. Leclercq for Ibn Wûṣî in Viena of the Atlas annexed to his Géographie du Moyen-Âge, Paris 1850. But the fact that the course of the Nile is from south to north is well known to all the Arabic sources, which often repeat the
The Delta of the Nile begins to the north of al-Fustat, where the distance between the two mountain ranges widens, while these hills themselves become lower and pass gradually into the desert. Immediately below al-Fustat began the canal that was dug by 'Amr b. al-‘Aṣ to link up the Nile with the Red Sea; this canal (Khālidī Mīṣr or Khalīlī Amīr al-Mu‘minīn) was made in 23 H (644) according to Muhammad b. Yūsuf al-Kindi (cited by al-Maqrīzī, Kitāb al-Bulāq, ii. 143; cf. Yākūt, ii. 466) and served for the conveyance of provisions to the Hijāz until the reign of ʿUmar Ibn ʿAbd al-ʿAzīz; afterwards it was neglected and even obstructed by the order of the caliph al-Manṣūr, so that, in the iVth (7th) century, it ended at Dhamab al-Timsah in the lakes to the north of al-Kulum (cf. al-ʾAskāfī, Muruǧī, i. 147).

The two principal arms of the Nile in the Delta began about 12 miles to the north of al-Fustat (a little further than nowadays, according to Guest) and had, as now, a great number of ramifications which communicated in many ways and ended for the greater part in the big lakes or lagoons such as the Bahr al-Fayum. These lakes were called in the Middle Ages: Buhārīrat Maryāt (behind Alexandria), B. Liʿktī, B. al-Ruūlūs or B. al-Buḥairīt and the very large B. Tinnīs, which last contained a large number of islands with Tinīs as the most important. On the land tongue, where the two main arms separated was situated the town of Shatūnī. The western arm went as now to the town of Ṣaḥīd Rosette after which it reached the sea; near the town of Shatūnī a branch parted from this arm in the direction of Alexandria, ending in the Buhārīrat Maryāt; this branch was only filled with water in the time of the flood (a very complete survey of the different "canals" of Alexandria by P. Kahle, in JL, xii. 89 eqq.). The eastern arm ran, as is still the case, past Dimyāt (Damietta) and reached the sea shortly afterwards; it had several branches that went to the Buhārīrat Tinīs, one of which continued one of the Nile mouths of antiquity. Though many sources, based on a pseudo-historical tradition, repeat after each other that there are seven Nile arms (Ibn ʿAbd al-Hakam, p. 6; further al-Khwārizmī, Khudānī, Suphrah, al-Maṣṭūdī, Ibn Zūlāk, the more realistic authors Ibn Khudādhibhī, al-Yaḳūlī, Ibn Rusta, al-ʾIstākhri, Ibn Ḥawkal, al-Iḍrīsī) only know of the two main arms. These were on the one hand the so-called "lower" Nahr, in the first years of the Middle Ages, differed considerably from the present situation. The chief sources from which we know them are Ibn Ḥawkal and al-Iḍrīsī, who give itineraries following the different branches, but as the places named in these itineraries have been identified only in part, an integral reconstruction is not yet possible (on this problem cf. R. Guest, The Delta in the Middle Ages, in J.R.A.S., 1912, p. 941 eqq. and the map annexed to this article). The description in the text of Suphrah (ed. v. Mīlīk, B. A. Ḥ. C. G., v.) has little value as an endeavour to trace back to his time (8th century) the seven legendary arms; among these arms special attention is paid to the "arm of Saradīs", which, according to tradition, was dug by Ḥamān (Ibn ʿAbd al-Hakam, p. 6; cf. Guest, loc. cit., p. 944 and Maspero and Viet, Mœliska, in M. I. F. A. O., xxvii). Al-Makrizī has prepared a detailed description of the canal system in the province of al-Buhāra, to the east of Alexandria, from the Kīṭāb al-Mīnāḥāb of Abu ʿl-Ḥasan al-Makhrūzī, who wrote in the xith century (M. I. F. A. O., xlvii, p. 167 sqq.). It seems possible that a study of the ancient maps (especially the Delta map of the Constantinople MS. of Ibn Ḥawkal and the maps of al-Īṣāṣī) may be useful for a more complete reconstruction of the medieval situation.

The Nile arms have always been decisive for the administrative division of the Delta, while the sources call by the name of al-Iṣṭākhri, al-ʾAṣfar, al-ʿAṣrī or Asfāl Arḍ Mīṣr. The region to the east of the eastern branch was called al-Ḥawf; the texts of al-ʾIṣṭākhri and Ibn Ḥawkal place al-Ḥawf to the north of the Nile, which may be understood in connection with the view referred to above that the Nile at al-Fustat had a direction from S. E. to N. W. The region between the two main arms was called al-ʿRīf (a name sometimes used for the entire Delta as well) or Bāṣa al-ʾRīf, while the country to the west of the western arm was called al-ʾBuhāra and later al-Ḥawf al-ʾGhuri, the original Ḥawf being called then al-Ḥawf al-ʾRīf. The delta was divided into šarās, the limits of which were determined by the more important branches; the bigger administrative units of later times (cf. Egypt) depended likewise on the river system. The present geographical aspect of the Delta is the result of the new irrigation works that began in the xith century under Muhammad al-Māli; the most conspicuous new canals are the ʿAlīn disc. I. 890, and the Rubināʾīs canal, which were completed in 1890, and the ʿAlīn, which links up the Nile with the Zuei canal.

As to the knowledge of the course of the Nile to the south of Egypt the Muhammadan geographical literature begins rather late to give information based on direct observation. At first these sources content themselves with saying that the Nile comes from the country of the Nībār; for the rest there were ancient sources of a different kind that helped to complete the geographical conception of the course of the great river. This conception involved also the orīgin of the Nile, covered since antiquity by a veil of mystery. The real origin of the Nile always remained unknown to the Muhammadan scholars and travellers. It is a curious fact, however, that the information on this subject which we find uniformly repeated in the Islamic sources from the treatise of al-Khwārizmī (± 830 A.D.) gives an idea of the origin of the Nile which does not correspond entirely to the data furnished by the classical sources. This conception makes the Nile emerge from the Mountains of the Moon (Daḥal al-Kamar) to the south of the equator; from this mountain come ten rivers, of which the first five and the second five reach respectively two lakes lying on the same latitude; from each lake one or more rivers flow to the north where they fall into a third lake and it is from this lake that the Nile of Egypt begins. This conception is largely schematized and corresponds only partly to Polemy's description of the Nile sources; Polemy...
knows only of two lakes, not lying on the same latitude and does not speak of a great number of rivers coming from the Mountains of the Moon. The third lake especially is an innovation (cf. A. v. Mück, in Denkschr. Ak. Wiss. Wien, lxxix., p. 44); in later authors such as Ibn Sa‘id and al-Dimashkī this third lake is called Kūrā and may connected with some notion of Lake Chad (the same authors change the name of Djabal al-Kamar into Djabal al-Kūmr which pronunciation is commented on by al-Makrizī, ed. Wiet, i. 219), but this is not probable for the time of al-Khwārizmī; the knowledge of more equatorial lakes, however, may perhaps be traced to the experiences of the two centuries which elapsed by Sīdī Ḥakīm and who reached, according to Seneca, a marshy impassable region, which has been identified with the Bahār al-Ghazal. The system described by al-Khwārizmī of the origin of the Nile is represented on the map in the Strassburg MS. and is repeated many times after him (Ibn Khurāḏbhee, Ibn al-Fakīh, Kudāmā, Suhrāb, al-Iḍrīsī and later authors). Al-Maṣūdī, in describing a map he has seen, does not speak of the third lake (Murūḏj, i. 205, 206) and Ibn Rusta (B. G. A., vii. 90) says that the Nile comes from a mountain called Bū-ḥan and also knows only two lakes. Al-Iṣṭakhrī and Ibn Ḥawkal on the contrary, frankly admit that the origin of the Nile is unknown, which is also illustrated by their maps. Still the system of al-Khwārizmī continued to be a geographical dogma and is found as late as al-Suyṭī. Al-Khwārizmī also took over from Ptolemy a western tributary of the Nile, which comes from a lake on the equator; this river is called by Ptolemy Astapos and may perhaps be identified with the Aṭbarā. A later development, which connects with the Nile system a river that flows to the east in the Indian Ocean, is found for the first time in al-Maṣūdī (Murūḏj, i. 205, 206; ii. 383, 384); this view is later taken up again by Ibn Sa‘id and al-Dimashkī.

Another category of notions about the origins of the Nile is connected with the Jewish and Christian traditions which make the Nile come from Paradise. Medieval cosmographical theory places Paradise in the extreme east, on the other side of the sea (cf. the maps of Beatus), so that the Nile, like the other rivers of Paradise would have to cross the sea. This state of things is actually described in an old tradition, probably of Jewish origin, of a man who went in search of the sources of the Nile and had to cross the sea, after which he reached Paradise (al-Maṣūdī, Muḥīḏj, i. 268, 269 and Aḥkār al-Zamān, MS. Vienna, fol. 158a-b; al-Maḥkārī, B.G.A., iii. 21). With this origin in Paradise is perhaps connected the view, which all sources attribute to al-Dīǰālīzī in his lost Kitāb al-Buldān, that the Nile and the Mīhrān (Indus) have the same origin (cf. al-Maṣūdī, Tanbīk, B.G.A., viii. 53), a view which is sarcastically criticized by al-Iḍrīsī (Indus, p. 101). To the same origin may go back the idea, often found in Muhammadan sources, that, when the Nile rises, all the rivers of the earth go down in level.

Thirdly there is a cycle of geographical conceptions which link up the western part of Africa with the river system of the Nile. Herodotus already had sought a western origin and Pliny quotes the Lūkaka of king Juba of Mauretania, who makes the Nile rise in western Mauretania. Marquardt (Biblioth.-Sammlung, p. 125 sqq.) has explained this view from a corruption of the name of the river Nuhul, which he identifies with the Wādī Nūl and which has its origin in the Mauritanian Atlas. Traces of this western Nile are to be found in Ibn al-Fakīh (B. G. A., v. 87) who, following an authority of the time of the conquest, places the origin of the Nile in al-Sūs al-Ṣārā. Al-Bakrī for the first time identifies this western Nile with the river Niger, although we find already in al-Maṣūdī the knowledge of a great river, far to the south of Sidīlmīsā (Murūḏj, iv. 92, 93). Al-Bakrī describes the Nile as passing through the territory of the Sudan (ed. Slane, p. 72) and makes an enumeration of the Sudan tribes and their towns which border the river; the westernmost town is with him Sānghāra, followed in eastern direction by Tarkīrī, Sīllā, Chānā, Tīrākā and finally the country of Kawāk. After al-Bakrī a similar description is given by al-Iḍrīsī, but this last author goes back to another source than al-Bakrī when he places the mouth of the Nile in the neighbourhood of the salt town Awīlī, thus identifying the lower course of this Nile with the Senegal (Marquard, loc. cit., p. 171). Al-Iḍrīsī likewise shows himself informed on the course of the Nile to the east of Kawāk, though he is in doubt if Kawāk is situated on the Nile itself or on a side arm (ed. Dozy and de Goeje, p. 11); he finally derives this western Nile from the third of the big Nile mentioned above, thus connecting the Nile of the Sudan with the Nile of Egypt in one river system. So long as the complete text of al-Bakrī is not known, we cannot ascertain if this conception goes back already to that author. Al-Iḍrīsī’s Nile course is clearly indicated on his maps of the 1st—4th section of the first climate. After him it is especially Ibn Sa‘id who has described the western Nile in this way and he has been followed again by Abu Ḭaydā. Al-Dimashkī (ed. Mehren, p. 89) gives the same representation; this last author even makes the third lake, which he calls like Ibn Sa‘id the lake of Kūrā, who in the history of the Sudan, the Nile of Egypt, and a third river running in eastern direction towards Maḥdāqūl in the Zandj country on the Indian Ocean. This last river, which was also connected by al-Maṣūdī with the Nile (cf. infra) is probably identical with the Webī river in Italian Somaliland.

While the geographical authors constructed in this way the Nile system with a good deal of credulity and imagination, the real knowledge of the Nile south of Egypt advanced but slowly. The southernmost point reached by the Arab conquerors was Dongola (al-Kindī, ed. Guest, p. 12) and it was well known that this town was situated on the Nile; its latitude and longitude are given by al-Khwārizmī and Suhrāb. Al-Yaṯībī (Ṭabīrī, ed. Houtsma, p. 217) knows that, in the country of the Nība called Alwa, who live behind the Nība called Muṣκarā, the Nile divides into various branches; this same author, however, places Sind behind Alwa. Al-Maṣūdī (Murūḏj, iii. 31, 32) knows that the country of the Nība is divided into two parts by the Nile. Ibn Ḥawkal (Constantinople MS.) describes two places where there are cataracts (nāṣīlāt), namely the one above Usūm, which is the “first cataract”, and one near Dongola, of which it is not certain whether the “second” or the “third” cataract is meant. About the same time,
however, a traveller named Ibn Sulaim al-Uṣwānī wrote a valuable description of the middle Nile course, which has been preserved in al-Maqrīzī's Kitāb al-Maqrīzī (ed. Wiet, in M. I. F. A. O., xvi. 252 sqq.). This Ibn Sulaim, on whom al-Maqrīzī's Kitāb al-Muḥāfūzān gives some information (cf. Quatremère, Mémor. sur l'Égypte, ii.), had been sent by the Fatimid general Dājwār al-dīnī, the king of the Nūba on a diplomatic errand, and was the author of a Kitāb ʿAlwān al-Nil, in which a detailed description is given of these countries. He says that the region between Us怀nī and Dunkula is inhabited in the north by the Marīs and more to the south by the Muḥārīs; the northern part is barren and the great cataracts are correctly described. The country between Dunkula and ʿAlwān (this last spot is the region of Kharjūm) is described as perfectly flourishing; the big winning of the Nile here is perfectly known to Ibn Sulaim. The Nile "is divided" then into seven rivers; from the description it is clear that the northern one of these rivers is the Athbara, coming from the east; further south the "White Nile" and the "Green Nile" join near the capital of ʿAlwān and the "Green Nile", which comes from the east, is again the result of four rivers, one of which, the new "White Nile", is from the country of the Ḥabash, and one from the country of the Zandj; this last, incorrect, statement may have been influenced by learned tradition. Between the "White Nile" and the "Green Nile" there stretches a large island (al-Qaṣr al-ʿawṣ, as it is still called on our maps), which has no limits in the south. This is about the only description in medieval Islamic literature that shows how far the knowledge of the middle Nile really went. Only little of it seems to have reached the systematic geographic treatises; al-Idrīsī, e.g., describes this part of the river in a way which only shows that he did not make good use of the inadequate sources that were at his disposal.

The exploration of the upper Nile and its sources since the end of the xviii century was the work of European travellers. They discovered, or perhaps re-discovered, the real Big Nile lakes and identified the Ruwenzori mountain range with the Moon Mountains, the name of which was found again by the explorer Speke in the name of the Nyamwezi country, the "country of the moon". A part of the exploration of the Nile was due, however, also to Egyptian initiative. The well-known military expedition of 1820—1822 under Muhammad ʿAṣhār son of Ismāʿīl Pasha, during which the city of Kharjūm was founded, established Egyptian domination in the Egyptian Sūrān and opened the way for further scientific exploration. In the years 1839—1842 three Egyptian expeditions went up the White Nile, and during the reign of Ismāʿīl Pasha the Egyptian government repeatedly tried to cleanse the swamps of the White Nile above Sobat from the masses of vegetation (ṣuṣīl) which hindered navigation.

The yearly flood of the Nile (ṣiṣīl, fāṣīl, fayṣāfān) is the phenomenon to which Egypt has been at all times indebted for its fertility and prosperity, as it provides, in compensation for the almost complete lack of rain in the country, a natural and almost regular irrigation for the lands on its borders and in the delta. It is the foundation of all cultural life and justifies entirely the attribute musābārāk so often given to the river. On the same account the Nile is considered, as well as the Euphrates, as a "believing" river (al-Maqrīzī, ed. Wiet, M. I. F. A. O., xxx. 215). The flood deeply influences the private and public life of villagers and townsfolk alike, and already the oldest Muḥammadan traditions about Egypt reflect the feelings of wonder and thankfulness that animated the people of Egypt before them (Ibn ʿAbd al-Hakam, p. 109, 205). Having reached its lowest level towards the end of May at Assuan and in the middle of June at Cairo, the Nile begins to rise again, reaching its highest level in the beginning of September at Assuan and in the beginning of October at Cairo. This regularity brings about a similar regularity in the methods of irrigation in the several parts of Egypt, in the times of the sowing and reaping of the different crops and consequently in the modes of levying the land taxes (e.g. al-Maqrīzī, ed. Būlāk, i. 270, which text comes from Ibn Hawkal): all the dates referring to these occupations have always continued to be fixed according to the Coptic solar calendar.

There is much discussion in the literary sources about the causes of the flood. The most ancient belief, which at the same time corresponds best with reality, was that the flood is caused by heavy rainfalls in the Nile basin, where the Nile and its tributaries have their origin. This is expressed in a somewhat exaggerated way in a tradition that goes back to ʿAbd Allah b. ʿAmr b. al-ʿAx, according to which all the rivers of the world contribute, by divine order, with their waters to the flood of the Nile (Ibn ʿAbd al-Hakam, loc. cit., and p. 149). This implies the belief that all other rivers fall while the Nile rises, but, on the other hand, it is sometimes observed that other rivers also show the same phenomenon of rising and falling, especially the Indus, and this again is considered as a proof of the common origin of the two rivers (al-Maqrīzī, ed. Wiet, M. I. F. A. O., xxx. 227). There are, however, other views, which attribute the cause of the flood to the movement of the sea, or to the effect of the winds; these views have been inherited from sources of the pre-Muḥammadan period, among others from the treatise on the flood of the Nile attributed to Aristotle, and they are discussed and refuted at length in a special chapter of al-Maqrīzī's Kitāb al-Nil (M. I. F. A. O., xxx. 236 sqq.).

Up to the xvi century the irrigation system of Egypt continued along the same lines. When the flood begins all the outlets on both sides of the main stream and its principal arms in the Delta are closed, to be opened again about the time of the highest flood, when the water level has reached the necessary height according to the different places. The most important of these yearly "openings" was that of the canal (Khalīd) of Cairo, which, until recent times, remained a public festival. In Cairo the flood is complete (ṣuṣīl al-Nil), when it has reached 16 ʿaṣār, generally in the first decade of the Coptic month of Mesore (about the midst of August), and this was proclaimed everywhere in the town (cf. the description by Lane, Manners and Customs, ii. 287 sqq. and E. Littmann, Ein arabischer Text über die Nischewelle, Festschrift Oppenheim, Berlin 1933, p. 66 sqq., for older times, al-Kalāṣānid, iii. 516).

The height of the level of the Nile has been measured since olden times by the Nilometers (cf. niṣṣaḥ). Many of these niṣṣaḥ are recorded by the
sources, the southernmost being that of ‘Alwa and al-Makrizī, the author of Ibn Wahšīf Shāhā, but no real irrigation work of a wider scope existed in the Middle Ages and later except the famous canal system of al-Fāyatīn [q.v.], which all the sources ascribe to the Prophet Yūsuf. In the rest of Egypt the water was allowed to flow freely over the lands after the piercing of the dams, so that large areas were completely inundated for some time; the Arabic sources contain some vivid descriptions of the large stretches of water, always in the vicinity of the villages, communication between the villages being only possible by means of boats during that time of the year (al-Masʿūdī, Murūdī, i. 162; Ibn ‘Abd al-Hakam, p. 205).

Since the reign of Muhammad ʿAlī new irrigation works have been planned with the aim of making the country more productive, a possibility at which already the medieval authors hinted more than once. The first efforts, however, failed. About 1840 began the construction of a great barrier across the two arms of the Nile at the apex of the Delta, according to the plans of the French engineer Mouget, but this enterprise began to bear fruit only fifty years later when this barrage project, including the Tawfīkiya, Manfīrīya and Buhairīya canals, had been completed in 1890. The later great irrigation works were executed higher up the river, such as the great dam and locks at the head of the cataracts near Philae above Assuan, in 1902, which was raised again in 1912, and again in 1933. While allowing, on one side, a better regulation of the distribution of Nile water in Egypt, these barrages higher up enable at the same time a better irrigation of the borders to the south of Egypt. Herewith is connected the enormous barrage of Makwār, near Sennār on the Blue Nile above Khartūm, which permits the irrigation of the region called al-Ḥiyāzīrat, between the Blue Nile and the White Nile. This work was finished in 1925 and is meant to be completed by a similar barrage on the White Nile. In this way the control of the Nile waters has passed to a certain extent out of Egypt itself; it recalls the days of the great famine in 1599, when the Egyptians thought that the Nubians were holding up the flood of the Nile.

The same problem came up recently with regard to the new project of constructing a dam on the frontier of the Süddan and the Belgian Congo and the question was raised whether this dam will prove a faṣāda ‘aṣīla or a faṣāda ‘aṣīla for Egypt (cf. the newspaper al-Balāẓī of March 17, 1934). It has already been shown how the flood of the Nile was the occasion of popular festivals such as the opening of the curtain of Safanāf in Nubia; cf. Evetts, Churches, p. 262). The level necessary for the operations of irrigation varied in different places; in the capital the average level had to be 16 ₃/₄ above the lowest level of the Nile; if the flood surpassed 18 ₁/₂ it became dangerous, while a flood not exceeding 12 ₃/₄ meant famine (cf. e.g. al-Idrīsī, p. 145, 146). In the history of Egypt the years after 1444 (1052), and especially the year 451 (1059), are notorious for the famine and disaster caused by the failure or practical failure of the flood. A historical account of the flood from the years 152—1296 (769—1579) is given on p. 454 sqq. of Omar Toussoun, Mémories sur l'Histoire du Nil, ii. 265 sqq.).

The regulation of the main stream and its branches is ascribed to the ancient Egyptian kings (al-Maʿṣūrī, on the authority of Ibn Wāṣif Shāhā), but no real irrigation work of a wider scope existed in the Middle Ages and later except the famous canal system of al-Fāyatīn [q.v.], which all the sources ascribe to the Prophet Yūsuf. In the rest of Egypt the water was allowed to flow freely over the lands after the piercing of the dams, so that large areas were completely inundated for some time; the Arabic sources contain some vivid descriptions of the large stretches of water, always in the vicinity of the villages, communication between the villages being only possible by means of boats during that time of the year (al-Masʿūdī, Murūdī, i. 162; Ibn ‘Abd al-Hakam, p. 205). Since the reign of Muhammad ʿAlī new irrigation works have been planned with the aim of making the country more productive, a possibility at which already the medieval authors hinted more than once. The first efforts, however, failed. About 1840 began the construction of a great barrier across the two arms of the Nile at the apex of the Delta, according to the plans of the French engineer Mouget, but this enterprise began to bear fruit only fifty years later when this barrage project, including the Tawfīkiya, Manfīrīya and Buhairīya canals, had been completed in 1890. The later great irrigation works were executed higher up the river, such as the great dam and locks at the head of the cataracts near Philae above Assuan, in 1902, which was raised again in 1912, and again in 1933. While allowing, on one side, a better regulation of the distribution of Nile water in Egypt, these barrages higher up enable at the same time a better irrigation of the borders to the south of Egypt. Herewith is connected the enormous barrage of Makwār, near Sennār on the Blue Nile above Khartūm, which permits the irrigation of the region called al-Ḥiyāzīrat, between the Blue Nile and the White Nile. This work was finished in 1925 and is meant to be completed by a similar barrage on the White Nile. In this way the control of the Nile waters has passed to a certain extent out of Egypt itself; it recalls the days of the great famine in 1599, when the Egyptians thought that the Nubians were holding up the flood of the Nile.

The quality of the Nile water is a matter of discussion in medical treatises. Avicenna (al-‘Kūnīn fī ‘-Ṭibb, ed. Balūk 1294, i. 98; cited by al-Maṣūrī) holds that the circumstance that a river flows from south to north has a bad influence on the water, especially when a south wind blows, and on this account he thinks that the abundant praise given to the Nile is exaggerated. The Egyptian physician Ibn Rāwān (d. 453 = 1061) says that the Nile water reaches Egypt in a pure state, owing to the health in the country of the Süddan, but that the water is spoilt by the impurities that mix with it on Egyptian soil (cited by al-Maṣūrī, M. I. F. A. O., xxx. 275 sqq.). This same author describes very clearly the troubled condition of the water when the flood begins. He discusses likewise the influence of the Nile on the climate of Egypt and the medicinal properties of its water.

Other authors speak at length of the fauna of the Nile, giving special attention to the fish. A very long list of fishes is given by al-Idrīsī (p. 16 sqq.) with a description of their often curious qualities. The animals most frequently described by the geographers are, however, the crocodiles, and the animal called sakānīzar, which is said to be the result of a cross between a crocodile and a fish, but which seems to be in reality a kind of lizard. The possibilities which the Nile afforded for navigation are best seen from the historical sources. Sea-going vessels do not seem ever to have entered
its arms, while the traffic on the river was maintained by small craft; various names of Nile boats occur in literature; in the sixteenth century the vessel called "dhahabiyat" is especially known. In earlier times the term "sallājī" is used for a Nile boat (al-Kindi, Kitāb al-Umāra, ed. Guéret, p. 157; Dozy, Supplément, s. v.). The skill of the fishermen in their sailing boats on the lakes in the Delta is often recorded; on shallow places, however, as well as on the inundated lands, boats had to be moved by means of oars or poles. The rapids between Egypt and Nubia were, as nowadays, an insurmountable barrier to river traffic; the loads were conveyed along the shore to the other side of the falls (Ibn Hawqal, MS. Sultan Ahmad Kosk, No. 3346, fol. 56).

The cataracts above Assuan for a long time continued to form a barrier to the spread of Islam towards the countries bordering the Nile to the south of Egypt, which forms a curious contrast with the part played by the Nile in the introduction of Christianity into Nubia (cf. J. Kraus, Die Anfänge des Christentums in Nubien, Münster [Diss.] 1930). Islam penetrated only slowly into Nubia and became more generally disseminated in the Sudān only in the sixteenth century [cf. SUDAN].

Something has been said already about the praises of the Nile and its descriptions in poetical terms, by which this river has contributed to Arabic literature. Al-Makrizi (loc. cit., p. 270 sqq.) cites some fragments of poems in praise of the Nile and its flood; among the poets which he names are Tāmil Ibn al-Muqīz [q. v.] (d. 985) and Ibn Kālikis (d. 1172). Further Yakūb (i. 592; iv. 656) cites some poems which he attributes to Umayya b. Abī l-Salt; this poet is probably Abū l-Salt Umayya b. Abī al-ʿArīz (d. 1143) who wrote a treatise al-Rīsāla al-Mīʾrājīya, from which also al-Makrizi makes quotations. The earliest Arabic poems on the Nile are probably those found in the Dīwān of Ibn Kais al-Ruṣayfī [q. v.], the court poet of Abī al-ʿArīz Ibn Marwān in the beginning of the viith century. Several treatises have been devoted to the Nile. Ibn Zālīk (d. 997) says in his Fadhilat Miṣr (Arabic No. 181 of the Bibliothèque Nationale at Paris, fol. 317) that he has written a book on the importance and the salutary qualities of the Nile, which now seems to be lost. Further there are a treatise Tābiṣrat al-Akhkār fī Nil Miṣr wa-Ahawkātīl min al-Aḥād (MS. in Algiers; cf. Brockelmann, G.A.L., ii. 506), and two short opuscules by Djalāl al-Dīn al-Mahallī (d. 1459) and al-Suyūṭī, which are found together in the MS. Or. 1535 of the British Museum (Rieu, Suppl., No. 1198; G. A. L., ii. 114).

Bibliography: As the aim of the present article is to give only an account of the Nile from the point of view of Islam and its history, it seems superfluous to quote here even the most important modern works and articles belonging to the abundant bibliography of the Nile. The earlier Muhammadan authors have all been named in the text; the later ones, such as Yakūb, Abī al-Latīf, Abū l-Fida', al-Kalḵašāndī, al-Makrizī, al-Suyūṭī (Ḥiān al-Muḥāfara), al-Nuwairī and others are in most cases a compendium of earlier earlier views and statements. A very important later Muhammadan source is al-Khālid al-Tawfikīya by Āhī Bīšāh Mubārak. The Muhammadan literary sources have been used in the following works: Else Reitemeier, Beschreibung Ägyptens im Mittelalter, Leipzig 1903, p. 31-61; J. Maspero and G. Wiet, Matériaux pour servir à la Géographie de l'Égypte, in M.R.A.O., xxxvi. 215 sqq.; and very profusely: Omar Toussoun, Mémoire sur l'Histoire du Nil, vol. i., ii., iii., in Mémoires présentés à l'Institut d'Égypte, viii., ix., Cairo 1925. The last of these three volumes contains a series of cartographical reconstructions. A number of ancient Muhammadan maps of the Nile are to be found in the Mappe Arabicae, ed. Konrad Miller, Stuttgart 1926-1930, and more completely in vol. iii. of the Monumenta Cartographica Africae et Aegypti by Youssouf Kemal, as far as this work has appeared; in this same work all the geographical references to the Nile are also to be found in a chronological order.

(J. H. Kramer)

NILUFER KHATUN, wife of URGHAN and mother of Murad I, apparently the Greek name Nenuphar (i.e. Lotus-flower) (cf. J. v. Hammer, G.O.R., i. 59), was the daughter of the lord of Yārbiṣūr (Anatolia, near Brussa; cf. Ḥādidījī Khalīfa, Dhikrīnā, p. 659) and according to one story was betrothed to the lord of Belokoma (Bilecik). ʿOthmān, the founder of the dynasty which bears his name, is said to have kidnapped and carried her off in 699 (1299) and to have destined her to be the wife of his son Urğan, then only 12 years old. Idrīs Bīltī and following him Neshrī, tells the story of the rape but the Byzantine sources make no reference to it. Nilüfer Khatun became the mother of Murād I and also of Sultanān Pashá.

The river which flows through the plain of Brussa bears the same name as also does the bridge over it in front of the town and monastery there. The bridge and monastery are said to have been endowed by Nilüfer Khatun. Nothing more is known of her life. She was buried beside Urğan on the citadel of Brussa. That Ibn Battūṭa, ii. 332 sq. really means Nilüfer Khatun by Bayallūn, (πυλής) Khatun, which both F. Giese (cf. Z.S., ii. 1924, p. 263) and F. Taeschner (cf. Ist., xx. 135) think to be obvious, as they take πυλής to be a corruption of nilot, is however by no means proved, because Bayallūn is a name which occurs again in Ibn Battūṭa for a Byzantine princess (cf. i. 393 sq.). Besides, the mention in Ibn Battūṭa who paid his respects to the princess at her court in Izrīk (c. 740 = 1339) is very brief. F. Taeschner suggests that Nilüfer is a corruption of Olivera, while hitherto Nilüfer (cf. Pers. nilīfēr *water lily" and Greek Νηλίφη and νηλός with the same meaning) has been derived from the Greek. Nilüfer was and is also popularly known as Lulufer (e.g. in the early Ottoman chronicles) or Uluf the river Ufer Cat; cf. F. Taeschner, op. cit. p. 135 sq.

Bibliography: J. v. Hammer, G.O.R., i. 59 sq.; Sīḏīlī ʿOthmānī, i. 86 (according to Neshrī); F. Taeschner, in Ist., xx. 133-137.

(Franz Babiner)

NIMAT ALLAH v. AHMAD B. KĀDI MUBRĀK, known as Kāhil Śifī, author of a Persian-Turkish Dictionary, entitled Lughat-i Nimāt Allāh. Born in Sofia, where as an enameller he made a reputation as an artist, he moved to Constantinople and there entered the Nakşbandī order. Association with the Nakşbandī dervishes made him more closely acquainted with literature and
especially with Persian poetry. Nīmat Allāh decided to make accessible to others the knowledge he had acquired by an ardent study of Persian literature and thus arose his lexicographical work which he probably compiled at the instigation and with the assistance of the famous Kermāl Pasha-zade (d. 940 = 1533). He died in 969 (1561—1562) and was buried in the court of the monastery at the Adrianople gate in Stamul. His work which survives in a considerable number of manuscripts is divided into three parts: verbs, particles and inflection, nouns. His sources were: 1. Usnam-i ʿAdjam (s. Ur. p. 291, N. 108); 2. Kāsima-yī Lutf Allāh Ḥālimī (Hāddjī Khalfā, iv. 503); 3. Manṣūr-i Tāhir (Flaygl, Lexicon Catalogae, i. 192); 4. Lenghyā-i Kard-Ḥūrān (Rieu, p. 1516); 5. ʿṢabbā-i ʿAdjam (Hāddjī Khalfā, vi. 91 and Leyden Catalogue, i. 100). Besides making careful use of these sources Nīmat Allāh added much independent material, of which his dialect notes and ethnographical observations are especially valuable.

This work is of considerable scientific importance and deserves greater attention than it has so far received.

Nīmat Allāh b. Ḥabīb Allāh Ḥaramī, a Persian historian. His father was for 35 years in the service of the Great Mughal Akbar (1556—1605) where he was a khalila inspector. Nīmat Allāh himself was for 11 years historian to Djiḥangir (1605—1628), then entered the service of the Khan-Djiḥan whom he accompanied in 1018 (1609—1610) on the campaign against the Dekkan. Soon afterwards he became acquainted with Miyaān-Halab-Khan b. Salīm-Ḥan Khan of Sāmān. Who persuaded him to write a history of the reign of Khan-Djiḥan. Nīmat Allāh began his work in Mālkāpur in Dhu l-Ḥijdāja 1020 (Feb. 1612) and finished it on the 10th Dhu l-Ḥijdāja 1021 (Feb. 2, 1613). The work is dedicated to Khan-Djiḥan, is entitled Tarīḵ-i Kāndahārī and consists of a mubadima, 7 bbāb and a ḥāțima. It deals with the history of the Afghans, beginning with their legendary descent from the Benā Ismāʾil and treats with special fullness of the history of Bahālū Lodi, Shīr Shāh Sūr and Nawwāb Kāndahārī Lodi. The last chapters are devoted to the genealogy of the Afghan tribes and the reign of Djiḥangir. The ḥāṭima contains biographies of famous Afghan šāhkhās. There is also an abbreviated version of the work entitled Ṣughāīrī Afghānī. Bibliography: H. Ethé, in G. I. Ph., ii. 362—363; Rieu, Catalogue, p. 210a, 212a, 923b; H. Elliot, History of India, v. 67—115. The shorter version is translated by B. Dom, History of the Afghans translated from the Persia of Nīmat Ūlāh, in Orient. Transl. Fund, London 1829—1836. (E. Bertiels)

Nīmat Allāh Wallī, a Persian mystic. Amir Nūr al-Dīn Nīmat Allāh, son of Mir Ṭab Ṭab Allāh, and a descendant of the fifth imām of the Shīa, Ṣafīr, the founder of the Nīmat Allāh order, is highly esteemed in Persia as a great saint and wonder-worker. He was born in Ḥalab in 730—731 (1329—1330/1), spent his early years in the ʿItāl and went to Mecca at the age of 24 where he became a pupil and khāṭīf of the famous Shāhī Ṣāb Allāh Yāfī (see Vīvīṅtī). After his teacher’s death, he went to Samarkand, then visited Herāt and Yazd and finally settled in Māhān, 8 fasaḵās from Kirmān, where he spent the last 25 years of his life and died on 22d Ṣadāb 834 (April 5, 1431). His tomb is still a popular place of pilgrimage (ziwār-e Ḥalāb). In his lifetime he was held in great honour by all rulers and received particular marks of esteem from Shāh Rukh. His sons migrated to India and were appointed to high office in the Deccan by ʿAllī al-Dīn Aḥmad-Shāh Bahman (1443—1457). Nīmat Allāh wrote a number of books; it is said to have written over 500 risālas on different questions of Ṣūfī doctrine. About a hundred of these have come down to us and can be identified. They are for the most part quite short treatises, generally explanations of difficult passages in the classics of Ṣūfīsm like Ibn al-ʿArabī, Fakhr al-Dīn Ṭalḥī et al. His large Divān of lyrics is more valuable; it contains much true poetry and is marked by a fervent sincerity.

Bibliography: H. Ethé, in G. I. Ph., ii. 299, 301; Rieu, Catalogue, p. 43b, 634b, 641b, 774a, 829a, 831b, 869b; E. G. Browne, History of Persian Literature under Tītār Qāsim, Cambridge 1920, p. 463 sqq.; Dīvān, lith. Thānsā 1276. A biography by Ṣanʿ Allāh Nīmat-Allāh, Sahānīn al-ʿārīfīyyīn fi Muḥākādat al-ʿarāf fī Sīlīliyyīn (Persian), lith. Bombay 1307 (1890). See also Ḥabīb al-Siyār, ii. 3, 143 (where 25th Ṣadāb is given as the date of his death) and Dāwlatshāh (ed. Browne, p. 333—340), who however with his usual carelessness gives 827 as the date of his death. (E. Bertiels)

Nīmat Kān ʿAlī, Mīrzā Nūr al-Dīn Muḥḥamad, son of Ḫakīm Faṭḥ al-Dīn Shīrāzī, a Persian author, was born in India and came of a family several of whom had been distinguished physicians in their ancestral homeland in Iran. He entered the service of the state under Shāh Djiḥan (1628—1659) and was appointed keeper of the crown jewels with the title of ḍārūgha-yī ḍawālīr-khāna. He attained his highest honours under Awrangzēb (1659—1707) who gave him the title of Nīmat Kān (1104 = 1662—1693), which was later changed to Muṣṣarak Kān and then to Dānishmand Khan. He died at Delhi on the 1st Rabīʿ II 1122 (May 30, 1710). Nīmat Allāh who wrote under the taḵkīliq of ʿAlī, was exceedingly prolific and wrote a number of works in prose and verse of which the following are the most important: 1. Waṣf-i Ḥālarābād: a description of the siege of Ḥalārābād by Awrangzēb in 979 (1685—1686). This work is characterized by a biting wit and describes the siege in a satirical form which procured the little book the greatest popularity; 2. Ḍjang-nāma, a chronicle which covers the last years of Awrangzēb’s reign and the war which broke out after his death among his sons; 3. Bahādur-dār-shāh-nāma, a chronicle of the two first years of the reign of Shāh Ḥālm Bahādur-Shāh (1707—1712); 4. Ḥān u-ṭibh, also called Katkhudāyī or Munīkāy-yī Ḥān u-ṭibh, an allegorical love story, an imitation of the celebrated Ḥān u-Dīl of Ṣattārī (q.v.); 5. Ṣihat al-Kalb, satirical sketches of a number of contemporaries; 6. Ṣīrāy-yī Ḥalāb-i Ḥukmatī.
anecdotes of physicians and their incompetence; 7. Khān-i Nīmat, a work on cookery; 8. Ruḥādat, letters to Mirzā Mubāhār Allāh Širāzī Khān Wādir, Mirzā Muhammad Šaʿīd, the head of the imperial kitchen and others, which were very highly thought of as models of a choice style of letter-writing; 9. a lyrical Divān; 10. a short Maḥbūhī without a title, which deals with the usual Sufi ethical themes. This survey shows a great versatility on the part of Nīmat Khān but it must be pointed out that, with the exception of the satirical works which are really original and of great value for the characterisation of his age, none of them rises above the level of degenerate imitations of classical models.

Nīmrūd [See Namrud.]

Nīmrūd, a ruined site in the ancient Assyria, the northern portion of the modern 'Īrāk, about twenty miles south of Mōsul, in 36° 3′ North Lat. and 43° 20′ East Long. (Greenwich) in the angle formed by the Tigris and its tributary, the Upper or Great Zāb, six miles above the mouth of the latter. The plateau of Nīmrūd rises abruptly from the surrounding country, and the great advantages of this situation caused a settlement to be made here already in remote antiquity. Excavations on the site have established the fact that the ruins there were those of the town of Kalakh (Kalḥā). This is already mentioned as Kalak (Kalāk) in the Tājīrīn of Tāhār. The site of the city, more than any other, seems to have been the natural choice of the ancients, and the stories of the ancient kings of Assyria and of the stories of the ancient kings of Assyria, which are not absolutely unambiguous (Gen. x. 11—12), which says it was built either by Nīmrūd or Ashšūr; the latter appears to me more intelligible. In Greek writers we find only the name of the district Kālakhur or Kālakhur (cf. Pauly-Wissowa, Realencykl. der. klass. Altertumswiss., x. 1530). It was no doubt its favourable strategic position that decided the Assyrian King Salmanassar I (c. 1280—1261) to raise it to be his royal residence alongside of the previous capital Ashšūr (now Kalat Sherkat; q. v.).

We learn nothing from the cuneiform inscriptions about the decline of Kalakh. Kalakh probably fell about the same time as Nineveh after a stubborn resistance to the onslaught of the Median-Babylonian army. When Xenophon in 401 B.C. passed by the town, which he describes clearly, it was already a ruin.

So far as I know Kalakh is not mentioned in Syriac literature and in the Arab writers of the middle ages only incidentally and under wrong names. In Yāḏūt (ed. Wustenfeld, i, 119, 163; iii, 115) we are told that al-Salāmiya is in the vicinity of the ruins of the town of Atūr, which can only mean the ruins of Kalakh (cf. also ii., p. 184).

At the present day the site is known only as Nīmrūd, which so far as I know first appears in Niebuhr, who stayed in Mōsul in 1766, see his Reisebesch., nach Arabien und andern unliegend. Ländern, ii. (Copenhagen 1778), p. 355, 368. When this, now the usual, name arose is unknown; I am inclined to think that it is a corruption of the name Nīmrūd, which has been noticed by Nīmrūd, Toll Nīmrūd, etc., are not found in the geographical nomenclature of Mesopotamia and the 'Īrāk in the middle ages, while they are several times met with at the present day.

The first European to give a brief account of the "ruined castle" of Nīmrūd and the remains there was Niebuhr, although not from his own inspection. In 1821 Cl. Rich visited the site and gives the first detailed account of the ruins; in his posthumous work are the first pictures of cuneiform tablets discovered there. A few years before Layard, William Ainsworth examined the site. In 1843 Fletcher visited it. Layard, the real investigator of Nīmrūd, twice examined the mounds of ruins in 1840 but it was not till 1845 that he was able to begin excavations, which were conducted in two great expeditions (1845—1847 and 1849—1851). Layard's reports were supplemented in many details by the notes, to which too little attention has so far been paid, by Sandreczki (see Bibli.) who spent a considerable time in Mōsul and its neighbourhood in 1850. After Layard's departure home, H. Rassam continued his work in Nīmrūd. In 1873 G. Smith resumed Layard's work but only for a month. Finally Rassam also on behalf of the British Museum again conducted the earlier excavations for a period of five years (1878—1882).

Our study of the topography of Nīmrūd must still be based on the large map of the vicinity of Nineveh and the whole area between the Tigris and Upper Zāb made by F. Jones in 152, which the Royal Asiatic Society published in three sheets under the title Vestiges of Assyria (sheets 2 and 3 deal with Nīmrūd). The commentary on these maps is the article by Jones, in J. R. A. S., vol. xv. (see Bibli.).

Layard's investigations revealed that this extensive area marking the site of the town of Kalakh was surrounded by a wall with towers. In the north he found fifty-eight, in the east fifty of these towers; in the south this wall of earth has now almost entirely disappeared (cf. Layard, Discoveries etc., p. 656). The length of the wall was seven miles, that is, it was not longer than the boundary of the whole ruined area because two arms were necessary to include the suburbs in the southeast.

The royal quarter in the southwest corner with the palaces and chief temples occupied a relatively small part of the area described. It lay on a terrace and was shut off from the rest of the town by a wall. To it also belonged the high cone-shaped mound in the northwest which is the dominating
feature of the landscape at Nimrud. Its diameter is 550 feet in breadth and 600 in length, and it still stands 120 feet above the level of the Tigris but must as a storied temple tower (stokusara), have been originally about 160 feet high. The royal city is oblong in shape and has a circumference of over 2,000 yards; its west side measures 2,000–2,050 feet and its north side about 1,200 feet.

In the northwest part of the royal city stood the temple of Ninurta (formerly read Nimib), the chief centre of worship of this deity in Assyria. It had a storied tower, the builder of which, according to an inscription, was Salmanasar III. Xenophon's ἡκήβα, now represented by the conical mound (cf. Streck, op. cit., p. clxiv, note 2 sq.; Lehmann-Haupt, Materialien etc., p. 20 sq. and do., Armenien, i/v, 251 sq.). Farther south on the same side was the so-called northwest (better: west) palace of Assurnasirpal II which Sargon II replaced by a new building. The sculptures with which its founder adorned it came for the most part to the British Museum (cf. Reallexicon der Assyriologie, i, 218). In the centre of the royal city but more to the south, Salama-sar III built the so-called central palace which at a later date was completely restored by Tiglatpileser III. The famous black obelisk came from it. This palace is less well preserved as Asshur-Addun partly destroyed it when he took out Tiglatpileser III’s reliefs to transport them to the new palace which he built in the southwest of the royal city. This southwest palace however remains unfinished as after a fire the building was not resumed; cf. Meissner and Rost, in Beiitr. zur Assyriol., iii, 191 sq.; Reallex. der Assyriol., i, 202 and see also E. Unger, Di Reliefs Tiglatpilesters III aus Nimrud, Constantinople 1917.

In the southeast part of the royal quarter Assur-Enlil built a palace and at the same time restored a temple of Nabû there which Adad-nirârî III had built and called after the chief sanctuary of this deity, E-ṣîda in Borsippa (= Birs; q.v.). Here Assasam discovered a series of statues of Nabû dating from the time of Adad-nirârî III which are still found in situ and were of topographical importance (cf. Streck, op. cit., i, p. cc–ccii and ii, 272).

The eastern and north-eastern sides of the royal city have so far only been cursorily examined; probably they also conceal royal buildings.

Outside of the city walls, in the already mentioned triangle at the southeast corner, there are smaller mounds. Layard (Discoveries, p. 656) thought that the largest of these tells was perhaps once a fort or castle; he gives it the name of Tell Alṭūr (op. cit., p. 165) on the authority of the local Arabs. Now it is true that — as already mentioned — in the Arab middle ages, the mounds of ruins near al-Salâmiya, i.e. the modern Nimrūd, were erroneously thought to be ruins of the town of Alṭūr. Educated Mūsulans still held this view in the time of Rich (cf Rich, op. cit., ii, 137). I think nevertheless that Layard’s name Tell Alṭūr for the mound or four mounds in question is due to a misunderstanding. In Vetiges of Assyria, sheet ii, Jones gives the name Tell Yasār for it, J. Oppert (op. cit., i, 309) Tulul Yasār, Sachau (op. cit., p. 106) writes Tell Azar, which is probably the name of a tribe (Yāṣar, J. R. A. 1879, xii, 224, 226).

The Tigris now runs about one and a half miles from Nimrūd but in Assyrian times it flowed directly past the walls of the town as distinct traces still prove (cf. thereon Jones in J. R. A. S., xv, 342–343 = Selections etc., p. 446 sq.; Lehmann-Haupt, Materialien, p. 27 and his Armenia, ii/v, 250 sq.). In the centre, between the still distinct ancient bed of the Tigris and the modern one, is a third bed which the river filled in the middle ages; this latter now bears the name of Ṣīr Alḥī Debâbî (see Jones, Vetiges and J. R. A. S., xv, 343 = Selections, p. 447 = “The road of Alḥī Debâbî”, apparently after a Bedîn tribe (the explanation given by Jones is hardly tenable).

A quarter of an hour west of the ruined site of Nimrūd (called frequently al-Kaffa = the citadel) is an older settlement, the fair-sized village of (old) Nimrūd also called De râa śīl. Still farther west, near the Tigris is a village also called (New) Nimrūd of more recent origin and a mile N.W. of it directly on the river the village of Naṭîf. Again a mile N.W. are the remains of a dam first described by J. Macdonald Kinnie from personal observations (see his Journey through Asia Minor, Armenia and Koordiant, London 1818, p. 465). The natives call it Sāk or Sāk Nimrūd (see Kinneir, loc. cit.; Layard, Nineveh, i, 8) = Nimrūd’s Dam. Jones gives (J. R. A. S., xv, 343 = Selections, p. 447 = Vetiges of Assyria, sheet ii): Sāk or Nimrūd (= Nimrūd’s Cliff): I suspect that he picked up the name wrongly (pāṣar for sāk “dam”). At the same time we also have the name Sīr al-Awāzē (Rich, op. cit., i, 129) or simply al-Awāzē, Āwāzē (Layard, op. cit., i, 8, 365; Jones, loc. cit.) = “dam of noise” or “the noise” (awāzē or āwāz from Persian awāzdeh; see Vollmer, Lex. Pers., i, 56) and this second name owes its origin to the great noise caused by the waters breaking over the rocks here. The people of the vicinity say that there was once a bridge here. Probably a barrier of rock in the river was already used in ancient times as the foundation for a dam for irrigation purposes.

Still farther northwards about three miles from the ruins of Nimrūd lies Selâmîyeh on the Tigris, now a small village but in the middle ages as Yâkūt, iii, 133 (al-Salâmîyeh; cf. also i, 119, 16) tells us, one of the most beautiful places in the region of Mūsul. The modern Selâmîyeh lies in the southeast corner of an area covered with old ruins. This Selâmîyeh may with great probability be identified with the Biblical Rezen, numbered among the four Assyrian towns founded by Asshur (or Nimrod; cf. above) according to Gen. x, 11–12, and there located as lying between Nineveh and Kalakh (Calah). The assertion constantly made in learned works because of the words describing them “the same is a great city” and in view of passages in Jonah (1, 2; 3, 3–4; 4, 11) that these formed a gigantic tetrapolis linked together hardly deserves serious refutation.

The greater part of the finds at the English excavations at Nimrūd are in the British Museum where they are exhibited in the Assyrian transect, the Nimrūd Gallery and in the Nimrūd Central Saloon (cf. the B. M. Guide etc. [see Bibl.], p. 41 sq.). Nimrūd provided the British Museum with even greater treasures in sculptures (not inscriptions) than Koyunjik–Nineveh. Various objects from Layard’s collection were left in Bombay on the way home and are now, with some pieces brought
by Rawlinson, in the possession of the Bombay Branch of the Royal Asiatic Society; on them see Karkaria in the Journal of the Royal Asiatic Society, (Bombay 1891), p. 97—107. A large series of sculptures came to the Louvre; cf. E. Pottier, Catalogue des Antiquités Assyriennes (Louvre), Paris 1924, p. 23, 49—63. There are also miscellaneous antiquities from Nimrud in the national collections in Stambul, Berlin, Zürich and Leningrad (Hermitage); on a few finds by Lehmann-Haupt, see his Materialien, p. 22 sq.

The English excavators left the site without filling in or even roughly levelling the ground they had cut up. In the spring of 1920 the Iraqi government however had the half exposed sculptures lifted and put in the new Museum in Baghdad. During my stay in Nimrud (May 1928), I saw the sculptures lying on the bank of the Tigris ready to be moved (2 statues of Nabû, a colossal bull, fragments of another, an unfinished lion in stone, two great slabs with inscriptions of Assurnasirpal etc.).

(M. Streek)

NIMRÜZ [See ŞEŞTAN.]

NIRIZ, a place in Adhār bādījān on the road from Marāḡa [q. v.] to Urmiya [q. v.] south of the Lake of Urmiya. The stages on this route are still obscure. At about 15 farsaks south of Marāḡa was the station of Barza where the road bifurcated; the main road continued southward to Dinawar while the northwest went from Barza to Tullis (2 farsaks), then to Jāḏbarwān (6 farsaks), hence to Nīrīz (4 farsaks) and finally to the town of Nīrīz (4 farsaks); cf. Ibn Khirdāṯibh, p. 121 (repeated by Kudama with some variations); Muḥaddas, p. 385.

The distance from Urmiya indicates that Nīrīz was in the vicinity of Suldūz [q. v.] which would find confirmation in the etymology from nirīz "flowing". Suldūz lies in the low plain, through which the Gāḏar flows to the Lake of Urmiya. At the present day the name Nīrīz is unknown, but a Kūrī tribe of the region of Saʿūdī-bulkā [q. v.] bears the name of Nirīz.

After the Arab conquest a family of Tīʿ Arabs settled in Nīrīz. The first of these semi-independent chiefs was Mūr b. ʿAlī Mawṣūli who built a town at Nīrīz and enlarged the market of Jāḏbarwān (cf. Rāḏāhil and Yaʿkōbī, ii. 446). One of his sons, ʿAlī, was among the rebels of 212 (827) whom the governor of Adhār bādījān Muḥammad b. Ḥamīd Ṭabī was deported to Bagdād but ʿAlī succeeded, it seems, in returning to his lands) cf. Ibn Khirdāṯibh, p. 119). Abū Rudainī ʿOmar b. ʿAlī, appointed in 260 (873) governor of Adhār bādījān by the caliph, made war on his predecessor ʿAlī b. Ḥamīd ʿAzīd and killed him (Ṭabarī, iii. 1886). He was supported by the Khāridjīs. Cf. the account in Pābdāḵān-i gummān, Teherān 1929, ii. 37, 34.

In the 19th century ʿIṣkāḥi, p. 186 and Ibn Hawkal, p. 240 mention the Banū Kudini as a dynasty already forgotten which had reigned over Dīḵkūrān (read Ḍāḏbarwān), Tabriz (read Niriz) and Ushnuḥ adhāḏāriya [cf. USHNU].

(V. Minorsky)

AL-NISĀʿ, the "Women", the title of Sūra iv. of the Kurʾān; so-called because in the opening verses the position of women is dealt with. Noldeke (Geschichte des Korāʾs, i. 1935) thinks that the greater part belongs to the period between the end of the year 3 and the year 5 A.H.

This sūra contains many verses that were abrogated: among the principal we may mention 9—8 abrogated by 12; 10 abrogated by 11; 10 abrogated by xxiv. 1; 33 abrogated by xxiv. 60 etc.

It is also one of the most important strata of the Kurʾān because many of the decrees formulated in it form the foundations for the Muhammadan laws of marriage.
The sura lacks unity, consisting as it does of a collection of verses of different origin and on different subjects. The following is a brief analysis of its contents: the creation of man; consanguinity; the care of orphans; rules for succession; marriage; relations of husband and wife; impediments to marriage; almsgiving; evidence; accidental homicide; holy war and the art of war; obedience to Allah and to the Prophets; punishment of the unbelieving Jews and Christians.

NISHA. (See ZAKAT.)

NISAN, the seventh month in the Syrian calendar. Its name is taken from the first month of the Jewish religious (seventh of the civil) year with the period of which it roughly coincides. It corresponds to April of the Roman year and like it has 30 days. On the 10th and 23rd Nisân, according to al-Bûrûnî, the two first stations of moon rise (the numbering of these two as first and second shows that the numbering was established by scholars for whom Nisân was the first month) and the 15th and 16th set. In 1300 of the Seleucid era (989 a. d.), according to al-Bûrûnî, the stars of the 28th and 1st stations of the moon rose and those of the 14th and 15th set while the rising and setting of the 2nd and 16th stations of the moon took place in Ayhr.

Bibliography: al-Bûrûnî, Alâ.der, ed. Sachau, p. 60, 76, 347-349; cf. also the references under TAMEUS.

(M. FLEISSNER)

NISH (Serbian Nish), the second largest town in Serbia, now the capital of the banate of Morava in the kingdom of Jugoslovakia, situated 650 feet above sea-level in a fertile plain surrounded by hills, on both sides of the Niska not far from its junction with the Morava and an important centre of communications by rail and road, on the international route to Sofia–Istanbul or Salonika–Athens. The larger part of the town with the railway station lies on the left bank, the fortress is on the right. The two parts of the town are connected by four iron bridges (including a railway bridge), cover an area of 11 sq. m. and had in 1931 35,384 inhabitants of whom only 3.7% are Muslims. According to the latest (Dec. 1933) statistics of the Imam-registrar, Nish has 1,892 Muslims in 365 households, chiefly gypsies, while Muslims speaking Serbo-Croatian, Turkish and Albanian form the remainder. These gypsies call themselves Muslims, bear Muslim names, marry with Muslim rites but nevertheless observe at home some of the Serbian Orthodox Church feasts, visit the churches etc. There are a number of offices of the civil and military authorities in the town, including a district shari'a court. This court has existed only since Oct. 29, 1929, i.e., since the abolition of the old office of district mufîf whose authority till then extended over the whole of Serbia. The authority of the new court extends over a part of that of the older (19 districts) while the remainder are under the kîdd of Belgrade. The Muslims of Nish have also a district wakîf meci'iff council (cf. i., p. 790), a common council (zaintashki medi'iff) and a registration office (mînâz). There are said to have been 19 mosques in Nish in the last Turkish period (1878), only one of which now survives. The second last mosque of which the great minaret is still standing, was destroyed as a result of the great floods of 1896. Nish has also Serbian Orthodox churches and a Roman Catholic church and a synagogue. Besides several colleges, it has a Hygiene Institute, two hospitals and a society for popular education. The town is making steady progress. Its whole history shows that Nish has always been an important strategical and commercial centre.

In antiquity Nish (Nassus, Nic, Nissa etc.) belonged at first to the Roman province Moesia Superior and later became the capital of Dardania.

Nish's greatest claim to fame is that it was the birthplace of Constantine the Great (306—337) and attained great prosperity in ancient times. The Romans had state munition works here.

In the time of the migrations of the Huns, Nish was taken after a vigorous resistance by Attila (434-453) and destroyed but rebuilt and refortified very soon afterwards by Justinian I (525-565). By the middle of the sixth century the first forces of the Slavs who had entered the Balkan peninsula in their great migrations had found Nish, when the Byzantine empire appeared before Nish. Nish was thus in the ninth century usually in the hands of the Bulgars and until 1018 it belonged to a Slav state founded in Macedonia in 976 by the emperor Samuel. The Byzantines held it from 1018 to the end of the eleventh century, when we find it described as large and prosperous; Idrisi who calls it "Nusa" (also on his map of 1154, ed. K. Miller) lays special emphasis on the quantity and cheapness of food and the importance of its trade. But even then it did not enjoy peace. In 1070 the Hungarians reached the town on a marauding campaign; in 1191 the inhabitants had to defend themselves in a strenuous battle "at the Bridge" against the Crusaders in which the latter suffered very heavily, and in 1182 the town was taken by Bela III supported by Nemanja, the Serbian prince. A little later Nemanja took Nish and the whole country as far as Serdica (Sofia). The town suffered considerably in these troubled times. The Third Crusade (1189) found it almost empty and practically destroyed. In spite of this, Nish was able to receive the emperor Barbarossa in Nish with great ceremony. From this time on to the Turkish conquest Nish was generally in Serbian hands.

In the earlier Turkish chronicles (e.g. Shukrullah, Uruj, İ. 511, 522; 523; 524, Anonymous Giese) there is no mention of the taking of Nish: Sa'd al-Dyn (i., 92—93), H. dji Khasil and Ewliya Çelebi, then von Hammer (G.O.K. 2, i. 157) and Lane- Poole (Turkey, p. 49) on the other hand, assume that it took place in the reign of Murad I in 777 (1375-1376). The Serbian chronicles however definitely give 1386 and this year, which Gibbons has recently strongly urged as the correct date (The Foundations of the Ottoman Empire, Oxford 1916, p. 161—162), is now generally accepted.

During the Turkish period (1386—1578) Nish had chequered fortunes. In 1443 it was taken by the Christian army under king Vladislav III and John Hunyadi and destroyed. After the fall of Smederevo in 1459 the Serbian despotate became a Turkish province and Nish was even more securely in Turkish hands. For several days after June 20, 1521 a great fire raged in Nish which would have destroyed it completely if the Beglerbeg Ahmad Pasha, who was leading an army against Hungary
at the time, had not come at the last moment to its assistance [F. Tauer, Histoire de la campagne du Sultan Saleymen 1er contre Belgrad en 1521, Prague 1924, p. 26 (Persian text), p. 31 (transl.)]. Western travellers who visited Nish in this period (Dernschwam, Contarini etc.) were not particularly attracted by it.

Turkish writers give us an idea of the appearance of Nish in the xviii century. Hadji Khilafa (c. 1648) describes it i.e. as a great town and kadılah in the sandjak of Sofia. The description which Ewliya Celebi (c. 1660) gives is much fuller: it is a fortified town in the plain with 2,000 houses, 200 shops, three mosques (ı. Chahi Khudawnedigär; 2. Mușli Efendi; 3. Hussen Kethkhdit), 2 schools for children, several mašjids, darwish monasteries, fountains, baths, many vineyards and gardens etc.

On Sept. 23, 1659 Nish was taken by the Austrians under Ludwig of Baden but abandoned the very next year to the Turks (1690). In 1737 Nish was again taken by the Austrians under Seckendorf but left to the Turks again after two months occupation. This leads to this period that the city owes its fortifications.

When in 1804 the Serbians under Karaordole (il=di) rebelled against the Turks they soon won a number of successes and in 1809 were able to build redoubts against Nish, in which Stevan Sindicli, one of Karaordele's voivods, on May 31 blew up himself and the attacking Turks. Nish was nevertheless not relieved and the Turks built the so-called Çele-Kula ("tower of skulls") with the heads of the Serbians killed there, of which A. de Lamarthe gave a moving description on his way home in 1833 (cf. Voyage en Orient, Paris 1859, p. 255—256). It was not until Jan. 1870 that Nish, Nishandži, the capital of a Turkish liwa, finally passed from the Turks. This induced many Muslims to migrate to Turkey.

Lying on the military road between Constantinople and Vienna and therefore exposed to every campaign Nish was by no means favourably situated to become a centre for the development of even a modest intellectual life. It appears, at least according to Gibb, that Nish has produced no Turkish poets or authors, except perhaps Sunbulzade Webbi (end of the xviii century) who celebrated in song his meeting with the young Sara in the Turkish camp at Nish (H.O.P., iv. 259). In Nish however, two Turks worked for a time who later were to become celebrated: 1. Aḥmad Lafi (1815—1907), afterwards imperial historiographer served in Vidin and Nish from April 1845 (G.O.W., p. 384); 2. the famous statesman and author of the Turkish constitution of 1876, Midhat Pasha [q. v.], was appointed governor of Nish and Prizren in 1861. In this capacity he saw to the building of a Serbian school (1864) in Nish.

Nish played an important part in the World War: first as the seat of the Serbian government and the Skupština (till Oct. 26, 1915) and then as the scene of a battle between the Germans with a Serbian force, which had been ordered in pursuit of them which ended in the capture of the town by the latter (Oct. 12, 1918).

NISHANDŽI, secretary of state for the Sultan's tughra, chancellor.

The Seljûks and Mamilûks already had special officials for drawing the tughra, the sultan's signature. As their official organisation was inherited in almost all its details by the Ottomans this post naturally was included. Its holder was called nîshân-djî or tâğhî. The nîshân-djî held the same rank as the defterdâr [q. v.] and indeed even preceded them, for we find defterdârs promoted to nîshân-djîs but never a nîshân-djî becoming a defterdâr. The nîshân-djî was included among the "pillars of the empire" (erbaştâ demet). The part which he played varied in course of time. Besides being secretary of state for the imperial tughra (nîshân) he had originally considerable legislative powers and he was called mufti-bî kânîn (to distinguish him from the muftî proper, i.e. the šâheit al-îslâm). In his office the laws were prepared under his supervision. Most of the Ottoman codes of law (kânîn) that have come down to us go back to nîshân-djîs. As they had besides the right to approve the contents of documents put before them for the imperial tughra, they had no slight influence on the business of administration. Of their official career we know that according to the Kûnum-nâma of Mehmed II they had to be chosen from teachers acquainted with law (mufters), apparently because they had to display legislative ability, or from the defterdârs and rûcâat el-bitteâb. As their authority diminished more and more in course of time, so did their influence, and finally they were limited to preparing the tughra. According to Mouradja d'Ohsson (Tableau de l'Empire Ottoman, iii. 373), the nîshân-djîs received from the state a salary of 6,620 piasters. On their official dress, see v. Hammer, G. O. R., viii. 431, according to whom they wore red in contrast to the other khânegân who wore violet.

(Franz Babinger)
NISHAPUR. the most important of the four great cities of Khorasan (Nishapur, Marv, Herat and Balkh), one of the great towns of Iran in the middle ages.

The name goes back to the Persian New-Shahpur ("Fair Shahpur"); in Armenian it is called Nishapu, Arab. Naishobur or Nishapur, new Pers. Nishapour, pronounced in the time of Yakut: Nishapur, the new Nishapur, Yeldeke, Tafar, p. 59, note 3; G. Hoffmann, Anzeige ..., p. 61, note 530). The town occasionally bore the official title of honour, Iranghar.

Nishapur was founded by Shushpur I, son of Ardabur I (Hamza al-Isfahani, ed. Gottwaldt, p. 48), who when he slain in this region the Persian Palælk (Pulak) (Stadteiliste von Erân, § 13) some authors say it was not founded till the time of Shahpur II (Tabari, i. 840; al-Thaddibûd, ed. Zotenberg, p. 529).

In the wider sense the region of Nishapur comprised the districts of al-Tabasun, Khuzistan, Nesa', Beward, Ardashur, Djân, Bâkhâs, Tôs, Zasan and Isparâin (Ya'âkib, ed. de Goeje, p. 278; cf. Tabari, i. 530). In the narrower sense Nishapur was the capital of the province of Abârshahr (Armen. Apar agh-âvarh, the "district of the ‘Aparapaus’"); Marquart, Erânshahr, p. 74; do., Catalogue of the Prov. Capitales of Erânshahr, p. 52), which was in turn divided into 15 Rustûks and 4 Tassâdîd (names in Isytahrî, p. 258; Ibn Hawkal, p. 313; Ibn Khurâzhbi, p. 24; Ya'âkib, p. 278; Ibn Rusta, p. 171). The latter were: in the west Rêwând (now Kâwân), in the south al-Shâmât, Pers. Tak-Ab, in the east Pusht-âfshân (now Pushâr-Furush, and in the north Mâsul (now Mâsul); cf. al-Makdisî, p. 314-321.

The Rêwând town to the north-west of the town was one of the three most sacred fire-temples of the Sassanians, that of the fire Burzûn-Mûlîr (G. Hoffmann, op. cit., p. 290). Yâzadîrîd II (438-57) made Nishapur his usual residence.

In the year 30 (651) or 31 (652) the governor of Başra, 'Abd Allâh b. Amîr'atâbâd, took Nishapur (Tabari, i. 3305; Baladhi, p. 404) whose governor Kanârân (Kanârayyân): Marquart, Erânshahr, p. 75 capitulated. The town was then insignificant and had no garrison. During the fighting between 'Ali and Muawiyah (36-37 = 666-657) the Arabs were again driven out of Nishapur by a rising in Khurāsan and Turkhistan (Tabari, i. 3249, 3305; Baladhi, p. 408; Dinawari, p. 165). Pîrzî, the son of Yâzadîrî and of the daughter of Kanân of Nishapur, is said to have lived for a period in Nishapur. Khulâid b. Ka'â was sent in 37 by 'Ali against the rebellious town (Dinawari, op. cit.). Muawiyah reappointed 'Abd Allâh b. Amîr governor of Başra in 41 (661-662) and commissioned him to conquer Khurāsan and Sûrând. The latter in 42 (662-663) installed Kais b. al-Hâlîhâm al-Sulami in Nishapur as governor of Khurāsan. Ziyäd b. Abî Sufyân in 45 (665-666) made Khulâid b. 'Abd Allâh al-Hanâfi governor of Abârshahr (Nishapur). 'Abd Allâh b. Khâzîm rebelled in 685 against the Umayyads. He fell in 692 at Marv fighting against 'Abd al-Malik, whereupon Umâiyad rule was restored in Khurāsan.

The prosperity of the city dates from the time when Abu l-Abbas 'Abd Allâh b. 'Abbas made it his capital in the third (ninth) century.

The founder of the Sassanid dynasty, Ya'âkib b. al-Lâhî b. Muaddâl, entered Nishapur on the 2nd Shawwal 259 (Aug. 1, 873) and took Muhammad b. Tâbir prisoner (Tabari, iii. 1881; Gardizi in Barthold, Turkestan down to the Mongol Invasion, p. 217, note 6) but the latter soon regained his liberty and land. Only after Ya'âkib's death was his brother 'Amr b. al-Lâhî gathered the marshals of Khurāsan and other regions. Rafî' b. Harâmâ in 882 took Nishapur from him (Tabari, iii. 2039) and Musulmân conquerors restored Khurāsan in 885 again; but in 279 (893) 'Amr was finally confirmed in office as governor and erected many buildings there. He finally fell in battle (891-901) with Ismâ'il b. Ahmad. The town thus passed to the Sâmâníds, under whom it attained its greatest prosperity. It was the residence of the governor and commander-in-chief of the province of Khurāsan (isâbâ-âlarâ). The Arabic geographers describe Nishapur at this time as a thickly populated town divided into 42 wards, 1 farsakh in length and breadth (al-Isfahârî, B. G. A., i. 254) and consisting of the citadel, the city proper and an outer suburb in which was the aristocratic seat of the Sassanid nobles. Nishapur, when it was the public market called al-Mu'asâkar, the governor's palace, a second open place called Mâdân al-Husainîyín and the prison. The citadel had two gates and the city four: the Gate of the Bridge, the Gate on the road from Ma'îlî, the Gate of the Fortress (Bîb âl-Khâridandî) and the Gate of the Takîn Bridge. The suburbs also had walls with many gates. The best known market places were al-Murâbâ'aat al-Kâbîra (near the Friday Mosque) and al-Murâbâ'aat al-Sâghira. The most important business streets were within fifty in number and ran across the city in straight lines intersecting at right angles; all kinds of wares were on sale in them (on the products and exports of Nishapur see G. Le Strange, The Lands of the Eastern Caliphate, p. 420 sqq.). Numerous canals were led from the Wâdî Sâgharaw, which flowed down from the village of Buşhânâr and drove 70 mills, from whence it passed near the city and provided the houses with an ample water supply. Gardens below the city were also watered in this way. The district of Nishapur was regarded as the most fertile in Khurāsan.

The town suffered many vicissitudes after this period. A great famine broke out there in 401 (1010). At the beginning of the 11th century Nishapur was the centre of the pietist Karrâmîs led by the anchorite Abu Bâkak Muhammad b. Ishâk. The Saljûq Tûghrul Beg occupied the town in 1037 and made it his capital. Alp Arslân also seems to have lived there (cf. Bartholyneus, Chron. Syr., ed. Bedjan, p. 243). In May 1142 the Khwârizmshâh Atâz took the town for a time from the Saltûn Sultan Sandar. When it was sacked by the Ghuzz in 548 (1153), the inhabitants fled, mainly to the suburb of Shâyâykh (al-Shâyâykh) which was enlarged and fortified by the governor al-Mu'ayyid. Tûghân-Shâh Abu Bâk ruled the city 1174-1185 and his son Sandar Shâh 1185-1187.

In May or June 1187 the Khwârizmshâh Tâhâ took Nishapur and gave it to his eldest son Malik-Shâh. At the end of 1193 the latter received Marw and his brother Kûb al-Dîn Muhammad became governor of Nishapur. Malik-Shâh died in 1197 in the neighbourhood of Nishapur, 'Alî al-Dîn Muhammad (as Kûb al-Dîn called himself after
his father’s death) took Marw and Nishapur in 1202 from Ghayath al-Din and his brother Shihab al-Din.

In addition to the wars and rebellions (e.g. 1207—1208) which afflicted the town, it suffered from repeated earthquakes (540 = 1145, 605 = 1208, 679 = 1280). Yakut who visited it in 613 (1216) but stayed in Shadykht, still could see the damage done by the first earthquake and by the Ghuza but nevertheless thought the town the finest in Kharasan. The second earthquake was particularly severe; the inhabitants on this occasion fled for several days into the plain below the city. In 618 (1221) the Mongols under Chinghis Khan sacked the city, which, in the words of Hamd Allah Mustawfi (c. 1340) and Ibn Battuta (c. 1350) it had to some extent recovered. After each earthquake the inhabitants had rebuilt the town on a new site but it never regained its former importance.

According to the Georgian chronicle (transl. by Brosset, Hist. de la Géorgie, i. 472), the Georgian queen Theamar is said to have taken the city of Romguar between 1210 and 1212; Brosset identified this with the Malalma Ramdar mentioned by Yakut in the district of Nishapur (more probably a suburb of it). Here the patriarchs of Antioch, whose jurisdiction according to the Nekropoliovâdion of Barthold, compiled in 818 (ed. Schott), in the first edition of Ecclesiast I, app. p. 82 sqq.) already at this time extended to Khurâsan (mêzi ye kwotamam homs al Khargan), created about 1053 the catholicate of 'Rumkhânegh or 'Rumkhânegh ûst Peraz; which, in name at least, still existed in 1365 (Brief des antiochenischen Patriarchen Pets III. an Domenico von Grado und Aquilina, ed. by Cornelius Will, Acta et scripta quae de controversiis ecclesiast Graec. et Lat. saeculo XI composita extant, Leipzig and Marburg 1861, p. 212, 31; Notitia Antiochena, ed. Gelizer, in B. Z., i. 247, 31; Nellis Duxpatros, ed. Parthey in Hieroclis Symeonovâdion et Notitiex graecex ecclesiast. patriarcharulx Constantinopolitanx, i. 207, 460-465; Pref. p. x.).

The modern Nishapûr is in 35° 12′ N. Lat. and 58° 40′ East Long. (Greenwich) on the east side of a plain surrounded by hills. To the north and east of the town lies the ridge of Bînâlût-Kûh, which separates it from the valley of Meshedh and Tûs. At its foot spring a number of streams, among them the Shûrâh Rûd and the river of Dîzâb (Hamd Allah al-Mustawfi) which irrigate the lands of Nishapûr and disappear in the salt desert to the west. North of the town in the mountains was the little lake of Cashmah Sabs, out of which, according to al-Mustawfi, run two streams, one to the east and the other to the west. North-west of Nishapûr were the famous turquoise mines (Ma'dîn: the district is still called Bârî Ma'dên). In the S.E. of the town is the show monument of her celebrated sons Oamar Khâyâm and Farid al-Din 'Aṭtar.

A history of the 'ulamâ of Nishapûr was completed in 8 volumes by Hâkim Abû 'Abd Allah al-Baiyî al-Nishabûrî (d. 1045 = 1631); it was used by Yakut and the 'Abîl Khâlîfah (ed. Flugel, ii. 155 sq.) and continued by 'Abd al-Ghâfir b. Ismâ'îl al-Fârisî down to the year 518. Al-Djâhâbi produced an abbreviated version of al-Baiyî's work.

929

NISâBûR — NISÎB

NISâBûR (نیسابور) and NISÎB (نیشابور) in the modern Turkish orthography Nizip, an administrative district in the Turkish vilayet of Gâzî 'Ainîb (now officially Gazi Antep) which borders on Syria in the south. The little town lies not far from the right bank of the Euphrates, N.E. of Halab (Aleppo). Nisib formerly belonged to northern Syria, to the sandjak of Urfa in the vilayet of Halab. According to the census of 1927, the whole district had 48,717 inhabitants of whom only 3,000—4,000 were in the town. Nisib is noted for its extensive olive groves and sesame fields, which extend to Kilis (in the same vilayet but nearly on the Syrian frontier); in this zone the annual production of oil is estimated at 5 million kilos.

Ewliya Celebi visited Nisib in the xviiith century and describes it as “an inhabited town in the middle of an unfertile district on the edge of a high hill, with inns, mosques, baths and a small market but without vineyards or gardens”. Nisib at this period was the residence of a judge on the salary scale of 150 akçe.

During the war (1831—1840) between the Turks and Egypt under Mehmed Ali, Nisib became the scene of a celebrated battle. Ibrahim Pasha,
Further the niya must immediately precede the act, lest it should lose its character and become simple decision (fazw). It must accompany the act until the end (Abū Ishāk al-Shārīzī, Tuhfah, ed. Juynboll, p. 3). Its seat is the heart, the central organ of intellect and attention. Lunatics, therefore, cannot pronounce a valid niya.

So the niya has become a legal act of its own. It is usually called obligatory, but in some cases, e.g. the washing of the dead, commendable. It can even be asked what the intention of the niya is. According to al-Bādājī (i. 57), four conditions must be fulfilled in a niya: who pronounces it, must be Muslim, composes mens, well acquainted with the act he wants to perform, and having the purpose to perform this act. In some instances adīmāla is used, where the later language has nasā (e.g. Nasīr, Šīyāv, bāb 68; Tīmūrīdā, Šīrāz, bāb 33).

The term does not occur in the Kur'ān. It is found in canonical hadīth, but the passages show that is has not yet acquired in this literature the technical meaning and limitation described above. The development of this technical use appears to have taken place gradually, probably aided by Jewish influence. In Jewish law the kawwānā has a function wholly analogous to the niya. Al-Shārīzī (7204 = 820) appears to be acquainted with the niya in its technical sense (Kīthī al-umn). In canonical hadīth i.e. the literature which, generally speaking, reflects the state of things up to the middle of the eighth century A.D. — neither the verb nasā nor the noun niya appear to have any special technical connection with the šidāt. On the contrary, niya has here the common meaning of intention.

In this sense it is of great importance. Būḥārī opens his collection with a tradition, which in this place is apparently meant as a motto. It runs: “Works are in their intention only” (innama ‘l-umāl bi ‘niya or bi ‘l-niyyā). This tradition occurs frequently in the canonical collections. It constitutes a religious and moral criterion superior to that of the law. The value of an šidāt, even if performed in complete accordance with the precepts of the law, depends upon the intention of the performer, and if this intention should be sinful, the work would be valueless. “For”, adds the tradition just mentioned, “every man receive only what he has intended”; or “his wages shall be in accordance with his intention” (Mālik, Dīnārā, tr. 36). In answer to the question how long the hijra is open, tradition says: “There is no hujra after the capture of Mekka, only holy war and intention” (Būḥārī, Manāṣib al-umnā, bāb 45; Qidābb, bāb 1, 27; Muslim, Imārā, tr. 85. 86 etc.). This higher criterion, once admitted, may suspend the law in several cases (cf. Nauck Hurnouje, Islam und Phonograph, in T.B.G.K.W., xlii. 393 sqq. = Verspr. Geschichten, ii. 419 sqq.)

So the intention, in this sense, becomes a work of its own, just as the intention in its juridical application. Good intention is taken into account by Allāh, even if not carried out; it heightens the value of the work. On the other hand, refraining from an act even with good intention is reckoned as a good work (Būḥārī, Kīthb, bāb 31). In this connection the (post-canonical) tradition can be understood, according to which the intention of the faithful is better than his work (Līkān al-ʻarbāh, xx. 223: cf. Ghażālī, ʻIlāh, iv. 330 sqq. where this tradition
NIYÄZI, an Ottoman poet and mystic. Sams al-Din Mehmedmed known as Mi'ri Efendi, Shaikh Mi'ri, whose maqṣād was Niyaizi, came from Aspaz, the former summer capital of Malatia (cf. Eweyla Celahi, iv. 15; v. M. Itikte, Ketehefi [p. 349], where his father was a Nakhabandi dervish. Niyaizi was born in 1027 (1617—1618). The statement occasionally found that Soghanci was his birthplace is not correct. His father instructed him in the teaching of the order, then he went in 1048 (1638) to diyābakr, later to Mardin where he studied for three years and finally to Cairo. There he joined the Kādiri order, travelled for seven years and finally settled down in the Anatolian village of Elmala, once notorious as a centre of heresy, to devote himself to study under the famous Kāhlwet Shihāb Umm-i Sinān (d. 1069 = 1658).

He stayed with him for twelve years until he was sent by the Shaikh as his deputy to 'Ushālah near Smyrna. After the death of his master he moved to Brussa where a pious citizen, Abdal-Celebi, built a hermitage for him. The fame of his sanctity and his gifts of prophecy spread more and more and finally reached the ears of the grand vizier Koprulü-zade Ahmad Pasha, who invited him to Adrianople, entertained him with great honour for 40 days and finally sent him back to Brussa. When in 1083 (1672) the army set out for Karamene in Podolia (q. v.), he was summoned to Adrianople where he had great audiences as a preacher. As he had allowed himself to drop obscure allusions (kellimet-i dairifte) he gave umbrage and was banished to Lemnos. There he spent some years in exile until he received permission to return to Brussa. The fact that during his stay on the island it was spared Venetian attacks was interpreted as a miracle wrought by this holy man. But when he stirred up the people by *kabbalistic* preaching he was again banished to Lemnos in Safar 1088 (May 1677). All kinds of prophecies which were fulfilled as well as the story of his coming had been foretold by Ibn al-Aravi (q. v.), strengthened his reputation as a holy man and miracle-worker. He spent ten years on Lemnos until in 1101 (1698) the vizier Koprulu-zade Mustafa Pasha allowed him to return to Brussa. In the next year he was summoned to Adrianople; he again excited the people by political utterances and mystical allusions so that the Kālinmakām O'mmān Pasha had him taken with all respect by a guard of Janissaries and Çavuşes out of the mosque and sent directly via Gallipoli to Brussa. From there he was again banished to Lemnos but died on the 20th Radjab 1105 (March 17, 1694). The date 1111 (1699) given by v. Hammer, G. O. D., iii. 588 must therefore be wrong.

Unfortunately the contemporary notices give no information about the nature of the sermons by Niyaizi which gave offence from the political as well as religious point of view. The historian Demetius Kantemir said Niyaizi was secretly a Christian. His Divān, in Arabic and Turkish, does not justify this suggestion although the poem declared by v. Hammer (G. O. D., iii. 569) to be apocryphal, given in translation by Kantemir, is really taken from his Divān, as Gibb, H. O. P., iii. 315 has proved. No study has yet been made of the Divān or of Niyaizi's position in the religious life of Turkey generally.

The order founded by Niyaizi once possessed several monasteries on Greek soil, in Modoni, Negroponte (Eghriboz), Saloniki, Mytilene, also in Adrianople, Brussa and Smyrna. Cf. thereon the study by V. A. Gordlevsky, Turkhat Mysri Niyaizi, in Doklady Akademii Nauk S. S. R., 1929, p. 153—160.

The main source for the history of Niyaizi's life and work is the rare Turkish treatise of Morall-zade Lutfi (Mustafa Lutfullah), Tuhfat al-qa'yi fi Manāhi al-Mi'ri, published at Brussa in 1308 (1890—1891).

Niyaizi's poems were repeatedly published 1254 and 1259 in Bitlisk, also 1260 and 1291 in Stambul; cf. thereon J. v. Hammer, in Wiener fahrbccher, lxxxv, p. 36 and J. A., ser. 4, vol. viii., p. 261. On his numerous other works, only available in MSS. of Brussal Mehmedmed Tahir, *Oytmek or Mu'li'lferi*, l. 173 sq. with references to where they are preserved.

NIZAM AL-DIN AHMAD B. MEHMAD MO'KIM AL-HARAWI, a Persian historian, author of the celebrated *Tabakat-i Akgarhiz*. He was a descendant of the Mongol conqueror Ghiyath al-Adl, Ansar. His father Khodja Mo'kum Harawi was major-domo to Sultan Babur (1526—1530) and later vizier to the governor of Guja겠다r Mirza 'Askari. Niẓam al-Din himself held several high military offices under the Great Mogul Akbar and became in 1585 Bakhshsi of Gujārāt and in 1593 even Bakhshsi of the whole empire. According to Bada'uni (ii. 397), he died on the 23rd Safar 1003 (Oct. 18, 1594) aged 45. At his father's instigation he took up historical studies while quite a boy. His fondness for this subject increased as time went on and induced him to try writing himself. The lack of a complete history of India made him decide to fill the gap and thus arose
his celebrated work, called the "Tabāḫ-ī Akbars̱hāhī" or "Tabāḫ-ī Akbarī" or "Tārīkh-i Niẓāmī" which was finished in 1601 (1595). Niẓām al-Dīn used 27 different sources for this work, all of which he mentions by name and in this way produced a work that was a masterpiece of work on which all his successors relied. He deals with the history of India from the campaigns of Subuktigin (977–978) to the 37th year of Akbar's reign (1593). The work is divided into a μuḥadditha which deals with the Ghaznavids and nine ṭabāqā: 1. the Sultāns of Delhi from Muḥizz al-Dīn Ghūrī to Akbar (574–1002 = 1178–1594); at the end of this part are biographies of famous men at Akbar's court, amirs, "ulūmā", poets, writers and šaykhs; 2. the rulers of the Deccan (748–1002 = 1347–1594); the Bahmani, Niẓām al-Mulkī, Adīdahāhī and Ḫubī al-Mulkī; 3. the rulers of Gudhār (793–980 = 1390–1572); 4. the rulers of Malwa (809–977 = 1406–1569); 5. the rulers of Bengal (741–984 = 1340–1576); 6. the Ṣafarī dynasty of Jiwānpūr (784–881 = 1381–1476); 7. the rulers of Ḩamādhan (747–995 = 1346–1587); 8. the history of Sind from the Arab conquest (86) to 1001; 9. the history of Mulkān (847–932 = 1444–1525). The whole work was to have as a khitama a topographical description of India but it was apparently never finished by the author.

(E. BERTHELS)

**NIẒĀM AL-DĪN AWLĪYĀ'** whose real name was MUḤAMMAD B. ʿABD B. ʿALI AL-BULĀḴĪ was born at Bādāḵān in 636 (1238). He studied elementary Arabic literature with Mawlaḵān Āfī al-Dīn al-ʿUḏāl Bāḏāḵānī and then went to Delhi and became a pupil of Ṣhams al-Mulk and Ṣhams al-Dīn Ṣaḥān al-Dīn al-Zahīrī. Later on, he went on the 15th Rajab 655 (July 29, 1257), to Adīlshāhī where he became a devoted disciple of Bāḏar ʿIṣfī al-Dīn Masʿūd Gandī Ṣhākār (died 664 = 1265), who nominated him as his Khalīfa or spiritual successor in 656 (1258). Subsequently he returned to Delhi and resided in an adjoining village Ghīyāthpur which is now called "Niẓām al-Din Awlīya ki bastā" where he died in 725 (1325). He is regarded as one of the most celebrated saints of India and he is popularly known as "Ṣuṭān al-Awlīya" "the king of the saints" and "Māḥīb Hādīh" "the beloved of God". He was as proficient in mysticism as he was in Ḥadīth (Traditions), Tafsīr (Commentary on the Kurān) and literature. His tomb is visited by innumerable Muḥammadians from all parts of India during the time of his "ṣuyūr" (anniversary of his death). His works are the following: eleventh century Tārīkh Bāḏarī, a collection of the utterances of the saints taken down from his lips, by Ḥasan ʿAlī Sandjāri (cf. Rieu, Cat. Brit. Mus., p. 972; Ḥādīddī Khalīfā, iv. 478); Khātāt al-Mubīdūn, discourses of the saint uttered in several successive sitting during the year 689 and 690 A.H. and taken down by one of his disciples (cf. Rieu, Persan Cat. Brit. Mus., p. 973).

**Bibliography:** Abū al-Hākīm Dhiyawā, Aḥbār al-Akbur, p. 54; Fakhr Muḥammad al-Lahawvī, Ḥadīth-I Ḥusaynīva, p. 277; Ethē, Cat. Ind. Office, p. 318.

(M. HIDAYAT HOSSAIN)

**NIẒĀM AL-MULK,** ABD AL-ḤASAN B. ʿALI B. ʿISĀH AL-TUFĪ, the celebrated minister of the Sāliḥīd sultāns alp Arslān [q. v.] and Malīk shāh [q. v.]. According to most authorities, he was born on Friday 21 Dhū ʿl-Kaʿbah 408 (April 10, 1018), though the sixth (twelfth) century Tārīkh Bāḏarī, which alone supplies us with detailed information about his family, places his birth in 410 (1019–1020). His birth-place was Rādkān, a village in the neighbourhood of Tūs, of which his father was revenue agent on behalf of the Ghaznavid government. Little is recorded of his early life. The Ṣuṣīyyāh however (for a discussion of the credibility of which see 581; F. R. A. S., October 1911: "Tarikh gudhārī Bāḏarī Shāhīdī, etc.") contains several anecdotes of his childhood, and is also responsible for the statement that he is a pupil of Niẓāmūr al-Dīn of a well known Shāhī doctor Ḥibāt al-Lūṭī al-Muḥaḏfān. On the defeat of Masʿūd of Ghazna at Dāndānḵān (431 (1040), when most of Khurāsān fell into the hands of the Sāliḥīds, Niẓām's father ʿAlī fled from Tūs to Khurasān and his native Bāḏarī, and thence made his way to Ghazna, Niẓām accompanied him, and whilst in Ghazna appears to have obtained a post in a government office. Within three or four years, however, he left the Ghaznavid court and joined the Ottoman army, commanded by Cāḏīh-beg [q. v.] and, [who had fallen to a Sāliḥīd force in 432 (1040–

---

(E. BERTHELS)
soon found himself too weak to oppose Alp Arslân, and thereupon sought to receive his position by acknowledging his claim, was retained in his post on the new sultan's first entry into Raiy. But a month later Alp Arslân suddenly dismissed him and handed over affairs to Niğm. Al-Kundurî was shortly afterwards banished to Marv al-Rûd, where ten months later he was beheaded. His execution was undoubtedly due to Niğm, whose fears he had aroused by appealing for help to Alp Arslân's wife.

During Alp Arslân's reign Niğm accompanied him on all his campaigns and journeys, which were managed by Fakhr Djaheîr, the famous champion of their cause. Niğm, however, at the famous battle of Manâzîş, having been sent ahead with the heavy baggage to Persia. On the other hand, Niğm sometimes undertook military operations on his own, as in the case of the reduction of Iṣṭârîr citadel in 459 (1067). Whose, his or Alp Arslân's, was the directing mind in matters of policy it is hard to determine. Its main points, however, appear to have been the following: first, the employment of the large numbers of Türkmen that had immigrated into Persia as a result of the Saldjûk successes, in raids outside the Dîr al-İsfâhân and in the southern part of the empire. Niğm endeavoured to take advantage of this circumstance, that Alp Arslân's first enterprise after his accession, despite the precarious condition of the empire he had inherited, was a campaign in Georgia and Armenia. Secondly a demonstration that the sultan's force was both irresistible and mobile, coupled with clemency and generally reinstatement for all rebels that should submit; thirdly the maintenance of local rulers, Shi'i as well as Sunni, in their positions as vassals of the sultan, together with the employment of members of the Saldjûkî family as provincial governors. Fourthly the oblation of a dispute over the succession by the appointment and public acknowledgment of Malikshâh, though he was not the sultan's eldest son, as his heir; and lastly the establishment of good relations with the 'Abbasîd caliph al-Kâ'im [q.v.], as the sultan's nominal overlord.

Niğm al-Mulk did not really come into his own until after the assassination of Alp Arslân in 465 (1072). But thenceforward, for the next twenty years, he was the real ruler of the Saldjûkî empire. He succeeded from the outset in completely dominating the then eighteen-year-old Malikshâh, being assisted in this purpose by the defeat of Kawurîbîg's attempt to secure the throne for himself (for which service Niğm received the title 'alâ-îbîg [q.v.], thus bestowed for the first time). Indeed in one aspect the history of the reign resolves itself into repeated attempts by the young sultan to assert himself, always in vain.

Malikshâh undertook fewer campaigns and tours than his father, the prestige of the Saldjûkî arms now being such that few would risk rebellion, and warlike operations being left largely to the sultan's lieutenants, as they had not been under Alp Arslân. Nevertheless, from Iṣ̄fâhān, which had by now become the sultan's normal place of residence, Malikshâh visited the greater part of his empire accompanied by Niğm, who continued on the same lines under Malikshâh as under his father. Niğm, however, was notably less tender than Alp Arslân had been to insubordinate members of the Saldjûkî family, insisting at the outset on the execution of Kûward, and, later, on the blinding and imprisonment of Malikshâh's brother Takâsh.

Niğm also reversed during the earlier part of Malikshâh's reign the conciliatory policy originally pursued under Alp Arslân towards the caliph. He had been rewarded for the friendly attitude he first evinced — which formed a welcome contrast to that of al-Kundurî — by the receipt from al-Kâ'im of two new lajâkes, viz. Kiwâ-n al-Dîn and Radî Azîm al-Mu'mînîn (the latter believed to be the earliest of this type in the case of a waiz); and up to 460 (1068) his relations with the caliph were friendly. Niğm sought to increase these, and after his first visit to Baghdad (1068) [q.v.] became more and more cordial; so much so, indeed, that al-Kâ'im in that year dismissed Ibn Djiheîr, chiefly on account of his too-subservient attitude to the Saldjûkî court. To secure this attitude in the caliph's waiz was, however, the very aim of Niğm; and on Fakhr al-Dawla's dismissal he sought to impose a nominee of his own in a certain al-Rûdwarî, and subsequently in the latter's son Abû Shu'dâr. Al-Kâ'im, to avoid this, reappointed Fakhr al-Dawla, though on condition that his relations with the Saldjûkîs should in future be more cordial. In fact he gave Malikshâh to contribute any unwelcome event in Baghdad to Fakhr's influence. For many years matters were prevented from coming to a head by the tact of Fakhr's son, 'Amid al-Dawla [cf. Ibn Djiheîr, 2], who won Niğm's favour so far as to marry in turn two of his daughters, Nâfî and Zâhîyda; but in 471 (1078) Niğm demanded Fakhr's dismissal, which the caliph al-Muqtâdî [q.v.] (who had succeeded in 467 [1075]) was obliged to grant. Niğm now hoped to obtain the office for his own son Mu'aiyid al-Mulk; but to this al-Muqtâdî would not agree. Henceforward, accordingly, Niğm's dislike was directed against al-Muqtâdî himself, and to Abû Shu'dâr, his former protégé, whom the caliph now created deputy waiz in an effort to conciliate him, leaving the waizrate itself unoccupied till the next year, when he appointed 'Amid al-Dawla. But in 474 (1082) Niğm in turn demanded the dismissal and banishment of Abû Shu'dâr, and at the same time composed his quarrel with Fakhr al-Dawla, when the latter was sent on a mission to Iṣfâhān, concerting with him a plan by which Fakhr should watch his interests at Baghdad. As a result al-Muqtâdî, who gave in with a bad grace, lost all confidence in the Banû Djiheîr, and two years later replaced 'Amid al-Dawla with the offensive Abî Shu'dâr; whereupon Fakhr and 'Amid fled to the Saldjûkî headquarters. Niğm, on this, vowed vengeance on al-Muqtâdî, and at first seems even to have contemplated the abolition of the caliphate (see Mi'ât al-Zaman), as a prelude to which he commissioned Fakhr to conquer Dîyâr Bâkîr from the Marwânîs [q.v.], the sole remaining Sunni tributaries of any consequence. The Marwânîs were duly ousted by 478 (1085); whilst al-Muqtâdî, on his side, showed himself consistently hostile to Niğm. But Niğm's feelings towards the caliph were in the following year completely transformed as a consequence of his first visit to Baghdad (for the wedding of al-Muqtâdî to Malikshâh's daughter). The caliph received him very graciously; and thenceforward he became a champion of the caliphate in face of the enmity which developed between al-Muqtâdî and Malikshâh as a result of the marriage.
The celebrity of Nizām al-Mulk is really due to the fact that he was in all but name a monarch, and ruled his empire with striking success. It was not his aim to innovate. On the contrary, it was to model the new state as closely as possible on that of the Ghaznavids, in which he had been born and brought up. His position was similar to that of his forerunners, the Barmakids [q.v.], and the notable Bayāk wazir Ismā‘īl b. ʿAbbād [q.v.]. All three may be said to have represented the old Persian civilization (progressively Islamicized, of course) in the face of a rise to empire of barbarian conquerors, Arab, Dailami, and now Turkmen. The monarchs were in each case equalled, if not surpassed, by their wazirs, and most of all in the case of Nizām al-Mulk. For with him the invaders aspired to an emperor’s position whilst still quite unacclimatized to their new habitat, so that his superiority in culture was the more marked (cf. Barthold, Turkistan, p. 308). But in revenge the Saljūqids’ lack of acclimatization stood in the way of a complete realization by Nizām al-Mulk of the now traditional Perso-Muslim state. Hence the lamentations that recur in the Sīyāṣet-Nāma.

The Sīyāṣet-Nāma, written by Nizām in 484 (1091), with the addition of eleven chapters in the following year, is in a sense a survey of what he had failed to accomplish. It scarcely touches upon the organization of the dīvān, for instance, partly, it is true, because the book was intended as a monarch’s primer, but also because Nizām, having absolute control of the dīvān, as opposed to the ḏargh (cf. again Barthold, p. 227), had succeeded, with the assistance of his two principal coadjutors, the mutawwiṣ Ṣaḥaf al-Mulk and the mawāli, Kamāl al-Dawla, in exactly modelling this, his special department, on traditional lines. Of the ḏargh, on the other hand, Nizām complains that the sultāns failed to maintain a sufficient majesty. They were neither magnificent (though he approves their daily free provision of food), formal, nor awe-inspiring enough. At their court, accordingly, the formerly important offices of ṣādāl, wakīl and amīr-i ṣaraf had declined in prestige. Nor, as had his model potentates, would they maintain a sound intelligence service, whereby corruption might be revealed and rebellion forestalled. The Sīyāṣet-Nāma consists in all of fifty chapters, of advice illustrated by historical anecdotes. The last eleven chapters, added shortly before the wazir’s avassassination, deal with dangers that threatened the empire at the time of writing, in particular from the Ḥasanids (for a review of the work, see Browne, A Literary History of Persia, ii 210–217).

Nizām’s situation resembled that of the Būyids administrators in another respect. He was faced, as they had been, with the problem of supporting a largely tribal army, and solved it likewise by a partial abandonment of the traditional tax-farming system of revenue collection for that of the ḍarṭ, or fēr [q.v.], whereby military commanders supported themselves and their troops on the yield of lands allotted to them. Since in the decay of the ‘Abbāsid power provincial amīrs had tended to assume the originally distinct and provincial office of ṣādāl, the way for this development had been paved. The Būyids had later attempted to restore the older system; but the establishment of numerous local minor dynasties had favoured the new. Nizām now systematized it in the larger field open to him. In the Sīyāṣet-Nāme he insists, however, on the necessity of limiting the rights of fēr-holders to the collection of fixed dues, and of setting a short time-limit to their tenures (see on this subject Becker, Stuernacht und Lehrenwein, in I.e., v.).

In the absence of the intelligence service he de-ired, Nizām contrived to intimidate potential rebels and suppress local tyranny by a judicious display of the might and mobility of the Saljūqī arms. He also insisted on the periodical appearance at court of local dynasts such as the Masyālids [q.v.], and Ḥajjīlids [q.v.], and proclaimed the sultān’s accessibility to appeals for the redress of wrongs by means of notices circulated throughout the empire and exposed in public places (see al-Mafarrukhi, Maṭhāsa-i Ḩaftān). He also gained the powerful support of the ʿalami, especially those of the Shāfi school, of which he was an ardent champion, by the institution of innumerable pious foundations, in particular of madaras, the most celebrated being the Nizāmīya of Baghdad (opened 450 = 1067), the earliest west of Khorasan; by the general abolition of muṣāra (taxes unsanctioned by the gharaḍ); in 479 (1086–1087); and by undertaking extensive public works particularly in connection with the ḥidāq. After the Ḥidāq had returned from Fāṭimid to ʿAbbāsid allegiance in 468 (1076), he exerted himself to make the ʿIrāk road safe from brigandage for pilgrims, as well as to diminish their expenses; and from the next year until that of his death the journey was accomplished without mishap. It was not until the second half of Malikshāh’s reign that the full effects of Nizām’s achievement made themselves felt. By 476 (1083–1084), however, such were the unneeded security of the roads and the low cost of living that reference is made to them in the annals.

Nizām al-Mulk was naturally much sought after as a patron. The poet al-Muṣṭafī [q.v.] accuses him of having “no great opinion of poetry because he had no skill in it”, and of paying “no attention to anyone but religious leaders and mystics” (see Čāhār Maḥbūla, transl., p. 46). But though his charity, which was profuse (see for example al-Sulṭānī, i. 41), went in large measure to men of religion — among them the most notable objects of his patronage being Abū Ḩabīb al-Shīrāzī [q.v.], and al-Ghazālī [q.v.], — he was clearly a lavish patron also of poets, as is testified by the Dżamīʿ al-Kvaʿir of al-Bābharzī [q.v.], the greater part of which is devoted to his panegyrics. In another sphere, the inauguration of the Dżāli calendar [q.v.] in 466 (1074) was probably due to his encouragement, since at this time his ascendancy over Malikshāh was at its most complete.

For the first seven years of Malikshāh’s reign Nizām’s authority went altogether unchallenged. In 472 (1079–80), however, two Turkish officials of the court instigated Malikshāh into killing a protégé of the wazir; and in 473 (1080–1081), again, the sultān insisted on disbanding a contingent of Armenian mercenaries against Nizām’s advice. Malikshāh now began to hope, indeed, for the overthrow of his mentor, showing extraordinary favour to officials such as Ibn Bahmannār and, later, Sāyiḍ al-Rūʿasā, who were bold enough to criticize him. Ibn Bahmannār went so far as to attempt the wazir’s assassination (also 473)
whereas Saiyid al-Ru'asāʾ contented himself with words. But in each case Niẓām was warned; and the culprits were blinded. In the case of Ibn Bahmanyār, in whose guilt a court jester named Dja fark was also implicated, Malikshāh retaliated by contriving the murder of Niẓām’s eldest son Djamal al-Mulk, who had taken Dja fark’s execution into his own hands (475 = 1082). After the fall of Saiyid al-Ru’asāʾ in 476 (1083—1084), however, the sulṭān left plotting till, some years later, a new favourite, Tād al-Mulk, caught his fancy.

All went well with Niẓām al-Mulk till 483 (1090—1091). In that year, however, occurred the first serious challenge to the Saldjūkīd power, when al-Ḫaṣṣa wał hacked by a force of Karmaṭjans; and almost simultaneously their co-secracy the Assassin leader al-Hasan b. al-Ḫaṣṣaḥ (q. v.) obtained possession of the fortress of Alumūt, from which repeated attacks failed to dislodge him. Meanwhile, moreover, an awkward problem had arisen over the succession to the sulṭānate, on account of the death in turn of Malikshāh’s two eldest sons, Dāwūd (474 = 1082) and Alam (481 = 1088). These sons had both been children of the Karšhāhād princess Terken Khāṭūn (see Ḏimār al-Taṭābūrī), who had borne the sulṭān a third son, Mahmūd, in 480 (1087). She was eager for Mahmūd to be formally declared heir. Niẓām, however, was in favour of Barkiyārūk (q. v.), Malikshāh’s eldest surviving son by a Saldjūkīd princess. Hence Terken became his bitter enemy, and joined with Tād al-Mulk, who was in her service, in instigating Malikshāh against the ważir.

Tād al-Mulk accused Niẓām to the sulṭān, who by this time was in any case incensed with the ważir’s championship of al-Muḳṭadī, of extravagant expenditure on the army and of nepotism; and Malikshāh’s wrath was finally inflamed beyond bearing by an unguarded reply made by Niẓām to a formal accusation of these practices. But even so he did not dare to dismiss him. (The earliest historian to assert that he was dismissed is Rāshid al-Dīn Fadl Allāh, who appears to have misunderstood the purport of some verses by al-Naḥḥās quoted in the Rāḥat al-Sādūr; and really composed after Niẓām’s death).

Niẓām al-Mulk was assassinated on 10th Ramadān 485 (October 14, 1092) near Sīhān, between Kanguwar and Bisutūn, as the court was on its way from Isfahān to Baghdād. His murderer, who was disguise as a Sūfī, was immediately killed, but is generally thought to have been an emissary of al-Ḥaṣṣaḥ b. al-Ḫaṣṣaḥ. Contemporary, however, seem to have put the murder down to Malikshāh, who died suddenly less than a month later, and to Tād al-Mulk, whom Niẓām’s retainers duly tracked down and killed within a year. And Rāshid al-Dīn combines the two theories, stating that the ważir’s enemies at court concerted it with the Assassins. The truth is therefore uncertain; but as Rāshid al-Dīn is one of the earliest historians to whom the Assassin records were available, his account would seem to deserve attention.

The extraordinary influence of Niẓām al-Mulk is attested by the part played in affairs after his death by his relatives, despite the fact that only two appeared to have displayed much ability. For the next sixty years, except for a gap between 528 (1134), 571 (1123) and 528 (1134), members of his family held office under princes of the Saldjūkīd house.

(N. Harrod Bowen)

NIZĀM BADAKSHI studied law and ṣawī in under Mawdūl ʿĪsā al-Dī‘ārī and Mullā ʿAbd al-Sa‘īd in his native land Badakhshān and was looked upon as one of the most learned men of his age. He was also the marīd (disciple) of Shaikh Ḥusain of Khwārizm. His attainments procured him access to the court of Sulaimān, king of Badakhshān, who conferred upon him the title of Kādī Khān. Subsequently he left his master and went to India. At Khānpūr, he was introduced to the Emperor Akbar (1563–1605). He received several presents, and was appointed Ṣurānī (Secretary) to Akbar soon discovered in him a man of great insight, and made him a “Commander of One Thousand” (vakhsūrī). He also bestowed upon him the title of Ghāzī Khān after he had distinguished himself in several expeditions. He died in Oudh at the age of seventy in 992 (1584). He is the author of the following works: 1. Ḥaḍīth al-Shāhīr al-ʿAbūdī, a commentary on al-Taftāzānī’s commentary on the ʿAbūdī of al-Nasaffī; 2. several treatises on Šāfīism.

(M. Hisyāvat Ḥosain)

NIZĀM-I DJEĐĪD, “new tree”, the reforms of Selīm III. Sultan Selim III [q.v.], recognizing the necessity of a thorough reorganisation in certain departments of state, promulgated in 1793 under the name of Nizām-i ʾidādī, i.e. new decree, a series of measures for the reform of the feudal military system, the admirality, the artillery and transport, a “vizierate ordinance” for the governors of provinces, a law dealing with provincial taxation, another for the creation of a body of infantry raised and drilled on western lines, and lastly the institution of a special military fund from new sources of revenue, to provide the funds for the reforms These revenues consisted of taxes on brandy, tobacco, coffee, silk, wool, sheep and the yields of the fiefs of holders of timar [q.v.] in Anatolia, who had neglected their duty in war and were therefore deprived of their fiefs. It was intended that the new body of infantry, Nizām-i ʾidādī ‘askeb, should number 12,000. To begin with a model battalion of 1,600 men was raised, to be composed of volunteers. This body was formed of young men of different nationalities and religions, mostly Austrian or Russian deserters collected during the war with Russia. The result was that the force enjoyed little prestige and native Turks only joined it in small numbers, with the consequence that this corps, popularly called lecema ʾaskerī, consisted of only a few hundred men and was unable to attain to the strength of a battalion (1,600) until 1799. The Sultan’s force trained and armed on European lines was limited to this body.

The Sultan employed foreign officers, mainly from England, Sweden and Spain, to train the soldiers and see to the management of the arsenals, building and fortifications. Large barracks and ammunition depots were built. The new revenue earmarked for military purposes which by 1797–1798 amounted to 60,000 purses, i.e. 48,000,000 francs (cf. Djewdet, Taʾrīkh, viii. 139 sq.), supplied the necessary funds. Internal difficulties, especially the ever increasing number of opponents of reform, prevented the Sultan from completely realising his plans. The name Nizām-i ʾidādī became more and more hateful to the people, who decided to abolish it altogether and to call the corps of regular troops Sejmen or Segbahn, i.e. “kennelmen”. On Selim’s deposition it was disband ed. Under his successor Muṣtafa [q.v.] the attempt was made to revive the Nizām-i ʾidādī. The Austrian renegade Sulaimān Āgha who had previously commanded the division quartered in Lewend Ciftlik was ordered to reconstitute it again secretly, but this effort met with no permanent success (cf. Zinkeisen, G.O.R., v. 552 sq.).

(Franz Badinger)

NIZĀM SHĀH, title assumed in 895 (1490) by Malik Āḥmad Bahrī, founder of the Nizām Shāh state of Ahmadnagar [q.v.], one of the five independent sultānates which arose out of the ruins of the Bahmani kingdom of the Dakhkan towards the end of the fifteenth century. For a chronological list and genealogical table of these kings of Ahmadnagar see Cambridge History of India, ii. 704–705; also Zambur, Manuel, p. 298–299.

The second ruler, Burhān Nizām Shāh I (914–960 = 1509–1553), adopted, in 1537, the Shāfī school of Islam which, except for a brief period under Ismā’il when the Māhālīs were in power, became the established religion of this kingdom. During Burhan’s reign an unsuccessful attempt was made by the anti-Dakhani faction, known as the Foreigners, to place his brother, Rādījādu, upon the throne. The flight of the defeated rebel to Berār, combined with the refusal of ‘Alāʾ al-Dīn Ḥamād Shāh to surrender Pāthī, the home of Burhan’s Brahman ancestors, led to war with Burān and to the capture of Pāthī. It was a dispute as to the possession of Sholapur, the chief bone of contention between Ahmadnagar and the neighbouring kingdom of Bidājpūr, that caused Burhan to adopt the disastrous policy of joining forces with Sadāṣhīvārīya of Vijaynagar, as a result of which the Hindu monarch was able to annex the Rātēr Dūḥā to his dominions, while Burhan was successful in capturing the fortress of Sholapur.
Burhan was succeeded, after a period of civil warfare, by his son Husain who reigned until 972 (1565). His reign was marked by outstanding importance in the history of the Dakhân, for it was at this time that the Muslim rulers of this area, with the exception of Berâr, irritated by the overbearing insolence of Sanâshîvarâya and realizing the strength of the Hindu menace in the south, combined to crush the military power of Vîjâyânagar at the battle of Tâlîkota (972 = 1565).

In the same year Husain was gathered to his fathers and his son, Murâdañ(Nizâm Shâh I (972—994 = 1565—1586), reigned in his stead. Murâdañ(Nizâm Shâh, called Diwânâ or Madman, neglected the affairs of his kingdom for a life of dissipation, the real power being in the hands of his ministers. An unsuccessful attempt was made during this reign to drive the Portuguese out of India, but the effort came too late, for, during the critical years when the Portuguese had been establishing themselves along the coast, the forces which might have united to hurl the invaders into the sea had been engaged in inglorious intermecine conflicts. The most important event in this reign was the annexation of Berâr, in 982 (1574).

The subsequent history of this dynasty, until the Mughal invasions of the Dakhân, is unimportant. Full details will be found in the pages of Faridâñ(N, the indispensable commentary on the heroes and the heroines of the Later, as the đowagerqwâns of the Durbar, the imperial forces conquered Aâhmadnagar in 1600. Nevertheless, it cannot be said that the incorporation of the Nizâm Shîh dominions in the Mughal Empire was effective under Akbar. All attempts by his successor Dâshângâr to complete his father's policy were frustrated by the organizing ability of Malik Ambar, an able Abyssinian minister, who was in charge of the affairs of Aâhmadnagar until his death in 1135 (1626). It was not until 1142 (1633), in the reign of Shahâhjâbân, that this kingdom was finally annexed, although for some years afterwards the Mâhâshâh leader Shahjâbân attempted to resuscitate the Nizâm Shîh dynasty.

**NIZÂMÎ, Nizâm al-Dîn Abû Muhammad Ilâyâb b. Yûsûf, one of the greatest poets of Persia. He was born in Ganjûl, the later Elissavetpol in 535 (1140—1141). His parents died while he was still quite young so that the education of his two sons and of his own had to be undertaken by his uncle. From Nizâmî's poems, it is apparent that his uncle very soon followed his parents to the grave. Nevertheless the two boys succeeded in getting an excellent education, for Nizâmî's brother, who wrote under the pen-name of Kiwâmî Muĥtarîzî, attained a very high skill as a writer of kârstas (an ingenious kastâ by him is given in Browne, *Lit. Hist. of Persia*, ii. 47 sq.). Nizâmî was thrice married and had a son named Muhammad. The poet was interested in Sîsî and studied in Sîsî circles under a certain Shâhî Ashâ Farruñî Raïhânî. Nothing more is known about his career and it may be presumed that his life was relatively uneventful. It says however of himself that he avoided the bustle of princes' courts and had a strictly ascetic conception of life. Nevertheless all his great poems are dedicated to rulers of his time and for one of them he even received the rents of the village of Hamdânîyân but it yielded him very little, he tells us. He died in 599 (1202—1203) aged 63½, Davlatshâh gives the date of his death as 576 (1180—1181), which is however impossible as three of his poems were written after this year; this is probably an instance of the usual carelessness of this writer.

Nizâmî's great work is his *Khâmana* or Quintette, a collection of five great epic poems, with different subjects. It is very possible that these poems were not collected under one title by the author himself, as Hamd Allah Kazvîni 25 years after Nizâmî's death does not yet know the work as a collected whole, although he esteems it very highly and was perfectly acquainted with it. The *Khâmana* consists of the following parts: 1. *Makhânâ al-Asâ'îr* (561 = 1388) dedicated to Mitâğir, Atâbek of Aâhharbâjîan. It is a didactic poem strongly permeated by the spirit of Sûfism. The principles inculcated are expounded by the insertion of short stories. In spite of a certain prosiness, the work is characterized by certain passages of remarkable beauty (e.g. chap. 5 "On old age") and played a prominent part in the history of Persian didactic poetry. 2. *Khusraw u-Shirin* (571 = 1175—1176) dedicated to the Sûfî Mitâğir. It deals with the Sûfîshen of Khusraw Parwiz and coinciding in parts with the corresponding sections of the *Shîh-nâmâ*. The heroic element however here falls into the background to give free play to the romantic and especially to a penetrating psychological analysis. 3. *Lailâ et al-Majdûn* (584 = 1188—1189) dedicated to the Shîrwanî Aâhâhshâh. The subject was adopted at the request of the Shîrwanî. Nizâmî was by no means satisfied with this choice; the love-story of the Beduin poet Kais al-Amîrî, known as Majdûn [q.v.], seemed to him as dry as the Arabian desert. Yet it is this very poem that is his greatest work, for it was an astonishing success and stimulated countless imitations, among them some of the pearls of Oriental poetry, such as the work of the same name of the Aâhharbâjîan poet Fudûñî. Here the heroic style is completely dropped and we have a simple love-story, only occasionally interrupted by the clash of arms. 4. *Shikandar or (iskandar)-nâmâ* (587 = 1191) divided into two parts which are known as *implicitly-nâmâ* or *Sharaf-nâmâ* and *Kharad-nâmâ* (or *Skandar-nâmâ-yi barû* and *Skandar-nâmâ-yi havîr*). It is probably the first part of the work was dedicated to *Izâr al-Dîn Mas'ûd I, Atâbek of Mûsûl. A revised version was offered by the poet to Nârzâl al-Dîn Abû Bakr Bîshîkîn, Atâbek of Aâhharbâjîan. Nizâmî took the romance of Alexander as the foundation for his poem and treats it very much on the same lines as Firdavsi. The subject afforded ample opportunities to work in scientific and philosophical material, which Nizâmî does very skilfully in the conversations between Alexander and his tutor Aristotle and other scholars. The work thus became a kind of encyclopedia, which touches on almost all branches of knowledge of the time. 5. *Hoist Paikan* (595 = 1198—1199) dedicated to the same ruler as the previous poem. In this poem Nizâmî again goes back to the popular Sûfîshen hero Bâhrâm Gûr. But here again
it is not on his chivalrous adventures that stress is laid but on seven stories related to the hero by seven kings' daughters with whom he is in love. Each of these stories is associated with a day of the week, a planet and a colour. They form a masterpiece of Oriental story-telling which has never been surpassed and their grotesque and gruesome fantasy is particularly effective. As a master of fantasy, Nizami recalls F. T. A. Hoffmann and J. Calot and is able to make his readers visualise his wonderful pictures just as vividly as the European masters. Besides these large works, Nizāmī left a lyrical Divān of which only three MSS. are known (Bodleian, No. 618, 619 and Berlin, Petitsch Cat., No. 691) and which so far has received little attention. It contains no každādī in the court style and is distinctly ūfī in tone.

Nizāmī's works are of the greatest importance in the history of Persian literature. They make the zenith of epic poetry in Persia, as in them for the first time the antithesis between the language of the lyric and the archaic style of the epic is overcome and the epic is brought into the milieu of the world, which as time was already fully developed in the lyric. The epic however at the same time loses its heroic character and devotes itself more and more to psychological characterisation at which Nizāmī was a master. The overloading with learning, which in time came to choke the action completely, is very noticeable.

Nizāmī's influence on the later poets was unusually strong. A whole series of important poets, men like Amir Khusrav Dihlawī, Khwāja Kirmānī, Kātībī, Dāmtī, Hūfī and even the great mystic Farīd al-Dīn ʻAbū l-Nūrī ond the great master of ʻAghdāšī poetry Mir ʻAlī Shīr Nāwī, tried their skill in narmās on Nizāmī's Khamsa (the number of poems in later writers rises to seven).

In spite of its great importance, so far critical editions of parts only of the Khamsa have appeared and we are dependent for the rest on bad Indian lithographs or manuscripts difficult of access. It is most desirable to put an end to this state of affairs and devote greater attention in Europe to the study of Nizāmī.

E. BERTHELS

NIZĀMĪ ʻARūDĪ. AHMAD B. ʻUMAR B. ʻALI took the nābāddah of Nizāmī and the honorific Naqīm al-Dīn (or Naqīm al-Dīn) was he usually called; Stīla (it was already fully developed in the lyric). He was a court poet and was often called ūfī by his contemporaries. He is one of the most interesting and remarkable Persian writers of prose: "one of those who throw most light on the intimate life of Persian and Central Asian Courts in the xiiith century of our era". He was a court poet who served faithfully the Ghōrīdī (q.v.) princes for 45 years (he would thus be born at the end of the xiiith century), according to what he tells us at the beginning of the Čahār Makhāla, the only work by him that has come down to us. His verse has been lost, at least except for fragments; Davlatghāf (ed. Browne, p. 66—69) only gives one couplet which does not seem to be by him. Afsī (Lubāb, ed. Browne, p. 207—208) quotes five poetical fragments (mostly occasional pieces) and adds that Nizāmī composed several mathnae, the titles of which have not survived. The only biographical information we possess about Nizāmī comes from himself. In 504 (1110—1111) he was in Sāmākand collecting traditions relating to the poet Rūdgāš (Čahār Makhāla, text, p. 33); in 506, he met Khayāmī in Bālḵ (ibid., p. 63) and three years later he was living in Herat (ibid., p. 44): in the following year (510 = 1116—1117) finding himself in poverty in Nāshāhpūr (ibid., p. 9), he went to Tūs in the hope of gaining the favour of Sulṭān Sandarjī who was encamped outside the town (p. 49 sq.); in Tūs he visited the tomb of Firdawīsī (p. 51) and collected information about him which he put in his book (p. 47 sq.). Encouraged by Muʿīzī, Sandarjī's poet-laureate, he succeeded in attracting the prince's attention; his fame and fortune probably date from this time; in 512 we find him again at Nāshāhpūr (p. 69); and again in 514 when he heard from the lips of Muʿīzī an anecdote about Mahāmād and Firdawīsī (p. 50—51); in 530 he returned to this town and visited the tomb of Khayāmī (p. 63); in 547 he fled into hiding after the defeat of the Ghōrīdī army by Sandarjī near Herat (p. 87). His "Four Discourses" (Čahār Makhāla) were probably written in 1156. For the remainder of his life we have no data. There is reason to believe he practised medicine and astrology (cf. text, p. 65 and 87). As to his poetry, in spite of the satisfaction he expresses with it, it is not
of the first rank, to judge by the fragments that survive; in any case it was very inferior to his prose, which Browne says is almost unequalled in Persian.

The Čahār Maṭbālas consists of four discourses, each of which deals with one of the classes of men whom the author regards as indispensable in the service of Kings: secretaries, poets, astrologers and physicians. Each discourse begins with general considerations, which are followed by anecdotes, often from the writer's personal experience. The number of these anecdotes, which form the most interesting and valuable part of the book, is about forty; some give valuable information on the literary and scientific state of Persia. We may say that the "Four Discourses" (especially the second) and Avf's Lūbān are the two old works which deal systematically with Persian poetry. Davlatshāh made a great deal of use of it (cf. Browne, Sources of Davlatshāh, in J. R. A. S., 1899, p. 37–60). We may specially point out that it is to Ṣāmidi that we owe the earliest notice of Firdawsi and the only contemporary reference to Khayām. On the other hand, we may point out the historical inaccuracy of certain passages, even in the case of events in which Ṣāmidi claims to have taken part. His book is mentioned or quoted by Avf (Lūbān) in Isfandiyār (Passage of Tahāvar) and Murray (Ṭāhirī-Kašānī, Dājānī, Sisītāt al-Dhakāb, Ghasfārt (Ngirštātor). Ḥududī Khāifa speaks of a Maḏmūn al-Navvārī, which he thinks is different from the Čahār Maṭbāla; but Ṣāmid Khwānī has shown that this is another title of the same book.

Niẓāmī ʿArūqī, a Persian historian whose full name was ʿAbd al-Dīn Muḥammad b. ʿArūqī. Born in Nishapur, he went on the advice of his šāhīk Muhammad Kābī to Ghaznī to give an opportunity to his remarkable talents as a stylist. A severe illness forced him to leave Ghaznī. And went to Dīlūr where he obtained an appointment as court historian to the Pathān Sulṭān, and began in 602 (1206) his great historical work Tādī al-ʿĀṣīr šī Tāʾīrī, which brought him great fame. It deals with the history of the first three Pathān Sulṭāns of Delhi — Muḥammad b. ʿĀṣīr (585–602 = 1102–1206), Kuṭb al-Dīn Aḥīak (602–607 = 1206–1210) and Shams al-Dīn Iltutmīs (607–637 = 1210–1235). The book begins with the capture of Aḏhir by Muʿizz al-Dīn in 587 (1191) and ends with the appointment of Nāṣir al-Dīn Muḥammad as governor of Lahore (614 = 1217). An Appendix contains a panegyric of Iltutmīs and his campaigns of conquest. The work was very highly esteemed in the Muslim east as a model of elegant style. It is written in high flowing language and abounds in a large number of poetical passages inserted in it. It is only with difficulty that the historical facts can be extricated from the medley of rhetoric but nevertheless the book is of undeniable value for the history of India and Afghanistan.

Niẓāmī ʿArūqī, a Persian historian whose full name was ʿAbd al-Dīn Muḥammad b. ʿArūqī. Born in Nishapur, he went on the advice of his šāhīk Muhammad Kābī to Ghaznī to give an opportunity to his remarkable talents as a stylist. A severe illness forced him to leave Ghaznī. It is written in high flowing language and abounds in a large number of poetical passages inserted in it. It is only with difficulty that the historical facts can be extricated from the medley of rhetoric but nevertheless the book is of undeniable value for the history of India and Afghanistan.

Niẓām-Shāhī (i.e. Hīfī-Niẓām-Shāhī "ambassador of Niẓām-Shāh" of the Dakhān), a Persian historian whose real name was Khwāshā b. Kuṭb al-Husainī. Born in the Persian ʿIrāq, he entered the service of Sulṭān Burhān (cf. Niẓām-Shāhī). The latter being converted to the Shī'a sent Khwāshā as ambassador to Tāhmāsp-Shāh Sāfawī. Reaching Rawjī in Raḍḍāb (Sept. 1545), he accompanied the Shāh to Georgia and Shirwān during the campaign of 1545–1546 against Akāvārī. He stayed in Persia till 1563, perhaps with occasional breaks. He died at Golconda on the 15th Dhu l-Kaʿād 972 (June 24, 1564). Khwāshā's chief work is the Tāḍīrīh-i Nīzām-shāhī, a general history from the time of Khwāshā himself to the year 1210 (638) of the Shīʿa calendar. The work (Tādrīg-i Gazānī, Zafer-nāma, Ḥāthī al-Siyar, the "Memoirs of Shāh-Tāhmāsp") etc. The book is divided into a preface and seven maḏmūn, each of which is again divided into several ʿawfār. The most important part of this work is that which refers to the reign of Tāhmāsp-Shāh (in the Brit. Mus. Ms. Or. 153, written in 972 = 1563, the events come down to 969) and to the local dynasties of the Caspian provinces: Māzandarān, Gilfīn, Shirwān. The two manuscripts in the British Museum show differences in their contents: Add. 23, 513 (written in 1095 = 1684) has passages added by some continuator and taken from the document of Aḥmad b. Muḥammad Ghasfārt. The later additions of Or. 153 come down as late as 1900. According to Firšt, "Shāh Khwāshā", during the reign of Ibrāhīm Kuṭb-Shāh of the Deccan (1597–1688) also wrote a history of the Kuṭb-Shāhs [v.]. It is difficult to reconcile this with a continuous stay in Persia from 952 to 971.

Bibliography: Rieu, Catalogue, p. 107–111; Schefer, in his Chrestomathie persane, ii., 1885, p. 8–11, (notes 65–133) printed the sections relating to the Caspian provinces.

Niẓār b. Maʿadd, common ancestor of the greater part of the Arab tribes of the north, according to the accepted genealogical system. Genealogy: Niẓār b. Maʿadd b. ʿĀdnān (Wustenfeld, General. Tabellen, A. 3). His mother, Muʿānāhīnī Dājahā, was descended from the pre-Arab race of the Djarhum. Genealogical legend which has preserved mythological features and folklore relating to several eponyms of Arab tribes is almost silent on the subject of Niẓār (an etymological fable about his name: Tādī al-ʿĀṣīr, ii. 563, 15–17) from the ʿArab al-ʿĀṣīr of al-Suhdūlī [i. 8, 8–22] is without doubt of very late origin as is shown by the connection which is established.
with the prophetic mission of Muḥammad; the same etymology from nafs “insignificant” is further found in Ibn Buraid, Kīrāb al-Uṣūla, p. 20, 6; Musafadatiyāt, ed. Lyall, p. 765, 16, without the story in question). Tradition has more to say about his four sons Kābi‘, Muḍār, Anmār, Iyāḍ and about the partition of the paternal heritage among them, in connection with which they visited the Dājurhum ṣabān al-Afā‘īs. Their adventures on the journey (they are able to describe minutely the appearance of a camel they have never seen from the traces it has left) form the subject of a popular story which has parallels among other peoples; its object is to make the origins of the Kiyāfa go back to the most remote period (al-Mufaddalī b. Salama, al-Fākkir, p. 155—156 and the sources there quoted; Tabarsi, i. 1108–1110 etc.); it perhaps is of interest to note that the story was known to Voltaire who introduced it into his Zadig.

As Robertson Smith showed half a century ago (Kinship and Marriage in Early Arabia, 2, p. 5 999, 283—289) and as Goldziher has confirmed by numerous quotations (Muḥammadanische Studien, i. 92), the name Nizar only appears late in Arab poetry, while that of Muḥammad (which is found as early as the Byzantine historians Procopius and Nonnus) appears quite early in it, although its ethnic character is rather vague (as to that of ‘Admān, still more comprehensive, one of the oldest historians of Arab poetry, Muḥammad b. Sallām, d. 230 = 844—845, had already pointed out that his name was almost unknown in ancient poetry, Tabarsi al-Shuwar‘a, ed. Hell, p. 5, 1; cf. Ibn ‘Abd al-Barr, al-Inshā‘ al-Kabīl al-Kuwarīs, Cairo 1359, p. 48). Before the Umayyad period the only trace we find of the use of Nizar as an ethnic is in a verse of the pre-Islamic poet Bishr b. Abī Khāzim (in the Musafadatiyāt, p. 667, 15) and in another of Ka‘b b. Zuhair (in Tabarsi, i. 1106, 16) in the verse of Ḥassān b. Thābit, ed. Hirschfeld, i.x, 2, the reference is to another Nizar, son of Ma‘sāb’s ‘Amr b. Lu‘ayy) (Wustenfeld, Tabellen, P. 15) belonging to the Kūrāshī. The line in Umayyad b. Ḥabīl al-Sa‘d, ed. Schultess, U, i. 10, in which the descent of the Thāthīf from Nizar is celebrated, is apocryphal and is connected with the well known dispute regarding the origin of the Thāthīf. The story of the verdict of al-Akra‘ b. Ḥabīb al-Tamī‘ī in favour of Dājrīr b. ‘Abd Allāh al-Bajjālī against Khālid b. Arāh al-Kalbī (Yā‘alī, ed. Devaran, p. 141—142; cf. Ibn Ḥishām, Sīra, ed. Wustenfeld, p. 50) in which there is a reference to Nizar and which is placed before Ḥabīl, is not less suspect: its object is to defend the northern origin of the Bajjālī (descendants of Ammār), often disputed, and to brothers the Khāthīm [q.v.] and to refuse the same origin to the Kalb, descendants of the Kudā‘a, to which it was attributed just at the time of the strife that raged around the succession to Yazīd I. The raqā‘ quoted by Ibn Ḥishām, Sīra, p. 49 (and often elsewhere; they are sometimes attributed to ‘Amr b. Murra al-Dhumān, a contemporary of the Prophet, and sometimes to a certain al-‘Abd b. al-Ya‘būb, otherwise unknown) in which we find used with reference to Kudī‘a, the verb tanazzara “to announce one-elelf to be descended from Nizar” may be regarded as apocryphal. No stress need be laid on the isolated reference in al-Baladhuri (Futūḥ, ed. de Goeje, p. 276, 16) to the quarters (khajfa) of the Banū Nizar in Kūfah contrasted with those of the Yamani; his language simply reflects the position in the author’s time or that of his sources, later than the great revolution of the first century A.H.

It is only from this period, and to be more exact after the battle of Manjī Kāhit (65 = 684) won by the Kalb over the Kāsī, that we begin to find the name Nizar recurring with increasing frequency; it occurs mainly in the pre-Islamic poetry: Dājrīr, al-Farazdak, al-Akheṭal, al-Katāfī. Zuhr b. al-Hārīth use it to designate the common source of the tribes of the north, contrasting it with the terms “Yaman” or “Kabīrīa”. The expression bīnā Nizārīn “the two sons of Nizar” becomes regular; it indicates the Muḍār (Kāsī ‘Ailān) and the Rabī‘a as belonging to one ethnic group; they were previously regarded as unrelated to one another. The tribes descended from Ammār (cf. above) and Iyāḍ (the fourth son of Nizar; but other sources make him a son of Ma‘add) appear only rarely as members of the group. This is what the genealogical systematisation seeks to explain by alleged migrations of Ammār and Iyāḍ into the groups of Yamani tribes.

But the term of the Banū Nizar continued to remain vague, more so than those of Kāsī, Muḍār and Rabī‘a which represent very large groups but more precise than that of Ma‘add, of which it tends to take the place. This is due to the fact that the term Nizar corresponds to a political ideal rather than to a historical reality; in the latter the reigning dynasty, claiming descent from Kūraish (themselves, consequently, Nizārt) had as their henchmen the Kalb, one of the most powerful Yamani tribes, while the Azd, another tribe of the south, bound to the policy of their most illustrious representatives, the Muhallabīs, were sometimes on the side of the Umayyads and sometimes against them. It was this complicated position that gave rise to the attempt to separate the Kudī‘a (i.e. the Kalb) from the southern stock in order to make them descendants of Nizar.

The story told in Alkhanī, xi. 160—161, al-Bukhārī, Ma‘bud, ed. Wustenfeld, p. 14—15 is intended to explain the separation of the Kudī‘a from the rest of the Nizar as a result of the murder of the Nizarī Yāḏkūr b. ‘A‘nāza by the Kudī‘a Ḥazīm b. Nahd. The lines in Dājrīr (Nā‘id, p. 994) sum up very completely the way in which the Kudī‘e-Kalb were connected with the Nizar, while elsewhere (e.g. ibid., p. 261: al-Farazdak) Kudī‘a and Nizar are opposed. Later, at the end of the Umayyad period and especially in the period of the struggle in Kūrāshī which was the prelude to the fall of the dynasty, Nizar (also in the form Nizāīr) became the title of designation which was contrasted with Yamaniya: henceforth the Banū Nizar were to be the representatives of northern Arabism; as early as the period of decline of the Umayyads, the poet al-Kumait b. Zayd al-Asadi [q.v.] had composed a long poem, the Muṣūlahkūba, exalting the Nizar at the expense of the Kudī‘a; nearly a century later, the Yamani Dihīl [q.v.] replied to him; these poetical jousts on which the ‘aqā‘īya, nationalistic fanaticism, of the two great ethnic groups of the Arabs was nourished, continued down to quite a late date, especially among the Zaidīs of the Yaman.

From what has been said it is evident that we cannot speak of Nizar as of a tribe having had
NIZĂR b. MA'ADD — NOVIBAZAR

a real historical existence nor, as is the case with the Ma'addi, as a comprehensive term indicating an effective grouping whether of tribes of different origin. Nizăr is simply a fictitious invention, a label intended to serve political interests. One must however ask whence the name came and what were the precedents which suggested its use in the sense above outlined. The problem has not yet been thoroughly studied and perhaps we do not possess the material necessary to solve it. It is possible that the history of the four sons of Nizăr (cf. above), a popular story the nature and diffusion of which seem to take it back to a very early period and which originally had nothing to do with genealogical tradition, supplied the names on which the Ma'addi later gave their imagination free play. But this is a pure supposition which would have to be confirmed by definite proofs.

NIZĂR b. AL-MUSTĀR (Pā'īn), born 10th Rabi' I 437 (Sept. 26, 1045). On the death of his father, having been displaced by his youngest brother al-Mustāfī (q.v.), Nizăr fled to Alexandria, took the title of al-Muṣṭafā li-Dīn Allāh, and rose in revolt early in 488 (1095) with the assistance of the governor, Naṣr al-Dawla Aftakin, who was jealous of al-Afḍal, and the population of the city. He was at first successful in driving back al-Afḍal and advanced as far as the outskirts of Cairo, supported by Arab auxiliaries. Al-Afḍal again took the field against him, and after a short siege in Alexandria he surrendered towards the end of the same year, was taken to Cairo, and there immured by order of al-Mustāfī.

By the Ismāʿīlī organization in Persia [see the art. AL-HASAN b. AL-SABBĀH], Nizăr was recognized as the rightful successor of al-Mustānsir, and this, with its offshoots in Syria, formed a new group (al-dawwa al-djadida), opposed to the Mustāli group (al-dawwa al-qadima), now known as Khodjas (q.v.) and Bohorās (q.v.) respectively. A party of the Nizāriya at first held to the belief that Nizăr was not dead and would return as the Mahdi or in company with him, but the majority held that the line of Nizăr was continued by the Grand Master of Alamut.

Nizăr has been called: al-Afdal, al-Djadida, Mustar, and Mustaffa. His best biography is that of al-Mustar (Pā'īn), Shīrāzi: see under al-Mustāfī; also Ibn Khallikān, transl. de Slane, i. 160–161 (from al-Nuwayri); Siddīqī. al-Mustānsīr b'līhā, MS., S. O. S., London, Ns. 35 and 43 (cf. B. S. O. S., v. 307 esp.).

(H. A. R. Gibb)

NOAH, [See Neh].

NOVIBAZAR or YESTI BAZAR is the name of a former (down to 1912) Turkish sandjaq in what was once the vilayet of Kosova; it now belongs to Jugo-Slavia. The district through which the river Lim flows and which is therefore also called the Lim district (area 7,350 sq. km. with 68,000 inhabitants of whom 7/8 are Christian Serbs and 1/8 Muslim Albanians), was bounded on the north by Bosnia and separated Serbia from Montenegro. The importance of Novibazar was for military reasons as it secured communications between Bosnia and Kurešan, and at the same time protected communication between Serbia and Montenegro. By art. 85 of the Treaty of Berlin, Austria-Hungary held the western part of the sandjaq (the Lim district) from Sept. 1879 to 1908, namely the towns of Plevlje (Turk. Tağlıda), Prijepejole and Bjelopljoli with a garrison of some 3,000 men, while the southern part, the kazā of Mitrovica, was returned to the Turks. After it was handed over in 1908, Novibazar formed a bone of contention between Turkey, Serbia and Montenegro. In 1912 the sandjaq was conquered by Montenegro (Bjelopljoli Oct. 12, Tusi Oct. 14, Berane Oct. 16, Gusinje Oct. 25 and Plevlje Oct. 28) and Serbia (Novibazar Oct. 23, Sjenica Oct. 24) and in 1913 divided between the two countries.

The district forms with Zeta the ancestral home of former Serbia and roughly corresponds to the ancient Rascia. The chief town Novibazar (in the official spelling Novipazar) 1800 feet above sea-level on the Raška, is now an impoverished place of 11,000 inhabitants with miserable houses and poor streets. In the middle ages however, it was of considerable importance as the imposing remains of churches monasteries and baths around it show. Not far from it the ruins of the town of Ragusa, a well known offshoot of the old Serbian Kingdom and already mentioned in Byzantine history in the 6th century (Pasow), where the Nemanjic prince Stephen held his court for a time. The settlement of Pagazarc or Trgoviste where there was called by the Turks Eski Bazar, "Old Market". A soushā was mentioned as being there in 1459 after the conquest of the land by the Turks (1456) and in 1461 a ẖāji. The Turks then founded a New Market not far away, Yeži Bazar, which soon became the capital of the whole district. The Ragusa historian Lucari says the founder of Novibazar was Ese, i.e. undoubtedly Išči Beg (1444–1460, from 1453 governor of Sarajevo), son of Išči Beg (1414–1444), both of whom were governors in Uskub (Skoplje) and were among the most important Turkish leaders of the time. The foundation of Novibazar must have taken place about 1460 for a year later we find mention for the first time in the archives of Ragusa of Ragusan merchants in Novibazar. In 1467 we already find a ẖāji and a soushā in Novibazar. The town from the end of the xvth century was frequently visited and described by western travellers as it lay on the old trade route from Ragusa (Dubrovnik) to Nish. The knight Arnold v. Harff mentions Novibazar about 1499 as a new emporium. J. Gibberd, (cf. Le voyage de Monsieur d'Armand, ed. L. Scherer, Paris 1887, p. 11) describes Novibazar as ville non fermée, assez marchande. While these and other travellers of the xviith century like Benedict Kuři-pesič (1550; cf. Benedict Curiepisit, Itinera-rium der Botschafterreise des Jes. v. Lamberg, etc., ed. by Eleonore Grafen Lamberg-Schwarzenburg, Innsbruck 1910, p. 41 sq.), Catarino Zeno (1550, in his Descrizione del viaggio da Constantinopoli, 1550 in the Starine of the Jugoslav Academy of Agram, vol. x) and Melchior v. Seydlitz (1555, in his Grundliche Beschreibung der Wallfahr, Goetz 1580) were very little impressed by Novi-bazar, Paolo Contarini (1580, in his Diario del viaggio de Venezia a Constantinopoli, Venice 1856; noce Grimani-Franconi) and the Sieur de
Stochove (c. 1639, cf. *Voyage du Sieur de Stochove fait en années 1630, 1631, 1632, 1633*, Brussels 1643, p. 30; at second hand and not from his own observation) and also Louis de Haye, Sieur de Courmenin (1621, in *Voyage de Lestat Fait par le commandement de Key en année 1621 par le Sieur Lestat de Courmenin*, Paris 1624) devote far more attention to it. P. Contarini spent a day of rest in the caravanserai of Novibazar (Novo Bazar) which he found was a town with 6,000 Turkish and 100 Christian houses. He mentions the Ragusan settlement and the 16 mosques, the very long bazaar, which attracted all kinds of traders and wares for sale (mostly articles of iron from the adjoining Ghubavica in the S. E. of Novibazar which was as early as 1396 the seat of an Ottoman judge and had a customs house). The Sieur de Stochove describes *La ville de Geni Bazari, qui en Turc veut dire nouveau marché, elle est située sur la petite rivière de Rusa en un lieu haull et bas, ce qui en rend la vue fort agréable, son circuit est de demi lieue sans entre enfilée de murailles, est la ville la plus considérable que l'on trouve depuis la frontière* (i. e. the Dalmatian-Bosnian frontier). Louis de Hayes in 1621 found Igni Bazar (i. e. Yeli Bazar) a pleasant place with one storey houses. It was under the governor of Bosnia and a judicature which was under the Chief Kâdi of Sarajevo [q. v.]. The description given by the traveller Evliya Celebi [q. v.] of his visit to Novibazar (1666) [v. 544 sqq.] is as usual full of exaggerations. He says there were 45 quarters in Novibazar, 23 large and 11 small mosques, 5 medreses and 2 monasteries. Of the mosques he mentions the Alun mosque and the mosque of Ghâzî Tâsk-Beg formerly a church, and the Tâskopru mosque and mosque of *Hâdîji-i mutümerem* (?). The bazaar had 1,110 shops, and there were 7 churches of the *Serbs, Bulgars and Latins* in Novibazar. He particularly praises the white unmixed bread and 45 kinds of apples and 35 of pears. Among the notabilities of the time Hâdîji Ishâhî Efendi, who had "cleansed" the roads to Bosnia and Herzegovina and erected bridges and rest-houses, and Dhu 'l-Fiṣar-Zâde Mahmûd Agha receives words of praise. Both had palaces (sârây) in Novibazar.

In consequence of its exceedingly important military position and as the key to Bosnia for Turkey in Europe (cf. F. Kanitz, *Serben*, Leipzig 1868, p. 200 sq.) Novibazar has frequently played a part in military history. In 1689 it was occupied under the Margrave of Baden; but the Christian inhabitants, disillusioned by the tyrannical attitude of the garrison, the excesses of the imperial armies, the heavy taxation, the intolerance shown the orthodox clergy and the partisanship for the Roman Catholic church, soon turned against their new masters and very soon Novibazar with the whole of Old Serbia again passed to the Ottomans. In 1737 Novibazar was again occupied for a few months by the imperial forces, but as a result of the careless leadership of the generals fell with Niš again into Turkish hands and this settled the disastrous result of the war for Austria (cf. F. Kanitz, *op. cit.*, p. 203 sq. and the Turkish description of the Bosnian campaign, from the pen of the kâdi of Novi, *'Omar Efendi* [q. v.], e. g. in the German version by J. N. v. Dubsky, Vienna 1879, p. 134 sqq. or the English by C. Fraser, London 1839, p. 49 sqq.). It is remarkable that the defence of Novibazar in the Turkish period were never what the strategic importance of the place demanded (cf. the description in A. Boué, *Die Europäische Türkei*, vol. 1, Vienna 1859, p. 549). In view of the stubborn defiance and steady opposition of the people, the Ottoman authorities — Novibazar was the seat of a kâmatmaš [q. v.] — had a difficult time. General Hasan Pasha who was to carry out the disarming in 1880, was killed in the street in a rising and those guilty were never brought to book. Unpopular officials were as a rule simply driven out. As the Porte resumed continuous fighting with the rebellious population of the sandžak it no longer felt it right to undertake a regular military expedition against them. The result was that all branches of administration, trade, agriculture and industry gradually went to pieces. From the xvinth century therefore Novibazar was always a place of little importance. Nor did it revive under the semi-independent feudal lords of the family of Ferhadagić (Ferhâd-gûllari). Of the remains of Muslim times in Novibazar may be mentioned the fortress (zâlu) built in 1103 (1690) in the reign of Sultan Ahmed II. The surrounding buildings as a rule date only from the time of Abd al-Ḥamid II. Historically most interesting is the Alun *'Alem Mosque built by Ghâzî Tâsk-Beg (see above), the founder of Novibazar. Belonging to it are the wretched ruins of the expensive karâye under the eponymous karâia of the first half feudal lord of Novibazar, Aiyyâb Pasha (d. 1243 = 1821). Of other Muslim houses of prayer may be mentioned the mosques of Muslih al-Din Efendi, first mu'cimnâni of the conqueror Mehmed II, of Ghâzî Sinân-Beg and of Aiyyâb Pasha. — The capital of the sandžak of Novibazar in modern times was the little town of Sjenica (cf. K. Oestreich, *Reisen im Vilajet Kosovo*, in the *Verhandlungen der Gesellschaft für Erdkunde zu Berlin*, vol. xxvi., 1899, p. 319).

**NUBA, name of a country [and people?] to the South of Egypt.** The names Nubia, Nubian, Nuba are commonly used without scientific precision and it is only in the linguistic sense that they have an unambiguous meaning. The frontier separating Nuba from Egypt proper is well defined as the first cataract of the Nile in the neighbourhood of Assûn, and the area where Nubian is spoken nowadays ends in the vicinity of the 18th parallel, but the southern limit of Nubia is sometimes placed as far south as the junction of the Atbara and the Nile or even the confluence of the two Niles. Nubia is often sub-divided into Lower Nubia
from Aswān to Wādi Ḥalfā and Upper Nubia from Wādi Ḥalfā southwards, but neither term has any political or administrative significance.

The medieval Arabic writers are equally vague about the southern extent of Nubia, the region immediately bordering on Egypt, which bore the name of Maris, seems to have been regarded as Nubia **par excellence**; to the south of it lay Muṣarra with its capital at Dongola (Dunkula, Dumbula), and beyond this the kingdom of Alwa the capital of which was Sōba, near the site of the modern Khartūm. According to the tenth-century author ʿAbd Allāh b. ʿAbīad b. Sulaim (Ṣulaim), quoted by Maḏrīzī Maris and Muṣarṛā ḥad distinct languages, and the frontier between them was situated three post-stations (hārid) to the south of the Third Cataract; politically, however, Maris formed part of Muṣarrā and this probably accounts for the fact that Ibn Sulaim immediately afterwards places the commencement of Muṣarṛā at a day’s journey from Aswān. The frontier between Muṣarṛā and Alwa was the district of al-ʿAlawā, a name still in use for the country round Kabūţya in Berber province. ‘Alwa is generally placed outside Nubia, and the preamble to the treaty which governed the political relations between Nubians and Arabs makes its provisions incumbent on *the* chief of the Nubians and all people of his dominion *a* the frontier of Aswān to the frontier of ‘Alwa;* yet Masʿūdī speaks of ‘Alwa as part of Nubia in the middle ages, and the political suzerainty of Muṣarṛā. According to Yâḳūţ, Nubia extends along the Nile a distance of eighty days journey, Dongola being situated halfway at forty days distance from Aswān; of ʿAlwa he speaks, with obvious exaggeration of the distance, as a people beyond Nubia three months’ journey from the king of the Nība, whose official title is *king of Muṣarṛā and Nība*.

The modern conventional division of the population of the northern Sudān into Nubian, Beida, and Arab is in the main a linguistic one and does not correspond to any clearly-marked racial divisions. The *Nubian* type, itself a hybrid one, which makes up the pre-Arabic stage of the Nubian people and states that it is until the political suzerainty of Muṣarṛā, is most purely preserved in the Kenē, Mahāṣ, and Sukkot, who between them compose the so-called Barābra, though even here a considerable element of alien admixture must be recognised. The Nubian-speaking Danīgla (Danakila), on the other hand, are scarcely distinguishable from the rest of the Danīgla-Djaḥyin-group (see MacMichael, *History*, i. 197 seqq.) which includes a number of Arabic-speaking tribes extending from Dongola province to the neighbourhood of Khartūm; the origin of this group must be sought in a fusion of the original Nubian element with the Arabs who poured into the Sudan in the middle ages, and we may conjecture that the fall of the Christian kingdoms of Dongola and ‘Alwa. The numerous Danīgla colonies on the Blue and White Niles have given up their language in favour of Arabic, and the same applies to a branch of the Mahāṣ, settled since the sixteenth century in the neighbourhood of Khartūm, who now claim to be descended from the Kazarjād of Arabia. Throughout the northern Sudān the original Nubian stratum has coalesced with the Arabs to such an extent that it is no longer possible to separate the two strains. This fusion has also affected the groups which still speak Nubian, though the Barābra may be said to have maintained a separate identity and to have absorbed the foreign elements rather than the reverse. The Danīgla repudiated the appellation Nubia, and the term Barābra is used only by Egyptians and other foreigners, while the people themselves prefer to call themselves by their tribal names (Kenē, Mahāṣ, Sukkot). It is only in recent times that they have begun to develop a national sentiment as Nubians and to make occasional use of the name.

**Language.** The Nubian language can scarcely be indigenous to the Nile Valley, and it is in no way connected with the language of the Meroitic inscriptions which preceded it in that area. The problem of its linguistic grouping has not been satisfactorily solved: both Hamitic and Sudanic features are present, and L. Reinisch (*Die sprachliche Stellung des Nubos*, Vienna 1911) regards it as a connecting link between the two groups. G. W. Murray (*Sudan Notes and Records*, vol. iii.) suggests the conclusion that in the remote past Diska-Shilluk, Bari-Masai, and Nubian had a common origin, and that they all have to a greater or lesser degree been permeated by Hamitic influence. W. Memhof (*Eine Studienfahrt nach Kordofan*) definitely classes Nubian as a Hamitic language.

The following branches are distinguished:

a. Nilotic Nubian (the language of the Barābra and Danīgla) with three dialects: Kenē, Mahāṣ, and Dongolaw; and states that a third, though separated geographically, form a single dialect group. A fourth dialect distinguished by Reinisch (Paddī, Fadjīka) is stated by Lepsius to be only a variety of Mahāṣ.

b. Hill Nubian spoken by a number of negroid tribes in the present province of Kordofan. The area in question is inhabited by a medley of tribes of different linguistic and racial stocks, and it is only in the case of the Nubian-speaking groups (mainly in the north) that the appellation Nubia is justified. The best known dialect is that of Dilling (Delen). A form of Hill Nubian is also spoken by the people of Dībel Mādūb in northern Dārfūr.

c. The isolated dialect of the Birged tribe in Dārfūr designated by Zylén as South-West Nubian.

d. Old Nubian, the literary language of medieval Nubia. The examples which have survived belong to the viii—ix centuries and consist of homiletic and edifying pieces intended for the common people, as distinct from strictly theological literature for which Greek was employed. The language of these texts approximates most closely to modern Mahāṣ, although the provenance of the existing remains is the northernmost part of Nubia when Kenē is spoken. Scanty remains from Upper Nubia justify the conclusion that Nubian (perhaps in a form more closely connected with the Hill dialects) was also used for literary purposes in the kingdom of ‘Alwa.

Modern Nubian has no literature apart from biblical translations produced under European influence. The Danīgla and Barābra use only Arabic for written communications and for literary purposes.

**History.** In speaking of the early history of the country the name Nubia is misleading, as there is no evidence of its use in ancient Egypt as a tribal or geographical name. To the Egyptians, Lower Nubia was known as Wawat, and Upper
Nubia as Kaš (the Biblical Kush) which corresponds to the classical Ethiopia. From the earliest times there existed relations of trade, conquest, and cultural influence between Egypt and its southern neighbour, and under the Middle Empire the Egyptian penetration of what is now Dongola province led to the development of a special local civilisation based on the culture of Egypt, but deeply affected by local forms, materials and customs. Under the New Empire Wawat and Kaš were governed by Egyptian viceroy, and Napata (Drybel Barkal) became an important centre of the cult of Amon-Ra. Later Napata was the capital of an independent Ethiopian kingdom which, in its turn, conquered Egypt, and five kings of Napata sat on the throne of the Pharaohs (the 25th dynasty, n. c. 730—663). Subsequently the centre of gravity shifted southwards and Meroc, about 130 miles north of Kharfûm, was the capital of a kingdom which still preserved the elements of a civilisation based on that of Egypt, though the isolation of the country, which was now almost complete, led to a rapid decline. In circumstances of which we have no detailed knowledge, the character of the population was modified owing to the intrusion of negroid elements from Kordofan and the Djiistra, and cultural contact with the north diminished to such an extent that the Hellenistic-Roman world Ethiopia was but vaguely known, as indeed was the case of medieval Nubia in its relation to the Muslim world. Byzantine missionaries, however, introduced Christianity in the sixth century, at which period the two kingdoms of Muqarr and ‘Alwa were already in existence: the Macurritae, we are told by the chronicler, became Christians in 569 and the Aldaeans in 580, and an embassy of the Macurritae visited Constantinople in 573.

The name Nubian appears for the first time in the Hellenistic-Roman age and the earliest occurrence seems to be in Eratosthenes (quoted by Strabo, xvi.) who speaks of the Noubai as “a great race living in Libya on the left side of the course of the Nile extending from Meroc to the bends of the river”. In this passage, as well as in other references in Greek and Latin writers, Nubians are clearly distinguished from Lybians, Ethiopians, and other Negro folk, and as late as ca. 550 A.D. a kinglet of Lower Nubia speaks of himself as αυτιλος Νουβαδων και ολων των Αλιστων. It is not until the Muslim period that Nubia is found to have replaced Ethiopia as the name for the whole of the riverin country to the south of Egypt.

Of the events which brought about this change of name (no doubt signifying a change in language and in the ethnic character of the people) there is no historical record. From the linguistic evidence it is probable enough that the name originally belongs to the negroid of Kordofan, and that the Noubai (Noubades, Nobates) of the classical writers were immigrants from the southwest who, as a result of political ascendency, imposed their language on the Ethiopians of the Nile valley.

The fact, however, cannot be disregarded that the modern Hill Nuba are strikingly dissimilar in physical character and culture to the mainly Hamitic Barabra-Dangila, and on this ground the possibility of a racial connexion of the two groups has been challenged by C. G. Seligman and H. A. MacMichael (see esp. MacMichael, History, i. 149). Yet it is certain that the separation of the dialects must have taken place at a comparatively early date (before Christianity); the presence of “Nubian” speech in Kordofan can therefore not be explained as the result of Danagha settlement in recent times. For a discussion of this vexed question see Ernst Zylhars, Zur Stellung des Dorfbar-Nubiens, in W.Z.K.M., vol. xxx.; and S. Hillen-on, Nubian Origins, in Sudan Notes and Records, vol. xil. (1950). What can be said with certainty is that the Arab conquerors of Egypt found on their southern frontier a population mainly Hamitic in the north, but containing negroid elements which increased in importance in the south. These people were Jacobite Christians, and they used Nubian as the language of government and letters.

Vaïsùt quotes two sayings ascribed to the prophet in which Nubians are praised as faithful friends and useful slavers, but there can hardly have been any contact between Arabs and Nubians before the two invasions (A.D. 641—642 and 651—652) the second of which carried the Arabs as far as Dongola [q. v.]. As a result of these raids the relations between Muslims and Nubians were regulated by treaties which established a system of mutual tolerance and non-interference; the tribute of slaves (βατές [q. v.] from παπερίμ) which the Nubians undertook to pay annually was not so much a sign of submission as the basis for an exchange of commodities. Intercourse between the two countries, whether commercial or political, remained very restricted, and the interest of the Arabs to the south of Egypt was in the main confined to the exploitation of the mines of al-Allâfî, which affected the Baghira rather than the Nubians. An invasion of Upper Egypt, said to have been undertaken by the Nubian king Kuriyakos in A.D. 737 (or between 744 and 750) is recorded only on the doubtful evidence of Christian writers and ignored by Muslim historians. Minor raids occurred from time to time, and the “tribute” was occasionally withheld, but on the whole relations were peaceful.

Muslims began to penetrate into Nubia at an early date, presumably for purposes of trade, and as early as the tenth century they are said to have had a special lodging-place (rahad) in the capital of ‘Alwa. According to a Syrian writer (quoted by Mez, Renaissance des Arabes, p. 32) Nubians resident in the lands of the caliphate remitted taxes to their own king and enjoyed the privilege of an autonomous jurisdiction. Further evidence of friendly relations is found in an account of an embassy to Baghdad in the time of al-Mutawakkil when a Nubian prince was honourably entertained.

Of pivotal conditions in Nubia we know very little; there are no native sources of information and Muslim accounts throw light only on special periods and occasional contacts. The fullest descriptive accounts, both dating from the tenth century A.D., are those of Masûlî (ii. 362; iii. 31—34; 39—43) and Ibn Salim (Sulîm) who wrote an account of “Nubia, Muḥarr, ‘Alwa, the Badja, and the Nile”, of which extensive fragments are extant in the Kibîf of Muḥarr (ed. Wiet, vol. iii., ch. xxx. 99). During the reign of Saladin Nubian affairs come into some prominence owing to the support given by the semi-Nubian Banû Kanz (on whom see below) to a Faṣiμd pretender; and Lower Nubia was
invaded by Saladin's brother Tūhān-Sālīh (1172-1173) who pillaged Ibrīm and took many captives, but reported unfavourably on the resources of the country with the result that a planned annexation was not proceeded with. Soon afterwards (about 1208), the Armenian Abū Sālīh composed his account of the Churches and Monasteries of Egypt (ed. and translated by B. T. A. Evetts and A. J. Butler, Oxford [1895]) which contains some interesting details about Maris, Muṣarrah, and 'Alwa, but must be used with caution owing to the confusion in the writer's mind between Nubia and Abyssinia and his uncritical use of older authorities.

The factors which brought about the disintegration of the Nubian kingdom and the assimilation of the country were the immigration of Arab tribes, the rise of the Banū Kanz, and the intervention in Nubian affairs of the Mamlūk rulers of Egypt, especially during the reigns of al-Zāhir Baibars [q.v.] and al-Manṣūr ʿAbd al-Dawla [q.v.].

The Banū Kanz are first heard of in 1260 when the Fāṭimid caliph al-Ḥakīm, as a reward for services rendered, conferred the hereditary title of Kanz al-Dawla on Abū Makākim Ḥibat-Allāh, a chief of the Rabīʿa Arabs who had settled on the borderland between Egypt and the Sūdān. Already in the tenth century the Rabīʿa had gained control of the mines of al-ʿAllāqī and imposed their rule on the Bedja with whom they allied themselves by intermarriage. Another section, settled near Aṣwān, fraternized with the local Nubians, and the tribe, formed by this amalgamation and ruled by the Kanz al-Dawla dynasty, came to be known as the Banū Kanz; they are represented by the Kenzū of the present day. During the reign of the Mamlūk they were virtually in independent control of Upper Egypt, alternately in alliance with or in revolt against the Mamlūk government, and though repressed at times with a heavy hand, they remained a powerful tribe until the Ottoman conquest of Egypt. Before this event, however, they had played their part, together with nomad Arabs and Mamlūk troops, in the destruction of Nubian independence.

The Bahri Mamlūks, for reasons not apparent in our sources, departed from the traditional policy of Muslim Egypt, and actively intervened in Nubian affairs. The pretext for the expeditions undertaken by the generals of Baibars and Ḥalīl were non-payment of the tribute and, more frequently, the championship of Nubian pretenders who had solicited Egyptian support in order to gain the throne. On several occasions such pretenders of the Mamlūk government were installed in Dongola only to lose the throne again as soon as the Egyptian troops withdrew [see the article DONGOLA]. A formal treaty concluded with one of these kings virtually established an Egyptian protectorate. Meanwhile the disintegration of the kingdom went on under the pressure of Arab immigration, and Arab chiefs who married into the royal house took advantage of the matriarchal line of succession to grasp at the throne. The age-long Christianity of Nubia was gradually undermined and in the xivth century Muslim kings began to appear: the first king to bear a Muslim name was Abū Allāh al-Sāluḥ who was installed in 1316 and after a short reign lost the throne to a Kanz al-Dawla. From the Kitāb al-Tawrīf of Ahmad b. Yahyā b. Fadl Allāh, written some time between 1340 and 1349, we learn that at this date Christian kings still alternated with Muslims, and Ibn Bāṣrīn in 1354 (v. 396) speaks of the Nubians and Christians, but mentions a Muslim king (Ibn Kanz al-Dīn).

The conversion of the common people we have no details: no doubt it was brought about by the absorption of the native inhabitants, or those who survived, in the Arab tribes.

The immigration itself has left little trace in the pages of the historians, though the outlines of the process can be reconstructed from occasional references and from oral tradition. The nomads who had entered Egypt in the wake of the first conquest can never have found that country congenial to their mode of life, and the rise of non-Arab dynasties tended to make conditions still less attractive, while the Sūdān seemed to offer all the advantages, from the nomads' point of view, that Egypt denied. For a long time the kingdom of Dongola formed an effective barrier to southward expansion, but a gradual infiltration of Arabs must have begun at a comparatively early date, even though the end of the process was not accomplished for several centuries.

The early stages of the movement are seen in the conditions depicted in the story of Abū ʿAbd al-Rahmān al-ʿUmarī, the events of which are laid in the reign of Ibn Tulun (Maqrīzī's Kanz al-Muḥāqqaq, quoted by Quatremère, pp. 59-80). Arabs of Rabīʿa and Djuhaina, led into the Sūdān by that adventurous prince, have fraternized with the Bedja and exploit the mines of the Eastern Desert, but the Nile is forbidden them and Nubia is too strong to be attempted by force of arms. A fratricidal struggle in the Nubian royal house provides an opportunity for an alliance between the Arabs and a princely pretender to the throne. Acts of unblushing treachery are committed on both sides and in the end the Arabs have the worst of the encounter. The end of the process is seen in the fourteenth century. "The kingdom of Nubia had now to all intents and purposes ceased to exist and such kings as reigned in name were puppets of the Arab tribes.... It is from this period, the early years of the fourteenth century, that the immigration of most of the camel-owning nomads of the Sūdān dates. Generally speaking, it seems, the Djuhaina and their allies, most of whom we may be sure were Fazira, loosened their hordes southwards and westwards, leaving the Banū Kanz and Ḫirma in northern Nubia and Upper Egypt" (MacMichael, loc. cit., p. 187). Of 'Alwa nothing is heard at this period, but no doubt the course of events was similar to that in the northern kingdom, and already in the time of Ibn Khaldūn (1332-1406) we hear of branches of Djuhaina "close to the Abyssinians", that is to say no doubt on the upper reaches of the Blue Nile in the southern Džazira. The kingdom of 'Alwa nevertheless lingered on precariously and Nubian Christianity was still a living memory in the time of the Portuguese Alvarez (1520-1527), but about the year 1500 Sōba fell to an alliance of Kawāsām Arabs (a branch of Raffāʿa-Djuhaina) and the negroid Fundj [q.v.] who here for the first time appear in history.

The fifteenth century is almost completely barren of records relating to Nubia, and the historical memory of the present inhabitants remembers little of pre-Fundj days. With the coming of the Fundj, who soon extended their influence to Dongola, the history of Nubia is merged in that of the

THE ENCYCLOPAEDIA OF ISLAM, III.
Südän, and the Nubians, now Muslims and deeply affected by racial mixture with their conquerors, survive only as a linguistic minority on the northern fringe of their ancient kingdom.

Lower Nubia, however, was politically separated from the Fundj kingdom by Schim I who annexed the country south of Aswān as far as the neighbourhood of the Third Cataract, and garrisoned it with Turkish and Bosnian mercenaries (called Ghuzz by the people of the Südān). From these, many of the modern Barābra claim to be descended.

The Barābra-Danāqla of the present day (in the Egyptian province of Aswān and the Südān provinces of Ijāfa and Dongola) are a peaceful race of cultivators and skillful boatmen of the Nile. Owing to the poverty of their country and aided by an enterprising disposition, large numbers seek their livelihood in Egypt and the Südān where they are found everywhere engaged in various forms of menial employment. The Danāqla have also spread all over the Südān as traders, and in the nineteenth century they played an important part, together with their rivals, the Dījālyn, in the trade of the Upper Nile and the Bahr al-Ghazzāl where they adventured as slave-traders, sailors, and mercenary troops.

The men are generally bilingual in Nubian and Arabic which latter they speak ungrammatically and with an accent of their own. Those in foreign employment show themselves remarkably adaptable to alien ideas, at the same time they are tenacious of their own customs and cliannish to a degree. Under modern conditions they are keen to take advantage of educational facilities, and show an aptitude for the educated professions. In the past they have made no important contribution to the intellectual and spiritual life of Islam and produced no scholars of note. Ḫuṣayn al-mustāfi (q. v.) is said to have been of Nubian origin, but he is generally called the Egyptian'. The most remarkable figure of their race is Muhammad Aḥmad [q. v.], the Mahdī of the Südān (died 1855), who was a Dongoloīfī, though his family claim to be sharifs. The Barābra and Danāqla are generally devout Muslims, and most of them belong to the Mirghanīya (Khatmiya) tārida.

NUBANDJAN. [See SYLUSTAN.]
NUBAR PASHA (1825–1899), an Egyptian statesman, who played a most prominent part in Egyptian politics in the sixteenth century. Summoned by his uncle Boghos Bey, the Minister of Foreign Affairs and of Commerce under Muḥammād Aḥfīdī, he came to Egypt in the age of 17 and entered the government service as second secretary to the Viceroy. In 1848 he accompanied Ibrāhīm Pasha to Europe as secretary and interpreter. Under Sa‘īd, Nūbār began to play a part in public life. His independent spirit, his methodical and precise mind were revealed in the organisation of the Egyptian railways which he put in order in the space of six months (1857).

But it was under Ismā‘īl that he fully revealed his gifts as a negotiator and diplomatist. He was however not called upon to play a national part because of his Armenian origin and his ignorance of the language of the country. Raised to the rank of Pasha at the beginning of the reign (1861) he hastened to take advantage of the support and advanced views of the Viceroy to carry through a great scheme: to encourage externally the independence of Egypt and its development not in Asia — this was Ibrāhīm’s idea — but in Africa where her destinies summoned her, and at home the regeneration of Egypt with the help of Europe. From the first Nūbār Pasha grasped the great truths of the Egyptian question. But if the conception was grandiose, the execution of the scheme proved difficult on account of the confusion of interests and the European jealousies. These inherent difficulties in the Egyptian problem proved impediments to many solutions and the policy of reform frequently had to twist its way round obstacles of all kinds.

On the smallest matters Egypt had to wage an unequal struggle with Europe. Nūbār conducted the struggle on three fronts at the same time, on three fundamental questions.

The question of the Suez Canal. On Ismā‘īl’s accession the Company formed a state within the state and constituted in the very heart of Egypt a kind of colony, as a result of the lands it had obtained along the sea canal and the fresh water canals which were linked up with it. Nūbār conducted negotiations in Constantinople and in Paris with the object of securing the territorial sovereignty of Egypt. His activity ended in the famous decision of the Emperor Napoleon III on July 6, 1864, who ordered Egypt to pay the Company $4,000,000 francs to regain its rights. This enormous indemnity was nevertheless far from bringing about a final settlement.
The question of judicial reforms. Nubar used often to say: "Give Egypt water and justice and the country will be happy and prosperous". But in order to place justice on a sound footing so that it could protect the native against the government and the European who was exploiting him and particularly against the arbitrary decisions of the consuls, each of whom laid down his own law to the governed and governors alike, Nubar thought of organising a mixed system of justice composed of Egyptian and European elements and thus establishing uniformity of jurisdiction, legislation and executive action. As a result of the systematic opposition of France and of certain powers interested in maintaining the "privileges", the mixed tribunals were not established till 1875 after ten years of striving and of waiting endured by the government.

The question of autonomy. The territorial prerogatives inflicted by the Suez Canal and the system of capitulations did not prevent Nubar from remembering the political restrictions imposed by Turkey, the suzerain power. From 1863 to 1873 Nubar endeavoured to extract from Constantinople by negotiation and bribery privileges which would enable the work of progress to develop freely. After the firman of 1866 and 1867, Egypt obtained the famous firman of 1873 which constituted a new charter conferring on the viceroy the title of Khedive [q. v.], hereditary succession to the throne in direct line from father to son, an increase in the army — limited to 18,000 in 1840 — and lastly the right to conclude loans and commercial treaties with the Powers.

But the error made by Nubar and the Khedive was to consolidate Egyptian independence in theory but not in practice. Nubar was anxious for the introduction of capital and European enterprise: a beneficial idea but also dangerous because the Khedive, encouraged by his minister, became involved without due consideration in a disastrous series of loans. The various enterprises which arose with the rapid development of the resources of the country were put in hand by his own companies like the Steam Navigation Company, the Sudan Company, the Agricultural and the Trading Companies, in which Nubar, Oppenheim, Dervieu and others were the chief directors. The failures of the companies were liquidated by Egypt which made good all losses. The collaboration of Nubar with these financiers brought an atmosphere of suspicion into the good understanding between the minister and the Khedive, as did the negotiations conducted by him to conclude loans in Paris and elsewhere.

But the tragic side of the question lay in the accumulation of a debt of £90,000,000 which opened the gates of the Delta to foreign control. There is no doubt that Nubar had always resolutely opposed any foreign interference. Down to 1875, during the little time that he was actually in Egypt he was often on missions to Europe — Nubar endeavoured to act as a check on absolute rule and to oppose all European interference from wherever it came. He was not popular either in England or France. He was rightly distrusted in the entourage of the Khedive also.

Towards the end of 1875 an event took place which modified his attitude. England having taken the unusual step of intervening in Egypt to defend the private interests of some of her capitalists and sending a mission under Mr. Cave to conduct an enquiry in the country, Nubar, with his remarkable political instinct, felt the immediate danger of such interference and resolved to oppose it by all means. He was able to provoke the intervention of the consuls-general of Russia and Germany, who offered the Khedive the support of their governments. Isma'il declined over his grave political error. He went further and communicated with the English consul and did not scruple to sacrifice his minister.

Nubar had to hand in his resignation on Jan. 5, 1876 and to leave Egypt on March 21. Henceforth he swore a bitter feud against his master and his attitude gradually changed and inclined to England. In deciding to undermine the personal authority of the ruler, and allying himself with the foreigner, without being able to fix in advance how far the alliance was to go, in a word in wishing to humble his sovereign, Nubar weakened his country for the benefit of England. For it was to the government of England that he appealed in 1876 to intervene, acting on the pretext that intervention was here inevitable as a result of the enormous debts contracted by Egypt and that England's action would be of more benefit to Egypt than that of any other power. The result was that England finally imposed on the Khedive both Nubar and her complete control by exorting from him the rescript of Aug. 29, 1876 which established a "responsible minister" presided over nominally by Nubar but in effect by Rivers Wilson as Minister of Finance and de Blignières as Minister of Public Works. This dangerous innovation — the formation of a European ministry not responsible to the Khedive whose authority was now negligible, and installed in the heart of the country to support European policy and high finance — aroused the Egyptians from their lethargy and created general discontent. The Khedive became at once popular and his cause was identified with that of the nation. The result was the outbreak of Feb. 18, 1879 which removed Nubar from power. A new European ministry presided over by the crown prince was formed but the evil remained. Finally Isma'il, emboldened by public opinion, dismissed the European ministers (April 7) and formed a national ministry under Sharif Pasha. But the Powers — and Nubar's doings in Europe were not without influence on their decision — decided on the ruin of the Khedive and succeeded with the help of Turkey in deposing him (June 26).

Two years after the English occupation, Nubar returned to Egypt to form a ministry after the resignation of Sharif Pasha as a protest against the evacuation of the Sudan by Egypt, deposed by England. Nubar endeavoured in vain to come to terms with England and to put a check on her policy of practically depriving Egypt of her territory in Africa (Jan. 1884—June 1888).

He again formed a ministry (April 16, 1894) but he soon had to submit to the control of the English councillor in the Ministry of the Interior, and seeing himself powerless against Lord Cromer's policy which aimed at controlling the whole of the administration he had quickly to retire from the scene (Nov. 1895).

Nubar then went to Europe to compile his memoirs — still unpublished — and peacefully await his end. He was, to sum up, a great minister, a statesman who made mistakes, it is true, but
the fates were against him: 1875 marks the final blocking of his great policy. We must not however forget the early struggles in which he sustained from Europe and from Turkey piece by piece rights and privileges which constituted a great boon to his country.

**NUBUWWA.** [See NAHJ]

**NUH, the Noah of the Bible.** is a particularly popular figure in the Kur'an and in Muslim legend. Thalâbi gives 15 virtues by which Nuḥ is distinguished among the prophets. The Bible does not regard Noah as a prophet. In the Kur'ān Nuḥ is the first prophet of punishment, which is followed by Hūd, Šālih, Iūs, Shū'āb and Mūsā. Ibrahim is one of his following (Shīrā) (Sūra xxxvii. 81). He is the perspicuous admonisher (nudhir nuḥiyy) such as xl. 2 the Prophet calls "the messenger of God" (xxvi. 107), the "abd aṣṣāhīr, "the grateful servant of God" (xvii. 3). Allāh enters into a covenant with Nuḥ just as with Muḥammad, Ibrāhīm, Mūsā and 'Isa (xxvii. 7). Peace and blessings are promised him (xxvii. 50). Muḥammad is fond of seeing himself reflected in the earlier prophets. In the case of Nuḥ, the Muslim Kur'ān exegetes have already noticed this (see Gurnbaum, Neue Beitrage, p. 90). Muḥammad puts into the mouth of Nuḥ things that he would himself like to say and into the mouths of his opponents what he himself has heard from his friend. Nuḥ is reproached with being only one of the people (x. 72—74). God should rather have sent an angel (xxvii. 24). Nuḥ is wrong (vii. 58). A lying, deceiving (vii. 62), is possessed by qinīn (liv. 9), the only lowest join him (xxvii. 111). When Nuḥ replies: "it is grievous to you that I live among you. I seek no reward, my reward is with Allāh (x. 72—74; xi. 31); I do not claim to possess Allāh's treasures, to know his secrets, to be an angel and I cannot say to those whom ye despise, God shall not give you any good" (xi. 31—33), we have here an echo of Muḥammad's defence and embarrassment about many of his followers. Muḥammad pictures events as follows: Allāh sends Nuḥ to the sinful people. Sūrah lix. which bears his name, gives one of these sermons threatening punishment for which other analogies can be found. The people scorn him. Allāh commands him to build an ark by divine inspiration. Then the "chalderon boils" (xii. 42; xxvii. 27). The waters down everywhere: only two of every kind of living creature are saved and the believers whom Nuḥ takes into the ark with him. But there were very few who believed. Nuḥ appeals even to his son in vain; the latter takes refuge on a mountain but is drowned. When Nuḥ had the waters be still, the ark lands on mount Ḥūdūd (q. v.; xi. 27—51). Not only Noah's son but also his wife (with Iūt's wife) are sinners (lxvi. 10). From the Haggada is developed, as Geiger shows, the following elements of this Kur'ānic legend of Nuḥ: 1. Nuḥ appears as a prophet and admonisher; 2. his people laugh at the ark; 3. his family is punished with hot water (main passages:

Talm. Sanhedrin, 10ab; Gen. Rabba, xxix.—xxvi.)

The post-Kur'ānic legend of Nuḥ as in other cases fills up the gaps, gives the names of those not mentioned in the Kur'ān, makes many links e.g. connects Nuḥ with Ferdhun of the Persian epic although it is pointed out that the Mag, (Persian) do not know the story of the flood. Nuḥ's wife is called Walîya and her sin is that she described Nuḥ to his people as nunaqun, the names of Nuḥ's sons, Sāmū, Hām, Vāsīf are known to Kur'ān exegetes from the Bible but it also gives the name of Nuḥ's sinful son who perished in the flood: Kāfānān, "whom the Arabs call Yamīn". Muḥammad's statement that Nuḥ was 950 years of age at the time of the flood (jāfūn) (xxix. 13, 14) is probably based on Gen. ix. 39 which says Nuḥ lived 950 years in all, but on the other hand, it serves as a basis for calculations which make Nuḥ the first mūhāmmar; according to the Kiṭāb al-Muḥāmmarīn of Abū Ḥātim al-Sūqāji (ed. Goldziher, p. 1), who begins his book with Nuḥ, he lived 1,450 years. Yet in his dying hour he describes his life as a house with two doors in which one door is thrown open to the outside, and the inner door to the other. Muslim legend knows the Biblical story of Nuḥ and his times and his sons, but embellishes it greatly and in al-Kītāb it becomes a romance. From the union of Kābīl's and Sheh's descendants arises a sinful people which rejects Nuḥ's warnings. He therefore at God's command builds the ark from trees which he has himself planted. As he is hammering and building the people mock him: "once a prophet, now a carpenter", "a ship for the mainland". The ark had a head and tail like a cock, a body like a bird (Thalâbi). How was the ark built? At the wish of the apostles, Jesus arises Sāmū (or Hām) b. Nuḥ from the dead and he describes the ark and its arrangements: in the lower storey were the quadrupeds, in the next the human beings and in the top the birds. Nuḥ brought the ant into the ark first and the ass last, it was slow because Ḳīlīs was clinging to his tail. Nuḥ called out impatiently: "come in even if Satan is with thee"; so Ḳīlīs also had to be taken in. The pig arose out of the tail of the elephant and the eat from the lion. How could the goat exist alongside of the wolf, or the dove beside the birds of prey? God tamed their instincts. The number of human beings in the ark varies in legend between seven and eighty. Ḳūb b. Ḳamāl was also saved along with the believers. Kābīl's race was drowned. Nuḥ also took Adam's body with him which was used to separate the women from the men. For in the ark intercourse was forbidden, for man and beast. Only Ḳūnūm transgressed and for this was punished with a black skin. The whole world was covered with water and only the Ḳūram (in al-Kīta), also the site of the sanctuary in Jerusalem was spared: the Ka'ba was taken up into heaven and Dījudh concealed the Black Stone (according to al-Kīta the stone was snow white until the Flood). Nuḥ sent out the raven but finding some carrion it forgot Nuḥ; then he sent the dove which brought back an olive leaf in its bill and mud on its feet; as a reward it was given its collar and became a domestic bird. On the day of 'Ashūra every one came out of the ark, men and beasts fasted and gave thanks to Allāh.

There are many contacts with the Haggada; the
(different, it is true) partitioning of the ark, Nūh's anxiety about the animals, Ḥām's sin and punishment (Sambūkāt, 108a b). The story that the giant Ḍūq escaped the Flood is also taken from the Haggadah [see Ḫ. D. B. 'ANĀK]. But Muslim legend goes farther than the Bible and Haggadah, like Muhammad who appears himself in Nūh.

On the name Nūh: Goldzweiler, in Z. D. M. G., xxiv. (1870), 207–211; on Nūh as Muḥammad; Goldzweiler, Abhandlungen zur arabischen Philologie, iii, Leyden 1899, p. lxxxix. and p. 2.

(Bernhardt HeUer)

NŪH, the name of two Sāmānid s. i. Abū Muhammad Nūh i. b. Naṣr b. Ḥāmid, called al-Amīr al-Ḥamīd, succeeded his father [see Naṣr]; but the real ruler was the pious theologian Abū ʿAfaq Muhammad b. Ḥāmid al-Sulami. The latter long refused to take the title of ḥāffiz but finally succumbed to Nūh's pressing representations, and took much less interest in the business of government than in his devotional exercises and theological studies which earned him the name of al-Ḥakim al-Shahld. There were also by this time unmistakable symptoms of decline. In 932 (943–944) Abū ʿAllāh b. al-Ashkām rebelled in Khwarizm and Nūh set out with an army from Bukhārā towards Merw. But when Abū ʿAllāh placed himself under the protection of the ruler of the Turks, whose son was a prisoner in Bukhārā, peace was restored between the two, and the fierce struggle ceased. Abū ʿAllāh was pardoned by Nūh. Much more trouble was caused to the Sāmānid dynasty by the rebel governor of Khurāsān, Abū ʿAllāh b. Muḥtādī. Shortly after his accession Nūh had sent him with an army against al-Raʾy to this town from the Būyid Rukn al-Dawla. A section of his troops deserted to him the way however and when he encountered Rukn al-Dawla three farsaks from al-Raʾy the majority of his Kūrd troops went over to the enemy. Abū ʿAllāh was defeated and had to return to Naṣibān. In Dīmāḏī I 355 (January–February 945) they advanced again against al-Raʾy by order of Nūh: on this occasion Rukn al-Dawla did not meet him but took to flight, and in Ramadān (April–May) Abū ʿAllāh took the town and the surrounding country. In the meanwhile his enemies in Khurāsān took advantage of his absence to libel him to Nūh, whereupon the latter replaced him by Ibrāhīm b. Sinījūr; but Abū ʿAllāh was not inclined to let this happen and on account of financial difficulties the government could not enforce its orders. As the troops were not paid regularly they blamed the vizier and said he was in collusion with Abū ʿAllāh. In the end the discontent increased to such a degree that Nūh was unable to protect the vizier and in Dīmāḏī I 335 (November–December 946) he was put to death. As early as 946 (947) Abū ʿAllāh was put on trial. In Ramadān (January–February 952) he left Saghāniyān, the administration of which he gave to his son Abū Mansūr Naṣr b. Ḥāmid, then went to Merw where he arrived at Aḥfān 146 (April–May 952). He restored order in Khurāsān, but when by Nūh's orders he attacked the Būyid Rukn
al-Dawla and his achievements did not come up to expectations, he was dismissed and Abu Sa'id Bakr b. Malik al-Farghânî appointed his successor, whereupon Abu Ali sought refuge with Bukhn al-Dawla. On Nuh's dealings with the Būyids see the article Ửa§hrjûr b. ɏyaKar. Nuh died in Rabi' II 343 (Aug. 954), and his son Abu al-Malik succeeded him.

2. Nuh II b. ɏAßîr b. Nuh, called al-‘Ansâr or al-Râdî, ascended the throne at the age of 13 after the death of his father in Shawwâl 366 (June 977). The government was at that time in the hands of his uncle and the able vizier Abu l-Husain ‘Abd Allâh b. ‘Abd Allâh al-‘Ubdî, who assumed office in Rabi' II 367 (Nov.–Dec. 977). In 371 (981–982) the powerful Sipahsârî in Khurâsân Abu l-Hasan Muhammed b. İbrahim b. Simdîr, who according to Ibn al-‘Aţîr's description of him "only obeyed when he pleased" (i’yuf ɨllâ fi- mâ niyârâ), was dismissed and Husîn al-Dawla Abu l-Abdîs Taşh, a devoted servant of the vizier, put in his place. But the rule of the vizier did not last long; the Sâmaûîs armies were defeated by the Bûyids and the vizier himself murdered at the instigation of Ibn Simdîr. When Taşh went to Bukhârâ in order to restore order there, Ibn Simdîr joined forces with the former Manûlî Fâîkî, who had taken part in the war against the Bûyids and offered him his assistance in the conquest of Khurâsân; they then met in Naisûlîr and seized the country around it. When Taşh heard of this he went to Merw and entered into negotiations with the two allies with the result that it was agreed that Taşh should retain the supreme command along with Naisûlîr while Fâîkî was to get Balkh and Ibn Simdîr's son Abu ‘Ali was to receive Herût. After some time, in 373 (983–984) or 376 (986), ‘Abd Allâh b. Muhammed b. ‘Uzâir was appointed vizier. The latter was hostile to the ‘Ubdî family and at once dismissed Taşh and restored Ibn Simdîr to the supreme command in Khurâsân. Some officers indeed appealed for Taşh but their representations were of no avail with the vizier, who was supported by Naisûlîr's mother. Equally unsuccessful were the efforts of the former Sipahsârî to enforce his claims by force of arms against Ibn Simdîr and Fâîkî, although he was supported by the two Bûyids, Fâîkî al-Dawla and Shams al-Dawla b. Abu al-Dawla. Taşh was defeated and fled to Murâdja where he died in 377 (987–988) of the plague or, according to another statement, of poison. In Dhu l-Hijjâ 378 (March 1990) Ibn Simdîr also died and was succeeded by his son Abu ‘Ali, who was jealous of Fâîkî and wished to get him out of the way. When he resorted to arms Fâîkî could not resist him but fled to Merwârîd. Abu ‘Ali then was recognised as governor of all the provinces south of the Amûl-Dârî and soon made himself independent of the central government in Bukhârâ while Fâîkî took possession of Balkh. The amir Abu l-Harîth Muhammed b. ‘Abd Allâh b. Farîghûn, whom Nuh sent against him, was defeated and joined Fâîkî against the lord of Saghâniyân, Taşh b. Faţlî. The latter could not resist the combined forces of the allies; he himself was slain and his army scattered. In addition there was the intervention of foreign rulers in the domestic affairs of the kingdom. Abu ‘Ali turned to the Karakhânîs Bughrâ-Khan and arranged with him for a partition of the Sâmaûîs kingdom by which Bughrâ-Khan was to have Transoxania and Abu ‘Ali Khurâsân. As a result Bughrâ-Khan appeared in Bukhârâ in Rabi' I 382 (May 992) but soon withdrew and died on the way back to Turkestân [cf. the article BUGHRA-KHAN]. After Nuh, who had had to evacuate his capital, had returned, Fâîkî again appeared on the scene. On the approach of Bughrâ-Khan he had been sent against him but, as we are told, presumably correctly, deliberately allowed himself to be defeated, whereupon he submitted and was rewarded by Bughrâ-Khan with the governorship of Tirmidh and Balkh. After the return of Nuh he renewed his alliance with Abu ‘Ali who, now and helpless Sâmaûîs decided to appeal for help to the Ghazavâd Sabuktegin [cf. the article SâMAûILDS]. After a time Abu ‘Ali and Fâîkî, who had taken refuge with the Büyîd Fâîkî al-Dawla in Durrâdîn, wished to return to Khurâsân (386 = 995). At first they had some success but when they encountered Sabuktegin near Tüs, they suffered a decisive defeat and fled to Anûl. They then sent messengers to Bukhârâ to appeal for pardon. The authorities turned a deaf ear to Fâîkî's appeal but declared themselves ready to restore Abu ‘Ali to favour. Fâîkî therefore fled to the Karakhânîs, while Abu ‘Ali after many vicissitudes finally made his peace with the authorities in Bukhârâ through the inter-vention of the amir Abu l-Abdîs Manûlî Muhammed in Gurgândî. He then first received very kindly but later thrown into prison with several of his brothers and officers. At the same time, a raid by the Karakhânîs forced Nuh again to appeal to Sabuktegin who was then in Balkh. The latter at once invaded Transoxania with a large army; but when he demanded that Nuh should join forces with him, Nuh refused on the advice of the vizier ‘Abd Allâh b. ‘Uzâir. Sabuktegin was not at all pleased and Nuh had not only to give in but also to hand over the vizier and Abu Allî, whereupon the vizierate was given to Abu Nâır ‘Abd Allâh b. Muhammed b. Abu Zâhid. Sabuktegin imprisoned Abu ‘Ali and Ibn ‘Uzâir in Gardhî. The former died in 387 (997) in prison while the vizier was afterwards released. At the conclusion of peace, Sabuktegin and the Karakhânîs agreed that the steppe of Karunik should be the frontier between the Sâmaûîs and the Karakhânîs. Fâîkî was then recognised as governor of Samarkand. Sabuktegin ruled as an independent sovereign in Khurâsân; in Transoxania the vizier Abu Nâır endeavoured to restore order by force but after a few months he was murdered and Nuh appointed as his successor Abu l-Harîth Muhammed b. Ibrahim al-Barghashî. Nuh died in Radjab 387 (July 997) and was succeeded by his son Abu l-Harîth Mânî. — Bibliography: Ibn al-‘Aţîr, al-Kânîl, ed. Tornberg, viii. 4955; ix. 7–9, 19 sq., 67, 68.
NUH R. MUSTAFÅ, an Ottoman theologian and translator of the Qur'an, was born in Anapa but migrated while still quite young to Cairo where he studied all branches of theology and attained a high reputation. He died there in 1070 (1659). He wrote a series of theological treatises, some of which are detailed by Brockelmann, G.A.L., ii. 314. His most important work however is his free translation and edition of Shahrazd's celebrated work on the sects. Terzâme-i Mihtât ve-i Vilâh which he prepared at the suggestion of a prominent Cairo citizen named Yûsf Efendi. It exists in manuscript in Berlin (cf. Fertich, Kat., p. 157 sqq.), Gotha (Fertich, Kat., p. 76), London (cf. Rieu, Cat., p. 35 sqq.), Upsala (cf. Tornberg, Catalogue des manuscrits turcs de l'Université de Upsala, ed., ii. 190), etc., and was printed in Cairo in 1626. On the considerable differences between this Turkish translation and the original Arabic of Rieu in the British Museum Catalogue, p. 35b. In his Mémoire sur deux coffrets gnostiques du moyen âge, du Cabinet de M. le Duc de Bordeaux (Paris 1832), p. 28 sqq. J. v. Hammer gave some extracts from the latter part of the work. He also wrote on it in the Wiener Jahrbucher, lxxi., p. 50 and cf. 4.

In 1150 (1741) a certain Yûsf Efendi wrote a life of Nuhus b. Mustafâ which exists in MS. in Cairo (Cat., vii. 364).

Bibliography: The catalogues of MSS. above mentioned and also Brockelmann, G.A.L., ii. 314 and Muhammad al-Muhiabîn, Tarikh Khulâtât al-'Azkar, Cairo 1868, iv. 458.

(Flanz Baringer)

AL-NUKHAILA, a town in the 'Irâk, near al-Kûfa. It is known mainly from the accounts of the battle of Kâdïsîyâ. From the statements collected by Yûkût regarding its position it appears that two different places of this name had later to be distinguished, namely one near Kûfa on the road to Syria, which is several times mentioned in the time of the Caliphs 'Ali and Mu'awiya and another, a watering station between al-Maghāra and al-Akâba, 3 mil from al-Jai'far, to the right of the road to Mecca. Several encounters took place there during the second battle of Kâdïsîyâ. According to al-Kâlidî in al-Bâkî, this al-Nukhaila was in the Syrian steppe (al-Bâlidiyâ); Ibn al-Fâkhî also seems to be thinking of this region. Caetani assumes that the reference in both cases is to the same place on the edge of the desert. According to Musili it perhaps corresponds to the modern Khân Ibn Nakhâilah about 14 miles S. S. E. of Kerbelâ and 40 miles N. N. W. of al-Kûfa.

AL-NUKHABA, a plain west of the Diebel Hawrân on the border of Trachonitis in Transjordan. The name al-Nukhâra ("the cavity") is quite modern. It is applied to an area, which includes the two districts of al-Baḩriyyâ (with its chief town al-Hârîrât) and Hawrân (West of the hills of the same name), i.e. the whole northern half of Transjordan. In the wider sense al-Nukhâra includes all the country from al-Lajûd, Djaoudir and al-Balka to the foot of the Diebel Hawrân, in the narrower sense only the southern part of this; in any case it stretches from al-Sanâmân to the Diebel al-Durûz (Hawràn). To al-Nukhâra belong Mundûn or Mundûb, Tûbûn (now Tibûn), al-Muhadjûn or Ob'at, al-Olûma, al-Muṣââra and al-Fa'dînîn already mentioned in Siraic texts of the pre-Muslim period.

NUMAIR b. 'Awîr b. Sa'îfâ, an Arab tribe (Wustenfeld, Gencal. Tabellen, F 15) inhabiting the western heights of al-Yâmâma and those between this region and al-Hîma Darîya: a bare and difficult country the nature of which explains the rude and savage character of the Numair. Their name like that of Namr and Anmûr borne by other ethnic groups (there are also in the list of Arab tribes a number of other clans with the name Numair: among the Asad, the Tamîm, the Djûft, the Hamdûn etc.) is no doubt connected with nîmr, the Arabic panther; we know the deductions made by Roberton Smith from this fact and from other similar cases, to prove the existence of a system of totemism among the early Arabs (Kinship and Marriage in early Arabia, second ed., p. 234). His theory is now abandoned.

The geographical dictionaries of al-Bakî and Yûkût mention a large number of places in the land of the Numair, especially their wells, and often even record a change of ownership from one tribe to another (e.g. Yûkût, Muqaddam, iii. 320; the well of Dhu, which formerly belonged to the Tâmûh clans of the Kulaib b. Varbû, later passed to Numair); this wealth of references does not however mean that the Numair played an important part in the history of Arabia. It is only due to the fact that the country of the Numair is typically Beduin in its scenery and lends itself to description by poets. The Numair besides were much intermixed with the neighbouring tribes (especially the Tamîm, Bûhîla and Kusairî) and the boundaries of their territory were rather vague.

The Numair, a poor tribe without natural wealth, have always been brigands. The part they took in the pre-Islamic wars was a very modest one and they appear in the first two diwans of al-Baladhûrî and the other groups of the great tribe of 'Amir b. Sa'îfâ (they hardly played any part in the battle of Fât al-Ri's against the Banu 'l-Hârîh b. Ka'b and their allies, Nakif, ed. Bevan, p. 469-472). It is to
this isolation that they owe the privilege of being known as one of the Djamarat al-Arab, i.e. a tribe which never allied itself with others (al-Mubarrad, Kāmil, ed. Wright, p. 372; al-Nakha'i, p. 946; Mafjūdīyūt, ed. Lyall, p. 841; on the different tribes to which this title is given, cf. Tāj al-Ârūs, ii. 107); the other designation of the Numair, the Ḥunūs of the Bani ʿAmir, also gives them a special place within the great tribe from which they sprang; it indicates that they were thought not to have the same mother as the other clans of the Bani ʿAmir (Mafjūdīyūt, p. 259, 12-13 = 771, 2-4; the source is the Djamara of Ibn al-Kalbī, Brit. Mus. MS, fol. 112b—121r). Neither during the life of the Prophet, nor at the beginning of the caliphate did the Numair make any stir: they appear neither as partisans nor as enemies of Islam. It is only from the Umayyad period that the name begins to appear in histories, but only to record their insubordination to the central power or their exploits as brigands; in the caliphate of ʿAbd al-Malik their refusal to pay tribute brought a punitive expedition against them (al-Dalāḥi, Fatīḥ, p. 139; cf. Aḥkām, xvii. 112—113; xx. 123—124). Another expedition of the same kind but on a larger scale was that against them under the famous general of the caliph al-Mu'tāwakkil, Bughṭ al-Kābir, in 232 (846) to put an end to their systematic plundering; it ended in the complete dispersal of the tribe (Tahān, iii. 1357—1363); a most interesting account of Beduin customs including on p. 1361 a detailed list of the Numair clans only one of which, the Bani ʿAmir b. Numair, devoted itself to agriculture and grazing, while the others lived only by brigandage). It appears however that the Numair soon resumed their old habits and another expedition was sent against them with the same object as the earlier ones in the 16th century A.D. by the Ḥamānīd Saif al-Dawla (Yusuf, Muqawwam, iv. 378).

An event of little importance in the life of the Prophet has given the Numair considerable fame in literary history, although little flattering to them: this is the attack directed against them by the poet Djarīr which is one of the most famous examples of the inventive of the highī (especially the hemistich: "Cast down thine eyes: thou belonest to the Numair"). The occasion of it was the unfortunate intervention of the Numair poet al-Ḥarīn in favour of al-Farādākī in the celebrated feud between him and Djarīr (al-Nakha'i, p. 427—451, No. 53: Aḥkām, vii. 49—50; xx. 169—171 etc.). The memory of this quarrel survived for a very long time. It was probably no accident that the man who urged the emir Dūghāt to the expedition against the Numair was the great-grandson of Djarīr, the poet ʿAbd al-Ḥamīm b. ʿĀḳl b. Būlā b. Djarīr; the Numair moreover had slain four of his uncles (Ibn Kūṭān, Shīr, ed. de Goeje, p. 284, where we must read B. Dinā [b. ʿĀḳl b. Nuṣair b. Numair] in place of B. Dalāḥa). The enmity between the family of Djarīr and the Numair was probably revived by the proximity of the latter to the title of the poet, the Bani Kulāh b. Yarāḥ.

To the Numair belonged notable poets — in addition to al-Ḥarīn and his son Djarīlī and like ʿAbd al-Ḥaiya (in the early Ḥabīlāl period) and Djarīr al-Awād whose Dīwān was recently published (Cairo 1930 = 1931, publications of the Egyptian Library).

(G. LEVI DELLA VIDA)
at the beginning of the year 63 (682) and drove all the Umayyads out of the town, Yazid wished to see what tact would do before resorting to arms and sent a mission to Medina under al-Nu'man to see the people the futility of armed resistance and to bring them to their senses. The mission was also instructed to go on to Mecca to induce the stubborn 'Abd Allah b. al-Zubair to pay homage.

Al-Nu'man's warnings and threats had no effect on his countrymen however and there was nothing left for the Caliph but to subdue the rebels in the two holy cities [see the article VAZI B. MU'AWIYAH] by force of arms. After the death of Yazid in Rabi' I 63 (Nov. 683) al-Nu'man who had in the meanwhile become governor of Hijaz declared openly for 'Abd Allah b. al-Zubair. In Dhu 'l-Hijjah of the same year (July—Aug. 684) or in Muharram 65 (Aug.—Sept. 684) however, the latter's leading follower al-Dakhābī b. Ka'īs al-Fihrī [q.v.] was defeated at Mardj Râhiṣ [q.v.] and thus the fate of al-Nu'man was also decided. He attempted to save himself by flight but was overtaken and killed. According to the Arab historians, the town of Ma'arrat al-Nu'man takes its name from Nu'man b. Bashīr.

AL-NU'MÂN B. AL-MUNDHIR (with the kunya Abû Kâbit or Abû Kâbita) was the last kingly house of the house of the Lakhmīds of al-'Hira [cf. LAKĪM]. He is certainly the best known to the Arabs but not by any means therefore the most important of the dynasty. He is often mentioned by the poets, according to circumstances a subject of panegyrics or of lampoons. His best known court poet was al-Nâbigha al-Dhubyâni [q.v.]; on his relationship with 'Adî b. Zaid al-Ihâdî see below.

His fame among the Arabs does not mean that we know a great deal about his life and activities. What we can get from the poetry is of very little historical value and what the historians tell us about him is of almost less value. Arab tradition about the house of Lakhmīds is generally speaking of the same nature as that of the partly contemporary houses of Ghassân and kindâ. In addition there is the complication produced by the frequent confusion of different people of the same name in the stories. What is to be found in non-Arab sources, although more reliable, is too trifling and accidental to build a historical narrative upon.

The material has been collected by Noldeke in his Geschichte der Perser und Araber zur Zeit der Sassâniden and G. Rothstein, Die Dynastie der Lakhmīden in al-'Hira and critically studied as far as possible.

The "kings" of al-'Hira were vassals of the Persian Great Kings and were installed by them, and given the task of keeping together the Arab population of the marches and the desert Arabs, their dependents, and thus to protect the empire against raids and plunder by the Beduins. Al-Nu'man is said to have reigned 580–602 A.D. or perhaps a little later. His father was al-Mundhir b. Hind, one of the three sons of the famous prince of the house of Kinda, who came to the throne in succession. His mother however was of humble origin; she was, it is said, the daughter of a goldsmith near Medina, a fact which the enemies of the king made good play within their lampoons on him. After the death of his father al-Mundhir, the Great King (Hormizd IV) is said to have hesitated for a time to fill the throne. Al-Nu'man's final appointment is said only to have been made through the influence and cunning of the Arab poet 'Adî b. Zaid al-Ihâdî [q.v.] who was secretary for Arab affairs to the Great King and whose family were devoted to al-Nu'man.

No really important events are known of the reign of al-Nu'man. Mention is made of hostilities with Arab tribes and anecdotes of his life recorded. At first a pagan, like all his male ancestors, he was baptised which did not prevent him remaining a polygamist. But there had previously been Christians in his family. His grandmother Hind above mentioned founded a monastery [cf. AL-HIRA] and his sister of the same name (others say daughter) was a nun. Towards the end of his life he had the poet 'Adî b. Zaid put to death as his enemies had poisoned him against him. But he is said to have helped a son of the poet to obtain the same influential position with the Great King (Khusraw II) as his father had held. He himself was not long afterwards made prisoner by the Great King — it is said as a result of the machinations of this son of 'Adî and died in prison. There are all sorts of legends giving details of his end.

AL-NU'MÂN B. THĀBIT. [See also HANIFA.] AL-NU'MÂN B. 'ABD ALLAH MUHAMMAD B. MANSŪR B. ÂHMAD B. HĀVĪN AL-TAMĪMĪ, Al-ISMĀ'ILĪ AL-MAGHRIBI ABU ḤANIFA, the greatest of Ismā'īlī jurists and a protagonist of the early Fātimids in Egypt. Nu'man appears to have been derived from a Mālikī stock in Kairawan, adopting the Ismā'īlī faith early in life. The exact date of his birth is not known, but it is probable that he was born in the last decades of the third century of the Hijra. He began his service of the Fātimids by entering the service of al-Mahdi (first Fātimid caliph), and served him for the last nine years of his life, i.e., 321–332 a.H. Thereafter he continued to serve al-Kāmil (second Fātimid caliph) for the whole of his life. During this time al-Nu'man was concerned chiefly with the study of history, philosophy and jurisprudence, and the composition of his numerous works. Just prior to al-Kāmil's death, which occurred in 335 (946), he was appointed a kāfi. His rank rose during the time of Mansūr (third Fātimid caliph) and he reached his
zenith in the time of the fourth Fāṭimid caliph, al-Mu‘izz (died 365 = 976), whom he preceeded by two years. Officially he does not seem to have been appointed ḥāfiẓ ’-r-iḥfāẓ, a designation given for the first time to al-Nu‘mān’s elder son ’Alī; but during the reign of al-Mu‘izz, al-Nu‘mān acquired great power and was in effect the highest judicial functionary of the realm, and one of the most important figures in the hierarchy of the Da‘wā (pronounced Da‘wot by the Ismā‘ilīs).

Kādī al-Nu‘mān was a man of great talent, learning and accomplishments; learned as a scholar, prolific as an author, upright as a judge. Not many external facts of his life are known. Possibly he was a recluse immersed in juristic and philosophical studies, and engaged in the composition of his numerous works. He was the founder of and is rightly regarded as the greatest exponent of Ismā‘īlī jurisprudence. According to the Ismā‘īlī tradition, he wrote nothing without consulting the Ismā‘īls who were his contemporaries; and his greatest work, the Da‘wā’īn al-Islām (The Pillars of Islam), is regarded as almost the joint work of Ismā‘īl al-Mu‘izz and Kādī al-Nu‘mān, and therefore of the highest authority. It was the official corpus juris after the time of al-Mu‘izz throughout the Fāṭimid empire. In addition to being a jurist, some of his other works are also considered standard works by the Ismā‘īlī doctors and are still eagerly studied, for example, Asīs al-Tawīl and Tawīl al-Dā‘wā’īn (asvīl), Shārī al-Akhbār and Ifṣīlīt al-Da‘wā’ (akhbār), and al-Ma‘āfīs wa l-Muṣāyarāt (wa‘f).

Al-Nu‘mān was the founder of a distinguished family of Kādīs, and both of his sons, ‘All and Muhammad, attained the rank of chief Kādīs, Kādī al-Kifāyat.

Kādī al-Nu‘mān died at Old-Cairo (Misr) on Friday, the 29th of Dhu‘l-Mahān II, 363 (March 27, 974).

Al-Nu‘mān was a prolific and versatile author, and the names of 44 of his works have come down to us. Out of these, 22 are totally lost; 18 are wholly, and 4 partially, preserved by the Western Ismā‘īlīs of India. Instead of giving a complete list of his works, which may be found elsewhere, I am only classifying them according to subjects, mentioning the most important of them: A. Fīkh: 14 works (Kittāb al-Istāḥ, Da‘wā’īn al-Islām, Mukhtasar al-Akhbār; B. Manazara; 5 works; C. Ta‘wīl (Allegorical Interpretation): 3 works (Asīs al-Ta‘wīl, Ta‘wīl al-Dā‘wā’īn; D. Ḥa‘ṣbī’t (Esoteric Philosophy): 4 works; E. Aqā‘īl (Dogmatists): 6 works (al-Ka‘ba al-mushabbār; F. Akhbār al-Sira: 3 works (Sharh al-Akhbār); G. Ta‘rīkh: 2 works (Ifṣīlīt al-Da‘wā’); H. Wa‘z: 3 works (Ma‘āfīs wa l-Muṣāyarāt); Miscellaneous: 4 works.

(FYZEE)

NŪN, the twenty-fifth letter of the Arabic alphabet, with the numerical value of 50, belonging to the group of liquids (al-hurūf al-ḥaṣik), and as such subject to numerous changes and assimilations; cf. the Bibliography.

On the palaeographic history of the character, cf. ARAβA, plate I.

NŪR (A.), light, synonym dawn, also dwā (the latter sometimes used in the plural). According to some authors, dawn (diyā) has a more intensive meaning than nūr (cf. Lane, Arabic-English Dictionary, s.v. dwā); this idea has its foundation in Kūrds x. 5, where the sun is called diyā and the moon nūr. The further deduction from this passage that diyā is used for the light of light producing bodies (sun) and nūr on the other hand for the reflected light in bodies which do not emit light (moon), is not correct, if we remember the primitive knowledge of natural science possessed by the Arabs in the time of Muhammad, nor is there any proof of it in later literature. The works on astronomy of the contemporaneous cosmology of the Arabs in the best period of the middle ages (Ibn al-Hajjām, Kāzvīnī and later writers) in the great majority of cases use the term dwā and it therefore seems justified to claim this word as a technical term in mathematics and physics.

Besides dealing with the subject in his Optics (Kittāb al-Ma‘āmīr) Ibn al-Hajjām devoted a special treatise to it entitled Kaws al-Hasan b. al-Husain b. al-Hajjām fi l-Dawā which has been published with a German translation by J. Baarmann in the Z. D. M. G., xxxvi. (1882), 195—237, from which we take the following details:

As regards light, two kinds of bodies are distinguished, luminous (including the stars and fire) and non-luminous (darks); the non-luminous are again divided into opaque and transparent, the latter again into such as are transparent in all parts like air, water, glass, crystal etc. and such as only admit the light partly but the material of which is really opaque, such as thin cloth.

The light of luminous bodies is an essential quality of the body, the reflected light of a body in itself dark on the other hand is an accidental quality of the body.

In the opinion of mathematicians all the phenomena of light are of one and the same character; they consist of a heat from fire which is in the luminous bodies themselves. This is evident from the fact that one can concentrate rays of light from the brightest luminous body, the sun, by means of a burning-glass on one point and thus set all inflammable bodies alight and that the air and other bodies affected by the light of the sun become warm. Light and heat are thus identified or regarded as equivalent. The intensity of light, like that of heat, diminishes as the distance from the source increases.

Every luminous body whether its light is one of its essential qualities (direct) or accidental (reflected), illuminates any body placed opposite it, i.e. it sends its light out in all directions. All bodies whether transparent or opaque possess the power of absorbing light, the former have further
the power of transmitting it again; that a transparent body (air, water, etc.) also has the power of absorbing light, and has been confirmed by the fact that the Hellenistic tradition speaks of transparent water, a doctrine which is found in the Self-known book of Al Fārābī Sahl ibn ’Alāʾ ibn al-Hadhāj; Ibn al-Haitham challenges this statement and shows from a use of the theory of the mathematician Abū Saʿīd al-Ṣalih ibn Hawall, which is based on the well-known rules of there being fraction of light in passing through media of different densities, that the transparency has no limits and that for every transparent body as an even more transparent one can be found.

An explanation of the origin of the halo around the moon, of the rainbow, its shape and its colour, and of the rainbow to be seen at night in the steam-laden atmosphere of the bath, is given by Kāzimī in his Cosmography, i. (Ayyāb al-Mathālib, Beirut, 1895, p. 100 sqq. transl. Eth.). Kāzimī in his discussion replaces the raindrops by small looking-glasses; Ibn al-Haitham, on the other hand, deals with the problem in a much more conclusive fashion by assuming a single or double reflection of light in spheres (cf. E. Wiedemann, Wied. Ann., vol. LXXIV., 1890, p. 575).

Bibliography: References given in the article.

(Willy Hartner)

The doctrine that God is light and reveals himself as such in the world and to man is very old and widely disseminated in Oriental religions as well as in Hellenistic gnosis and philosophy. We cannot here go into the early history; it will be sufficient if we refer to some parallels in the Old and New Testaments, e.g. Gen. i. 3; Isaiah, lx. 1, 19; Zech., iv.; John, i. 4–9; iii. 19; v. 35; viii. 12; xii. 35 and Rev., xxi. 23 sq.

How Muhammad became acquainted with this teaching we do not know, but the Kurān has its "light" verses [notably Sūra xxiv. 35, the "light verse" proper; cf. with it Sūra xxxiii. 45 (Muḥammad as lamp); lxi. 8 sq. (Allāh’s light)]; lviii. 8 (the light sent down = revelation). The light verse runs (as translated by Goldsith, in Koran-Auszüge, p. 185 sq.): “Allāh is the light of the heavens and of the earth; his light is like a niche in which there is a lamp; the lamp is in a glass and the glass is like a shining star; it is lit from a blessed tree, an olive-tree, neither an eastern nor a western one; its oil almost shines alone even if no fire touches it; light upon light. Allāh leads to his light whom he will, and Allāh creates allegories for man, and Allāh knows all things.”

From the context it is clear that we have to think of the light of religious knowledge, of the truth which Allāh communicates through his Prophet to his creatures especially the believers (cf. also Sūra xxviii. 40). It is pure light, light upon light, which has nothing to do with fire (nūr), which is lit from an olive tree, perhaps not of this world (cf. however A. J. Wensinck, Tree and Bird as cosmological Symbols in Western Asia, in Verh. Ak. Amst., 1921, p. 27 sqq.). Lastly it is Allāh as the all-knowing who instructs men and leads them to the light of his revelation (cf. Sūra lxxiv. 8). It is clear that we have here traces of gnostic imagery but those rationalist theologians, who — whether to avoid any comparison of the creature with God or to oppose the fantastic mystics — interpreted the light of Allāh as a symbol of his good guidance probably diverged less from the sense of the Kurān than most of the metaphysicians of light. Passages are very frequent in the Kurān in which Allāh appears as the Knowing (al-‘alim) and the Guiding (al-hādi’ī). One did not need to look far for an exegesis on these lines. As Abū Ṣafīr observes (Makālāt, ed. Ritter, ii. 534) the Mu’tazilis al-Hasan al-Nadījār interpreted the light verse to mean that God guides the inhabitants of heaven and earth. The Zaidīs also interpreted the light as Allāh’s good guidance (cf. the article Nūr).

From ca. 100 A.D. we find references to a prophetic doctrine of nūr, and gradually to a more general metaphysics of light, i.e. the doctrine that God is essentially light, the prime light and as such the source of all being, all life and all knowledge. Especially among the mystics in whose emotional thinking being, name and image coalesced, this speculation developed. Meditation on the Kurān, Persian stimuli, gnostic-Hermetic writings, lastly and most tenaciously, Hellenistic philosophy provided the material for new ideas. Kumāt (d. 743) had already sung of the light emanating through Adam via Muhammad into the family of Āli (cf. the article Nūr). The doctrine of light was dialectically expounded by Sahl al-Tustari (d. 896) (see also Masson, Textes inédits, p. 39 and the article SAHIL AL-TUSTARI).

The first representatives of a metaphysics of light in Islam readily fell under the suspicion of Manicheanism, i.e. of the dualism of nūr and šahāna (darkness) as the eternal principles. The tradition of Tirmidhī that Allāh created in darkness [cf. the article NūR] must have aroused misgivings. The physician Rābi’ (d. 923 or 932), although a Hellenistic philosopher, adopted ideas from Persia and was for this refuted or cursed by various theologians and philosophers. Many mystics also (e.g. Hallād; according to Masson, Passion, p. 150 sq. wrongly) were accused of this dualism.

But the speculations about nūr found a powerful support from the ninth century in the monistic doctrine of light of the Neo-Platonists (we do not
know of any Persian monism of light) which was compatible with the monism of Isâm. The father of this doctrine is Plato, who in his Phîleîsia, 506 D sqq. compares the idea of the good in the supersensual world with Hélios as the light of the physical world. The contrast is not therefore between light and darkness but between the world of ideas or mind and its copy, the physical world of bodies, in the upper world pure light, in the lower world light more or less mixed with darkness. Among the Neo-Platonists the idea of the good — the highest: God = pure light. This identification was also facilitated by the fact that according to Aristotle's conception light is nothing corporeal (De anima, i. 7, 418b: [αἰθί] ... ὅπως ἔχει οὐδὲ ἄκμα ἀκμαίον όμοιον). From the context which is however not all clear, it appears that Aristotle regarded light as an effective force (ἐνέργεια). It is however of no importance here. Many Aristotelian forces and Platonic ideas are described by Neo-Platoeans and Neo-Platonists sometimes as forces and sometimes as substances (spiritual).

With Aristotle σνς (darkness) was conceived not as something positive but as ἄστρενε (privatio, the absence of light).

From this developed the doctrine which we find in the Arabic "Theology of Aristotle". Not far from the beginning (ed. Dieterici, p. 3) it is said: the power of light (κινωνια νουταγ) is communicated by the prime cause, the creator, to the αἰθή and by the αἰθή to the world soul, then from the αἰθή through the world soul to nature and from the world soul through nature to things which originate and decay. The whole process of this creative development proceeds without movement and timelessly. But God who causes the force of light to pour forth is also light (νῦρ; occasional synonyms: ἄναν, βαθή), "the prime light" (p. 51) or (p. 44) the "light of lights". Light (p. 51) is essentially in God, not a quality (ὕφασμα) for God has no qualities but works through his being (καταρτια). The light flows through the whole world, particularly the world of men. From the supersensual original (p. 150), the first man (καὶ ἀνθρώποι) it flows over the second man (καὶ ἄνθρωποι) and from him to the third (καὶ ἄνθρωποι). These are the originals of the so-called real men. Light is of course found in its purest form in the souls of the wise and the good (p. 51). It should be noted also that νῦρ as a spiritual force (νοον καταρτια) is distinguished from fire (νῦρ) which is said to be only a force in matter with definite quality (p. 85). Fire of course like everything else has its supersensual original, but this is more connected with life than with light.

The elevation of the soul to the divine world of light corresponds to the creative descent of light (p. 8). When the soul has passed on its return beyond the world of the αἰθή it sees there the pure light and the beauty of God, the god of all mysteries. Although the author of the Ἐραις de causis, 4th cent., adhered to the opinion that nothing can be predicated regarding God, yet he has to call him the prime cause and more exactly pure light (§ 5, ed. Bardenheuer, p. 69) and as such the origin of all being and all knowledge (in God is τεύχων = ὦν ἀραία; see § 23, p. 103).

The light emanated by God may, if it is regarded as an independent entity, be placed at various parts of the system. Most philosophers and theologians connect it with the ῥῆς or αἰθή or identify it with them, sometimes also with life (καταρτια), but this must be more closely investigated.

The great philosophers in Isâm, Farâbî and Ibn Sinâ, connected the doctrine of light with the αἰθή in metaphysics as well as in psychology. Farâbî is fond of using many synonyms for the light of God and the αἰθή (βαθή etc.; see e.g. Der Muster- stadt, ed. Dieterici, p. 13 sqq.). In the biography of Farâbî in Ibn Abî Usîkhâ (C̱yân, ed. Muller, ii. 134—140) a prayer is attributed to him in which God is invoked as the "prime cause of things and light of the earth and of heaven". Ibn Sinâ like Farâbî takes up the doctrine of light in theology and further develops it. In his psychological writings he regards the light as a link of the soul and body (cf. Sahîl al-Tustari who places νῦρ between ῥῆς and φίλ in the four elements of man). In the Kitâb al-Ishârat (ed. Forget, Leyden 1892, p. 126 sq.) he even reads the whole metaphysical doctrine of the αἰθή of the Aristotelians into the light verse of the Kurân. Light is the αἰθή of υποφή, the αἰθή (p. 57) and so on. Allâh's νῦρ is therefore like the nouns of Aristotle! This discovery of Ibn Sinâ's was incorporated in the pious reflections of Güzâzî (in Mâbridî al-Kuâ'id fi Madârijî al-Ma'rifat al- Nafl, Cairo 1927, p. 58 sq.)

The many expositions of the further developments of speculation on νῦρ, especially among the gnostics and mystics, are in Massignon's articles Ḳârâmîs and ṬásaWFūWF.

Nûr Allâh al-Sâyîd B. al-Sâyîd Sharîf al-Marâşi al-I'jüsâîni al-Shâshârî, commonly called Khâdîj Nûr Allâh, was born in 956 (1549). He was descended from an illustrious family of the Marâşi Sâyîds and settled in Shâshâr. He left his native place for India and settled in Lâhore where he attracted the notice of Hâkim Abû 'l-Fâth (d. 997 = 1588) and through his presentation to Emperor Akbar (963—1014 = 1556—1605), he was appointed Khâdîj of Lâhore in lieu of the Shahîk Mu'tîn (d. 995 = 1586). 'Abd al-Kâdir Badâ'uni, iii. 137, says that he was, "although a Shî'ah, a just, pious and learned man. He was flogged to death in 1019 (1610), on account of his religious opinions, by the order of the Emperor Dâhângir (1014—1037 = 1605—1628). He is regarded as al-Shâhâl al-Thâlibî, "the third martyr", by the Shî'is and his tomb in Akhânbâd is visited by numerous Shî'as from all parts of India.

He is the author of innumerable works of which the following may be quoted: 1. Ḳâhîsîs ala 'l-Bâdiâfârî, a supercommentary to al-Bâdiâfârî's commentary on the Kitâb al-Nûra al-Anârî, edited. Twain al-Tâmirî, Asiatic Society of Bengal MSS., List of the Government Collection, p. 16; 2. Ḳâhîsîs Sharîf Ḳâdîî ala 'l-Tâmirî, glosses to Ḳâdîî's commentary on Naṣîr al-Dîn al-Ṭâsî's Compendium of metaphysics and theology, entitled Tâmirî al-Kalâm: Loth., Ind. Off., No. 471, xv.; 3. Ḳâhîsîs al-Hâkîs wa-'l-Sâfî al-Bâdiâfârî, a polemical work against Sunnism written in reply to Faqî b. Rûshâhâns work entitled Φαλάτ al-Fâtîî, a treatise in refutation

Nūr al-Dawla. [See DUBAI.]

Nūr al-Dīn Muḥammad, an Ortōkīd. He was the son and successor of Fakhr al-Dīn Kāra-ʿĀlī, lord of Hisān Kaḥf and of a considerable part of Dīyār Bakr (Ibn al-ʿĀṯir, Kāmilī, ed. Tornberg, xi. 217) who, according to Ibn al-ʿĀṯir (xi. 207), died in 562 (1166—1167) but according to the numismatic evidence may have lived till 570 or 571 (van Berchem, Abh. Ges. Wiss. Göttingen, N.F., vol. ix.iii, 1907, p. 143, note 3). Nūr al-Dīn married the daughter of Sulṭān Kīṭhī Arslān but when he treated her disgracefully, his father-in-law was very angry and threatened him with war. In consequence Nūr al-Dīn appealed for help to Saʿlāh al-Dīn who after fruitless negotiations took the field against Kīṭhī Arslān in 576. Nūr al-Dīn came to him in his camp on the Gōk-sū (this should be the reading in Barhebraeus, Chron. Syr., ed. Bedjan, p. 356) and was received by him with great honour. Soon afterwards his father-in-law made peace with him and with Saʿlāh al-Dīn. When the latter in 578 took the field against ʿIzz al-Dīn of al-Maʿṣūl, Nūr al-Dīn showed himself at once ready to pay homage to him and assist him at the siege of al-Maʿṣūl. The powerful ʿAṭībaīd then awarded him with the important town of Āmīd, which he took in the following year (579) and gave him (Ibn al-ʿĀṯir, xi. 324). Of all the wealth collected in this town Saʿlāh al-Dīn only took for himself the 1,040,000 volumes which its library is said to have contained (Barhebraeus, op. cit., p. 362). In the following year (580), Nūr al-Dīn took part in the unsuccessful siege of al-Karāk (Barhebraeus, p. 364). When Saʿlāh in 581 (1185—1186) again advanced against al-Maʿṣūl, in place of Nūr al-Dīn who was ill, his brother Ḥimād al-Dīn accompanied him. Nūr al-Dīn died soon afterwards and left to his son Kūṭh al-Dīn Sukmān II rule over Hisān Kaḥf and Āmīd. Ḥimād al-Dīn on hearing of his brother's death hurried from Saʿlāh al-Dīn's camp before al-Maʿṣūl to Hisān Kaḥf but found his nephew already fully installed there. He therefore seized the fortress of Kharṭārib where he became the founder of a branch of the Ortōkīds.

Biography: see the article Ortōkīds. (E. Honemann)

Nūr al-Dīn Abu 'l-Kāsim Māhīmed b. Ḥimād al-Dīn Zengī, called al-Malik al-ʿĀdil, atābeg of Ḥalab and Damascus. Nūr al-Dīn was born in Shāmbılı (Feb. 1118) and took part under his father in the siege of Kaṭḥ al-Diżār where the latter was murdered in Rabī I 541 (Sept. 1146). His kingdom was then divided between his two sons, Saʿif al-Dīn Ghārī [q. v.] who took possession of al-Maʿṣūl, and Nūr al-Dīn who established himself in Halab. Scarcely had the news of Ḥimād al-Dīn's death reached Joscelin II who lived in Tell Bāšir [q. v.] than the latter entered into negotiations with the people of Edessa, mainly Armenians, the chief stronghold of the Crusaders, which Ḥimād al-Dīn had taken shortly before and assured himself of their cooperation in his successful attack on the city. He was thus able to occupy the city without difficulty and its Muslim garrison took refuge in the citadel. When Nūr al-Dīn heard this he hurried thither by forced marches; Joscelin fled and Edessa fell into the hands of Nūr al-Dīn who wreaked a terrible vengeance on the treacherous Christians, laid the city completely waste and left only a few citizens in it. In the following year he invaded the district of Halab and took from the Christians Arṭāb and Kafarīhā and several other places. The news of the fall of Edessa in 539 (1144) made a tremendous impression in Europe and induced the Pope Eugenius III on Dec. 1, 1145 to send a letter to Louis VII and the knights of France in which he demanded a new crusade and in the spring of 1146 to send St. Bernard of Clairvaux to preach the crusade. He was listened to with enthusiasm; on receiving the Pope's message Louis had already declared himself ready to take the crusaders' vow and finally the Hohenstaufen Conrad III was also won over. In the first half of the year 1147 the two kings set out and after great difficulties and considerable losses through starvation, epidemics and enemy attacks, the European armies joined another one in Palestine in the spring of 1148. It was decided to attack Damascus which was then nominally in the power of the Bulūr Muḍjähr al-Dīn Aṭ巴 b. Muḥammad although the real ruler was one of his Mamluks named Muʿīn al-Dīn Anar. In Rabī I 543 (July 1148) the Christians began the siege of the town from the southwest. The first few days were spent in heavy fighting with great losses on both sides. In the meanwhile Muʿīn al-Dīn had appealed for assistance to Saʿif al-Dīn Ghārī. The latter set out with a large army and was joined on the way by his brother Nūr al-Dīn. Before giving the hard pressed Muʿīn al-Dīn the assistance he desired, he sent him a letter in which he demanded the surrender of the town to his deputy in order to have a base in case of a defeat; but if he was victorious he would leave the town at once. But as Muʿīn al-Dīn did not trust him completely he endeavoured instead to frighten the Christians by threats and declared that if they did not retreat he would hand over the town to Saʿif al-Dīn Ghārī who would certainly drive the invaders completely out of Syria. These representations, supported by the gold of Damascus, did not fail to influence the eastern leaders who were able to appreciate the situation much better than their European allies. But as they had not the courage to propose that the siege should be once abandoned, they suggested in the council of war held in the night of the July 26—27, 1148 that the camp should be moved from west to east because, they said, the walls on this side were not so strong and the attack would not be impeded by gardens. The besiegers followed the
advice of those possessing local knowledge but

soon saw that they had been deceived because the
terrain on the east side offered even greater
difficulties in every respect and there was there-
fore nothing left for them but to withdraw in
order to resume the siege another time. When
Bertrand, the son of Count Alfonso of Toulouse
who had just died, took the fortress of al-Arta in
and threatened the district of Tripoli Count Raymond
of Tripoli appealed to Nur al-Din and Masʿūn al-
Dīn who had joined one another in Baalbek;
the two Muslim leaders supported by a contingent
sent by Saif al-Dīn hurried to his help. Bertrand
had to surrender; the fortress was destroyed and
he himself taken prisoner. The Christians then
prepared to invade the district of Ḥalab; Nur al-
Dīn however anticipated them, defeated them at
Yaghra taking much booty, which he divided among
his brother Saif al-Dīn, the caliph al-Muqtāfī and
the Saldūjūk sultan Masʿūd. At the beginning of the
following year (May 1149) Nur al-Dīn invaded the
region of Ṣanṭākiyā, laid waste the country with the
suburb of Ḥarīm and laid siege to the fortress of
Innīb. Prince Raymond of Antioch hastened up
with a small army to attack Nur al-Dīn but
was enticed into an ambush and fell in the fight.
Nur al-Dīn then went with his victorious forces
doing great damage as he went, close up to Antioch
in order to inspire the inhabitants with terror,
and on his way back took Ḥīrām and forced the
strong fortress of Fāmiya (Apamea) near Ḥamāt
to surrender. About the same time Saif al-Dīn died
and his brother and successor Kūb al-Dīn Mawdūd
prepared to fight Nur al-Dīn, but the dispute was
settled amicably [cf. the article MAWDUDD]. Soon
afterwards (545 = 1151 or 546 = 1151-1152) Nur
al-Dīn succeeded in capturing his enemy Joscelin II
of Edessa. The latter had previously won a victory
over Nur al-Dīn and treated him very scornfully.
When one night he was travelling with only a
few followers to Antioch he was surprised by a
troop of Turkomans in the pay of Nur al-Dīn and
brought to Ḥalab where he remained a prisoner
till his death, while Nur al-Dīn gradually took all
the fortresses belonging to the Christian
forces in Edessa. In order to split up the Christian forces
and to bring some relief to the Muslims besieged in ʿAskālān, he made an agreement with his enemy,
the prince of Damascus, Mudījr al-Dīn Abāṣ, and
in Safar 548 (May 1153) they both appeared before
the walls of Bānīyās (q.v.). But while the irresolute
Mudījr al-Dīn would undertake no serious steps
against the Christians, they soon abandoned the
siege and separated without having achieved any-
thing. When ʿAskālān, was forced to capitulate
after an eight months siege the Christians began
to cast covetous eyes on the great and wealthy
city of Damascus, especially as Mudījr al-Dīn acted
almost as if he were their vassal. In order to
thwart their plans, Nur al-Dīn endeavoured to gain
over Mudījr al-Dīn by pretended friendship and
by making false charges against them persuaded
him to get rid of his chief emirs so that Mudījr
al-Dīn thus lost his most reliable friends. When Nur
al-Dīn suddenly appeared before the gates of the
city they were opened to him by his friends in
Damascus as had been prearranged. Mudījr al-Dīn
took refuge in the citadel and summoned the
Christians to his assistance but surrendered the
city before help arrived (Safar 549 = April 1154).

In compensation he received Ḥīms. There he
began to intrigue against Nur al-Dīn and the
latter offered him Ballūs instead; Mudījr al-Dīn
however was not satisfied, but settled in Baghdād
where he remained till his death as a protégé of
the caliph al-Muqtāfī. In 551 (1156) Nur al-Dīn
made a peace with Baldwin III of Jerusalem,
whereby the latter gave up the annual tribute which
Damascus had had to pay him since the time of
Mudījr al-Dīn and ceded the half of the lands of
Ḥārīm. In spite of this about the end of the year
551 (Feb. 1157) Baldwin fell upon a defenceless
encampment of Arabs and Turkomans in the neigh-
bourhood of Bānīyās, took the men prisoners and
carried away their cattle. As a result the way broke
to Ḥarīm, and the Christians were forced to
fight on the Euphrates by the governor of Damascus,
Asad al-Dīn Shīrkuh, some in the vicinity of
Damascus by Nur al-Dīn's brother, the emir Nāṣīr al-Dīn.
Many prisoners were brought to Damascus and put
to death by Nur al-Dīn's orders in revenge for
the Muslims killed at Bānīyās. Nur al-Dīn then
attacked Bānīyās and destroyed the town but
could not take the citadel; he retired on the
approach of Baldwin. The latter rebuilt the ruined
town, dismissed a number of his troops and
intended to return to Tiberias, but was surprised
on the way by Nur al-Dīn and suffered a disastrous
defeat (Djmāʿa 1 552 = end of June 1157). Another
attempt by Nur al-Dīn to take the town was also
unsuccessful; he again raised the siege when the
approach of Baldwin. Very soon afterwards he
fell very ill and a rumour spread that he had died.
The Christians thereupon attacked Shaizar [g.v.]
which had been severely damaged by an earthquake,
and had along with Baalbek shortly before fallen
into the hands of Nur al-Dīn. The attack failed
however owing to the jealousies among the Frankish
leaders. On the other hand, they were successful
after two months siege in taking Ḥārīm in the
following year and in inflicting a severe defeat
on Nur al-Dīn on the Jordan (Djmāʿa 1 553 =
July 1155). About the same time the emperor
Manuel I Comnenos appeared in Syria to chastise
the rebel governor of Cilicia and prince Raynal
of Antioch who had undertaken an expedition against
Cyprus. After receiving the submission of the
princes, the emperor resolved to join Baldwin in
an attack on Ḥalab at the beginning of 1159.
Nur al-Dīn however escaped the danger which
threatened him by releasing the Christian prisoners.
He then concluded a truce for four months with
Baldwin, took Ḥarrān and al-Raḳḳa from his brother
Nāṣīr al-Dīn and invaded the lands of sultan
Kīlīd Arslān II [q.v.]; but when Baldwin began
then lay waste Nur al-Dīn's territory, the latter
hurried back to Ḥalab and Baldwin retired. About
this time conditions in Egypt began to attract
the attention of Nur al-Dīn and from the year 556
(1161) his history is so closely bound up with
that of Saladin that it is sufficient to refer to
the article on the latter for the main facts. Only
the following need be added here. In 556 (1161)
Nur al-Dīn had planned an invasion of the coast
of Tripoli and encamped before Ḥīṣn al-ʿAṭlan
[q.v.] and was preparing to storm it when he
was suddenly attacked by the Christians. His
forces who were quite unprepared were scattered
and again Nur al-Dīn himself only escaped with
difficulty. Nevertheless he succeeded by exerting all his
efforts in raising a new army in a short time
with which he again advanced on Ḥārīm After
winning a decisive victory over the Christian relief force, he took Harrim by storm (Ramadan 558 = Aug. 1163) and a few months later also forced Baniyas to surrender. When the atabeg of Mawsil, Nur al-Din’s brother Kubl al-Din Mawdud, at the end of 565 (Sept. 1170) died and his younger son Saif al-Din Ghāzūr was chosen successor by the emirs, Nur al-Din went there and said that Saif al-Din Mawsil was but a shadow he had brought with him. Sīrāj al-Dīn Zanjī to his elder brother ‘Imād al-Dīn Zanjī. In 568 (1173) he invaded Asia Minor and took several towns; on his relations with the Sāljuqs of Rum there see the article BANJAN LI. While he was still on this expedition, an envoy arrived from the Abbāsid caliph of Baghdad bearing a diploma recognising Nur al-Din as lord of al-Mawsil, al-Djazira, Irbil, Khilât, Syria, Egypt and Konya. He died on 11th Shawwāl 569 (May 15, 1174) in Damascus of a disease of the liver (‘illat al-khawwānîth) and was buried in the citadel; his body was later brought to the madrasa founded by him at the entrance to the Sīk Khuwwāsin.

With reference to Nur al-Din, Ibn al-‘Athur, xi. 265 says: ‘I have studied the careers of the rulers of the past but from the time of the legitimate Umayyads and ‘Omar b. ‘Abd al-‘Azīz I have found none who led a purer life or had greater enthusiasm for righteousness’. As a pious Muslim convinced of the truth of the Prophet’s mission, he was always eager to follow out in exact detail the many prescriptions of the Kur‘ān and the Sunna regarding the conduct of believers in private and public life. He was distinguished by a remarkable love of justice which was seen for example in the fact that he would never punish on mere suspicion alone and was able to check any arbitrariness on the part of the lower courts also, and aversity and selfishness were entirely foreign to his character. He never gave way to the temptation always at hand to enrich himself at the expense of the treasury; on the contrary, he applied the proceeds of the booty taken in war to pious foundations and public works for the benefit of Islam. Among the important cities of Syria the fortifications of which were renovated by him, Ibn al-‘Athur mentions (xi. 267) the following: Damascus, Hims, Hamāt, Halab, Ša‘izar and Baalbek, and mosques, schools, hospitals and caravanserais were built everywhere. On his great activity as a builder cf. the article DAMASCUS; cf. also Fleischer, Mīḥā’l Melāhā’s Cultur-Statistik von Damascus (Kleinere Schriften, iii. 306 sqq.). He was also a generous patron of scholars in whom he took great interest; on the battlefield he earned the admiration of his soldiers by his personal bravery, which was coupled with unusual talent as well. If on the other hand he was guilty of acts which are not quite compatible with humane warfare, like the massacre in Edīb, on the recapture of the town and the slaughter of the Christian prisoners in Damascus after Baldwin’s attack on the defenceless Muslims at Bāniyas, it should be remembered that this was no breach of the practice of war of the time. The constant aim of his efforts was the expulsion of the Christians from Syria and Palestine and to this object he remained faithful throughout his life. In the political history of Syria and Mesopotamia, Nur al-Din played an unusually important part and laid a firm foundation on which Saladin was later able to build.

Wiegand, iii. 3—11); cf. also the article SALADIN. V. NUR AL-DIN ABU l-HARITH ASHRĀN SHĀH b. MAŠ‘UD b. MAWDCALL b. ZANGI, called al-MA‘LĪK al-‘ADMĪ, lord of al-MAWSIL. After the death of his father [q.v.] in Shābān 559 (Aug. 1193) Nur al-Din succeeded him; the real ruler however in the early years of his tenure of office was the governor of the citadel, the eunuch Muqālidh al-Dīn Kāmaz al-Zanī, who is described not only as a pious and learned man but as an official much concerned with the welfare of the people. He died in Rajab 1 595 (Jan. 1199) or, according to another statement, in Safar of the same year (Dec. 1198). Many buildings, such as mosques, monasteries, schools and bridges, which the city of Mawsil owes to him, are evidence of his interest in the welfare of the community. When the officials of Nur al-Din’s uncle, the lord of Sendjar, ‘Imād al-Dīn Zanjī b. Mawdud, seized several places in the neighbourhood of Nasībin, but really belonging to the territory of Mawsil, Nur al-Din after long and fruitless negotiations decided to seize the town of Nasībin. ‘Imād al-Dīn then died and was succeeded by his son Kubl al-Dīn Muhammad. The change in the throne caused Nur al-Dīn to hasten; in Djuwmād I 594 (March—April 1198) he set out with a large army. Kubl al-Dīn was defeated and turned to the Ayyūbīd al-‘Adīl [q.v.] with an appeal for help while Nur al-Dīn established himself in Nasībin; but his army melted away through sickness and death and on the approach of al-‘Adīl he evacuated the town and returned to Mawsil (Ramadan 594 = July—Aug. 1198), whereupon al-‘Adīl laid siege to Mardin. In Muharram 595 (Nov. 1198) the ruler of Egypt al-‘Azīz died and when his successor al-Afdal recalled al-‘Adīl’s Egyptian troops and also made an alliance with Nur al-Din, al-‘Adīl had to withdraw and leave the conduct of the siege of Mardin to his son al-Kāmil [q.v.]. Nur al-Dīn then took the field and along with his two cousins Kubl al-Dīn Muhammad and Sendjar Shāh b. Ghāzī, lord of Dżirāt b. ʻOmar, encamped before Dünaisir [q.v.]. After two months there they moved their camp to Harram between Dünaisir and Mardin. In the meanwhile, the inhabitants of Mardin had exhausted their supplies; in addition devastating epidemics
broke out which still further reduced the ranks of the defenders; the commander therefore sent a message to al-Kāmil and declared himself ready to surrender the town within a definite period on condition that he was allowed to import sufficient food. Al-Kāmil agreed but with the arrival of Nūr al-Dīn the people of Mārīn plucked up their courage and renewed the struggle. Al-Kāmil might almost have taken the town by treachery; although Kūtb al-Dīn pretended to be devoted to Nūr al-Dīn he was really secretly attached to al-Kāmil and had promised him to take to flight at once in case of an encounter. When the troops were drawn up for battle he was placed in such a position however that there was no possibility of escape on the narrow battlefield. Al-Kāmil was defeated and fled to Damascus to his father (Shawwāl 595 = Aug. 1199). As to Nūr al-Dīn, he fell sick and could not follow up his victory but returned to al-Mawsīl. After he had recovered from his illness, he went in Shawāb 597 (May–June 1201) with Kūtb al-Dīn to Harrān to resume the struggle with al-Adīl. When he reached Ra's al-'Adīl, enemies of his father came to him from al-Fīrāz al-Adīl who lived in Harrān to seek peace and as he knew that the other Ajyālīs wished to make peace with al-Adīl and deadly epidemics had broken out among his troops, he granted their request for a return to the status quo and returned to al-Mawsīl. In the year 600 (1203–1204), Kūtb al-Dīn openly made homage to al-Adīl and had the kā'iba read in his name; Nūr al-Dīn could not permit this and took possession of Nasībin except the citadel. This also would probably have fallen into his hands if the news that the lord of Irbil, Muzaffar al-Dīn Kōbūrī [q.v.], had invaded the territory of al-Mawsīl in his absence and had wrought great havoc, had not forced him to return. After he had ascertained that the accounts that had reached him were much exaggerated he turned his attention to Tell Āfar which belonged to Sindjār and laid siege to it. But fortune did not favour him. It is true that he succeeded in taking Tell Āfar; then a number of Mesopotamian princes allied themselves with Kūtb al-Dīn and Nūr al-Dīn could not face their combined strength. When it came to a battle he was completely routed and had to surrender Tell Āfar and make peace (beg. 601 = late summer 1204). The relations between Nūr al-Dīn and Kūtb al-Dīn had never been particularly friendly and matters did not improve when Nūr al-Dīn gave his daughter in marriage to one of al-Adīl's sons. On the occasion of this union of the two dynasties, Nūr al-Dīn's viziers proposed to him to conclude an alliance with al-Adīl so that he might himself take possession of Dżarāt ibn 'Omar which was under the rule of Mu'izz al-Dīn Māhād b. Sindjār Shāh and that al-Adīl should occupy Kūtb al-Dīn's territory. This plan which was entirely in keeping with Nūr al-Dīn's desires was also approved by al-Adīl and the latter undertook a campaign against the east. On this campaign in a short time he took al-Khābār and Nasībin and besieged Sindjār. While Kūtb al-Dīn was preparing to fight to defend his capital, Nūr al-Dīn equipped an army which was to join al-Adīl's. Then a sudden change took place in the political situation. The lord of Irbil, Muzaffar al-Dīn Kōbūrī, who had promised Kūtb al-Dīn to intervene with al-Adīl on his behalf but had been unsuccessful, now proposed to Nūr al-Dīn to join him against al-Adīl. Nūr al-Dīn agreed and when the Ajyālīs ruler of Ḥalab al-Malik al-Zāhir and the Sālīq Sultān of Konya Kaşıkusuar 1 b. Kılıç Arslan [q.v.] joined the alliance and al-Adīl was further fortified by the 'Abbāsid caliph al-Nāṣir [q.v.] to abandon his hostile plans, he finally yielded, especially as his emirs had no inclination to continue the campaign. In the meantime Kūtb al-Dīn returned to Harrān and al-Adīl departed to the end of Radjab 607 (Jan. 1211) and was succeeded by his son al-Malik al-Kāhir Ḫiz̄al-Dīn Masūd.

**Nūr Dżahān, name given to Mīhrāb Nīṣāzī, the famous queen of Nūr Dżahān, the Mughal Emperor. She was born at Kandahār in 1577 when her father, Ghiyāth Beg, was migrating from Persia to Hindustān (Ma'ajīr al-Unūrā, i. 129). In the reign of Akbar she was married to 'Ali Kūli Beg, a Persian who had rendered distinguished military service to the Emperor and who, because of his bravery, was known as Shīr Afgān. The assassination of her first husband will always remain a matter of controversy, some regarding it as a repetition of the story of David and Uriah, others holding the view that he had been suspected of disloyalty. It was not however until four years later, in 1611, that she became, at the age of thirty-four, the wife of Dżahān. In the eleventh year of that monarch's reign her name was changed from Nūr Maḥāl to Nūr Dżahān (Ṭā'kūr Dżahāngirī, ed. Rogers and Beveridge, i. 319).

An extraordinarily beautiful woman, well-versed in Persian literature in an age when few women were cultured, ambitious and masterful, she entirely dominated her husband, until eventually Dżahāngīr was king in name only. The chroniclers record that she sometimes sat in the jharokā, that cows were struck in her name, and that she even dared to issue farmāns (Ikbālnamā, p. 54–57). She became the leader of fashion and is said to have invented the taṭrī Dżahāngīrī, a special kind of rose-water. Her style in gowns, veils, brocade, lace, and her farāsī tandānt (carpets of sandalwood colour) were known throughout the length and breadth of Hindustān.

Aly assisted in political affairs by her father, now known as Tūmād al-Dawla, and her brother, Āsaf Ķān, she dispensed all patronage thus falling foul of the older nobility led by Māhātā Khān. The history of the last years of Dżahāngīr's reign is the history of Nūr Dżahān's efforts at paving the way for the succession of her son-in-law, Prince Shāhrīyār. But the death of her father, combined with the fact that Āsaf Ķān was supporting the claim of his own son-in-law, Prince Khurram, considerably weakened her power. On the death of Dżahāngīr, in 1627, she was completely outwitted by Āsaf Ķān, her candidate was defeated, and Prince Khurram ascended the throne as Shīh Dżahān. The last eighteen years,

GREAT RUSSELL STREET
of this remarkable woman’s life during the reign of Shah Djiian are unimportant to the historian of Moghal India.

NUR MUHAMMADI, the technical term for the pre-existence of the soul of the Prophet Muhammad; the predominating essence of the last of the prophets, to have created first of all, in the form of a dense and luminous point; all the predestined souls are said to have emanated from this.

Among the Sunnis, the idea first appears among the mystics in the third century A.D., then gradually begins to dominate popular worship (cf. Na‘til Tusuri and Haqim Tirmidhi, in our Recueil, 1429, p. 54, N° 39 and p. 39); Abu Bakr Wasi‘i, whose Ha Mim al-‘Kalam should be identified with ch. 1 of the Tawasul of Hallaj (cf. our Prose, p. 930, 930) exalts it. According to Kili‘ani, Muhammad is “the image in the pupil which is in the centre of the eye of creation” (‘insan ’ain al-wa‘fi‘y). This is what Ibn ‘Arabi calls the haqika mu‘hammadiyya the pre-eternal conception of which is celebrated by the poets ‘Arariti, Witriri and the mystical Dzirrili; hence Muhammad’s immeasurable pedigree since Adam (cf. the poems on the Mawlid). Orthodoxy has always carefully placed the doctrine of the unreality of Kur‘an above this cult. Popular legend among the ‘Ashura‘i has reduced and materialised this devotion: in showing the model of the body of the Prophet kneddled from a handful of earth from Paradise with from the spring Tasnim which makes it shine like a white pearl. But it is certain that it is a question here fundamentally of a gnostic pre-existence, an intellectual substance of the nature of the angels as is evident from the antiquity of the equation nair=al-ilm borrowed by Tirmidhi from the Tan‘na‘i (cf. ‘Akil).

Among the Shi‘is, this doctrine appears earlier and with more logical coherence; among the extremists, who explain this “prophetic light”, either as a “spirit” transmitted from age to age and from elect to elect, or as spermatic germ (Traducianism) inherited from male to male. At the beginning of the second century Mahgra and Dzair taught the primogeniture of the luminous shadow (qitl, opposed to ghaba “dark body”) of Muhammad. It is a fundamental dogma of Isma‘ili from its beginning (al-sabih nair ma‘dh al-mim); it is found again extended through solidarity to all the ‘Alids or to all the Tahiris with the gift of sinlessness among the Nasaris and even among many pious Ilma‘i writers (Kulini, K‘ufi, p. 116).

The authors of this doctrine derive it from the Kur‘an (a‘vat al-nair; xxiv, 35; the ‘bahsha; the connexion between the two terms of the shahdra) effectively interpreted by the old hadiths (Surra ba‘sha; la‘veda) as proving that Muhammad is “the first (by taklif, zor‘a, khali‘) and the last” (by ‘i‘lfi, mahsimwa, ‘le‘th). But it certainly required for its development the stimulus of Christian gnosticism and Manichaean antecedents.

The Encyclopaedia of Islam, III.
time. He rejects the expedient called 'awzāl in dealing with deceased persons' estates, as being neither in the Kurān nor the Sunna.

3. Later history of the sect. The Madjālis names two successors (khalifa) of Nūrbakhsh: Shams al-Dīn Muhammad b. Yaḥyā al-Lahijānī al-Gilānī, called Asītī, the author of a Divān of which there is a copy in the Brit. Mus.; this person built a khanqah in Shiraz; and Nūrbakhsh's son Shāh Kāsim Faidbakhsh, first heard of in Irāq, whence by permission of the AKBayn Muhammad Sulṭān Yaḥyā (588—896) he was allowed to go to Khorāsān to cure Ḥusain Mirzā, the governor, of an ailment by his barakāt. His religious opinion won him the favour of ʿIsāmīl the Safaṭī (907—936). According to Firdawsī, who cites the Šafaṭī nāme, a disciple of Shāh Kāsim, named Mir Shams al-Dīn went from Irāq to Kāshān about 902, where he was received with high honour by Fath Kān, who made over to him the confiscated lands which had formerly fallen to the crown. In a short time many of the Kashmīrs, particularly those of the tribe Čūk, became converts to the Nūrbakhshī sect (Firdawsī, transl. Briggs, Calcutta 1910). The Kashmīrs had previously been Sunnis of the Ḥanafī rite according to Mīrzā Ḥusain (author of Taʿrīkh-i ʿAkhbārī, transl. E. D. Ross, London 1895, p. 435), who when he came into possession of the country asked the opinion of the Ḥanānite of Hindūstān about al-Fīqh al-Ahwāζ; as they condemned it as heretical, he persecuted and endeavoured to extirpate the sect (about 950). His confused and fanatical account of it has misled some European writers. It survived his persecution, and according to J. Biddulph, Tribes of the Hindoo Koosh (Calcutta 1880) it numbers over 20,000 followers, most of whom are to be found in Shigar and Ḥāk of Bāltistān. A few of the sect, he adds, are now to be found in Kīshār, to which place they were deported by Golbān Singh when he conquered Bāltistān.

The work last cited contains some details about their practices; its account, however, mixed with fables, and without access to the Fīqh Āhwāζ, it is difficult to estimate the justice of the assertion that the system is "an attempt to form a via media between Shiʿī and Sunni doctrines".

Bibliography: references are given above.

D. S. Margoliouth

Nūrī, a common name in the Near East for a member of certain Gipsy tribes. A more correct vocalization would perhaps be Nawrī (so Hīva, Steingass, etc.), with plural Nawrār. Mimosky [above, iii. 38] gives Nawara. By displacement of accent we also find the plural form as Nawār (e.g. in Jassun, Coutumes des Arabes, p. 90, and British Admiralty's Handbook, Syria [1919], p. 196, Arabia [1916], p. 92, 94). In Persia the current name for Gipsy is Lūrī, Lūrī, or Lūlī [q. v.]. It is not unlikely that by a natural phonetic transformation the form nūrī derives from Lūrī, which, it has been suggested, originally denoted an inhabitant of the town of al-Rūr (or Arūr) in Sind. Quatremère advanced the theory (Hist. des Sultans Mamlouks, i. 341, note 5) that the name nūrī arose from the Arabic nūr (fire) [he gives the form mūr] because these vagrants were usually seen carrying a brazier or a lantern. Even to-day many of the Nawār earn their living as itinerant smiths. But it is more probable that the correct etymology is to be found in some Saṣākritic dialect of N.W. India, the original home of the Gipsy tribes.

In the various countries of the Orient in which Gipsy families are located, we find several designations for them used. The older name, now much restricted in use, was Zūf [see zöyr] or Jatt. The Turkish name Çingana passed into European languages under such forms as Ċinka, Cingana, Zingaro, Zigeuner, Zigeuner, etc. Dozy (Supplément aux Dictionnaires Arabes, i. 658), quoting Caussin de Perceval, records the occasional use of the name Zanzibya, but this is inexact [cf. art. ZAND].

The commonest names, apart from those already mentioned, seem to be Nawar or Kurkat or Gharbat (particularly in Egypt, Syria and Persia), Chegagan and Ḥalabī (especially in Egypt and Northern Africa) and Diman (in Mesopotamia). For other sub-divisions reference may be made to the bibliography, and particularly to E. Littmann's Zigeuner-Arabisch, which is an excellent summary of the whole subject, particularly on the linguistic side.

The collecting of data regarding the Gipsy tribes of the Orient is by no means easy. Even experienced orientalists and travellers have reached different conclusions regarding them. For example Lane (in his Modern Egyptians, London 1836, ii. 105) in spite of his profound knowledge of Egypt, asserted that there were few Gipsies in the land, while numbers of well-educated natives to-day, are still unaware of the presence of these tribes in their midst. The statistics of Massignon's Annales musulman (Paris 1925, p. 115) however, gives the number of Gipsies in Egypt as two per cent of the population, consisting, namely, of two tribes of Gharbat and Nawar respectively, and four tribes of Ḥalab.

The Gipsies as a rule seem, chameleon-like, to take their creed, such as it is, from their surroundings. In Muslim countries these tribes usually profess Islam, in so far as they may be said to profess any religious views, many of them, indeed, being very superstitious and reported to be scoundrels and vagabonds. The same applies to the Muslim Gipsies of what was formerly European Turkey (Admiralty's Handbook of Turkey in Europe [1917], p. 62). In the Balkans many of them are Greek-Orthodox.

Persian and Arabic writers preserve for us the tradition that the tribes of Jats (or Zuff) from the Pundjāb were conveyed westwards by command of the Sāfāvīan monarch Bahārān Gūr (420—438 A.D.) and their descendants proved a troublesome problem some centuries later for the Caliph of Baghdād. Once more numbers of them were dispersed to the borders of Syria, where many of them were captured by the Byzantines, and thus found their way into the Eastern Roman Empire, thence to continue their migrations to other ends of the East and West. Many of them are even said to have risen to high rank, e.g. al-Sarī b. al-Ḥakam b. Yūsuf al-Zirī, governor of Egypt (200—205 A.H.), while it has been supposed that the famous Barmaicce family at the court of Harān al-Kashīd were of similar Gipsy origin. The name Barmaicce is actually the designation in Egypt of a class of public dancers (Ghawāza) of low moral character and conduct who have been regarded as of Gipsy blood. The question, however, is doubtful (see L. Bouvat, Les Barmaicces d'après les historiens arabes et persans, Paris 1912, p. 110, 125).

The German traveller Seetzen and the American
missionary Eli Smith gathered valuable material in the Near East regarding those nomadic peoples which proved useful to later scholars. They were followed by Capt. Newbold (1856) on the Gypsies of Egypt, Syria and Persia; von Kremer, Austrian Consul at Cairo, on the Egyptian Gypsies (1863); Sykes (1902) dealt with the Persian Gypsies, while an excellent treatise appeared in 1914 from the pen of R. A. S. Macalister on the Language of the Nawar or Zutt, the Nomad Smiths of Palestine. Macalister in this work had the rather difficult task of reducing to writing a language almost completely unknown, and interpreting and analysing the Nûri stories Gipsies had related to him. In melo-dramas of the Nûri settlement north of the Damascas Gate in Jerusalem. He employed several of these Nawar in the course of his excavations there. A small Syrian Gypsy vocabulary received by Miss G. G. Everest of Bairrût from a friend at Damascus was also published in the *Journal of the Gipsy Lore Soc.*, Jan. 1890, in an article by F. H. Groome. The philological aspect of the question has received, in recent years, the attention of scholars such as E. Galtier and E. Littmann (see Bibliography).

In Egypt the Halâb (sing. ḫālab) are to be found mostly in Lower Egypt carrying on their special occupations at the various markets and *mansâlîd*, as traders in camels, horses and cattle. Their womenfolk are noted seersesses and medicine-women, practicing all the arts of sorcery (*ādâ*): sand-divination (*dâr-i-ramî*), shell-divination (*dâr-i-arâdâ*), bibliomancy (*fâth-i-lâtâb*) etc. Their tribal subdivisions are variously given by Galtier (p. 7) and Newbold (p. 291). Their name suggests some connection with Aleppo (Halâb), but they themselves proudly claim a South Arabian ancestry their tribal chronicle being the popular broad-sheet production, *Târîkh Zir Sâlim*.

The Ghâgar Gipsy tribe, however, have a rather unsavoury reputation, a fact that is reflected in the modern Egyptian Arabic verb *gâjâs* "to be abusive". Their speech has fewer foreign ingredients and Galtier is of the opinion that they are more recent arrivals in the Nile Valley, probably wanderers from Constantinople. The argot of the Egyptian Gipsy has been called *AtlSim*, and in modern colloquial Arabic in Egypt "to speak in enigmas" is *yâtalælim bi 'l-Sim*.

The word Nûri in Egypt is almost synonymous with thief, and their thieving propensities are liberally associated in a popular proverb with the inhabitants of Damanhûr [q. v.] (alif Nûri wa-lá Damânhûr). According to the age-old policy of setting a thief to catch a thief, the Nawar are often recruited as estate watchmen (*gâlûf*).

Their pursuits and proclivities are varied in the extreme. Besides the myriad occupations of enchanter, amulet-sellers, quack-doctors, snake-eaters and astrologers many of them travel about as hawkers, metal-workers, animal-trainers, professional tumblers, rope-dancers, acrobats, monkey-leaders, musicians and ballad-singers, while some are employed to circumference Muslim girls, to tattoo lips and chins, and to bore ears and nostrils.

**NUŠAIRI, the name of an extreme Shi'a sect in Syria.**

I. The etymology of the name is disputed:

a. contemptuous diminutive from *nawrûzi* "Christian", in allusion to certain ritual similarities (Renan);

b. corruption of *nawrûzi*, Latin name in Fliny for a Syrian tetrarchy of the first century B.C. (but the name is still found uncorrupted in *štût*; it is the *Djarat al-Nawrûz*, which is crossed in going from Tell Kallâkh to Homs, between the bridge called "Achan Kepru" and the lake of Homs; cf. British G. S. map of 1/50,000, *Homs-Beirut sheet*, 1918); c. *nîšâb* from a village near Kûfa, Nâsûrîyâ (Barhebraeus; cf. de Sacy, *Drooses*, i., p. clxxxvii. and Tabârî, iii. 2128); *nîšâb* from an eponym: a fictitious *Shî* martyr, son of *Ali* (according to the *Allâh-llâhî*), or a freedman of *Allî's* or vizier of Mu'allîya (Dussaud, p. 10); or rather Ibn Nuṣair, i.e. Muḥâammad b. Nuṣair Namî (*Abûl* (= of the *Abûl al-Kais*, a Bakr clan), whom we shall find below as the first theologian of the sect.

As a matter of fact this name adopted from the time of Kâshûlí (d. 346 A.H.) by these sectarian, previously called *Namîrâh* (Nawbakhtî, *Firâq*, p. 78; *Asbâr*, Mak., i. 15) and who called themselves *muḥâmâni*; has been applied since *Samâni* (s.v.) and *Umâra* (ed. Denebâl), p. 155, 286 not to a district only partly converted in the north of Syria, but to an extreme Shîa sect also found in Egypt and along the Euphrates. This etymology, that of all the Muslim heresiographers, from the
Shi' i Ibn al-Ghaḍā'irī (d. 411 A.H.) and the Sunni Ibn Ḥaḍār, has been and is most probably.

II. The term has three acceptations: administrative, social and religious.

a. Administration: it is the “mountain of the Ansariyya” of Syria (formerly Djabal Lūkkānā), the former Ḥuṣn of Latakia to the east of the Orontes which has been extended to the south and since 1920 has become the state of the Alawis (6,500 sq. km.: 334,173 inhabitants end of 1933 of whom 213,066 are Nu'airis, 61,877 Sunniis in the north of Sahyūn and at Baniya, 5,669 Ismā'īlīs at Kadmūs and Mayṣāf, 53,604 Christians, mainly Orthodox at Tell-Ḥīṣa (22,000) and in the north of Ṣīrītis, capital Latakia (22,000) divided into two sanjaks and 8 kazas: Latakia, Sahyūn (Hafṣa), Djabal, Ṣartūn, Markab (Bandas), ʿImrāniyya (Tell Kallakh), ʿSūfīt, al-Ḥiṣn (Maṣṣaf); a country of patient and industrious agriculturalists (tobacco, silkworms). Its place-names studied by M. Hartmann (Z.D.P.V., xiv. [1851], 151-255) for the north (villages, not counties of which there is a list in [Delattre] Répertoire des alphabètes. Latakia [Raghaṭāb press], Dec. 1933), show an old stratum of names in part Aramaic and later Arabic occupation without any definite local religious traits except for modern Shi'a influences, beneath which one can hardly see the pagan or Christian culture of the substratum (cf. on the contrary, Lebanon). The study of the district from the point of view of ethnology and folklore has hardly begun; certain prohibitions regarding food have been noted (Niehuhn, loc. cit.; DuPont, in T. L. V. 1884, p. 134), Bakūra, p. 57), some general (camels, hares, eels and catsfish) and others special to the Ṣūjanīyya (female or maimed animals, gazelles, pig, crab, shellfish, pumpkins, ʿaṣūma, tomatoes). The only domestic art is bar-keft-making.

b. Socially, the name covers tribes of different origins, almost all speaking Arabic, who have adopted the Nu'airi teaching:

1. in the state of the Alawis (213,000): the nucleus seems to be descended from Yemeni clans of Hamdān and Kinda (Ya'qūbīn, in B. G. A., vol. 324), ʿGhassān, Bahrā and ʿAnṣārī (Hamdānī, Ṣīfa, p. 132) early converted to the Shi'a, from the Tiberiad and the Djabal ʿAmil (where there are still Metwells) to Aleppo, increased by immigrants from Šāfi (end of the 14th century) and from ʿGhassān who at the time the Crusaders were being driven back came with their emir ʿAbd al-Hannā Makzūlī (d. 638 H. = 1240, ancestor of the ʿHadadānīn), from Mount Sindjār, and imposed on the district their ruling families, their clans and ethnic structure (M. E. Ghālib, Tāvīl, p. 356).

2. the present day list of the principal clans (wajūda) (map in K. M. M., xlv. 6: cf. ibid., xxxvi. 278; and Tāvīl, p. 349-52) grouped in 4 confederations: Kālbiyya (at Kārāh; with Nawāṣa, Karāhīla, ʿUjulāsiyya, Rashāwīna, Shāhlīna, Rasālīna, DJurdiyya, Bait al-Ḥiṣf, Bait Muḥammad and Darawīs); Khāliyātīn (at Markab: with Šarāmita, Makbalīha, Fakāwīyā, ʿAmāmīra [mixed with ʿAbd al-Kays]; Ḥadādānīn (clan of the emir ʿAbd al-Hannā Makzūlī with Mahālīha, ʿBārī ʿAmāmīra, ʿAṭāliyya, ʿAṭāliyya, Miṣināliyya, Sawāriq of Aleppo, Sawāriq, Mahārīna, which claims to the ʿAṣūma, and Bāṣā- riyya). From the 14th century their political history has been a series of persecutions by invaders (the Crusades; Baḥair who covered the country with mosques; legend of Durrāt al-Ṣadā, daughter of Saʿīd al-Ansārī [tomb at Aleppo] who instigated Timūr to sack Damascus; massacres under Selim I) and civil wars, both among the clans themselves and against the Ismāʿīlīs of Kadmus (lost, and retaken for a brief period in 1508 by the Mahārīna) and of Mayṣāf, allied with the Turks;

3. in the sanjaks of Alexandria (38,000: at Antioch 1/3), ʿUjulāsiyya, ʿAṭāliyya, Dijlīyya; with two deputies in Parliament;

4. in Palestine (3,000): to the north of Nablus;

5. in Cilicia from the 14th century (at Tarsus and Adana: 80,000 in 1921 now turkified);

6. along the Euphrates. In Kurdistān and in Persia, there are ultra-Shi'a elements who have similar views and are called Nu'airis (among the 'Al-Ihāli or Ahl-i Ḥakk; q.v.);

7. in Lebanon, there were some down to the 16th century (in Khawānīn).

III. Religion: it is the religious teaching of the Nu'airī sect that we have to study more particularly here.

Cosmogony and eschatology. According to the Nu'airīs there is immediately below the ineffable divinity a spiritual world of heavenly beings (or stars), which emanates from him in the following hierarchy: Ibm, Bāb and other Aḥk al-Marāṭib (of the first seven classes); it is the “great luminous world” (al-ʿālām kalâr nafrūnt); when they appear here below it is to lead back gradually to heaven the “little luminous world”, fallen beings, half materialized, imprisoned in the bodies which are their tombs; this operation revives them and brings them back to heaven to form the seven last classes of the Aḥk al-Marāṭib (119,000 out of a total of 124,000 = the traditional number of the prophets); next comes the “little world of darkness” (zāmbānt), extinguished lights, souls that damnation materializes (khuṣūn al-masālikhiyya) in the bodies of women and animals; and lastly the “great world of darkness” composed of all the “adversaries” (al-ṣābīlāt) of the great luminous world; demons, who after innumerable metamorphoses in corpses of murdered men or slaughtered animals still quivering after death, are reduced to inert or passive matter (forged metals etc.). Just as the fall takes place through seven stages (doubts about divine appearances), so does the return to the heaven of the elect to go through seven cycles or ʿadār of divine emanations.

Theory of revelation. The pure divinity (ʿabīt), the object of adoration, being ineffable his first emanation is the Name (Ibm), the articulating prophetic voice (Nūṭīh), the signification (Maḥānī) of divine authority; such was the primitive teaching, that of Abu ʿI-Khaṭṭāb, the common teacher of the Ismāʿīlīs and the Nu'airīs. But his disciple Maimūn Kadam, thinking that the enunciation by the divinity of an object which manifests him, is of greater importance than its signification which is a mute idea, detached the Maḥānī from pure divinity, identified it with the Šāmit (the "silent" Name; opposed to Nūṭīh) and placed it as a more recent, below the substance, the Ibm. Then, by reaction, other Khawānīn like Bābār, ʿAbbārī, retaining the equation Maḥānī = Šāmit, re-established the Maḥānī before the Ibm. And, as Abu ʿI-Khaṭṭāb had taught that in the Muḥammadīyya cycle, the
signification (muwarziiya) of the ineffable divinity was expressed through five privileged Asma' (Muhammad, 'Ali, Fāṭimah [the masculine form of Fāṭima, as we have seen women have no souls; this explains why they may form part of the offering of hospitality among initiates]. Ḥasan and Ḥusain, announcing equivalently its mysterious Unity), this group of Five equals, in which we recognise the Five of the nubātahu (q.v.; cf. our, Salmān Fāk, No. 7 of the Soc. des Études Iranisten, 1933, p. 40—42) became in the hands of his pupil Maimān a descending series of five terrestrial (symmetrical) with the five spiritual terms, and inferior to them, the Druzes say): Nāfi' (Mim), Asāf (Shaykh, Ma'āqib; whence the Mas'ūd, the Khaḍrābi Wadjāfān remarks, has the priority [cf. Nūr Muhammad]. While according to Bashshār, the five were equal and became Muhammad, Fātimah, Ḥasan, Ḥusain, Muḥaṣṣān; 'Alī being thought to surpass them was identified by hereditalia and against all logic with the Mā'ānī. It is this last list that the Nusairis have adopted. And this is the realised ambition of their 'god' (Allāh) whom there is no need to seek antecedents in the Syrian pagan pantheon or in a Druze empanation. Bashshār and the 'Utayyā (or 'Aintyā) copied by the Nusairis have simply copied the Karāfīan list of Maimān, by inverting the order of priority between Mīm and 'Ain, and making the Mas'ūd (Mā'ānī) the superiors of the Nāfi' (Mim). The following is the double list (Mīm in italics): a. in the seven cycles (tawādin, khitāb personified by women among the poets) of the iṣbābāt iṣābāt: 1. Ḥabīl, Abū; 2. Ḥabīl, Nūr; 3. Ḥabīl, Ṣāliḥ b. Fakhr; 4. Ṣāliḥ b. Fakhr; 5. Ṣāliḥ b. Fakhr; 6. Ṣāliḥ b. Fakhr; 7. 'All (Abū Turāb, Abūnāl-Nāfi') Muhammad. Khaḍrābi allows that there were 44 (63—19) other iṣbābāt (iṭīlāyā) during these seven cycles; b. in the sa'īr al-dawma' (the twelve classical imāms substituted for the early list of Ibn Nusair [which we shall see later] by Khāṣibī) each imām is promoted mas'ūd after having been the iṣām of his predecessor. The mode of appearance of the two divine emanations localised behind the screen (ta'ābūr, iṣbābāt) of a phantomike body (ṣamāt al-zarā'ir, mas'ūd al-ab'iḥāroid, is a reality for the faith of the Nusairīs; this body is the support of a momentary illumination for the believer; while for the Druze nominalism it is only a mirage (ta'rēf and for the Ḥaḍāthīya, a real body, transfigured by a gradual sanctification. Theor-y of catechesis. Abu l-Khaṭṭāb had found that the Five persons of the iṣām were pointed out to the believers by one or more inspired angelic intermediaries (al-fā'il, ruḥanīyin; of whom the first was Saulīb or al-Sulṭān = Salmān in the Ma'ānīs. (See our story, p. 16). These initiators, became with his disciple Maimān, the five spatially symmetrical of the Asma' (Ṣamīr = Salmān; masīr = Miṣḥād; ḥaṣīl = Abū Ḥanīf; asfāl = [Uthmān b. Ma'āqib, Ḥayāl = [Abū Ma'āqib] b. Yāsir: corr. thus No. 60 of the Druze catechism). While among the Nusairīs, these five initiators remained equal and far below the iṣām, became the five Allāms (Miṣḥād, Abū Ḥanīf, Abū 'Ali b. Nāṣir, Uthmān b. Ma'āqib and Ḥanīf), Salmān being thought to be above them placed third as Biṭṭ after the Miṣḥād and the Iṣām. Such was the origin of the Nusairī triad, Abūl-Mu'min Sāliḥ (= Mu'āqib-Ism-Bālā) in which there is no need to see an original pagan Syrian triad of Sun, Moon and Sky: this astrological correspondence, a favourite subject with Nusairi poets, found its way into the Shi'a catechism of Kūfa under the influence of the Sabean of Harrān; the assimilation, in the spiritual, of the sun to Muhammad and of the moon to 'Alī (the moon, like the imām, is the regulator of canonical acts; cf. our, Salmān, p. 36, No. 9) appears at Kūfa with Mujāhid (d. 119 A.H.) In any case if pegan survivals are at the basis of astral gnosticism, as Dussaud suggests, is not among the uneducated peasants (Djībal Lükākām) but among the town-dwellers in Harrān that they have been able to survive. The following is a list of the personifications of the Bāb: a. in the seven cycles (they are really only six, Salmān, the long-lived = Rūzbih); the masā'ūdāt: 1. Dībrāylī; 2. Yāsīl; 3. Ḥām b. Kāsh; 4. Dān b. Asbih; 5. 'Abd Allah b. Sim'ān; 6. Rūzbih. b. In the sa'īr al-dawma' (here are only eleven): the masā'ūd: 1. Salmān; 2. Kās b. Waraka Rāfī (Samīr); 3. Ḥusayn Ḥadjārī (d. ca. 58 A.H.); 4. Kānak b. Abī Khaḍlī Kātī; 5. Yāḥyā b. Muḥammad b. Umm al-Fawāl (d. ca. 85 A.H.); 6. Dābīr b. Umm al-Fawāl (d. 128); 7. Abū l-Mu'min' Muḥammad ab. Abī Zalān Miṣḥād Abī Khaḍlī (d. 138: cf. Kāsjī, p. 191); 8. Muṣafādāl b. 'Umar Dju'dī (d. ca. 170); 9. Muḥammad b. Muṣafādāl Dju'dī; 10. 'Umar b. al-Farāt (Dju'dī; killed in 203 A.D. by Ibrahim b. al-Mahdi). 11. Muḥammad b. Nusair 'Abdī (Bāb ca. 245, d. 270). Beginning with No. 7, these individuals have actually played the part of party leaders (Nes. 9—10 had as rival Muḥammad b. Sinān). A nephew of No. 10, grandfather of the father of Ibn al-Farāt, was the principal supporter of Ibn Nusair. Below the Bāb are the Five Allāms, whom he associates as lords of the elements (muwaqākāt bi-nuqdat al-aqām) with his role of Demiurge engendering souls by initiation. The list of Nusairī aśīm given above should be compared (as well as that of the Druze ḥadhād "wise virgins" of Salmān; like the Nusairī aśīm are the daqīqāt of the Bāb (Arabic = Salmān) with the lists of Garmy (Aṣṭāḥābād, Mubnayh, p. 225) and of the Khaḍrāfīya of the Palmyra (R. E. I., 1932, p. 442, trans. Ivanov). IV. Initiation. This has three degrees (mujāh, mabāth, imām): the first consists of a solemn pledge (I'ādāt, Ḥṣīfūf with wālī muwarzii; cf. SURAJIVYA) to reveal nothing of this spiritual marriage (mujāh al-tabātā) in which the word of the initiator fertilizes the soul of the initiate in three scenes, the ritual of which is related to that of the other extreme Sha'ī sects (and of the faizāxvī-tānā) and through them and the Sabean of Harrān to the old mysteries of Central Asia (cf. SHABBAD, Dussaud, p. 166—169, 193, p. 2—7, 18). The cup of wine (called ṣāda al-nūr, Cat. No. 91), the anticipation of Paradise, is partaken of at it. The initiatory teaching is essentially an ultra-Shia symbolism (ta'ābil) of the seven canonical rites (da'ām) of Islam which are personified: 1. wālī; the five awlād by Muḥammad (Kalīr; same among the Ḥiṣāiyā). Fātimah, Ḥasan, Ḥusain and Muṣafā (fohry; among the Druzes as among the Khaḍrāfīya of the Palmyra by the mujābīh, the mujāhādīh, Abū Ḥanīf, Miṣḥād, Salmān). Similarly the 17 (then 51) rā'īn: 2. yawan: the secret guarded regarding 30 names of men (days) and thirty of women (nights of Ramadan); 3. zā'ar: by Salmān; 4. Ḥṣīfūf: the "sacred land 12 miles around", this is the sect; Bālī = the ism; the Black
Stone = Mīḥfūd; the 7. ʿadwāʾ = the 7 cycles;
5. ʿāthār = the maladies upon the ʿadād (Bāk., p. 44) and the discipline of the mystery;
6. ʿawāya = devotion to the ʿAlīus and hatred of their adversaries; 7. the ʿaḥāda refers to the former Sannū. The Kurān is an initiation to devotion to ʿAlī; it was Salūm (under the name of ʿAbbāsī) who taught it to Muḥammad.

The annual festivals include the Shiʿa lunar festivals: Fīr, ʿAḥd, Ghadīr, Mubāhala, Fīrāsh, ʿAshūrā, 9th Rabiʿ I (martyrdom of ʿOmar) and 15th Shābān (death of Salūm); then certain solar festivals: Nawrūz and Mīhhrān, Christmas and Epiphany, 17th ʿAdhār, St. Barbara. Certain liturgies (kusūd) pertain to these festivals and are wrongly called "masses" (kusūd al-Ṭīb, al-Bakkīr, al-ʿIshār).

V. History of the Sect. All the initiatory, isnād of the sect go back from Khāṣibī to Ibn Nuṣairī through two intermediaries, Muḥammad b. Dūndab and Muḥammad al-Djanān al-Dujunbuli. Of Ibn Nuṣairī, a notable of Bāṣrā, teacher of ʿAṣīṣī, we know that in 245 ʿA. ʿU., he proclaimed himself Kāmil (c. 1100) and of his eldest son Muḥammad who died before him in 249, the year of the ghâthā of the Mahdī, according to Ibn Nuṣairī (Ibn Bāwaʿī, Ghaibī, p. 62, l. 12, taken from Nawbakhkt, Fīrāsh, p. 77, 83; such was still the belief of the Hamdānī emir ʿAbbāsī, Dīwān, 1837, p. 39). It is only Khāṣibī who says that Ibn Nuṣairī joining the eleventh isnād (Nīrī, Nuṣairī, p. 144) had taken for mahdūt his son Muḥammad b. Ḥasan.

Of the two successors of Ibn Nuṣairī we only know that the second, like Khāṣibī, belonged to Dujunbul between Kufa and Wāṣit, the centre of the Ẓaydī and Karmāṭīn rebels (Ṭabarānī, iii. 1517, 1925, 2198; Maṣūdī, Tanbīk, p. 391), native place of Ibn Wadūḥa, Ḥusayn b. Ḥamād b. Ḥusayn b. Ḥabīb (vocalisation attempted by Dūbābī, Mūṣṭafā; in Persia and the Irāk wronglly now pointed Ḥaḍīnī) died in 346 (957) or 358 (968) at Aleppo (tomb to the north called Shāliqīn Bārīqī); he was the real founder of the Nuṣairīs; he lived, like his patrons the Hamdānīs, between Kufa (in 344 according to Ṭustāḥ, loc. cit., p. 112) and Aleppo; he dedicated to them his Ḥiṭyā (cf. his Ṭīkāna Rākṣābīgī (Ṭawīl, p. 196 q. 240, 257). Among his 51 disciples the best known is Muḥammad b. ʿAlī Dījīlī of Dījīlī near Antioch where the chief of the Ḥaḍīdīs still lives. His direct disciple was Saʿd Maimūn Ṭabarānī (d. 427 = 1035), a prolific polemist against the chief of the Shīkhiyya of Latakia, Abū Dāhiba Ismāʿīl b. ʿAlī Kullād. After him mention is made of ʿIsām al-Dawālī, Ḥātim Ṭawbānī (c. 700 = 1300; Paris, Méj, 1450, fol. 1122; Fīrāsh, p. 315), author of the al-Din al-Kabīr, Ḥasan Adīdū of ʿAran, died at Latakia in 836 (1432) (Ṭawīl, p. 317): lastly several heads of parties, Hamdānīs, Muḥammadīs of Ḥusayn b. ʿAbd al-Ḥusayn b. Yūsūf Kullātī (1011 = 1602), who lived near Antioch, ʿAbd al-Māhkī, Ṣājīr Nāṣīrī, Yūfūn Ṣuḥaylī. In this connection we may note that the four alleged Nuṣairī sects reduce themselves to two; that of the north (Shamīiya because it is Miṣḥīya, Shamīlya = Ḥaḍīrīs, from its head in the 10th [xvth] century = Ghaibīya) and that of the south (Kīṭlīya, for it is dominant there), which is Miṣḥīya, then Kamariyya.

The spiritual organisation is quite distinct from the political among the Nuṣairīs. The four mukālām (mentioned by Niebuhr in 1780 (at Balhīliyye near Latakia, Simerian-Khāṣībī, ʿAṣīṣī and Djiyal Kablye) were temporal rulers. In 1914, there were two spiritual leaders, the ʿAbd al-Majīdi (ʿAṣīṣī) in Cileika and the Kāmil al-baṣīr (Homari) at Karđāh (in 1933; Sliman al-Ahmād of the Numašīya).

From 1920 the Dījīlī Shīʿī ṭalāqī of the south have found their way among the Nuṣairīs. In the last ten years a shepherd of the ʿAmmārīs, Sliman Murṣūdī, has been trying to found a new sect to the north of Masāf.

VI. Bibliography: 1. Nuṣairī and Muḥammad an sources: There is no canon of the Nuṣairī initiatory writings, as for the Druze (cf. de Sacy and Seybodl); but Catafago has given a list (J.A.P., 1876) of 40 esoteric works, of which 29 are theological and 11 poetical (specimens translated by Huard, in J.A.P., 1879); we may mention N. 20, Kitāb al-Majdīnya (= 16 liturgical sūras; text in Bāk., p. 7—34 and Dussaud, p. 181—189 with transl.) and N. 19, Kitāb Majdīnya al-Tāfīd of A. S. M. Šaṭbarān: anal. in J.A.P., 1848. This list might be supplemented (see the appendix of the M., 1440—1450 etc.) for there is a bio-bibliographical collection of the writers of the sect, similar to that of the Ismāʿīlī writers published by Ivanov. Nuṣairī writers make free use of moderate Shiʿa works (Mufīḍ is quoted by Šaṭbarān and have even written some; e.g. the Ḥiṭyā of Khāṣibī which is still read in Persia. Two Nuṣairī catechisms have been studied: Tālim Diwān at-Nuṣairiya, in 101 questions (Paris MS. 6182; anal. by Wolf, Z.D.M.G., iii. 302—309 where No. 88 is lacking), modern, directed against the Christians; and the old formulary by A. Baitār (anal. by Niebuhr, Šaṣīn, ii. 440—444). An unimportant disclosure that (but without more or less biased errors) of the Nuṣairī rites was published in 1893 at Bāṭīrī by a convert to Christianity, Sulaimān al-Ādān (he was assassinated): the Bāṭīrī Sulaimānīya (119 pp.; part transl. Salisbury, in J.A.O.S., 1868, p. 227—308; cf. Šaṭīlī, p. 386; the first part is taken from an authentic manual used where there is not a lodge of initiation; cf. MS. Taimūn, ʿArb., N. 564). A popular history, in places containing a good deal of romance but documented (without exact references), was published by Muḥammad Emin Qālibī (d. 1932), of the Al-Ṭawīl of Adana: Taʾrīkh al-ʿAmīra, pr. Taqāṣkī. Latakia 1343 (1924), 478 pp. Two refutations are well known; a Druze one by Ḥamīza (Rākṣā, N. xvi. of the canon; perhaps refuting No. 9 of Catafago's list), and a Sunni by Ibn Ṭaimūrīyya (Jawārī, p. 94—102 of the Majmūʿ, Cairo 1232; transl. Guyard, in J.A.P., ser. 6, vol. xviii, 1871, p. 158).

NUŠAŘI — AL-NUSHADIR

3. In Arabic the only recent studies are: Kurdali, Khi&t al-Sāmān, vol. vi. (1928), p. 258—268; and Kāmil Ghazzi, Naḥr al-Dhahab (Aleppo 1342 A.D., vol. i., p. 204—205); cf. also the Bairūṭ press (Aḥrār, Sept. 19, 1930) and that of Damascus (Ayyūn, March 29, 1933). (Louis Massogno)

NUṣB, standing stone, especially one which is held sacred. The root is the same as in the Hebrew māṣqēb, Phoenician ḥēb and nēḥēb and South Arabian ḥēb, nēḥēb. On the explanation of the Arabic forms the philologists are not agreed. They have usually read māṣqēb as a singular with the plural māṣqēb, and others pronounced it māṣāb and consider it the plural of nēḥēb or nēḥb. In addition to these forms Arabic has also from the same root the substantives mansāb and nāṣbīn.

In answer to the much-discussed question of the ideas associated with standing stones, Arabic only makes one contribution, in as much as it is evident that the fundamental conception was that of a dwelling place of the deity (bêt-ti). Of several of the old Arab deities we are told that they were rocks or blocks of stone, i.e. that they were incarnate or present in them. Whether this was always so or whether this form of worship developed out of stones placed upon graves (e.g. Hāmidā, p. 562), 1. 8 and the use of nāṣbīn in the sense of tombstones) where the stones were originally memorials, is a question which cannot be dealt with here. We need only mention that the theory of worship of the dead breaks down if the deity has its abode in a tree, like al-Uzzā of Nakhlā in a samara tree (umbrella acacia). Examples of the presence of a deity in a stone are given in the articles DUH L-SHAKT, AL-LĀT and MANĀT. Other examples are Dhu l-Khalasa, al-Fals, al-Djalsad, Sa’d. The worship associated with such stones usually consisted in sprinkling them with the blood of sacrifices. Thus Zuhair, 10, 24 speaks of a sacrificial stone, mansāb al-lātir, the top of which was red with blood; a wounded and bleeding man is compared to a red nāṣb ( Ibn Sa’d, iv, 162, 4); among forbidden foods, Sūra v. 4 includes what is slaughtered sūla mansūb; al-Nāṣb (Morgenländische Forschungen, p. 258) warns against worshipping a dhā l-mnāṣb l-mansūb (i.e. read māṣāb) with sacrifices; cf. also Mutafammis, ed. Volland, 2, 1. The words of Sūra lxx. 43, which say that the resurrected stream out of their graves as—if they were running (ynūthāna) to a nēḥ (other readings nēḥb or nēḥūb) refer to a characteristic feature of the worship. In view of the prominent part played by stones in the worship of the early Arabs, it is natural that Muhammad should have included anjūb among things prohibited to the believers like wine, māṣir etc. (Sūra, v. 92) for the worship associated with them was one of the principal forms of idolatry. The smearing of the anjūb with blood recalls the well known statement in Herodotos iii. 8 regarding the ancient Arabian ceremony of concluding alliances. There is however an essential difference. In the first place there is no question of any act of worship and further we are told that the participants put their blood on seven stones lying between them, and called upon the gods to swear in the sacredness of these stones but not here conceivably to be habitations of the gods but owed their merit to the number seven which was the important thing on taking oaths.

Bibliography: Ibn Hīṣām, p. 51; Wellhausen, Reste arabischen Heidentums, p. 101, 141; Baudissin, in Z.D.A.G., lvi. 830; Goldziher, Muhamedanische Studien, i. 230 sqq. (FR. Buhl)

AL-NUSHADIR, also nūṣādīr, nāṣūdādīs, Sanskrit nāśavādāra, Chin. nā-sū-hā, sal-ammoniac. The etymology of the word is uncertain; perhaps it comes from the Pahlavi anūsādār "immortal fire" as we find the form anūṣādār in Syriac.

The oldest references to the occurrence of sal-ammoniac in a natural state are in the reports of Chinese embassies to the Chinese courts in the Middle Ages, which were the subject of very full investigation in connection with a geological problem, the question of volcanoes in Central Asia by H. J. von Klapproth, A. von Humboldt and C. Ritter, in the first third of the sixteenth century. The reference was to mountains of fire, Pe-Shan on the northern slopes of the Tien-Shan south of Kuldja, Ho-Chou on the south side of the Tien-Shan near Turfan and the sulphur pits of Urumtsi. The mountain Pe-Shan was said to pour forth fire and smoke continually; on one side of it all the stones burn, and are melted and then after flowing some miles solidify again. Nāsūḍ and sulphur were obtained there for medicinal purposes but the stones could only be collected in winter when the cold had cooled the ground. A. von Humboldt and C. Ritter do not accept a reference to the burning of coal by which sal-ammoniac and sulphur are obtained. The statement that the volcanoes of Central Asia produce sal-ammoniac in immense quantities is found in G. Bischof and even G. von Richthofen still held the volcano theory. The botanist and geographer Regel who travelled in these regions about 1879 was the first to dispute the existence of volcanoes. After Nansen, Le Coq and others had been unable to confirm the existence of volcanoes but established the fact that there were large deposits of coal on the surface, the old sources in Central Asia are now generally attributed to the burning of coal.

Almost all the Arab geographers who refer to Central Asia, from al-Maṣʿūdi, al-Iṣḥāqī, Ibn Hawkal, to Yāḵut and al-Kazwīnī, give fantastic stories about the method by which sal-ammoniac is procured in the Butam hills east of Samarqand. Here again the details suggest the burning of the earth rather than volcanic exhalations. The Persian traveller Nāṣīr-i Khusraw however mentions deposits of sal-ammoniac and sulphur at Damāwend and Ibn Hawkal is acquainted with the volcanic sal-ammoniac of Etna; the latter was still exported to Spain in the xiith century. At an earlier date they had begun to procure sal-ammoniac from the spot of camel dung. This product remained into modern times an important import by the Venetian traders and was only driven from the market by the modern cheap methods of production from gas liquor etc.

The use of sal-ammoniac as a remedy in cases of...
inflammation of the throat etc. is already mentioned by Sahib, Rabban, al-Tabari. Ibn al-Batār also quotes from other authors all kinds of remarkable uses of it, on which no stress need be laid. Lījābīr b. Ḥaṣyān reckons sal-ammoniac among the poisons, which is true of large doses.

The part played by sal-ammoniac in alchemy is much more important. Lījābīr b. Ḥaṣyān adds it as a fourth to the three ṭumāNTSTATUS of the Greeks, quicksilver, sulphur and sulphide of arsenic (As₂S₃), and it is used by all Persian-Arab alchemists in countless recipes. The preparation of carbonate of ammonia through distillation of hair, blood and other materials is already fully described in the “Seventy Books” and other works of Lījābīr. These methods seem to have given the stimulus to the discovery of the Egyptian method of obtaining sal-ammoniac. All these things came with alchemy to Spain and thence into western alchemy.

In the earliest Latin translations sal-ammoniac is still called nesiaed, nitazharg etc., i.e. transliterations of the Arabic name. The general term al-Yūbah is also found in the forms al-sabac, al-soath or translated by aquila. The identification of this salt with the salt of the oasis of Ammon already mentioned by Herodotos is first found in Syriac authors and lexicographers.

**NūSHIRWĀN.** [See Anšašhawān.]

**NUŠRĀTĀB.** [See Sīstān.]

**AL-NUWAIRI.** Shihāb al-Dīn Ahmad b. Abd al-Wahhāb al-Bakri al-Kindī al-Shāfi’ī, a rabbi historian, born on the 21st Dhu’l-‘Ka‘da 677 (April 5, 1279) in Upper Egypt (probably in al-Kūs), died on the 21st Rāmādān 732 (June 17, 1332) in Cairo, one of the three best known encyclopedias of the Mamluk period (the others are by al-‘Umari and al-Kalqashandi). His father before him had been an official (al-Kūfī) of note (628—699=1231—1300); the son filled several offices at the court of Sulṭān al-Malik al-‘Nāṣir (Muḥammad b. Khalīf), whose favourite he was. He was for a time Nāṣir al-Ju’aṣib in Tripolis (Syria) and later Nāṣir al-Dinwān in the Egyptian provinces of al-Jāhāliya and al-Murtuḥiya. His monumental work al-Nāṣir al-‘Arab fi Funtan al-Adāb which was dedicated to al-Malik al-Nāṣir was his result of a administrative activities. As he says in the preface, at the beginning of his literary career he was almost exclusively concerned with kitābāt (i. 2) and only later took up adab (i. 3); he wished to sum up in his encyclopedia all the knowledge that was indispensable for a first class kitāb. The book is divided into five sections called jāmāḥ, each jāmāḥ has five parts, each ābū has a different number of chapters (ābūkā) varying from two to fourteen. The first ābū is devoted to heaven and earth, the second to man, the third to the flora and the fifth to history (full list of contents: vol. i., p. 4—25; also in de Goeje, *Catalogus*, i. 5—14; cf. also Hādżjī Khalīfa, ed. Flügel, iv. 397—598, No. 14069). The division is unequal; the last ābū of the fifth ābū, which is devoted to Muslim history fills almost half the work, which runs to nearly 9,000 printed pages. In addition to the division according to subjects, the book is divided into volumes: the last, the 31st discovered by Ahmad Zaki Pāshā, contains the history of Egypt down to the death of the author in 731. From the dates of the separate parts and volumes it is evident that he devoted no less than twenty years to his book (cf. e. g. de Goeje, *Catalogus*, i. 16 where the year 714 is given; vol. i., p. 416: year 721; vol. v., p. 335: year 722 or Weil, *op. cit.*, xv.: year 725 etc.). In the earlier parts later additions are often found (e. g. vol. i., p. 13, q=15, 4—5; 20, 6—9). For contemporary history Nuwairi’s book is of the first importance; in other parts its value depends on that of his sources. Its extent and manysidedness will only be appreciated when the edition is complete and a study like that of Borkman on al-Kalkashandi Sabh al-‘Arab has been undertaken. Al-Nuwairi himself makes no claim to originality; like the majority of Arabic encyclopaedists, he expressly says that he follows his predecessors and places the whole responsibility on them (i. 26). Owing to the existence of many manuscripts of separate parts, European scholarship early became acquainted with al-Nuwairi; he is already mentioned by d’Herbelot (1625—1695) in his *Bibliotheque Orientale* (Maestricht 1776, p. 670). In the collections made by Golius and Warner some fine copies came to Leyden (including holographs) (W. M. C. Jubboll, *Antwende vondere Briefenburon von al-Nuwairi in Nederland, Utrecht 1931*, p. 178; *Catalogus*, i. 5—18, No. 5) and attracted great attention in the xviiith century. One of the first to study him was J. Heyman (d. 1737) whose *Nouairiana* — not too fortunate excerpts and notes — is in manuscript in Leyden (*Catalogus*, i. 18, No. 6; on Heyman see Reiske, *Prediagnata*, in J. B. Kohler’s *Abhandlungen Tabula Syriaca*, Leipzig 1766, p. 233 and Jan Nat, *De studie van de oosterse Talen in Nederland in de 18de en de 19de eeuw*, Purnerend 1929, p. 25—26). In general in the xviiiith and early xixith centuries too much stress was laid on the account of pre-Muhammadan history in al-Nuwairi (Schultens, *Monumenta*, 1740, *Historia, 1786*; Reiske, *Prediagnata*, 1766, p. 232—234, *Primaet lineae*, ed. Wustenfeld, 1847; Rasmussen, *Historia praeppositum arabum regnum*, Copenhagen 1817, p. 81—124 etc.). Later investigation showed that with the existence of other sources, Nuwairi’s work loses its secondary importance (see Mittwoch, *Practica arabica regnum*, Berlin 1899, p. 26—30; G. Ollendorf, *The Kings of Kinda, Lund 1927*, p. 19 etc.). Of considerable importance are the parts which deal with later, especially contemporary, history and historical geography; in the course of the xixith century they were frequently appealed to and excerpts edited or translated by Silvestre de Sacy, de Slane, Désfrémy, v. Hammer, Quatremère, Well, Tiesenhausen, Amari, etc. One of the latest studies of a section of his work is the two volume *Historia de los musulmanes de España y Africa. Texto árabe y traducción española* of M. Gaspar Remiro (Granada 1917—1919; cf. Angel González Palencia, *Historia de la literatura arábigo-española*, Barcelona 1928, p. 162—163). Ahmad Zaki Pāshā
Al-NUWAIRI — AL-OBOLLA

deserves honourable mention for the interest he (died July 5, 1934) has aroused in the study of Nuwa'iri modern times. With great industry and perseverance he has collected photographs of all 31 parts of the Nilâyat al-Arab frequented from autographs, and these are now deposited in the Royal Library in Cairo. As a result of his efforts, a complete edition was undertaken in 1923 and ten volumes are now available in the handsome and imposing edition of the Dâr al-Kutub al-Misriyya, which affords a sound basis for the general estimation of the value of the book.

Al-Nuwa'iri was not only an official but also a fine calligrapher: he was able to copy as many as 80 pages a day. He himself made at least four or five copies of his own encyclopedia and sold them at 2,000 dirhems each. He made eight copies of the Sahih of Bukhari at 1,000 dirhems each. He was also famous as a bookbinder.

(IGN. KRATSKHOWSKY)

NUZHA. [See NFZAF.]

**AL-OBOLLA** was in the middle ages a large town in the canal region of the Tigris Delta, east of al-Basra. It was situated on the right bank of the Tigris and on the north side of the large canal called Nahr al-Obolla, which was the main waterway from al-Basra in a southeastern direction to the Tigris and further to 'Abbâsid and the sea. The length of this canal is generally given as four farsakh or two barlas (al-Makdisi). Al-Obolla can be identified with 'Apâdâ Dour à Genevet, mentioned in the Periplus Maris Erythraei (Geogr. Gracii Minoris, i. 285) as lying near the coast. In a story told by al-Mas'udi (Marrûji, iii. 364) there is still a reminiscence of the period before the foundation of al-Obolla, when al-Obolla was the only seaport in the Tigris estuary. The earlier Arab authors, in discussing the ancient administrative division of lower Babylonia in Sassanian times and the foundations of towns by the Sassanian kings, identify al-Obolla with other places, such as Dast-Ma'isân (Ibn Khurdadhbih, in B.G.A., vi. 7) or Bahman Ardashir (Tabari, i. 687), although these provinces must be sought on the opposite bank of the Tigris; Eutychius (in Migne, Patrologia Graeca, iii. 911) likewise makes al-Obolla a foundation of Ardashir I (cf. on this question: H. H. Schaedler, in Lil, xiv. 27 sqq.). Ibn Khurdadhbih, p. 7 quotes an Arabic poem of a contemporary of Muhammad, where al-Obolla is mentioned. In the story of the conquists the town is reported to have been captured by 'Otba b. Ghazwân in the year 633 and this conqueror described it to the caliph 'Omar as the "port of al-Bahriân, 'Oman, al-Hind and al-Sîn" (al-Baladhuri, p. 341). This conquest enabled the Arabs to seize the opposite bank of the river (Dast-Ma'isân) and the so-called Euphrates county. After the rise of al-Basra, al-Obolla became of secondary importance, but throughout the 'Abbâsid caliphate it remained a large town. It was further from the sea than it had been, but still the effects of the tide were perceptible even above al-Obolla. All the great geographical authors of the 9th—11th century give a longer or shorter notice of this place. Its environs are described in very laudatory terms (cf. Yâkût, i. 97); the borders of the Nahr al-Obolla were one large garden (Ibn Hawkal, in B. G. A., ii. 160). The part of the Tigris opposite al-Obolla was important for navigation; in earlier 'Abbâsid times there had been here a dangerous whirlpool, which had been eliminated by sinking a large quantity of stone in the water at the expense of an 'Abbâsid princess. Here was erected a beacon light which is described by al-Idrisi (ed. Jaubert, i. 364). Al-Obolla was in this period even larger than al-Basra, according to Makdisi (in B. G. A., iii. 118), and the place was noted for linen goods and also, as appears from al-Yâkûtî (in B. G. A., vii. 360), for its shipbuilding. Naṣîrî Khusraw, who visited the place in 443 (1051), gives likewise a vivid description of its beautiful surroundings (Berlin 1341, p. 133). On the other hand, al-Obolla does not seem to have been an important strategic point; occasionally it was occupied, as in 331 (942) by the governor of 'Oman in his action against the Barîdî brothers in Basra (cf. Miskawaw, ed. Amedroz, ii. 46), but as the events showed it was far from being an important bulwark of that city. After the 12th century the general decline of those regions seems to have brought about the gradual disappearance of the place; Ibn Battûta (ii. 17 sq') calls it only a village and the Nâshat al-Kulûb

1) See also U.
(p. 38) knows only the Nahr al-Obolla, but does not mention the place itself. About this time it must have disappeared; later mention (as late as the Dyákán-Gushá of Hājīdji Khāfis, p. 453) reproduce only obsolete geographical traditions.

**OCHIALY, Turkísh corsair and admiral in the xvth century.** He was born in a village of Calabria called Licastelli, about 1500, as, at the time of his death in 1587, he is said to have been over ninety years old. Ochalía is the name by which he is known in Italian sources of the time; the Turkish sources call him Uluğj 'Ali, which name probably was given to him in Northern Africa. It may be the Arabic plural 'ülüğj (from 'ülüğ), denoting his foreign descent (Hammer, G. O. K. ii. 481, 751 gives conflicting statements). After being released as a galley slave, he became a Muhammadan and entered on a long maritime career in the Mediterranean. According to the Sídijlí-i ՚ethmání (iii. 502), he became Tersáne Kapudánı in 961 (1554). He owed his rise to his connection with the famous admiral Torğhud Re’ısı, whose lieutenant he was. With Torghud he was at Djerba during Charles V’s expedition against this island, and in 1565 both took part in the abortive expedition against Malta, where Torghud was killed. Then, until 1568, he was the latter’s successor as viceroy of Tripolis, after which he was appointed in the same capacity to Algiers, as successor of Şâli Pasha. During this time he extended the Algerian territory towards the west and, in 1567, he temporarily took Tunis from the last Hafsid sultan and his Spanish protectors. Cervantes mentions him as king of Algiers in chapter xxxix. of his Don Quixote. In the following year Uluğj ‘Ali took part in maritime expeditions against the Venetians and the Maltese. His chief exploit is connected with the battle of Lepanto [q. v.], in September 1571, where he commanded the left wing of the Ottoman fleet. His success in bringing a part of the fleet safely to Constantine after the defeat procured him the dignity of Kapudánı Paşa, the former grand admiral Mu’eselhín-Zâde ‘Ali having perished at Lepanto. On this occasion the name Uluğj ‘Ali is said to have been changed into Kiflid ‘Ali. He remained in this office until his death and commanded a series of predatory expeditions in the Mediterranean, participating i. a. in the reconquest of Tunis and La Goulette in 1574, along with the sarácher Sinán Paşa [q. v.]. The inner political changes did not affect his favour with government circles. His last official activity was to bring the new Khuñ of the Crime to Kaffa to install him in place of the deposed Khuñ. Ochalía displayed considerable activity in ship-building, especially after the debacle of Lepanto; in addition he was the builder of the Topkhâné Djanmî at Galata, and of a hamam in the sultan’s palace. When he died unexpectedly in his own mosque (15th Radjâb 995 = June 21, 1587) he left an enormous fortune, which fell to the state.

**OCSNOBA, the old name of the circle (kıya) in al-Anâdalus corresponding to the present Portuguese province of Algarve of which Silves [q. v.; Ar. 5âli] was the capital.** The geographers and historians transliterate this place name in the forms 5êhûnûba and 5khâhûnûba; we also find the wrong forms 5˘âkûnîya and 5˘khûnîya, the result of graphic errors. The name Ocsnoba seems also sometimes to be applied to a town which would be the old Santa Maria de Algarve [q. v.] now Faro. On the authority of an epigraphical reference it has however been identified with Milreu (Estrói) by Hubner (C. J. L. ii. 3—4, 786—795).

**OPEN. [See Budapest.]

**OGHUL, a word common to all the Turkish languages, meaning “son”, “child”, “descendant”.** In this connection attention may be called to certain formations, such as edhâqoghlu, “son of good house”, and edhâgbê, which used to be applied to the sons of the Janissaries. Oghul is very frequently found in family names where it takes the place of the Persian zade or the Arabic ibn, e.g. Hekmoglh u Hekm-żade for Ibn al-Hekm or Râmajd-oglh u Râmajd-żade for Ibn Râmajd (where it should be remembered that the Arabic ibn does not mean exclusively “son” but “descendant”). An incomplete survey of such formations in an early period is to be found in Sídijlí-i ՚ethmání, iv. 778—812.— The new law on family names will give rise to numerous forms where oghul is combined with names and crafts.

Cognate is egélân, “boy”, “young man”, “servant”; a word also found in certain compounds, e. g. edhlgelân, “sultan’s page”, edhâghlan, “language-boy”, “interpreter”. From egélan we also get ughan, the name for light cavalry.

(FRANZ BABINGER)

**OHOD, a mountain about three miles north of Medina, celebrated for the battle fought there in the year 3 which ended unfavourably for Muhammad. It is a part of the great range of hills which runs from north to south but here spreads to the east over the plain and thus forms an independent group of hills. The rocky walls surmounted by a rectangular plateau — without peaks, Yâkıùt says — “which rise like masses of iron” (Burton) above the plain are quite destitute of trees and plants and only the face of the south wall is broken by a ravine which played a decisive part of the battle. The country round is stony and covered with gravel but farther south there are a few cornfields and gardens watered by a brook, but these are sometimes flooded by sudden rainstorms so that the pilgrims coming from the town cannot reach the hill. The Meccans who had
set out to avenge the defeat at Badr were encamped at the already mentioned cornfields at al-`Irî or al-Jûrf, which were then full of ripe corn and supplied food for their animals. Muhammad who against his will and against the advice of the elders was forced to leave the town and meet the enemy in the open field, went unhindered past the enemy camp and drew up his troops at the foot of the hill with their backs to it: a strategy no less peculiar than that of the enemy. At first it looked as if the enthusiasm of his followers would secure him a victory like that of Badr. But when the archers, whom the Prophet, had placed upon the hill with distinct orders to prevent a flank attack by the enemy and not to leave their positions, were unable to restrain themselves when they saw the Meccan camp being pillaged and hurried up to see what they could get, Khâlid b. al-Wâlid's quick eye at once saw the weak spot and when he attacked it, the tables were quickly turned. When the rumour spread that Muhammad had fallen, the Muslims began to retreat, and only the Prophet's loyal followers remained. In reality the Prophet was only wounded, and some of his followers succeeded in concealing him in the ravine. Fortunately the Mecceans, little experienced in warfare, did not know how to follow up their victory and began to go home. The Prophet was in this way saved from the worst but he had to lament the loss of many of his followers, including his uncle ʻAmma sa [q.v.], a loss which he felt particularly. It is not easy to get a clear idea of the treatment of the fallen as the traditions differ very much. It is said that the Medinees at first brought their dead to Medina but the Prophet soon forbade this; some mention a common grave in which those who knew the Kur'ân were put in the first row; but according to others the martyrs were buried singly or in twos and threes and some authorities say that the alleged common graves of the martyrs of Ohod are really those of beduins who died of hunger in the reign of ʻOmar (Wâkidî, transl. Wellhausen, p. 143). All accounts however agree in their tendency to glorify ʻAmma sa. The Prophet is said to have uttered the nause his first; the bodies of the other dead are said to have been placed beside him one by one and Muhammad prayed over him 70 times, as he included him in the prayer with each new corpse. Every year afterwards the Prophet went to Ohod, to visit his and the other graves and the elderly caliphs did so also. Muhammad is said to have ordered that the women in lamenting the death of every ʻAsârî should begin with a lament for ʻAmma sa. In this way Ohod became one of the most prominent places of pilgrimage of the Muhammadans. A mosque was built over ʻAmma sa's tomb and it is mentioned by al-Mukaddasi; it lay behind a well near the grave of the other martyrs. We have a brief description by Ibn Djinâbî in the viith (xîth) century. He mentions first of all ʻAmma sa's mosque on the south side of the hill 3 miles north of Medina; a mosque is built at his grave with the grave in an open space to the north of it. Opposite lay the other graves of martyrs and opposite them again was the cave where the Prophet took shelter on the lower part of the hill. Around the graves of the martyrs is a low wall of red earth ascribed to ʻAmma sa at which the people seek a blessing. The best modern description is that of Burchhardt who visited the place in 1814 after its devastation by the Wahhâbîs. From his description we may quote the following: "About one mile from the town stands a ruined edifice of stones and bricks, where a short prayer is recited in remembrance of Muhammad having here put on his coat of mail, when he went to engage the enemy. Farther on is a large stone, upon which it is said that Muhammad leaned for a few minutes on his way to Ohod. To the east of this torrent, the ground leading towards the mountain is barren, stony, with a mound, on the slope of which stands a mosque, surrounded by about a dozen ruined houses, once the pleasure villas of wealthy towns-people; near them is a cistern, filled by rain water. The mosque is a square solid edifice of small dimensions. Its dome was thrown down by the Wahhâbîs but they spared the tomb. The mosque encloses the tomb of ʻAmma sa and those of his principal men who were slain in the battle; namely, Muṣâb b. ʻUmar, Dâfar b. Shâmmâs (not mentioned in the traditions) and ʻAbd Allâh b. Dâfar. A group of these graves are in a small open yard, and, like those of the Bâṣî, are mere heaps of earth, with a few loose stones placed around them. Besides them is a small portico, which serves as a mosque. A little further on, towards the mountain, which is only a gun-shot distance, a small cupola marks the place where Muhammad was struck in battle by a stone . . . . At a short distance from this cupola, which like all the rest has been demolished, are the tombs of twelve other partisans of the Prophet, who were killed in the battle . . . . The people of Medina frequently visit Ohod, pitching their tents in the ruined houses, where they remain a few days, especially convalescents, who during their illness had made a vow to slaughter a sheep in honour of ʻAmma sa if they recovered. Once a year (in July, I believe), the inhabitants flock thither in crowds, and remain for three days, as if they were the feast days of the saint. Regular markets are then kept there: and this visit forms one of the principal public amusements of the town". In modern times Wavell records that the opening of the railway to Medina in 1906 produced a disturbance among the beduins which resulted among other things in the Banû ʻAli, whose duty it was to protect the pilgrims visiting the tomb of ʻAmma sa, while putting no obstacles in their way, declining to take any responsibility. The Wahhâbîs who now rule in northern Arabia permit pilgrimage but as at all the holy places forbid actual worship. 

ŐKAILIDS, a dynasty of al-Mawṣil. The Banû ʻOkâl belonged to the great Beduin tribe of ʻAmir b. Saṣâ’a. From their original home in Central Arabia they spread in course of time in different directions and among their better known subdivisions were the Banû Khafāfîdî [q.v.] and the Muṭaṣîfî [q.v.]. In the fourth century of the
Hizyra the Banū ʿOkail in Syria and Ṣirāk were tributary to the Ḥamdānids and when the latter were no longer able to maintain themselves in al-Mawṣil the city passed to the ʿOkailids. The Kūrā chief Bāgh, the founder of the dynasty of the Ṣawarānids [q.v.], endeavoured to bring al-Mawṣil under his rule whereas the two Ḥamdān brothers Abī Ṭāhir ʿIrābhīn and Abī ʿAbd Allāh al-Ḥusayn appealed for help to the emir of the Banū ʿOkail, Abū ʿl-Dhawwād Muḥammad b. al-Muṣayyib. The latter at once announced his readiness to assist them and was given as a reward Dz̄azrāt b. ʿ Omar, Naṣīrān and the town of Ḍalād. After the death of Bāgh in battle (380 = 990—991) his sister's son Abū ʿAlī al-Ḥusayn continued the war with success. Abī ʿAbd Allāh was taken prisoner and when Abū Ṭāhir went to Naṣīrān to seek the protection of Abū ʿl-Dhawwād, the latter took him, his son and several of his retainers prisoners, put them to death and then occupied al-Mawṣil. He then submitted nominally to the Bāyiḍ Bahrāʾ al-Dawla [q.v.] and persuaded him to send a representative to al-Mawṣil. But the latter did not play a part of any importance. Bahrāʾ al-Dawla's efforts to make his influence felt in al-Mawṣil did not have the success he desired. Abū ʿl-Dhawwād remained the real ruler. He died in 386 or 387 (996—997) and was succeeded by his brother al-Muṣālīd [q.v.]. The latter was assassinated in Ṣafār 391 (Dec. 1000—Jan. 1001) and his eldest son Kūrah b. [q.v.] was recognised as emir of al-Mawṣil. After holding office for fifty years, he was deposed by his brother Abī Kāmil Bāzara [cf. ʿIrābāsh] in 442 (1050—1051) and on the latter's death in the next year 443 (1051—1052) the rule passed to his nephew Kūrah b. Bādhrān [q.v.]. The latter was succeeded in 453 (1061) by his son Muslim [q.v.] under whom the territory of the ʿOkailids attained its greatest extent; their power then declined rapidly. On Muslim's death (478 = 1085) his brother Ibrāhīm who had languished in prison for years was set free and proclaimed emir of al-Mawṣil. In 482 (1090—1090) however, the Saʿdīng sultan Malikshāh invited him to come and give an account of his stewardship, and as soon as he appeared he was thrown into prison and Fāḥhr al-Dawla b. Ḍajār [q.v.] 'en ′ Alan as governor to al-Mawṣil. Only after Malikshāh's death (Shawwāl 485 = November 1092) was Ibrāhīm set free and returned to al-Mawṣil. In the meanwhile Muslim's widow Ṣafiyya who was also the aunt of Malikshāh, had married Ibrāhīm, and on the death of Malikshāh she went with ʿAlī, her son by Muslim, to al-Mawṣil. But as Muḥammad, another son of Muslim's, also coveted the city, its inhabitants split up into two parties and when it came to fighting, Muḥammad had to take to flight, while ʿAlī occupied al-Mawṣil. As soon as Ibrāhīm heard of this he began negotiations with Ṣafiyya and received from her the town of Ḍalād which Malikshāh had given her as a gift. The Saʿdīng prince Tutuš [q.v.] then demanded that Ibrāhīm should recognise him as sultan and when the latter refused, the decision was left to arms. In Rabīʿ I 486 (April 1093) the two armies met near al-Mawṣil; Ibrāhīm was taken prisoner and put to death and Tutuš became as governor. It was however not long before his brother Muḥammad b. Muslim endeavoured to dispute his power. He asked the emir Kūrbūkha [q.v.] to help him against his brother and the result was that he lost his life while ʿAlī had to give up al-Mawṣil (Dhu ʿl-Kaʿda 489 = Oct.—Nov. 1096).

In addition to the emirs of al-Mawṣil, several ʿOkailīd dignitaries are mentioned in history. In 479 (1086—1087) Salīm b. Mālikī b. Badhrān b. Muṣālīd surrendered Halab to sultan Malikshāh and received in return the fortress of Ḏajār [q.v.] to which al-Ṭābākha was soon added and these remained almost without interruption in possession of his descendants until 564 (1168—1169) when his grandson Mālik b. ʿAlī b. Salīm ceded them to Nūḥ al-Dīn Muḥammad b. Zangī.

Another branch was established in Ṭakrit [q.v.]. According to Ibn al-ʿAlīhūrī, x. 289, when a short sketch of the history of this town is given down to the year 500 (1106—1107), the ʿOkailīd Rāʾf b. al-Ḥusayn died in 427 (1036) as lord of Ṭakrit. His nephew Abū Maʿṣūm al-Ḥamīs b. al-Ṭaghlīb inherited his governorship. After the latter's death in 435 (1043—1044) he was succeeded by his son Abū Ghāshām. The latter was suddenly attacked in 444 (1052—1053) by his brother ʿĪsā and thrown into prison and ʿĪsā seized the power. In 448 (1056—1057) ʿĪsā died and soon afterwards his son Nāṣr also died. ʿĪsā's widow Amīra then had Abū Ghāshām, who was still in prison, murdered and installed a governor named Abū ʿl-Ghātim in Ṭakrit but he handed the town over to the Saʿdīng sultan Tughrībāg. ʿOkailīd governors are also occasionally found in other towns, like ʿAna, Ḍamīla, Hit and ʿUkhār. After the extinction of the dynasty in Persia and Mesopotamia and the ʿIkīr the ʿOkailīds withdrew to Bahrayn.

ʿOKAZ, name of an oasis situated between Ṣāʾif and ʿAkkālah. The Arab philologists derive the name from the root meaning 'to retain', in the middle forms 'to assemble' or from the meaning of 'concourse'. Both interpretations are based on the fact that ʿOkaz was primarily celebrated for its annual fair, which was held on the 1st—20th Dhu ʿl-ʾKaʿda and was at the same time an official occasion of mafṣīḥara, i.e. a gathering of tribes or rather of groups and individuals belonging to the same tribe where individuals competed for honours and for the honour of their tribe. These assemblies to which poets came to recite their poems, were also a great fair at which merchandise was exchanged. That of ʿOkaz was followed by those of Madjūna (last ten days of Dhu ʿl-ʾKaʿda), of Dhu ʿl-Maṣdž (1st—8th Dhu ʿl-Hijja).
and those which accompanied the great pilgrimage. These weeks formed the climax of public life in pre-Islamic Arabia — the truce of the sacred months making discussion of the political affairs of the tribes of the Ḥijāz possible. The Ṭamīm took no part in them. ʿIsām by condemning hereditary and individual feuds was the cause of the decline of the ṣawāʾiqīn (cf. ʿAṣwīn).

Muḥammad was on his way to the fair of ʿOqāz with a few of his companions when at Nakhaʾ he the ḍājjān heard the Kurān being recited and were struck with admiration as we are told in the Kurān (sūra Ixii. 1 sqq.; xlvii. 28 sqq.) and ḥadīth (Buḫkārī, Aḏān, bāb 103; Tafsīr, sūra Ixii., bāb 1; Muslim, ʿAlāʾ, trad. 149; Tirmīzī, Tafsīr, sūra Ixii., trad. 1).

ʿOqāz is also noted for the fighting which took place there at the beginning of Islam.

(A. J. Wensing)

ʿOqba b. Nāfīʿ b. ʿAbd Kāis al-ʿArabī al-Fihrī, the famous general of the first century A.H. who endeavoured by consolidating the first successes of the Arab conquest in North Africa to put an end to the resistance of the Berbers but finally perished after a troubled career at the hands of African rebels.

The data supplied by the historians regarding the career of ʿOqba are relatively abundant but like all that relates to the beginnings of the expansion of Islam in North Africa have frequently to be taken with caution. They come from later traditions, and W. Marçais has clearly demonstrated the particular bias which they represent (Le passé de l'Algérie musulmane, in Histoire et Historiens de l'Algérie, Paris 1931, p. 150). It is certain as regards ʿOqba that the essentials of what the Maghribi historians have preserved about him are of eastern origin and in addition the most circumstantial accounts of his career that we possess are from the pens of eastern authors: Ibn ʿAbd al-Ḥakam and al-Nuwairī. The only authority for the African tradition regarding ʿOqba so far known is his descendant Abu ʿl-Muḥādīrī. The information, at once detailed and new, found in a Maghribi MS. (cf. Bibliography) about ʿOqba's raid into the south of Morocco seems fairly reliable up to a certain point from the very fact of its precision. Use of it after a critical study seems likely to throw doubt upon the statements hitherto regarded as reliable regarding the progress and chronology of the Arab conquest of Northwest Africa, such as are given in studies, already antiquated like Fournel (Les Berbères, Étude sur la conquête de l'Afrique par les Arabes, Paris 1875), or more recent and more distinguished works but also based on unchecked translations like that of E. F. Gattier (Les siècles obscurs du Maghreb, Paris 1927).

This is why in the present state of our knowledge we shall here confine ourselves to tracing a sketch of ʿOqba b. Nāfīʿ's activities in North Africa which need not be considered final on all points.

ʿOqba was born in the last years of the Prophet's life and was through his mother the nephew of ʿAmr b. al-ʿArây [q.v.], the celebrated conqueror of Egypt, who shortly before his death in 43 (663) gave him the supreme command in Ifriqiya. According to a story, difficult to verify, ʿOqba at that time was directing his attention to the Sadān and establishing Islam by force of arms at Chahādām. But this was only a raid and not a regular occupation of the country. It was not till some years later that we find him preparing for a new expedition, no doubt better equipped than the others. This was the expedition of 50 (670) in which he founded the military stronghold of al-Kairāwān [q.v.] in the middle of the province of Byzacene. For this expedition ʿOqba had at his disposal a force of 10,000 horsemen which was gradually increased by the accession of Berbers converted to Islam: with the help of this force he was able not only to attack the Byzantines who had continued to hold out in the towns of the coast of Ifriqiya but also the Berbers of Kānawān, forming a strong base for the Arab troops, seems to have very much facilitated if not the occupation and pacification of Ifriqiya, at least its conversion to the religion of obedience to the authority of the invaders. But it was not ʿOqba who gathered the fruits of this spread of Islam. Ifriqiya remained a dependency of the province of Egypt; the new governor Maṣlama b. Makhūl al-Anṣārī dismissed ʿOqba in 53 (675) and replaced him by one of his own clients, Abu ʿl-Muḥādīrī, who very soon undertook a raid on Mijiras, and according to Ibn Ḥakīlān got as far as Tlemcen [q.v.]. On his return to the east, ʿOqba is reputed to have complained to the caliph Muʿāwīya of the way in which he had been treated by the governor of Egypt and a little later Muʿāwīya's successor restored him his governorship.

This second appointment of ʿOqba to Ifriqiya may be put with certainty in 62 (682). His enemy, the governor Abu ʿl-Muḥādīrī, had in the course of his raid defeated the Berber chief Kusaila [q.v.] who became a Muslim and it was on these two that ʿOqba wreaked his vengeance in his turn. He put them into chains and carried them with him wherever he went. At the same time he prepared an expedition on a larger scale than the previous one the stages of which can be traced from the narrative of Ibn Ḥakīlān. ʿOqba's army, preceded by an advance guard under Zuhār b. Kāis al-Balawī, advanced from Kairāwān into the Central Maghrib, at first encountering in the Ziba and again in Tāḥār Berber and Byzantine elements which he defeated and received tribute from. He finally reached the region of Tangier. The chief of the Ghanīma, Iyān (Julīān), submitted to the Arab leader and became his military adviser. He dissuaded him from crossing the Straits of Gibraltar and undertaking the conquest of Spain and pointed out the danger threatening the Arab troops from the great body of still unconquered Berbers in the Great Atlas and Sās [q.v.;] ʿOqba therefore turned his attention to the Berbers. First of all he occupied the massif of the Zārahān, took the town of Ulib (Volubilis), crossed the Middle Atlas and advanced through the Dra (Dar'a) and Sās, the inhabitants of which he pursued up to the desert of the Lantūma. He
then turned to the Atlantic coast, reached the land of Safi and began to subject the Berber bloc of the Maqūda of the Līsāb Dāruq (Great Atlas) then that of the Anti-Atlas as far as Tārālibān [q.v.].

But however brilliant they seemed these successes led nowhere. An advance no matter how brilliant through a country meant nothing if it was not followed by an occupation which Ṭāḥā was not able to secure. But when he and his army turned homewards, he does not seem to have realised that all would have to be done again. Kusaila escaped from him and organised resistance, making use alike of the fondness for fighting of his Berber compatriots and the discipline and technical skill of the Byzantine garrisons in the country. Ṭāḥā trusting to his good fortune did not see the danger. Reaching the Za‘āq, at Thubunah (Tuluma) he went so far as to divide his army into several contingents which he sent off in succession on the road to Kairawān. Trusting the Berbers, who had submitted to him, he had only a small body of Arabs with him, the rest having gone off from him. But he was soon surrounded by Kusaila’s sides on the border of the Sahara at Tāhūda and fell with 300 of his companions in 63 (683).

His grave and that of his companions is still pointed out at the same place and forms the centre of a little village which bears his name: Sajiyid Uqba (vulg. Sidi Uqba), a few miles S.E. of Biskra, not far from the old site of Tāhūda.

(E. Lévi-Provençal)

AL-ʿOLĀMĪ, ABU ‘L-YEMN ‘ABD AL-KĀHMĀN b. MUḤAMMAD MUẒIR AL-DĪN AL-ʿOMARI AL-HANĀLI AL-MĀSSIDI, an Arab historian, born on the 13th Dhu ’l-Ka‘dah 860 (Oct. 13, 1456) in Jerusalem, studied from 886 (1476) in Cairo, became in 894 (1484) kālī in Ramla and in 941 (1480) chief kālī in Jerusalem. He retired in 922 (1516) and died in 928 (1522) in Jerusalem.

(B. Brockelmann)

OLČAITU KHUDĀBANDA, eighth Līkhaṇ of Persia, reigned from 1304 till 1317. He was, like his predecessor Ghāzān, a son of Arghūn and a great-grandson of Ilūghū. At his acces-
sion he was 24 years of age. In his youth he had been given the surname of Kharbana, for which different explanations are given (cf. the poem by Rashid al-Din reproduced on p. 46 of E. G. Browne, A Literary History of Persia, ii. p. 46 sqq. and Ibn Battuta, ii. 115), but E. Blochet, in his Introduction à l'histoire des Mongols (G. M. S., xii. 51), has explained the name as a Mongolian word, meaning “the third”. The Byzantine historian Pachymeres calls him Χαρίακτιος (ed. Bonn 1835, ii. 459). His mother Cruj Khūţā had him baptized as a Christian, but under the influence of one of his wives he afterwards embraced Islam and received the name Muhammad, while his surname was changed to KhūĎa bāna. In addition he took the laḥab of Ghīyāth al-Dunya wa-l-Dīn, which al-Din Rashid, Olcaiťu was sent to the Indian frontier of the empire, where there was no difficulty about the succession, as a possible claimant, his cousin Alafrank, had been killed previously. Olcaiu continued the traditional warfare of his predecessors with the Mamlūk Empire and their friendly relations with European Christian powers; some of the letters addressed to him by the Pope Clement V and the English King Edward II. are still extant; these letters were brought by his Christian envoy Thomas Ilde, who, in contradiction to the facts, kept up the fiction that his master was a Christian. Olcaiu likewise sent a military expedition to relieve the Byzantine Emperor Michael Pulaeologos by dividing the force of the Turks in Asia Minor, but this was a defeat (Pachymeres, ii. 585). Against the Mamlūks Olcaiťu himself conducted a campaign during which the town of Rahba on the Ephrates was besieged in vain (1313). The authority of the government in the interior was strengthened by the conquest of Dīlijān in 1307 and in the same year by the conquest of Herfīt from the vassal Kur dynasty. In 705 (1305—1306) Olcaiu made the recently founded town of Sulṭaṇa [q. v.] the capital of his empire, on the occasion of the birth of his son and successor Abū Sa‘d. Prosperity was increased by the laws of Ghāzin, whose canons were promulgated again by Olcaiu, and also by the able administration of the famous historian Rashīd al-Dīn [q. v.]; the latter's colleague and rival Sa‘d al-Dīn was executed in 1312 through the intrigues of 'Alī Shīh, who took the sultan's place. The dispute which was caused between the two ministers made the sultan in 1315 assign to each of them the administration of half of the empire. The attitude of Olcaiu towards Üslām deserves special notice. After first showing preference for the Shī‘a (cf. the story of Mādīj al-Dīn of Shirāz told by Ibn Battuta, ii. 57 sqq.), he became an adherent of the Sunna. Then, after an attempt to introduce the Shī‘i instead of the Ẓanafī ma‘ālīḥāb, he finally decided again to join the Shī‘a, after having visited the tomb of 'Alī; one of his coins affords proof of this. Olcaiu is described as a virtuous, liberal ruler; he showed interest in the observatory of Maragha, where Āṣīl al-Dīn, Nāṣīr al-Dīn's son, was appointed astronomer-royal. He likewise favoured the literary-historical activity of Rashīd al-Dīn and the historian Waṣḥāf. He died at Sulṭaṇa on December 16, 1316; afterwards Rashīd al-Dīn was accused of having caused his death. In Sulṭaṇa his tomb is still to be seen.

Bibliography: Contemporary sources are the Tu’rīkī Waṣṣāf, lith. Bombay 1269, and a continuation of Rashīd al-Dīn’s Ḷūmī al-Tavārīkh, which continuation is found in several manuscripts, but has not yet been edited. Further the Tu’rīkī Gūzālā by Ĥamd Allāh Mustawfi and the later Persian works. Of European works must be mentioned: D’Ohsson, Histoire des Mongols, iv. 475—508; J. von Hammer-Purgstall, Geschichte der Ilkhāne, Darmstadt 1843, ii. 178—251; H. Howorth, History of the Mongols, iii. 534—584; E. Blochet, Introduction à l’histoire des Mongols, in G.M.S., xii., Leyden—London 1910, passim. — For Olcaiu’s coins: Stanley Lane-Poole’s Catalogue, vi. 44 sqq. (J. H. Kramers)

’OMĀN, a nominally independent state on the Persian Gulf under the protectorate of England. Its extent has varied considerably in the course of its history. While Iṣlāḥī, for example, who gives ’Oman an extent of 300 parasangs, includes the district of Mahrā in it, Idrīsī describes the latter as an independent country. In the northwest ’Oman was bounded by the province of al-Bahrān or al-Ḥajdar, in the south by Yaman and Ḥażar. In the sultanate reached its greatest extent under Sulṭaṇ Ibn Mālik b. al-ʿArab b. Sulṭaṇ, under whom ’Oman not only included the territory from Rās al-Ḫadd to Ḫuṭṭār, but also al-Bahrān and other possessions, particularly on the African coast where his son Sa‘fī conquered Kilwa and Zanzibar. ’Oman at the present day includes the whole south-eastern part of Arabia with a strip about 500 miles long on the south coast of the Peninsula including the land of Ḥuṭṭār. By the decision of the International Court at the Hague in 1905 in a dispute between England and France regarding the granting of the French flag to owners of sailing-ships in Maskat, the southern boundary was fixed at Rās Sakar and the coast as far as Ḵūr al-Ḫalib reckoned to ’Oman, while at the same time the sulṭaṇ’s claim to the peninsula of Rāṣ Masandum from Rās Ḏibba to Ṭībba was expressly recognised by both powers. This of course does not prevent the actual power of the sulṭaṇ barely extending beyond the coast district of Maskat and Ḍāḥi. The population of ’Oman is estimated at half a million but that of ’Oman proper at 34,500 only. As regards creed the ’Omanis are predominantly in particular in the south, but the northern districts are inhabited mainly by Sunnis. The capital is Maskat [q. v.] while at an earlier period Šuḥr [q. v.] was regarded as the most important town in the country.

The following details of the distribution of the population may be given: the thickly populated district of Ḍāḥi has 10,500, the Wādī Sāmāl 2,800, Maskat 10,000, Ṭuḥra 11,000, Šūr 12,000, Šulṭaṇ 7,500. ’Oman for administrative purposes is divided into four districts: 1. Ḏaṭālān, the land of the Beni Ālī and all the land south of Bedri; 2. ’Oman proper from Bedri to Makiniyya; 3. Durrā from the latter place to al-Durūmīn, the narrow strip of coast from Šīb to Ḵūr Pākkan. The characteristic feature of the orography of the country is a mountain range, which runs from Maskat in a southern direction as far as Šūr close to the coast but runs a considerable distance inland north of Maskat and thus leaves space for the fertile lowlying land on the coast, al-Baṭina, which is in
a way comparable to al-Tihāma in the Yamān, although it never attains the same width, being only from 20 to 30 miles across. South of Rūstāk just below 23° Lat., almost at right-angles to the former, is a second range, higher in its highest parts, known as Djebel Akhlar which with 10,000 feet is the greatest height in the country. It runs parallel to the coast as far as Rās Masandum and sends off a second range which runs to Rās al-Khīme. The most fertile part of 'Oman is the already mentioned low-lying coast land of al-Bahānā where in addition to intensive cultivation of the date-palm, wheat is grown and all kinds of fruits flourish. The Arab geographers praised the dates of 'Oman and some other parts as being the best in the world. 'Oman was a garden. Among the fruits special mention is made of bananas, pomegranates, and nebeḵ (lotus nebk). A considerable part of 'Oman however is quite unsuited for agriculture; for example the part bordering on the desert zone of Arabia which however contains a few fertile oases among the mountains, for example on the way from Benī Abī 'Ali to Nezwa. These oases are watered by subterranean deposits as was long ago pointed out by Ibn al-Fākhī; where the water is not too deep below the surface or there are subterranean channels, springs supply the necessary water to the fields. The climate of 'Oman suffers from the great heat, which is only to some degree tempered by the refreshing winds from the sea; in Maskat the maximum in July and August is 91°–88° F. The rainy season is in winter from October to March, but the rains seldom fall more than three or four days in a month; among the mountains heavy storms occur and the snow sometimes lies. In Maskat the annual rainfall is 3 to 6 inches.

The cereals grown are wheat, dūrā, some rice, the fruits, tamarinds, mango, banana, pomegranates, quinces, pistachios, apricots, grapes, almonds, figs, walnuts, water-melons, apricots and cherries, while cotton, sugar-cane and indigo are cultivated. Stockraising is now mainly confined to horned cattle; at one time 'Oman was celebrated for its strong, swift camels and goats. The Arab geographers (Ibn al-Fākhī) praise 'Oman's wealth in fish, which supplied the food of large sections of the community (especially in al-Ḥijāma). Industry, once very flourishing, is now confined to weaving on a modest scale in Maskat, Nezwa and 'Ibrī, dyeing in the two last-named towns and the making of weapons in Maskat, Idrīsī mentions the pearl-fisheries of Sūr below Cape al-Maḥjama and in Damār. The pearl-fisheries now produce about half the revenue of Bahrain (10–15,000,000 rupees). The Arab philologists (Ibn al-Aṣrābī) derive the name 'Oman from 'awman with the meaning "to stay continually in one place". According to others the name goes back to 'Oman b. Ibrāhīm al-Khāhilī, who built the town of 'Oman; this is of significance as much as the classical writers know of a town called Omana (Pliny, Nat. hist., vi. 149) and 'Omano ivārōs (Tolomei, vi. 7, 36). It has been identified with Sūhār which was later regarded as the most important trading centre. Al-Mukaddasi (p. 35) compared 'Oman with 'Aden and Egypt for importance in the world's trade and called it and Sīrāf (q. v.) the forecourt of China (p. 426). This does not seem however to have much benefited the people of 'Oman, for they were regarded as dishonest, wicked and deceitful merchants; indeed Ibn al-Fākhī (p. 92) describes them in much coarser language. The prosperity coming from the trade and agriculture is evident from the huge yield from taxation, 300,000 dinārs in the 'Abbasid period. A dishem a year was paid on each palm-tree (Muḥaddasi, p. 105).

For the early history of 'Oman, Huxt's account may be consulted.

The relations of England with the country have been of great importance to 'Oman. They began in 1798 with a treaty between the East India Co. and the sultan by which the French and Dutch were excluded from the territory for the duration of the war, and this was followed in 1800 by the granting of permission for the E.I.C. to have an agent permanently resident in Maskat. By the treaties made by the French with Saŷid Sa'id b. Sulṭān in 1807 and 1808, this resident was joined by a French Consular agent. But French prestige suffered a severe blow when Mauritius was occupied by the English in 1810. In 1839 a commercial treaty was concluded between England and Maskat, modelled on one concluded in 1833 between the U.S.A. and 'Oman. In 1844 there followed a commercial treaty with France, which secured this country the most favoured nation clause and freedom to trade in Maskat for its subjects. In 1862 came the Anglo-French guarantee of the independence of 'Oman, but England was able to secure a predominating influence in 'Oman by vigorously supporting the sulṭān at various crises and by paying him a subsidy. In 1891 the sulṭān declared in a treaty of friendship, which also regulated questions of trade and navigation between the two countries, and was binding upon himself and his successors, that he would not cede any of his territory in any way to any power other than England. When then, in 1898, the sulṭān in contravention of this agreement wished to allow France to have a coaling-station in his territory, he had to withdraw the concession on receiving an ultimatum from England; France was compensated with a coaling station in Mukallāt [q. v.]. The dispute assumed a more serious aspect which arose out of the practice of the French consul in Maskat giving ships' papers and French flags to Maskat ships which abused the privilege to carry arms and slaves. The dispute was settled by the International Court at The Hague, the decision being that only those ship-owners who had received permits before January 2, 1892 were allowed to retain them. The result was that in 1917 only 12 ships of 'Oman were allowed to carry the French flag. The result has been the practical exclusion of French influence from 'Oman, and the securing of English predominance.

was soon appeased and 'Omar ascended the throne without encountering any serious opposition.

As a caliph, 'Omar stands apart; he was distinguished from his predecessors and successors alike. Inspired by a true piety, although not entirely free from bigotry, he was very conscious of his responsibility to God and always endeavoured to further what he believed to be the right and conscientiously to do his duty as a ruler. In his private life he was distinguished by the greatest simplicity and frugality, although he is said to have lived no less luxuriously than other Umayyad princes before his accession. Poets who praised the delights of worldly pleasures were therefore not particularly popular at his court.

'Omar laid no special stress on military glory, and his reign which only lasted two and a half years was poor in military events. The siege of Constantinople was raised on his accession to the throne; but it is uncertain whether the Muslim army was actually withdrawn by him. In Mesopotamia he allowed the people of Turanda to evacuate their town whereupon they settled in the adjoining Malatya and Turanda was destroyed. In the far West the Muslim armies crossed the Pyrenees, invaded Southern France and returned to Spain laden with rich booty. On a later campaign which is usually but not quite certainly attributed to the reign of 'Omar, they captured Narbonne, fortified it, and used it for a time as their headquarters.

'Omar however by no means felt obliged to spread Islām by the sword; he rather sought by peaceful missionary activity to win members of other creeds to the faith of the Prophet and in case of conversion by this means demanded no tribute. This method proved particularly successful and suitable among the Berbers and it is even said that there was not a single Berber left unconverted to Islām in the governorship of Isma'il b. 'Abd Allāh appointed by him. In a similar way were converted the princes of Sind when 'Omar's governor Amr b. Muslim al-Bihili invited them to adopt Islām and promised them complete equality with Muslims; but under Hishām they lapsed again.

His interests were primarily in home affairs. He was the trustworthy governor of Khurāsān Yazīd b. al-Muhallab [q. v.] arrested and his post given to al-Jarrāḥ b. 'Abd Allāh al-Hakamī. In other cases also, the most important offices were filled with men whom 'Omar thought to be capable and just. He adopted a kindly attitude to the 'Alids. The practice introduced by Mu'āwiya of publicly cursing 'All in the service in the mosque was abolished by 'Omar. It is said that when he was a boy and his father was appointed governor of Egypt he begged him to forbid the customary cursing of 'All and received the reply that such a step although laudable in itself would be against the interests of the Umayyad dynasty and might give support to the 'Alīids' claims to the caliphate. 'Omar gave up in favour of the 'Alids the oasis of Fadak [q. v.] which had originally been the private property of Mu'āmmad but was then declared a state domain and had finally become the property of the Umayyads. After his accession he decided that it should revert to its original use and according to one story expressly ordered that it should be handed over to the descendants of Fāṭima as the heirs of the Prophet. He also restored to the family of Talhah their property in Mecca, which 'Abd al-Malik had
taken from them and abolished the addition to the tribe which had been levied by a former governor of the Yaman, Muhammad b. Yasaif, a brother of al-Hajjaj. In general he laid great stress on compensating those who had in any way been subjected to illegal extortions; but, as is obvious, this principle, while it testifies to the caliph's love of justice, was often applied, according to Ibn Sa'd, v. 252, uncritically (is-zahir al-bayyina al-tasifia) and in the long run could not be beneficial to the treasury and was destined to have serious consequences.

As a devout Muslim he was gracious to members of other creeds so far as this was possible without a breach of the principles of Islam. Christians, Jews, and lie-worshippers, were allowed to retain their synagogues, churches, and temples but not to build any new ones. In Damascus, al-Walid [q.v.] had taken down the basilica of John the Baptist and incorporated the site in the mosque of the Umayyads. When 'Omar came to the throne, the Christians complained to him that the church had been taken from them whereupon 'Omar ordered the governor to give back the site of the mosque. But as the people of Damascus would not agree to this, the matter was settled by 'Omar's approval by the churches outside the town, notably that of St. Thomas which belonged de facto to the Muslims and not by treaty because the Qifla [q.v] had been conquered by the sword and not surrendered by capitulation, being handed over to the Christians on condition that they abandoned all claims for the future on the Church of St. John. While 'Omar endeavoured to protect his Muslim subjects from being abused, he was also anxious that his Christian subjects should not be crushed by oppressive taxation. In Aila and in Cyprus the tribute settled by treaty had been increased: 'Omar reduced it to the original amount. In al-Yaman the Christians of Nadhrran had made a treaty with the Prophet which guaranteed them complete security in their land on payment of an annual tribute of 2,000 robes (jalla) each of the value of 40 dirhams. This treaty had been broken by 'Omar I. Nevertheless, they had to pay the full tribute until 'Uthmaan reduced it by 200 robes. Mu'aawiya or, according to another story, his son Yazid granted them a further reduction of 200 robes because their numbers had been much reduced by death and conversions to Islam (on this see Lammens, Le califat de Yazid Ier, p. 346 sqq.). But when 'Abd al-Rahman b. Muhammad b. al-Ash'ath [q.v.] rebelled against al-Hajjaj, the latter raised the total tribute to 1,800 robes because he suspected the Nadhrranians of being in secret agreement with the rebels. In the meanwhile however, their numbers had sunk from 40,000 to 4,000 and when they appealed to 'Omar to alleviate their hard lot he reduced the taxation to one tenth and demanded only 200 instead of 2,000 or 8,000 dirhams.

One of 'Omar's most important measures was his reform of the taxation. The comprehensive administrative system of 'Omar I which proved excellent for the conditions in his day, was now no longer suitable to the demands of the time. The treasury was continually suffering from the ever increasing conversion to Islam of non-Arabs who had paid tribute and their consequent exemption from taxation and in addition many of the new converts settled in the large cities instead of remaining at home and tilling the fields, so that agriculture lost much of the labour it required. To overcome this difficulty al-Hajjaj had imposed the kharaj also upon Muslim landowners who were not paying tribute and prohibited immigration into the cities. This aroused general dissatisfaction but this did not worry him. 'Omar, on the other hand, adhered to the principle that Muslims should pay no tribute. He further propounded, no doubt in agreement with those learned in the law in Medina, the theory that conquered land was the common property of the Muslim community and therefore could not be broken up and transformed by sale to Muslims into immune private property. Consequently in the year 100 (718—719), he forbade Muslims to buy land which should pay tribute; but he did not make this legislation retrospective and he placed no obstacles in the way of the immigration of new converts into the cities. Further, just claims upon the treasury for compensation for services rendered were never refused: he granted the Mawali in Khorasan, who had fought against the unbelievers, pay and exemption from taxation just like Muslim collectors of taxes. He added that the small modifications of the various elements in the caliph's empire and although his system of reformed taxation did not survive because the principle of the inalienability of tribute-paying land could not be permanently maintained, he did his best to clear up the existing financial muddle.

The historians of the older school described 'Omar as an unpatriotic idealist, who pursued purely Utopian ideals as a result of his theological preconceptions, without paying any heed to actual conditions, and only modern research has put his work in its true light. His reign was spared trouble from the Kharidjists but hidden forces were working in secret which were to bring about the fall of the Umayyad dynasty.

'Omar died after an illness of 20 days in Radjib 101 (Feb. 720) and was buried in Dair Sim'an near Halab. He was succeeded by his cousin Yazid b. 'Abd al-Malik [q.v.].

Very much influenced since his boyhood by pious authorities on tradition, he was one of the authorities in this field and regarded, although wrongly, after his death as one of the first collectors of Sunna. In course of time a whole cycle of pious legends gathered round his name which were quite devoid of any historical foundation. For example we are told (Ibn Sa'd, v. 501, l. 17) that a roll of parchment fell from heaven upon the men who were filling up his grave which assured him security from the flames of hell (amin min Allâh bi-'Omar b. 'Abd al-'Aziz min al-nâr). Even the biassed historians of the 'Abbasid period who as a rule ran down the Umayyads on every possible occasion in favour of the 'Abbasids make an exception in his case and give him the highest praise. His tomb was also left undisturbed when those of the other Umayyads were desecrated after the triumph of the 'Abbasids.

OMAR [i. 'abd Allâh] b. ABD RABI'A, 'undeniably the greatest love-poet of the Arabs' (Rückert), born, according to tradition, on the 26th Dhu 'l-Hijjah 26 (beginning of Nov. 644), died in 93 (712) or 101 (719). His biography, like those of other poets who are regarded as representatives of a particular form of poetry (e.g. Abû Nuwâs with his drinking songs), is much encumbered by legend; he was regarded as the greatest love-poet and imitators by his contemporaries and the works of later poets were readily ascribed to him. It is only the brilliant monograph by F. Schweiz that has made it possible to separate the really historical matter in his biography and in his poems. It may be regarded as certain that he belonged to the Karâshân clan of Mahâlab; his father 'Abd Allâh, a prosperous Meccan merchant, amassed a great fortune by importing the drugs of South Arabia. For a time he was governor of Dâmâd in the Yaman; Omar's mother was a 'Himyarat' from 1Faj'am.aw. The poet as the possessor of a large fortune was able to lead a carefree life; his youth he probably spent in Medina and his manhood mainly in Mecca. He travelled in South Arabia, Syria and Mesopotamia. There are all kinds of legends about his death which it seems did not take place in his native land. His traditional biography is mainly filled with stories of his relations with various ladies, chiefly of the house of the Umayyads. These stories are literary inventions rather than historical facts. The stories of his meetings with emirs and caliphs of the house of 'Umayya seem also suspicious: he is said to have been punished along with the poet al-A'âwas by Omar II and to have had to promise to write no more poetry. He also wrote much from his poems of the political history of the period or of the events of every day life. He was the first townsmen poet in Arabic. His poems reflect the bright social activity of town life. This is the fundamental distinction between him and the celebrated traid of Umayyad poets, al-Akhtâl [q. v.], Dîjarr [q. v.] and al-Farazâdâq [q. v.] as well as between him and the half legendary representatives of the Beduin love poetry of the period like Dîjâm [q. v.]. In him there is no trace of the court poet or tribal bard; he hardly ever describes journeys, and still more rarely fighting. The poetry of wine is quite strange to him. All his poems are records of his own experiences and pictures of his emotions. We need not always imagine that they are historically accurate but the expression of feeling is undoubtedly true to life. The persons in his poems are "sensitive, aimable creatures, full of individuality. They reveal their souls, they act, they speak. Dramatic scenes, full of feeling stand out vividly before the reader's eyes" (Schwarz). In the form of his verse also 'Omar is a gifted poetical genius who writes without difficulty. His verse flows easily and naturally in simple language. His prosody differs from that of the Beduin poets; although he uses the same metres, he does not prefer those most popular in the old poetry (basît or lastî) but flexible and light metres (khiftj, râmal, mutafrîd, munathît). That he did not feel himself bound by tradition is shown by some traces of strophic verse in his poems. It would be a mistake to see in 'Omar the first love-poet of the Arabs. But he was the first to bring this form to perfection. The roots of this genre are to be found not so much in the introductory parts of the old Arabic qâṣidas as in the love-poems, which were particularly cultivated in South Arabia (perhaps not without Persian influence). A study of the surviving fragments of Waddâ in-Yaman, a contemporary of 'Omar which has been long in preparation by V. Ebermann, will perhaps shed new light on this point.

'Omar attained great popularity with his contemporaries and in the following generations, chiefly among singers, wits and men of letters. But his popularity among learned men was hampered by two things: his simple language offered very few "testi di lingua" in comparison with poets like, e.g. al-Farazâdâq, and the matter of his poems was little suited for study in schools, especially in religious and bigoted circles. The renaissance of Arabic literature in modern times has brought about a change; besides several monographs devoted to him, special chapters are devoted to him in the text books. 'Omar b. Aâbi Râbi'a is now so to speak rehabilitated among the Arabs and recognised as a great poet.

IGN. KRATSCHEKOWSKY

OMAR B. AYUB. [See HAMâ and AYâBUD SUPPLEMENT.]

The name al-Fārīd (notary) refers to the profession of his father, who belonged to Hāmīt but migrated to Cairo, where ‘Omar was born in 576 or, more probably, in 577. In early youth he studied Shafi‘i law and Hādhīth; then came his conversion to Sufism, and for many years he led the life of a solitary devotee, first among the hills (al-Muṣṭatām) to the east of Cairo and afterwards in the Ḥijāz. On his return to Cairo he was venerated as a saint till his death in 632, and his tomb beneath al-Muṣṭatām is still frequented. The Diwān of Ibn al-Fārīd, though small, is one of the most original in Arabic literature. Possibly the minor odes, which exhibit a style of great delicacy and beauty and a more or less copious use of rhetorical artifices, were composed in order to be sung with musical accompaniment at Sufi concerts (Nallino, in K. S. O., viii. 177); in these the other odes are more intellectual and some of the minor odes may be read either as love-poems—a fact to which they owe their wide popularity in the East—or as mystical hymns. But the Diwān also includes two purely mystical odes: 1. the Khamsa or Wine Ode, describing the “intoxication” produced by the “wine” of Divine Love, and 2. the Naim al-Sulūk or “Pilgrim’s Progress”, a poem containing 760 verses, which is often called al-Tawīyat al-kubrā to distinguish it from a much shorter ode rhyming in the same letter. In this famous kifla, nearly equal in length to all the rest of the Diwān together, Ibn al-Fārīd depicts his own experience as a Sūfī. The result is not only a unique masterpiece of Arabic poetry but a document of surpassing interest to every student of mysticism (for a resume of the contents, see Nicholson, Studies in Islamic Mysticism, p. 195–199). Its whole character is psychological rather than speculative; though some passages are pantheistic in feeling and expression, it bears little or no trace of the intellectualism which marks the system of Ibn al-‘Arabī; and the charges of heresy brought against the poet do not appear to be justified. Among Sūfis the Tawīya occupies the position of a classic, and many commentaries have been written on it.

‘Omar (Abū ‘ūmar) b. Ḥafs was appointed governor of the province of Ifriqiya by the Abbāsid caliph al-Mansūr in 151 (768). He belonged to a family which in the time of the Umayyads had furnished a number of high officials to the state. One of his uncles, al-Muhallab b. Abi Sufra, had attained fame as governor of Kūhārūn under ‘Abd al-Malik b. Marwān. ‘Omar whose bravery was celebrated had himself held a command in the eastern provinces; he had been given the Persian epithet of Hazarmerd, “1,000 men”.

The difficult situation in Ifriqiya at the time justified the choice of an energetic governor. Barbery had gone over almost entirely to various sects of the Khārījī heresy. The chief leader of the movement was the Sufrī Abū Kūra. The Arab qāmī showed little enthusiasm to fight the rebels and besides, it was much divided by old tribal rivalries.

‘Omar b. Ḥafs, appointed by the caliph, brought with him 500 horsemen. He cleverly won the hearts of the people of Kairawān and was able to secure the country over three years of peace. Al-Mansūr having given him orders to strengthen the defences of Tobna [q.v.], an old town, the strategic position of which on the western borders of the empire was becoming so important, ‘Omar abandoned it. In Tobna, ‘Omar being thus denuded of troops, the Berbers rose and ‘Omar’s lieutenant Ḥālib al-Muḥallabī was killed. This initial success encouraged the rebels who concentrated a large force around Tripoli under an ‘Ibādī chief. Al-Djunaibī b. Baghār, who had assumed command at Kairawān after Ḥālib’s death, asked for reinforcements from ‘Omar b. Ḥafs. He received them but was defeated. The insurrection now became general. Kairawān was again besieged and soon ‘Omar himself who had only 15,500 men under him was besieged in Tobna by several Khārījī armies. ‘Ibādī and Ṣufī units united under the command of Abū Kūra and numbering over 73,000 (the figures given are of course not at all reliable). ‘Omar wished to cut his way through his opponents but his companions prevented him. He then tried to bribe Abū Kūra to leave his allies and offered him 60,000 dirhams but the offer was rejected. ‘Omar then turned to his brother (or son) and obtained for 4,000 dirhams the succession of the Sufrī. Abū Kūra had then to withdraw. ‘Omar b. Ḥafs, thus rid of his enemies, sent a corps against the ‘Ibādī Ibn Rastam who had to take refuge in Tāhet (Tiaret) [q.v.].

‘Omar was again at work in strengthening the defences of Tobna when he learned of the critical situation of Kairawān. The town blockaded for eight months by the ‘Ibādī Abū Ḥākim was in dire straits. With 700 men of the qānī, he hurried to Ifriqiya but instead of marching on Kairawān he took the road for Tunis, enticing the Berbers after him. He succeeded in getting supplies into Kairawān which he then entered himself. The siege was resumed with fighting every day. Food again became very scarce. ‘Omar b. Ḥafs wished to send two chiefs of the qānī to procure supplies but they refused to go. He then decided to make a sortie himself which meant certain death, without awaiting the reinforcements of 60,000 men which the caliph was sending him. Throwing himself on the enemy “like a camel mad with rage” he fell on the 15th of Bhu ‘l-Hijja 154 (Nov. 27, 771).

OMBa HAFŠUN, leader of a famous rebellion in Spain, who at the end of the ninth century A.D. held out for years against the Umayyad emirs of Cordova and in the end was only brought to book by the caliph 'Abd al-Raḥmān III al-Nāṣir [cf. UMAIYADS]. His full name was O'MAR b. HAFŠUN b. DJA'FAR called al-Islāmī, from his conversion from Christianity to Islam and he claimed descent from an ancestor named Alfonso who had the title of count (comet). 'Omar's father Hafs or with the specifically Spanish suffix (-ūn), Hafsun, was thus the grandson of a Visigothic lord who had become a Muslim and lived on the income from his lands at Iznate (Ḫisn Awt) in the region of Ronda [q.v.] in the south of Spain in the middle of the 9th century A.D. His son while still quite young displayed a very violent temper and as a result of a crime committed by him against the person of one of his neighbours, had to escape for a time to North Africa, and spent some time at Tābert [q.v.]. He only returned home to rebel at once against the Umayyad emir of Cordova. Having gathered around him a small body of followers he established himself in 767 (883) in a ruined fortress of Bobastro (Ar. ينطخ; q.v.) which he restored.

Dozy has identified this castle with el Castillon, to the south of Campillos, between Teba and Antequera, relying on the discovery at this place of the inscription mention, municiupium Singilifere Barbatuntes, while Simonet thinks that its site corresponds to las Mesas de Villaverde, a little farther south between Ardales and Carratraca. Excavations have recently begun in the district in order to find the ruins of Bobastro. Whatever be the real position of the castle, we know that it commanded the valley of the Guadalhorce in the direction of Malaga and from there Ibn Hafsun could disturb a considerable part of the territory of the kāra of Reiya, which a governor dependent on Cordova was supposed to rule. 'Omar having had several successes, the governor tried to bribe him to reason but without success, and he lost his post. His successor was no more fortunate. Soon Ibn Hafsun was exercising complete authority over all the inhabitants of the mountainous region which extends from Ronda towards Grenada, Malaga and Algeciras. The Umayyad emir Muḥammad b. 'Abd al-Raḥmān, had to organise a regular expedition against him the command of which was entrusted to his vizier Ḥāshim b. 'Abd al-'Azīz. Ibn Hafsun submitted and went to Cordova to offer his services to the Umayyad emir in 270 (883). But his submission did not last long; in the following year the rebel had regained the mountains of Bobastro and took by storm the castle in which Ḥāshim had put a strong garrison.

From this time on Ibn Hafsun begins to play the part of a champion in the nationalistic movement in the south of the peninsula, where he put himself at the head of all the malcontents, whether Christians or neo-Muslims (muwalladun). The rapid growth of his rebellion did not fail to disturb greatly the Umayyad emir whose position each day became more precarious. The task of bringing Ibn Hafsun to book was given to the heir-presumptive al-Mundhir b. Muḥammad, who laid siege to one of the rebel's principal supporters Ḥarīth b. Ḥamdūn al-Rifā'ī in his castle of Alhama. But in 273 (886) the emir Muḥammad died and al-Mundhir had to go back to Cordova to be proclaimed in his place. Ibn Hafsun seized the opportunity to organise resistance in all the mountainous districts of Southern Spain and had himself recognised as leader of the rising by all the inhabitants.

On ascending the throne al-Mundhir found himself faced by a critical situation. But he at once took the necessary steps with great energy. There were continual encounters between the rebels and the loyalist troops; in the end al-Mundhir set out in person to lay siege to Bobastro, but after the siege had lasted forty days he died, undoubtedly poisoned at the instigation of his brother 'Abd Allāh who succeeded him.

The new emir displayed no less energy than his brother. Ibn Hafsun had profited by events to increase his influence and according to the chroniclers the land which he ruled was only separated from Cordova by a day's journey. After a truce which only lasted a few months, 'Abd Allāh and Ibn Hafsun resumed the struggle. The Umayyad emir at first devoted his attention to two rebel chiefs, Sawwâr b. Ḥamdūn and Sayf b. Ḥuṭn, whom he conquered; while Ibn Hafsun was collecting a considerable army at Polei [q.v.]. But 'Abd Allāh with a superior army defeated him, put him to flight and took Polei in 278 (991), then Eciña [q.v.] and finally laid siege to Bobastro again. But the rising of the Banū 'l-Hadjādīd in Seville created a diversion in favour of Ibn Hafsun, who from now on seems to have received at least the moral support of the Fāṣimids of Ifriqiya.

The rest of the reign of 'Abd Allāh passed without any great successes being obtained. It would take too long to detail here all the negotiations followed by agreements, more or less observed, which went on during these very troubled years. But the most striking gesture of the rebel was to repudiate Islam openly and, in order to have the more complete support of the Christians of Andalusia and Cordova, to return to the religion of his ancestors. Ibn Hafsun then took the name of Samuel and proclaimed himself not only the leader of the Spanish nationalistic movement but the champion at the same time of a regular crusade against Islam.

The situation was then very critical when 'Abd Allāh's successor, his grandson 'Abd al-Raḥmān III al-Nāṣir, mounted the throne of the emirate of Cordova in 300 (912). Without delay the new sovereign saw that it was necessary before all else to dispose of this threat which was steadily increasing in magnitude. Not only the future of his dynasty was at stake but also that of Islam in Spain. For several years he made his preparations with the greatest care and displayed exceptional tenacity. The mountain districts of Andalusia were blockaded, attacked and reduced in turn. Ibn Hafsun, more and more surrounded in the Sierra de Ronda, finally died in 306 (918) leaving to his sons the task of continuing the resistance.

According to some chroniclers, Ibn Hafsun in the last years of his life, seeing the futility of his efforts, submitted to 'Abd al-Raḥmān III and even gave him one of his sons as a hostage. He is himself said to have taken part in the campaigns against the Christians of the north in the Umayyad army.

In any case after the death of the aged rebel,
the ruler of Cordova, now favoured by circumstances, set himself to neutralise completely the influence of the sons of Ibn Hafsün. The eldest, Dja’far, was attacked at Elda and finally fell a victim to a plot. The second, Abū al-Rahmān, after holding out for a time at Tarragona and at Almuerete, met his death in an encounter at San Vicente. The third son, Hafsūn, was besieged by Abū al-Rahmān himself in Bobastro and surrendered in 316 (928) to serve in the Umayyad ranks in Galicia. The final capture of Bobastro marked the last stage in a rebellion of unexampled extent, the suppression of which had been the main care of three Umayyad rulers. It was the crowning achievement of the efforts of Abū al-Rahmān III al-Nāṣir to secure the complete consolidation of his territory before beginning the attempt to advance its frontiers to the north.

'OMAR B. HUBAIRA. [See Ibn Hubaira, i. supra, ii. 383a.]

'OMAR IBN AL-KHAṬṬĀB, the second Caliph, one of the greatest figures of the early days of Islam and the founder of the Arab empire. Religious legend has naturally in the case of 'Omar, as with other heroes and saints of Islam, filled his biography with a mass of apocryphal details. Nevertheless the main characteristics of his personality are revealed to historical research with sufficient clearness for it to be possible to understand his character and assign him his place in the formation of Islam. Like many other people whose strongest characteristic is an energy of will, 'Omar began by being the declared enemy of the cause which he was later to support with all his strength. Legend has perhaps somewhat coloured the stories of 'Omar's persecution of the early Muslims and exaggerates in representing his conversion as the sudden result of his having overheard some verses of the Qur'an read in the house of his sister Fatima, who with her husband, Sa'id b. Zaid, had early given ear to the Prophet's preaching. It is from this sudden reversal of his attitude as well as from the fact that it was under 'Omar that Islam became a world phenomenon, from the simple incident in Arab history that it originally was, that 'Omar has earned the epithet of the "St. Paul of Islam" which the west has given him. In reality there is nothing personal between the two, except the stubborn energy with which they later championed the cause against which they originally fought. As with all great converts, we have in this case only an example of change of polarisation of the same exclusive and uncompromising attitude which, recognising no middle course, is as impetuous in devotion as in hatred. Tradition places the conversion of 'Omar in his 26th year, four years before the Hijra. It is probable that the round figure of 30 which we thus get as the age of 'Omar at the beginning of the new era has something artificial about it. But he was in any case certainly in the flower of his vigour when he began his new career of apostle of Islam. Besides, if his support was only personal and legend has no doubt exaggerated its importance. 'Omar was not able to assist the new religion through the power of his clan (he belonged to the Banū 'Adi b. Ka'b who being only Kurāshī al-Zawārī enjoyed no influence in the politics of the mercantile republic) and made his position with regard to his fellow-citizens was in no way outstanding. Even if it is true that, as tradition has it, as soon as 'Omar joined the community of the faithful, the latter's faith in its ultimate triumph was increased, his intervention certainly had no influence on the events which led to the migration to Medina. It is only in this town alongside of the Prophet and apparently through the prestige of his initiative and strength of will that 'Omar without holding any official position began to be the real organiser of the new theocratic state. His part was that of councillor rather than of soldier; although he took part in the battles of Badr, Ohod and later ones, practically nothing is recorded of his military exploits, accounts of which are so abundant in the case of 'Ali and other Companions. Tradition which traces to his initiative no less than three Kur'ānic revelations (ii. 119: the worship of the maṣfūr ibtidām beside the Ka'ba; xxiii. 53: on the veiling of the Prophet's wives; xvi. 6: on the threat of punishment to the same women) is probably not only true but may even record only a few of the cases in which a suggestion from 'Omar stimulated the Prophet's inspiration. What is remarkable about 'Omar in the Medina period is his perfect agreement with Abū Bakr, a concord which — a surprising thing and one which is a tribute to the two great champions of Islam — was never disturbed by jealousy. The fact that 'Omar like Abū Bakr also became the father-in-law of the Prophet through the marriage of his daughter Hafsā, did not arouse the slightest feelings of rivalry in him; on the contrary it was he who on the death of Muhammad thrust the caliphate upon Abū Bakr. The ingenious theory put forward by Lammens (M. F. O. P., iv. 113 sq. and reproduced in Etudes sur le siècle des Omeyyades) about the "triumvirate Abū Bakr, 'Omar, Abū Ohaibā d. al-'Hjarah" (these three individuals united by a bond of intimate friendship are said to have dominated and so to speak monopolised the authority of the Prophet, controlling him either by direct action or through
his wives, 'A'ishah bint Abi Bakr and Hafsa bint 'Omar) may be to some extent correct but should not be pushed too far. It is beyond question that 'Omar, the greatest brain of the three, was able in the lifetime of Muhammad as well as during the brief caliphate of Abü Bakr to resist the temptation to come too much into the foreground. But as soon as the first caliph was dead the power naturally passed to him.

The question whether the dying Abü Bakr designated 'Omar as his successor has been the subject of much discussion by the theorists of Muslim constitutional law. As a matter of fact, there does not seem to have been any formal act of investiture which would in any case have been of no value for it would have been quite out of keeping with Arab custom. 'Omar assumed power de facto and the recognition which was at once given him by the majority of the Companions assured him the exercise of it in a way quite similar to that in which the nomination of the emir in the tribes took place, who, as we know, was only firmly seated when the individual approval of the members of the tribe had been asked and obtained. Later he had extended his control over regions of which he had not assumed power. Such a system however primitive gave no trouble, except when the feeling between two parties was acute; this is what happened at the election of 'Ali. Against 'Omar there was only the dissatisfaction of the 'legitimist' party of 'Ali and the Anṣār who had however been defeated too recently when Abü Bakr had become caliph to feel like organising a regular opposition.

'Omar at the beginning of his rule found that the great expansion by conquest had already begun; he had perhaps contributed more than any other to its beginning in his capacity as adviser to his predecessor. This is not the place to discuss once more the traditional story of the Arab conquests, nor to subject to a revision the well-known thesis of Caetani on their origin and character. This thesis has seemed to lessen considerably the importance of 'Omar's personal action and to take from him the glory of having been their initiator and director, according to a strategic plan conceived in advance of the campaigns against the Byzantine empire and Persia. In reality there is reason to marvel that a simple citizen of Mecca should have been capable of controlling with an undisputed singleness of command undisciplined levies of Beduins, scattered over a vast area and should have been able to keep control over their chiefs who were practically the sole masters of the position. If the military victories were not due directly to 'Omar it was certainly to him that the credit should go of never having lost control of his generals and above all of having been able to make use of the powerful and talented family of the Omayyads, without however allowing them to have a free hand. His quarrel with Khalid b. al-Walid who, after having won the most brilliant victories for Islam, was dismissed and deprived of 'Omar's personal favor, gives us an idea of the political talent of 'Omar and the extent of his authority. The knowledge of the limits of his power (which is the mark of political genius) caused him to treat the wily 'Amr b. al-As with tact and to leave him the initiative in the conquest of Egypt. But he was careful at the same time to put at his side an old Companion of the Prophet, al-Zubair, as a check upon him. He was careful in general (and the appointment of al-Zubair was no exception to the rule) not to appoint to high commands respected Companions whose ambition he had cause to fear. He preferred to watch them from close at hand and to satisfy their parvenu desires with the revenues of the great royal domains of the Irāq and Syria which he assigned to them (cf. qāṭ'a and ūṭla). If tradition has done justice to 'Omar's strength of will, it should be remembered that he also knew how to employ with success gentler and simple methods.

The caliphate of 'Omar which is marked by the complete transformation of the Muslim state, is regarded by tradition as the period in which all the political institutions by which it was later ruled had their origin. That there has been in tradition a process of idealisation which centred in a single individual a complicated development extending over several generations is what historical criticism has not failed to recognise. But the part played by 'Omar was nevertheless a great one. The regulations for his non-Muslim subjects, the institution of a register of those having the right to military pensions (the d'fā'id), the founding of the military centres of which were the focal areas of the future great cities of Islam, the establishment of the office of kādī were all his work, and it is also to him that a series of ordinances goes back, religious (the prayer of the month of Ramadān, the obligatory pilgrimage) as well as civil and penal (the era of the Hīdjr, the punishment of drunkenness, and stoning as a punishment for adultery; in connection with the last it looks as if he did not hesitate to interpolate a verse in the text of the Qur'ān; cf. Noldeke-Schwally, Geschichte des Qorāns, i. 248–251). If it is true that several of these institutions, particularly those of a fiscal character, were rather of the nature of provisional regulations than definitive legislation and if it is also true that the fiscal business continued to be carried on by Persian and Byzantine officials and that the coins continued to be struck with the types of both empires, we cannot however refuse the title of political genius to the ruler who was able to impress a stamp of unity and permanence upon the variegated and confused elements which went to make up the new Muslim state.

In spite of the autocratic character of 'Omar’s rule, his caliphate has nothing of the monarchical character about it. It is further distinguished from that of Abü Bakr by a deeper feeling of its permanent character. Thus for the title of khilāfah which conveys the idea of deputy, there was substituted that of amir al-mu'minin (which 'Omar is said to have assumed in the year 19), in which the character of sovereign is more marked; at the same time the religious character in it becomes more distinct. Indeed one might say that 'Omar was inclined to renew, naturally with a shade of difference, the theocratic regime of the time of the Prophet; being neither able nor willing, it must be remembered, to pose as a prophet, he yet knew how to take advantage of the intimacy in which he had lived with the Prophet to legislate in the spirit of the latter and to give to his own measures an almost supernatural origin. It is perhaps this which tradition is trying to express when it makes Muhammad say: ‘If God had wished that there should have been another prophet after me, 'Omar would have been he'.
in the slightest degree the necessary qualities to overcome them.

While orthodox tradition reverses in 'Omar not only the great ruler but also one of the most typical models of all the virtues of Islam (cf. a list of his merits in the work of al-Muhibb al-Tabari, al-Riyād al-nādira fi Manakib al-ʻAghara, Cairo 1327), the Shī'a has never concealed its antipathy to him who was the first to thwart the claims of ʻAlī (cf. Goldziher, in W.Z.K.M., xx. 321 sqq.). The šīfī teaching although it exalts the ascetic austerity of the life of ʻOmar, has very little to do with him; besides this type of puritan lends itself very little to mystical speculations whether in its historical reality or in its idealisation in legend.

**Bibliography:** All the historical material is to be found collected in L. Caetani, Annoti dell'Islam, III.—vi. (Milan 1909—1912); vol. v. contains the historical synthesis of his caliphate and vi. the general Index. The material contained in the works on ʻHadīth, which has only been partly utilised by Caetani, is collected by A. J. Wensinek, A Handbuch zur arabischen Tradition, Leyden 1927, p. 231—236, s.v. ʻOmar.

(G. LEVI DELLA VIDA)

'Omar Efendi, an Ottoman historian, according to popular tradition originally called Elkasović or Čauević, belonged to Bosniski-Novski. Of his career we only know that he was acting as kâdi in his native town when fierce fighting broke out on Bosnian soil between the Imperial troops and those of Ḥakim-oghlu. ʻAlī Paša (1150—1237). ʻOmar Efendi at this time wrote a vivid account of the happenings in Bosnia from the beginning of Muḥarram 1149 (May 1736) to the end of Djiṃādā I 1152 (end of March 1739); written in a smooth easy style, this work is of considerable importance for social history. It seems to have been called Ḥaẓawā‘ī Ḥakim-oghlu ʻAlī Paša but is usually quoted Ḥaẓawā‘ī—Dīyār-i Bosna, and sometimes as Ḥaẓawā‘ī—nāme-i Rūmālī (i.e. Banjaluca in Bosnia). As a reward for this literary effort, ʻOmar Efendi was promoted to be one of the six judges (wūlbe-i wulūs sitte). Of his further life and death nothing more is known. It is certain that he ended his days in Bosniski-Novski and was buried there. The site of his grave is still pointed out but the tombstone has disappeared.

'OMAR KHAIYĀM, famous Persian scientist and poet of the Saljuq period (d. in 526 = 1132).

Biography. Although reliable information on Khaiyām is scarce, we cannot underestimate the importance of the sources at present available.

In his Algebra he refers to himself Abu 'l-Fath 'Omar b. Ibrahim al-Khaiyām and in his verses seems to use Khaiyām ("tent-maker") as his tabākhuš. It is likely that this nickname refers to the profession of his ancestors. W. Litten, in his pamphlet Was bedeutet Chajām? Warum hat O. Chajām... gerade diesen Dichtermonen gevoilt?, Berlin 1930 (25 p.), has suggested the possibility of a technical interpretation of Khaiyām as "poet, expert in metrics" (cf. Shams al-Din Muhammad b. Kais, Miqādam, in G. M. S., p. 13–16), where metrical terms are explained by the names of different parts of the tent (biš in Arabic both "house" > tent and "verse"). However, in the well-known quatrains, such as Khaiyām ki khaima-khi yi frumat midakhk the reference is evidently to "tents" and not to "verses".

'Omar was a Khurāsānī from Nishāpūr or its neighbourhood. The date of his birth is unknown. He was already famous as a mathematician in 467 (1074–1075) when with Abu'l-Muẓaffar Asfāharī and Māmūn b. Naḍīb Wāṣītī (cf. Ibn al-Athīr, x. 67, under the year 467) he presented to the Persian calendar [cf. Dālahī]. In 506 (1112–1113) Niẓām-yi Arūḍī met 'Omar, whom he calls Ḥududīya al-Ḥakī, in Balkh and in 530 (1135–1136) visited his grave in the Hīra cemetery of Nishāpūr "it then being four (variant: some) years since his death". Consequently the probable date of Khaiyām's death would be 526 (1132). (On Khaiyām's grave beside the shrine of Muhammad Mahbūr see Muhammad Ḥasan, Mafta al-Shams, iii. [Tehran 1503 = 1886], p. 101, 173; Sir F. Sykes, A pilgrimage to the tomb of 'Omar Khaiyām, in Travel and Exploration, London, Sept. 1909, ii. 129–138, and Williams Jackson, From Constantinople to the Home of Omar Khaiyām, New York 1911, p. 240–245. See also a picture in the Times, July 16, 1934. On the occasion of Firdawsi's millenary (Oct. 1934) the Persian Government took the occasion also to erect a new monument of white marble over Khaiyām's tomb.)

Niẓām-yi Arūḍī's Chaḥār Maḥāla, written ca. 551 (1156), remains the oldest contemporary witness to 'Omar. The second and even more important biographer is Abu'l-Ḥasan 'Ali Bahiḳī (q. v.; died 565 [1169]); the relevant passages, already known through quotations in Shahrazūrī, have been translated by Jacob and Wiedemann, Zu 'Omer-i Chajām, in Ist., iii. (1912), pp. 42–62 (English transl. of the principal passage by Sir E. D. Ross and H. A. R. Gibb, in B. S. O. S., v., pp. 467–473). Bahiḳī calls 'Omar al-Dastār al-Fa'allal, Ḥududīya al-Īslām 'Omar b. Ibrahim al-Khaiyām. He says that he had a disagreeable character and was not so nice to his pupils as for example Asfāharī. However, when in 507 (1113) Bahiḳī (at that time only 8 years old; cf. Yaḡū, 1931, 205) visited 'Omar, the latter examined him in Arabic poetry and geometry and expressed his satisfaction. Malik-Shāh (cf. also Chāhār Maḥāla, p. 63) and the [Karaḵānī] Shams al-Muluk of Bukhārā (d. 547 = 1159) were particularly kind to 'Omar but Sandjar had a grudge against him. Among the persons who had direct intercourse with 'Omar are mentioned Abu Ḥamīd Muhammad al-Ghazālī and the learned prince of the Karaḵānī dynasty Farīr Marzī b. Āli Khaiyām. In different references 'Omar is also called the follower of Abū 'Ali b. Sīna (Avicenna). Though he was a scholar in philosophy, jurisprudence and history he was no prolific writer and of his works Bahīḳī mentions only a short treatise on physics (Mukhtasar fi 'l-Takbīrīfī), a treatise on Existence (Fi 'l-Wujūd) and a treatise on Being and Obligation (al-Kawm wa'l-Taklīf). In the Khatārīd al-Kār of 'Imād al-Din al-Kātib al-Isfahānīi (written in 572 [1176–1177]) Khaiyām is mentioned as an incomparable scholar of his time enjoying a proverbial reputation (bihi yuṭrub al-maṭāla'). Khānī (d. 595 = 1198–1199) refers to him once in a verse. Among the later sources may be mentioned Shaikh Naḍīm al-Din's Mirsād al-līlūd (620 = 1223–1224) where 'Omar is called "an unhappy philosopher, atheist and materialist". Kift, Ta'rīḥ al-Hīnakārī, ed. Lippert, p. 243–244 [the passage first utilised by Woepcke, represents Khaiyām as a follower of Greek learning (cf. Bahīḳī). Shahrazūrī's Nūḥat al-Arwaḥ (sixth century) chiefly repeats Bahaḳī. Rashīd al-Din in his Dīwān al-Tawārīkh is the earliest authority known for the tale of three schoolboys: Niẓām al-Mulk, Ḥasan-i Šābāḥ and Khaiyām. The chronological discrepancy involved by this story was already noticed by A. Mūller: Niẓām al-Mulk was born in 408 (1017) and there are no indications that Khaiyām [or Ḥasan-i Šābāḥ] died at the age of more than 100 years (cf. A. Mūller, Der Islam im Morgen- und Abendland, ii. 97, 111; Browne, A. Litter. Hist. of Persia, iii. 190–193. On the different explanations of the legend see Houtsma's preface to al-Bundārī, p. xiv., note 2; Muhammad-Ḵān Ḵāzwī in Browne's translation of the Čahār Maḥāla, p. 158 and latterly H. Bowen, in J. R. A. S., Oct. 1931, 771–782). However, the facts remain that Niẓām al-Mulk must have met Ḥasan-i Šābāḥ (cf. Ibn al-Ḵārīb, x. 110 [year 949]) and that Khaiyām in his metaphysical treatise dispassionately mentions the İsmā'īlī among the searchers for metaphysical truth, but the authorship of the treatise is suspect.

Khaiyām as a scientist. Khaiyām's scientific activities for a long time eclipsed his poetical renown and in 1848 Reinard in his learned introduction to Abu'l-Fidā'a Geography wrote: "malheureusement, 'Omar allait avec l'astronomie le goût de la poésie et du plaisir."

On the reform of the calendar for which Khaiyām is responsible jointly with his colleagues, cf. Dālahī.

MSS. of Khaiyām's principal work on Algebra exist in Leyden, Paris and the India Office (see Woepcke, L'algèbre d'Omer Alkhaïyami publiée, traduite et accompagnée d'extrait de ms. inédits, p. 1851). Khaiyām's introduction to his researches on Euclid's axioms (Muḥāṣārat) was translated by Jacob and Wiedemann, in Ist., iii. (MS. in Leyden). The treatise Muḥūṣūlīha al-Ḫīṣāb exists in Munich. G. Sarton, Introduction to the History of Science, Washington 1927, i. 759–761, calls Khaiyām "one of the greatest mathematicians of
medieval times. His Algebra contains geometric and algebraic solutions of equations of the second degree; an admirable classification of equations, including the cubic; a systematic attempt to solve the all and partial geometric solutions of most of them. His classification of equations... is based on... the number of different terms which they include... thus Omar recognises 13 different forms of cubic equations... Binomial development when the exponent is a positive integer. Study of the postulates and generalities of Euclid" (cf. also W. E. Story, Omar as Mathematician. Boston 1918 [17 pages]). In physics Khayyam's researches were devoted to the specific weight of silver and gold (MS. in Gotha; see Wiedemann, Über Bestimmung der spezifischen Grade [Beiträge, in S. B. P. M. XXI, xxvii. [1906]. p. 170—173). The Šārīrī's Alfi (written about 1000 = 1591) quotes the names of the Mīrzā al-Hikam "on the methods of determining the value of objects studded with precious stones without taking the latter out" [perhaps the same work on geometry and algebra of the Lawdarn al-Abmkha "on the methods of determining the orientation and the cause of the difference of climate of various countries".

Of metaphysical works of Khayyam a MS. of the above mentioned treatise on Existence is in Berlin and a MS. of a little Persian treatise (Dar 'Ilimi Kulliyāt) in Paris. Of the latter Christensen has translated several chapters, Un traité de métaphysique de Omar Khayyam, in M. O., i. (1905), p. 1—16. This treatise, of the contents of which Christensen has a poor opinion, is dedicated to a certain Fakhr al-Milla wa l-Din Mu'ayyad al-Malik, probably one of Niẓām al-Mulk's sons.

Finally must be mentioned the Nawrūz-nāma of which the existence was first revealed by F. Rosen, The Quatrains of Q. Khayyam newly translated, London 1936—1938. The text based on the unique Berlin MS. (Rosen: 1365 a.v.; Muḥammad Khān Kawzni: "not later than the 7th century of the Hijdra") was published with notes and a glossary by Muḥfiz-i Minawī, Thirān 1933. This treatise is a presentation pamphlet written at the request of a friend. The matter, referring to Nawrūz [q. v.] occupies only 19 pages out of 77; the rest is taken up by such subjects as gold, horses, falcons, wine, beautiful faces. The treatise does not show any deep knowledge in the compiler and his authorship, for several reasons, cannot be considered as finally established. An incomplete copy of the same treatise (perhaps the first 43 pages out of 77 of the printed edition exists in the British Museum, Add. 23,568, fol. 869—101b: Risāla dar ūfakiki Nawrūz [Anonymous]).

For lists of Khayyam's scientific works see Brockelmann, G. L., i. 471; Suter, Die Mathematiker und Astronomen der Araber, 1900, p. 112; Muhammad Khan Kawzni, in the Cāhsad Mašāla, p. 220—221; Cassilis, op. cit., introduction (21 names are quoted of which some are only Persian equivalents of Arabic titles).

In a very detailed book Khayyam, or uskī savarnik wa-sanā'īn fur nādīnā dar warmer, published in Hindustani by Saiyid Sulaimān Nadwi, 'Aṣām-ghar, 1933 (508 pages), the following scientific works ascribed to Khayyam have been reproduced: Risāla al-Kawān wa'l-Takht (with further polemics on the subject); Risāla al-Wuḍūd (published in Cairo under the name of Diya' al-Qādī); Risāla al-Wuḍūd also called al-Aynif il-l-Nawrūz; Risāla i Kulliyāt-i Wuḍūd (in Persian); Mīrzā al-Hikam, Khayyam as a poet. Already 'Imād al-Dīn Isfahāni in his Kharitāt al-Qāṣ (572 = 1172) mentions Khayyam among the poets of Khurāsān and quotes four Arabic verses of his. Nā'dīn al-Dīn Kāšī cites two quatrains in Persian. Shahrazūrī gives three Arabic fragments (and) numbering respectively 4, 6 and 3 verses [while the Persian translation of Shahrazūrī, finished in 1011 (1602), substitutes for them 2 Persian quatrains]; that of 6 verses belongs to the same poem as the verse quoted by 'Imād al-Dīn. Kifi reproduces exactly the latter's quotation. Djuwaini (658 = 1260), i. 128, puts a Persian quatrain into the mouth of Saiyid 'Izz al-Dīn who was counting the victims of the Mongol invasion in Khwarizm in 518 (1221). One quatrain is found in the Ta'dīrkh-i Guizā, in G. M. X., p. 518. From 741 (1340) we possess 13 quatrains preserved in the Ma'ānis al-A'hār. The MS. edited by F. Rosen contains 229 quatrains but its date 721 (1321) is certainly wrong. The other oldest collections of the 13th (xvth) century are:

Stambul A S 1032 861 (1456—1457)
NO 3892 865 (1460—1461)
315 quatrains;
Oxford Bodl. Oneley 140 865 (1460—1461)
158 quatrains.

Later the number of rubā'īyāt in some MSS. rapidly rises: the MS. in Vienna (Fügel, Handschrift, i. 496, N°. 507) dated 597 (1550), has 482 rubā'ī, that of the Bankpūr Public Library, dated 961 (1555—1554), 604 rubā'ī, till finally in the Lucknow edition of A. D. 1384 one finds 770 rubā'ī. Miss Jessie E. Cadell (Fraser's Magazine, May 1879) is said to have collected from all available sources 1,200 quatrains; see the list of the MSS. in Cassilis, op. cit., p. 17—39.

Already in Th. Hyde's Vetus etnova Persarum..., Religionis historia, Oxford 1700, p. 529—30, there is found a Latin translation of Khayyam's quatrain Ay, sīkhto-yi sīkhto-yi sīkhtan. For the first time several Persian quatrains were published in a Persian grammar compiled by F. Dombay in Vienna in 1804. Khayyam's renown in Europe, however, was long based on his scientific activities and it is noteworthy that his Treatise on Algebra was translated in 1851, while the first edition of Fitz-Gerald's famous version of the quatrains was published in 1859, the French edition by Nicolas in 1867, and only since the second edition of Fitz-Gerald's version in 1868 has the wave of admiration for Khayyam swept through western lands. Critical studies of the text started only in 1897, when Žukowsky published his article "Omar Khayyam i stroimowysyja ciestworoszyja, in al-Maqṣafrati, a presentation volume to Baron V. Rosen, St. Petersburg 1897, p. 344—363 [made more widely accessible in an early (abridged) translation by Sir E. D. Ross, in J. R. A. S., xxii., 1898, p. 349—366]. Žukowsky's merits consist in: 1. rendering accessible some old texts on Khayyam's biography entirely unknown up to that time, and 2. shattering the uncritical belief in the authenticity of the existing collections of quatrains. Žukowsky showed that 82 out of 464 quatrains included in Nicolas' edition are found also in the dīwāns of
987

39 other authors (and sometimes simultaneously in the diwāns of several poets). He then divided these 82 quatrains into different subject groups and thought that the proportion thus obtained would (in inverse order!) serve as a hint for the characteristics of Khaiyām. For example, the interpolations of epicurean character represent 33% and those which give expression to Muslim free-thinking 2%. Therefore, the safest way is to take as a basis the least interpolated group of which the authenticity has been shattered the least. Consequently Žukowsky attaches a particular importance to the "mystic sīraḥ" in Khaiyām's poetry. This theory (which puzzled Christensen, Recherches, p. 10; and misled Hartmann, in W.Z.K. M., xvii. 367) is certainly insufficient both psychologically and statistically, for it is not the percentage of interpolations but that of the remaining quatrains which is of importance. So Žukowsky's discovery of a high proportion of "wandering" quatrains is valuable only as a negative principle (cf. Barthold, in Zap., xxv. 403-404). The thoroughness of Žukowsky's work is shown by the fact that the later researches by E. D. Ross and Christensen resulted in the raising of the total number of ascertained "wandering" quatrains only to 108.

In his Recherches sur les Rubā'īyat de 'Omar Ḥayyām, Heidelberg 1904, Christensen went one stage farther. Stating how rapidly the number of quatrains increased since the date of the Bodleian MS. (only a century later the Bankipīr MS. contains 604 quatrains!), he postulated a similar process for the time separating that MS. from Khaiyām's death (over three centuries): "how many quatrains then would remain attributable to Khaiyām? A diwān is transmitted tolerably intact, whereas a collection of rubā'īt is much more exposed to tampering." Consequently "there exist no criteria [of genuineness] both as regards the form and the matter" of the quatrains (p. 32). Christensen admitted only the probability that the twelve rubā'īt containing Khaiyām's name and the two quoted by Nasr-i Khān had some sense of being genuine. [But even one of the 12 quatrains of the first category has a variant ascribed to Aflālī Khāšī]. The more optimistic conclusions of Christensen are that those 14 quatrains "contain, so to speak, in nucleus all the rubā'īyāt" and that in general the poetical and historical importance of the rubā'īyat must be severed from the question of their authorship. As Khaiyām wrote in the national Persian spirit the latter addition kept "within the same cycle of ideas" (see the 14 quatrains above mentioned). Only the few mystical and erotic quatrains seem to be interpolations foreign to Khaiyām's nature. In a following chapter Christensen studies the historical traits of the Persian national character and winds up by saying that Khaiyām's spirit is the Persian spirit as it existed in the Middle Ages, and as in substance it is nowadays" (p. 89). This part of Christensen's reasoning must be initably accepted cum grano salis, such matters admitting unfortunately no final demonstration. A further step in the study of Khaiyām's text was the discovery by Muḥāmad Khān Kāzwīnī of 13 quatrains in the anthology Mu'āns al-thānā (composed and copied in 714 = 1314; see Sir D. Ross, in B.S.O.S., iv/iii, p. 433-439). F. Rosen, in the Persian preface to his new edition (1925) of the Rubā'īyat (also in German, Zur Textfrage der Vierzeltler 'Omaris des Zeitmachers, in Z. D. M. G., 1926, p. 284-313), criticised the exaggerations of the theory of "wandering" quatrains but authenticated only 23 rubā'īt (those quoted by Rāzī, Ḍiuwainī etc., six of those containing the name of Khaiyām and 13 of the Mu'īnis al-Āḥārī). Finally, after a new revision of all the materials available, Christensen in his Critical Studies in the Rubā'īyat of 'Omar-i Khayyām, Copenhagen 1927, offered a new criterion to ascertain the genuineness of the quatrains. He divided (p. 19) the collections of quatrains into three categories: those in which the quatrains are disposed without any alphabetical arrangement, those with single alphabetical arrangement (i.e., in groups according to the final letter of the rhyme) and those with double alphabetical arrangement (under each rhyme letter the quatrains disposed in the order of the first letter, of the beginning word). He takes the first arrangement as the oldest and of this group mentions five specimens: one bearing the apparently false date 721 (1321), one dated 902 (1496) etc. The double alphabetical arrangement is already found in the Bodleian MS. and the single alphabetical one must be presumably older. Moreover Christensen noticed that in different collections (of the first and second class) there were found series of quatrains "in the same, longer or shorter succession" (p. 13). Though the comparison of the non-alphabetical group led to "a purely negative result" (p. 27) as regards the establishing of a textual tradition, Christensen suggests that in some cases (MSS. dated 1528 and 1540) the principle underlying the non-alphabetical arrangement was the disposition according to the contents. Moreover he thinks that we may "learn something by studying the total stock of the texts" (p. 27) and consequently (p. 39) lays down an elaborate system of rules based upon the number of times a given rubā'īt is found in different groups of MSS. This system being strictly enforced entails considerable changes in the former views on the subject: thus out of the six best attested quatrains contained in Khaiyām's "Rubā'īyat" one proclaimed spurious, one uncertain and four genuine (p. 40).

Finally 121 quatrains which have stood the test are taken as a basis for a new characteristic of Omar.

The new method, in spite of its mathematical character, greatly depends on the materials utilised by its author. H. Ritter in his important review of Christensen's work (Zur Frage der Echtheit der Vierzeltler 'Omar Chayyāms, in O. L. Z., 1929, N°. 3, col. 156-165) has quoted 7 ancient MSS. found in Constantinople. Of these the two oldest (that of 861 = 1456 containing 131 quatrains, and that of 865 = 1461 containing 315 quatrains) are non-alphabetical while that of 876 (1471-1472) containing 320 quatrains is alphabetical. This fact is partially in favour of Christensen's views but the order in the two non-alphabetical MSS. is different from that of BN1 (the oldest of the non-alphabetical MSS. quoted by Christensen, dated 902 = 1496-1497 and containing 213 quatrains). On the other hand, the MS. of 865, contemporary with the famous Bodleian MS., contains double the number of the latter's quatrains. Lastly two of the MSS. mentioned by H. Ritter contain each 478 quatrains in a special arrangement by Ver (Da) Ahmad b. Husain al-Rashidi al-Tabrizi, who in 867 (1462-1463) arranged the quatrains
in nine chapters according to their subjects. This fact, Ritter thinks, may be responsible for the traces of a similar arrangement in the two later MSS. (dated 1528 and 1549) mentioned by Christensen [in Tahiriz’s redaction a paper was read by M. F. M. Kaprusi-tade at the Orientalists Congress at Oxford; it was also known to Husain Dânisch; v. i.]. So H. Ritter falls back upon Christensen’s conclusions of 1904 and in a somewhat modified form insists on the practical impossibility of authenticating this or that of Khâyâm’s quatrains. The rubâ‘iyât have been transmitted by methods typical of popular songs (typische Volkliederberüfiung); they express the popular feeling of the masses (Volksempfindung) which opposed the official religious and literary spirit of foreign origin. As now we happen to speak of a truly “Khâyâmî” quatrain, so historically the particular genre must have been associated with the great savant, and Christensen’s attribution of his selection of quatrains to ‘Omar can be understood only in the sense of a collective name for all what is looked upon as a manifestation of a peculiar tradition (Einzeluberliefung).

Further interesting is the discovery of a MS., dated 1423 and containing 206 quatrains announced by Mahfîz al-Hâkî at the meeting of the Asiatic Society of Bengal, on April 5, 1932, and H. H. Schäfer’s paper Der geschichtliche und der mythische ‘Omar Châyâm, read at the Orientalistentag held at Bonn at the end of August 1934. Schäfer is extremely and perhaps excessively sceptical as regards the attribution of the quatrains to ‘Omar Khâyâm. He concludes by saying that “Khâyâm’s name must be struck out of the history of Persian literature”. He also doubts the authenticity of the treatise published by Christensen and the Naârâb-nâmâ. Schäfer’s paper will appear in book form. For a resumé see Z. D. M. G., xiii/2, 1934, p. 25—*28.

Conclusions. The upshot of the preceding study is that we possess nothing approaching a res extensa recepta of Khâyâm’s poetical works. What should we say, if for characteristics of a historical personality we had his correspondence in which scarcely a single letter could be authenticated and many were decidedly spurious? Taking, for instance, the important point of “mystic Şāfâyâm” we find that Žukowsky makes a strong point of it in Khâyâm’s poetry, while Christensen denies its importance, though in support of this insufficiently attested tendency one could quote Khâyâm’s metaphysical treatise in which the most honourable place is reserved to the Şâfit seekers of Truth (cf. Rosen, 1926).

The striking contradictions in the ideas and feelings expressed in the Rubâ‘iyât have struck all those who have written on Khâyâm and the characteristic trait of the “type associated with Khâyâm” seems to be precisely the alternation of sarcastic pessimism and epicurean hedonism, of the consciousness of frailty of our contingent existence and the joyful mood of carpe diem. Nevertheless it must be admitted that the pessimistic side of Khâyâm’s poetry is better attested by the quotations in the older biographers and, what is more, by the Arabic verses of ‘Omar Khâyâm which may have suffered in transmission but which certainly could not be imitated by popular tradition (F. Rosen has utilised the Arabic verses in his penetrating study of 1926).

FitzGerald’s version. Khâyâm’s popularity among large circles of the public is chiefly due to the English version by E. FitzGerald (1809—1883). This paraphrase has exceptional poetic merits, consisting in the second edition of 110 quatrains [third edition: 101], cannot, however, be taken for a translation in the strict sense of the word. E. Heron-Allen who most carefully compared the English and Persian texts (Some side-light upon FitzGerald’s poem “The Rubâ‘iyât of ‘O. Khâyâm”, 1898) has established that 40 quatrains are faithful paraphrases of single rubâ‘î; 44 are traceable to more than one rubâ‘î; 2 are inspired by the rubâ‘î found only in Nicolau’s edition; 2 reflect the “whole spirit” of the original; 2 are traceable exclusively to Ṭâṭar; 2 are inspired by Khâyâm but influenced by Ḥâfîz and 3 (only in the first two editions) could not be identified. As manifestations of the almost religious feeling with which the admirers treat FitzGerald’s version may be mentioned the ‘Omar Khâyâm Club, founded in London in 1892 (and its numerous imitations in the U.S.A.), as well as J. R. Tatin’s book, A concordance to FitzGerald’s translations, London 1900.

Bibliography. See the works mentioned in the present article. For the older bibliography see H. Ethé, in G. J. Ph., ii. 275—277; Brown, A Literary History of Persia, 1906, ii. 246—259; Krimsky, Istoriya Persii (Trudi po vostokoved- deniiu, xvi., tome i., № 4), Moscow 1909, p. 358—390. Last in date and very complete is A. G. Potter, A bibliography of the Rubâ‘iyât of ‘Omar Khâyâm, together with kindred matter in prose and verse pertaining thereto [second edition], London 1929, 314 pp. [contains 1,308 printed items and mentions over 50 principal MSS. and 35 editions of the text].

Translations into European languages: into English see above, Whinfield, Heron-Allen, Christensen, J. Payne, 1898; F. Rosen, The quatrains newly translated, London 1930; into German: A. von Schack, Stuttgart 1878; Bodenstein, Breslau 1881; F. Rosen, Die Sonnebrutsche Omars des Zelotakens (several editions); into French: see above Nicolas, Ch. Grolleau, Paris 1903; Claude Anet (in collaboration with Muhammad Khatn Kazzim), Paris 1920 (144 quatrains). Cf. also the extensive collection of translations into English, French, German, Italian and Danish edited by N. H. Doke, Boston and London 1898, 2 vols., clxxix. + 655 p. Single quatrains have been translated into most of European and extra-European languages, Basque, Yiddish and Gypsy included. Modern Arabic translations: Ahmad Hamid al-Šarrāf, Baghdād 1350 (1931) (with lengthy introduction); al-Sayyid Ahmad al-Šafi al-Najjāf, Dimishk 1350. (V. Minsky, Omārah b. Abī l-Ḥasan ʿAlī b. Zahirān al-Ḥakamī al-Yamanī, an Arab man of letters born in 515 (1121) in Martân on the Wâdī Wāsá in the district of al-Zarābīn in the Thāhmat al-Yaman, executed on Ramadan 2, 569 (1174) in Cairo, according to al-Fadīl al-Makhdūmī [cf. the article al-Salāhīn]. In that period the Yaman, broken up into many little principalities, was suffering severely from continual civil wars. Traditional learning was still in a flourishing condition however, especially in the large towns. In 530 (1136) Omāra was sent by his father to Zabid, where he studied, especially Shāfiʿī law, under ʿAbd Allāh b. al-Abbār and others. In the year 535 he was given his teacher’s diploma (līfāṣa), visited his parents and taught for three years in the madrasa of Zabid. While civil war was raging with particular violence in Zabid, he spent some time in the coast town of Anbara where he was on intimate terms with one of the pretenders, ʿAlī b. Mahdī [q. v.]. Returning to Zabid, he continued his studies and in the years 538–548 engaged in trading between Zabid and ʿAden which brought him into contact with the Banū Najīḥī, a dynasty of Abyssinian origin reigning in Zabid. In the year 538 (1143) he went on his first hajjī with some members of the dynasty. In ʿAden he entered literary circles and was able to develop his poetic gifts. The rivalry between the Najīḥīs and the Zurārīs who ruled in ʿAden provoked intrigues against him which threatened his life and forced him to leave the Yaman. In 549 (1155) he went on pilgrimage to Mecca and was sent by the Shirif Ḵāsim b. Ḥāshim on a mission to the Fāṭimids in Egypt. Returning to Mecca in the same year, he visited Zabid and ʿAden for the last time in 551 (1156) and in 552 (1157) again made the hajjī. Sent on a mission a second time, he settled permanently in Egypt. He said himself that he came here to seek “position and fortune” (al-fikr ʿalā ṣāḥba wa ʿl-ʿimāra: Diwan, i. 287); his later life is typical of the Arab adīb. Although he held for some time the title of ḱāḥī, he devoted himself exclusively to working as a court poet. His ḵāṣidās of praise were dedicated not so often to the last Fāṭimid caliph al-Fālid [q. v.] (d. 555 = 1160) and al-ʿĀṣid [q. v.] (d. 567 = 1171) as to their autocratic chievers, who changed the stage like marionettes: Taḥfī b. Ruzzik [q. v.] (d. 556 = 1161), Ruzzīk (d. 558 = 1163), Dirghām [q. v.] (d. 559 = 1164) and Shīrkhū [q. v.] (d. 564 = 1169). In the continued changes at court, Omārah managed always to hold his position. When Ṣalāḥ al-Dīn came to power first as vizier, he addressed to him in 1169 an appeal in verse which appears to have had the desired effect. With the end of the dynasty his position became difficult; Omārah was neither a Šāḥī nor an ʿImām al-Dīn in Dernbūren, i. 399 or al-Danjani, ibid., ii. 546–547) but his sympathies inclined to the Fāṭimids and he openly expressed them in a popular ḱāḥīda of lament. Very soon afterwards he took part in a conspiracy, the object of which was the restoration of the Fāṭimids, was crucified along with other participants and buried in the cemetery of Cairo. Among his contemporaries Omārah was especially renowned as an authority on law; in Zabid he was known as al-Fāradī, in al-Yaman as al-Šāfī (see al-Danjani in Dernbūren, ii. 546); several textbooks compiled by him on al-farādī were popular in his native land in his lifetime (see al-Nūkūr in Dernbūren, i. 23). Nothing of his legal work has survived and we only know him as a literary man of very ordinary type. His works in the sphere of Shāfīʿī law have disappeared, but his own time, but Dernbūren much exaggerates their literary value. The most interesting is perhaps al-Nūkūr al-ṭawīla fit al-Shārīr al-Šaṣṣah al-Mīṣīya (ed. by Dernbūren, i. 5–154; ii. 503–511) which contains many autobiographical details, an anthology of his verse and notes on the contemporary Egyptian viziers. It begins in the year 558 (1162) and comes down to the death of Shāwar (564 = 1169). He dedicated his history of al-Yaman to the Kâdī al-Fāḍil [q. v.] (1135–1200); it was begun at his suggestion in 563 and finished in the following year (ed. by H. C. Kay). Based on the same plan as a work of his predecessor, the emir of Zabid Ṭaḥṣīrī b. Najīḥah (d. 498 = 1158), called al-Muṣīfī fit al-Shārīr Zabīd, which has not come down to us, it is known as the Turḵī al-Yaman. Its importance lies mainly in what he tells from his own experience or hearsay. Of less interest are his Tarāṣṣalūtī, nine in number (ed. Dernbūren, ii. 431–490). They show the influence of the famous Ṭalḥī al-Kādī al-Fāḍil, being in rhymed prose filled with all kinds of stylistic figures. His anthology of the poets of Arabia, particularly of al-Yaman, has not come down to us but was much used by ʿImād al-Dīn in his Ḵūrīdīr al-Ḵasrī. Of his Diwān (ed. by Dernbūren, i. 155–394; ii. 405–429, 511–539) no proper edition exists and all the known manuscripts differ in their contents and are not all complete. His famous ḱāḥīda of lamentation for the Fāṭimids for example is known not from his own Diwān but from the separate MSS. and other sources (in addition to the texts from Ibn Wāṣil and al-Maʿṣūrī given by Dernbūren, ii. 612–616 see now al-Kalḵāshandī, Ṣabīḥ al-ʿĀṣid, iii., Cairo 1914, p. 530–532). As a poet Omārah was entirely in the tradition of the later ʿAbbaṣī school. His models in the panegyric style he found in Bashshār, Mīyār and al-Buṭṭūry (Diwān, i. 266–267); to these may be added Abī Tammām (the Arab critics had already noticed this; cf. e.g. Ibn al-ʿAthīr, al-Maṣāḥa al-tawīrīr, Cairo 1282, p. 409) and al-Mutanabbi. The influence of the last named is particularly marked,
not only in his verses, but also in many passages in his letters. As regards subject, his poems are mainly kaṣādas of praise or lamentation. Satires (ḥida'ā) are rare as he had once promised his father neve to insult a Muslim (Derenbourg, ii. 791). This of course did not prevent him from mocking officials of Christian origin in epigrams which are quite obscene (Divān, i. 312; 331); in keeping with the taste of his time we frequently find in his Divān prophetic phrases (v. 283, 392; ii. 431, N. 342). The form of his poetry follows tradition in matter and composition; only a few muwâwīkhādāt are attributed to him (Divān, i. 388—391; to be added in M. Hartmann, Das arabische Ströpfengedicht, i., Weimar 1897).

OMDURMAN (Um Dürman), a town of the Anglo-Egyptian Sudan situated on the west bank of the main Nile immediately below the junction of the Blue and White Niles. A seven-span steel bridge built in 1925—1928 connects Omdurman with Khartūm (q.v.), and the two towns (together with Khartūm North on the right bank of the Blue Nile) form for practical purposes a single city; but whereas Khartūm as the seat of the government and the centre of foreign commerce has acquired a European character blended of British and Levantine elements, Omdurman remains the focus of native life and of the internal trade of the Sudan. The inhabitants number some 110,000, of whom the great majority are natives drawn from every part of the country.

The importance of Omdurman is of very recent origin; it started as an insignificant village in the territory of the Fritḥāb (a branch of the Qimāṭyā tribe) and is first mentioned as the dwelling-place of a ascetic and "holy man", Hamad b. Muhammad generally known as Hamad Walad Umm Maryūm, who lived from 1640 to 1730 A.D. (see MacMichael, History of the Arabs in the Sudan, ii. 277). The site first became important when it was fortified by Gordon for the defence of Khartūm against the Darwīsh army of Muhammad Ahmad [q.v.] who captured it on January 15, 1895, ten days before the fall and sack of Khartūm. Under Muhammad Ahmad's successor, the khalīfa 'Abdulwālī, Omdurman was the capital of the Mahdist state and the religious centre of the new sect. The Mahdi's tomb, a domed building designed by an Egyptian captive, was erected in the middle of the new settlement which henceforth was known as Būk'at al-Mahdi, the [holy] place of the Mahdi, and by the khalīfa’s ordinance the duty of visiting the tomb was substituted for the orthodox pilgrimage to Mecca. In order to consolidate his personal rule the khalīfa induced large numbers of his fellow-tribesmen, the Tanīgha and other Baṭsīrah from the western Sudan, to settle in Omdurman where they could support themselves only through the spoliation of the ivoryin population; this migration was described as a ḥida'ā in accordance with the Mahdist practice of establishing analogies between the life of Muhammad Ahmad and his companions and the early history of Islam. The population of Omdurman was further swelled by the enforced settlement of large numbers of tribesmen from all parts of the country whom the khalīfa desired to concentrate at his own headquarters for political or military reasons. The town grew up in a haphazard fashion and, apart from the houses of the khalīfa and his principal amirs, consisted of a struggling mass of straw huts covering a length of about six miles from south to north. The khalīfa’s "mosque" was a vast open space in the centre of the town enclosed by brick walls. For a graphic description of Omdurman under the khalīfa’s rule see Sir Rudolf von Slatin’s Fire and Sword in the Sudan.

The reconquest of the Sudan by the Anglo-Egyptian forces under Lord Kitchener was completed by the battle of Omdurman on September 2, 1898, the scene of which was near the village of Kerċerī a few miles to the north of the town. Under the new administration the town has acquired such modern features as regularly laid-out streets, tramways and electric light. The houses of the well-to-do townpeople and the government buildings are built of brick and stone, but a large part of the town still consists of the rectangular mud buildings which are characteristic of the northern Sudan, and the life of the busy markets preserves its Oriental and African character. Associated with the principal mosque there is an institution known as al-madīhad al-ilāmī, presided over by a shaikh al-ilmāmi, which provides instruction in the traditional subjects of Muslim learning. The kādis employed in Muslim law courts are however drawn from students of the Gordon College in Khartūm. For secular education Omdurman possesses a government intermediate school and several kuttābā (government elementary schools) as well as a number of schools maintained by missiona ry societies and by private enterprise.

S. Hillelson

ORÂMÂR, URMAR. The administrative geography of Turkey speaks sometimes of a baṣaṣa of Urâmâr containing two nāhiya, Djilüle and Ishâţân; with 32 neighborhoods and 25,910 inhabitants (cf. Cuiinet, Turque d'Asie, ii, 756), sometimes of a nāhîya of this name forming part of the baṣaṣa of Gavar, in the sanjaq of Ħakkari, in the wilâyet of Wân [q. v.]. We incline rather to the second definition, having visited this district, lost in the middle of Central Kurdistan. Not only has Orâmar not the importance of a baṣaṣa but the two nāhîya attributed to it are inhabited exclusively by Nestorians [q. v.], the Djilüle, being autonomous while Orâmar is at present at least purely Kurdish and an appanage of the house of Mâlah Mirî, a tribe of Duskânîs Zûri and not Herikî (Cuiinet, op. cit.): a further proof of the inaccuracy of the Turkish statements regarding this part of Kurdistan. The boundaries of Orâmar are on the north Ishtagân and Gavar; on the south Šekkân: on the west Djilüle, Bûz and Tîşâma [cf. Nestorians] and Artûš; in the east Šul [cf. Shâmîndân]. Orâmar situated at a height of 5,520 feet (cf. Dickson) is a group of hamlets scattered on the two sides of a rocky mountain spur above the Rûhârî Shîn. On the spur itself which is called Gaparâni Zher, at the place named Gire Bûî, is the capital of the group and the residence of the zâhîh, the Nâw Gund or "the middle of the town". A large cemetery occupies the promontory at the end of the spur. The name Gire Bûî which we explain as the "hill of the idol" seems to indicate the antiquity of the settlement. The fact that the slopes separated by the Gaparâni are very carefully cultivated and present a complicated system of little terraces each of which is a field or tiny kitchen garden, leads one to believe that man chose this site for habitation a long time ago, perhaps simply on account of its extreme isolation in the centre of a wild country.

O r o g r a p h y. On the general character of the country see the article Nestorians, Orâmar is at east end of the curve traced by the system of the Djilû Dîghî. According to Dickson, the chains and valleys of Turkish Kurdistan run roughly along the parallels of latitude and take a south-eastern direction as they approach the Persian frontier and at the point where they change their axis form a complicated system of heights and valleys. The most complicated part near the centre of the change of axis in question may be called Hartî-Orâmar.

R o a d s y s t e m. Although they are really nothing but tracks used for intertribal communications, it is nevertheless interesting to indicate the directions to connect the routes of the road-system which we have studied at Rawândzî and Shâmîndân [cf. these articles] which must have played a more prominent part in ancient times. Orâmar is connected with Gavar via Shamskî, the pass of Bašhtázîn, 'Ali Kânî, Baţûtî and Dîzza. It is a road which shows traces of works undertaken at the more dangerous places. To the south the road going through a very narrow defile leads first to Nerwa (cf. below) where it forks: 1. to the west, by the district of Artûshî, via Birtû-Tîsîm and the district of Nirwe via Wîlîa and Pîrî Hâlân, this last place being on the left bank of the Great Zāb opposite Sûriya on the road from 'Akrâr; 2. to the east, by the district of Rekâni, via Bèzâlî-Sadadî and Avî Mârîk (water course) to Barzan and Bahrî Ras on the left bank of the Great Zāb opposite Bîr Kepran, also on the road from 'Akrâr. A third road goes from Nerwa to Nehri, the centre of Shâmîndân, via Raĝa, the heights of Peramîzî (frontier of the three tribes — Rekâni, Harkî, Duskânî), Derî deffle of Harkî (Sîwa Harkî), Begor, Mazrâ, Nehri. It is to be hoped that with the final delimitation of the boundary between Turkey and the Irâk, this region will be properly surveyed and mapped and will no longer as at present show so many blanks and inaccuracies on the maps (cf. Astre François, Oct.-Nov. 1926, treaty of delimitation).

E t h n o g r a p h y. The following Kurdish tribes may be mentioned in Orâmar itself and in the vicinity with ramifications inevitable as a result of the Kurd migrations. After the name of each tribe we give in brackets that of the district and the number of households: Duskânîs Zûri (Orâmar, 2,000); Nirwe (Nerwa, baṣaṣa of Amâdiya, 800); Djîr (Gavar and Gelîa Djîr, 1,000); Penanîshî (between Gavar and Dîlûmerk, and the part of the Pirhulî, near Bashkâlî, 4,000); Duskânîs Zûri (baṣaṣa Dehuk, 2,000); Maisîrì Zûri (ibid., 5,000). Berwârî (ibid., 4,000). Gauël, nomads (wintering at Dehuk; summing at Gavar and Orâmar, 1,400); Ceïl (Dîlûmerk, 6,000); Artûshî (summing at Fârûshî; wintering at Berîl Zângî, 6,000); Artûshî (sedentary Alâbîk, 1,000; Nurzî, 1,000); parts of Artûshî: Gwardam, Mâm Kûrân, Zhirkî (around Dîlûmerk, 6,000).

H i s t o r y. There are so far as we know no texts mentioning Orâmar except this brief note in the Mirâzd al-Bâldîn (Tîrân, p. 22): Ormar bi-dammi awal wa-sukhî-ya-thîn iktî as-aghî-ši Ashârî-sâîdîn ast dâr āmâdî dânašî kahte rîzÎ dângi wa-mudâfî Sâlî ibn ut-cî Âm dângî wa-Sîrî dângî-ya Sallî Dîrîr ibn 'Abd al-lâl al-Badjîlî bâ dângî dângî âmâdît mamâr kurd wa-Qûrîr âmâdît mamâr bawayasawardî-i iškân bâ dî dîr zad. —

We may note here: 1. the reading Urmar which corresponds to the pronunciation of the Highland Nestorians for this part of the but differs from it in giving an a and not an ò for the second (in Kurdish the pronunciation is Horâmar with the characteristic aspiration); 2. the qualification al-Badjîlî which is to be connected with Badjîlî, a Kurd village in the neighbourhood known for its family of Shaikh Badjîlî; 3. the fact that the date of this event is not indicated. Orâmar however like all this part of Central Kurdistan must have had a rich history full of associations with the history of Christianity in these regions. Here we give a description of the Nestorian church of Mâr Mâni which is in the village of the same name in Orâmar and has not been previously described; Dickson mentions it; as to Cuiinet (op. cit., ii, 757) he says that the 40 Nestorians raysa domiciled in Orâmar are entrusted with the care of the two Nestorian churches in the Kurdish town (see). The second church called that of Mâr Dâmilî at Naw Gund (cf. above) has been turned into a mosque within the memory of the present generation. The Nestorian charm uttered at the sight of a snake in order to escape its bite mentions the two saints: Mâr Mâni Mâr Dâmilî kîps-l-kubîn kîhs ("M. M., M. D., the stone on the snake"). For legend says
that the saint Mārī Manū escaped from martyrdom in the time of Julian the apostate at Caesarea in Cappadocia and took refuge in the mountains where he collected the reptiles and shut them up under a flagstone over which was built the church which bears his name (cf. Acta Martyrum et Sanctorum, ed. Bedjan, vi, 1896). The life of the saint however contains no mention of Orāmār or of reptiles but it does attribute to him certain powers over wild animals. The version collected by Dickson seems to differ too much from the life of the saint. Dickson thinks that the church was erected on the site of an Assyrian zikkurat. In any case the following is the description of the sanctuary which is guarded by the Nestorian family bearing the title of Serdar Bī Mārī Manū. Were it not for a very little door adorned in the upper part with a Nestorian cross and two circles within which is the same cross, one would not suppose that the building of rough stone in the form of a parallelepiped was a church. In the semi-darkness of the interior one can see that a quarter of the area is taken up by the sanctuary while separated from the nave by a wall in which are two doors. Through that on the left one approaches the altar proper represented by a stone over three feet high and about two broad half built into the wall with rounded edges and narrowing towards the top. Above this altar is a very narrow, very high, very little niche. From the sanctuary a door through a stone wall leads into another chamber in which there is a primitive baptistery carved out of the rock and a little lower on the same base a hearth (tanura) for the preparation of the unleavened bread. In front of this part set aside for the divine offices, there are two pulpits also in stone for the liturgical books and for the Gospels and the cross. The bells are replaced by two metal plates hung from a rod connecting the two walls at the bottom of the vaulting. There are no sacred images. The dimensions of the church are about 40 feet long, 17 broad and 16 high. According to the legend, the reptiles shut up beneath the altar would come out if the family of guardians were deprived of their secular privileges. The dust from the walls possesses virtues against the bites of mad dogs, the slings of snakes and scorpions, etc. — We have very little certain information about the Nestorian churches of Kurdīstān, some of which, that of Mār Bishū on the Persian frontier (Tergawar), that of Mār Zaīla at Dijlī, that of Mār Sawā at Ashīta as well as the ruins at Kuqanīs must with Mār Manū go back to a high antiquity between the 4th and 6th centuries, for it is to this period that we are told we must put the coming of the first missionaries, Mār Awgin, Mār Bishū etc. The plan of Mār Manū may be compared with that of Mār Bishū given by Heazzel (Kurds and Christians), while in W. A. Wigram (The Assyrians and their Neighbours, London 1939) is a sketch of the interior of the church of Mār Shahīthā at Kuqanīs. In any case there is reason to believe that Orāmār was once inhabited by Christians. A local tradition even suggests that the ancestor of the modern tribal Mádūs came long ago into this Christian district and by stratagems and intrigues succeeded in driving out its inhabitants. The toponymy of Orāmār seems to confirm this. The etymology of the name Orāmār itself would also seem to be Araamic. — We owe to Mgr. Grafini the interpretation of the name as Ur-mūr “citadel of the master” (cf. Ur-siklitum). This explanation would be corroborated by the inaccessible character of the region. It would confirm at the same time our supposition that this district was inhabited at a very early date. — There are similar place-names elsewhere in the region: Ora Bishū, one of the slopes of Kiria Tawka (cf. above); Orishu, a village beyond Gela Nu; Uri, a Nestorian clan; finally Urmia itself.

Bibliography: The only works with which we are acquainted are listed in our joint study with E. B. Soane, Sato and Tato, a Kurdisch text with transl. and notes, in B.S.O.S., iii., p. 1. — In the review of the Geographical Society of Paris appeared in 1935 our study on Le système routier du Kurdistān, containing besides many geographical details a general view of Orāmār from a rare photograph.

(B. Nikitine)

ORAN (Wahran), a sea-port town on the coast of Algeria (33° 44' N. Lat.; 0° 39' W. Long.). The anchorage which is protected on the west by the heights of the Aïdou, the extreme end of the little range of Mirdajdo, and the bay of Mars al-Kabir, 10 miles distant, was probably the Portus Divini mentioned in the Itinerary of Antoninus. According to the Arab writers however, the town was founded, as a number of other towns on the northern coast, by Andalusians: at the beginning of the tenth century (c. 290 A.H.) a band of these émigrés came there under the leadership of two chiefs in the service of the Umayyads of Cordova, Muhammad b. Abi 'Awn, and Muhammad b. 'Abdān who concluded a treaty with the families of the Berber tribe of the Azādja settled in the district.

Seven years after its foundation, Oran, which the agents of the Umayyads had no doubt wished to make a base for the enterprises of their masters, felt the repercussions of the rivalry between the Umayyads and the Fāṣimids of Kairawān. A body of soldiers sent by the latter and supported by the Azādja Berbers seized the town and burned it. Rebuilt, Oran was placed under the authority of the Fāṣimid governor of Tiyařet. Throughout the fourth century (tenth A.D.) it was held alternately by the Fāṣimids and Umayyads and was taken and re-conquered (notably in 910 and 954) and rebuilt by expeditionary corps or Berber chiefs representing the two rival caliphs. In spite of these vicissitudes, the town enjoyed great economic prosperity as a result of its position on the coast. The geographer Ibn Hawkal, who visited it in the second half of the tenth century, thought that there was not a more sheltered port in the whole of Barbary. The commercial relations with Spain were considerable. (The town however at this date was under the authority of ziyya b. Nānān [cf. Zirids], a vassal of the Fāṣimids). Large quantities of wheat were exported from it. The country around was well cultivated. The river (Wādī Behi, now covered over in its passage through the town) served to irrigate the fine gardens.

In the eleventh century, Oran belonged to the Banū Khalīṣ, a branch of the Maghra wa Zenāt who ruled in Tlemcen. It was from them that the Almoravid Yūsuf b. Tashfin took the town when he conquered the Central Magrib in 473 (1081). 63 years later it was to be the scene of the drama in which Almoravid power met its end.
On Ramdan 27, 539 (March 23, 1145) the second last emir of the dynasty, Tâshfin b. 'Ali, defeated near Tlemcen by the Almohads, died there. Three days later the town passed to the Almohads.

Under its new masters the town prospered. Idiisi described it as surrounded by a good wall of earth and possessing well-furnished bazaars. The harbour, which was supplemented by that of Mars al-Kabir, was within easy reach of Almeria. It had a naval arsenal and 'Abd al-Mu'timin built ships there.

The part which it played in commerce with Spain became still more important when the 'Abd al-Wâdîds [q.v.] replaced the Almohads in the Central Maghrib. Oran was, along with Honain, to the east of the modern Nemours, a port of Tlemcen. The wealth of the capital depended on the possession of these ports and on the safety and liberty of traffic on the roads which led to them. This explains why throughout the xivth century when the Marinids came to besiege Tlemcen, they sent a force against the coasts to try to take Honain and Oran. In 1748 (1347) the Marinid Abu l-Hasan built two forts there.

At the beginning of the xvth century, the Castillians, continuing the work of the Reconquista on the Berber coast, endeavoured to take Oran, which had now become a dangerous centre of piracy. They were only able to take Mars al-Kabir in 1505 and Oran in 1509. On May 17, Pedro Navarro entered the town, massacred 4,000 Muslims and sent off 8,000 prisoners. Cardinal Ximenes who had organised the expedition came in person to take possession of the new conquest. Wishing to develop their success the Spaniards interfered in the quarrels of the last 'Abd al-Wâdîd kings of Tlemcen. They gave their support to one of these princes who had lost his throne and this provoked the intervention of 'Arûdi [q.v.], the Turkish corsair of Algiers. The latter having been defeated and killed, the 'Abd al-Wâdîd Abu 'Abd Allah was restored to the throne of Tlemcen by the Christians in 1543 and became their vassal. The other expeditions planned from Oran as a base produced little result and were ended by the disastrous expedition of the Count Alcaudete against Mostaganem in 1558. The Spaniards were at Oran, as elsewhere, practically confined within their walls, badly supplied by their Berber allies (los Moros de Pas), exposed to famine, plague and the attacks of the Berbers supported by the Turks; they nevertheless held it till 1708. After a siege of five months, they capitulated and the Bey of Mescara Bu Shahîgah took possession of it in the name of the Dey of Algiers.

At the end of twenty-four years of Turkish rule the Spaniards re-entered the town. The Count of Montemar, having routed the Arabs who held the coast, entered the town which was undefended in 1732. Bu Shahîgah tried in vain to re-take it. At last in 1791 after a terrible earthquake in which almost 2,000 perished and which was followed by an attack by the Bey of Mescara, Muhammad al-Kabir, the king of Spain Charles VI agreed to surrender Oran to the Dey of Algiers; some 70 or 80 Spanish families remained in it however. The town restored to Islam became the residence of the Bey of the West and remained so till 1830. On Jan. 4, 1831, the French, already masters of Mars al-Kabir, entered Oran.

The town has developed immensely since then.

The population, which was 3,800 in 1832, is now over 160,000. Of this total the Muslims number at least 25,000. They live mainly in the southern quarter known as the "village nègre". Among the Europeans the element of Spanish origin is considerable.

There is little trace of its Muhammadan past in Oran. The Spanish period has left more, notably the old fortress with its gateway adorned with vigorously carved coats of arms.

ORFA (Greek Edessa, Z. Syr. Orhâ, Armen. Õhây, Ar. al-Ruhâ), an important town in Diyâr Muhammad, the ancient Osroene.

The origin of the town, which must have existed before the Macedonian conquest, is lost in obscurity. Repeated attempts to prove the existence of the name in Assyrian times (E. Honigmann, Urfa keilschriftlich nachzeitarb., in Z. A., N. F., v. 1930, p. 301 sq.) have so far failed. The original name was probably Ō̄fân which has survived in that of the spring Kallâš, which lay below the walls of the town, and in that of the district of Osroene (cf. Orfa in Isid. Charac., i, ed. Müllner, in G.G.M., i. 246; Ō̄fân, Steph. Byz., s. Bârby; Arabs Orfe, Plin., Nat. Hist., v. 85; vi. 23. 129; in inscriptions Orhaeni, C. L., vi. 1707; their land was called in Syriac Bith Orfa; Cureton, Spilii. Syr., p. 20). A derivation of the Syriac Orfaš from the Arabic Warhâši (a fîlîš-form from warîša, "rich in water") as proposed by Markwart (in E. Hersfeld, in Z. D. M. G., lviii., 1914, p. 665 sq.) can hardly be accepted; as little probable is that from Orhaš, the alleged first ruler and eponym of the town.

Edessa was refounded by Seleucus I on the site of an older settlement (Euseb.-Hieron., Chron., ed. Helm, p. 127) and renamed by Antiochos IV ʻAntîkas evi Kallâš (Plin., Nat. Hist., v. 86: ḤEadesām quæ ad quondam Antiochâ dictabatur, Callirhoenâ a fonte nominatum; coins in Babelon, Köis de Syrie, cii.; Head, Histar, num. 2, p. 814 and Hill, Greek Coins of Arabia in the British Museum, London 1922, p. cxiv.—cviili. and 91—119). It received its Hellenistic name very probably from that of the capital of Macedonia (the ancient Aigai, now Vodena) and the wealth of water may have contributed to the choice of the name (Steph. Byz.: ḤEadesā, τῆς Σιρίας, δία τῶν ὕδατος μένου ὀνόματι χρυσάς ἢ τῆς ποιοτείας ἰδιότητος, of Macedon.; Nordeke, Hercus, v. 459, wished to emend ὀνόματι to ὄρος, but cf. ὑδατα from ἅῦδος = ὀδα, voda, from which Vodena is derived: G. Hoffmann, Die Makedonen, Gottingen 1906, p. 257; J. Marquart, loc. cit., p. 665 sq.; W. Tomaschek, in S. B. d. W.,
According to Malalas, the town was also called "Antiochē τοῦ μείζονος" (p. 418 sq., ed. Bonn.).

In the pre-Christian period Edessa, like Harrân, was the centre of a planet-cult. Edessenes called Venus "Bath Nikkal" (Doctrina Addai, p. 24), i.e. "the daughter of Ningal" (G. Hoffmann, in Z. A., xi, 1896, p. 258—260, § 11; Winckworth, in Journal of Theol. Stud., xx. 402).

Before the foundation of the Osrhoene kingdom, the town seems to have been an unimportant place under the Seleucids (to 139 B.C.). Its earlier history is quite unknown. The kings of Osrhoene, whom the Romans regarded as Arabs (Tact., Ann., xii. 12, 14; Plin., Nat. Hist., v. 55; Arabiam Orrhoeos), bore Nabataean (Ma'nî, Bakrû, Ṣabdû, Sahrû, Gebarû, Ayûrû), Arab (Abgar, Ma'ûr, Wu'll) or Parthian (Phradasht, Pharnaspas or Parthamaspates) names. From the end of the first century A.D. the dynasty was closely related by inter-marriage to that of Adiabene (Duval, Histoire d'Edesse, p. 27 sq.) which then ruled Nîbûs also (Josephus, Ant. Jud., xxv. 68).

The names and chronology of the kings of the Greeks called them, toparch or phyarchus of Edesse (Osrhoene) are known from the "Edessene Chronicle" (composed about 540 A.D.), and the "Chronicle of Zuqitn" (near Amid; preserved in the same Cod. Vat. Syr. 162) written about 775 A.D. According to the "Edessene Chronicle", the dynasty ruled for 552 years, and began in 133-132 B.C. with Orhîî bar Ḩeveyû but according to v. Gutschmidt, rather with Areyû (Doct. Addai, ed. Phillips, p. 47), whose name is not to be regarded as Iranian (v. Gutschmidt, in Mém. de l'Acad. Imp. des Scien. de St. Pétersb., series vii., xxxv., 1887, p. 19), but as Semitic ("Lion") (Duval, Histoire d'Edesse, p. 26 sq.).

The list of toparchs which has been corrected by von Gutschmidt from historical references and coins is as follows: they were under Parthian suzerainty at first (down to 57 B.C.)

Areyû (132-127 B.C.); Ṣabdû bar Ma'ûr (127-120); Phradasht bar Gebarû (120-115); Bakrû I bar Phradasht (115-112); Bakrû II bar Bakrû (alone 112-94; together with Ma'nî 94; with Abgar I Pe'kê 94-92); Abgar I (alone 92-68), in which the reign of the kingdom passed for a short time to Tigranes of Armenia; Abgar II (Ariamnes?) bar Abgar, of the family of Ma'nî, hence in Florus III, 11., and Ruf. Fest., Brev., 17: Mazorus, Mazaera etc. (68-53), who entered into friendly relations with Rome about 65-64. After the battle of Carrhae there was an interregnum of one year (53-52). Ma'nî II Allîhî (Theos, 52-34); Fakurî (34-29); Abgar III (29-26); Abgar IV Sumakû (26-23); Ma'nî III Saphil (23-4 B.C.); Abgar V Ukkâmî (4 B.C.—7 A.D.); Ma'nî IV bar Ma'nî (7—13 A.D.); Cumont found in the citadel of Birejik an epitaph in Syriac of 6 A.D. (?) of Zabirian, commandant of Birtha and governor for the time Ma'nî bar Ma'nî (Kügner, in R.S.O., i, 1908, p. 557; Cumont, Études syriaques, Paris 1917, p. 144); Abgar V Ukkâmî (for the second time: 13-50); Ma'nî V bar Abgar (50-57); Ma'nî VI bar Abgar (57-71); Abgar VI bar Ma'nî (71-91), under whom the Senator Ma'nî bar Ma'nî had a sepulchral tower built for himself in Serin on the Euphrates (B. Moritz, Inscriptions aus Syrien, Mesopotamien und Kleinasien, ed. Oppenheim, Leipzig 1913, p. 165 sq.); interregnum of 18 years (91-109; rule of Sanatrûces of Adiabene, nephew of Abgar, over Edessa?); Abgar VII bar Izat (109—116).

After the great rebellion of 116 the town was taken by Lucius Quietus and burned. There followed a brief interregnum under Roman rule (116—118). Iûr (or Vulud) and Pharnaspas (118—122), then Pharnaspas alone (122—123); Ma'nî VII bar Izat (123—139); Ma'nî VIII bar Ma'nî (139—163). In the Parthian war of Lucius Verus, Edessa was besieged by the Romans in 163—164 and surrendered to them after the murder of the Parthian garrison. During the war the ruler was Wu'll bar Sahrû (163—165). After the conclusion of peace (165) Edessa passed under Roman protection; Abgar VIII (165—167); Ma'nî VIII phâlîmânîs (for the second time 167—179); Abgar IX bar Ma'nî (on coins: Α. Κύριος Ἡσταίμης Μέγας Ἀβγαρός; 179—214), under whom occurred the first great inundation of Edessa (Nov. 201) which destroyed his palace; a winter palace was thereupon built in the Tebarâ quarter. The official account of the catastrophe and of the measures taken by the king is preserved in the "Edessene Chronicle" from documents in the royal archives. Abgar was in Rome perhaps in 202 where he was received with all honour by Septimius Severus. Christianity is said to have been made the state religion in his time (which has however not been proved: Gomperz, Archäol.-epigraph. Mitt. aus Oster-Ungarn, xix. 154—157); according to legend Abgar V Ukkâmî had become a Christian in the year 29 or 32 (R. A. Lipsius, Die edessische Augsburger kritisch untersucht, Brunswick 1880). A friend of Abgar IX was the Christian scholar Bardaisan (Vardanes, 154—222 A.D.); Sex. Julius Africanus is also said to have spent some time at his court (Ps. Moses Khoren, Hist., ii. 10). The cult of Thar'ashî was exterminated by Abgar IX with great rigor. Abgar then ruled along with Severus Abgar X bar Abgar as co-ruler (214—216); both were put in chains by the emperor Antoninus Caracalla in 216. The emperor spent the winter in Edessa which was now created a Roman colonia and on Apr. 8, 217 he was murdered on his way from there to Carthâae.

After the fall of the kingdom of Edessa, according to the "Chronicle of Zuqitn", Ma'nî IX bar Abgar ruled for another 26 years (216—242), but he probably lived during this time in Rome and was only nominal ruler.

When the Staânsins Ardshir and Shâhpuru I disputed Osrhoene with the Romans, Gordian III again set up a member of the old family as king in Edessa. According to the coins, Abgar XI Phrahatres reigned from 242-244; he was probably a son of (Antoninus) Ma'nî. Returning to Rome, he erected a tombstone there to his wife Hodda with inscription (C. I. L., vi. 1797).

After the royal house had adopted Christianity, Edessa became along with Adiabene the centre of literary activity in Syriac (east Aram.) (cf. Duval, Histoire d'Edesse, p. 107 sq. and the histories of Syriac literature by Wright, Duval and Baumstark).

Edessa became a Roman city from the time of Gordian (244); after his death, it is true, Philip the Arab invaded Mesopotamia as far as the Euphrates to the Parthians; but the Roman garrisons remained in the country (Mommsen, R.G., v. 422). Shâhpuru I besieged Edessa in 260, and the emperor Valerian was taken prisoner by the Persians not far from here about this time. The
town then belonged for a time (till 273) to the kingdom of Palmyra under Odaïnath and Zenobia.

After the peace of 363 Aphrem (Epiphram; d. June 9, 373) of Nisibis moved to Edessa and founded there the “Persian school”; the emperor Valens banished the Orthodox from Edessa as Arians in Sept. 373 and they only returned after his death in 378. The monasteries on the sacred hill at Edessa were plundered by the Huns in 396 and Aphrem’s nephew 'Absamya composed laments upon this.

It is only from the beginning of the third century that we know the names of bishops of the town; these begin with Papù (c. 200) and among them are Rabbâlî, the enemy of the Nestorians (411—435), his opponent and successor Hîbî (435—457) and in the sixth century the founder of the Severian “Jacobites,” James Baradaios (Ya'kôb Bûrdeamû, d. 578), but later persecutions of the Christians led to the martyrology, much embellished by legend, of the “Edessa professors” Sharbîl and Barsamîa (250 A.D.), Shemônî, Gûrîya, and Hîbbîb (509—510). The legend of the “man of God from the city of Rome” (St. Alexius) is put in the period of Rabbâlî.

Edessa became the capital and ecclesiastical metropolis of the eparchy of Osroene. There were seven bishoprics under it in 451: Marêqâlîs (Syriac Hîklâ de-Saiygda, “temple of the hunter”), Kâllê (Harrân), Ksîrênîa, Bêwê (now Biredîjk), Kallînînus, Kowzqartîn (Tellâ, Tellâ de-Mawzeltâ), and that of the Taiyâné (Schulthess, in Abh. G. W. Gutt., N. S., x., 1890, No. 2, p. 134). Later were added Bîrma (Sarûdî), Yêlêmêm (Tellmêmeh), “Hirmâ” (Syr. Imerin), DêwÎn (Arab. Kalât-Dîbar), Nîn Olaqalla and Mâsêrê (Syr. Ma'ritha; cf. B. Z., xxv., 1924, p. 73 sq., 77 sq.).

The emperor Zeno in 489 finally closed the “school of the Persians” after the Nestorians had already with their leader Narsai been driven out of Edessa in 457 (Baumstark, Gesch. d. syr. Lit., p. 104, note 12, p. 109, note 10). The war with the Persians (502—506) in the reign of Anastasius is described in the Syriac chronicle by an Edessene, the author of which is wrongly said to be Joshua (Joshî) Stylites. After Amida had fallen in 503, Kâwghân besieged Edessa but could not take it (Procopius, Bell. Pers., ii. 13). The undisciplined Gothic troops, who were to defend it, plundered it like enemies and practically the whole of Osroene was depopulated. After the fourth inundation of the town (525 A.D.; see below) the emperor Justin I restored it and gave it the name of Khuwârâ (Malalu, ed. Bonn, p. 419; Euagrius, Hist. ecc., iv. 8; Hallier’s quite unfounded doubts, Texte u. Unterr., iv. 136, are repeated by Ed. Meyers, R. E., i. 5. ed. Edessa, No. 1, 2, etc.). Khusraw I in May 540 on his way back from Syria encamped in front of the city but retired on receiving 200 pounds of gold (Chr. of Edessa, ch. 105; Noldke, Ṭabârî, p. 239). His stubborn siege in 544 proved without success. According to a late legend, the wondrous powers of the ikôn DχKpOÎfOvTÎK, which were rediscovered at this time, saved the city from the enemy.

In the sixth century the whole of Syria and Mesopotamia was won for the Monophysites. In Edessa Stephanos bar Šudâlît, who, influenced by Origen, preached a pantheistic doctrine, found many followers. In 580 Hormizd IV sent the general Adharmahan against the Byzantines but he retreated after a three days’ siege of Edessa. Khusraw II who had been previously in Edessa on his flight to Maurice, conquered the town in 609 (Chron. Pasch., ed. Bonn, p. 699; Cedren., ed. Bonn, i. 714; Theoph. cont., ed. Bonn, p. 432) after it had previously gone over to him for a time under the Byzantine general Nares, and deported a large number of Jacobites to Khûrân and Sidjîstân (Barhebraeus, Chron. ecc., ii. 125). After his victories over Persia, Heraclius in 628 restored orthodoxy in Edessa, and banished the prominent Jacobite families.

On the topography of the town Syriac and Greek authors supply us with a good deal of information. Edessa lay at the intersection of the road from Samosata (Samâs) to Carrhae (Harrân) with the great trade route between east and west from the Euphrates at Zeugma-Balkîs and Birthâ-Biredjîk via Mârûm and Nâṣibîn to the Tigris. The Antonine Itinerary knows (p. 184—192) two roads from Germanicia via Zeugma, one from there via Samosata and one from Callicome to Edessa. The town lay in a hollow surrounded on three sides by mountains and open on the southeast on the river Euphras (Syr. Dultîn, “the Leaper”), the modern Karn Kûbîn or Nahr el-Kût. This branch of which the Dûljâb flows into the Balîkh, in the past, according to the Edessene Chronicle, four times inundated the town and wrought great havoc (in Nov. 201, May 303, March 18, 413 and April 22, 525) until the emperor Justinian had a canal dug to drain off the flood water north of the town (Procopius, De aed., ii. 7, 1 sq.; Aucell., 18, 38). We hear again in 668 and 743 of floods however (Theoph. Chron., ed. de Boor, p. 537; Chronicle of Zubîn, under the year 743). The town was surrounded by a double wall. This enclosed on the southwest the citadel which stood on a spur of the Nimrûd-Dagh and was overshadowed by this mountain; Justinian therefore had its walls strengthened on this side. At the western end of the citadel are two columns one of which, according to its inscription, was put up by queen Shalma, the daughter of Manî (Sachau, in Z. D. M. G., xxxvi. 153 sqq.). On a large open place in the citadel called Bîh Tehdrâ, Abgar IX after the inundation of 201 had a winter palace built (cf. above) and the aristocracy of the town moved their quarters to the adjoining upper market called Bîh Sahârye. There was also a large altar there which was still standing in Christian times, and probably also the royal archives (ἔργατος; Bîh ‘Udâna). Below the citadel there were two ponds inside the town. The larger fed by a spring, the fish in which were considered sacred like those in the lake of Bannyhe (Manbîq), corresponded to the old springs Kallîbîn, the modern Birket Hvarîm. South of it lay the smaller pond ‘Ain Zilka. In the town stood the council house (ἀρχήσος), a gallery built in 497 (παμηλειός), several public baths (μανθανέα), a theatre, a hospital and the hippodrome. The six gates were called: the Gate of Bîh Shemesh and the Gate of Barlâh (Bârlîh; Procopius, Bell. Pers., ii. 27, 44) in the north, the Gate of the Caves which led to the catacombs in the west, the Gate of the Hours (Θεοτ, probably the Σωτήρ πόλεως of Procopius, Bell. Pers., loc. cit.; cf. Duval, Hist. d’Édésie, p. 207, note 1) in the southwest, the Great Gate in the south and the Gate of the Theatre in the east (Duval, p. 14).
At a later date, the Arabs only mention four gates: that of Harran, the Great Gate, the Gate of Sab'a and the Water Gate. The "Old Church," several times destroyed by floods stood near the "Tetrapsilon" and the square of Beth-Shabta (Barhebraeus, Chron. ecle., i. 359). The Syrac authors mention many other churches within and without the town (Duval, loc. cit., p. 16 sq.; Baumstark, in O. C., lv. 164—183).

In the Nimrud-Dagh west of the town coves were hewn out of the rock in very early times; there also were the mausoleums of the kings, that of the bishop Abghelamiya bar Abuqar and, 2½ hours from the town, that of Amalshahne (Al-husayn), wife of Zafqan, son of the Musa. Numerous authorities had their cells in the "sacred mountain" and many monks their monasteries on it. It is probably τὰ Στέγανα (read Στέγανον "Cross Hill" as at Antioch) ἴων on which the monk Aswānā (Ἀσώνα) had his visions (Philoxenos, Letter to Patriarch, with the wrong title: Išāk of Niniveh, Letter to Symeon from Θεαυσκιδα ἴως, in Nova Patrum Bibliotheca, ed. Angelo Mai, viii., Rome 1871, p. 156, ch. 39; cf. Baumstark, Gesch. d. syr. Lit., p. 29, 142, note 10; 225, note 2). Another hill was called in the Christian period Kāmātha de-Beth Aḥláh Kikā (Symeon Metaphrastes, Migne, Patr. Graec., cxvii., col. 141: Βεθασκαΐα). In the vicinity of Edessa were the villages of Bokhām, Serrn, Kubbe and Kfar Ṣellem or Negbāt. Two aqueducts restored in the year 509 brought down from Tell Zmā and Mawdūd supplied the town with spring water (Ps.-Joshua Stylites, col. 59 sq., 62, 87). The position of these villages and of the buildings in Edessa cannot as a rule no longer be ascertained exactly (plans of ancient Edessa: by G. Hoffmann, who corrected the old sketches by Carsten Niebuhr [1780] in Wright, Chron. of Joshua Stylites, 1882; better in F. C. Burkitt, Euphemia and the Goth, London 1912, p. 46).

Abū 'Ubayda in 637 sent Ḣarm b. Ḥamm to al-Dżazīra. After the Greek governor Jonas Katara, who had endeavoured to save Osroene by offering tribute, had been dismissed by the emperor Heraclius and the general Poilëmaios put in his place, al-Rūḥā (Edessa) had to surrender in 639 like the other towns of Mesopotamia (al-Balaghuri, ed. de Gomez, p. 172—175; Ibn al-Atirī, ed. Tornberg, ii. 414—417; Yūḥān, s. v. al-Dżazīra; Khwarzīmi, ed. Baethgen, Fragmente syr. u. aram. Historiker, Leipzig 1884, p. 16, 110 = Abu K. M., viii., no. 5; Theophranes, ed. de Boor, p. 517, 521). The town now lost its political and very soon also its religious significance and sank to the level of a second-rate provincial town. Its last bishop of note, Jacob of Edessa, spent only four years (654—687) and a later period again of four months in his office (708). The Maronite Theophilus of Edessa (d. 785) wrote a "Chronicle of the World" and translated into Syriac the "two Books of Homer about Ilion".

Al-Ruḥā, like al-Rākka, Harrān and Karkšiya, is usually reckoned to Dyār Muḍar (Ibn al-Atirī, viii., 248; al-Yaḥyāī, i. 177; M. Hartmann, Bokhām, p. 88, note 2 and 3 = M. v.A.G., 1897, i. 28). In 67 (668—687) al-Ruḥā was taken by the Byzantines, Harrān and Samsāt formed the willayet, which Ibrahim b. al-Ashtar granted to Hátim b. al-Nuṣari (Ibn al-Atirī, iv. 218).

The "old church" of the Christians was destroyed by two earthquakes (April 3, 679 and 718). In 737 a Greek named Baghir appeared in Harrān and gave himself out to be "Tiberias the son of Constantine"; he was believed at first but was later exposed and executed in al-Rūḥā (Barhebraeus, Chron. syr., ed. Bedjan, p. 119). In 133 (750—751) the town was the scene of fighting between Abū Dżafār, afterwards the caliph al-Mansūr, and the followers of the Umayyads, Išāk b. Muslim al-Ukayli and his brother Bakkār, who only gave in after the death of Marwān (Ibn al-Atirī, v. 333 sqq.). But continual revolts broke out again in al-Dżazīra (Ibn al-Atirī, v. 370 sqq.); in the reign of al-Mansūr, for example, the governor of al-Ruḥā of the same name, the builder of Iṣpān, was murdered in al-Raṣṣā in 141 (751—750) (al-Baladhuri, p. 192). When Harrān al-Rasūl passed through al-Ruḥā, an attempt was made to cast suspicion upon the Christians and it was said that the Byzantine emperor used to come to the city every year secretly in order to pray in their churches; but the caliph saw that these were slanders. The Gümāya (from al-Ǧumā, the valley of ‘Afrīn in Syria), who, with the Tēmârâyē and Rusūfayē, were one of the leading families of al-Ruḥā, suffered a good deal however from his covenousness (Barhebraeus, Chron. syr., p. 130). In 812 the Christians were only able to save the unprotected town by being paid by the rebels Nasr b. Shabāb and ‘Ar’r therefore fortified al-Ruḥā at the expense of the citizens (Barhebraeus, p. 136 sqq.). At the beginning of his reign al-Muʿāʾīṣ sent his general Taḥir to al-Ruḥā, where his Persian soldiers were besieged by the Byzantines but obtained a successful resistance supported by the inhabitants among whom was Mār Dionysios of Tellmārē (Barhebraeus, p. 139). Taḥir, who himself had fled from his mutinous soldiers to Kallinikos, won the rebels over to his side and made ‘Abd al-ʿAzz governor of al-Ruḥā; he oppressed the town very much (Barhebraeus, p. 139 sqq.). Muḥammad b. Taḥir who governed al-Dżazīra in 825 persecuted the Christians in al-Ruḥā as did the governors under al-Muʿāʾīṣ and his successors.

In 331 (942—943) the Byzantines occupied Dyārbakr, Arzān, Dārā and Rāʾe Ain, advanced on Naṣibin and demanded from the people of al-Ruḥā the holy picture of Christ called μαθαίαν (al-ʾIṣnaṭ al-Maṣnī); with the approval of the caliph al-Mutākī it was handed over in return for the release of 200 Muslim prisoners and the promise to leave the town undisturbed in future (Yahyā b. Saʿūd al-Antākī, ed. Krauchkowijski-Vasić, in Patr. Orient., xviii. 730—732; Taḥāth b. Siḥārī, ed. Baethgen, op. cit., p. 90, 145). The picture reached Constantinople on Aug. 15, 944 where it was brought with great ceremony into the Church of St. Sophia and the imperial court (cf. in addition to Yahyā, loc. cit.; al-Masʿūdī, Muḥājir al-Dhānāb, ii. 331; Ibn al-Atirī, viii. 302 and an oration ascribed to Constantine Porphyrogentos on the εἰκὼν ἐξηγησάτως or De imagine Edessena, ed. Migne, Patr. Graec., xxivii., col. 432, better ed. v. Dobuschka, Christusbild, in Texten u. Untersuch., xviii.). But by 338 (949—950) this treaty was broken by Saʿīf al-Dawla who together with the inhabitants of al-Ruḥā made a raid on al-Maṣṣūa (Yahyā, op. cit., p. 732). Under the Domestikos Leon the Byzantines in 348 (950—960) entered Dyār Bakr and advanced on al-Ruḥā (Ibn al-Atirī, viii. 393). The emperor Nicephoros Phocas towards the end of 357 (967—
997 advanced on Diyar Mudar, Maiyâfarîkîn and Kafarrahâ' (Yahyâ, p. 815). According to Ibn al-Athîr (viii. 454 infra), al-Ruĥâ' was burned to the ground in Muḥarram 361 (Oct.-Nov. 971) and troops left in al-Djâzîra. One should rather read Muḥarram 362 and take the reference to be to the campaign of John Tâmisces, unless there is a confusion between Edessa and Emissa (Himṣ) which was burned in 969 (Barhebraeus, Chron. syr., p. 190).

Ibn Hawgal in 978 refers to over 500 churches in al-Ruĥâ' and al-Makdisi reckons the cathedral, the ceilings of which were richly decorated with mosaics, among the four wonders of the world.

Down to 416 (1025-1026) the town belonged to the chief of the Banû Numair, ʿUṯân. The latter installed Aḥmad b. Muḥammad as nāʾīr there but afterwards had him assassinated. The inhabitants thereupon rebelled and offered the town to Naṣr al-Dawla the Marwanid of Diyarbakr (Greek: Λατραὶ), who had it captured by Zangl. After the capture of ʿUṯân and the death of Zangl (415 = 1025), Naṣr al-Dawla gave ʿUṯân’s son one tower of al-Ruĥâ' and another to Shâbul’s son (Ibn al-Athîr, ix. 244). The former (according to others: a Turk Sâlmân, Şulâquzâ, appointed governor, who was hard pressed by ʿUṯân’s widow) then sold the fort for 20,000 darics and four villages to the Byzantine Protospatharios Georgios Maniakes, son of Gudelios, who lived in Samosata; he appeared suddenly one night and occupied three towers. After a vain attempt by the emir of Maiyâfarîkîn to drive him out again in which the town, which was still inhabited by many Christians, was sacked and burned (winter of 1030-1031), Maniakes again occupied the citadel and the town (Ibn al-Athîr, ix. 281 infra; Michael Syrus, ed. Chabot, ii. 147; Barhebraeus, Chron. syr., p. 214; Aristakes Lastivertici, c. 7, p. 24 sq.; Matthiæs Uthayes, ed. 1898, c. 43, p. 58—62 = transl. Dulaâniert, p. 46—49; Kedren-S Kleitz, ed. Bonn, ii. 500; the accounts of the events preceding the surrender differ very much). Edessa under Maniakes seems to have enjoyed a certain amount of independence from Byzantium, as he sent an annual tribute thither (Kedrenos-Skleitzes, p. 502).

In Radjab 427 (May 1036) the Patrikios of Edessa became a prisoner of the Numairi Ibn Wathillâh and his many allies; the town was plundered but the fortress remained in the hands of the Greek garrison (Ibn al-Athîr, ix. 305; Barhebraeus, Chron. syr., p. 217). By the peace of 1037 the emperor again received complete possession of Edessa which was refortified (Ibn al-Athîr, ix. 313; Barhebraeus, p. 221).

According to the Armenian sources, Maniakes was followed by Apâk-ap or Ali Astoswâ, then by the Iberian Bearstakë as strategos of Edessa; in 1059 ʿIyârûm; ã Dvântzītâs was Kantapeano of the town. In 1065—1066 and 1066—1067 the Turks under the Khûrsân-Saltar attacked the town and Alp Arsalân besieged it for fifty days in 1070; it was defended by Wasil (son of the Bulgar king Alosián). After the victory of Manaritk Eddux was to be handed over to the sultan but the defeated emperor Romanos Diogenes had no longer any authority over it, and its Kapetanos Paulos went to his successor in Constantinople (Skleitzes, ed. Bonn, p. 702). In 1081—1082 Edessa was again besieged by an emir named Khussaw in vain. After the death of Wasil the Armenian Smbat became lord of Edessa and six months later (Sept. 23, 1083) Philaretos Brachamios succeeded him. But he lost it in 1086—1087 when in his absence his deputy was murdered and the town handed over to Sultan Malikshâh. The latter appointed the emir Buzân governor of al-Ruĥâ’ and Harrân. When the latter had fallen in 1094 fighting against Tutush, Alpârûk, general of the sultan of Dimashk and Hâlab, occupied the town but it was not plundered by his army as he was poisoned by a Greek dancing-girl called Gall. Then the Armenian Kupolaates Tóros (Theodoros), son of Hethum, took the citadel. When in 1097—1098 Count Baldin captured Tell Bishîr Tóros asked him to come to al-Ruĥâ’ to assist him against their joint enemies and received with him joy but was shortly afterwards treacherously murdered by him (Matthiæs of Edessa, ed. 1898, p. 260—262 = transl. Dulaâniert, p. 218—221; Anonym. Syr. Chron. of 1201—1204 in Chabot, C. R. Acad. Insr. Letr., 1918, p. 431 sq.).

From 1098 the Latins ruled for half a century the “county of Edessa” to which also belonged Sumâisît and Sarûdî (1098 Baldwin I; 1100 Baldwin II: 1119 Joscelin I; 1131 Joscelin II). The town suffered a great deal under them. On Dec. 23, 1144 ʿImād al-Dîn Zangî of al-Mawsîli took it (a detailed description of these events in the Anonymus Syr. Chron. of 1203—1204, ed. Chabot, in C.C.S. O., series iii., vol. xv., p. 118—126; transl. Chabot, Une époque de l'histoire des Croisades, in Milanges Schmirberger. i., Paris 1924, p. 171—179). Under Joscelin II and Baldwin of Kaisim the Franks again attempted to retake the town in Oct. 1046 and succeeded in entering it by night, but six days later Nûr al-Dîn appeared with 10,000 Turks, and soon occupied and sacked it; the inhabitants were put to death or carried into slavery. Baldwin was killed and Joscelin escaped to Sumâisît (Barhebraeus, p. 311 sq.).

The fall of this eastern bulwark of the Crusaders aroused horror everywhere; in Europe it led to the Second Crusade. The Syrian Dionysios bar Salîbî as Diaconus wrote an “oration” and two poetic mémoires about the destruction of the town. Three similar pieces were written by Basilios Abu l-Faradj b. Shunnâma, the favourite of Zangî; he had also written a history of the town of Orhâî (Baumstark, Gesch. d. syr. Lit., p. 293—298).

After the death of Nûr al-Dîn his nephew Saif al-Dîn Ghâzin took the town in 1174; in 1182 it fell to Saladin who later handed it over to al-Malik al-Manṣûr. When Malik al-ʿAdîl died in 1218, his son Malik al-Ashraf Shâriāt al-Dîn Mūsa became lord of al-Ruĥâ’, Harrân and Khîlît. In June 1234 the town was taken by the army of ʿAlî al-Dîn Kâlpûkhâd and its inhabitants deported to Asia Minor (Kamâl al-Dîn, transl. Blöchet, in R.O.F., v. 88; Barhebraeus, Chron. syr., p. 468). But it was retaken within four months by Malik al-Kâmil. In 1244 the Tatars passed through the district of al-Ruĥâ and in 1260 the Mongols under Hûlagû. The people of al-Ruĥâ and Harrân surrendered voluntarily to him but those of Sarûdî were all put to death (Barhebraeus, Chron. syr., p. 509; Chron. arab., ed. Bârit, p. 486).

In the time of Abu l-Fida al-Ruḫâ was in ruins. Hamd Allâh al-Mustawfi about 1340 could still see isolated ruins of the main buildings. According to al-Kâlîkashâni, the town had been
built by his time (c. 1400) and repopulated and was in a prosperous state. In connection with the campaigns of Timur, who conquered al-Dżazira in 1393, al-Ruḥān (Dżazira) is repeatedly mentioned in the Šafā'ī-nâme of Šaraf al-Dīn Āli Yāzdi (written in 838 = 1435).

The Ottomans finally took the town, to which they gave the name of Orfa, in 1637 during Murād IV's war with Persia.

To-day Orfa (Orfa) has nearly 30,000 inhabitants. It is the capital of a wilayet of the same name numbering a little more than 200,000 souls. The town is 550 m. above sea-level.

ORIHEULA, Arab. Uryūda, a town in Eastern Spain (Levante), 15 miles N. E. of Murcia, the capital of an administrative area (partido) and the see of a bishop, contains with its adjoining country, which is thickly populated, 35,000 inhabitants. It was conquered by the Muslims at the same time as the other towns of the kūra of Todmir [q. v.] and was for a long time the capital of this kūra before it had to give way to Murcia. Its history was that of the latter town as long as it remained Muslim. It was however for a very brief period in the middle of the 12th century A.H. (middle of the 13th century A.D.) the capital of a petty independent state ruled by the Kūdi Aḥmad b. 'Abd al-Raḥmān b. 'Alī b. 'Āṣim.

E. Lévi-Provençal

ORISSA (ODRA-DECA), a part of the modern Indian province of Bihār and Orissa, has an area of 13,706 square miles and a population of 5,306,142, of which only 124,463 profess the Muslim faith. For administrative purposes it is divided into five districts of Cuttack, Balasore, Furl, Angul and Sambalpur. There are in addition twenty-four native states, the Orissa feudatory states, with a population of 4,465,385, the Muhammadans numbering only 17,100 (Census of India, 1931).

Modern Orissa, which embraces the delta of the Mahānārd and neighbouring rivers, extends from the Bay of Bengal to the borders of the Central Provinces and from the river Sutnarekha to the Čilka Lake. In the past its inaccessibility proved its salvation for, while the coastal strip was sometimes conquered, the highlands of the interior remained under semi-independent or tributary chiefs. It was included in the ancient kingdom of Kalinga, the sole conquest of the peace-loving Ačoka, but, with the reintegration of the Maurya empire, once more passed to the Kalinga kings. Until the eleventh century the history of this area is extremely confused. Those interested in the solving of chronological puzzles would do well to consult the first volume of Banerji's History of Orissa.

Certain parts of modern Orissa were annexed to the empire of Muḥammad b. Tughluḳ and were included in the province of Dījadīnjār. The real conqueror of Orissa, however, was Akbār's famous general Rāḏā Mān Singh, who took it from the Afghāns of Bengal, who had obtained a temporary footing in the country. Under Akbār it was administered as part of the šāhā of Bengal, for it was not until the reign of Djahānghīr that it became a separate province. With the decline of the Mughal empire Orissa fell into the hands of the Bhōnlī Marāṭhīs of Nāgpūr [q. v.]. Although it nominally passed to the British by the diwān grant of 1795 it was not finally conquered until the year 1803.

With the exception of the district of Sambalpur, the territory now known as Orissa was administered along with Bengal until October 1905, and with
ORISSA — ORKHAN

999

West Bengal until March 1912, when Bihar and Orissa were formed into a separate province. Orissa has always been a stronghold of Hinduism and the temple of Dijannath still draws thousands of pilgrims to the sands of Puri.

(C. Collin Davies)

ORKHAN or ORKHAN (ur-khun) was the eldest son of the emir 'Othman [q.v.], the founder of the Ottoman dynasty. His mother was Malikhatun, the daughter of Shaikhi Ede-Ball of the village of Ithurna near Eski-Shehir. His birth is not known and indeed the year of his reign leaves much to be desired. Ottoman sources say he was born in 687 (beg. Feb. 6, 1288); according to others, he was born as early as 680 (beg. Apr. 22, 1281). The first date which probably goes back to Hadiji Khalifa's Tahrir has most in its favour. We know very little about his youth. When barely twelve years old he was married in 699 (1299) to the daughter of the lord of Yar-Hisar named Nillfufer-Khatun [q.v.], a Greek girl, who was betrothed to the lord of Belokoma (Bileblik). From this union were born among others his sons Murad, who succeeded him, and Sulaiman Pasha. Orkhan was nearly 40 when he ascended the throne in it is said, Ramadhan 726 (Aug. 1326). According to tradition, Orkhan offered his brother 'Ali al-Din 'Ali (usually called 'Ali al-Din only; cf. Isi., xi. 20, note 2) a portion of the ancestral possessions but the latter is said to have been content with the vizierate. This story strongly resembles that of Moses and Aaron as given in the Kur'an (xx. 30) and is probably intended to give a historical foundation for the office of vizier. 'Ali al-Din 'Ali was also the first to bear the title Pasha [q.v.] which then passed to Orkhan's son Sulaiman and was inherited from him by Kara Khalil.

Orkhan's rule may be divided into two periods: that from 1326 to 1344 when he was establishing the Ottoman power in Asia Minor, creating the army and becoming the founder of the Ottoman empire; and the period from 1344 to his death in 1359–1360 during which he was preparing to gain a footing in Thrace and Macedonia and to extend his rule on European soil. He laid the foundations for the later empire of the Ottomans and is to be regarded as its real creator.

Orkhan had already shown his ability as a conqueror in the lifetime of his father. Shortly before the latter's death of gout at the age of about 70 he had taken Brassa without bloodshed. It now became the capital of the kingdom. Nicaea and Nicomedia were now the next objectives of Ottoman arms. He was assisted by a number of able leaders of whom the best known were the Kose Mihkal, Ake Koda, Konural, Abd al-Rahman Ghani, Kara 'Ali, Kara Mursal. With their help he carried through all his enterprises with the greatest success. Before taking these two cities, Orkhan first of all secured possession of the most northerly peninsula of Bithynia, which is enclosed on the north by the Black Sea, on the south by the Gulf of Nicomedia and on the west by the Bosphorus. The two strongly fortified fortresses of Semendra and Aidos which guarded the military road from Constantinople to Nicomedia were taken. The town and district of Semendra were given in feudal tenure to the general Ake Koda and henceforth known as Koda-Ili. The fall of these strong places was followed by the subjection of most of the little towns on the coast on both sides of the Gulf of Nicomedia, of which the fort of Hereke offered most resistance. Kara Mursal conquered the land on the southern coast by occupying Yalova, famous for its medicinal baths, and the district of Kara Mursal which bears his name. As Orkhan's vassal, he pledged himself to maintain a small fleet to protect the coast so that communication by sea between Constantinople and Nicomedia was entirely stopped. Orkhan now took the field against Nicomedia in person. The town was taken without any special difficulty after the hill fort of Kayun-Hisar had fallen. While the emperor Andronikos abandoned Nicomedia, he prepared to defend the old seat of the Palaeologi, Nicaea. At the beginning of 1339, the Byzantines moved over to the Asiatic shore and in the vicinity of the little coast town of Philokrene in Mesothyia, now Tawhandjil, a battle was fought about which there are no records in the Ottoman, the Byzantine historians (Kantakuroes, ed. Bonn, i. 341 sph; Nikephoros Gregoros, ed. Bonn, i. 434; cf. the on Phrantzes and Chalecocondyles) show obvious errors and deliberate perversions of the facts. The defeat of the Byzantines at Philokrene meant the end of any hope of saving Nicaea. The inhabitants did not even attempt a serious resistance but hurried to swear fealty to Orkhan. The city, upon which Orkhan lavished all kinds of endowments, soon became one of the most flourishing and prosperous towns in the Ottoman empire after its period of tribulation. Nicaea, now Iznik [q.v.], became celebrated as a centre of Muslim intellectual life especially through its medresse. In 1333 Orkhan's son Sulaiman undertook a campaign into the still independent country north of the Sangaris (Sakarya) with the towns of Golnik, Modrene and Tarakdjli, which he occupied almost without striking a blow. All Orkhan's victories and conquests had so far been won at the expense of the Greeks and there had been no warlike encounters with the little principalities which had arisen in Anatolia and of the Salgik empire. The adjacent country of Karasi [q.v.] where in 1335 the succession had given rise to a dispute between two brothers, the youngest of whom, Tursun, was living at Orkhan's court, came first. Orkhan's help was called upon by Tursun against his older brother (named Timurkhan) and he invaded Karasi on receiving certain assurances. On the way he took Ulubad, Kirmast [q.v.] and Mihkali on the castle of Kilsos and Ailhos. Bahlkesir was surrendered to Orkhan.
without a blow and the resistance shown was limited to Bergama. This town also soon passed into Ottoman hands as a return for the leniency shown by Orkhan to the lord of Kasari when the latter had treacherously disposed of his younger brother (736 = 1336). Hadji-dji Il-beghi, the vizier of the last prince of Kasari, was entrusted with the administration of the newly won territory, and as his councillors Edje-Beg and Erennos [q.v.] were appointed. After the fall of Bergama Orkhan was engaged in consolidating his rule by systematic regulations and arranging for the administration of the now considerably enlarged Ottoman kingdom. He seems to have been the first to organize his rule on Anatolian lines (on the full account in Zinkeisen, G. O. R., i. 118 sqq., in which his brother 'Ali' al-Din 'Ali played a prominent part until after his death in 1333 his place was taken by his nephew Sulaiman. In 728 (1328) 'Ali' al-Din is said to have induced his brother to set up the first mints (according to Sa'd al-Din). In this year the first gold and silver was struck in Orkhan's name and replaced the Saldjk coins which had previously been current throughout the Ottoman empire. A regulation regarding dress produced a strict distinction between ranks and classes, and the army was completely reorganised in keeping with the new conditions by Cendereli Khalit [q.v.]. In 1330 the corps of Jannissaries [q.v.] was founded, the Turkish infantry composed of youths of Christian birth and associated with Hadji Bektaşi [q.v.]. But the irregular infantry also, the 'Azaba, was put on a better footing and the feudal cavalry (aghinda) developed in keeping with the objects of the new empire. At the same time Orkhan founded numerous mosques, monasteries and schools and the foundations which he endowed everywhere in the newly conquered territory bear witness to the great attention which he gave to matters of religion. The dervish system which at this time was at the height of its development — the order of the Bektaşi seems to have arisen in the reign of Orkhan — had undoubtedly a great patron in Orkhan as is seen by the number of cells and monasteries of holy men in his capital Brusa, who had come from the east during his reign to find asylum in the Ottoman empire. The religious life of Islam under Orkhan, which had a marked 'Ald, not to say Shi'a, stamp, is one of the most remarkable phenomena in the history of religion and still requires elucidation in essential points through special studies.

In Orkhan's reign we have the beginnings of friendly and peaceful intercourse between Ottomans and Byzantines, although we also have an altercation of peace and war, of enmity and alliance (cf. J. v. Hammer, G. O. R., i. 126). Ottoman troops were repeatedly summoned to the assistance of the Byzantine emperors and when Orkhan ascended the throne, Turkish hordes had already crossed the straits three times, without success it is true, and without leaving the slightest trace on European soil (cf. J. v. Hammer, G. O. R., i. 120 sqq. and Zinkeisen, G. O. R., i. 184 sqq.). There obviously was no idea of establishing Ottoman power on the other side of the Dardanelles in these raids and the Byzantine emperor paid very little attention to them. But in course of time there arose out of these casual enterprises more and more regularly organised expeditions by the petty dynasties of Anatolia. For example the ruler of A'din-elli [q.v.], Umur-Beg, one of the most brilliant, if very little known, figures of the time, had undoubtedly intended to develop systematically his repeated raids into Europe. Orkhan himself is said in 1333 to have concluded a treaty with the emperor Andronicus at the time of the siege of Nicomedia, by which he bound himself not to disturb further the towns of Asia Minor which were under Byzantine suzerainty (cf. Kantakuzenos, ed. Bonn, i. 446). The increasing weakness of Byzantium and the growing power of the Ottomans soon however deprived any such agreement of its binding force. Already in 1337 Orkhan had tried to effect a landing near Constantinople with a fleet of 30 ships; his intention must have been to attack the capital and establish himself in Thrace. The Ottomans suffered a disastrous defeat and escaped with one ship only. The dynastic troubles which broke out soon afterwards in Constantinople when the Grand Domesticos Kantakuzenos became emperor and joint ruler with John Palaeologus, brought about a rapprochement between Orkhan and Kantakuzenos. Umur-Beg renewed his efforts to gain a footing on European soil, but, in spite of the expenditure of men and ships, they remained unavailing. Orkhan maintained an attitude of watchfulness. The empress Anna, mother of the young emperor John Palaeologus, induced him to send a force to help her against her rival Kantakuzenos. The latter saw the increasing danger and after this force had come to a miserable end endeavoured with all his power to win Orkhan over for his own plans. In return for 7,000 soldiers he offered him his daughter Theodora, who was still a minor, as a wife in January 1345 (cf. Kantakuzenos, lii. 31; ed. Bonn, p. 498; Dukas, 9, ed. Bonn, p. 33 sqq.; Chalco, i. 24) and in May 1346 the wedding was celebrated with great splendour in Selymbria (Kantakuzenos, lii. 95, p. 585 sqq.; Nikeph. Gregor. xxv. 5, p. 762 sqq.; Dukas, 9, p. 35; according to Nikeph. the bride's name was Maria, cf. i. 762, certainly a mistake). It is worth noting that Orkhan's bride did not abandon her religion but remained a devout Christian (cf. Kantakuzenos, ed. Bonn, p. 588; Zinkeisen, G. O. R., i. 201 sqq.) and acquired great merit by purchasing numerous Christian slaves and sending them home to freedom. The prince Khalil Celehi, who later became a prisoner of the Genoese and when very young married a daughter of the emperor John V, was probably the result of this union (cf. Jorge, G. O. R., i. 201). The alliance with the Ottomans was to cost Kantakuzenos dear. When, shortly after the wedding, Orkhan sent him 10,000 men to help in his fight with the Serbs, prince Stjepan Dušan, the Turks turned against the Byzantines and returned with vast booty from Europe to Asia. This breach of faith did not deter Kantakuzenos from again asking for assistance from his son-in-law in 1349. But this time also the army of 20,000 men, summoned unexpectedly back to Anatolia, recrossed the Dardanelles after burning and plundering all the way. Besides these two invasions of Europe by request the continual raids of the Anatolian hordes went on and the sufferings of the people of Thrace became intolerable. Orkhan took advantage of this uncertainty to carry out his long cherished plan of establishing the Ottomans permanently in Europe. His son Sulaimän Paša in 1356 was ordered to cross the Dardanelles. The crossing was successfully carried through at the fortress of Tzyme (the modern
Dijmenelik). In 759 (1357) Kallipolis (now Gallipoli) was taken by the Ottomans. The sudden death in 760 (1358) of the conqueror Sultanin Pasha, who was buried soon after, put an end for the time to any further advance by the Ottomans. Hüdji Il-beghi and Edje-Beg conducted raids into the interior, it is true, but no effort was made to extend Ottoman power. Orbahan died very soon after Sultanin. The date of his death is not exactly known. The most probable statement is that which says he died at the beginning of 761 (beg. No. 23, 1359). The statement (taken by K. J. Jirecik from a Slav Chronicle) that Orbahan lived till March 1362, after the capture of Adrianopolis, has no claim to credence (cf. *Arcif fur slav. Filh.*, xiv. [1892], p. 260), although Oskar Halecki, *Un Empire de Byzance à Rome* (Warsaw 1932 = *Travaux historiques de la Société des Sciences et des Lettres de Varsovie*, vol. viii.), p. 74, note 3, based on C. Jirecik, *loc. cit.*, and *Byz. Zeitschr.*, xvi. (1909), p. 582 sq. is inclined to accept the year 1362. That the Byzantine annals (cf. especially p. 392) edited by J. Muller, in *Sitzungsber. d. k. Ak. d. Wiss.*, Vienna 1853, ix. are in favour of such a supposition cannot be disputed as well as the fact that the Florentine chronicler Matteo Villani (cf. Muratori, *Rerum Ita/ Script.*, xiv., p. 672 sq.) puts "Orcam's" first actions still in November 1361. If Murad I is justly called the "conqueror of Adrianopole" the year of his father's, i.e. Orbahan's death must be fixed earlier as the taking of this town in spring 1361 (cf. thereon F. Babinger, *M. O. G.*, ii. 311 sqq.) can now be taken for granted (cf. thereon the fact not noted in *M. O. G.*, that, according to O. Halecki, *loc. cit.*, p. 75, the capture of Adrianopolis was known in Venice on March 14, 1361). Orbahan was buried beside his father in Brussa (cf. J. v. Hammer, *G. O. K.*, i. 157 sq. with a description of what his personal appearance is said to have been).

**Bibliography:** Contemporary Ottoman sources have so far not come to light. Of the Byzantine chroniclers the most important is Orbahan's father-in-law Kountakuzenos although his bias makes it necessary to use him with great caution. Nikophoros Gregoras is much more to be believed. The crossing of the Ottomans into Europe in the sixteenth century has been critically studied by J. Dracsecbe, in the *Neues Jahrbuch für das klassische Altertum*, vol. xxvii., p. 7 sqq. The whole period of Orbahan's reign has recently been dealt with in not always reliable fashion by H. A. Gibbons (d. 1934), *The Foundation of the Ottoman Empire*, Oxford 1916, p. 54—109. Further sources are indicated in the works of J. v. Hammer, Zinkeisen and Jorga. (FRANZ BAHINGER)

**ORMUZ. [See Hormuz.]**

**ORTOKIDS (Urtu/kids), a Turkmen dynasty, branches of which ruled in Mardin, Hisn Kaifā and Khartābīrt.**

When the Saljuq sultan of Damascus, Tutub, conquered Jerusalem in 479 he appointed as governor of the town his officer ʻUrtuk b. Akshab, who had already served under Malikshah and had taken part in the siege of Antioch in 477. He was succeeded in 484 (1091) by his sons Sukman and Ighāzī. After the Holy City had been taken for the Fatimids in Shabban 489 (1096) by al-Afdal b. Badr al-Djamal, Sukman went to al-Rahba and Ighāzī to his lands in the 'Trak. In 495 (1101) Sultan Muhammad made Ighāzī his commissioner (*Shāhna*) in Baghdad. A. Hisn Kaifā Mu'in al-Dawla Sukmana I (cf. iv., p. 510) assisted Mūsā when he was besieged by Djakarmish in al-Mawsil and as a reward received from him in 495 (1101) 10,000 dinars and the town of Hisn Kaifā (Ibn al-ʻAthir, x. 234—236). He had already owned Sarūdij since 488 and in 498 or shortly before, Mardin also fell into his hands (Abū 'l-Fida' ed. Reiske, iii. 350—353). Along with Djakarmish, Sukman took Count Baldwin and his brother Joscelin prisoners at Harrân. After his death in 498 his son Ibrahim ruled in Hisn Kaifā while Mardin passed to his brother Ighāzī in 502. In Hisn Kaifā, Ibrahim was succeeded first by his brother Rukan al-Dawla Dāwūd (who is mentioned in 508 and again in 511; Ibn al-ʻAthir, x. 352 sq.; xi. 73), then by the latter's son Fakhr al-Dīn Kārā-ʻArslān who ascended the throne about 543 and probably died in 562 (or perhaps not till 570) (van Berchem, in *Abh. G. W. Golt.*, N. S., xxi/ii., 1907, p. 143, note 3). He ruled over Hisn Kaifā and a considerable part of Diyarbakr (Ibn al-ʻAthir, xi. 217); to him or his father we probably owe the bridge over the Tigris at Hisn Kaifā [q. v.]. After his death he was succeeded by his son Nur al-Dīn Muhammed. When Shālāh al-Dīn in 578 came to Diyarbakr, Nur al-Dīn was ready to pay homage to him and to assist him at the siege of al-Mawsil. As a reward he was next year given the valuable town of Amid (579). He died in 581 and was succeeded by his son Kūbāl al-Dīn Sukmau. His son lost his life in 597 from a fall (Ibn al-ʻAthir, xii. 112). Before his death he had designated as his successor a Mamlūk named Ayās, as he hated his brother al-Malik al-Salāḥ Nāṣr al-Dīn Māhmmād, whom strict Sunni's condemned as a philosopher and heretic. But Māhmmād seized Ayās when the emirs asked him to do so (Ibn al-ʻAthir, xii. 112). He recognised the suzerainty of the Ayyūbid b. 'Adil and Kāmil of the Saljuq Kaftāns. On an AyyūbI inscription of the year 605 (1208—1209) he calls himself sultan of Diyarbakr, al- Ṣūd and a-r-Mān (van Berchem, *cf. cit.*, p. 147). After his death in 619 he was succeeded by his son al-Malik al-Maṣūd Mawdūd (Ibn al-ʻAthir, xii. 260). According to a coin of 628, Hisn Kaifā then belonged to the ruler of Mardin. The lands of the Ortokids had already been much diminished by the attacks of the Saljuq sultans of Rāmūr when in 629 (1231) the Ayyūbid al-Kāmil advanced against Mārān and took it with the towns that belonged to it, including Hisn Kaifā (Abū 'l-Fida', iv. 393) which, if this statement is correct, had therefore again been taken by Mawdūd from his relative. Al-Kāmil's son, al-Malik al-Salāḥ, remained in possession of Mārān and Kaifā. In 639 he had to cede Mārān to the allied armies of Halāb and Rāmūr, while he retained Kaifā (Kamāl al-Dīn, *History of Aleppo*, transl. E. Blochet, p. 219 = *R. O. L.*, vi. 16). Mawdūd remained in prison until the death of al-Kāmil in 635; then he escaped and found refuge with al-Muazzāf al-Ḥamā until his death probably during the Tatar inroads (Abū 'l-Fida', iv. 393).

B. Mārān. On the death of its governor Lulu, the city of Halāb submitted voluntarily in 1117—1118 to Nādīm al-Dīn Ighāzī I [q. v.], who had since 502 (1108) been lord of Mardīn. Ighāzī
gave it to his son Timurtash (Ibn al-Athir, x. 372). When in 515 the latter was sent by his father to Sulaiman Mahmud to intercede for Duhais b. Saida, the sultan gave his father Ilghazi Mayafarikan (Ibn al-Athir, x. 418) which henceforth remained Ortokid until Salih al-Din annexed it in 581. After the death in 516 of Ilghazi, the most dangerous enemy of the Crusaders among the Ortokids (Ibn al-Athir, x. 426), he was succeeded by his sons Shams al-Dawla Sulaiman in Maiyafarikan and Husam al-Din Timurtash [q. v.] in Mardin, and in Halab by his nephew Badr al-Dawla Sulaiman b. ‘Abd al-Djabbar (Ibn al-Athir, x. 426) who had already in 515 been appointed governor of it by Ilghazi, when his son Sulaiman had attempted to stir up a rising against him there (Ibn al-Athir, x. 417 sqq.). As a fighter against the Crusaders his other nephew Bahram b. Bahram followed his uncle’s example; in 497 (1103–1104) he occupied ‘Ana and al-Haditha after the Franks had taken Saruji from him in 494. In 515 he brought Joscelin de Courtenay Count of Edessa and his brother Galeran prisoners to his fortress of Khartabirt (Ibn al-Athir, x. 418 sqq.), and defeated Baldwin king of Jerusalem at Gargar and brought him prisoner to Harran [see BALAK]. He had taken this town in 517 (Ibn al-Athir, x. 433). In the same year he took Halab from his cousin Badr al-Dawla Sulaiman, as he did not seem fitted to defend it against the Franks. At the siege of Man-

bidj in 518 Balak received a mortall wound from an arrow (Ibn al-Athir, x. 436). In Halab and his other possessions he was succeeded by Husam al-Din Timurtash but the latter lost Halab as soon as he went to Diyabakr as the city, besieged by the Franks, opened its gates to al-Bursuki [cf. AKBONE or BURSIK]. After the death of his brother Sulaiman in 518 Timurtash inherited Mayafarikan also (Ibn al-Athir, x. 441) and at his death in 547 (1152–1153) was lord of Mardin and Mayafarikan (Ibn al-Athir, xi. 115). He was succeeded by his son Nadim al-Din Alpt. During the lifetime of his father he had received al-Bira from the Franks in 539; they had given him the town out of fear of ‘Imad al-Din Zangt. At a later date (before 565), we find ruling there Shabah al-Din b. Ilghazi who had distinguished himself in fighting against the Crusaders. His son was besieged in 577 (1181–1182) in al-Bira by Kub al-Din Ilghazi II of Mardin (cf. ii., p. 466), who had succeeded his father Alpt in 572, and appealed for help to Salih al-Din; at the latter’s command Kub al-Din retired to Mardin (Ibn al-Athir, xi. 313). After his death in 580 the guardian of his sons Shah Arman Sukman of Akhlat, then after the latter’s death in 581 (1185) Salih al-Din, took possession of Maiyafarikan (Ibn al-Athir, xi. 335; C. Defremery, in J.A., ser. iv., 1, 1843, p. 72–78). In Mardin Kub al-Din was succeeded by his son Husam al-Din Yuluq-Arsalan (var. Bulaq-, Buluk-Arsalan) who again in 587 regained Maiyafarikan for a short time; the next successor was the latter’s brother Nisir al-Din Urtuk-Arsalan al-Mansur (from c. 596–598). In his time Mardin was besieged in 599 by al-Ashraf by order of al-Adil. At the conclusion of peace the Urtukid recognised the suzerainty of al-Adil (Ibn al-Athir, xii. 117; coins). The later Urtukids of Mardin are given by Abu ‘l-Fida‘ (v. 295) down to his time (715 = 1315). Urtuk-Arsalan was followed in 637 by his son Nadim al-Din Ghazi I al-Sa'id, in 658 by the latter’s son Kara-Arsalan al-Muzaffar, about 691 by his son
Shams al-Din Diewd, about 693 by his brother Nadjm al-Din Ghazi II al-Mansur, in 712 by his son Timad al-Din ‘Ali Alpi al-Adil, then by his brother Shams al-Din Salih, in 765 by his son Ahmad al-Mansur, in 769 by his son Mahmmud al-Salih, in 769 by his uncle Diewd al-Muzaffar. In 778 by the latter’s son Madjd al-Din Isa al-Zahir, and lastly by the latter’s brother Salih (809–811 = 1406–1408). After Timur had taken Mardin, the ownership of the town passed to the Karsh-Koyunli.

To the territory of the Ortokids of Mardin belonged at least down to the time of Nadjm al-Din Ghazi II the town of Dunausir (q.v., now Koc Hisar), according to coins found in the neighbourhood near Tell Ermen (E. Sachau, in Abb. Pr. Ak. W., 1886, phil.-hist. Kl., treatisc ii., p. 86).

C. Khartabirt (Kharpoot). Khartabirt is found as early as 515 in the possession of the Ortokid Balak b. Bahram, who held it till 518. His relative Sulaiman then occupied it but he seems to have died in the same year. It then belonged successively to Diewd of Hse Kaifah and his son Karsh-Arsalan and grandson Muhhammad. There is an inscription (dated 561 = 1165–1166) of Fakhr al-Din Karsh-Arsalan commemorating a building in Kharpoot (van Berchem, in Abb. G. W. Gott., ix/iii., 1907, p. 142 sq., N9. 9). After the death of Nur al-Din Muhhammad in 581 (1185–1186) his brother Timad al-Din Abul Bakr founded an independent dynasty there as Lane-Poole was the first to show (Essay on the Urtuki, in Num. Chron., N.S., xiii., 1873) (van Berchem, op. cit., p. 144, note 1). At his brother’s death he was in Salah al-Din’s camp before al-Mawjil and at once set off for Hse Kaifah on hearing the news to claim his inheritance. But his nephew Sukman II had already taken possession of the fortress and had been recognised by Salath al-Din. The uncle had therefore to be content with Khartabirt (Ibn al-Athir, x. 359). Abul Bakr must have died in 600 at latest for Muhmmad of Kaifah and Aimdun unsuccessfully besieged his son Nizam al-Din in Khartabirt in 601 (Ibn al-Athir, xii. 132). Thus last Ortokid of Khartabirt is said to have been called Nizam al-Din Abul Bakr; according to the inscription on a bronze mirror in the Blacas collection in Paris, his name was more probably Nizam al-Din Ibrahim, unless we have to see in Abul Bakr a (childless) brother of Ibrahim (van Berchem, op. cit.). Ibrahim had two sons: ‘Izz al-Din Ahmad mentioned in a manuscript of 685 written in his reign and al-Khadr named on the above mentioned mirror, father of Nur al-Din Abul ‘I-Fadl Ortok-Shah who ruled at an unknown time and unnamed place. Khartabirt probably remained in possession of the Ortokids only down to 631. At least the town was taken in this year by Sulath Kaibkib I.

Coins. Four mints are named on the coins of the Ortokids: al-‘Iti-n or Kaifah, i.e. Hse Kaifah, Aimdun and Dunausir. The strong influence of trade with Byzantium is seen on the coins in a remarkable fashion: we find on them not only rulers’ heads taken from ancient coins and no longer understood but also the Virgin Mary, Christ and the Greek inscription Emmanouel on them.

OSMAN DIGNA [see ‘OTHMAN ABU BAKR DIGNA].

ORSUSHANA, the name of a district in Transoxania. The form Orushana is the best known although Yakti (I. 245) says that Orushana is preferable. In the Persian versions of the text of al-Istakhri and in the Persian text of the Hudud al-Alam (ed. Barthold) we find more often Surushana while Ibn Khurdadhbeh sometimes has Sharushana; the original form may have been Sroshana. This district lies to the north-east of Sama'kand between this town and Khjojd, to the south of the Sir Darya (Salut) so that it forms the approach to the valley of Faraghana; on the north west it is bounded by the steppe. The southern part is occupied by the mountains of Batam which run along the upper course of the Zor-Maghun; these hills are generally regarded as forming part of Orushana. The geographical information about this region is based almost exclusively on the geographers of the tenth century; the later geographers down to Hajjaj Khusrau only repeat what their predecessors have said: it appears therefore that the name Orushana had fallen into disuse before the end of the middle ages. As a result of its numerous streams, which flow into the Sir Darya, it was at one time a rich country visited by many travellers because the route to Faraghana lay through it. The geographers describe several roads from Sama'kand to Khjojd all of which passed through the towns of Sabaat and Zamin, the name of which still survives. The principal town — in which in the tenth century the governor lived — was in all probability called Nawamandikath — this must be the basis of the more or less certain readings of a number of manuscripts (cf. especially Baladhuri, p. 240) — the form Bundjikat given by Yakti (I. 744; but see also iv. 307 where the name is Koub) and adopted by Barthold is a late corruption; it lay a little to the south of the great road and was identified in 1894 by W. Barthold with the ruins called Shahristan to the south of the present town of Ura Tube; these ruins were examined a little later by P. S. Skvartsy. The geographers describe the town in detail. Two other towns of some importance were Zamin and Dizak, and a number of other places are recorded;
there were also rural areas without towns, while al-Ya'qubī (B.G.A., vii. 294) says that there were 400 fortresses in the country. In the tenth century there was an important market-place called Massananda. There is some further geographical information about the country in the Bābur-nāma.

At the time when the first Arab invasion of the country took place under Kutaiba b. Muslim (712—714), Osrushana was inhabited by an Iranian population, ruled by its own princes who bore the title of afshin (Ibn Khurdadhbih, p. 40). The first invasion did not result in conquest; in 737 the Turkish enemies of the governor Asad fell back on Osrushana (Tabari, ii. 1613). Nasr b. Sayyār [q. v.] subdues the country incompletely in 739 (Baladhuri, p. 429; Tabari, ii. 1694) and the Afshin again made a nominal submission to al-Mahdi (Ya’qubī, Ta’rikh, ii. 479). Under al-Mamūn the country had to be conquered again but soon a new expedition was necessary in 822. On this last occasion the Muslim army was guided by Hādīr, the son of the Afshin Kāwīs, who on account of dynastic troubles had sought refuge in Baghdaḍ. This time the subjugation was complete; Kāwīs abdicated and Hādīr succeeded him, later to become one of the great nobles of the court of Baghdaḍ under al-Mu’taṣım, where he was known as Afshine [q. v.]. The dynasty of the Sa’dids of Aḥsarbaḏân was also descended from the royal family. His dynasty continued to reign until 893 (coin of the last ruler Sāhir b. Abū ʿAlāʾ al-Mamūn of 279 [592] in the Hermitage in Leningrad); after this date the country becomes a province of the Samanids and ceases to have an independent existence while the Iranian element was almost entirely replaced by the Turkish.

Bibliography: The geographical descriptions (Ibn Khurdadhbih, Ya’qubī, al-Iṣkāḥi, Ibn Hawkal, al-Makhḍīs) have been analysed and utilised by W. Barthold, Turkestān down to the Mongol Conquest, 2nd ed., in G. M. S., N. S., v., London 1928, pp. 165—169. — The second part of the same book contains all the historical references (cf. index); cf. also Le Strange, The Lands of the Eastern Caliphate, p. 473 sqq.

J. H. KRAMERS

OSTĀDĪ (P.), master, teacher, artisan. This word has passed into Arabic, with the plural ostādān, astāda. It also means eunuch, musician, merchant’s ledger, in the modern language particularly teacher. Combined with dār the form ostāda or “master of the house”, master-domo, was applied to one of the great dignitaries of the Mamlūk sultanān [q. v.]. We also find the abbreviated forms ostā, ostā, ostā, plural ostāvāt, ostāwā, ostāw, which in Cairo is applied to coachmen.

A. J. WENINK

OSTĀDĪS, the name of the leader of a religious movement in Khurāṣān, directed against the ‘Abhāsids. The rising began in 150 (767) and spread rapidly in the districts of Herāt, Rādīghis, Gānd-Rūstāk and Sādijātān; the sources say that it had 300,000 adherents. The first opposition it met with was at Marw al-Rūthi but the rebels killed the Arab leader al-ʿAdlī with a number of his officers. Hearing this, the caliph al-Manṣūr sent his general Khāzin b. Khuzaima to his son al-Mahdi at Naṣīrābād and the latter ordered Khāzin to attack the rebels with 20,000 men.

After several checks due to the treachery of subordinates, Khāzin entrenched himself in a camp at a place, the name of which is not given, and by a number of stratagems and with the help of reinforcements from Ṭehrānštān succeeded in defeating the rebels, of whom large numbers were slain. Ostādīs escaped to the mountains but was captured in the course of the following year. The 30,000 who accompanied him were set free but he and his sons were sent to Baghdaḍ and executed. The rising of Ostādīs was of a religious character; he represented himself as a prophet and exhor(ted the people to koft (Tabari, iii. 773); he was one of a series of heretical rebel leaders who appeared in Khurāṣān after the death of Abū Muslim [q. v.] like Sinbāḍ the Magian, Bih-āfrīd [q. v.], Yūṣuf al-Barm, and al-Muḥammad. It is probable that his views were based on Zoroastrian doctrines.

The name of the leader is given by Tabari as Ostādī-Sīs, “Lord Sis”; the name Sīs is found in several Iranian names (cf. Justi, Alltānān, Namenbuch, p. 336; Mani’s successor was called, according to the Fihris, p. 334: Sīs al-Imām and in the Greek sources: Sisinios). On the other hand this heretic numbered among his adherents, according to the Kitāb al-Bad’ (al-Walqī, Ta’rikh, ed. Huart, vi. 86), a large number of Ghurā Turks, as was also the case with the rebel Ḥāṣālī al-Barm, who, saw in Abū Muslim an incarnation of the deity. It al-Ya’qubī’s story it is said that Ostādīs declined to recognise al-Mahdi as heir apparent, but the most astonishing statement is that of Ibn al-ʿAṯūr, who says that Ostādīs was the father of Marāḏīlī, wife of Ḥārūn al-Raṣīd and mother of al-Ma’mūn, and that Ḥālīb, son of Ostādīs and maternal uncle of al-Ma’mūn, assassinated the latter’s vizier, the famous al-Fadḥ b. Sahl known as Dhu ’l-Riṣāyṣātān. It is impossible to say what can be at the basis of this story but perhaps we may see in it a tradition from a Persian source the object of which was to give al-Ma’mūn a royal or even saintly pedigree. The rising of Ostādīs broke out about half a millennium after the foundation of the Parthian dynasty and one of its bases was Sudjīstān which may have made this leader be regarded as one of the “saviours” expected in Zoroastrian religious tradition (cf. G. van Vloten, Recherches sur la domination arabe, in Vorb. Arb. Amt., i. 3; 1894, p. 68).

J. H. KRAMERS

OTBA B. GHAZWĀN B. AL-HĀRITH B. DĀHIR B. WAḤIB (OF WURAIH) B. NUSAYR ABU ḤUṢIYĀD AL-MĀZĀNĪ OR OTBA GHAZWĀN AL-MĀZĀNĪ, belonged to the tribe of Kais al-Aṭīḥ, half of the Nafāwī or of the Ḥud Shamās, one of the oldest Companions of the Prophet, “the seventh of the Seven”, i.e. the seventh to adopt Islam and one who had shared in the sufferings to which the first believers had been exposed in Mekka. He took part in both Būrās, the battle of Badr, and in most of the battles and expeditions of the Prophet. He is best known as the founder of Baṣra. In the caliphate of ‘Omar he first of all conducted an expedition which ended in the capture of Obollā. ‘Omar then appointed him agent (hamīl) in “the country of India”, i.e. the borderland between Arabia and Persian territory with orders to begin a campaign in the Sawād [q. v.]. He made
his headquarters at a hamlet called Khuraba, where he built all that was necessary for a military base: a mosque (cf. iii., p. 318), a residence for the governor, quarters for the soldiers, their families and all that goes to make a rising town. This was the nucleus of al-Baṣrā [q.v.]. The order of events and the chronology generally are far from being settled; the years given vary between 14 and 17. The years 15 and 17 are given for his death. Having performed the pilgrimage, he asked 'Omar to be allowed to resign his governorship but 'Omar refused to permit it. He then prayed God to spare him from returning to Baṣrā. On the way back he fell dead from his camel at the age of 57. Another tradition is given by Ibn Saʿd [cf. Bihl]. He was succeeded by al-Mughira b. Shuṭba [q.v.].

(A. J. WensincK)

'OTBA B. GHAZWĀN — 'OTHMAN I

1005

has remained attached to the dynasty of the 'Othmān Oghlārī or Alī 'Othmān and is later found in the description of the empire and its inhabitants as 'Othmānī or 'Othmānī, that behind the name of 'Othmān there lies a powerful personality. The most extensive source of information about him is Turkish historical literature and particularly its ancient chronicles, the Tavārīkhī Alī 'Othmān, representing the oldest tradition, along with a few poetical compositions of an epic nature dating from the end of the xi century, like the latter part of the Islandar-nāme of dāmēt. The study of the ancient chronicles reveals to us that although they certainly contain some good historical traditions, they are loaded with additions of a legendary character. These additions are explained by the enormous expansion of the power of the earlier Ottoman princes within less than a century of the death of its founder. As often happens in such cases the obscure history of the ancestor was embellished with details of a legendary character foreshadowing the greatness of his descendants. On the other hand, all the chronicles show a tendency to establish a historical connection between the power of the Sāliḥs of Asia Minor and that of the first Ottoman rulers by making Ertogrul or 'Othmān be invested with certain powers by Sulṭān 'Alī al-Din (II). These relations are more than doubtful. A third feature of the traditional accounts of 'Othmān′s career, which we find in all the chronicles, is the explanation of a number of geographical names by connecting them with events which took place in the glorious period of the founder of the dynasty. There is further the tendency which we find pushed to its greatest extent in the chronicle of 'Ashīk Pāsha Zāde to attribute to 'Othmān events which belong to the tradition of Ertogrul, like the prophetic dream regarding the greatness of the posterity of 'Othmān and the daughter of Shaikh Edebali, and the capture of the castle of Kardaş Hīṣār; in the same way the chronicles put many feats of arms of Orkhan like the taking of Brusa and even the conquest of Kōdja Ili to the reign of 'Othmān, who had then long been an invalid “with a disease of the limbs”. While in the chronicles we can still distinguish with some probability the non-historical features, pragmatic Ottoman historiography, with which 'Ashīk Pāsha Zāde and Idrīs Būlūsī form the transition, represents these traditions as historical facts. Among the Byzantine historians, Pachymeres and Nicephorus Gregorios alone have preserved historical features independent of the Ottoman tradition, which clearly shows its influence in the later Byzantines (Phrantzes, Ducas, Chalcocondylas). Quite legendary stories of 'Othmān are also found in the hagiographic literature (cf. Das Vamarin-Nāme des Hājī Beketash, transl. E. Gross, in Türk. Bibl., xxv., Leipzig 1925, p. 133 iqq.). According to unanimous tradition, 'Othmān was one of the sons of Ertogrul [q.v.] whom he succeeded as chief of a semi-nomad Turkish clan which had its winter camp at Sogud [q.v.] in the valley of the Kāra Su. The date of Ertogrul's death is uncertain; later sources vary between 1264 and 1282. At this time Kardaş Hīṣār and Eski Shehir [q.v.] situated considerably to the south of Sogud were perhaps already in the possession of this clan. They formed the frontier district bordering with the lands of the Germiyan-
Oghlu. 'Othman in the first phase of his career extended this cradle of Ottoman power to the north by taking the fortresses of Inegol, Khar-
menджik, Bileдjик, Vär Hisar and Kopru Hisar, which had hitherto been in the hands of the Byzantine feudal lords. This country consists of
mountains and valleys lying to the west of the course of the Sakarya [q. v.] and ends in the north in the plain of Yeşi Shehir; the capture of
the last place seems to have been of great military importance as it became a base of operations for future conquests (cf. the map Das Stammgebiet
der Osmanen, attached to the article Anatolische Forschungen, by F. Taeschner, in Z.D.M.G., N. S., viii. 492). On Von Hammer, C.O.N., ii. 495, the
inscription by Pachymeres (ed. Bonn 1835, ii. 415) of the fortresses taken by the Turks, corresponds pretty well with the conquests of 'Othman.
It is perhaps to this first stage of conquests that belongs the first recital of the Ḳutbta at Karada Hışar in the name of 'Othman by Tursun Fakhtā.
The chronicles put this event in 689 (1290). During this time the newly conquered territory seems to have received an increased of population from the
side of the Gemlyān (Ashık Pascha Zade, ed. Giese, p. 20). The second phase in 'Othman's career is that in which from his base at Yeşi Shehir he continued his conquests in the westerly
direction towards Brusa and in a northern direction towards Iznik. The Turks were not strong enough to take these towns but they ravaged the country round.
According to the chronicles, there was a battle between 'Othman's Turks and a confederation of lords (takbešir) of Brusa, Iznik and several other places at Köyün Hışar, near Iznik, in which the Turks were victorious; this battle has been identified
since Von Hammer's time with the battle of Baphaeon, in which, according to Pachymeres (ii. 337), the heretarch Mouzalon was defeated in 1301
as a result of the impetuous onslaught of the Turkish cavalry. This victory enabled Lefke and Ağa Hışar on the Sakarya to be taken and in the
west Tricoccia between Iznik and Brusa (Pachymeres, ii. 637). In connection with this last victory (in 1308) Pachymeres mentions a personal feud between
'Othman and the Byzantine princess Maria, sister of the emperor Andronicus, who lived in Nicaea. She had been Lefke's wife and Pacho, the
Hisān, Ölkaitu Khudābanda [q. v.] and had threatened 'Othman with the latter's intervention. In this
second period the Turks extended their conquests as far as Ulubad (Leopardon) to the west of Brusa. The third phase is that in which 'Othman
no longer took part personally in the military expeditions although, according to tradition, he was still alive. It was Orkhan [q. v.] and his
companions in arms who continued the conquests. The first enterprise of Orkhan was the expulsion of a horde of Tatars who had invaded the district
of Eski Shehir (perhaps sent by the Mongol allies of Byzantium). In the latest stage, 'Othman devoted himself to the closer encirclement of Iznik and
Brusa. This last town finally fell in 726 (1326), according to the chronicles, shortly before the death of 'Othman who is said to have received
the good news just before he died in Sügd. These sources are not agreed as to whether 'Othman was buried at Sügd or Brusa. This last town has
however for a very long time claimed to have a turbe of 'Othman.
From the very beginning of his reign 'Othman was surrounded by a group of devoted followers, consisting in part of his brothers and their sons
and in part of allies like Shaikh Edebali — whose daughter Mâ'ḵšat âdun (in the two versions of Uruđ Beg her name is Râbi'a) became the wife of
'Othman and the mother of his sons Orkhan and Aâdâ al-Dîn — and the Byzantine lord of Khrimendjik, Köse Mîkhâl [q. v.] who later became a Muslim. The chronicles record how 'Othman
divided among his friends the civil and military administration of the places he conquered. As to 'Othman's foreign policy, it seems that his relations
with the Germiyan Oghlu were not very friendly; it was from their territory that Eski Shehir was exposed to the ravages of the Turks. The chronicle of 'Ashık Pascha Zade tells us that he had
other independent Turkish allies like Samâmâ Çâüşh with whom he made raids across the Sakarya.

The chronology of the career of 'Othman is uncertain. It is a pure fiction to say his reign began in 700 (1300); this is connected with the
popular belief that at the end of each century a new conqueror makes his appearance (cf. 'Ali, Kuchi al-Aхbār, v. 3). Neither does the statements
made by several chroniclers that at his death 'Othman had reigned nineteen years (byzâlîk etti) agree with other records. Perhaps however it gives
a hint that his death took place long before the traditional date. The importance of the career of 'Othman has attracted research into the true
nature of the expansion of the little Turkish clan and the power of its first chief. It has been suggested (Gibbons) that it was the conversion
of 'Othman to Islam which gave the first impetus to expansion, but that is little probable as most of the available facts suggest a milieu already
Muslim; 'Othman did just what a number of other Turkish chiefs were doing in Asia Minor about the same time. 'Othman's name, which looks strange
among the Turkish names of the members of his family (the name of his grandfather Sulaiman Shâh excepted), has also been the subject of
study. While the chroniclers all write 'Othman (like the few coins of Orkhan, cf. T. O. E. M., viii. 48 and an inscription of Orkhan at Brusa; cf. T. O. E. M., v. 318 sqq.), Pachymeres has the
give 'Othmândjik (Ahn Fadl Allah al-Umar, however, has Taman) and the Italian historian Donado da Lezze (Historia Turcica, Boccares: 1910, p. 4) says that Ottoman was the son of Zich. Now
some traditions make the founder of the dynasty be born in the town of 'Othmândjik to the south of Sinope (Ewijâ Celebi, ii. 179) which may be a
hint of the origin of the name. Moreover, the text of the chronicle of Uruđ Beg (p. 6), taken in combination with other texts, shows that Ertogrul
had three sons with Turkish names which might even make one suppose that 'Othman was not a son of Ertogrul (cf. J. H. Kramers, Wer war
belonged to one of the corporations of ghâzin or akhî's as did several members of his entourage like Edebali and his nephew Akhi Hasan ('Ashık Pascha Zade, p. 28), corporations which at
this period represented a Muslim element more civilised

**ÖTHMÂN II,** sixteenth sultan of the Ottoman empire, was born on the 19th Dhu- mada II 1012 (Nov. 15, 1603; cf. *Sidjil-i ʿothmâni*, i. 56), the son of Sultan Ahmad I. After the death of his father in Nov. 1617, the brother of the latter had been proclaimed sultan as Mustafa I [q. v.] but Öthmân, taking advantage of the weak character of his uncle and supported by the mufti Esâd Efendi and the Khâlîg Agha Muṣṭafâ, seized the throne on Feb. 26, 1618 by a coup d'état. The youth of the new sultan at first assured the promoters of the coup d'état of considerable influence. To them was due the replacement of Khalîl Paşa as grand vizier by Oküz Mehmed Paşa [q. v.] in Jan. 1619, Khalîl had just concluded a treaty of peace with Şâh ʿAbbâs I of Persia, after a campaign which had been indecisive. The relations with the other powers, Austria and Venice, with which the capitulations were renewed, were also peaceful. But after, in Jan. 1620, Mehmed Paşa had been replaced by the very influential favourite Güzeldje ʿAli Paşa [q. v.] who removed from the court all possible rivals, the chances of war increased. This time it was a war with Poland which broke out through the intrigues of the wooid of Moldavia. In the battle of Yassy on Sept. 20, 1620, the Polish army was annihilated by the ser-asker İskender Paşa. The grand vizier, who held office mainly by satisfying the avarice of the young sultan, never lost an occasion to irritate and provoke the enmity of Austria and Venice. He died on March 9, 1621 and under his successor Hüsam Paşa of Oktîr, Öthmân took part in person in the campaign of 1621 against Poland. This campaign ended in a check for the Turks and the Tartars, who, with great losses, had in vain tried to storm the fortified Polish camp on the Dniester near Choczin. A preliminary peace was signed under the same conditions as before under Sulaimân I and the sultan appointed a new grand vizier Dilâwîr-Zade Hüsam Paşa. Since the time when Öthmân, still considerably under the influence of the Khâlîg Agha Sulaimân and his Khodja Molla ʿOmer, had begun to act independently, he had not been able to gain the sympathy of the army on account of his brutal treatment of the Janissaries, nor of the people chiefly as a result of his avarice, nor of the *ulâma*. The latter were particularly horrified at the sultan's wish to take four legitimate wives from the free classes of his entourage; he actually married the daughter of the Mufti Esâd. His unpopularity increased still further when he wished to put himself at the head of an army to fight Fakhr al-Din, the Emir of the Druses, and to go on and make the pilgrimage to Mecca. Preparations had already been made for this expedition when on May 15, 1622 a mutiny broke out among the Janissaries and Sipahis who plundered the house of Molla ʿOmer. Next day the rebels secured the cooperation of the chief *ülâma* and demanded the heads of the Khâlîg Agha, the Khodja, the grand vizier, and three other high officials. Öthmân at first refused but after the rebels had forced the third wall of the palace he had to sacrifice the grand vizier and the Khâlîg Agha. But in the meanwhile his uncle Muṣṭafâ had been brought out from his seclusion in the harem to be proclaimed sultan. Öthmân tried during the night to secure his throne through the influence of the Agha of the Janissaries, but the latter was killed on the following morning and he became the prisoner of the Janissaries who took him to their barracks. The rebels had no intentions against his life but in the meanwhile the direction of affairs had passed to Dâwid Paşa, the favourite and son-in-law of Mah-Feiker, the mother of Sultan Muṣṭafâ. Dâwid Paşa being appointed grand vizier had ʿOthmân taken to the castle of Yedi Kule where he was put to death in the evening of May 20, 1622. He was buried in the *türbe* of his father Ahmad I. — Öthmân is praised for his skill as a horseman and for his intelligence. He was also a poet with the *mâghâš* of Fârisî. He was the first of three sultans to lose his life in a rising; the others being İbrahim and Selim III.

*Bibliography:* The Turkish sources are the works of Naîmî, Pečevî, Hasan Bay Zade, the *Rudat al-ābrâr* of ʿAṣrî Čehbi Zade, and the *Relatione* of Fedh'lehe. The *Othman Khan* of Tücht is specially devoted to the deposition of ʿOthmân (transl. by A. Galland; cf. *G. O. W.*, p. 157), while his whole reign is described in a *Shâhnâmeh* by Nâdir (G. O. W., p. 169). Among contemporary western accounts: the *Relazioni* quoted by von Hammer, in the note on p. 806 of *G. O. R.*, ii. and that of Sir Thomas Roe. Cf. also the general histories by von Hammer, Zinkeisen and Jorga.

**ÖTHMÂN III,** twenty-fifth sultan of the Ottoman Empire and son of Muṣṭafâ II, succeeded his brother Maḥmûd I on Dec. 14, 1754. He was born on Jan. 2, 1699 (Sidjil-i ʿothmâni, i. 56) and had therefore reached an advanced age when he was called to the throne. No events of political importance took place in his reign. The period of peace which had begun with the peace of Belgrade in 1739 continued; at home only a series of seditious outbreaks in the frontier provinces indicated the weakness of the Empire. In the absence of any outstanding personalty the sultan was able to please, but his activities were practically confined to changing his grand vizier frequently (six times). His favourite Şihâb-ʾâr ʿAli Paşa, grand vizier from Aug. 24 to Oct. 22, 1755, had his career terminated by execution. The appointment on Dec. 13, 1756 of Râgib Paşa [q. v.] was an important one, as for five years this great statesman showed himself an excellent administrator of the empire under Muṣṭafâ III. ʿOthmân III's other activities were the suppression of cafés, of the liberty of women to show themselves in public and the regulation of the dress of his non-Muslim subjects. His name is associated with the great mosque of Nūr-i ʿOthmânî, which had been begun by Maḥmûd I and was solemnly opened in Dec. 1755. The reign of this sultan is remembered
for the great fires in the capital in 1755 and 1756. He died on Oct. 30, 1757 and was buried, like Mahmud I, in the tomb of the Yeüs İjâmî.

Bibliography: The Tārikh of Waṣîf is the principal source. The reign is described in the great histories of von Hammer, Zinkeisen and Jorga.

Othmân III — ʻothmân b. ʻAffân

J. H. Kramers, the third caliph (23-35 = 644-655). He belonged to the great Meccan family of the Banû ʻUmâya and to the branch descended from Abu Ḍa'īṣ, whose grand-son he was (cf. the genealogy in Wustenfeld, Genal. Tabellen, U. 23). This makes his prompt acceptance of the teaching of Muhammad quite noteworthy; he became a convert, if not at the very beginning of the Prophet's mission, at least at a very early date, several years before the Hijra. ʻOthmân was a rich merchant and an accomplished man of the world; tradition, which likes to represent him as a model of beauty and elegance and deals to a degree which borders on exaggeration with his toilet, may be correct, simply because it is unusual. Whatever was the exact motive that induced him to embrace a cause of which no one could then have possibly foreseen the success is a question that can never be answered with certainty. One set of historical traditions connects his conversion with his marriage to Muhammad's daughter Ruqayya but other sources, probably with more justice, put this marriage after his conversion.

The conversion of ʻOthmân, the first Muslim of high social rank, must have made a sensation and contributed to the success of the new religion, but his personal efforts on behalf of Islam were never remarkable. His indolent character, which was however accompanied by a very living faith and great good nature, is another feature ascribed by tradition to ʻOthmân and it is unlikely that we have here an invention intended to excuse the inaction of this caliph against his lying officials; just because lack of energy and initiative is evident in ʻOthmân from the very beginning of his career, this defect must have been there in the first instance. ʻOthmân is believed to have taken part in the two migrations to Abyssinia and then joined the mukābîrîn in Medina; but he did not take part in the battle of Badr (it is alleged that he had to attend to a sick wife; the Prophet however regarded him as present and allotted him his share of the booty).

After the death of Ruqayya the Prophet's alliance with ʻOthmân was renewed by his marriage with another daughter, Umûm Kullûh; the doubts raised by Lammens (Fâmi'm et les filles de Mahomet, Rome 1912, p. 3-5) regarding the actuality of this marriage do not seem to be justified; there is no reason to think that Muhammad did not lay great stress on this alliance with the only member of the Meccan aristocracy of whom the Muslim community could so far boast.

During the lifetime of the Prophet and those of the caliphs Abû Bakr and ʻOmar, the part played by ʻOthmân was very humble; how did it happen then that the council (qâta) appointed by ʻOmar on his deathbed chose him as successor to the second caliph? The sources dealing with the history of this laborious conclave have been minutely analysed by Caetani; but it is only too evident that the mysteries of these secret deliberations are never destined to be revealed to historical criticism. What it seems possible to affirm is that, as often happened in the papal conclaves, the most outstanding candidates ruled one another out; for example ʻAli whose election would have meant the negation of ʻOmar's policy; or al-Zubair and ʻAbd, also it seems opponents of ʻOmar and whose ambition and covetousness was feared. If among the three who remained, Sa'd b. Abû Wâqîq, ʻAbd al-Rahmân b. ʻAwf and ʻOthmân, it was the latter who was chosen, it may be thought that even more than his relationship to the Prophet it was his being a member of the Umayyad clan that proved the decisive argument in his favour. The Umayyads had already regained in the lifetime of the Prophet, and especially during the caliphate of ʻOmar, a part of the position they held during the ʻAbdîhîlîya. There is no need to think as some one has done that Abû Sufyân, the head of the family, was the deus ex machina of policy during the first twenty years of the caliphate, and it would be naïve to represent the Umayyads as having formed a kind of secret committee dealing with the Islamic state as it pleased.

In reality it was not so much to their noble birth as to a real talent for affairs possessed by several of their members that the Umayyads owed their influence. But this was counterbalanced in the time of ʻOmar by the part played by other elements and especially by the oldest Companions. The strong personality of the second caliph had been able to maintain equilibrium among a number of heterogeneous elements, often in opposition to them.

It was otherwise with ʻOthmân. In reality, as Wellhausen pointed out and Caetani has expanded at length, ʻOthmân only followed and developed the policy of ʻOmar. The difficulties he encountered were only the results of the policy of his predecessor. But it was just here that the difference in their talents became apparent.

The tragedy which put a bloody end to the reign of ʻOthmân and opened up the period of civil wars has caused the greatest embarrassment to the Arab historians, forced to record the series of grievances which the adversaries of ʻOthmân raised against his rule and faced with the alternative of either accepting the caliph's sin as having been committed against the laws of Islam that ʻOthmân, among whom were some of the most venerable patriarchs of the faith, had either lied or been deceived. It is owing to this painful dilemma (out of which orthodox tradition extricated itself by means of the theory of the "excusable error" and other subtle distinctions) that there has been preserved for us the long list of these grievances (which are given in great detail for example in Muḥibb al-Dîn al-Tabari, al-Riyâd al-maṭrîra fi Manâhib al-ʻAṣharâ, Cairo 1327, ii. 137-152). The first and perhaps the gravest charge against him is that he appointed members of his family to the governorships in the provinces; if Syria had already been long in the hands of the Umayyad Mu'awiyâ b. Abû Sufyân, ʻOthmân replaced Abû Mâsa al-ʻAshâri and Sa'd b. Abû Wâqîq at Basra and Kufa respectively by his two relatives ʻAbd Allâh b. ʻAmir b. Kuraiz and al-Walîd b. ʻUkba, his half-brother; when the latter was dismissed, having been involved in a scandal, he was replaced by another Umayyad, Sa'd b. al-Ăsîb, to whom is attributed the celebrated saying: "The Sawâb of Kufa is the garden of the Kuraish". Egypt, the first conqueror of which, ʻAmir b. al-Ăsîb, seemed to deserve the right to hold the governorship for
life fell to 'Abd Allāh b. Sa‘d b. Abī Sarḥ, who was not an Umayyad, but whose Muslim past was, to say the least, suspicious. Finally the caliph's intimate adviser to whom tradition likes to ascribe a beneficent influence, was Marwān b. al-Ḥakam b. Ḥabīb. Abī l-'Āṣī, first cousin of the caliph, who had recalled his father from the exile to which the Prophet had condemned him. It cannot be denied that these measures of 'Othmān were not entirely free from nepotism; but we must recognise in them a deeper motive: the intention of establishing unity of government and administration where it was being threatened by the excess of independence which the governors enjoyed. It was practically the same end that 'Omar had in view but the latter had succeeded by his energy and prestige in imposing his authority even on governors who belonged to other tribes and clans. 'Othmān thought he could obtain the same results by using officials connected with him by ties of blood; he was not successful; the parts were reversed and it was the caliph who was under the influence of his relatives (perhaps however to a less extent than the official historians say); besides, popular discontent ascribed solely to this cause the troubles that arose, which were probably quite independent of the personality of the officials. Indeed (and it is one of Caenans's great merits that he has called attention to this) the 'Abbasid system instituted by 'Omar demanded that the plunder taken in war should increase steadily in perpetuity, the regular receipts from the taxation of the Abi al-Qasimyya not sufficient for the new recruits who hastened to the provinces from the depths of Arabia. From this came the stimulus to the expeditions in which the caliphate of 'Omar never ceased to push forward the frontiers of the Arab empire: such were the conquest of the last provinces of the Sāhānīan empire (the dynasty of which became extinct with the murder of the last king Yazdāgird III), the occupation of Armenia, a series of expeditions along the north coast of Africa, into Nubia, into Asīr Minor, and by sea into the eastern basin of the Mediterranean. If we sum up the conquests made or begun by the 'Abbasids, the caliphate of Othmān we shall see that if there do not exist the swift expansion of those that took place under 'Omar, they are nevertheless impressive as they mark on one side the conclusion of the initial stage of the Arab empire and on the other the preliminary to the second period of expansion, that of the 'Umayyads.

Nevertheless the booty produced by these expeditions was perhaps not so great as had been hoped; besides, 'Othmān — this is another of the grievances against him — instead of assigning it entirely to the soldiers, reserved a share for his governors and for the members of his family, by developing the system of fiels (taba‘ī), which 'Omar had already made great use of. In this again, we should recognise not a simple scheme for enriching his relations but perhaps rather a conscientious attempt to form domains for the state in contrast to the communist system of dividing all the booty among the combatants. The 'Imāmī empire was tending from an innate necessity to give itself a regular administration, for which the Byzantine and Persian afforded models. What 'Omar had already begun, what the 'Umayyads to some extent accomplished and the 'Abbasids realised, the transformation of the incoherent and anarchistic grouping of the tribes into an absolute monarchy of oriental type, was also 'Othmān's programme. He may be reproached with not having chosen the means best fitted to realise it and described as not being fit for a task of this magnitude; but his plan was a reasonable one and only meant following up 'Omar's ideal. Besides, the economic crisis, the inevitable consequence of the sudden enriching of the Arab masses, very soon forced the state to make economies and to cut down the military pensions; this not unnaturally increased the number of malcontents.

One of the steps which contributed very greatly to stirring up against 'Othmān the religious element, formed of the old Companions of humble or even servile origin (such as 'Am'mār b. Yasir, Abū Dharr, 'Abd Allāh b. Mas'ūd etc.), whose influence upon the masses was very strong, was the official edition of the Kur'ān (cf. Noldeke-Schwally, Geschichte des Qorāns, ii. 47—119). What was found most odious in this process was the destruction of the provincial copies. 'Othmān was no doubt urged to this step by considerations of a religious and liturgical nature, but nevertheless the dominant motive may have been a political one. The Qur'ān, which were the receptacles of and of course also the expositors of the sacred text, exercised for this reason a tremendous influence on the masses, which made them to some degree independent of the central power, the latter having no way of checking whether the Qur'ānic passages used by the Qur'ān were authentic or not. In depriving them of this weapon and making itself the monopolist of divine revelation, the government was endeavouring to realise unity and to establish its absolute power over the state: but it is only very natural that the opposition to this tendency should have accused the caliph of having mutilated and destroyed the divine word.

'Othmān therefore made himself enemies in very different quarters: the turbulent elements of the anjar [see Mišr] faced with economic difficulties and disposed to accuse the caliph of confiscating for his own benefit the property of the Muslims; growing piety to which the assertion of the authority of the state seemed a breach of the principle of equality laid down by the Prophet; lastly the former governors who had been dismissed and the great Companions who, removed from power, were striving for it with all their might: such were Taḥṭa, al-Zubair and 'Alī. It may be asked if 'Othmān, while following the line of conduct imposed upon him, as we have seen, by the necessities of state and the example of his predecessor, could have avoided the fate which overtook him and which so profoundly disturbed the unity of Islam. Although the answer to this kind of question cannot be a definite one in the field of history, it may be supposed that a more intelligent mind and a more energetic temperament than that of the third caliph (or to be more definite a real political genius such as Mu‘awiya) would undoubtedly have revealed if he had then been at the head of the government, might perhaps have overcome these difficulties. Perhaps also his adviser Marwān, who was thirty years later to face a situation not less difficult, lacked as yet experience and prudence. In any case, 'Othmān, incapable in himself, was also badly advised and the Umayyads, whom he had overwhelmed with riches and honours, thought more of themselves than of their relative in the hour of danger.
The course of development of events can only be briefly indicated here. Tradition divides quite artificially the caliphate of 'Othman into two periods of equal length: six years (23–29) of good government and six (30–35) of illegality and confusion. The change is represented symbolically by the loss of the seal of the Prophet which 'Othman, according to the story, dropped into the well of 'Aris in the year 30. It is in any case a fact that it was just at this period that the first movements of rebellion began in the 'Iraq, the region which was suffering most from the economic crisis and the one where the turbulent elements were the most numerous. The episode of Abi Dharr, one of the precursors of asceticism in Islam, exiled to Syria with several of his companions, and later sent to Rabatha to die there in destitution, although embellished by legend is characteristic as showing the attitude of the growing piety to the secular transformation of the caliphate. Much more serious troubles broke out in Kufa in 32–33, led by the kurrari', who combined a religious character with a dynasty character, and involved a number of doubtful elements. In spite of severe measures taken against them, the caliph's elements succeeded in procuring the deposition of Sa'id b. al-'Aṣ who was replaced by the former governor of Başra, Abi Mā'ṣ al-Ash'ari, himself a pretender and opponent of 'Othman; Kufa was henceforth no longer under the central government. Similarly in Egypt, Iön Abi Sarhī had to yield to the violence of a group led by the young Muḥammad b. Abi Ḥudhaifa who although an adopted son of 'Othman took the side of his opponents. It seems that the wily 'Amr b. al-'Aṣ who had retired to Palestine after his dismissal was secretly encouraging the revolutionary movement in Egypt. The storm which had been brewing for some time burst at the end of the year 35 when bodies of rebels advanced on Medina from the provinces. The first to arrive were the Egyptians; dramatic interviews took place between them and the caliph; the grievances against 'Othman were expounded with great bitterness of language. But the rebels were disarmed by the humble and conciliatory attitude of the caliph who gave in to all their demands, promised to annul his previous measures and to change his governors; the Egyptians left satisfied. But suddenly, on the way back at the halting-place of al-'Arṣih, a messenger of 'Othman's was seized and a letter found upon him from 'Othman to Ibn Abi Sarhī confiscated which contained an order to put to death or mutilate the leaders of the movement on their return. The latter turned back furious and retraced their steps to Medina, determined on vengeance. 'Othman denied that the letter was genuine, and even insinuated that it had been forged by his enemies in order to ruin him. Although official tradition shows a tendency to attribute this forgery to Marwān, there is also the trace of other versions and even of one (preserved by al-Baladhuri alone), which says that 'Othman suspected 'Ali; this, by the way, is what Caetani had suspected without knowing of this text (Annali, viii., p. 159). Whatever we may think of this suspicious episode (we know well that the manufacture of false documents intended to bring ruin upon an adversary who cannot be defeated otherwise has been regularly practised in ancient as well as modern times), it is certain that, while it was the immediate cause of the tragic end of 'Othman, events had already begun to move. A regular siege of 'Othman's house was set up; the conduct of the old Companions who remained in veiled opposition was of the most hypocritical character; without having the courage to share in the deposition of the caliph by violence, and without the desire to help him against the rebels, they, 'Ali in particular, maintained an attitude of malevolent neutrality. 'Aṣīha, the widow of the Prophet, who had conducted a violent campaign against 'Othman, preferred to slip away at the last moment on the pretext of a pilgrimage to Mecca. Reduced to the last extremity, 'Othman mustered all his dignity and refused to abdicate. After a siege, the length of which is given differently in the different sources, a number of men penetrated into the house in the last days of 35 (June 656) led by Muḥammad b. Abi Bakr (the son of the first caliph and brother of 'Aṣīha) who raised his hand against 'Othman. We do not know if it was he or another (tradition gives several names and it is evident that the exact details were obscure at this first round between the caliph an the opressor). His blood flowed, it is said, upon the copy of the Kurān which he was reading when attacked; his wife, the Kaibīt Na'īla bint al-Furāfīsa, was wounded. The house was pillaged. During the night the body was burned with the greatest secrecy by his wife and some friends. The troops sent by Muḥtawīya from Syria (too late, says tradition, accusing him of duplicity) received the news of the murder when half way there and quickly returned home.

We know how the new caliph was elected in the midst of tumult and terror (cf. Caetani, Annali, ix. 321–342); it shows, the author of this article thinks, that there was no previous arrangement among the principal Companions, each of whom probably thought he could deal with events as they arose. The election of 'Abī was without doubt due, even more than to the prestige given him by his close relationship and alliance with the Prophet, to the support of the Anṣūr who in the confusion in the Umayyad party had resumed control over their own town. But the new government from the first was destined to be challenged either by the unsuccessful rivals or by Muḥtawīya, the only one of the Umayyad governors who had remained master of his province. Political unity, and soon also the religious unity, of Islam was now at an end and the period of schisms and civil wars had begun. The caliphate of 'Othman and its bloody end mark a turning point in Muslim history and give to the third caliph an importance which his true personality, a somewhat mediocre one at best, would never have merited.

Bibliography: The sources and earlier works are collected and summed up in Caetani, Annales dell' Islam, vii. and viii., Milan 1914–1918 (cf. also by the same author Chronographia Islamica, p. 279–388). The only historical text of importance still unpublished, the Anwa al-Aṣṣāf of al-Baladhuri, is in course of publication by the University of Jerusalem. The part relating to 'Othman, edited by D. S. F. Goltzein (who has lent us his corrects and complements on many points the material already available but does not supply much that is new. We may also expect shortly the publication of the long biography of 'Othman in the Tavarih
'OTHMÂN b. 'Affân — 'OTHMÂN Abû Bakr Dîguna

(Levi Della Vida)

'Othmân b. Mâzûn b. Ĥâbi b. A'bî-l-'Aṣînâ of the Kurâish clan of Dîjumâh, one of the earliest companions of Mûhammad, the thirteenth man to adopt Iṣlâm. He took part in the hijâra to Abyssinia, returned, like some other refugees, on the false news of a reconciliation between Mûhammad and his pagan enemies and became for some time the client of al-Walîd b. al-Mughıra. Soon he renounced this privilege, because he preferred to bear his share in the insults offered to his co-religionists in Mecca. On a quarrel between 'Othmân and the poet Lâbid see Ibn Hîshâm, p. 343–344.

'Othmân took part in the hijâra to Middina where he found lodging with Umm al-Ĥāla. When Mûhammad formed pairs of "brothers" between the Mûhâdhîn and Anṣâr, 'Othmân was associated with Abu Ḥârîrî b. al-Ţalîyînân. He took part in the battle of Badr and died in the following year, 3 a.H., according to another account in the year 4. He was the first Muslim buried in Bâkîf al-Ĥuṣayn. The affection in which Mûhammad held him was seen in the grief he showed at the sight of his corpse. Nevertheless Mûhammad is said to have reproved his widow Khwâlîn bint Ḥâkîm al-Sulamîyâ for using language, more natural than theological, and saying her dead husband was one of the inhabitants of Paradise.

In Tradition 'Othmân is the most characteristic representative of the ascetic tendencies which were not entirely foreign to primitive Iṣlâm. He abstained from wine before this beverage was prohibited. He neglected his wife who did not fail to complain to 'Aîsha whereupon Mûhammad tried to divert him from a too rigorous asceticism by suggesting that he should follow his example. The tradition is also very well known according to which he asked Mûhammad to permit him to castrate himself, a request which the Prophet did not at all consider with favour.

(O. J. Wensinck)

'Othmân Dan Fodio. [See pul.]

'Othmân Abû Bakr Dîguna (Dîguna), govern- nor and general of the Mahdîyya in the Eastern Sudân from 1883 onwards, born in Sawâkîn about 1830 (cf. Shûkâr, iii, 200; Dietrich, p. 50), was according to some a descendant of Khûbatu dijîr Bâkî who had come in 1517 under Sulţân Selîm to Sawâkîn and intermarried with the Hadendoûa. The resulting family of the Dîgunî (Dîguna) settled in Erkowit (Arkowât) west of Sawâkîn. Shûkâr mentions several relations of 'Othmân: two brothers, Muhammad Mûsa and the slave dealer 'Alî, a half-brother Ahmad Dîguna, two nephews, Madani b. 'Alî and Muhammad Fâi, emir of Kassâla. 'Othmân gave them appointments in the army and in the administration. Ahmad Dîguna and Madani both fell in fighting in the Eastern Sudan.

Down to the outbreak of the Mahdîyya rising, 'Othmân was a trader, dealing especially in slaves between the Hijâz and the Sudan. The prohibition of the slave-trade by the Egyptian government in 1877 affected not only his livelihood and his liberty— he and his brother 'Alî suffered a period of imprisonment in Djûdâ— but also his religious conviction that the slave-trade was a permitted one. Even then his religious fanaticism displayed itself in joining the ecstasy of begging order of the Mahdîyya. On the hearing of the coming of the Mahdî Muhammad Ahmad [q.v.], "he migrated to him" (hadîyâra), met him shortly after the fall of el-Ouend (al-Ubâyîd) in 1883 and took the oath of obedience to him (bâti'â). Henceforward he was blindly devoted to the Mahdîyya and retained his allegiance to it until his imprisonment.

It is evidence of the Mahdî's keen judgment that he at once recognised 'Othmân's extraordinary abilities and in a proclamation to the tribes of the eastern Sudan on May 8, 1883 (in Shûkâr, iii, 201 sqq.) appointed him governor-general (ʿamal ʿanma, over the till then peaceful tribes of the Beidjâ, between the Atbara and the Red Sea (with the towns of Sawâkîn, Tôkâr and Kassâla). These tribes who did not speak Arabic and had never been ruled by an Arab, readily gave obedience to the Mahdi with the only knowledge they had of him being that he was well known to them through years of friendly commerce but also knew their language and ways.

'Othmân's activity from 1883 to 1900 falls into two periods. In the first (1883—1891) as leader of the Mahdîyya rising in the eastern Sudan he carried out the important task of protecting the eastern frontier of the Mahdîyya against the Anglo-Egyptian government, which made it possible for the Mahdî to concentrate his forces on the Nile. In the second period (till 1900) after the loss of the eastern Sudan, he was still general of the Mahdîyya along with others in the service of the Khalîfa ʿAbdulâhî against the English in Khartoum.

I. The events of the first period which he opened from Erkowit with the encounter at Sinkât on Aug. 5, 1883 were at first concerned with Sawâkîn. The details of this fighting are given by Shûkâr, i, 200 sqq., 323 sqq., 400 sqq., 538 sqq., 601 sqq. The main object was not so much the taking of Sawâkîn and other towns as the command of the roads between Sawâkîn and Berber, the shortest and most convenient route to the Nile. 'Othmân is entitled to the merit of having for seven years successfully closed this road to the government. In contrast to this, the results of the actual fighting were of little significance on either side. 'Othmân defeated the Egyptians under Mûhûd Pîshâ at el-Ţeb (Nov. 5, 1883), destroyed an Egyptian expedition at al-Tamânib (Dec. 1883), undertook the siege of Sawâkîn, Sinkât and Tôkâr, defeated Bakr Pîshâ in a second battle at el-Ţeb (Feb. 4, 1884), on Feb. 8 forced Sinkât to surrender and on Feb. 24 Tôkâr, but on Feb. 29, 1884 suffered a severe defeat at el-Ţeb and again on March 13 and 27 at Tamâl at the hands of General Graham, which checked him for a time but did not cause him to withdraw. It was not till March 1885 that he began new operations from Tamâl, Tell Hashim and Tôkâr, with little success.
because the tribes which composed his army threatened to disperse, fearing English intervention. Nevertheless, he succeeded again and again in inspiring the undisciplined masses with enthusiasm, not least by the fact that he transferred the centre of his activities to Kassala and Abyssinia. The years 1884—1885 mark the zenith of his career. He incited the people of Kassala by Mahdist pamphlets; after the death of the Mahdi on June 22, 1885 and the fall of Kassala he was sent there by the Khalifa 'Abdullâhi, as the only higher official of the Mahdi (not related to the Khalifa) who had remained in his position, and from there waged war on the Amârâ and the Abyssinians. He compensated himself for the failure of his Abyssinian campaign by a savage treatment of the people of Kassala. As he was continually threatening Sawâkin and even went so far as to draw trenches round the town and begin a regular siege from Handûb, Kitchener, who was then in command at Sawâkin, forced him after a series of defeats to retire to Tôkâr. 'Othmân's position now began to decline. The tribes became alienated by his strictness and severity and by the continual warfare. The exhaustion of the Mahdists was so great that the Khalifa allowed 'Othmân to resume trading between Sawâkin and the Mahdiya via Handûb, but this was stopped on the opening of the final struggle between the Mahdists and the Anglo-Egyptian government, and the result was famine among the Mahdists. The oppression of Kassala by Muhammad Fâlî, sent there as emir by his uncle 'Othmân, induced the Khalifa to summon 'Othmân to Omdûrman [q. v.]. He returned with full approval of his conduct and with new military powers but was completely defeated by Holled Smith Pagâ who finally took Tôkâr in Feb. 1891; the tribes scattered, 'Othmân fled abandoned by everyone to the mountains between Kassala and Berber. The country between the Atbara and the Red Sea was lost to the Mahdists; Berber and Kassala were open to the English and Italians. 'Othmân was banished by the Khalifa to Alârâna on the Atbara, where in addition to buying himself with agriculture he endeavoured to raise a new army which was to hold the Atbara line.

II. When at the beginning of the decisive campaign against the Mahdiya, Kitchener conquered Berber in 1897, 'Othmân came to the front again. He led an army over the Nile at Ghendi and joined his fellow-general Mahmûd. They were both defeated and Mahmûd was taken prisoner. In the battle that followed at Omdûrman (Sept. 2, 1898) he attempted in vain to check the flight of the dervishes with a strong force between the Sughab hills and the Nile. After the defeat he accompanied the Khalifa on his flight until the latter's death at Gadîd (Nov. 24, 1899), refused to surrender, escaped across the White Nile and Atbara into the Werriba mountains and endeavoured with the help of the Shaikh of the Djumlat to cross the Red Sea into the Hijâz. Through the treachery of the Shaikh he fell into the hands of the authorities of Sawâkin on Jan. 18, 1900, and was sent to prison in Damietta where Shukair saw and spoke with him in 1905 (see Bibl.). To the kindness of the Royal Egyptian Embassies in Berlin I owe the following data of 'Othmân's later life: 'Othmân's imprisonment took place on Jan. 12, 1900; he was brought to Rosetta, from there to Tiura near Cairo, finally, out of climatic reasons, to Wâdi Halfa. After some years his lot was relieved; he was allowed to retain his property in Berber, but did not take any interest therein. In 1924, at a great age, he made the pilgrimage to Mecca; after his return to Wâdi Halfa he settled outside the town, where he died in 1926; he was buried there.

'Othmân Digna was the model of a primitive unbroken nature. He was the type of the fanatical Mahdist, noteworthy as the only non-Arab to hold high office in the Mahdiya. He was an imposing figure as described by Shukair, iii. 200 (German by Dietrich, p. 49). Not only did he know the languages of the tribes placed under him but he also spoke and wrote Arabic fluently (a specimen of his concise style is given by Shukair, iii. 206 sqq.). Courage veering on foolhardiness and cleverness which seized upon the slightest advantage, strictness to the verge of cruelty, and a stubbornness in following up his goal, from which even the severest defeats could not turn him, were combined in him with an ecstatic piety — Shukair described his ecstatic fits in prison (iii. 609 sqq.) and also his mode of living. From time to time on the coming of the Mahdi he went without sandals and shoes and used riding-beasts only for longer journeys. He was therefore, along with Wad Nadjâm and Âbû 'Amûdâ, the most important Mahdist general and the most dreaded enemy of the government.

Bibliography: Na'âmî Bey Shukâr, Tahriû' al-Sâdûn, iii., Cairo 1903; E. L. Dietrich, Der Mahdi Mohammed Ahmed von Sudan nach arabischen Quellen, Berlin 1925, p. 49 sqq. (with further literature). — Cf. also the article Muḥammad Ahmad.
Turkish sources are contradictory: Hâdîddî Khalîfa says that the town of Othmanîdik took its name from the fact that in the 10th century a leader named Othman conquered it. Evliya Celebi (1647-1648) says (ii. 180 sqq.) that many see in Othmanîdik the birth-place of the emir Othman. This opinion had become the current one about the middle of the xvith century, as may be seen from a passage in Les Voyages et Observations of François le Gouz (Paris 1653, p. 63). The place does not appear in the clearer light of history till 1392 when it was taken by Bâyazid from the lord of Kastamuni, Bâyazid Kuturum, and definitely incorporated in the Ottoman empire. The fact is mentioned that there was evidently a considerable Bektashi settlement here at an early date and the tomb of the famous Bektashi saint Koyun Baba [q. v.] in Othmanîdik has always been much visited. The inhabitants according to Hâdîddî Khalîfa belonged almost entirely to the order of the Bektashis. Cf. on this point in 1546 Le Voyage de Monseigneur d'Ararat, ed. Ch. Schefer, Paris 1887, p. 66 (where Cochinia Baba should be read Koyun-Baba). — Makarjus of Antioch mentions a place called Othmanîdik near Malîfâh. He visited the site where there was said to have been formerly a large town of this name also called Osman Dada (= Othman Dede). (Trattel, ii. 453 sqq.).

(TRANZ BUVINER)

'Othmanî Zâde Ahmed Tûn, a notable Ottoman poet, scholar and historian of the end of the xvith and first third of the xvith century. The son of the râz-nâmîdî (mâlîye teskeretçî) of the pious foundations, Othmanî Efendi, he took up a theological career. The year of his birth is not recorded. From 1689 (1099) he held the post of miadîris in various medreseâs in Constantinople. At intervals he also worked in other places. For example in 1107 (1695) he went to Damascus with Kemânehs Mehmed Pasha when the latter was appointed governor there. In 1124 (1712) he was appointed miadîris at the Salâmîyâ, a post he had aimed at from the very beginning. He then went as chief judge (Ḫâleb molla) to Aleppo in 1126 (1716) and lastly as Miyr mollaî (chief justice of Cairo) to Cairo, where he died at the end of his year of office on the 2nd Ramadan 1136 (May 25, 1724). According to Brusali Mehmed Tûbîr, there is existence a biography of Othmanî-zâde composed by Ibn al-Emin Mahmûd Kemal Bey.

Othmanî-zâde was regarded by his contemporaries as the most important poet of his period. He was particularly celebrated for his chronograms (târîkā'î and kifâ). A chronogram on the birth of prince Bayhaqîm (1133 = 1720-1721) made such an impression on Sultan Ahmad III (1115-1143 = 1703-1730) that he gave Othmanî-zâde the title "king of poets" (mâlîye [sulûm al-îlâmî]) and granted him a special khâtîf. Othmanî-zâde left behind him a divân of the usual type (muraqkeb divânî) which consists of 12 kașfîs, 32 chronograms and 77 ghazels. Along with these are isolated poems, e.g. a satire (khâvî) on Tâbîk Efendi composed in 1124 (1712). He also wrote in verse a commentary on the 40 hadîðîs entitled Sharh-iHadîth-i 'Abî 'Abdisîn, which is still known as Şâhid-iâbîd, it was written in 1128 (1715).

It is however to his prose works that he owes his fame with posterity, especially his historical works, some of which are still popular and valuable at the present day. The most important is his biographical collection Hadîkat al-Wusurâ, a most estimable and still important collection of lives of the first 92 viziers of the Ottoman empire, from 'Alâ' al-Dîn 'Ali Pasha to Râmi Mehmed Pasha who was dismissed in 1115 (1703). The work was composed six years before his death. It was printed at Constantinople in 1271 (1854). Othmanî-zâde's idea was later taken up by others. His biographical collection was continued by: Dilâwer Aghâ-zâde 'Omar Efendi ('Omar Wâhid), a friend of Râkib Pasha's who wrote a Sharh-i Hadîkat al-Wusurâ, also called Kimdh-i Manâbi-i Wusurâ-i 'Zïbân or Gulî Zîbân, which covers the period from the grand vizier Köwanos Ahmad Pasha to Sa'id Mehmed Pasha; also by Ahmad Dâvud Bey, who compiled a continuation entitled Wird al-Muwarra which covers the period 1172-1213 (1758-1802), from Râkib Pasha to Yusuf Zîyâ Pasha, the conqueror of Egypt; finally by 'Abd al-Fettâh Sheikh-i Baghdâdî entitled Bûk-i zebî, covering the period 1217-1271 (1802-1854), from Zîyâ al-Dîn Yusuf Pasha to 'Alemdar Muşafî Pasha.

All three continuations are printed as an appendix to the Hadîkat of Othmanî-zâde, while the later continuation by Rifât Efendi: Wird al-Ḥasîrî appeared in a lithograph separately while the continuation by Mehmed Sa'id Shehri-zâde entitled: Shâhid-i Hadîth-i al-Wusurâ or Gulî Zîbân or Ḫâwîsî-i Muîläh, which deals with 31 grand viziers from Nîhândji Ahmad or Sîlîhîdî Mehmed Pasha to Sa'id Mehmed Pasha, is still only available in MSS.

The two sketches of Turkish history by Othmanî-zâde also attained great popularity. The longer: lûmîsî Manâbi (or Târîkā'î) Salatîn-i Âlî 'Othman deals with the first 24 Ottoman sultans, from the founder of the dynasty to Ahmad III. The shorter version: Fikrist-i Şâhidîn or Fikrist-i Şâhidîn-i Âlî 'Othman or Mütcetürür-Târîkâ-i Salatîn or Târîkh al-Mulûk or Hadîkat al-Mulûk covers the period from 'Othman to Muşafî I. The number of varying titles shows the popularity of the work. The book, sometimes quoted as Fadîli-i Âlî 'Othman, dedicated to İbrahim Ibrahim Pasha, seems to be only a variant title of one of these books.

In the year of his death (1136 = 1724) Othmanî-zâde wrote a history of Fâdíl Ahmad Pasha entitled: Ta'rîh-i Fâdíl Ahmad Pasha, which like most of his works is only accessible in MSS. The Munâzara-i Dewletîn (struggle between the two kingdoms) in the form of questions and answers is also dedicated to İbrahim Pasha (MS. in Vienna).
and is an interesting contribution to the very highly developed mułağara literature.

As further independent works may be mentioned: İdżas Naṣiğ-i-Ḫulanza and Taḫfat al-Na-mūn. Here we may mention his anthology Ḏanî al-Laṣṭîf (a collection of anecdotes, jests etc.). His stylistic collection Munṣif-i-a Tābīf Efendi was intended for practical purposes; it is a collection of letters in three fasl and a concluding chapter.

His extracts from and editions and translations of other works are very numerous. The greater part of his work is collected in his Kuflîār with an introduction by Aḥmad Ḥanif-zade. Some titles cited by von Hammer and Fransa Mehmed Tāhir which apparently go back to Ḥanif-zade, the compiler of the Kašīf al-Ṣu-nă of Ḥadjīlī Khaliṣa, are probably not correct and refer to double or subsidiary titles. — Translations by him are: Maḥārîj al-Anwâr and Masḥârî Şerîf, the latter entitled: Tawâwîl al-Mujâli on hadîth. — Extracts from or versions of other works are: Akhâbâr Muḥînî (or Muḥâṣṣar-i Akhâbâr-i Muṣhîn or Kuflât al-Ḳawâlî) from the Ethics of Ḥunain b. ʿAlī Kāshâfī, who is known as Wâqî al-Qarî (d. 910 = 1504). The actual work which was written in Persian for Mīrza Muḥînî b. Ḥusain al-Baḳâra was translated by Pîr Mehmed known as Ḥaramî, with the title Anš al-ʿArifîn in 974 (1565); Akhâbâr-i-ʿAṣîr, an extract from the work of ʿAlî b. ʿAmr Allâh, known as Ibn Ḥīnâ (Kīnâl-zâde) which was written for the Emīr al-ʿUmmâr of Ǧām, ʿAlī Ḷâṣṭa, and therefore called after him; the Manâbîx-i Ismâ̄-i dâlam, i.e. of ʿAbû Ḥanîfa. We also have from his pen a synopsis of the Humâyûn-nâm-e. The Anwâr-i Suḥâlî, the Persian version of Ibn Mûkâfâ's Arabic version from the original Indian (Pahlawi) of BîĎpî was the work of Ḥusain Wâqî Kâshâfī, court-preacher to Ḥusain Bâkâra of Herât. This Anwâr-i Suḥâlî was translated into Ottoman Turkish by ʿAbd al-Wâṣîl Allî Mollâ ʿAlî Čelebi b. Șâhî, known as Ṭalî Waṣî or Șâhî-zâde al-Râmî with the title Humâyûn-nâm-e and dedicated to Șûlân Sûlaimân. Ĭthâm-zâde abbreviated the Humâyûn-nâm-e to about a third of its length. This version was printed in Constantinople in 1256 under the title Tâmâr al-Aśmâ. In the Kuflîār this extract is entitled Zâbîd al-Nâṣîh.I. The version of the Naṣīḥ (Naṣīḥî) al-Muṭâb of Re's Efendi Sarf ʿAbd Allâh entitled Taḥkîs al-Hikam is also described as a synopsis of the Humâyûn-nâm-e. A synopsis of the Madjâlis al-Śâbâr of ʿAlî is also attributed to Əthâm-zâde.

OTRÂR, a town on the right bank of the Str Daryâ (Salîbûn), a little south of its tributary the Aris. The name is found as a geographical term for the first time in Yâqût (i. 310) as ʿUtrâr but Ṭabarî (iii. 815—816) already knows of a prince called ʿUtrâr-bandā as a rebel vassal of the Caliph al-Maʿmûn. The place that Maḍîq calls Tarâr Zârâk (9 G. A., iii. 263, 274) in the district of ʿIsâbîdân must be quite a different place. ʿUtrâr may perhaps be the same as the capital of the district of Fârâb [q. v.], a town which replaced the older one of Kâdâr (mentioned by ʾĪsâḥîrî and Ibn Ḥâkîm) and called Fârâb by Maḍîq (Bârbî on p. 273). The town of ʿUtrâr acquired a melancholy fame through the part it played at the time of Ǧîzîg Ǧîhân's invasion. It was then a frontier town of the empire of the Khwârizmshâh Muḥâmmâd, who had captured it in 1210 from the Ǧârâ Ǧîhân. The town was at that time under the command of Ṭâfî al-Dîn Ǧilî Ǧîhân Ǧâh who was giving trouble to his new ruler. In 1218, there came to ʿUtrâr a great caravan of 450 people (Djuwâinî), all Muslims, sent by the conquering Mongol to open up commercial and peaceful relations with the Muḥâmmâdân empire. Detailed at first by the commandant ʿInâkîlî, either because he thought they were spies or simply because he coveted their wealth, they were later all massacred and the commandant seized their merchandise. One source (Nâsawî) throws upon the Ǧîlî Ǧâh a part of the responsibility for this deed; in any case when an ambassador came from Ǧîzîg Ǧîhân to complain of the outrage and demand the surrender of ʿInâkîlî, he refused to hand him over and put the envoy to death. This made war inevitable. In 1219, Ǧîzîg Ǧîhân appeared with a Mongol army on the Str Daryâ and laid siege to ʿUtrâr. The town was taken after several months siege and ʿInâkîlî was captured and sent to Kârâkûrûm to be executed.

It was from ʿUtrâr that the Mongol armies set out which conquered the empire of the Khwârizmshâhs. ʿUtrâr still existed at the beginning of the xth century for Timîr Lang died there in 1405 (ʿAllî Yâdî, Žafar-nâmâ, ii. 646). The site of ʿUtrâr is now only indicated by ruins.

UDOHI (AWADAH), a district now forming part of the United Provinces of modern India, has an area of 24,154 square miles and a population of 12,794,979, of which 11,870,266 are to be found in the rural districts (Census of India, 1931).

From very early times Oudh and the neighbouring countries of the great alluvial plain of northern India have been the peculiar home of Hindu civilization. The ancient Hindu kingdom of Kosala corresponded very nearly to the present province of Oudh. Its capital, Ayodhya, the modern Adhodh on the river Gogra, is supposed to have been the residence of Daçaṭân, the father of Râma whose
exploits are recorded in the *Rāmāyana*. Here too arose a number of religious reactions against the sacerdotalism and the social exclusiveness of Brahmanism.

The apart from plundering raids, such as Maḥmūd of Ghazni’s attack upon Mānaśc and the doubtful exploits of Sālār Masudi Ghāzī recorded in the *Mīrāb Masūdī of ‘Alī al-Raḥmān Chishtī*, it was not until the last decade of the twelfth century, in the days of Kūth al-Dīn Abū Bakr [see Abū Bakr], that the Muslim invaders established themselves in Oudh and annexed it to the Dīlī Sultanate. It definitely formed a province of Muhammad b. Taghūlūk’s extensive empire, but, towards the close of the fourteenth century, it was absorbed by the *Shārkī* kingdom of Ḍjāwānpūr [q. v.]. Under the Lōdīs [q. v.] it was once more part of the Sultanate.

In the days of Akbar [q. v.] it formed a ṣāḥa of his empire, extending from the Ganges on the south-west to the Gandāk on the north-east, and from the river Sai in the south to the Tarai of Nepal in the north. According to *Abū ‘l-Fadl*, it was divided into five sākārā and thirty-eight parganas (*Ḍīn-e Akhārī*, in *Bibliotheca Indica*, ii. 170—177 [tr. Jarratt], 1891). Local traditions in Oudh, however, conflict with the Muslim accounts and declare that the Rāḍāpūr chiefs maintained their authority practically intact throughout the Mughal period (W. C. Benett, *The Chief Clans of the Reyn Boreilly District*, 1893). The weakness of the central government under Awrangzīb’s successors gave the nawāb of Oudh an opportunity of asserting their independence, although nominally they still acknowledged the authority of the Mughal emperor.

Sa’dāt Khān Barhān al-Mulk, the real founder of the Oudh dynasty, was descended from a respectable Saiyid family of Nīghāpūr (Munāṣib al-Ludāb of Khāṭī Khān, ii. 902). During his nawābship (1722—1739) he both maintained internal order and extended his dominions so as to embrace Benares, Ghāzīpur, Ḍjāwānpūr and Cunār. His successor, Sa’dār Dīnjg (1739—1754), was appointed nawār of the empire in the year 1748. It is said that he invited the Marāḥās to assist him against the Rohlīs, the engagements entered into at that time forming the basis of later Marāḥā claims on Rohilkhand. His son and successor, the nawāb-wazir Shudjā’s al-Dāwla (1754—1775), came into conflict with the rising power of the English East India Company and was totally defeated at Baksar in 1764. This left Oudh at the disposal of the Company. By the treaty of Allāhābād (1765) Oudh was restored to Shudjā’s al-Dāwla with the exception of Kora and Allāhābād, which were given to the emperor for the upkeep of his dignity. British relations with this buffer state between Bengal and the Marāḥās were placed on a firmer footing by the treaty of Benares (1773) which fixed the subsidy for British troops at 210,000 rupees a month. At the same time Kora and Allāhābād were sold to the ruler of Oudh for fifty lakhs of rupees, because the emperor had deserted the Company and surrendered these districts to the Marāḥās.

The accession of the incapable Āṣaf al-Dāwla (1775—1797) enabled the hostile majority on Warren Hastings’s council to raise the subsidy to 260,000 rupees per mensem and to force the new nawāb to cede Benares, Ḍjāwānpūr and Ghāzīpur in full sovereignty to the Company. At Cunār, in 1781, Hastings attempted to reform the wazir’s administration and to afford him relief by reducing the number of English troops in Oudh. His share in the resumption of the *ḥādās* and in the sequestration of the trances of the ḍāghts of Oudh formed one of the charges against him on impeachment.

In 1801 Lord Wellesley forced Sa’dāt ‘Alī Khān (1798—1814) to cede the whole of Rohilkhand and part of the Rābhās, the revenues of which were devoted to the payment of the subsidiary force. Sa’dāt ‘Alī Khān was succeeded by his eldest son, Ghāzī al-Dīn Haidar, who was the first ruler of Oudh to assume the title of king. The remaining kings of Oudh were Nāṣir al-Dīn Haidar (1827—1837), Muḥammad ‘Alī Shāh (1837—1842), Amjad ‘Alī Shāh (1842—1847) and Wadjiḏ ‘Alī Shāh (1847—1856).

It was a provision of the treaty of 1801 that the ruler of Oudh should introduce into his country a system of administration conducive to the prosperity of his subjects and calculated to secure their lives and property. In spite of repeated warnings nothing was done and misgovernment continued unchecked. On these grounds Oudh was annexed by Lord Dalhousie in 1856. Wadjiḏ ‘Alī Shāh received a pension and was allowed to reside at Calcutta where he died in 1887, his title expiring with him.

On annexation Oudh was controlled by a Chief Commissioner, until, in 1877, both Agra and Oudh were placed under the same administrator, who was known as the Lieutenant-Governor of the North-Western Provinces and Chief Commissioner of Oudh. The title of Chief Commissioner was dropped on the formation of the United Provinces of Agra and Oudh in 1902. It was not, however, until 1921 that this administration was raised to the status of a Governor’s province.

The first land revenue settlement after annexation was carried out with a lack of consideration for the great talukdārī families of the province, who were ousted from the greater part of their estates. This was reversed after the Mutiny when Canning reverted to a talukdārī settlement and confirmed the rights of the talukdārs by sanads.

To-day in Oudh Muḥammadans are to be found chiefly where they held sway in the past, their preference for urban life explaining their presence in the chief towns. Although the population is predominantly Hindu it is interesting to note that in the last decade Muslims have increased nearly twice as rapidly as Hindus. This is largely the result of social customs which permit Muslim widows to remarry and do not favour early marriages. Conversion has not affected these parts of Muslims was countered by the *shudhī* and *sanghathān* movements on the part of Hindus.

**OUDJDA** ((Wâjda)), a town in Eastern Morocco, eight miles from the Algerian frontier in the southern part of the vast plain of Angad. It was founded in 384 (994) by Zirî b. 'Âtiya chief of the great Zenâtì tribe of the Maghrib. (q. v.) We shall give a resume of the events that led up to its foundation. In the course of the fighting between the Şanhâdja and the Zenâtâ, the latter had been driven towards the extreme Maghrib. Supporters of the Umayyads of Cordova, they had loyally defended their imperial policy in Barbary, especially in the time of the great minister Ibn Abî 'Amir al-Mansûr. Zirî b. 'Âyyâ al-Maghârâwî, who had proved himself a particularly valuable ally, was allowed to occupy with his tribe the environs of Fâs. He seized the opportunity to expel from the city the Banî Ifran, and he then fortified the town which had already established themselves there. Not however having full confidence in the Umayyad minister, of whose policy he disapproved, and not feeling secure in the vicinity of or in the town of Fâs, and wishing to be in touch with the central Maghrib which was the real country of his tribe, he founded the town of Oudjda and garrisoned it with his troops; he brought his possessions there and put one of his relatives in it as governor. The foresight of the founder was justified; in 424 (1033) the Banî Ifran having reoccupied Fâs the emir Hâmmâmâ, one of the successors of Zirî, took refuge in Oudjda.

According to al-Bakrî, about the middle of the xiith century (after 1048), a new quarter surrounded by a wall was added to the original nucleus by a chief of the Oufrâghüm (q.). The great mosque was outside of the two towns.

During the period of Umayyad expansion Yûsuf b. Tâshfîn occupied Oudjda in 472 (1079). In the middle of the xiith century it became an Almohad town. In the reign of the Almohad al-Nâsîr, when the Banû Ghâniyâ, hoping to restore the power of the Almoravids, came from the south of Tunisia and extended their ravages into the region of Tlemcen, the fortifications of Oudjda were repaired and strengthened (Kîrîh, p. 203; transl. p. 194).

It was however mainly after the installation of the 'Abd al-Wâdids in Tlemcen [q. v.] that the town of Oudjda “the bulwark of the frontier which separates the central from the extreme Maghrib” (Ibn Khaldûn) was summoned to play an important strategic part. Belonging to the kingdom of Tlemcen, it was the first place encircled by the Marinids of Fâs when they invaded the lands of their hereditary enemies and the first victim of their attacks. In 670 (1271) the Marinid Abî Yûsuf having defeated Yaghmurâsân, the king of Tlemcen, near Oudjda, laid the town in ruins. In 695 (1296) the Marinid Abî Ya'qûb having fortified his own frontier town of Taûrit seized Oudjda and destroyed its defences. In the following year he seems to have wished to make Oudjda a base for his future expeditions. He rebuilt it; he created a palace there, a citadel and a great town (possibly the one which still exists) and began the siege of Tlemcen which lasted eight years. In 714 (1314) the Marinid Abî Sa'id delivered a fierce attack on Oudjda which resisted and, presumably leaving troops in front of it to immobilise the garrison, he went on towards Tlemcen. In 735 (1335) Abu 'I-Hasan besieged Oudjda; it was taken and the fortifications dismantled. In 772 (1371), Tlemcen being occupied by the Marinids and Oudjda being also in their hands, the Arab tribes of the region took the side of the dispossessed 'Abd al-Wâdids and laid siege to the town.

The tribes of the region, Arab as well as Berber, were also closely involved in the fighting in the xviith down to the xixth century between the Turks of Algeria and the Moroccan sultâns. In the town itself there were clans which supported each side. Authority passed from one side to the other, but it was only a relative authority, enjoyed precariously and intermittently; of the peace reigning in the Maghrib and the sultan's orders were fully carried out, Oudjda formed part of his empire; if on the other hand the country was troubled and the power of the sovereign weakened, Oudjda went with the province of Tlemcen and belonged to the Turks' (Voinot). One of the few periods during which the authority of the sherif was firmly established in this remote province was the reign of Mûsîy Ismâ'îl (1082—1139 = 1672—1727), who brought to Oudjda Arabs from the south of Marraksh, formed them into a dîjîh [q. v.], strengthened the defences of the town, built several kâbâlas around it and organised the tribes of the plain. After his death the country lapsed into insecurity and anarchy. The Turks reappeared. Finally in 1795, a Sherifian force again took possession of Oudjda which henceforth remained under Moroccan rule. An 'ânâm (governor) represented the sultan in it.

In 1844 after the battle of Isly, the town was temporarily occupied by the French as a punishment for the help given to 'Abd al-Kâdir by the sultân. The French troops reappeared there in 1859 and finally occupied it in 1907.

Oudjda, a town of old Morocco, where local government was non-existent had become a haunt of smugglers and fugitives from Algerian justice; it has been cleansed of all suspicious elements.

The town, surrounded by its wall which however only dates from 1866, is surrounded by modern suburbs and beautiful gardens. The population is now about 30,000 of whom half are Europeans.

PADISAH, the name for Muslim rulers, especially emperors. The Persian term падишах, i.e. (according to M. Bittner in E. Oberhumer, Die Turken und das Osmanische Reich. Leipzig 1917, p. 105) "lord who is a royalty" in which the root pad is connected with Sanskrit padis, lord, husband, fem. patni. Greek πάδισα is derived. Lat. patris, G. Curcius, Griech. Etymol., p. 377, was originally a title reserved exclusively for the sovereign, which in course of time and as a result of the long intercourse of the Ottomans with the states of the west also came to be approved for certain western rulers. In the correspondence of the Porte with the western powers, the grand vizier Kuyudpasi Pascha (d. Aug. 5, 1612) probably for the first time applied the title padisah to the Austrian emperor Rudolf II. At the conference of Yenbua (1737) Russia demanded the title for its Czars (cf. J. v. Hammer, G. O. K., viii. 488) and claimed it again at the negotiations at Bucharest (1773; cf. ibid., viii, 412). When padisah came to be applied to the sultan, the patishah ab-i ulqm, does not seem to be exactly known. In any case it is found in conjunction with all kinds of rhyming words as early as the beginning of the nineteenth century in Ottoman documents. Padisah therefore may have come to be used towards the end of the nineteenth century, presumably instead of bluqeh (from bluqakan, bluqkan, from bluq, bluqeh, bluq), an obsolete word, as well as bluqan (cf. id., xi, 70) already found in dervish Sufism, and was regularly used in the end of the sulqanate (cf. the cry of padisahmi lis or bi rach with which the sultan was until quite lately greeted by his troops and subjects).

Horn, Grundriss der neupersischen Etymologie, Strassburg 1893, p. 61, No. 266 (where however another derivation is given, from Old Persian pad, protector, and śāh, ruler; cf. thereon Horn, in G. I. Ph., i, 74).

PADRI (padri, padrī); bā-i fārsī or bā-i 'āṣām: the bā with three points subscript, invented for Persian as supplement to the soft Arabic bā' and to represent the hard label. It is sometimes interchangeable with bā' (e.g. asp and asp, dabir and dafir) and more frequently, with ū (e.g. saṭīl and saṭī, Ṣāfī and Fāsī). The regular use of the letter in manuscripts is comparatively modern, but it is found in good examples of the nineteenth–twentieth century while at the same time it is often omitted in manuscripts of much later date (G. I. Pā, i, iv., p. 74).

(FRANZ BABINGER)

PADRI. "Padries" or "Pedaries", also "Pedaries" is the name given in Dutch literature to the people who wished to carry through by force a reformation of Islam in the early decades of the sixteenth century in Minangkabau (Central Sumatra). In explanation of this expression it may be said that, according to one opinion, the word is connected with Padri, a harbour on the north coast of Sumatra; while, according to another, it corresponds to the word padri (Port. padre) used in several Indonesian languages meaning "Christian clergyman", whether Roman Catholic or Protestant. The first derivation cannot be supported, but the second is probably correct. It may be that Malays, when asked by Dutchmen after the troubles, accommodated themselves to the linguistic level of the interrogators by designating the insurgents as padri as they laid special stress on the religious life. Such a case would not be unique in dealings of Dutchmen with natives. The Dutchmen then adopted the word and retained it; it also occurs sometimes as padari in native sources. The usual native name however for the people called padri by us was urang putih-"white men", a common term among Indonesian peoples for those who take their religious duties with particular seriousness and are distinguished by their white robes (van Ronkel, in Indische Gids, 1915, ii. 1193). In the official reports and Dutch colonial literature of the time, those who did not join the Padaris are called "Malays", a misleading designation as the Padris were also Malays. Padris and non-Padris were of the same stock. A better name for those who held by the old customs is the "Adat party"; they formed the party who on every occasion tried to base their action on the traditional usage. The Minangkabauans or Minangkabau Malays inhabited the central Sumatran highlands between about ½° N. lat. and ½° S. lat. From this mountainous country they have extended eastwards over the highlands which form the transition to the eastern Sumatran lowlands. To the west they reached the coast of the Indian ocean. Here there are several harbours which gave a connection with the outer world. It is generally supposed that the country was converted to Islam from Atjeh. The Atjehnese held several points on the coast when the Dutch and English Trading Companies established themselves here.

Islam was firmly established in the country when the activity of the Padris began. There was a burning zeal for the faith, in certain circles at
least. In 1785, a spiritual leader came down from the mountains with some thousands of followers and disciples in order to circumscribe the Christian population of the port of Padang, then the principle possession of the Dutch, and force them to adopt Islam (T. B. G. K. W., v. 55). The Minangkabaus managed to combine a strongly Muhammadan outlook with the retention on a large scale of their old popular institutions. Matriarchy still prevailed among them. The administration of a village is conducted by the leading heads of the various families, the various *uku*, i.e., union of families of different descent in common council. The form of government is republican. Every matter of any importance is considered by all the prominent families, their chiefs and other leading men (*muqadda*, Ar. *nuwafasha*). It is a wearisome process, not calculated for speedy decisions. A society organized on these lines is naturally at a disadvantage against vigorous and powerful attacks.

In the beginning of the sixteenth century three Minangkabau pilgrims came home. They had seen Wahhabi rule in Mecca (after 1806). Filled with the puritan zeal of the Wahhabis, they set out to purify the religion of their own land. They were able to win over to their views a prominent theologian of the central district of Agam named *Tuanku nan Renjih* (*tuanku* is a title for a theocratic prince). He at once set to work. He first of all insisted on the exact observance of the law, particularly in ceremonial. Popular customs which in his opinion were contrary to the *shari'a* were attacked, such as cock-fighting, which was associated with betting and was the most popular pastime of the people, dice, drinking of palm-wine, opium-smoking, betel-chewing, filing the teeth, wearing long nails, smoking tobacco. All these were forbidden. The prohibition of interest was insisted upon. The men were to cut their hair, let the beard grow and wear white clothes in the Arab style. The women were to wear veils. Finally the Padris dealt a blow to the matriarchial institutions by taking their women into their houses with them (de Stuers, i. 185, footnote 3). The prohibition of tobacco seems to be directly taken from Wahhabi practice, while the other prohibitions and commands all find a place in the *Shi'i* school. It is also evident from *Tuanku nan Renjih*'s attitude that he did not intend to institute Wahhabism. In the same district of Agam lived a highly respected and very influential teacher: *Tuanku Kótá tuá*, he was *guru* *tarçat* (Ar. *warás*), a master of mysticism; to what order he belonged is not known. Mysticism of a popular kind is much cultivated in Minangkabau; *Tuanku nan Renjih* turned to him, not to quarel with him but to seek his cooperation. The *Tuanku Kótá tuá* agreed that a strict observance of the law should be aimed at; but when *Tuanku nan Renjih* insisted that if any one did not perform the *gúlát* correctly he was a *mustād* and was liable to the penalty of death as *kadd*, *Tuanku Kótá tuá* met him with the milder doctrine that the *mustād* should not be put to death, unless every effort to bring him to the true faith had failed, a case which however did not exist and was not to be expected. *Tuanku nan Renjih* now went his own way. After the Minangkabau custom, he summoned an assembly which was to approve his views. He met with enthusiastic approval from the theologians but with opposition from the chiefs; for the latter recognised at once that the Padri demands attacked their positions and would overthrow the whole social system. *Tuanku nan Renjih* went vigorously forward. With his own hand he stabbed his mother's sister whom he caught smoking; the body was thrown into the forest and not allowed to be buried. The effect was considerable; his followers applauded the deed, his silent or open enemies shrank back; he who had done such an unprecedented thing as not to heed the bonds of blood must be acting under a higher inspiration: it was not cruelty but self-sacrifice; the reformation went on with fanatical zeal. Whoever omitted a *gúlát* had to pay a fine; for a second offence the punishment was death. Opponents were overcome by force, their villages burned, themselves killed or made slaves or at least made to pay an indemnity. Soon the greater part of Agam and of the district of *Tuanku Kótá tuá* were in his power. Several villages which had already yielded to pressure and adopted the stricter teaching of *Tuanku Kótá tuá* were also plundered and burned. In the end the doings of his followers were too much for the leader and he retired after about eight years. It was only at a later date when the Dutch troops entered the country that he again placed himself at the head of the movement. He died in 1832.

The procedure adopted by *Tuanku nan Renjih* was as follows: after a village had been taken, he appointed on his own authority an *imin* and a *kali* (Ar. *khafi*); the former was head of the mosque and had control of all religious matters; the sphere of activity of the *kali* is not quite clear. In any case, this proceeding was revolutionary; by constitutional law the offices were hereditary with certain limitations; important decisions could only be made by *muqadda* (see above).

Another teacher, *Tuanku Pasaman*, also called *Tuanku Lintau*, was active in the south east in the district of Lintau. Less well known than *Tuanku nan Renjih* he in no way yielded to him in fanatical ardour. Lintau was soon in his power. He then entered the adjoining territory of *Tanañ Data(r).* Here in the old capital lived in faded glory of their former greatness the descendants of the royal house of Minangkabau. Well led, their power might have resulted in a restoration of their former age. *Tuanku Lintau* had them all murdered, except one who escaped across the frontier. Burning and murdering, he brought the whole land under his rule.

A third centre of Padri activity was *Alahanpandjang* in the north. The movement began here at the same time as in Agam and Lintau. Very soon there came to the front here a man who is best known by his later name of *Tuanku Imam*, first as an adviser and then as the leading figure. We possess exceptionally a native source for the life and deeds of this important figure. Quite recently a Malay work, a kind of biography written by one of his sons, has been discovered and published (see Ronkel, *Indische Gids*, 1915). The Padris of Alahanpandjang began by building a fortress which they called Bondol. Here the strict doctrine was observed and it was the central position of the Padris power from which they sent out expeditions in all directions. Invited by sympathisers they would go to a village, subject it, appoint a *kali* and an *imin*, as *Tuanku nan Renjih* did, and return to Bondol with rich booty. The bio-
graphy relates that campaigns were undertaken at intervals of about a year. This was the period of Tuanku Imam's rise to be Imam, for in many matters he was Imam, Imam in religion, Imam in all matters requiring intelligence and reflection so that all quarrels and disputes were finally brought to him". Four men were sent to Mecca to guarantee the purity of the doctrine. After a long time they returned, even more strict. There was not yet regular spiritual intercourse with Mecca. Pilgrims were very few in number.

As soon as the Padris had overcome or driven away the supporters of the Adat, the latter tried to resist the English who had occupied Padang in 1795 to the extent that they could not. Tuanku Imam, who had till then held out in Bondjol, surrendered. He then secretly prepared a rising which broke out in the beginning of 1833. The Dutch colonial troops were as a rule superior to the natives in the fighting but the attacks of the latter were continually resumed. Finally in 1832 all activity by the Padris stopped. Tuanku Imam, who had till then held out in Bondjol, surrendered. He then secretly prepared a rising which broke out in the beginning of 1833. The Dutch colonial troops were as a rule superior to the natives in the fighting but the attacks of the latter were continually resumed. Finally in 1832 all activity by the Padris stopped. PALAHENG — PALMYRA

p. 78 (with reference to the Bektashi of Kruga in Albania); John Potter Brown, The Debates or Oriental Spiritualism, ed. H. A. Rose, London 1927, p. 214. (Franz Baringer)

PALANPUR, a Muslim state in India now included in the Western India States Agency. The territory incorporated in this agency includes the area formerly known as Kathiawar together with the Cutch and Palanpur agencies. Its creation in October 1924, marked the end of the political control of the Government of Bombay and the beginning of direct relations with the Government of India. The old Palanpur Agency with its headquarters at the town of Palanpur was a group of states in Gujara[t [q.v.] lying between 23° 25' and 24° 41' N. and 71° 16' and 71° 46' E. It was bounded on the north by the Rajput states of Udaipur and Sirohi; on the east by the Mahi Kāṇṭha Agency; on the south by the state of Baroda and Kathiawar; and on the west by the Rann of Cutch.

The state of Palanpur was conquered towards the end of the sixteenth century by Lohānī Pathāns, subsequently known as Dīhlōris. A short account of its history under the Mughal emperors will be found in the Gazetteer of Bombay, v. 318—324, and in the Mir'tā-i Aḥmadî (Ēthē, No. 3599, fol. 741). British relations with this state date back to the year 1609, when, through British influence, arrangements were made for the payment of tribute to the Gaekwar of Baroda (Aitchison, vi. lxxix). This engagement was further strengthened by an agreement signed on November 28, 1817 (cp. cit., ed.). In 1848, the military and commercial agent from the Gaekwar was abolished and the finances of the state remained under British supervision until 1874 when the ruler of Palanpur was entrusted with the management of his own finances.

Palanpur is still ruled by Lohānī Pathāns. It has a population of 264,179, of whom 245,000 speak Gudjārāti. The distribution of population according to religion is as follows: Hindus, 222,714; Muhammadans, 28,690 and Jains, 12,542.

PALMYRA, Tadmur, now Tadmur, the ancient Tadmor, called Palmyra by the Greeks (probably a corruption of the older name by a popular etymology; cf. Hommel, in Z.D.M.G., xlv. 547; M. Hartmann, in Z. D. P. V., xxiii. 128 sqq.) lies northeast of Damascus in the great desert in an oasis watered by two springs. The water is sulphurous but drinkable after it has settled. The climate is unfavourable, having great differences of temperature between day and night and being unbearably hot in summer and sometimes having snow in winter. What it lacked in climatic conditions was compensated for by its situation which made Tadmur an important junction on the caravan routes connecting east and west, notably that from the Euphrates to Damascus. The natural supposition that the place was already of importance and settled in very early times has been confirmed by several inscriptions of Tiglat-Pileser I of the eighth century B.C. because the "town of Tadmor in the land of Amuru", which the Assyrian kings mentions, can hardly be anywhere else (R. Meissner, et al., O. L. Z., 1923, p. 157; Dhorme, in R. B., 1924, p. 106). Otherwise the city is not mentioned till shortly before the beginning of the Christian era and in the Old Testament only in a peculiar ġquil ģro qvo. While in I Kings ix. 18 in the accepted text it is said that Solomon built Tamar (in southern Palestine) among other towns, the Chronicler (ii. 8, 4) followed by the variants and by Josephus, Archeology, viii. 6., gives Tadmor instead. From this it appears that the latter in his time must have been of some fame and size and also that the later widely known legend according to which Solomon built the wonderful city, was already in existence. This story was known at a later date to the Arabs among whom it was related, in keeping with the fantastic elaboration of the legend of Solomon, that the ġjin helped the king to build it (cf. Nuzair, v. 22; cf. Syme, Ancient History, p. 514 and several of the Arab geographers mentioned below; according to Ibn al-Ṭahrir, ed. Tornberg, i. 166 the queen Bilkits visited Solomon in Tadmur and is buried there).

Its incorporation in the Roman empire was of the greatest importance for Palmyra. Its already busy trade increased enormously and great wealth poured into the town, surrounded by the dreary desert (on the roads connecting Palmyra with the other world see Dussaud, Topographie historique de la Syrie ancienne et médiévale, 1927, p. 248—270). From this period dates the brief but accurate account of Palmyra by Pliny (Hist. nat., v. 25). The merchants were able cleverly to use the enmity between Rome and Parthia for their own advantage, and the conditions, when the emperor Hadrian, by the clever stroke of policy of leaving Assyria and Mesopotamia to the Parthians, inaugurated a long period of peace, contributed still more to the prosperity of the town. The customs tariff of the year 136 written in Aramaic and Greek gives a vivid picture of the business life of the Palmyrene republic in this period, while the splendid ruins of the temple of the sun and of several other fine buildings show how highly developed was the artistic sense of its citizens under Greek influence. In the third century, further prospects opened up which induced the Palmyrenes for a brief period to dream of a new power in the east with their city as its centre. At the beginning of the third century arose the new Persian dynasty of the Sāsānians which revived the ancient bitter feud with the Romans so that the Palmyrenes again had an opportunity to use their diplomatic ability. The Palmyrene king Odenathus (Udhain) I at first wanted to join the Persians under Shāpur (241—272) but, when his offer was rejected, he joined the Roman general Ballista in Asia Minor and inflicted a heavy defeat on the retiring Persians. Under Gallienus he became the actual ruler of the whole of the east and was given the title Augustus by the emperor. When in 266—267 he was murdered, his dignity passed to his son Valaballatus, but the real power was in the hands of his widow Zenobia (Zainab), a highly gifted lady who extended her kingdom, notably by the conquest of Egypt. This was done with the approval of the emperor Aurelian, but Palmyra soon rebelled against the Romans and in 270 a battle was fought in which Zenobia was
defeated. Palmyra then surrendered. When it rebelled again, Aurelian had the city with its fine buildings destroyed. Zenobia fled, was captured and brought to Rome. This queen, distinguished alike for her beauty and intellect, made a great impression on her contemporaries and her memory survived among the Arabs under the name of al-Zabda although only in fabulous tales in which little of history remains. She is said to have enticed the Arab king Daghima (q.v. and the article tiik) to her and then killed him by opening his arteries. Her nephew 'Amr b. 'Adi wished to evade his obligation as avenger of blood but was forced by the cunning Kayr to do so and when the latter by stratagem got the cunning queen in his power, she took poison which she always carried in a ring she wore, in order not to be put to death by him.

With the fall of Zenobia, Palmyra lost its importance. The walls however were rebuilt although not on the former scale but the trade, the source of the town’s livelihood, began to dry up. In this period Christianity began to spread in the town; bishops are mentioned and Justinian among others built a church there. Palmyra remained under Roman rule for about 35 centuries until the Arab conquest put an end to it. When Khalid b. al-Walid approached the town on his celebrated campaign, the inhabitants thought of defending the town against him but abandoned the idea and capitulated voluntarily in order to secure the status of dhimmi (q.v.); they seem however to have rebelled again for it was only when Yazid sent Dihya against it, after the taking of Damascus, that it was finally subjected.

Palmyra never regained its former prosperity under Muslim rule. It was inhabited mainly by Khalifs and was one of the towns which rebelled against Marwan II who set out with an army against it. An agreement was come to however, but according to Ibn al-Fakhrī (298 = 902), Marwan had a part of the walls destroyed. According to the legend, he abandoned the idea of destroying the town completely when he came upon the corpse of a richly dressed woman on whose forehead was a plate of gold with an inscription warning him against doing so.

Several Arab geographers mention Tadmor but very briefly. Some of them speak of the wonderful buildings and ruins, and as a rule they repeat the old legend that the town was built by Solomon with the help of the djinn. Yāküf makes the intelligent observation that people are everywhere inclined to attribute great buildings to this king. The terrific earthquake of 1157 affected Palmyra. Benjamin of Tudela (1173) makes the rather remarkable statement that no fewer than 2,000 Jews were able to bear arms lived in the town. Duništi mentions along with incomparable ruins the djinn of the roof of which was formed of 15 stories. The strong citadel of Kal'at al-Man’s north of the town is ascribed by the inhabitants to the famous Druse king Fakhr al-Din (q.v.) but this is doubtful. Palmyra disappeared in the period of great decline in the east; its inhabitants finally lived in a wretched village built on the court of the temple of the sun, quite forgotten by the west. Not till 1678 was the once so famous city again discovered by members of the English factory at Aleppo and in 1751 it was more closely explored by Robert Wood and described in a handsome volume. When traffic began to revive again, Palmyra resumed its importance as a station on the caravan routes and in quite recent times new life has been given it by the motor, the new means of transit across the desert; these give a rapid and comfortable connection between Palmyra and the cities of east and west.

PAMPELUNA. Sp Pamplona, Ar. BANBALUNA, a town in the north of Spain, capital of the province of NAVARRE, has at the present day about 30,000 inhabitants. It was conquered by the Arabs in 121 (738) during the rule of the wali 'Ojbā b. al-Hadidjādī. But the occupation of the town and its territory was of very short duration. It soon became the capital of the province of Navarre when García Íñigo tried to found a small independent state; later at the beginning of the tenth century, it was the capital of the first king of Navarre, Sancho Abacar. Several expeditions were sent against Pampluna by the Hmāyid emirs of Cordova, in 228 (843), 246 (860), and in 260 (874). 'Abd al-Rahman III succeeded in taking it for a time in 312 (924) in the course of his campaign against Navarre and destroyed it. Of her attempts against Pampluna were made by the Muslims in 322 (934) and during the rule of the two 'Amrīd Ḥabūs al-Mansūr [q.v.], and al-Muẓaffar [q.v.]

(P. LEVI-PROVENCAL)

PANDJĀB, the land of the five rivers, is a province of modern India which, together with the North-West Frontier Province and Kashmir [q.v.], occupies the extreme north-western corner of the Indian Empire, and, with the exception of
the recently-constituted Delhi province, comprises all of British India north of Sind and Radjputâna and west of the river Dîjamân. Geographically therefore it includes more than its name implies, for, in addition to the country watered by the Dîheluna, Cînâb, Kâwî, Beas, and Sâteledj, it embraces the table-land of Sîrnând between the Sateledj and Dîjamân, the Cînâb-Sâsâr Dôâb between the Sateledj and the Indus, and the district of Dâr Khân.

Administratively the province is divided into two parts, British territory and the Pândjâb States. British territory, which has an area of 99,265 square miles and a population of 23,580,526, is divided into 29 districts, each administered by a deputy commissioner. These districts are grouped into the five divisions of Ambala, Lîjhlundur, Lahore, Râwâlpindi, and Multân, each under a commissioner. The Pândjâb States have an area of 37,699 square miles and a population of 4,910,005. The conduct of political relations with Dâdjânâ, Pâtawdi, Kâlsîa, and the 27 Sînula Hill States is in the hands of the Pândjâb Government.

The history of this area has been profoundly influenced by the fact that the mountain passes of the north-west frontier afford access to the Pândjâb plains. For this reason it is ethnologically and more nearly allied to Central Asia than to India. The recent excavations at Harappa in the Montgomery district are evidence of a culture which probably flourished in the Indus valley about 3000 B.C., and which bears a general resemblance to that of Elân and Mesopotamia (Sir John Marshall, Mohenjo-Daro and the Indus Civilization, 3 vols., 1931). But the first movement of which we have any evidence is that of the Aryan-speaking peoples who established themselves on the Pândjâb plains in prehistoric times. Centuries later successive waves of invaders swept like devastating torrents through the mountain passes of the north-west. Persian, Greek, and Afghan, the forces of Alexander and the armies of Mahââd of Ghâznâ, the hosts of Timûr, Bîbûr, and Nûr Sâdûr, and the troops of Ahmad Shah Durrât (cf. these articles), all advanced by these routes to lay waste the fertile plains of the Pândjâb. All these migrations and invasions added to the heterogeneity of the existing population in the land of the five rivers. The history of invasions from Central Asia proves that the Pândjâb and the frontier zone from the banks of the Indus to the Afghan slopes of the Sulaimân range have never presented any real barrier to an enterprise of the existing population of the Indus and the lower Pândjâb, but the real threat to Hindustân came from the direction of modern Afghanûstân. The Ghaznavid invaders found the powerful Hindûghâshiyâ dynasty of the Khâbhâr ruling between Lâmâghân and the Cînâb. The power of this Hindu state was completely shattered by Mahââd of Ghâznâ who annexed the Pândjâb, which became a frontier province of his extensive empire and the sole refuge of his descendants when driven out of Ghâznâ by the Shânshâbâni sultâns of Ghôr (see Gôrîn). Multân and the surrounding country had remained in Muslim hands since the days of the Arab conquest, but the fact that its rulers were heretical Karmaângs (q.v.) was one reason for Mahââd's attack in 1006 A.D. Muhammad Ghôrî annexed the Pândjâb in 1186 A.D. and on his death in 1206 A.D. it definitely became a province of the Sulâtânate of Dîhil under the rule of Kûfû al-Dîn Aiblâm. With the exception of occasional rebellions and raids from Central Asia it remained under the Sultâns of Dîhil until the defeat of Ibrâhîm Lodi (q.v.) by Babur at Panîpât (q.v.) in 1526 A.D. paved the way for the foundation of the Mughal empire. Under Akbar (q.v.) the modern province of the Pândjâb was included in the sîbâs of Lâhôr, Multân, and Dîhil, a detailed description of which will be found in the Ain-i Akbârî (transl. Jarrett, ii. 278–341).

The persecuting policy of Akbar's immediate successors led to the growth of Sikh political power in the Pândjâb and transformed a band of religious devotees, founded by Guru Nanak in the second half of the fifteenth century, into a military commonwealth or Khâlîsa animated with undying hatred toward Muslims (cf. the art. SIKH). The weakness of the central government and the unprotected condition of the frontier provinces under the later Mughal's exposed Hindustân to the invasions of Nûr Sâdûr (q.v.) and Ahmad Shah Durrât (q.v.). On the bloodstained field of Panîpât, in 1761, the Marâhâs, who were aspiring to universal sovereignty, sustained a crushing defeat at the hands of the Afghân invader. In the following year, at Bârnâlîa near Ludhâna, Ahmad Shah dismally defeated the Sikhs who had taken advantage of his absence in Kâbul to possess themselves of the country around Lahore. The Sikhs, however, soon extended their sway to the south of the Sateledj and ravaged the country to the very gates of Dîhil, but their further advance was checked by the Marâhâs who had rapidly recovered from their defeat at Panîpât. It was the defeat of the Marâhâs by Lord Lâke, in 1803, which facilitated the rise of Ranjit Singh and enabled him to found a powerful Sikh kingdom in the Pândjâb. His attempts to extend his authority over his co-religionists, the cis-Sulâtânate Sikhs, brought him into contact with the British, and, by the treaty of 1809, he pledged himself to regard the Sateledj as the north-west frontier of the British dominions in India (Aitchison, viii., No. llii.). After the death of Ranjit Singh, in 1839, his kingdom rapidly fell to pieces under his successors. Revolution succeeded revolution, and during the minority of Dalip Singh the Khâlîsa soldiery became virtually rulers of the country. Unprovoked aggression on British territory produced two Sikh wars which ended with the annexation of the Pândjâb in 1849.

At first the newly-conquered territories were placed under a Board of Administration. This was abolished in 1853, its powers and functions being vested in a Chief Commissioner. In 1859, after the transfer of the Dîhil territory from the North-Western (now the United) Provinces, the Pândjâb and its dependencies were formed into a Lieutenant-Governorship.

The annexation of the Pândjâb by advancing the British administrative boundary across the Indus
brought the Government of India into closer contact
with the Pathan tribes of the north-west frontier
and the Amir of Afghanistān [q. v.]. Because this
frontier was too long and too mountainous to admit
of its being defended by the military alone, much
depended upon the political management of the
tribes. At first there was no special agency for
dealing with the tribal tracts, and relations with
the tribesmen were conducted by the deputy-
commissioners of the six districts of Hazara,
Beshāwar, Kohat, Bannu, Derā Is-lā'il Khān, and
Derā Ghīza Khān. In 1875, the three northern
districts formed the commissionership of the
Pendjdeh, the three southern ones that of the Derādż. The
system of political agencies was not adopted until
1878, when a special officer was appointed for the
Khyber during the Second Afghan War. Kurram
became an agency in 1892, while the three remaining
offices of the Malakand, Tochi, and Wāna were
created between 1895 and 1896. The Malakand
was placed under the direct control of the Government
of India from the outset, but all other agencies
remaining under the Pendjāb Government. This
was the arrangement until the creation of the
North-West Frontier Province in 1901.

The Pendjāb attained its present dimensions in
1911 when Dihāl became a separate province. It
was not however until 1921 that it was raised to
the status of a governor's province. To-day it
contains 13,930,000 Muhammadans, 8,600,000
Hindus, and 4,072,000 Sikhs. Unfortunately the spirit of communal antipathy has been fanned in the province by the activities of the Anglogan, zābātī Islām, and tablīgh movements organized by Muslims for the purpose of combating the proselytizing activities of the Hindu community known as the ḥudūdī movement. In 1926 Swānī Shārdhānand, a leader of the ḥudūdī movement, was murdered in Dihāl by a Muslim. Communal relations were further embittered by the murder in Lahore of a Hindu bookseller who had published a libellous attack on the Prophet of Islam in his book entitled the Raṅgīla Raṣūl. Far more serious than this communal strife were the political disturbances culminating in the Dīa-
līsānī, Bāgah Incident of 1919 (Sir M. O'Dwyer,
India B. C. to Know It, 1883—1925).

At least 90 per cent. of the total population
live in villages and 60 per cent. is supported
by agriculture, for the Pendjāb is a country of peasant
proprietors. But the bulk of the cultivators are
born in debt, live in debt, and die in debt. Almost
the whole of this money has been advanced by
Hindus and Sikhs who are not debared by religion
from the taking of interest, but, unfortunately, well
over half of this debt has been incurred by Mu-
hammadans. No community can hope to thrive
under so great a handicap and some organization
to combat this evil is essential to the prosperity
of the Muhammadan community.

PANDJĐIH, (PENJĐIH) a village in the Turko-
noman republic of the U. S. S. R., situated
to the east of the Kugah river near its junction
with the Murghāb at Pulī Kīghtī. The fact that
the inhabitants of this area, the Sarık Turkomans,
were divided into five sections, the Sukāts, Harzāqis,
Khūrāsānis, Batārā, and the Ḍāhī Shāh, has
been put forward as a possible explanation of the origin
of the name Pendjāb, but it carries no weight as the Sariks
were only fourteenth century immigrants whereas the
name was in use in the fifteenth century.

This obscure oasis owes a somewhat melancholy
importance to the "Pendjāb Incident" of 1885,
when an Afghan force suffered heavy losses in
an engagement with Russian troops. History proves
that an ill-defined boundary is a potential cause
of war. It was a knowledge of this and the Russian
occupation of Murw, in 1884, that gave the neces-
sary impetus to negotiations which ended in the
appointment of an Anglo-Russian Boundary Com-
mission for the delimitation and demarcation
of the northern boundary of Afghanistān. Trouble
immediately arose in this quarter for while the
Russians contended that the inhabitants of Pendjāb
were independent the British held the view
that they were subjects of the Amir of Afghanistān.
According to the British, the district of Pendjāb,
which comprised the country between the Kugah
and Murghāb rivers from the Band-i Nadir to Ak
Tepē, together with the rest of Badghis, formed
part of the Herāt province of Afghanistān. During
the first quarter of the nineteenth century Pendjāb
had been occupied by Djamšidis and Hazaras.
Towards the end of this period some Turkomans
of the Ersari tribe, whose settlements were scattered
along the banks of the Oxus between the Cargi
and Balkh, moved to Pendjāb and obtained per-
mision to settle there. Salor Turkomans had also
settled in this area. About 1857 the Ersaris migrated
from the oasis of Pendjāb and soon afterwards the
Sarık Turkomans, forced southwards by their more
powerful neighbours, the Tekkehs, occupied Valistan
and Pendjāb and compelled the Salor families to
migrate elsewhere. Although, therefore, Pendjāb
had from time to time been occupied by various
tribes, they had all, whether Djamšidis, Hazaras,
Ersaris, Salors or Sariks, acknowledged they were
on Afghan soil and paid tribute to the nābīb or
deputy of the Afghan governor of Herāt. The
Sarık Turkomans had even supplied the Amir
with troops. The British therefore contended that
the district of Badghis, of which Pendjāb formed
part, had long been under Afghan rule (Foreign
Office MSS. 65, 1205).

The Russians on the other hand contended that
the people of this oasis had always enjoyed independence. Lessar, a Russian engineer, who visited Pendjdeh in March 1884, discovered no trace of Afghan authority, but a Russian doctor, named Regel, who visited it in June of the same year reported the presence of an Afghan detachment.

In their opinion therefore Pendjdeh had only recently been occupied by Afghan troops. The fact that the Afghans had not permanently garrisoned this area was no proof of its independence. On the contrary, it was only natural that, after the Russian occupation of Merw and Pul-i-Khatun, 'Abd-Al-Rahmân Khan should have taken steps to indicate his sovereign rights over this area. When, therefore, an Afghan garrison occupied Pendjdeh, the Russian Government immediately protested and disputed the Amir's claim to the territory. While negotiations were taking place between London and St. Petersburg events moved swiftly on the frontiers of Afghanistan. On March 29, 1885, General Komarov sent an ultimatum demanding the withdrawal of the Afghan garrison. The Afghans resolutely refused to withdraw whereupon the Russians attacked them driving them across the Pul-i-Kishti with the loss of some 900 men. It must be admitted that the posting of Afghan troops in Pendjdeh, and the Russian advance to Yulatan on the Marghab and to Pul-i-Khatun, the Mulbccul, were regrettable actions almost certain to precipitate war. The whole incident should have been avoided, but the confusing reports of Lumsden, the British Commissioner, to the Foreign Office, and the delay of Zelenoi, the Russian Commissioner, in arriving at Sarakhs complicated matters still more.

At the time this incident seemed likely to embroil Russia and Britain in war, but, fortunately, the good sense of the Amir, who was at this critical moment on a visit to the Viceroy, and the diplomatic skill of Lord Dufferin prevented this, for even the pacific Mr. Gladstone had proposed to Parliament that £1,000,000 should be expended on preparations for war.

It was finally agreed that Pendjdeh should be handed over to Russia in exchange for Dhu'l-Fikhr, and by the year 1886 the northern boundary of Afghanistan had been demarcated from Dhu'l-Fikhr to the meridian of Duki in forty miles of the Oxus. After a dispute as to the exact point at which the boundary line should meet the Oxus, the process of demarcation was completed in 1888. This recognition of a definite frontier between Russia and Afghanistan led to a decided improvement in the Central Asian question.

(C. COLLIN DAVIES)

PANGULU (Jav.), pangulu (Sund.), pangolô (Madur.), literally 'headman, director' used in the east Indian Archipelago as the name for secular and religious chief administrators, in the islands of Java and Madura the name of a mosque official, namely the chief in his area. The official representatives of religion are organised there on the same scheme as the native administrative officials. Alongside of the regent, the highest administrative official, is the pangulu of the regency, alongside of the head of the district is the pangulu of the district, called the pangulu naib or briefly naib, and so on. The officials of the mosque are graded in a hierarchy; the pangulu at the capital of the regency is at the head of all the personnel of the mosques of the regency. The village official in charge of the divine services is of a different origin. He is a member of the village authority for attending to the religious requirements of the village he does that, alongside the staff of the mosque. This man is exceptionally called pangul in Bantén (Western Java); elsewhere he is known by other names.

The pangulu is the director of the mosque and the chief of its personnel; according to a fat law, he is appointed, like the rest of the staff of the mosque, by the regent, usually being chosen from the staff of his own or another mosque. This procedure does not always guarantee that the man appointed is specially qualified (see below).

Theological training is quite free from special prescriptions. The student of theology, whether he intends to take up an official position or remain a private student, studies at schools (all private institutions of which there are many in the land). Each studies as he pleases, for shorter or longer period, just as he likes; an effort is made to attend lectures at several schools.

The duties of the pangulu are varied, but not uniform throughout the whole regency. The office of director of the mosque has already been mentioned; in larger villages, especially at the capital of the regency, the staff is large: there the pangulu does not himself take part in the work. The pangulu has charge of marriages which are concluded in his presence: talâk and rughû are pronounced by him and marriages are registered by him. The pangulu of a regency only performs this office in the case of very prominent families: in this case it is the custom to conclude the marriage in the house of the family. The pangulu also performs the ceremony when the wâli of the bride appoints him wâskil, a regular custom, observed by the majority without the reason being quite clear to them; to the popular mind the pangulu is the person who binds in marriage. It is therefore a very old custom to have the marriage performed in the mosque by the pangulu: this unwritten custom has now been given the force of law by a colonial enactment (since 1895, the law in question is of 1929). This law also regulates the fees to be paid at marriages, proclamations of talâk and rughû, taking the old customs as the guiding principle. These fees form the most important part of the income of the pangulu and his staff; the latter also receive their share; if properly qualified they frequently act as deputy for the pangulu at marriages. Women who have no wâli are married by the pangulu as wâli hâkim. The number of pangulus with this qualification is always less than the number of officials appointed to perform marriages. In some districts the regent appoints himself wâli hâkim but in practice he leaves the exercise of his rights to the pangulu.

The djakat (Ar. sukâr) is of course not collected in Java and Madura by the authorities; it is, if it is levied at all, a free-will offering and in many places insignificant. Only in Western Java was the collection at one time organised and in the

hands of the mosque officials. The revenue went
to them. To this day the *djabat* is still a con-
siderable source of revenue for the pangulu,
especially in western Java.

The pangulu — this is true only of the pangulu
of the regency — is also the *kadi*; but his
jurisdiction is limited to family law and the
*wokap* (Ar. *wa'ák*) estates. The office of *kadi*
is his main sphere of activity. These judicial functions of
the pangulu have a very long history. The
colonial authorities thought from the official position of
the mosque officials that they were priests;
they further thought that they had to deal with a
*collegium* because the pangulu sits with some of
his subordinates to assist him when in legal
session. This misunderstanding was perpetuated
fifty years ago in colonial legislation. The pangulu
was made president of a bench of judges; his
assessors were appointed by the authorities and
chosen from the subordinates of the pangulu and
private individuals learned in law. In this way a
pangulu of lower rank may be a member of a
"priestly college". It is now intended to restore
the old state of affairs. The "college" is to be
abolished and the pangulu's court i.e. one in which the pangulu,
sitting with assistants, will be sole judge, will take its place. The law is
prepared but has not yet been put into operation
(1934). The "priestly college" holds its meetings in
a room in the mosque. Most of the cases are
brought by women. In Western and Central Java
it is the regular custom for the husband imme-
diately after the wedding to be forced to pro-
nounce the *tātılı* in a way which, from the
legal point of view, is not quite free from ob-
jection. If he does not fulfil the obligations which
he takes upon himself in the *tātılı* formulae and
if the wife is not satisfied she brings the matter
before the "college" and the latter pronounces that
a *tātılı* has taken place. These are the most
common cases. In Eastern Java and Madura a
facilitated *fašh* takes the place of the *tātılı*. We
also find cases in the rest of Java where the
"priestly college" decides questions of *fašh*. Women
who are refused *nafaqha* also apply to the "college".
If there are difficulties after a divorce about the
division of property acquired during marriage, or
if the heirs to a property are dissatisfied with the
decisions of an ordinary pangulu, the matter is
referred to the "college" for decision. The method
of procedure is as follows. The "college" gives
its verdict as to how the property should be
divided according to the *shar'a*. If the parties
prepare to carry this out but all are not ready to
do so, the scheme can only be legally enforced
when the secular court has given authority. This is
always done if the verdict of the "priestly college"
is formally in order; no test is made of its material
correctness. Fees have to be paid whenever ap-
lication is made to the "college"; a considerable
revenue is gained from the division of estates as
in such cases the "college" gets a percentage of the
objects in dispute (6% to 10%) — hence the name
*mesr*.

The "college" is consulted also in other matters
of Muslim family law but these are of less importance.

Finally there are *wokap* foundations the founders
of which intended the revenues for mosques, schools
of religion, or cemeteries. It is the task of the
"priestly college" to decide according to the *shar'a*
such disputes as arise and in general to supervize
the administration.

The pangulus in the native states are appointed
by the princes; their sphere of activity is the same.
Whenever a new pangulu is appointed he is given
his appointment as *kadi* by an edict "in confirmation
of my oral command", as the phrase is, in order
to comply with the demands of the *shar'a*.
In this edict the phraseology suggests that the ruler
hands over his jurisdiction to the pangulu.

The Netherlands Indies colonial law requires the
presence of the pangulu when Muslims appear
in the government courts as accused in civil or
criminal cases. A number of such assessors are
attached to each court according to its requirements.
They are appointed by the government and chosen
from the personnel of the mosques. It is arranged
that the director of the mosque is at the same
time an assessor. The right of appointing pangulus
has thus gone out of the hands of the regents
into those of the colonial administration. As the
pangulu is usually chosen from the lower staff,
the government has been able to secure influence over
the appointment of these minor officials so far as
they are capable of being pangulus. The object is
to choose as competent men as possible, so that
the prestige of the pangulu has increased in the
Muslim community. This is less true of their
position as assessors at the courts; the colonial law
intended that the court should be advised regarding
the *adat* (traditional) law. The choice of the pangulu
was therefore a mistake, as the latter goes by the
*Rh* books.

The word pangulu as the name of a mosque
official is not unknown outside the islands of Java
and Madura. In some places there are pangulus
whose work resembles that of the pangulus of
Java, e.g. in the centre of the former sultanate of
Palemhang (Sumatra). The colonial authorities have
retained the name; they have also given the name
to the court assessors appointed by them in districts
where the name was not previously in use.

rrecht van Nederlandsch-Indië, ii, 160 sqq.

(R. A. Kern)

PANIPAT, a town and tahsil in the Kar
nāl district of the Pāndštāb [q. v.]. On
tree occasions has the fate of Hindūstān been
declared on the plain of Panipat: in 1526, when
Bābur [q. v.], the Barās Turk, defeated Ibrāhīm
Lōḍî in 1556, when Akbars [q. v.] crushed the
forces of Hīmī; and lastly, in 1761, when the
Marāthās where defeated by Ālīā Mahī Shāh
Durtānī [q. v.]. The geographical factor combined with
internal decay and a weak system of frontier defence
has been chiefly responsible for this. From the
strategic background of Afghanistan the path for
invaders lay along the lines of least resistance,
the Khyber, Kurram, Tochi, and Gomal passes,
on to the Pāndštāb plains, for the Indus has never
proved an obstacle to an enterprising general.
Checked on the south by the deserts of Rādjputāna,
invading troops were forced to enter the Ganges
and Djamna valleys through the narrow bottle
neck between the north-eastern extremity of the
desert and the foot of the Himalāyās.

Bābur's success over Ibrāhīm Lōḍî, in 1526, has
long been regarded as resulting from the extensive
employment of artillery. The source of this error
is to be found in an inaccurate translation of the
word *araba*. It is true that 700 *'arabs* were used
by Bābur, but it is incorrect to regard these as gun-carriages, for the word simply means "carriages". There is no textual or circumstantial evidence for supposing that Bābur had guns in such numbers as to demand 700 gun-carriages for their transport. Indeed, from Bābur's "Autobiography" it may be inferred that he possessed two guns only and Bābur himself makes his victory a bowman's success.

The importance of the first battle of Pānīpat is that it decided the fate of the Lodī dynasty. Far more formidable was the resistance offered by the Radjputs at Kāhānī in the following year.

The second battle of Pānīpat, in 1556, when Akbar defeated Hemānī, is of outstanding importance in the history of India, for there was no Moghul empire before Akbar, only the attempt to create one.

After his victory over the Marāthās, in 1761, Aḥmad Shāh Durrānī made no attempt to consolidate his position in Hindustān but returned to Afghanistan. The Marāthās were only temporarily crushed, for they rapidly recovered from this defeat and, by 1771, were once more a menace to the peace of India. The importance of this battle is that it facilitated the growth of British power.

**Biography:** A. S. Beveridge, Bābūr-nāma, ii, 1921; H. Beveridge, Akbār-nāma, ii. 58 sqq.; "All Muhammad Khān, Mir ārā-Mahmūd (Bādī, No. 3598, fol. 593 sqq.); Igān-nāma-i Bīnd, 1766 (see also Aishtī Researches, vol. iii., and Elliot and Dowson, viii. 396-402; Selections from the Prākāsa's Daftars, Letters and Dispatches relating to the Battle of Panipat, 1761-1763, 1930. (C. Collin Davies)

**Pāra,** a Turkish coin, originally a silver piece of 4 akēs, first issued early in the sixteenth century; it soon replaced the akē as the monetary unit. The weight, originally 16 grams (1.10 grammes), sank to one quarter of this weight by the beginning of the sixteenth century and the silver content also depreciated considerably. The multiples of the silver pāra were 5 (beṭīlik) pāras; 10 (āmil) 15 (ouzādīgh) 20 (ṣīγīmīparālick); 30 (zōlīsa) and 40 (ūrān) or piastre Higher denominations were 50 (beṭīlik) and 100 (jūlik) pāras were occasionally issued.

In the new Medjidieh currency of 1260 (1844) the pāra became a small copper coin with multiples 5 (beṭīpālick), 10 (ouzādīgh), 20 (ṣīγīmīparālick) and 40 (ūrān). In the later years of the Turkish empire, the larger copper pieces were replaced by nickel. The pāra under the republic is a money of account, the 100 pāra or 2½ piastre piece of aluminium bronze being the smallest denomination issued.

When Serbia became independent it retained the name para for its smallest coin as did Montenegro also. The name survives in Yugo-Slavia, where the nickel 50 para piece is the smallest coin issued. During the Russian occupation of Maladvia and Wallachia in 1771-1774 copper coins were issued with the value in para and coppers.

**Biography:** Lane-Poole, Catalogue of Oriental Coins in the British Museum, vol. viii., London 1881; Belin, in J. A., ser. 6, iii., p. 447-451. (J. Bliss)

**Pārgāna,** the Indian name for an aggregate of villages. The first reference to the chaulkān in the chronicles of the Sultānate of Delhi appears to be in the Tūrīkī Fīūs Shāhī of Shamsi, Surjī 'Allī (Bibliotheca Indica, 1891, p. 99), for it is not used by Ḥasan al-Ḍīfī in his Tażī al-Maḍīrī or by Mīrāḥī al-Dīn in his Tūrīkī Fīūs Shāhī. Although it first came into prominence in the sixteenth century partially superseding the term ḥāsh, it is, in all probability, based on still more ancient divisions in existence before the Muslim conquest. The exact date of its creation is therefore uncertain.

An account of the internal working of a pārgāna occurs in the chronicles of the reign of Shīr Shāh who learned the details of revenue administration in the management of his father's two pārgānas at Sāsarām in Bihar. When he became ruler of Hindustān he organized his kingdom into administrative units or parganas which were divided into collections of villages termed parganas. Each pargana was in charge of a fīōdār or military police officer who supported the amīn or civil officer. The amīn had for his civil subordinates a fīōdār or treasurer and two kīrkhāns or clerks, one for Hindi and the other for Persian correspondence. It does not seem correct to hold the view that in this respect he was an administrative innovator, for the provincial officials and institutions which he has been credited with creating were already in existence before he ascended the throne. This remained the administrative system until Akbar organized the Moghul empire into sābās (provinces) which were divided into sārās or districts. The smallest fiscal unit under Akbar was the pargana or mahāli. Thus, for example, the sābā of Oudh was divided into five sārās and thirty-eight parganas (Āmīn-ī Akbarī, in Bibliotheca Indica, i. 170-177 (Jr. Jarrett, 1894).

Under the Moghul emperors the chief pargana officials were the kānūnī, the amīn, and the shikārī, who were responsible for the pargana accounts, the rates of assessment, the survey of lands, and the protection of the rights of the cultivators. Similarly in each village a patwārī or village accountant was appointed whose functions in the village resembled those of the kānūnī in the pargana. It must not be imagined that the pargana was a stable and uniform unit. Not only did it vary in area in different parts of the country, but often a new land settlement was followed by a fresh division and redistribution of these fiscal units. The co-extensiveness of a pargana with the possessions of a clan or family has given rise to the suggestion that it was not only a revenue-paying area, but that it was founded on the distribution of property at the time of its creation.

The Twenty-four Parganas: a district of Bengal lying between 21° 31' and 22° 57' N. and 88° 21' and 89° 6' E. It derives its name from the number of parganas comprised in the zamindāris ceded to the English East India Company in 1757 by Mir Jāfar, the Nawāb Nāṣīr of Bengal. This was confirmed by the Moghul emperor in 1759 when he granted the Company a perpetual heritable jurisdiction over this area. In the same year Lord Clive, as a reward for services rendered by him to Mir Jāfar, was presented with the revenues of this district. This grant which amounted to £3000 per annum, made the Clive both the servant and the landlord of the Company. The sum continued to be paid to him until his death in 1774, when, by a deed sanctioned by the emperor, the whole proprietary right in the land and revenues reverted to the Company.

**Biography:** given in the article. (C. Collin Davies)
Pāṛṣīs. Under this name (Pahl. pārsik, Mod. Pers. pārși literally "inhabitant of Pārś") are known the Zoroastrian Iranians, who, after the Arab conquest, refusing to adopt Islam, fled and after various vicissitudes finally settled in India in Gujjūrāt, where they now form an ethnical and religious group of 100,000 persons (101,775 according to the census of 1921). At the present day the name Pāṛṣī is beginning to be used also for the Zoroastrians remaining in Iran instead of yekb, the somewhat contemptuous significance of which [cf. Mādīš] is no longer in keeping with the spirit of tolerance which is increasing every day in Iran.

What we know of the wanderings of the Pāṛṣīs before their arrival in their present abode in India is based principally on two narratives: Kišābi Sandžān, written in verse by a Zoroastrian priest named Bahman Kā Bobad of Nawsāri in the year of Yazdagird 969 (1600 A.D.) and Kišābi Zartoštīn (Kisah-i Qaṣīdā-i Bahrām-i Nawsārī, a work written at the end of the xvith century by the Dastur Shapourji Manockjī Sandžān (1735-1805).

According to these sources, the first group was composed of Zoroastrians who about a century after the Arab conquest went from Khurāsān, where they had sought refuge, to the south, reaching the island of Hormuz at the mouth of the Persian Gulf (751 A.D.). After a short sojourn there they crossed to Diū on the Gulf of Cambay to the south of the coast of Kāthīwār (766) and remained there 19 years. Continuing their journey southwards they landed at Sandžān (785) and installed the sacred fire there. According to the tradition of the Pāṛṣī priests, before obtaining permission to settle there they drew up for the lord of Diū, Ujjālāi Rānā, in a series of 16 shlokas the principal articles of their faith. In these shlokas, of which several versions exist in Sanskrit and Gujjūrā, several points of contact between Hinduism and Zoroastrianism are cleverly brought out. At Sandžān they were twice joined by other bodies of refugees and these formed a community which prospered rapidly and spread to Cambay, Bankāt, Bankānār and Anklewar. After the year 1000 Pāṛṣīs are also found in upper India, but it is probable that these were isolated bodies who came directly from Iran.

In 1490 A.D. the Pāṛṣīs who had made common cause with the Hindus were forced by the troops of sūlṭān Mahmūd Bigara to abandon Sandžān and take refuge with their sacred fire among the mountains of Barbhūt. When the Muslim pressure ceased, the Zoroastrian community resumed its development. According to the data given in Kišābi Sandžān, the sacred fire was installed at Nawsāri in 1491 after the sack of Sandžān, and after a brief period at Barbūt and Bansdāh it was brought back in 1516.

The sacred fire was installed at Sūrat in 1733 as a result of the raids of the Sindārīs but the settlement of the Pāṛṣīs in the town dates from the second half of the xvith century. We do not know the exact date when the Pāṛṣīs went to Bombay, which is now the principal centre of the Pāṛṣī community in India.

The Pāṛṣīs were able to settle in India without meeting any opposition mainly owing to the excellence of the moral principles of the Mazdaean religion observed in the threefold rule of kāṃata, kāśṭā, kāwarhāta — "good thoughts," "good words," "good works" — which is found in the Avesta. Although they have always abstained from any proselytising activities, they had the good fortune to attract the great emperor Akbar to the Mazdaean religion. Trustworthy and active, assisted by the fact that the social character of their religion does not prevent adaptation to the forms of western life, they are at the present day a flourishing and well organised community much appreciated for the high standard of piety of their lives.

The old religious inheritance of Zoroastrianism has been preserved by the Pāṛṣīs with remarkable piety. In the xvith century on the initiative of the dastur Cāṅgā Asāh of Nawsāri a mission was sent to Persia to obtain from the Zoroastrians who had remained there information regarding certain details of their religion. As a result the study of the manuscripts of the Avesta and of the exegetic literature was intensified and at the present day Pāṛṣī scholars are engaged in preparing a laudable activity in the publication of the old texts.

The sacerdotal class still occupies a predominant place in the community; its hierarchy (dastār, māsōdā, kārdā) is a hereditary one.

The interests of the community are managed by a committee (fātagi) composed of 6 dastārs and 2 māsōdā but with incorporation in the public life of British India the functions of such a committee are gradually diminishing.

The mass of the faithful (behadān) conform — with a few concessions to the demands of modern life — fully to the ritual prescription of Zoroastrianism. Birth must take place on the floor of the house to show detachment from the things of the world. At the age of 7 there is the investiture with the kūśšī, the sacred cord formed of 72 threads which winds three times round life. The funeral rites consist of exposure of the corpse on the tower of silence which is frequented by vultures (šāvag). In the ceremony of marriage, which tends more and more to monogamy with the marriage of full rights (Pahl. zamh-i faštikānāthā) to the exclusion of secondary marriages, Hindu customs have prevailed.

The prohibitions regarding contamination of the sacred elements of fire, water, earth are still scrupulously observed and the greatest care taken in purification after contact with impure objects, especially corpses. The Zoroastrian principles of morality are faithfully observed in all activities of life; hatred of falsehood, honesty in all dealings, assistance of the poor are the regular rules of piety.

The Zoroastrian community in India is keenly interested in the lot of their co-religionists in Iran and it was through the intervention of the Pāṛṣī "Persian Zoroastrian Amelioration Fund" that the dzīsys paid by the Zoroastrians of Yazd and Kirmān was abolished in 1882 by the Persian government. As a result of the decline of religious intolerance in Persia, there has been increasing intercourse with the Zoroastrian communities still existing in Iran and the Pāṛṣī community has frequently sent appeals to the Muslims of Persia to ask them to return to the ancient religion.

While as regards doctrine perfect harmony still exists in the community, as regards ritual controversies have not been wanting and are not lacking within it. In 1656 the question of precedence was raised between the priests of Nawsāri and those
of Sandžān. Another question which has been a subject of controversy even since the xviiith century, is the question whether the use of the pādān — i.e. a kind of veil placed in front of the mouth to prevent the sacred fire from being contaminated by the breath — should also be put on the dying, thus nullifying the laws of purity.

Much more serious however is another controversy, that regarding the calendar; it goes back to the xviith century and divides the community into two sects: the Shahenštihās and the Kadimis. According to the Avestic calendar adopted by the Parsis, to make up for the loss of a quarter of a day each year, a month is added every 120 years but this system was not observed during the period of persecution following the Muslim conquest. In 1745 a group of the faithful felt the need for a reform of the calendar; but this group, which took the name of Kadimis, was opposed by those who wished to adhere to the Hindu system of calculating the months and who took the name of Shahenštihās. The result is that the calendar adopted by the latter is a month behind that adopted by the Kadimis. The Parsis follow the era of Yazdigird which dates from the accession of the last Šāhīdad (June 16, 632).

PARVANA. [See Mu’in al-Dīn Sulaiman.]

PASAN TREN. Javènese "santri-place", a monastic school for students of theology (santri) on the islands of Java and Madura, Madur, sanjantren, Sund. usually pondok, i.e. the lodgings of the students of the school ("to go to the pondok" = to attend a pasantren). — Elementary education i.e. reciting the Kūrā, and the elements of a knowledge of ceremonial law is given in the East Indian Archipelago wherever there are Muslimmadans by teachers, who confine themselves to these subjects, in their own houses. In the larger villages and towns of Java and Madura there are also teachers who collect pupils around them in a mosque, in their own house or in a special building. If their reputation increases it often happens that students come from a distance and live in the place for a time to enjoy their instruction.

The pasantrens however are institutions for advanced theological training. They consist of several buildings and when they are not built out in the country, form at least a separate quarter of the village. Javanese princes have from time to time issued edicts making villages "free" i.e. the taxes and services which they have to yield are given in perpetuity to the teacher of the pasantrens founded there. Pious individuals have also endowed wakfs in favour of pasantrens. The others are private institutions which owe their origin to the initiative of a learned man who establishes himself as a teacher. Their foundation and prosperity or decline is therefore bound up with the personality of the teacher and that in which his learning is held; even pasantrens which are regularly endowed are influenced by this factor.

The pasantren consists in the first place of the houses of the teacher and his assistants, then of lecture-rooms, a chapel, rarely a Friday Mosque, the lodgings of the students (pondok), rice-barns, all of which occupy a considerable space. The pondok alone possess a peculiar form of architecture not found in other buildings. A pondok is a quadrangular building built of the usual materials. The interior is divided by two walls into three long compartments of about equal breadth, the central one of which forms a corridor running from an end of the living to the other. The two outer ones form the living rooms; each of them is divided into cells of equal size by partitions. The door of the pondok is in the centre of one of the shorter outer walls; it opens into the corridor. Only blank walls are seen on right and left as one enters; then it is noticed that very little doors are let into these walls, made of the same material as they are; these admit to the cells. The little doors are at regular intervals in the two walls, two always being opposite one another. The cells are lit from the outside by little windows in the wall; they are so low that the occupant can only sit or lie on the floor; for the students study in a recumbent position. Several students live in one cell; in very popular pasantrens, the pondok may have two stories. The number of students may amount to several hundreds. It may also be quite small. There are hundreds of pasantren in existence. In each pondok discipline is maintained by one of the older students or by a junior teacher. In spite of this, cleanliness leaves much to be desired. The head of the pondok is at the same time tutor and assists the students under him in every way. We also find women sharing in the instruction given in a pasantren but it is very rare for them to live in this institution.

The pasantrens have a life of their own. Great activity prevails even before dawn. After the salat al-suhb which the teacher himself conducts and which is followed by a dhikr, the lectures begin. The teacher takes the beginners one after the other and after their lesson they return to the pondok; here they go over what they have learned by themselves or with a more advanced student or with the head of the pondok until noon. The students
then have their midday meal, the santri of each pondok forming one mess; this is practically speaking their only meal. All then go to chapel to the salat al-zuhur. They are summoned to three further salat in the course of the day. The intervals between them are devoted to lectures and study. The more advanced students are taken together by the teacher; he reads the Arabic text, translates it and adds any necessary notes of explanation. After the salat al-fikr the day's work is over and the students retire for the night. Some santri may still be engaged on little tasks which may bring them in something, soon these also stop and quiet reigns over all.—Friday brings a variation in this monotonous round; all go to the nearest Friday mosque to attend the salat ashura'a. Harvest is also a busy time for the santri; they work in the rice-fields or beg for zakat. Many santri go home in the month of the fast.

Fikr is the primary subject of study in the pasantrens; the Arabic works used are those in use in other Shi'i lands. There are also a large number of javanese works; those based on Arab sources or theological works taken from Arabic are called kitab. Javanese works written by the students of the pasantrens; in the Sudanese speaking districts (western Java) Javanese works are more and more replaced by Sudanese. At the same time dogmatics are also studied. Here no particular maqdis is followed, nor are the works used written only by Shi'i. Orthodox mysticism is less studied. There is, it is true, a popular form of mysticism tinged with pantheism; but this is less and less taught in the pasantrens. The santri calls the main fikr book used by him in the pasantrens kitab pethik without further qualification (he hardly knows its title) and work on dogmatics kitab usul. Small books for elementary instruction on the duties of religion and dogmatics are also called kitab usul.

The method of instruction is one peculiar to the pasantren. As soon as he has finished the elementary text-books, the student is introduced to more important Arabic texts. He reads them, sentence by sentence, under the supervision of the teacher who himself has perhaps never studied Arabic properly and has only his memory to rely upon for the vocalisation. The sentence is translated into Javanese and paraphrased by the teacher. Finally the student is so far advanced that he can translate easy texts from Arabic into Javanese (a list of the texts most used [at the time] is given in T.H.G.K.W., xxxi. [1886], p. 518 sqq.). This takes a long time; the joy however at seeing his knowledge steadily increasing and the pleasant feeling of being able to read texts in the original spurs the student on. Under Meccan and Ijāgra-maw interpretation, however, this method is being gradually driven out by another which begins with Arabic grammar. It certainly seems the more logical; one disadvantage, however, is that the study of Arabic offers so many difficulties to the Indonesian that many lose heart before they succeed in reading texts.

Study at the pasantrens is quite free. Diplomas are neither sought nor given. The student comes and goes as he pleases. The majority when they enter the pasantren have already had an elementary education at home. The desire to increase their knowledge of the faith, the wish among rich and prominent families to see one of their sons devoting himself to the study of religion and among others the hope of gaining a livelihood, bring young men into the pasantren. The santri endeavour to attend the lectures of a number of teachers, each on his special subject. They therefore go from one school to another; some indeed travel about all their lives studying. Others when they think they have acquired sufficient learning settle somewhere, but not in their own districts, as teachers or become assistant teachers in a pasantren or they may prefer to remain "independent scholars". There are no offices for which study in a pasantren is a requisite preliminary; in general the theologians are averse from anything official or belonging to the state but the higher mosque officials have usually studied for a time in a pasantren.

It is considered very reprehensible to give instruction in sacred learning for an agreed fee. Nevertheless, most of the teachers are well to do. Pious gifts are liberally given to them on account of the blessing they bring. The teacher is a most welcome guest at religious feasts, of which there are many in Javanese life. All appeal at all times to his learning or for his intercession; gifts accompany these appeals. New arrivals among the students, if they can afford it, make their offering: sons of the better situated parents bring back presents when they go home, and poor students work in the teacher's fields.

The majority of the students are poor and indeed live by begging. On certain days they go round the district; their begging is not considered a nuisance; they are assisted readily for they are acquiring sacred learning; to give to them brings a blessing. Work on the land, the copying of Kur'ans etc. also bring them in the little they require for their frugal life. The colonial government only troubles about the pasantren in so far as it exercises a general supervision over them; the foundations of new ones are reported to the authorities and the principal has to keep a register of the names of the students and of the titles of the books used.

The spread of schools on the European model has dealt a blow to the pasantrens in recent years. Only the pasantrens could give religious instruction as the public schools instituted by the colonial authorities gave none. On the other hand, only the latter prepared for everyday life. This has resulted in the growth of private schools intended to do both. These are called madrasas and are intended to be schools for all. Attached to the madrasas are schools for higher education; in these religious instruction plays a very prominent part. In these schools, which owe their origin to circles influenced by modern ideas, the method of instruction is taken from European models; but their outlook is not by any means broader than that of the old pasantrens. The name madrasa points to Egypt or perhaps Arabia; the organization, apart from the religious instruction, is modelled exactly on the government schools.

In the country of the Minangkabau Malays (Central Sumatra) there are theological seminaries which correspond on the whole with the pasantrens; they are called surau, a name also given to elementary schools, chapels, houses for men, and also to the separate buildings of the institution called surau. The students' houses are not divided into cells; the occupants have a common lecture- and sleeping-room.

Ateh also has seminaries comparable with the
PASANTREN — PASHA

Javanese. The method of instruction however, which in Java may be called the new one, is the only one here; Malay takes the place of Javanese here; a knowledge of this language is therefore indispensable for students in Atjeh. The lodgings of the students (ranggang) have the same plan as the pondok of Java; just as the pasantrens are also called pondok, so the name ranggang in Atjeh is also applied to the whole institution.

PASE, the name of a district on the north coast of Atjeh (Sumatra) which according to the prevalent native view stretches from the Djambó-Ajé-river in the east to the other side of the Pasé river in the west. The whole area is divided up into a number of little states each with a musbalang or chief.

Pasé at one time was a kingdom known throughout eastern Asia. The north coast of Atjeh was in the middle ages on the trade route by sea from Hindustan to China. Islam followed this route and firmly established itself from India on this coast, the first point in the east Indian archipelago which it reached. In the xiiith century we know there were already Muslim rulers here. One of these was Malik al-Sallí (d. 1297), according to native tradition founder of the state and the man to make the country Muslim; his tomb made of stone imported from Cambay (India) has been discovered along with several other gravestones on the left bank of the Pasé river, not far from the sea. The capital of the kingdom is said to have been here. A second capital rather more to the west was Sumatra; it was the royal residence when Ibn Baṭūṭa in the middle of the xivith century twice visited the land, on his way to China and on the return journey. The present name of the island of Sumatra, by which it is known in the west, comes from Sumatra — in Ibn Baṭūṭa: Sumatra. Pasé was then a flourishing country on the coast; the ruler was king of the port, who himself sent out trading-ships; a ship belonging to him was seen by Ibn Baṭūṭa in the harbour of Ch’unchou (Fukien) in South China. Life at the court was modelled on that of the Muḥammadan courts of India. The ruler at this time was an ardent Muslim, who took a great interest in learning. He waged a victorious djīkdī on the natives in the hinterland. Leaden coins struck in the country and Chinese crude gold were the means of exchange. The chief food was rice.

Shortly after Ibn Baṭūṭa left the country the king had to recognize the suzerainty of the Javanese Hindu empire of Majapait (before 1365). A tomb of a queen or princess found near Līh Kukun has an Arabic inscription, dated 791 (1389) at the top of the stone and at the bottom an inscription in much weathered old Javanese script. It has not yet been read. The Chinese envoy Cheng Ho remarked in 1416 that the land was involved in continual war with Nago (Fidie). He mentions rice, silkworms and pepper as its products. The last-named attracted the Portuguese there. From 1521 they had a fortified settlement in Pasé but in 1524 they were driven out by the sūlān of the rising kingdom of Atjeh (i.e. Great Atjeh). Henceforth Pasé was a dependency of Atjeh. The tombs of the rulers of the former kingdom were still an object of pilgrimage to the most famous sūlān of Atjeh, Iskandar Ḥānī, as late as 1048 (1638—1639); at the present day even the memory of the old kingdom is extinct. The mouth of the Pasé river is silted up and the place where the capital stood is no longer recognisable.

Pasé exercised through the years a considerable influence in the Malay Archipelago through its Muslim scholars and missionaries. Javanese and Malay tradition have preserved their memory.

PASHA (T., from the Pers. pāshīqār, probably influenced by Turkish başqār), the highest official title of honour ("uquyin or laḳāb") in use in Turkey until quite recently and still surviving in certain Muslim countries originally parts of the Turkish empire (Egypt, Iraq, Syria). It was always accompanied by the proper name like the titles of nobility in Europe but with this difference from the latter, that it was placed after the name (like the less important titles of bey and efendi). In addition, being neither hereditary nor giving any rank to wives, nor attached to territorial possessions, it was military rather than feudal in character. It was however not reserved solely for soldiers but was also given to certain high civil (not religious) officials.

The title of pasha first appears in the xith century. It is difficult to define its original use exactly. The word had in any case early assumed and lost the vague meaning of "seigneur" (donintus) (cf. Divān-i türk-i Sultān Fevled, p. 14; text of the year 712 = 1313, where Allāh himself is invoked in the phrase Ey Pasha!). At this same period the title of pasha like that of sultan was sometimes given to women (cf. Ismā‘īl Ḥākī, Kitāb-i, 1927, index; s.v. Kādem pasha, Sejuk pasha), a practice which remains, and then exceptionally, in the xivith century in the case of the mother of the Kheðive (cf. WELIDE SULTAN).

Under the Seldjūks of Anatolia the title of pasha (in as much as it was an abbreviation of pāshīqār and always by analogy with that of sultan) was given occasionally to certain men of religion who must also have at the same time been soldiers and whose history is not yet well known. To judge from the genealogy which Aşık-pasha-zade claims for himself, the title of pasha was already in use in the first half of the xivith century. Mālkhūs al-Dīn Māsā Babā, alias Şamsik Mālkhūs or Mālkhūs Pasha had, according to 'Alī Efendī, seized the power before the Karamanoğlu and in the same region, after the defeat of the Seldjūk Sultan Ghiyath al-
In the provinces they were, and became, more numerous, and two classes of pashas were distinguished: 1. the pashás of 3 horse-tails (kızıl) or væzir (a rank which became more and more one of honour and extending to the provinces gradually absorbed that of beylerbeyi); 2. the pashás of 2 horse-tails or mir-müran (rank at first the Persian synonym for the Turkish beylerbeyi and the Arabic amir al-unwar but gradually became a lower rank). Besides, the old sandalbeyis having in principle a right to only one horse-tail were promoted mir-müran and thus became pashás in their turn.

After the Tānzımāt the title of pasha was given to the four first (out of 9) grades of the civil (1. væzir, 2. bâlû, 3. ilâ, 4. şâhiye şinflı evedevi) or military (1. meğkhr, 2. birîndî fêrîb, 3. fêrîb, 4. livâ) hierarchy and to the notables (3. râmîlî beylerbeyi, 4. mir-müran, with in practice unjustified extension to the fallen mir-il-unwar, in this case to the purely honorary rank of the sixth grade).

The table of ranks having been abolished after the fall of the Ottoman Empire, the Turkish Republic retained the title of pasha for soldiers only. It has just been abolished by the Grand National Assembly of Ankara (Nov. 26, 1934). Instead of pasha one now uses general and in place of müşkûr, mareşal.

In western usage the word was at first pronounced bağha (the pronunciation pasha does not appear till the xviii century): Ital. bascia, Low Latin bassa, Fr. bâcha or baxsa, to say nothing of variant spellings. In Greek on the contrary, the form pasha is the oldest (xvii century) but probably under western influence we also find başha (xviii century); cf. Ducange, Glossarium medice et infimæ Graecitatis, s. v. pasha.

The pronunciation as bașha by Europeans is due either to the influence of Arabic in Egypt or to a confusion with the old Turkish title of başha (cf. the end of the article).

Etymology of the word pasha: we shall examine the various etymologies that have been proposed.

1. Pers. pāy - shāh “foot of the sovereign”. This explanation, which was based on the fact that in ancient Persia there were officials called “eyes of the king”, is found already in Trévoux’s Dictionary (s. v. baxsa) and was revived by G. v. Hammer.

2. Turk. baş “head, chief” already suggested by Antoine Geoffroy (Brieve description de la Cour du Grand Turc, 1542) and by Leunclavius (Lowenh., Pandectes historiae turcicae, suppl. to his Annàles (1588). Cf. also Trevoux’s Dict. and Barbier de Meynard, Suppl. — It is to be rejected. — Cf. the following word.

3. Turk. bask-ağa taken (for the purposes of proof) in the meaning of “elder brother”. This is the etymology accepted in Turkey until lately (Mehmed Thureya, Sîkîl-i Ilhâmi, iv. 738; Shams al-Dîn Sâmî, Kâmi-i türkî, s. v. pasha) and based on the fact that Sulaimân Paşa and ‘Ali al-Dîn Paşa were the elder brothers of Orkhan and ‘Olmân respectively. Ali Efendi in his Künk ul-Akhbâr written in 1593—1599 (v. 49, 29) and ‘Olmân-zade Ahmed Tâhib (d. 1724) called attention to this use of the word pasha among the Turkomans (Hadâker al-Wussâr, Istanbul 1271, p. 4, 16); Heidborn (Manuel de Droit Public et Administratif Ottoman, Vienna 1908, p. 186, note a) also says that pasha

Din Kaikhusraw II which took place in 1243 (cf. Gibb, A History of Ottoman Poetry, i. 177).

At the end of the same century the title of pasha seems to have been added to the names of certain members (restricted in number) of the petty Turkish and Turkoman dynasties which shared Asia Minor; these are sometimes rulers, sometimes members of their families. It was the same in the principalities of Tékke, Aidin, Deñizîl and Kızl-Ahmadî [cf. the article TURKS, iv. p. 961] and probably also in other little kingdoms of Anatolia (cf. for Sâfuqk, ‘Ali Pasha, according to Shihâb al-Dîn b. al-Umar, al-Ta’rîf etc. quoted by Kâkshandî, viii. 16, 14).

In the family of ‘Olmân, two individuals are credited with the title of pasha: ‘Ali al-Dîn, son of ‘Olmân, and Sulaimân, son of Orkhan.

The case of ‘Ali al-Dîn is very obscure. Two different individuals of this name have even been distinguished: the one being ‘Ali al-Dîn Bey, son of ‘Olmân, the other ‘Ali al-Dîn Pasha, væzir of ‘Olmân, and the two may have been one and the same (cf. Hauser, Historiadel, ‘Alîzadeh al-Dîn Bey, in T. T. E. J., years xiv. and xv., 4 articles). It may be added that the same individual or one of the two in question may also have been a beylerbeyi (cf. Oruç’s chronicle, ed. Babinger, p. 15, 18). Whatever be this case with the insoluble problem, it seems certain that the title of pasha was early given to statesmen (cf. a Sînàm Paşa under Orkhan: article TURKS, iv., p. 962).

The title of pasha in any case very soon became the prerogative of two classes of dignitaries: 1. the beylerbeyis of the provinces and 2. the væzirs of the capital. It was later extended to officials with similar functions.

In the second half of the xvi century (in 1539 or 1632?) Lâlî Shâhîn who, according to the Ottoman historians, was the first (?) beylerbeyi of the ‘Olmânîâs, was given the title of pasha at the same time as he received this office. The same title was then given to the beylerbeyi of Anatolia (thus keeping up the idea of the two beylerbeyis, one of the right and one of the left wing) and later as new posts were created in the growing empire, extended to the other beylerbeyis or væzirs “governor-general”.

It was the same with the væzirs, of whom the first (?) according to the Ottoman historians, was Djiandarî Khalîl surnamed Khârî al-Dîn Pasha in 1770 = 1368—1369). The number of the væzîrs [cf. væzir] who were called Chûbhe vazelerî down to the time of Ahmad III was raised to three and then to nine and the title of væzir, also given to high officials like the kapûnân pasha, the nişâhî, the defterdar, became more and more one of honour, carrying with it the title of pasha; but since at the beginning and for a considerable time in the capital itself there was only one væzir, the title of pasha in particular excellence and without any addition, came to be applied to the prime minister (later the væzir or tavr d’ám), whence the expression pasha kapûl which was later replaced by that of kâbi ‘alî, “Sublime Porte, the door of the first minister”.

The increase in the number of pashas was not at first very rapid. M. d’Aramon mentions only 4 or 5 pashas or væzir-pashas and at the time he wrote (in 1547), there were only three (Ayaz, Gavdîlî Kâsim and İbrahim, all three of Christian origin). It is true that here he is referring only to the capital.
means “elder brother” among the Greeks of Karachania, but there seems to be nothing to confirm these isolated statements. Some Turkish lexicographers like Ahmad Wefik (under 十) and Said have admitted this etymology but by two stages: pasha comes from the Turkish title başka which is for başbakan. The title of başka to be discussed below does really seem to come from baş-ka-z, but contrary to what I at first thought, has nothing to do with pasha.

4. Pers, स "sovereign". — Etymology, the only admissible one (with however the possibility of the influence mentioned under 5), proposed by the Turkish-Russian dictionary of Boudagov (1869) and later revived by the Russian Encyclopedia of Brockhaus and Efron. It had been previously proposed by D’Hebelot (under pasha, à propos of the spelling with final k). This explanation is based on the use of the words nhất and pādīshah, as the titles most often placed after the names when applied to individuals of high rank in the religious world (derives). Cf. Giese, in Türkkyät Muḥammad, i, 1925, p. 164. It seems that one can even explain by pādīshah the obscure phrase used by Orkhan to “Ali” al-Din Paşa in ʾĀshīq-paşa-zade (ed. Giese, p. 34—35) before the latter asks leave to retire (cf. above). Orkhan says “you will be pasha for me” Now a few lines earlier he had asked him to be a fāvārī pādīshah, i.e. a shepherd for his people. On the other hand, it may be noted that the title of pasha is often used not only as an alternative for pādīshah but also for shah. Here are a few examples:

Shadār al-Din Sulaimān, of the dynasty of Kizil Ahmedi, is called Sulaimān Pādīshah in Ibn Battūta (ed. Defreyn and Sagniuetti, ii, 343) and Sulaimān Pasha in Shihāb al-Din b. al-ʿOmari al-Taṣīf bi l-Muṣṭali al-darāsī, Cairo 1312, p. 4: written baška, following the Arabic script) and in Munaḍājam Bašī (in. 39). The son and successor of this ruler, Ibrāhīm, is called Shāh in Ibn al-ʿOmār and Pasha in Munaḍājam Basī. — In the Dastur-nāme-i Emwet (ed. Mukrīm Khālid, p. 83—84) Sulaimān Pasha, son of Orkhan, is called Shāh Sulaimān (with poetical inversion). — ʿAli b. ʿīcīk (Čecika), the Ikhānīan governor of Baghdad (d. 1336), is called ʿAli Pāša by Ibn al-ʿOmār. According to Naṣrī-zade (Gliesher- Khālīfāt, Constantine 1143), he is also found in some MSS. as ʿAli Shāh. He is also called Ḥalim Pāša (Čecika, Histoire de Bagdad, p. 10). In the oriental dialect, the title of pādīshah is given to petty local rajas were there it has the form, not of pādīshah but of pātka (Kırgız) and pātka (Ozbek).

5. Turk. baška (variants bashkaq, bashkak) “governor, chief of police” (Dictionary of Pavet de Courteille and under baṃmā in that of Boudagov). This word of the Khwarizmian language” according to Vullers came into use in Persia (Ikhānīd). Among the Mongols it meant the commissioners and high commissioners sent by them to the conquered provinces (of the west only?); notably in Russia. The accepted etymology is from the verb baṃmā, “to press, crowd, oppress, impress”, whence the meaning “oppress, extortioner” for baškaq, an official, it is noted (cf. the Russian and Polish encyclopaedias), whose main duty was to collect taxes and tribute. However extraordinary such an explanation of an official title may appear it seems to be confirmed by the parallelism with the Mongol equivalent of baškaq which is daruğa or daruğa [q.v.] and which may be compared with daružkin, a Mongol verb, synonymous with baṃmā in the sense of “to impress”. These may however be popular etymologies.

Schefer in his edition of the Voyage de M. d’Aramoun (p. 238, note 3) says “The etymology of the word pasha given by Geoffroy (from the Turkish bask) is wrong. Pasha is a softened form of the word bašqaq or pachqaq which means a military governor”.

Carpini renders the Mongol baškaq by bashmati (variants in the MS. : bascati, basstæ; cf. The texts and versions of John de Pl. Carpini... London, Hakluyt Soc., 1903, p. 67 and 261 notes). In the edition of 1598 (Hakluyt) there is a marginal note “Basha, vox Tartarica qua utuntur Tureci”. This also implies a confusion between the words baškaq and pasha.

It is not impossible that there was actually some confusion among the Turks themselves between pādīshah (pasha) and the title baškaq, the synonym of the Mongol daruğa. We had thought of this even before we saw the notes of Schefer and Hakluyt. It may be noted that the title of pasha (which is not found in Persian sources, as Muḥammad Ḥazvimī kindly informs us) was applied either to Anatolians, subject in fact or in memory to the Mongols, or to officials of the Mongol Ḥaḏān (like the governor of Baghdad mentioned above; cf. also Hit-śa ʿAff Paša alluded to in the Bism-ʿū Reem of Aziz b. Ardāšir Astābād [ed. Korpali, p. 249, 8]). The confusion could be explained the more easily as one finds (certainly not true) the form bashkaq (Djuwairī, Türkischer-Jazagut-Gründen of 1260, ed. Muḥammad Ḥazvīnī, ii, 113, note 9; in this passage there is a reference to a Khwarizmian official of 699, i.e. before the Mongol conquest).

It may be suggested that but for the influence of this confusion with the title baškaq that of pasha would never have attained such importance.

The Turkish title of baškaq. — This title which is not to be confused with the preceding, nor with the Arabic or old eastern pronunciation of it, was also put after the proper name but was applied only to soldiers and the lower grades of officers (especially janissaries) and, it seems, also to notables in the provinces (Meninski, Thesaurus, i, col. 662 and 294, l. 18; Onomasticon, col. 427; d’Herbelot, s. v. pasha; Vigier, Éléments de la langue turque, 1799, p. 218, 309, 327; Žemtke, p. 164, col. 2 (probably following Meninski); De La Mottraye, Voyages, 1727, i, 150 note a; cf. Ewliyā Čelebi, v. 107, 4; 211, 8; Na’mā, v. 71 11; İsmal Hājči, Kitābaler (کتاب‌البر), p. 41 and 8)]. De La Boulaye-Le-Gouz (Voyages, 1657, p. 59 and 552) also distinguishes the title from bacha and translates it by “monseigneur”. Meninski, loc. cit., also notes the pronunciation bašhi (باشی) which is not to be taken as the word bašha followed by the possessive suffix of the 3rd pers. -i; Meninski knew Turkish too well to make such a mistake. As to the pronunciation bašha (given by Chloros, s. v. pasha) it comes from the spelling باشا (cf. e.g. Ahmad Wefik Paša, Zaraki Tašhi, act i, se. 2, ironically applied to a woman) but Meninski pronounces basha, even with this spelling.

As the lexicographers have sometimes confused
basha and pasha, some have thought that basha also meant "elder brother" (Mehemet Salahi). Kaminu-i orteemi, ii. 291 sqq. followed by Chiloros.) I think we have two separate problems and that basha is really for basha-agha but with the meaning of "aoga (E. usage). The janissaries or yatachii were called basha-agha (according to Roehrig). On the other meanings of basha-agha and in general for more details on some of the points dealt with here see Deny, Soumaine des Archives Turques du Caire.

Note on the accentuation. — In the word pasha the tonic accent is on the last syllable (pasha). In the word basha it is on the first (bashe) as is shown by the weakening of the final vowel in the pronunciation bashi, already mentioned.

(J. Deny)

PASHALIK (r.), means 1. the office or title of a pasha [q. v.]; 2. the territory under the authority of a pasha (in the provinces).

After some of the governors called sandojak-beyi (or mir-beyi) had been raised to the dignity of pasha, their territories (sandojak or irad; q. v.) also received the name of pashalik.

Early in the sixth century of 152 sandojaks 79 were pashaliks. Of these 25 were pasha sandojaks, i.e. sandojaks in which were the capitals of an eyalet, the residence of the governor-general or wall of a province. For further details, cf. Mouradse d'Othmann, Tableau general de l'Empire Othoman, vii. 307.

PASHTO. [See ARZHIYNISTAN, i. 149 sq.]

Pasir. The Sultanate of Pasir in S. E. Borneo comprises the valley of the Pasir or Kendilo river, which, rising in the north on the borders of Kutei runs in a southeasterly direction along the eastern borders of the Beratos ranges and turning east finally reaches the straits of Malacca through a marshy district. The country, about 1,252 sq. km. in area, is still covered by primitive forest. It is so far as the scanty population, which is found mainly in Pasir, the residence of the sultan, and in Tanah Grogot, that of the official administration, has not cleared the trees to make ricelands. Although some gold, petroleum and coal are found in Pasir, Europeans have not exploited them, still less do they practice agriculture. A European administrative official was first stationed in 1901 at Tanah Grogot at the mouth of the Kendilo river. Pasir is therefore a good example of the Borneo coast state which as regards Islam has developed independently of European influence. The population of the sultanate is estimated roughly at 17,000. It consists of Dayaks who live by growing rice, of immigrant Bandjareses and Baginese from Celebes, who control the trade; they are found chiefly in the flat country at the river mouth. On the coast the Badjos, a people of fishermen, live in their villages built on piles in the sea. Of the 9,000 Dayaks, about 4,000 have adopted Islam, while 5,000 in the highlands are pagans. The 5,000 Baginese have a predominating influence in view of their large numbers and their prosperity; the 1,200 Bandjareses are of less importance. There are very few Europeans and about 50 Chinese and Arabs in Pasir.

Half of the population are therefore foreigners, but like the Dayaks they belong to the Malay race and mix with one another.

Pasir is despoticallyl ruled by the sultan and the members of his family; the people have no voice in the government. Alongside of the sultan and his presumed successor there is a council of five notables which the sultan consults on important occasions; this is also the highest court of the country. These notables and a number of other members of the sultan's family have estates as fiefs. Since 1844 each sultan on his accession has concluded a treaty with the Netherlands Indian authority. In 1908 they declared themselves vassals of the Netherlands Indian government. In 1900 the right to collect duties on imports and exports and taxes, as well as the monopoly of opium and salt, was ceded to the government in return for compensation. This amounts to 16,800 gulden yearly of which 11,200 go to the sultan and 5,600 to the notables.

The sultan still collects the following taxes: a poll-tax from adult males; 1/10 of the yields of the rice-fields and forest products, 2 cocoanuts from each fruit-bearing tree; also military service. He also has an income from the administration of justice in the capital.

From the very legendary history of the country it may be gathered that this despotic government which is foreign to the Dayaks was introduced from eastern Java. Under the ruling caste are the chiefs of lower rank, priests and landowners and freemen as a middle class. At the beginning of this century there were still slaves and debtorslaves as the lowest class in Pasir; although slavery had long been abolished in other states of the Indies under Dutch influence. As is usual among other Dayak tribes, slaves go about like free men, take part in all festivities and games, may own property and are not even distinguished by dress. If their debt is paid to their master by one person, they go over to the latter. Slaves are not sold.

As the social condition of the Muslim Buginese, Bandjareses and Badjos have already been described elsewhere, the following remarks are confined to the pagan Dayaks and their Muslim relatives, the Pasiarese.

According to tradition, an Arab (Tuan Said) brought Islam to Pasir. His marriage with the daughter of the reigning chief did much to further the progress of Islam in the country.

As to the Pasirese, their social life was only superficially affected by Islam. In their daily life a pagan conception of the worship of the deity and of the world of spirits still prevails. The old belief in the important influence of spirits on the fate of man and reliance upon their signs are evidence of this. The fact also is significant that throughout Pasir there is only one misikis and a few smaller places of worship. The number of Muslim priests and hadjis is also small nor is the enthusiasm to make the pilgrimage to Mecca great. On important occasions appeal is made for assistance to the spirits; this is particularly the case with illness among the Pasirese, who hold the pagan bhinan feasts, which are also celebrated in South Borneo. Amid a great din of gongs and drums which can be heard a long way off, the pagan priest (batian) becomes possessed by the spirit which then communicates to him the remedy for the illness. Even in the capital Pasir, exclusively inhabited by Mujaannamans, the advice of the batian is sought; only during the month of Ramadhan, the sultan forbids this.

How attached the upper classes of Pasir still
are to animistic views is evident from the legend still current according to which Sultan Adam in the middle of the last century used to isolate himself for several days in the year on the mountains of the spirits, Gunung Melikat; he had concluded, it is said, a marriage there with a female djinn from which a son named Tendang was born. This son, who has the gift of making himself invisible, is said to live on the island of Madura where he married a princess of the djinn. He appears from time to time in Pasir, when he is invited by a great sacrificial feast (formerly also human sacrifice). These feasts are still celebrated occasionally, especially in order to free the land from misfortune and sickness. In the village of Pasun a house has been built for Tendang with a roof in three parts, which is built on a large pole and thus resembles a dove-cote.

The revenues of the priests consist of what they collect at the end of the month of fasting in cæteris pribus, everyone giving what he can and the chief exercise no pressure. A priest also receives a small fee at a marriage or divorce.

The calendar now in general use in the sulphate is the Muhammadan. As elsewhere among the Dayaks the tilling of the fields begins when a particular constellation becomes visible in the heavens.

The family life of the Pasisrese has developed to some extent according to Muslim ritual. Among the followers of Islam, marriage is performed through the intermediary of a priest, with the father or another man as wali, but only after an agreement has been come to about the very considerable dowry. This is paid to the parents of the bride; she herself only receives a small part of it. According to Dayak custom young people are allowed to meet very freely before marriage. A marriage feast is marked by a very considerable consumption of palm-wine. The man remains at least a year in the home of his parents-in-law before he can take a home of his own. Divorce is very frequent because attention is seldom paid to the wishes of the woman in the negotiations between the parents. Man and woman retain their property after marriage; after a divorce this goes back to the family. Property acquired during marriage is divided into two equal portions between husband and wife. After the death of one or the other the survivor inherits all. Only a few families follow the Muslim law. The followers of Islam are buried with Muhammadan rites.

PASWARÓWITZ. [See POFZERKHAN.]

PASWAN-OGHLU (written پیسران وغل; cf. Kêmmâs al-Astâm, ii. 1467) or Paswan-Oghlu (پرکممشان وغل) in Aid al-Rahman Sharaf, Türkîh, ii. 280) or, according to the new orthography, Paswanâtlu (Hümit ve Muhsin, Türkîye Tarîhi, p. 423) but on his own seal “Paswan-wadé Othmân” (in Orêskow, see Bîhl), the rebel Pasha of Vidin (1759—1807). His family originated in Tuzla in Bosnia, but his grandfather Paswan Agha, for his services in the Austrian wars, was, granted two villages near Vidin in Bulgaria about 1739. Othman’s father ‘Omar Agha Paswan-Oghlu not only inherited these villages but as bakrâk etc. was also a rich and prominent man (dyân); on account of his defiant attitude, however, he was put to death by the local governor.

Othmân himself only escaped death by escaping into Albania, but after taking part in the war of 1787—1789 as a volunteer, he returned to his native town. Very soon he was in the field again and fought with distinction, returning to Vidin in 1791. From there he organised with his men raiding expeditions into Wallachia and Serbia. When the sultan wanted to punish him for this he cast off his allegiance in 1793, took to the mountains and at the end of 1794 captured Vidin with his robber band and became the real ruler in the pashalik there. Vidin, which he fortified again, thus became a meeting-place for robbers and discontented janissaries who were driven out of Serbia in 1792, and he himself became the popular leader of all those who opposed the reforms of Selim III.

In 1795 Paswan-Oghlu even attacked the governor of Belgrade, Hâdhîji Mustaфа Pasha, a supporter of the reformers, who had been given the task of divorcing himself and returning in order to marry another woman. His troops were defeated by the Porte but without success. In consequence negotiations were begun at the end of 1795 but Paswan-Oghlu remained practically independent in the whole of Upper Bulgaria.

But since the Porte did not also formally recognise him, Paswan-Oghlu drove the official governor out of Vidin and in 1797 attacked the adjoining pashaliks; in the east his forces occupied or threatened a number of places in Bulgaria (but they were defeated at Varna) and in the south they attacked Nish [q. v.] without success; in the west they advanced up to Belgrade, occupied the town but were driven back from its fortress by the resistance of the Turks and Serbs whom Hâdhîji Mustaфа had armed. As a result of this attack and because of Paswan-Oghlu’s negotiations with France and Russia the Porte in 1797 sent an army of 100,000 men against him under Admiral Kâvuk Husaín Pasha. He besieged Vidin in vain until October and had to withdraw with heavy losses. This defeat and Napoleon’s invasion of Egypt induced Turkey to come to terms, nominally at least, with Paswan-Oghlu and give him the rank of Pasha of three tails (1799).

Nevertheless he declared himself against the reforms, against the central government and even against Selim III; he also sent several expeditions to plunder Wallachia (1800 and 1801) and incited the janissaries who had in the meanwhile returned to Belgrade to occupy the fortress (in the summer of 1801) and to murder Hâdhîji Mustaфа Pasha (at the end of the year).

At this time he repeatedly asked the Czar to number him among his faithful subjects and also offered his services to France. The Porte, which shortly before had forgiven Paswan-Oghlu everything, from 1803 declared war on him again, but the Serbian rising of 1804 diverted their attention. Paswan-Oghlu himself had to fight in the western part of his territory against Pintzo’s rising (1805). The appearance of the Russians on the left bank of the Danube (1806) induced him to offer his services to the Porte but the latter instead gave the supreme command to the commander of Rusçuk. This embittered him so much that he resolved to defend only his own territory against the allied Russians and Serbs but he died soon afterwards on Jan. 27, 1807.

PASIR — PASWAN-OGHLU
That Paswan-Oghlu was able to hold out so long was due to the state of the Ottoman empire at the time, to his personal ability and foresight (he never abandoned Vidin!) but for the most part to luck. Within his area he collected customs and taxes, ruled strictly and despotically, although not entirely without mildness and justice. Although his health was rather poor as a result of too great mental strain, ambition led him to aim at independence as evidence of which we have the coins struck by him and known as Pasvanbota.

(FEHEM BAJRATAREVIĆ)

PATANI, an administrative district of Siam in the extreme south of the kingdom on the east coast of the peninsula of Malacca; it is bounded on the south by the Malay states of Kélan and Kédah, both under British protection. The whole district is made up of seven Malay petty states, each with its own native chief who is assisted by a Siamese official. Malay forms of government are allowed to remain. In the capital of the same name resides the Siamese High Commissioner of the district. His advice has to be obeyed by the rulers of the states.

The native inhabitants are Muslims. Friday and other mosques are distinguished. The latter are called surau and have their own staffs. All the states have law-courts: the sharia is followed in matters of family law, Siamese law in other cases.

Patani is a very mountainous country. There is only a strip of plain on the coast. The area is about 13,000 sq. km. and the number of inhabitants about 350,000; the great majority are Malays, the remainder being Siamese and Chinese. There are few roads. The railway which connects the Siamese Southern railway with the English lines in Malacca cuts through the country a short distance from the coast. Agriculture is of little importance; only in the environs of Patani and in Nawng-Chik rice is cultivated. A large number of the people live by fishing; the fish caught are salted with salt obtained locally. Tin-mining is increasing. The exports include dried fish, salt, cattle, elephants and tin. Intercourse with Bangkok and Singapore is maintained by small steamers. The revenues amount to £45,000, of which one third is allotted to the Malay rulers as private income for themselves and their families, one third goes to administration, and a third set aside for special purposes, is also as a rule used for administrative purposes.

Fra Odorigo of Pordenone in 1323 mentions a place called Paten in this region, which he identifies with Thalamosyn. It is doubtful whether the reference is to Patani. The first certain occurrence of the name is in the xvith century when the Portuguese begin to come here to trade. Patani has for centuries belonged to Siam. Advancing southwards the Thai reached Ligor about 1284 (on the coast, a little N. W. of Patani; Sukhotei inscription); in 1350 the whole of the peninsula of Malacca was under Siamese rule; the conquest of Patani took place between those dates. The Nigarakrāgama in 1365 mentions Džere, the modern Djiring, one of the seven states of the district with its capital on the sea, a little east of the town of Patani, as conquered by the Javanese kingdom of Madjapait. Soon after the conquest of the town of Malacca in 1511, the Portuguese began to trade in Patani. Many Portuguese settled here. About 1600 the Dutch and English appeared; Patani at this time was a prosperous centre of trade, a station between Malacca and China and a depot for the exchange of goods from China on the one side, and the most important harbours of the East Indian Archipelago on the other.

When this latter activity began to decline about 1620, the place lost its importance and the Europeans abandoned their settlements.

It is not definitely known when Patani became converted to Islam. About 1600 it was a Muhammadan country; the queen ruling at this time had succeeded her husband fifteen years before; in all probability the country was already Muhammadan at an earlier date when Mendez Pinto (1534, 1540) visited it. According to native tradition, the conqueror of the land, Chaw Sri Bangsa, a son of the Siamese king, converted the country to Islam, after adopting it himself and taking the name and title of Suljân Ahmad Şah. He is said to have acknowledged the suzerainty of Malacca; this suggests that Malacca was the power that caused the conversion. Malacca, as is well known, was during the xvith century the predominant power in the Malay Peninsula.

(R. A. KERS)
PAITHAN. [See AFGHANISTAN, i. 149 sqq.]
Paula, the name given in the Moghul Emperor Akbar's monetary system to the 1/4 dam (1/4 paisa).

(P. Allax)

PNENEG, a people of Turkish stock of the middle ages. Their name occurs in numerous variants (Bağdâk, Pañém, Pathâkân, Patânâkân, Pathânâkân, Patânakâ, Patânacae, Pecinigi, Pin-cenakî, Pecenâcî etc.); also Bysseni, Besi, in Hungarian Bezeny etc.). There is no longer any doubt that they were a branch of the Turkish race. Rashid al-Dîn (xiiith century; see Ethnography) and Maḥmûd Kâshghari (1073) number them among the Ghuzz (p. v. 27); the latter (Dvîgin Lugât al-Turk, i. 27; cf. K. C. A., i. 36) puts them in the northern group of Turkish peoples, to which the Köka, Oghuz, etc. belong and describes them "as next to the Romneys" i.e. the most westerly Turkish tribe.

In all probability the Penegeks separated very early from their brethren in the original home of the Turks in Turkestan. Their earlier home is said to have been the Emba-Ural-Volga regions, which according to Bakker and Gârdzî was 50 days' journey in length and breadth. There they remained probably for a considerable time, their neighbours being the Khazars in the S.W. and the Oghuz in the S.E., and they traded with Persia and Khwâshim.

But by 860 the Oghuz began to move westwards and to drive the Penegeks from the Ural region.

Towards the end of the xith century the Oghuz (Uzen, Oçjûs) came to terms with the Khazars and drove the main body of the Khazars from their old home, so that in 922 Ibn Fâdîl found only a small remnant of the Penegeks there; according to De administrando imperio (p. 166), the latter remained there of their own accord.

The fugitive Penegeks came up against the Magyars, drove them into Hungary and occupied their lands, at first the territory between the Don and the Dniesper and later as far as the Danube. Constantine Porphyrogênetos (c. 950) says this took place "fifty years ago"; but the chronicler Regino (d. 915) dates it exactly in 889. The power of the Penegeks in the end extended from South Russia over Besarabia and Moldavia up to the Eastern Carpathians.

Warlike and powerful as they were the Penegeks were a constant danger to their neighbours. Here however we can only briefly mention their relations with Hungary, Russia and Byzantium. In the course of the xith and xith centuries they frequently attacked Hungary from the Eastern Carpathians or settled peacefully in various Hungarian districts (cf. the map of their settlements in Németh, Die Inschriften des Schatzes von Nagy-Szent-Miklós, 1. Beilage). In the xith century the Penegek settlements in Hungary still enjoyed certain special political privileges. They finally became merged in the Komans.

With the Russians, the Penegeks were early on friendly terms (according to the De adm. imp., p. 69, they sold them cattle, horses and sheep); sometimes they were their allies against Byzantium and Bulgaria (in the time of Igor, c. 911), but more frequently they were attacking the Russians. In the year 968 they besieged Kiev, in 971 they killed the Grand Duke Svatoslav on his way back from Bulgaria and the Russians had to build a number of fortifications against them. Their last attack (1034) was completely repulsed. A little later (1065) they were being hard pressed by the advancing Uzen and moved more and more towards the Danube and later also back to the Balkan peninsula.

The Byzantine imperial historian in De adm. imp. (p. 68) recommends the maintenance of peaceful relations with the Penegeks and there was actually an alliance with them but by 970 we find them fighting with the Russians against Byzantium. Henceforth the Penegeks were continually at war with the Byzantines until the emperor Alexius I in 1091 routed them completely at the mouth of the Maritsa and in 1122 John II inflicted another heavy defeat upon them. Of the remnants of the Penegeks some were taken into the military service of the Byzantines and some settled in the Balkan, especially in Bulgaria.

The Gagauz (q. v.) are sometimes regarded as what was left of them but their present language gives very little evidence of this (cf. vol. iv., p. 992). Nevertheless a number of Balkan place-names still recall the fact that the Penegeks were once there.

With the nomadic nature of the Penegeks it is obvious that the tribal organisation was an important factor. According to C. Porphyrogênetos the Penegeks were divided into eight tribes (four beyond and four on this side of the Dniesper) with as many great chiefs and into 40 clans with petty chiefs. The names of the tribes according to Németh were mainly derived from the names of horses and from titles of the supreme chief e.g. Zêrouxâtaîn = îmbi Kûl-bey, i.e. "the tribes of Kûl-bey, with grey horses". The three tribes who were prominent for bravery and distinction are called Kangar (Kârî-du) by Porphyrogênetos. Of the names of chiefs that of the tribe of Julia (Julia), namely Kûkât (q. v.), is probably the most remarkable. In the time of Kedrenos (i. 581–582) there were thirteen Penegek tribes "each of which had inherited its name from its ancestor and chief".

We know very little about the religion of the Penegeks. According to Bakri, they were formerly fire-worshippers (Magians) but according to other sources there were already a considerable number of Muslims among them by the beginning of the tenth century.

As to the Penegek language, Anna Comnena (xith century) already asserts its identity with that of the Komans [see kirîsî]. Until recently its scanty remains consisted almost entirely of the names of the Penegek tribes, chiefs and fortresses listed by C. Porphyrogênetos. But when in 1931 Németh succeeded in deciphering the inscriptions of the treasure of Nagy-Szent-Miklós, it became evident to him that the gold and silver vessels contained in it belonged to the Penegek chief Bota-al Calam (d. 900–920) and that we had here further specimens of the Penegek language; from these he concluded that the language of the Penegeks was closely connected with that of the Komans in Hungary and that of the Codex Chuenicus. The characters of these inscriptions may be called Penegek runes, which belong to the family of the Kok-turk script and are closely connected with the Hungarian runes.

In conclusion, from the fact that there are two baptismal fonts in the treasure of Nagy-Szent-Miklós it may be assumed that several Penegek chiefs were converted to Christianity. Very
little more is known of the Pécegens; cf. however the index to K. Dieterich (s. Bibl.).

**Bibliography:** The earliest Arabic (Ibn Rusta and Bakri) and Persian (Gardizi) records of the Pécegens are based on Djanhäuser (tenth century) and on a source of the first half of the 15th century so that they only refer to the earlier home of the Pécegens; Mr. Huseyin Namik, a detailed account however includes the period after they were driven from the Volga region. Both groups of sources have been used by J. Marquart and W. Barthold. — Also: Constantin Porphyrigenetos, ed. Bonn, vol. ii. (1849) see index historicus (the whole of ch. 37 deals with the Pécegens); P. Golubovskiy, Pécegen, torki i polovtsi do nazhestviyata tatar, Kiev 1884; Sh. Santi Bey, Kâmiûl al-Ālam, ii. 1905; K. **PECÉWI, Ibrahim, Ottoman historian.** Ibrahim was born in 982 (1574) in Funkichene (Hungary, Ung. Török, Turk. Pécevit), i.e. Pécevit, whence his epithet Pécevi (cf. Pécevi, Török, i. 286 and ii. 433; also j. v. Hammer, G. O. R., iv. 5, note). His ancestors were holders of fiefs in Bosnia and Hungary. Pécevi has not recorded his father’s name (cf. Török, i. 87); he was in any case already domiciled in Funkichene. His mother was a member of the celebrated family of Sokolović (Sokoli). Of Pécevi’s early years, we know that at the age of 14 he was taken as an orphan into the house of his uncle Ferhâd Pasha, governor of Ofen, and later went to another relative Lâlâ Mehemet Pasha (cf. his Török, i. 323); he spent 15 years in the latter’s entourage. In 1402 (1593) he joined the army, took part in the Hungarian campaigns of Sinan Pasha, was an eye-witness of the siege of Gran (cf. Török, i. 136, 180), of the Erlau campaign and the siege of Peterwardein. The next few years he spent mainly on the staff of Lâlâ Mehemet Pasha who had been grand vizier since 1513 (1604). He gives a detailed account in his history of the various offices which he held. After the death of his patron Lâlâ Mehemet Pasha (1524 = 1615) he was sent by his successor to Anatolia where he had to prepare a description of several sanjâjs. He was next desterr for a short period in Tokât, went in the same capacity to Rumelia and finally was given the office of Anatolia as “alms”. He spent the rest of this life in his native district. He became muteperrîf of Stuhlweissenburg, then desterr for Temesvár. In 1541 (1631) he retired from office and went to Ofen. He spent his last years here and in his native town engaged in writing his history. The date of his death is not exactly known. He must have however died about 1600 (1650).

Ibrahim Pécevi, who from his youth upwards displayed a marked turn for history, is the author of a work which is one of the best Ottoman sources for the years 926–1049 = 1520–1639. While for earlier events he relies upon the accounts of his Turkish predecessors, and as N. IV. Istvânyi and K. Heitai have shown, also Hungarian sources, for the later period he writes from his own observation or information. His work, which is written in lucid and simple language, survives in numerous manuscripts (to those detailed by Babinger, G. O. W., p. 194 may now be added two others in Upsala, University Library, cf. Zetterstén, Katalog, p. 531 and a manuscript in Rhodes in the possession of Hâfiz Ahmed, No. 446), but so far we have no critical edition. Several preliminary drafts seem to exist which vary considerably in the periods covered and were presumably later expanded. The Stempl printed edition of the Târîkh-i Pécevit in two parts (1540–540 pp. and 7 + 487 pp., printed 1828; cf. J. D., 1868, i. 471 and 484 and F. v. Kraelitz, in Lit., viii. 259) covers the period from the accession of Sulaimân the Magnificent to the death of Murâd IV in 1049.

**Bibliography:** F. v. Kraelitz, in Lit., viii. (1918), 252 sq. and the sources given in Babinger, G. O. W., p. 195.

(Franz Babinger)

**PECCHINA, Arab. BADJÎNĂ, formerly an important town in the south-east of Spain, to the north of Almeria [q. v.] (originally Mari-yet Badjînâ), from which it is about six miles distant. Towards the middle of the ninth century it was the centre of a kind of maritime republic founded by Andalusian sailors, who had also a colony on the Algerian coast at Tenes [q. v.]. It consisted of several quarters separated by gardens; becoming the capital of a šâura of the same name, Pechina was later supplanted by its neighbour Almera, to which its inhabitants soon migrated.

(E. Lévi-Provençal)
PEHLEWÂN, MUHAMMAD b. ILDEGZI, SHAMS AL-DIN, ATABEG OF ÂDÂBÂBÎDÂN. His father Ildegzî [q. v.] had in course of time risen to be the real ruler in the Saldjûk empire; the widow of Sultan Tughîrî [q. v.] was Pehlewân’s mother and Arslân b. Tughîrî [q. v.] his step-brother. In the fighting between Ildegzî and the lord of Mâzâgha, Ibn Âk Sunkur al-Almâshî, Pehlewân played a prominent part [cf. the article Mâzâgha]. From his father he inherited in 565 (1172–1173) Arslân, Âdâbâbîdân, Dâhimâshî, Isâfâshân and al-Kaj with their dependent territories and a few years later he also took Tabriz, which he gave to his brother Kûzî Arslân [q. v.]. Like Ildegzî, Pehlewân also became the real ruler. Sultân Arslân b. Tughîrî was completely under his control as was also his young son Tughîrî [q. v.], whom Pehlewân put on the Saldjûk throne, after Arslân had been disposed of by poison. Pehlewân died in Dhu ’l-Hijja 581 (Feb.–March 1186) or the beginning of 582 (1186) and his brother Kûzî succeeded him.

Ibn al-Athîr (xli. 246) pays a high tribute to Pehlewân’s statesmanlike qualities and during his tenure of office peace and prosperity prevailed in many of the territorial possessions of his dominion. After his death his son, bloodshed and unrest broke out. In Isâfâshân the Shâfî and Hamâfis fought one another and at al-Kaj the Sunnis and Shî’is until order was gradually restored.

PERSIA.

I. Historical and Ethnographical Survey. (J. H. KRAMERS)

II. Language and Dialects. (H. W. BAILEY)

III. Modern Persian Literature. (E. BEKTHEIS)

I. Historical and Ethnographical Survey

Name. The name Persia is of Western origin and probably only in the Middle Ages began to be used for the countries occupying the Iranian plateau (in Plautus Persia is found once instead of Persis). It is derived from the Greek-Roman appellation "Persae" for the Persians, an appellation that goes back to the name of the region of Persis in the south-west, named in its turn after a tribe that is probably identical with the Parsua, known by the Assyrian inscriptions as having occupied formerly a part of Media (oldest mention 844 B.C.). The name Pars, (New Persian: Pârs) in Media and Persia is from media times is applied to the same region of Persis only, but Pârsi was already at an early time used for one of the types of language spoken in the Iranian provinces (cf. Fihrist, ed. Flügel, p. 13), which language since the 16th century became the written literary language that we call Persian. Equally the appellation al-Fûrûs, found in early Arabic literary sources, denoted the whole of the people of Persia, but was restricted in use to the Persians of pre-Islamic times or to those who had kept to their ancient traditional and religious views. This meaning is often synonymous with the Arabic expression al-Shârâb.

The form Iran is of Pehlevi origin and goes back to an earlier form Ariana, originally an adjective (airvana in the younger Avesta) meaning "Aryan". It was the name of the core of the state of the Sasanids, who styled themselves "kings of Eran and Arsân", and it occurs in the early Arabic historical and geographical sources in the form Irân-shâh, meaning the country of Iran (cf. i. a. Yâkût, i. 417 sqq.). In Muhammadan times the name became popular again by the revival of the ancient traditions in the Sâhân-mâna, but the use of the word Iran for the modern kingdom of Persia is probably not older than the sixteenth century, when the Persians began to call themselves Iranîyân (about 1800 there existed already a newspaper called Iran). Nor does the use of the words "Iranian" and "Iranistic" in scientific publications appear to be older than the second part of the sixteenth century (Spiegel's Iranische Alltumskunde was published since 1871, and Darmesteter's Études Iraniciennes in 1883).

Geographical Survey. Throughout the Middle Ages Persia was neither a geographical nor a political unity. In treating the Persia of Muhammadan times we therefore must choose an arbitrary delineation of the country, namely the territory comprising present Persia, Afghanistan and Baluchistân and in addition the region of Marw as far south as the present Persian frontier. The territory thus circumscribed may represent the actual Achemenid and later the Sasanid empires, excluding the territories of al-Irâk, Mesopotamia and Armenia, which during both periods belonged to those empires; Babylonia was called even in Sasanid times Dîlî Irânshâr (B. G. A., vi. 5).

The greater part of Persia thus circumscribed consists of a plateau, very mountainous in parts, with the coastal regions of the Caspian and the Persian Gulf. With the exception of these coastal regions the waters of Persia have no outlet to the sea. The consequence is that there are hardly any great streams, the only rivers deserving that name being the Hîlmand, which falls, like many smaller streams, into the depression of the Sistân lake, and the Herî-Rûd, which ends in the northern steppe. The many small streams allow only of a limited cultivation in the mountain valleys and on the fringes between the mountains and the deserts. This circumstance gives even to the inhabited mountainous stretches of the plateau a character of a series of oases, which are larger or smaller as the irrigation systems, mainly effected by the subterranean aqueducts called kâkerîs) is more or less developed. The territory between the oasis towns and villages is steppe, which, in central Persia, become real desert, the soil of which is more or less saltish. The steppes, as also the higher mountain regions, support nomad life only, as they are only habitable during certain periods of the year, to which cause is added the very considerable variation of temperature in many regions. Nomads or semi-nomads have therefore
always lived together on the Iranian plateau with the settled population; the proportion has considerably varied on account of the frequent invasions of nomad peoples. Persia consists of a number of regions of very different character, which accounts for the lack of political unity during long periods of history. Each of these regions has formed occasionally an important political and cultural centre and the Islamic geographers in describing Persia give for each of them its own description. Their division is mainly traditional and at the same time geographical, but disregards the very variable and ephemeral political frontiers.

The regions may be divided into a western and an eastern group, separated by the great central Iranian desert, which extends from the Caspian Sea south-eastwards practically as far as the Indian Ocean in Mukrān. This desert, called by the geographers Mafsat al-Khurāsān, Mafsat Faris, Mafsat Kirman or Mafsat Sīstān, depending on the parts particularly taken into consideration, varies in breadth and character. Its level is on the whole considerably lower than the eastern and western parts of the Iranian plateau. The northern part is a large salt desert, where vegetation is hardly possible. Further to the south, to the east of Fāris, begins the region called on modern maps Dagh-i Lūt; here, and further to the south-east there are not a few oases, which form important resting points on the many caravan ways that have linked up since olden times Fāris and Kirman with Khurāsān and Sīstān. In the southern regions of Tūrān and Mukrān, with which it is linked the large desert to the south of the Hindu River, the desert steppe character is prevalent. This series of deserts, though not forming an impassable barrier between east and west, has often coincided with political frontiers; only in the north in the region of Kūmis, east of al-Kayā (later Teheran) and along the Caspian coast, a more continuous cultivated stretch links up Media with Khurāsān.

The central part of the western regions is Media, called al-Djībāl in Muhammadan times and later Irbāt-i Aḥāmat, consisting of a plateau all covered by mountain ranges running mainly from N. to S. E. and bordered on its south-western side by the Zagros mountains; the most important towns are here Hamāqān and Isfahān. To the north-west Aḥdarbajdān forms a continuation of al-Djībāl, from which it is separated by the desertlike region of Ardalān. Aḥdarbajdān is still more mountainous, being a transition to the Armenian and Caucasian mountain systems; it is also richer in water-courses; the river Araxes (al-Rass) may be considered its northern boundary. Its chief geographical feature is the big salt lake of Urmia. In early Muhammadan times Ardabīl was here the most important place, succeeded in modern times by Tabāz. The small coastal border to the east of Aḥdarbajdān belongs to the South Caspian regions, known in Islamic geography as al-Djīl, al-Daillam, and further Aḥbaristān, Bīlān and Mzandra. This region consists of a narrow coastal stretch, widening somewhat towards the east and contrasting with the rest of Persia by its moist climate and rich vegetation; to the south it slopes rapidly upwards to the high range of the Elburz that forms the northern border of the central plateau; alongside the southern slope of this range stretches a narrow cultivated and inhabited area, in which al-Raiy was the most important town and through which ran the main route to Khurāsān, passing, after al-Raiy, Sammān, al-Dāmghān and Bīstān. At the south-eastern corner of the Caspian the route passed south of the mountain region of Djarjdān, which region, owing to the fact that its waters — the rivers Djarjdān and Atrek — flow towards the Caspian, does not belong geographically to Khurāsān.

In the south of al-Djībāl the Luristān mountains are a transition to the low country of Khūrizān, the ancient Elam and the modern 'Arabistān. It is very similar to al-Irāk, from which it is separated by desert stretches. The rivers of Aḥwāz, now the Kūrān, fed by its tributary the Kerkhā, in the early Middle Ages flowed directly into the Persian Gulf, and later into the Shāh al-Arab. To the east of Khūrizān and south-east of al-Djībāl begin the mountain ranges of Fāris with their many mountain lakes and their fertile valleys, which find their continuation in the similarly shaped mountain region of Kirman, where, however, the desert areas are more numerous. The chief town of Fāris is the medieval and modern Khurāsān, which has replaced the ancient towns of Djar and Iṣfahān, while the medieval towns of Kirman, al-Strādān and Dirūf, have disappeared, the present town of Kirman being comparatively young. The coastal region of Fāris and Kirman is barren; here were the very important ports of Tawaddū, Sīnt, Sīrāf and Hurmuz, now replaced by Būshīr and Bandar 'Abbās. The geographers distinguish Fāris and Kirman a southern hot zone (jāwār, garmst) and a northern colder zone (sarād, sarvest), a distinction important to nomads and pertaining to the climate and the vegetation; hot regions are found, however, also in the north-eastern parts of Kirman, where the land descends to the level of the central desert. The oasis of Yazd and environs is generally counted a part of Fāris. The country east of Kirman as far as the Indus, occupied by several mountain ranges, is poor in cultivated areas and has not much importance as a passage to the Indus region. It consists of the coast region of Mukrān and the parallel inner zone of Tūrān, forming together the present Balācīstān.

The north-eastern part of the Iranian plateau consists of three main regions, of which Sīstān with al-Rukhhādād (Arachosia) is formed by the basin of the Hindu; these waters flow into the Sīstān lakes, which have considerably changed their form in the course of history. The principal medieval towns were Zarandj and Bīst; the mountain ranges become higher towards the north of this region and run mostly north and south; the eastern border is the water-shed of the Indus valley. To the north of Sīstān stretches the large region of Khurāsān. Its main features are a series of mountain ranges running east and west, bordered in the east by the Hindū Kush; between these mountains flow a number of rivers, mainly from the south-eastern ranges to the north-west or the north, where they lose themselves in the desert, bordering the south bank of the Djarjdān (Amū Daryā) and continuing in a western direction towards the Caspian. The largest river is the Hei Kūnd, on which is situated Herāt; then the Murghāb with Marw al-Rudh and Marv, and the river of Balkh. The westernmost section of Khurāsān with Isfarāy, Naftūr and Tūs (Meshhed) receives its waters from the western mountains that form a
not quite complete watershed between Khurasan and Djurджan. Though certainly presenting a geographical unity, the large extent of Khurasan allows the division into smaller regions, such as Bādghīs, al-Djurджadjan, Tukhiristan and others. The present frontier between Persia and Afgānīstān cuts from north to south right through Khurasan and Sistān. Finally the basin of the Indus and its tributaries forms a region of its own, although the part with Kābul to the south of the Hindū Kūsh and Ghāzna (Zābulistān) was often counted by the Islamic geographers to Khurasan. The more southern part of the Indus valley is separated from the Hindu system by the Sulaimān range and the deserts of Waziristān and is, owing to climate, poor in cultivated areas.

All over the Iranian plateau a system of secular caravan roads links up the many cultivated centres. The chief connexions with the surrounding countries were the passage of the Araxes towards the eastern Caucasus (al-Rām), the pass west of Urmia to Armenia, the passeways of Shahriruz and Halwān to Mesopotamia and al-Iraq, and the road from al-Baṣra to Ahwāz. The sea-ports on the Persian Gulf maintained regular intercourse with the coast towns of Arabia, India and even Eastern Africa. Towards Transoxana (Mā warḵ al-Nahr) the chief passage went by Tirmiḏ on the Oxus, while the roads from Kābul and Ghāzna to Mulkān were the chief connections between the Iranian plateau and the Islamic parts of India. The Caspian ports maintained a small traffic with the Volga mouth.

Historical Survey. The relations between Arabia and Persia date from long before Islamic times. Arabs settled in southern Persia from the time of Ṣhadīr I, and the Šāšānids were masters of southern Arabia up to the time of Muḥammad. Then began, under the caliph ʿUmar, the Arab conquest of Persia, which inaugurated the Islamic period in the history of that country. The political and psychological prelude to this conquest was the taking of the capital of the Šāšānid empire, al-Maḏārīn, in 637, after the battle of al-Kādisiya. Although the exact dates of the different conquests and battles are not known, the early historical sources allow a reliable survey of the phases of the amazingly rapid progress of the Arabic invaders all over the Iranian plateau. For, with the exception of Mārkān and Kābul, all regions had been reached, as far as Bālḵ, before the death of the caliph ʿOṯmān (656). We may distinguish different chief expeditions that were directed primarily from Madīna, and secondarily from Kūf and Baṣra by the governors of those two garrison towns. The first expedition, however, the conquest of the greater part of al-Djurдж and south-eastern Ardharbijdān, was the immediate consequence of the capture of al-Maḏārī in the army of Saʿd b. Abi Waqāq. It was followed, probably in 638, by the battle of Djalulā and the conquest of Halwān, Karmāsīn (Kirmānshāh) and, after reinforcement had been sent from Kūf, by the famous battle of Nihāwān. These events caused the flight of king Yezeḏegard by the way of Isfahān, ʿIsaḵr, Kirmān, Sīḏuṣṭān, to Marw, where he was killed by the Marzubān Māḥūya (651). Immediately after Nihāwān came the capitulation of Ardaḵīl (about 644), together with raids into Djerfān. The further conquest of Ardharbijdān, however, started from Māsūl, taken in 641 by ʿOtbā b. Farkaḏ, who, in the course of his expedition, took Shahriruz, Urmīya and several other places in Ardharbijdān. Nīhāwand remained the base from which, under the direction of the first governors of Kūf, were conquered al-Raḵwī and the towns of Kūmis (after 641), and about the same time Hamadhān, Kaẕwīn and Zandjān. In the following years several expeditions were necessary in this region against the Dailamīs and other mountainers. From Kūf started also the first invasion of Khūzistān under the governor al-Mughīra b. Shuʿbā, but the real conquest of this region began in 638 under the famous governor of Baṣra Aḥb Ṭūrūḥān al-Aḥnaf b. ʿAṣ’ī. The subjugation of this very near neighbour did not take much time, the most serious resistance being met at Tustar (Ṭustar). Khūzistān remained Abū Mūsā’s base, from which he conquered the remaining towns of al-Durḏālī, namely al-Sirwān, al-ʿAṣimāra, Kūm and Kaḏān, and finally, in 644, by means of his brother Harb b. Abū Mūsā, was brought under his sway. The latter was also the first to move in the direction of Khurasan by forcing the towns called al-Tabaristān to capitulate. About the same time took place the first invasion of Fāris, not, however, from Khūzistān, but from the opposite Arabian province of al-Baḥrānī, whose governor ʿOṯmān b. Abī ʿAṣ’ā had an encounter with the marzubān on the island of Abarkawān and subsequently took Tawwādji, from where he began raids on the other towns of Fāris. His brother al-Ḥakām defeated the marzubān of Fāris near Rāshār on the coast, in 640, in a great battle, which, according to al-Balḵhūrī, was equal in importance to that of al-Kādisiya. Then Abū Mūsā was ordered to join forces with ʿOṯmān b. al-ʿAṣ. Together they conquered between 644 and 647 a number of towns: Arrāḏān, Ṣahrāb, Ṣīrāz, Dārābjudāl, Fasṭ; Abī Mūsā penetrated far into Kirmān, Shīrāz became the principal Arab garrison. It was from here that, in the caliphate of ʿOṯmān, started the great campaigns of ʿAbd Allāh b. ʿAmīr, after his appointment as governor of Baṣra. In 649 he took the not yet conquered towns of Iṣṭakhr and Djerfān, and in 650 he set out for the conquest of Khūzistān; the reason of this is said to have been an invitation by the marzubān of Tūs, addressed equally to his colleague of Kūf, Saʿd b. al-ʿAṣ. But while Saʿd did not go beyond Ṭabaristān and Durdān, where the malk was made tributary, ʿAbd Allāh became the real conqueror of Khūzistān. He had already dispatched his lieutenant Mūdjīšī b. Maʿṣūd towards Kirmān, in pursuit of Yezeḏegard; this first expedition having failed, Mūdjīšī was sent a second time to Kirmān in 650, where he conquered the principal towns: al-Sirwān, Bamm and Djerfān. Battles were fought near Hūrmuz and at the Sīfān mountains. A similar minor expedition was sent by ʿAbd Allāh to Sistān, under al-Raḵwān b. Ziyād, who crossed the desert from Ṭabaristān and conquered with considerable difficulty Zandjān, the capital of Sistān, where he remained several years. His successor having been expelled from Zandjān, ʿAbd Allāh dispatched ʿAbd al-Raḥmān b. Sāmūra, who reconquered the country and penetrated as far as Dīwar, Bust and Zābul. In 650 ʿAbd Allāh had in the meantime proceeded to al-Tabaristan, already conquered, and sent from there al-ʿAṣnāf b. Kāis to the conquest of Khūzistān. He himself reached Nīshābūr, which surrendered after a siege. From there several
towns were subdued by him and by his lieutenants, and with the marzubān of Tūs a treaty was concluded. Mawar capitaulated without a fight. A secondary expedition to Herat under Aww b. Tha'labā resulted in the capitulation of the ruler of that town, while finally eastern Khurasān was raided by al-Āṣīf b. Kāiš, who fought a decisive battle near Marw al-Rūdhāb and conquered the region of al-Djīzaḏjān and the town of Balkh, continuing from here this advance as far as Khwārizm. When ʿAbd Allāh b. ʿAmīr returned, he left Kāiš b. al-Ḥaithām as the first governor of Khurāsān.

This was the military situation at ‘Othmān’s death. The conquests were by no means secure, least of all in Sistan and Khurasān. The placing of garrisons in Nihāwān, al-Ahwāz and Sirās, enabled the Arabs to complete their conquests against the civil wars were over. The people and the authorities with whom the Arabs had to deal in Persia were very different. After the royal army had been destroyed at al-Kalābīstān and Nihāwān, it was chiefly the marzubān who opposed the Arab invaders with their local troops and concluded on their own account treaties (mutālaḵa), which guaranteed freedom of religion and the possession of private property against payment of kharāj. Where a town or a region had been taken by force, the Arabs became proprietors of the soil, as in the Median regions Māḥ al-Kūfah and Māḥ al-Baṣra. Wholesale acceptance of Islām, as is reported of Kāzawā, was rare; the Zoroastrians continued the practice of their religion, notably in Fāris and Aḥbarīḏgān, but from Fāris many of them took refuge in Sistān and Mūrkan, and about 700 took place the first emigration of Zoroastrians to Kathiāwar in India. In the town of Dārābḏījīd it was the local herbānī who treated with the Arabs. On the other hand, many Persians were taken as captives to Ḥirā and Ḥarabīyā, where they became wasūfī, while also entire groups, such as many knights (āḏizwīr) of Zevedegard’s army, and different elements of the population of southern Persia (the Zūţ, Saybdīḏa and others) joined forces with the Arabs. The mountainers, however, in Fāris and al-Dījībāl, and especially those of Dījīlān and Dālaţī, long remained unconquered, living under petty local dynasties. In Khūsān the Arabs had had to deal with remnants of the Ḥēphāltās (Ḥēphāltīs), still further east with polytheists (muṣhrākīn), probably Buddhists and, in Khurāsān, often with Turkish auxiliaries. On the other hand, the conquests introduced a contingent of Arab Muslims in the Persian towns, where they generally began by establishing a mosque; they increased by colonisation in Umayyad times and among them were many bearers of the traditions (kadīth) about the Prophet and other religious matters and in this way was prepared the gradual Islamisation of the population, favoured at the same time by economic conditions.

The civil war, in which not a few Persians took part in Ḥirā, crippled for some time the Arab progress; the emissaries of ʿAṭī’s governors in Kūfah and Baṣra had great difficulty in maintaining themselves, and the whole of Khurasān rebelled, in spite of the reported vassalage of Mawar. Now that caliph Balkh was even for some time under Chinese control. It was only under the energetic governors of Ḥirā under the Umayyads, Ziyād and al-Hādhījīdī, that the conquest was taken up with renewed vigour. Under Muʿawāya ʿAbd Allāh b. ʿAmīr had been again appointed governor of Baṣra (662) and he sent again ʿAbd al-Ḥaṣān b. Samura to Sistān, and then the Arabs reached Kābul, although he and his successors experienced greater difficulties in their dealings with the Kābul-Shāh and the different rulers of Zābulīstān who are called zambīl (according to Marquart, Erānsahr, p. 245). These difficulties continued throughout the Umayyad period and became less only when Sistān was joined administratively to Khurāsān, and the Arab domination grew stronger in the latter region. Ibn ʿAmīr was also the first to begin the reconquest of Khurāsān by his lieutenant al-Kāiš b. Ḥaithām (capture of Herat and Balkh); he was continued by Ziyād b. al-Ḥaṣān (from 666), under whom Marw was made a strong Arab garrison, and shortly afterwards 50,000 Arab colonists were established with their families in Khurāsān. Al-Hādhījīdī operated in Khurāsān through his able generals al-Muhallab b. Abī Sufrā, Yāzīd b. al-Muhallab, and finally Kuṭāibī b. Mūsīm. One of the greatest difficulties was, in his time as many times afterwards, the clearing of the main road to Khurāsān by al-Raʾīs, Kūnīs and Ṭabarīstān, where many battles were fought with the mountainers. The transfer of a considerable Arab contingent to Khurāsān under Ziyād had been a consequence of tribal wars that had started during Muʿawāya’s reign. The new comers soon began to infect the Arab solders of the garrisons, while at the same time the political and religious parties born from the civil war began to gain adherents in Persia, first among the Arabs and soon among their Persian clients. Prominent were the Khūrqās, who, under their leader Kāṭārī b. al-Fuḍāwā (killed ca. 697), founded a refuge in Kirmān and made from there raids to the north and the west. And towards the end of the Umayyad period, Isfahān with parts of Fāris and Khūrāsān were temporarily in the power of ʿAbd Allāh b. Muʿawāya (744–746). The main object of the Umayyad administration was the collection of the ḏiyā and the kharāj and, until the time of al-Hādhījīdī, the books were kept by native scribes in Persian, after the custom of the Sāsānids. Under al-Hādhījīdī the language and the script of the administration were changed to Arabic in Ḥirā, and we must assume that gradually Arabic came into administrative use in the Persian provinces; nevertheless the first Arab governors, and among them Kāṭārī, had coins struck with Pehlevi and Arabic legends. A considerable advance in the Islamisation of Persia was due to the financial policy of ʿUmār b. ʿAbd al-Azīz and Ḥishām; after ʿUmār’s edicts had induced many Persians to adopt Islam in order to get rid of the ḏiyā, the taxing of Muslims and non-Muslims alike by Ḥishām brought about an assimilation of the different elements of the population, from which there emerged at this time a reliable class of Islamic-Persian functionaries. Only the mountain people under their local chiefs remained unruly. But notably the remote province of Khurāsān, though revolts were not rare, and notwithstanding the continuous tribal feuds of the Arabs, remained under firm government control, owing to the presence of the strong garrison at Marw, where the governor resided, and in a not less degree to the successes of the Muslims in Transoxiana under Kūtāibā.

This makes comprehensible why the anti-Umayyad propaganda, directed by the Abū Ḥāṣāsīd in Syria, chose Khurāsān as the field of operation for their
emissaries. Making use of the animosity between the Arab tribes and of the general dissatisfaction with the existing rule, this propaganda resulted finally in the revolt of Abî Muslim in 747 and his victorious entrance into Marw and soon afterwards into Naṣīrābād. So it was to the Arab legions in Persia and their Persian helpers that the 'Abbâsîds owed their final victory in 750. This, of course, brought about a completely new orientation of Persia within the empire of the new dynasty, the more so as the 'Abbâsîds transferred their residence to 'Iṣâk, where the centre of the last national Persian dynasty was formerly situated. Persian attitude to life and Persian tradition became dominant in the new centre of Arab political power and soon of Islamic civilization in the newly founded Bagdad (762). A symptom of this Persian cultural influence is the translation into Arabic of products of Pehlevi literature by authors like Ibn al-Muqaffâ. Further, powerful families of Persian origin, gained as the Barmakids, and afterwards the Banû Nawbakht, such influence as viziers on the affairs of state. This was also the time when the racial sentiment of the Persians began to assert itself in the Shia 'Ithâya movement and when the manifestations of the Persian simîds aroused the anxiety of religious circles. The caliphs themselves showed more interest in their Persian provinces than the Umayyads had ever done; they were moreover compelled to do so, as events had shown what a powerful commander might be able to undertake against the central authority. In the south-western provinces — al-Djâdîl, Khûstân and Fâris — revolts of this kind were not so to be feared, but farther away and in the mountains authority could only be maintained by repeated expeditions. So when the governor of Khûsrâûn showed signs of disloyalty, the caliph al-Manûsîr sent his son al-Mahdî with the general Khâzûzman to restore order and afterwards to subjugate a local dynasty in Tabaristan. Then al-Mahdî took up his residence in al-Raiy until his accession. Hijrân al-Râshîd undertook himself at the end of his life an expedition against Khûrsân and Transoxiana, during which he died at Tîb (809). His son al-Ma'mûn, who had accompanied him, remained in Khûsrâûn, even after he had become caliph (813), until 817. During this time happened the episode of the inâm 'Alî al-Râfiq [q.v.]. In the same early 'Abbâsid period the attitude of the Persian population towards Islam had changed in so far as notably the revolt of Abî Muslim had induced many Persians of the better class (the akîbâns) to become Muslims, but at the same time the lower classes were able to outstrip the religious fanaticism, in which Islamic and pre-Islamic views were untimbered. In Khûsrâûn a number of "false prophets" made their appearance: Shânshâh the Maqâlî (754—755), 'Omadîs (766—768), Ya'ûsîf al-Barmî, al-Muqâmannâ (777—789). To the same kind of religious movements belonged the prolonged rebellion of the Khurramites under Bâbak (816—838) in Adharbâjdân. The caliphs were justifiably in repressing these movements with great severity, because they were generally accompanied by aspirations towards political independence. The revolt of the 'Abbâsîs b. 'Abd Allah in Fâsil in 793 showed likewise that it was already possible to operate in Persia with I-manic devices, and for this reason the caliph Harûn had to proceed with much circumspection in its repression.

Under al-Ma'mûn the political loosening of Khûsrâûn and neighbouring provinces from the 'Abbâsîd caliphate, not by the action of the ancient Persian nobles or princes, nor by the popular movements already described, nor by Khûrâbidite or 'Abbâsîd propaganda, but by the action of Persian-Muhammadan governors not of ancient noble lineage, but nevertheless animated by national feelings, preparing in this way the Persian-Muhammadan political and cultural renaissance. TIâhir b. al-Husûn, general of al-Ma'mûn, was appointed in 820 governor of Khûsrâûn. His descendants, the Tâhirîs, were nominally governors of the caliphs, but the latter had to leave to them an almost independent authority over Khûsrâûn with the regions to the east as far as the Indus and to the west as far as al-Raiy. Those regions never came back under the caliphs' full authority, for the Tâhirîs lost their power and their territory in 873 in the struggle against the Sa'dîrs, a dynasty of still less noble descent, who in 867 had begun to make themselves masters of Sîstân under Ya'ûsîf b. al-Hâlî and his two brothers. Their territory comprised for some time Khûsrâûn with the regions of Kâbul and al-Raghîbîkhdj — where the 'Abbâsîd power had never been well established — and even Kîrmân and Fâris, but the position of the Sa'dîrs as leading power in Persia soon came to an end, when they were beaten in 879 in Kûsrâûn in their endeavour to attack the caliph in Bagdad. The cultural and religious position of the Sa'dîrs is not well known, but their exploits remained famous in Persia long after their extinction. During the same period the caliphs had to suffer the establishment of other more or less independent dynasties, such as the Dulafrîs in al-Karâfî in the southern part of Media (842—897), and the Rudainî family in Adharbâjdân. Far more important is the rise of the Zâma'îd dynasty in Khûsrâûn and Transoxiana. This dynasty originated in Khûsrâûn; they had been at first faithful servants of the Tâhirîs and occupied already a powerful position in Transoxiana when the troubles in Khûsrâûn, after the fall of the Tâhirî power, enabled them to establish their power in Khûsrâûn in 892, under the nominal suzerainty of Bagdad. Under Ya'ûsîf b. Ahmad (913—943) they governed also in Sîstân, Kîrmân, Luvagjînîn, al-Raiy and Tabaristan. The immense cultural importance of this dynasty for Persia lies in the fact that a revived national but Islamized Persian spirit found an opportunity to develop itself in Khûsrâûn, as is revealed to us by the beginnings of the New Persian Islamic literature [cf. infra. ill.]. This development certainly goes back at least as far as the time of al-Ma'mûn. The Zâma'îds re-sided in Transoxiana and had Khûsrâûn governed by governors, so that it was not the native mass of their brilliant court alone which formed the Persian branch of the Islamic culture; this was due rather to the general prosperity which began to reign and which brought into existence a class of wealthy landowners who were able to patronize literary and scientific activity, for Arabic literature also began to flourish in Khûsrâûn (al-Palîkî and others). It is further noteworthy that the Persian renaissance did not take place in the traditional centres of Persian, Fâris and Adharbâjdân, where about this time the ancient conditions had not much changed, but rather in a (culturally speaking) new country, where new forms could more easily come into existence.

In western Iran the manifestation of the Pe-
PERSIA

1043

The 18th century witnessed the rise of the Turks in Persia. Turkish troops had already formed large contingents in the armies of the governors and princes who disputed with each other parts of Iranian soil, not excluding the mountain-eaters who needed horsemen alongside their local foot-soldiers. It is true that already in Sāmānīs times sections of Turkish tribes had been established south of Dījān in Ṭukhārjān, but the main role of the Turks in Persia had always been that of soldiers and military commanders in the service of local governors and princes. In the Sāmānī state seven Turks had risen to high military and administrative functions, and, as the military power of the Sāmānīs began to weaken, these Turkish commanders aspired to political leadership, relying on their Turkish troops and using their natural capacity for military organisation. In this way the Turkish vassal of the Sāmānīs, Subuktānī, founded his independence in the newly conquered region of Ghaznā and Kābul, where until then local Hindu rulers had been able to maintain themselves; his power soon became a menace to the Sāmānīs themselves, who, in Transoxiana, were continually losing ground to the Turkish ilkhanīs. Subuktānī had been Samanid governor in Khurāsān, and it was after his death (997) that his son Mahmūd of Ghaznā (997-1030) took the opportunity of establishing an independent power in Khurāsān, choosing Balkh for his capital at the outset. He extended his sway in Persia over Sīstān and as far as eastern Media, while his conquests in India and Transoxiana gave a strong backing to the consolidation of his power in Iran. Mahmūd had asked the caliph for a diploma of investiture and was noted as a champion of Sunnism. Under his reign the new cultural Persian-Islamic tradition of the Sāmānīs was continued; his court was a centre of Persian court poets and whatever his personal relations with Firdawīs may have been, they show at any rate that his states offered congenial soil for the renaissance of Persian cultural traditions. The name of al-Birūnī is sufficient to show also that the noblest and highest form of Islamic scholarship could flourish under his reign. And his immense popularity in later Persian Sufi poetry has made this Turkish ruler a cultural hero. The final islamisation of the Kābul country was the work of the Ghaznavids. In western Iran in the meantime, the later Būyids were able to maintain themselves with less brilliance; apart from the Ghaznavids they were seriously weakened in Fāris by the Shābānī Kursis in the first half of the 13th century. Yet conditions did not hinder the prosperity of Persian literature and science (Avicenna).

The rise of the Ghaznavids was only the prelude to the Turkish invasion under the house of Seljuq, by which the Seljuq rule became established in Persia and beyond. This time the Turks, mostly called Ghuzz, had begun, since 1029, to migrate into eastern and northern Persia, in spite of the opposing measures of the Sāmānīs and the Ghaznavids. Within seventeen years from his first appearance in Khurāsān (1058), their leader Taghri Bek had overrun the whole north of Persia, and made his entrance into Baghad (1055).
At the same time the power of the remaining Ziyārids and of the different Būyids dynasties was entirely crushed; the Iranian possessions of the Ghaznavid power were considerably reduced, and thus nearly the whole of Persia was united again under the Turkic dynasty of the Seljukids, whose members divided amongst them the different provinces: Khorasan, Sistan with Herat, Kirmān, Fāris, and Adharbājjan. Tughrī Bek fixed his residence at Rayy, he and his successors being called the Great Seljuks, in contrast to the minor Seljuq dynasties. The last Great Seljuk, Sandjar (1117–1157), though an able ruler, was real master only in Khorāsan and had already to face new factors in Persia, which, after his death, brought about a political disintegration that could only be arrested by the Mongol conquest.

The Turkish invasion, which brought nomadic Turks into nearly all parts of Persia, where they found conditions suited to their mode of life, and which in many regards may be compared with the Arab invasion, did not make of Persia a Turkish country, as was the case with Transoxiana, although the period was the last position only of Adharbājjan. The young Persian cultural revival had gathered enough vital force to assimilate the ruling Turkish elements, and this to such a degree that, until the xiii. century, the Seljukids continued to spread Persian culture in Asia Minor. The nomadic Ghuzz did not find the opportunity, as elsewhere, to assert themselves otherwise than as a very turbulent element, which in the xiii. century became threatening even to the Seljukids themselves. The influence of their certainly not very orthodox Islamic religious views on the religious history of Persia has certainly not a little contributed to the spreading of Shi'ite ideas. The Seljukids themselves continued the tradition of the Samanids and Ghaznavids by becoming champions of Sunnism. The minister Nizām al-Mulk is an outstanding figure among the many personalities of Persian descent who were the pillars of the political, religious and literary currents of the time. Under his patronage worked al-Ghazzāl, the scene of whose later activity was Nishāpūr in Khorāsan. Persia had acquired at this time an importance as a seat of Islamic culture equal to that of Iraq and other parts of the Islamic world. The theological colleges founded by Nizām al-Mulk (Baghdad and Nishāpūr) were the crowning work of the Sunni Islamic civilisation, but involved at the same time a consolidation by which religious and cultural ideals were fixed and anchored for the centuries to come. The early Seljuk period shows also a continuation of the best of Muhammadan scientific activity in Persia, for which we have to quote only Umarî Khâsîyân.

Western Persia, however, asserted her non-Sunnite tradition by the Ismā'îlī propaganda which resulted in the capture of the stronghold of Alamut near Kazwin by Ḥasan-i Sabbāh in 1091. The sources of this propaganda were in the East (Nāṣir-i Khurasaw) and the West (Egypt) alike, but its real political effects were concentrated, as far as Persia is concerned, in al-Djibal, Fāris and Khorāsān and, in a lesser degree, in the east in Kūbatān, where about the same time a number of fortresses were acquired by the Ismā'îlīites. Ḥasan-i Sabbāh and his successors became a political power in western Iran, especially in al-Djibal, against which the Seljuqids were more and more powerless, and which was crushed only by the Mongol invasion.

The Seljuqids had established in their dominions a system of hereditary military fiefs (kāhā) with the object of being able to dispose of an army commanded by reliable chiefs. The consequence of this system was the loosening of the central power which was supplanted in course of time by a number of independent military governors, who are known in history as atabeks. On Persian soil the chief Atabek dynasties were those of Adharbājjan (since 1146), of Luristan (since 1148), of Vazd (since 1170), and the Atabek dynasty of the Salghairids in Fāris (since 1373), who annexed also Kirmān after the extinction of the ruling Seljuqids of Kirmān. In the southern parts of Fāris and Kirmān the Shābânkara continued their irregular authority. In Khorāsan the Seljuqids were eclipsed after Sandjar's death by the Khwārizmshāhs, and simultaneously these rose into prominence the Ghūrid dynasty, originating in the mountains of al-Ghor and al-Dīwar. It was the Ghūrids who, by taking Ghazna in 1144, put an end to the Ghaznavid rule in Persia, and made Khurasan, the country of Būz, and to the north, Bâṃyān and eastern Khorāsan. Later on they too lost the greater part of their possessions to the Khwārizmshāhs. Sometimes the Ghūrids were allied with the wandering Ghuzz, and sometimes they fought the latter; on the whole the devastations wrought by the Ghūrids and their temporary allies mark the beginning of the cultural decline in north-eastern Iran.

This decline was hastened by the Mongol invasions. After the Khwārizmshāh Muhammad had come into conflict with Cingiz Khān (1218), the Mongols first took possession of his lands in Transoxiana, of which their appearance in Khorāsan was the political and military consequence. In the campaign of 1220–1221 the Mongol general Lējje and Subutai conquered Khorāsan and the northern part of western Persia as far as Adharbājjan, driving the Khwārizmshāh Muhammad to the island of Abiskān in the Caspian, where he died, and forcing his son Djalāl al-Dīn to cross the Indus. The great towns of Khorāsan were devastated in a way that made it impossible for them to recover their ancient splendour; the population must have been considerably reduced by the wholesale massacres, and the works of art and literature were destroyed. The conquered cities were immediately placed under Mongol administration; where the population revolted, as in Hamadān, there followed a pitiless massacre. The conquered territories were annexed to the part of the Mongol empire given to Chaghatāi. Southern Persia was spared for the moment; in Kirmān the Mongol emissary Burāk Hādji founded in 1224 an almost independent state. Soon afterwards Djalāl al-Dīn reappeared from India to make his turbulent way to Adharbājjan and Armenia without being able to drive out the Mongols. Then, in 1256, came the second invasion of Mongol armies under Hūlagū, brother of the reigning Khān Mangu. This expedition had been carefully prepared and was directed against the Ismā'īlī heretics in Persia and against the caliphate in Baghdad, which was exterminated in 1258. Whatever the real political and religious motives for the expedition of Hūlagū, the friend of the Christians, may have been, its results were of immense consequence for eastern Islam in general.
Persia was entirely subdued and came to form the greater part of the dominions of the non-Islamic Mongol dynasty of the Ilkhan, who resided most of the time in Adharbājīan (after 1306 in Sīfānīya). By the end of the fourteenth century the smaller existing dynasties, such as the Salgharid abebeck of Fāris and the Khūlgh Khāns of Kūmān were also extinguished.

By the terrible devastations in Khūrāsān these regions ceased to be a hearth of national Persian Islamic culture and this role now was taken over by the west. At the same time these political events had loosened the ties with the western Islamic centres which at the time were wholly absorbed by the action against the Crusaders. Moreover by the extermination of the Ismāʿīlī power and the uncertain attitude of the Ilkhan towards Islam and its different aspects, Persian Islam passed in this period through a profound crisis, and many conflicting currents were at work. In this period lived in Ardabil the Shāikh Safi al-Dīn (1252—1334), the ancestor of the Safawī dynasty. Still the Persian national character maintained itself and assimilated the many new foreign elements, mostly Turkish, so far as these were capable of advance to a higher cultural level. Great Persian poets (Ṣaʿdi) flourished, and the Ilkhanīs showed an interest in the achievements of Islamic science (Naṣīr al-Dīn Ṭāṣkī; and literature (Raṣūl al-Dīn). During the Ilkhan period (1255—1337) Persia was considered by the European Christian powers as their ally against Egypt, now the chief champion of Islam in the west. But although the political opposition between the Ilkhan empire and western Islam became a living reality, any attempt to organize and propagate Christianity in Persia by the institution of bishoprics was fruitless. Persia was opened, however, to closer contact with the European world than ever had been the case in Islamic times, not so much by the series of well-known travellers who passed through Persia on their way to the centre of the Mongolian Empire, as through the establishing of commercial settlements by the Italian republics in Adharbājīan, for the overland commerce from their establishments on the Black Sea (Trebizond) through Armenia and Persia to Central Asia.

After the death of Abū Saʿīd (1335) the dynasty of the Ilkhanīs came to an end in the quarrels between the Djalāʿīr and Cūbān families. Abū Saʿīd had already had great difficulty in maintaining the unity of his state, especially in his struggle against the influential amir Cūbān. Further the latter Ilkhanīs had already had to suffer the existence of semi-independent dynasties, such as the Kūrt dynasty at Herāt, the only large town in Khūrāsān that had escaped Mongol devastation. Other powerful commanders, who had served the Ilkhanīs, found during the troubles after Abū Saʿīd’s death opportunity to aspire to political independence; the most successful were the Meshafarīdīs of Fāris and Kīrmān, a dynasty of Arab extraction, who from about 1340 until their destruction by Timūr in 1392 held sway in southern Persia and for sometime as far as Persian Ibrāhīm (al-Dībālī) and Adharbājīan. Further Adharbājīan was now in the power of the Khān of the Golden Horde and now in that of the Djalāʿīr dynasty of Baghdad. Eastern Persia was mainly divided between the Kūrt dynasty of Herāt already mentioned and the Serbēdīr clan who had their centre in Schenzewar.

In these chaotic times, when the authority of political power was waning, the more popular and, in a way, democratic elements in Persia, gained more opportunity of asserting themselves, as may be seen from the rather independent way in which the citizens of different towns treated the quarrelling rulers. This self-assertion of democratic elements is also to be observed in Asia Minor, but on the culturally more fertilized soil of western Iran, it bore the fruit of a brilliant literary development in the fourteenth and fifteenth centuries, which at first sight may seem astonishing in such unfavourable political surroundings. This development was accompanied by an intensification of the religious currents that were at work among the population, where it was strongly influenced by the lower forms of Suʿūṣī as propagated by derwishes. In the case of the Serbēdīr in Khūrāsān the derwish activity had even political consequences and here also is a striking parallel with conditions in Asia Minor. Higher Suʿūṣī was confined to the upper classes and expressed itself in literature, by which we are able to follow the different trends of thought. From the poems of Ḥāfiz we learn that the Shīʿa creed of the taqī al-din ʿAlī al-Ridā in Meḥdī had become an object of national veneration.

At the end of the fourteenth century followed a fearful political reaction in the conquest of Persia by Timūr Lang, another foreign intervention which for the last time held up the development of a national state in Persia. Timūr, after conquering for himself an empire in Central Asia, founded on his descent from Čingiz Khān a claim to the domination of Persia. In 1370 he had already conquered Balkh; in 1380 he subdued Khūrāsān, Sīstān and Māzandarān, and in 1383—1384 he completed the conquest by taking Adharbājīan, Persian Ibrāhīm, and finally Fāris by exterminating the dynasty of the Meshafarīdīs (1392). The Serbēdīr had already been swept away and in 1389 disappeared the Kūrt dynasty at Herāt. The most bloody event during this conquest was the sack of Iṣfahān in 1387. Timūr never resided for long in Persia, but confined its government to some of his trusted men, notably Shāhrukh, who became king in Khūrāsān and Sīstān as early as 1397. In Adharbājīan reigned Mīrānshāh, not altogether to the satisfaction of his father. After Timūr’s death (1405) the political unity of the empire was on the whole preserved under Shāhrukh (d. 1447), who sought to repair much of the devastation wrought by his father’s campaigns. Shāhrukh still recognized nominally as his suzerain the emperor of China. After his death different descendants of Timūr, the Temurids, disputed with each other parts of Persia, while after 1450 the dynasties of the Kūram Koyunlu emerged from the west to dominate large parts of Persia. The best known Timurid in Persia was Sultan Husain Bājrā, who ruled from his capital Herāt over Khūrāsān, Sīstān and Hūsain Bājrā from 1468 to 1506.

Timūr’s reign in Persia meant also a Sunni reaction, but in western and middle Persia this reaction was not lasting. Among the many heterodox religious manifestations of this time is the appearance of the Huṭuṭī sect, one of whose adherents tried to murder Shāhrukh in Herāt in 1426. This religious movement was suppressed by the government, but it had, like similar currents,
strong connections towards the west, through Adharbājān into Asia Minor, where at this time the Sunni power of the Ottomans was re-establishing and strengthening itself to oppose the heterodox influence emanating from Persia. Mean-while Persian cultural life continued to manifest itself in the important literature produced in western Persia, while also in the Caucasian countries and Maḩammadan India Persian cultural and literary influence was reaching its climax. This was not the case in Khurāsān: here, in the intellectual centre of Herāt, developed at this time the eastern Turkīsch Caghatay literature, promoted by ʿAlī Shīr Nāwī at Bāburin Baḵtār’s court at Herāt. Although the Persian-Islamic tradition continued its influence in these regions, eastern Persia begins to be culturally separated from the west under influence of the Turkish and local elements; a development similar to that witnessed at the same time in Asia Minor and the regions of Arabic tongue in Mesopotamia and Irāq.

The events that preceded the rise of the Safawī dynasty have Adharbājān as their chief scene of action. It was in Adharbājān that ʿAlī Shīr Nāwī, the son of Khūnaīn Bābur, had begun his career by taking Tabrīz in 1406, and that his successors had the centre of their empire, which, under Djiāhadvāštīr (1435—1467), extended over nearly all western Persia and in the east as far as Herāt. And it was through Adharbājān that ʿUzzān Ḥasan of the Aḵ Koyunlu penetrated Persia, after his victory over Djiāhadvāštīr in 1467. Then he defeated the last Timūrid Aḥmād Ṣafī and became master of western Persia, inaugurating in the meantime the series of wars with the Ottoman Turks, that were to last for three centuries. The successors of ʿUzzān Ḥasan had already come into conflict with the Safawī leaders, Shīh Ḥādīr and Ṣafī ʿAlī, who about this time had acquired enormous influence in Adharbājān and Asia Minor. The Safawī movement began indeed in a much more democratic way than the preceding dynasties. Its chief adherents belonged to seven tribal groups of Turkish origin, amongst whom Shīʿite convictions had been spread by means of Sūfī propaganda methods. This ever-increasing flock acquired at this time the celebrated nickname of Kīlī-Baḵsh. Thus their political rising under Shīh ʿĪsā ʿAlī was again a reaction against the official orthodoxy of the ruling classes, a reaction in which it was not difficult to enlist the Persian town population of western Iran, since olden times ready to accept non-official and unorthodox religious views, by which at the same time they showed their dislike for foreign rule. These different elements gave a Persian “national” character to the Safawī dynasty; although their leaders were Turks from turcized Adharbājān. Shīh ʿĪsā ʿAlī, emerging from his hiding place in Fīzādīn, gained his first success in the Caucasus against the king of Shirvān, and this made him strong enough to turn his arms against the last ruler of the Aḵ Koyunlu, whom he defeated in the battle of ShāHR (1501). By 1530 he was master of western Persia and in addition of Armenia, Mesopotamia and Irāq (Baghdād taken in 1508) with the holy tombs of the imāms in Nādījāf and Karkhābād. He then turned to eastern Persia, where a new invasion from Transoxania was threatening, after the death of Sultan Husain Baḵtār at Herāt (1506), by the rise of the Uzbek power under Shāhi Khān. The latter had already invaded Khurāsān, and had not been defeated and killed in the battle of Marw (1510) by Shīh Ṣaydī, Persia might have experienced a fourth wave of conquest from Central Asia. Then followed in 1514 the famous battle of Cāldirān; the defeat suffered here by Shīh Ṣaydī from the army of Sūrūr I showed where the political frontiers of the Safawīs were henceforward to lie; the wave of sympathy that had spread west from Adharbājān far into Asia Minor was ruthlessly suppressed by the Ottoman Sultans and Cāldirān showed that any political extension of Persia in this direction was impossible.

Thus the important events of ʿĪsā ʿAlī’s career determined the field of action of the Safawī dynasty, which was to last until 1736. Religious and cultural traditions and geographical necessity gave this dynasty the character of a “national” dynasty, and the long period of its existence, together with the religious isolation of their empire, contributed not a little to the coming into existence of a real Persian “nation”, that overcame the troublesome period of the xviiith century and asserted itself ever more vigorously during the xixth. The nature of the country, however, was not favourable to a rapid development in this direction. The many nomadic elements of Irānīan, Turkish and Arab origin kept much longer to their own traditions, and the disconnectedness of the various inhabited centres could not but weaken the authority of the government. Throughout Safawī rule, the kings had to reconcile with the existence of half independent governors and tribal formations, from which came the powerful nobles and courtiers. In the time of Abū Shīrāz, some Georgian nobles, relatives of the king, were in a dominant position, but on the whole it was the Kīlī-Baḵsh clans who formed at times a dangerous power in the state, while nevertheless the kings were dependent on these elements for the defence of the country. It was only during the reign of ʿAbbās I that something of a royal militia (the Shīhek-sewārī) was formed, while on the other hand the army was reinforced by European artillery. Therefore the civil and military administration of the country never acquired even such a regularity and a cohesion as is witnessed in the Ottoman Empire; the Safawīs had to suffer for instance the permanent establishment of the Portuguese in Hormuz (1507—1622) and afterwards of the English, but this did not yet conflict with the state conceptions of that time. Governmental authority could only be maintained in the interior by the utmost severity, as was practised notably by ʿAbbās I. For the same reason the frontiers of the Safawī empire in east and west were never very stable, although gradually a demarcation takes place. The eastern part of Khurāsān and the regions to the south of it, long since culturally disconnected from western Persia, never returned to the Safawīs. Balkh and Marw were under the almost unbroken domination of the Uzbek (ʿAbbās I only temporarily occupied Balkh in 1598), while Kābul and Kandahār belonged from the beginning to the empire of the Great-Mughals of India, Kandahār being only temporarily held by the Safawīs. Only Herāt was for most of the time under their control and far into the xixth century Persia had not abandoned her claim to this town. All this makes clear why eastern Iran, after the extinction of the Uzbek and the Mughal power did not return to Shīʿite Persia, but came to form at last an independent state
under the Afghan rulers. Only western Khurāsān, with the shrine of Meshhed, and Sistān remained an integral part of Sa'āfawid and consequently of modern Persia. In the west the Ottoman Turks and the Persians disputed with each other in a continual series of campaigns, interrupted by temporary peace, the large band of territory stretching from the Persian Gulf to Georgia. In the xvth century the Turks won and occupied Adharbājdān, Mesopotamia and 'Irāq. Under Abbas I most of the lost territory was recovered, but the recapture of Baghdād by Murād IV in 1638 made an end of Persian domination in the Tigris valley, while Adharbājdān and parts of Armenia and Georgia remained to Persia. In 1668 took place the first conflict with Russia through a descent of Cossacks upon Māzanlārān.

Since the beginning of Ismā'īl's career the Shi'i creed had been forcibly imposed on the settled population and a regular persecution of all Sunnite theologians had begun. This persecution was accompanied by a repression of all Şûh manifestations, whereby the new state religion took at last the aspect of a fanatical and intolerant church, whose ministers, the Shi'i divines, repressed all utterances of free thought. Browne ascribes to this development the sudden poorness of literary production in Sa'afawid Persia. In these circumstances Persia became much isolated from the surrounding Islamic countries, but on the other hand the enemies of the Ottoman power in Europe looked upon Persia as a valuable ally in their common efforts to crush that power. To this was due the forming of friendly diplomatic connections with European powers, such as Venice and Spain, who, in addition, sought to profit by commercial relations. These relations, together with the political necessity of securing their colonial establishments in India and beyond, led other European states also to take up friendly relations with the Sa'afawid court, namely the English, the Dutch and the French, after the Portuguese had been driven from the Persian Gulf. The European envoys, amongst whom the Sherley brothers are most notable during 'Abbas I's reign, were well received, and established the first real contact between Persia and European civilisation. These relations also provoked the sending of some memorable Persian embassies to Europe. The political reasons that had brought the European sea powers to the Persian Gulf prevented Persia, however, from ever becoming a maritime power; even the venture of 'Abbas I to make of the newly founded Bender 'Abbas a great maritime commercial town remained unrealized.

Most of the Sa'afawid kings had very long reigns, for which the uncommon practice of killing possible pretenders amongst the royal family was probably responsible. The most brilliant reign was that of 'Abbas I (1587–1629), who transferred his residence from Karāwin to Isfahān, which, by his buildings, became a splendid royal city. His successors profited by his work. After the middle of the xvth century Persia was passing through a peaceful period, owing mainly to the weakening of its neighbours. Conditions at this time are well known by a series of European travel accounts. The same peaceful conditions had allowed, however, the establishment at Kandahār in 1709 of a Sunni rebellious movement, which was opposed in vain by the Sa'afawid king Husain and was the beginning of the Afghan state. In 1722 the Afghan army of Mir Mahmūd conquered Isfahān, after which the Afghans were masters in Persia for about eight years. At last the Sa'afawid successors of Husain were able to liberate the country through the help of their general Nādir Kuli of the Afshar tribe who, in 1736, made himself king of Persia as Nādir Shāh. At that time he had already restored to Persia the cities in Adharbājdān and Georgia that had been taken by the Turks and likewise Rašt and Bākū, occupied by Russia. After his coronation he set out on his invasion of India and the Afghan country, but his reign had brought so little stability that, after his murder in 1747, there followed a period of general lawlessness in Persia. The Afghans regained strength, but allowed Nādir's blinded grandson Shāhshūkh to reign over Khurāsān. The fall of Nādir Shāh to establish a lasting dynasty was also due to his endeavours to abolish the Shi'i religious practices, but in this he met a determined opposition from the people and their spiritual leaders. After Nādir's assassination there was hardly any question of restoring a Sa'afawid to the throne. The real power devolved on Karim Khan Zand, who resided mostly in Shīrāz and who succeeded in uniting Persia during a benevolent reign; in his time the troubles on the 'Irākian frontier led even to the conquest of Baṣra. His death in 1779 occasioned a dispute for the throne among his descendants. Agha Muhammad Khan of the Kājār tribe round Astārābād profited from these troubles by bringing with much cunning and much cruelty the entire empire under his control. He was finally enthroned in Tehran in 1796 and was assassinated in 1797. With him began the Kājār dynasty, which reigned until 1925.

At the beginning of Afghan rule Russia had occupied Derbend and Rašt, while Turkey had invaded the country as far as Hamadān; the Afghan ruler Aṣḥāf, however, and after him Nādir Shāh succeeded in recovering the occupied territories. A second Turkish attack in 1740 was equally thrown back by Nādir. During the second half of the century Russia and Turkey were too much occupied with each other to pay attention to Persia. The political development in the north-east had eliminated direct danger from the Uzbek states, but now the lawless Turcomans north of Khurāsān had become by their raids the terror of the Persian population; Agha Muhammad Khan had inflicted serious blows upon them. With the coming of the Kājārs, however, the international situation grew much more difficult, owing to Persia's becoming involved in world-wide political struggles. Until 1814 the alliance of Persia was an object of dispute between England, whose position in India made Persian friendship a vital question, and the France of Napoléon, who schemed an invasion of India with the aid of the Russian army. In 1814 the French threat disappeared and England concluded a treaty with Persia. But the struggle with Russia for the possession of Georgia, which had begun already in 1812, soon led to military disasters and finally to the loss of all territory to the north of the Araxes by the peace treaty of Turkmānchāri (1828). From this time on begins the rivalry between Russia and England, the latter country's policy being to prevent Persia, now politically under strong Russian influence, from gaining strength. Great Britain opposed for this reason any extension of Persian territory in
Afghanistán; it prevented the capture of Herât—a cherished Persian ideal—in 1838, and, when Herât was really taken in 1856, went even so far as to declare war on Persia and to land troops in the Persian Gulf; at the peace treaty of 1857 in Paris, Persia had to abandon her claims. In the meantime Russia’s position grew ever stronger; a Russian naval base was founded in the bay of Astrakán, and by the Russian conquest of Khiva and Bukhârâ, completed by the subjugation of the Tekke Turkomans in 1858, and the acquisition of the Mârvar oasis, the Russian Empire had attained an enormous military and political ascendency over Persia, to which was added the Russian influence in northern Afghanistán and Turkish Armenia. Persia was not able to assert entirely its political freedom, but it gained for the first time well-defined frontiers; difficulties with Turkey in Trâk (massacre of Persians at Kerbelâ) had led to the fixing of the Turkish-Persian frontier in 1843 (followed by a rectification in 1913), while the eastern frontiers with Afghanistán and Balûtân were defined by the Anglo-Persian Afghan boundary commission in 1872; these measures had been mainly necessitated by the establishing of a telegraph line through Persia to India. During the long reign of Nasîr al-Dîn Shâh (1844–1890) international conditions remained stable, to which the on the whole untroubled domestic situation also contributed, but when, under his successor, conditions became less secure, owing to inner political and financial troubles, the intervention of the two great Powers became more threatening. It took the shape of the Anglo-Russian treaty of 1907, which practically divided Persia into a northern and a southern sphere of influence.

During the sixteenth century indeed the Kadjar dynasty had been able to rule Persia in the traditional way, succeeding in checking the action of the troublesome tribes and their chiefs by profiting from their eternal discord. The influence of the higher Shi'ite religious leaders, over whose nomination the government had no authority whatever, and who resided for the greater part in the religious centres of Kerbelâ and Nadjaf, was supreme among the population, although some divergent theological trends had developed, such as the Shaikh's, since the beginning of the sixteenth century. This more spiritualized sect finally paved the way for the appearance of the Báb in 1844; the Bábí movement for some years took the aspect of a religious-political rebellion, which the government had to suppress with bloody measures. Since then Bábism and afterwards the movement of the Bahâ'ís to which it gave rise, disappeared from the surface, but remained all the time a living factor in the national-religious life of the Persians. This contributed not a little to the awakening of a more independent political attitude among the more educated classes of the population, who generally found the higher divines a hindrance in their increasing criticism of government actions. The pan-Islamic propaganda of Djamâl al-Dîn al-Afghânî also furnished elements to the awakening public opinion. Thus the bad inner conditions that had developed under Muzzafar al-Dîn Shâh and the consequences of the foreign loans contracted by that ruler brought about a popular action that led to the granting of a constitution and the opening of the first National Assembly (Majdilis) in October 1906. The succeeding Shâh's reactionary policy ended with his dethronement in 1909, but the troubles connected with the accompanying revolutionary movement gave opportunity to the Russians to occupy Tabrîz and Ìâzvin, while at the same time the Persian government was obliged to use foreigners in different branches of its administration (gendarmerie, finances, customs). During the world war Persia was officially neutral, but the German scheme of attacking Great Britain in India gave rise to an at first successful German propaganda in Southern Persia in 1915. On the other hand Russian troops were landed at Enzeli and these opposed the Turkish advance into Persia, which had begun in 1916 by the taking of Kirmanshâh. In this same year began the British counter-action in Southern Persia by the formation of the South Persian Rifles. When by the Russian revolution the action of the Russian troops was crippled, British troops landed in the Gulf and succeeded in checking the Turkish advance in the western frontier region and inpressing, together with Russian troops, the local opposition of the Jangalis in Gilân. Finally in 1918 the British had great difficulty in opposing a similar national rising in Shirâz, headed by the Kadîکî tribe.

Persia was evacuated after the war and became from the outset a member of the League of Nations. A treaty with Great Britain in 1921 re-established British influence, but the coup d'état of that same year suddenly changed Persia's internal and external policy. Saiyid Diyi' al-Dîn and Rúh Kháñ assuming forcibly the leadership of the government, Rúh Kháñ became minister of war and proved to be the strong man needed. His chief achievement during the following years was the subjugation and disarmament of the turbulent tribes, and the forming of a reliable army of 40,000 men. In 1923 he became Prime Minister, Ahmad Shâh Kadîjâr left the country and was deposed in October 1925 by the Majdilis, whereby the Kadjar dynasty was brought to an end. At the end of the same year the scruples of many sections of the population against a new dynasty were dispelled and the dictator became king of Persia under the name Pahlâvi; he was crowned on April 25, 1926.

Persia's internal situation has been much improved by the action of the present king, while the exploitation of the oil wells in 'Arabistân has secured the government a profit that has not a little contributed to its financial liberty of action. The finances have been moreover controlled by an American adviser since 1923 and since 1928 by a German adviser. As to the currents of spiritual culture, the intellectual classes are abandoning the traditional religious views and this secular movement is favoured by the government; in connection therewith the influence of the divines is declining. On the other hand, the interest awakened towards the end of the sixteenth century for pre-Islamic Persia has given a new direction to national sentiment, expressing itself amongst others in literary occupation with ancient Iranian subjects and a great interest in excavations, the results of which are no longer allowed to leave the country.

The present ethnographical structure of Persia is quite different from what it was before the Arab conquest, owing to the repeated invasion of foreign elements during the thirteen centuries of its Islamic history. The combined existence of a sedentary and a nomadic or semi-nomadic population, however, is a feature proper to the geographical conditions of the country and has continued up to the present
The general tendency of the nomadic elements to become settled, which can be observed all the time, was repeatedly counteracted by fresh invasions of nomads, chiefly from the north-east. At present the proportion of the nomads to the settled population is estimated to be 20%. The development of urban settlement is a feature proper to Islamic times; it began with the expansion of the population outside the walls into the 
*rabaqs* (cf. al-Baladhuri, p. 324). From that time on the Persian name for a town became *zahr*, which word had designated originally an entire region or country. The Arabs often placed their garrisons in less important places, which subsequently overshadowed the ancient centres. In the course of history many towns were devastated, but the generally rebuilt or near the spot of the ancient ruins. Since the later Middle Ages great Islamic towns like al-Raiy and the towns of Kirmān have disappeared, to be replaced by formerly less significant places; among the latter are Teherān, Tabriz and Mašhad, at present the largest towns of Persia. The townspeople, composed of craftsmen and merchants, have been in history the passive and suffering element, together with the rural population of the villages clustered together in the oases. This settled population was generally regarded with scorn by the tribesmen, who were the aristocrats, and from whom until modern times were recruited the ruling classes and the high officials. From the tribes have also been recruited the best soldiers in the armies.

At present the largest towns in Persia are Teherān (210,000 inh.), Tabriz (200,000), Isfahān (90,000) and Mašhad (70,000). The towns population has been constituted in the course of centuries from the very different invading ethnic elements. They now constitute the most stable element in Persia and speak, with local dialectic variations, the New-Persian language, which runs more or less parallel with the written New Persian. Only in Adhārbaījān Adhārī Turkish is the language of the townsfolk and the peasants.

The rural population of the villages around the towns have kept many particular local features of their own and amongst them many remnants of other Iranian dialectal groups have been preserved, a fact which is already noted in ancient Islamic historical and geographical sources. In north-eastern Persia the different dialectal groups of these peasants are called Tāt, while in southern and eastern Persia they are often designated as Tādžīk.

Among the rural population, however, and in a less degree amongst the townsfolk, there are many elements that are conscious of their allegiance to tribal formations, mostly so in regions where the population of the neighbourhood still possesses the tribal organisation. These settled members of the tribes are often called *zahr-nishīn, dīn-nishīn* and *zāhrā-nishīn*.

As to the tribes themselves, called *tīyār* in Persia, they nearly always occupy a definite territory nowadays, on which many members of the tribe have become entirely settled, while the others are no more than semi-nomads who, in summer, go with their cattle to the higher mountain regions. Nomadism is not extinct; however, and anywhere in the Persian steppes the black tents of nomads may be seen occasionally.

The origin of the tribes is an extremely complicated problem. In almost every region they have resulted from a mixture of pre-Iranian, Iranīan, Arabic and Turkish-Mongolic elements. In northern Persia the Turkish element is no doubt the dominating, as judged by the language; here the redoubtable mountaineers of the Dailam and the Dīj, who so long withstood Islamization and had still in the Middle Ages a language of their own, have mostly been turcized, in so far as they have not been assimilated by the Iranian settled population. In the mountain region stretching from Adhārbaījān to Fāris and Kirmān, the Iranian element is largely prevalent, again so far as we can judge from the languages spoken there. The local traditions circulating among those tribes, and about those tribes among the neighbouring populations, have often preserved the memory of extensive migrations that betray a partial Turkish or Arab origin. Some groups are even known as Turkish, although they speak Iranian dialects. Other tribes are still conscious of their Arab origin, although they no doubt have already been Iranianized for centuries; only a few tribes in Kūhistan and Khurāsān have preserved the Arabic language. But those local traditions, which never go back more than two hundred years at most, often do not square with what we may regard as established facts from historical sources. It is true, however, that even in recent historical times more or less important migrations of Iranian tribes have taken place. The movement of the Balūcīs from the North-West to Kirmān and afterwards to modern Balūcīstān had already begun in the early Middle Ages. In addition, reasons of military policy induced several rulers of the xviith and xith centuries to transplant some Kurdish tribes to the North-East; best known is the settlement of Kurdish tribes by Nādir Shāh on the Khurāsān frontiers around Kūcān and in Māzandarān, where they have still preserved their own features and their language. The only possible description of the tribes in Persia has therefore to be based on their geographical distribution.

With the mediaeval Arab geographers all the tribes in al-Dījābīl and Fāris are included under the designation of Akrād, i.e. Kurds, but this general term has hardly any ethnographical value. At the present day the name of Kūrd is generally restricted to the tribes inhabiting the environs of Kirmānshāh and further to the north in western Adhārbaījān. South of Kirmānshāh begin the Lur tribes, to the west of whom, in the mountains between Persien, Ḥārān and Arābīstān live the Bāshṭiyārīs. The northern mountains of Fāris are occupied by the Kūhgelu and the Māmāsīn tribes. South of these, round Shīrāz, live the Kashkāy, who still speak a Turkish dialect. In Ārābīstān, where in the Middle Ages the local khāri language was not yet extinct, the Arah element of the settled population is strong; the Arab tribes here belong to the Ka'b division and consist for the greater part of Arabs transferred here from Šāhī under 'Abbās I. The tribes on the Gulf fringe, in Persian Bāltīstān, and in Sīstān are Bālūcīs who, since their immigration, have absorbed such inconsiderable local elements as the Kuft, known from medieval sources. Further to the north there are Arabs in Kūhīstān, notably around Kāin. There is further a not unimportant part of the population, who claim descent from the Prophet, and consequently an Arabic origin; these sayids abound especially in Māzandarān, where there were 'Allī dynasties at an early period. In Persian Khurāsān there are also Arabs,
a few Afghan elements and the already mentioned Kurds on the frontier. Finally there live all along the northern frontier of Khuzestan Turkish tribes, some of whom have been there since the later Middle Ages, such as the Afshars and the Kajbars (found Arambar), while the more recent element is composed of Turcomans.

Other ethnic elements are the Armenians in Persian Armenia in Ardabîrdjan, and the large Armenian colony in the suburb Qafla of Isfahan transplanted there by 'Abbâs I. The Nestorian Christians east of the Urmia Lake have nearly disappeared as a result of the war. In 'Arabistan there are still remnants of Mandaeans, and finally there are reported to be about 40,000 Jews in Persia, who for the greater part are probably descendants of the Jews who lived already in Persia in the beginning of the Islamic period and among whom notably the Jewish colony of al-Yahidiya at Isfahan was well-known.

The great mass of the inhabitants of Persia, including in the first place the townspeople and the settled population, but also many members of the tribes of ancient Turkish origin, belong to the 'Imami Shī'a (the Safavids, 'Abbâsids; 'Abbâs I.), and follow the nawâkhîb called 'Ijâ'ârî. Their number is estimated at little less than 7 million. About a million of them are the so-called Akhbarîyûn, living in Hamadân and al-Ahwâz and environs, who recognize only the authority of the traditions of the Prophet and the Imams. Other Shī'ite sects are the Shâkiyâ (about 250,000) and the Nuktiwyâ (about 100,000 in Gilân, of Zaidite origin). The Babis and the far more numerous Bahâ is are represented in all towns and reach together about the number of 700,000. The extreme Shī'ite called 'Ali 'Ihârî or Ahî 'Hâkî are found among the Kurds round Kirmânshâh, among the Lurs, and partly in Mâzandarân and Ïar, and in the number of 500,000. Half that number is given for the adherents of the Ismâ'îlî Hurūfî sect, spread all over Persia. There are also some Yazdîs on Persian soil near Mâzâ, Nûnî (Shâkiyê) Muhammedans are found only among the Kurds and the Arabs, the Turcomans and the Afghans, these latter being (l. a. jânsîtes (about 85,000). Finally there are still remnants of the Zoroastrian creed at Yazd, Kirmân, 'Tehrân, Shûrî and Kâshân.

The entire population of Persia is given as 12,000,000. This last figure is given on the authority of the last edition of the Encyclopædia Britannica; the other figures given are derived from the Annuaire du Monde Musulman, 3rd edition 1929.

Bibliography: In view of the general character of the above article it is sufficient to refer for all detailed bibliographical information to the historical, geographical and ethnographical articles dealing with Persia, and to the general bibliographical works on Persia: M. Schwab, Bibliographie de la Perse, Paris 1875; and A. T. Wilson, A Bibliography of Persia, Oxford 1930. (J. H. KRAMERS)

II. LANGUAGE AND DIACRITICS.

Introduction. The Persian language is one member, now the most widely extended member, of a group of languages which are spoken over a region stretching from the River Euphrates to the East of the Hindu Kush, with branches in the Caucasus and in the Masandam Peninsula, 'Oman. It is convenient to group these languages, which in turn form one group within the Indo-European languages, under the name 'Iranian, a designation from Iran, the modern national name of the Persians, as it was also earlier, in Sassanian (arzân, irân), and Achaemenid times (arâb-), and which is used also by the Ossetes (in, ira, iron). Formerly these Iranian dialects were more widely extended, to the north of the Caspian Sea, from Chorasmania (Khâvârîm) to the west of the Black Sea (see M. Vasmer, Untersuchungen über die ältesten Wohnsitze der Slaven, I., Die Iranier in Südrußland, 1923), and also to Sogdian colonies in Northern Mongolia (see O. Hansen, Zur segelsichen Inschrift auf dem dreisprachigen Denkmal von Karasagun, in J. S. F. O., xxiv., 1930).

Earliest sources. 1. Sakâ. Three divisions of the Sakâ are referred to in the Achaemenid inscriptions: Sakâ hâmuwargâ, Sakâ tivrâvââ, Sakâ iva/([p]irâ)vâra(vâ) (on the tomb inscriptions published in J. R. A. S., 1932, p. 374: Sakâ para(dy)â). They are the Sakâ of Herodotos, and the Sace of the Latin writers. At a later period they are attested in Sakastân (mod. Sistan), and in the Saka kings of India. Names of Sakas are preserved in Greek, and in the Middle Saka dialect is now largely known.

2. Chorasmania and Sogdiana. Both these countries are named in the Avesta (xorârîm, sogda-) and the Old Persian inscriptions ([k]horârân-mî, sogâ), but the dialects are known only in later times.

3. Media. The Medes (Madaî, Mâdam) appear first 355 b.c. in the inscriptions of Shulmanu-sharidu III. (see F. Hommel, Ethnologie und Geographie des alten Orient, 1926, p. 194). Names and some words are known in Greek (Herodotos quotes σαγξα 'bitch'), and there are loanwords in Old Persian (vispa/nām, cf. the da-na-ik of the Elamite version).

5. The Avesta. To avoid too definite implications, it is usual to employ the designation 'language of the Avesta' (Pahl. 'pêk, Syr. 'bîg, Pzand avawstra, avâstâ, Arab. abâstâ, abâst, isâstâ, basist) for the language preserved in the oldest Zoroastrian texts. The considerable extent of these texts makes them the most important witness to the Old Iranian stage of the dialects, although they have been preserved in a late orthography). In spite however of continued discussion (see F. Tedesco, in M. O., xxv. 255 sqq.; H. Reichelt, Iranisch, p. 29, in Geschichte der indogermanischen Sprachwissenschaft, ii., 1927; G. Morgenstierne, 1.) For convenience the transcription of the G. J. Ph. is here followed, but a revised orthography, more conform to that of the Old Persian texts and the Greek and Akkadian transcriptions, would represent the Old Iranian form more satisfactorily (as e.g. aâyâ for aîyâh).
Report on a Linguistic Mission to Afghanistan, 1926, p. 28 sqq.; J. Markwart, Das erste Kapitel der Gāthā Ustavāti, 1930, it has proved impossible to point definitely to the provenance of this dialect (or possibly two dialects). The legendary matter of the Avesta points to Chosrau as the earliest home of the Iranians (E. Benveniste, L’Éravévé et l’origine légendaire des Iraniens, in B. S. O. S., 1934, VII. 265 sqq.), while the Zoroastrian traditions became closely associated with the region of the Hātamīn (Hilmand) river (E. Herzfeld, Archäologische Mitteilungen aus Iran, I.–II., 1929–1930; A. Christensen, Les Kayanides, 1932, p. 5).

The linguistic development within the Avesta with the all the other known dialects suffices to isolate Avestan. This may be briefly indicated. In Avestan sp. (afrav. ‘horse’) corresponds to Old Persian s (ara. ‘horse’), Saka š (afrav. ‘horse’), and Wakhši (yay ‘horse’). Old Persian, Saka, and Wakhši are therefore separated from Avestan from an early period. All other dialects have sp, but other tests suffice to exclude them. Avestan hr (r) < r, b < δ, m < k without ṣ, s < s, sm < s, exclude Sogdian (mowrt ‘dead’, ṣgr. ‘door’, ṣvān–antelope), Yagnobi (ārt ‘four’, ḍīrān ‘door’) Mundji (tūrān ‘door’) Yāzgūlāmi (derv. ‘door’), North-Western dialect forms (Turfan texts atūrī ‘righteous’, Pahlavi, New Persian gara ‘deer’, New Persian āšım ‘fuel’, Armenian loanword mazed ‘worshipping Mazda’). Here again Pashō, Ishkāsmi, Parāēi and Ormuri agree with Avestan for ḍ and the evidence of ṛ is indecisive (Pashō may ‘dead’, Ishkāsmi mādak ‘man’, Parāēi may ‘died’, Ormuri mādak ‘died’). Probably however Pashō is excluded by ṛ > s (tavita ‘hot’, Avestan ṛtē), and by ṛ (Pashō wrīl ‘rice’). Ishkāsmi by ṛ > r (tēr ‘seven’, Avestan ṛhāpta) and by ṛ > s (pārud ‘yesterday’, ṛūd ‘cushion’); Ormuri by ṛ > ṛ (rīm ‘rice’); Parāēi does not permit, in the absence of examples of ṛ and s, and in the development ṛ > r (rīr ‘seven’), any decision. The negative conclusion is so far of interest that connection with the North-Western dialects is excluded.

6. It is possible that other dialects developed in the cities of Carmania (Strabo, xv. 2, 14 speaks of τον διαλέκτον τον Κερμιανότα, Arachosia, Aria and Margiana, but nothing survives.

Relationship with Indo-Aryan and Kāfīri dialects. The Old Iranian dialects stand in close connection with the Indo-Aryan languages of India, which are known in their oldest form (apart from the words of uncertain position within Indo-Iranian history preserved in the Mutani and Hitite documents, see N. D. Mironov, Aryan Vestiges in the Near East of the Second Millennium B. C., in Acta Orient., 1933; J. Friedrich, Realtaikon der Assyriologen, 1929, i. 144 sqq.; A. Christensen, Die Frühin., 1933, p. 209 sqq.) in the Vedas, and with the modern Kāfīri dialects of Kāfīristān. The vocabulary of Indo-Aryan and Old Indo-Iranian is largely identical (āp. ‘water’, vyāk. ‘speak’, martijke-‘man’, kard. ‘do’, ā ‘up to’, puri ‘around’, irwan ‘thou’, ka ‘who’), so also is the morphology of verb and noun. Differences do however exist in vocabulary (Iranian yār ‘year’, gām-b. ‘speak’, gād. ‘pray for’, sanj. ‘to snow’), and in morphology (Iranian ša 2 sing. pret. middle, as Greek -i). In the phonology there are two groups which have diverged in the oldest texts. To Sanskrit š ch j h (taya. ‘hundred’, cha. ‘to appear’, jān. ‘to know’, deh. ‘to form’) correspond Avestan š z (satu. ‘sand’, zan. ‘do’), and Old Persian š d (sha. ‘year’, šand. ‘to appear’, daw. ‘know’, dida ‘fortress’); Sanskrit g gh, d ḍh, b bk, to Avestan, Old Persian g d b; Sanskrit kha h ph to Avestan, Old Persian x j f; Sanskrit ed edh, yd ydh, yd ydh to Avestan ud, uḍ, uṣ; Sanskrit ti dth to Avestan rd.

The Kāfīri dialects of Kāt, Askūn, Prasun, Wāgil, are known only in a modern form from the sixteenth century, and adequately only this century (see Morgenstierne, Report on a Linguistic Mission to Afghanistan, 1926, p. 39 sqq.; do., Report on a Linguistic Mission to North-Western India, 1932, p. 46 sqq.; do., The Language of the Askūn Kafers, in N. T. S., II. 1932–1933). The evidence of the Kāfīri dialects is important for the Indo-Iranian period, in particular for the history of the sounds represented by the Kāfīri ts, ḍ, dz; the corresponding to the Avestan s, ḍ, dz; Old Persian š d, Sanskrit ś ḍ j ḍh. Thus Kāt has dat. ‘ten’, tawu ‘autumn’, ṛṣ, wahu ‘I’.

Periods of the Iranian dialects. The extant documents, of widely different character, and in many scripts, are sufficient to allow the distinction of three periods: Old, Middle and New Iranian. In the west of the Persian empire, the change to the Middle Iranian stage (marked by the acquisition of a large part of the old inflexion) is clearly defined already in the later Achemenian inscriptions.

Old Iranian. The Old Iranian stage of development is known in the Old Persian inscriptions, the Avestan texts and the names of Medians and Sakas. The two dialects Old Persian and Avestan, in spite of the restricted number of texts, and hence little known vocabulary, agree closely, but are clearly distinct. In phonology Old Iranian has t p k unchanged before and between vowels (tēk. ‘to run’, tap. ‘to be hot’, pē. ‘to fly’). In morphology, Old Persian has š d, Sanskrit ś ḍ j ḍh. Thus Kāt has dat. ‘ten’, tawu ‘autumn’, ṛṣ, wahu ‘I’.

Old Iranian is a stage characterized by the development of vocalism and morphology, with great facility of composition and derivation. Nominal bases terminate in consonants, or in vowels and diphthongs: a ā āu āu a i i u u u un. Alternation of vowels (apophony, Ablaut) rests upon the older system attested also in the other Indo-European languages. The inflexion can be seen in Avestan with base –a (wholly falling forms of one noun the following are quoted: ahūra. ā. ‘lord’, aspa. ‘horse’, aha. ‘bad’, zāsta‘hand’, ās. ‘party’, mara. ‘man’): singular, nom. ahūra, acc. ahūrā, gen. ahūrā, dat. ahūrā, abl. ahūrā, gen. ahūrā, loc. ahūrā, aspa. ‘horse’, voc. aspa, dat. aspa, abl. aspa, gen. aspa, loc. aspa. The verbal system is elaborately developed, but the extant texts do not provide all the forms. There are three voices: active, middle and passive; six moods: indicative, conjunctive, injunctive, optative, imperative, infinitive, with tenses present, preterite (imperfect and aorist), perfect, pluperfect, future,
with personal terminations in singular, dual and plural, and in addition participles present, aorist, future, and perfect. These cannot all be illustrated here. The following Avestan forms may be quoted: 

**baraiti** 'he bears', *vazaiti* 'he worships', conj. pres. *barat* 'he will bear', opt. pres. *hyat* 'he shall be', opt. perf. *japany* 'I would have come', imperative *bara* 'bear', *baratu* 'let him bear'; *id* 'go', *korxiti* 'make'. The infinitive has no single form, but is expressed by oblique cases of verbal nouns of action: *avatasti* 'fall down'; *vilfizdiri* 'to choose', *apagjarziti* 'remove'. There is an aorist passive (*vudti* 'was spoken', *jaimi* 'was struck'), confined to the 3rd sing. The personal terminations differ in pres., pret., perf. and imperative. In the present are found: *barati*, *bariti*, *baraiti*. dual 3 *barati* plur. *baritahati*; *zayad*; *zaraniti*; in the imperfect: *baram*, *fard* 'thou canest', *baraj*, dual 1 *fardu* 'we two live', 3 *fazati* 'they two came', plur. *baruma*, *jatati*, *baram*. The present base was formed either with or without suffix, or by reduplication: asti 'he is', *dadati* 'he gives', *barati* 'he becomes', *korxanti* 'they remove', *nearanti* 'I bless', *korxasti* 'makes', *irxanti* 'leaves', *hinlanti* 'pours out', *jiaxanti* 'I pray for', *tapxanti* 'heats'. The aorist was formed direct to the base (adit 'he created') or with the suffix -i (dardit 'he held'), the perfect was either reduplicated (*tavata* 'has spoken') or not (*vaditi 'has known') with special terminations, the pluperfect was expressed by the use of preterite endings to the perfect base (*tavata* 'had said'). The active present and future participle was formed by the -ant suffix, and the passive pretetite participle usually by the suffix -ta. Of these present bases and of these and other participles examples are preserved in New Persian. The comparison of adjectives could be expressed in two ways (suffixes *yad-, yad-*, *tara-, tama*): *vahu* 'good', *vahyeh*, *vahita*; *ako- 'bad', *akatare*, *haztama* 'best'. Three morphemes (see Hubatsch, fem., m. f.) are expressed in nouns and adjectives. Of the many suffixes may be named the noun of agent in -tar-, noun of action in -di-, abstract noun in -tah-. Compounds are of many forms: *asparita* 'horses and men', *vireyam* 'slewing men', *abyasit* 'lord of a country', *penxunbardi* 'possessing many brothers', *munxam* 'up to the knee', *daryarzatara* 'holding a chariot'. Of this whole elaborate Old Iranian system but small part has survived to the present day.

The Sogdian verbal system has present (durative past present expressed by adding *šōn*, *šon*, and future by adding *kmn*, *kmn*) imperfect (*nōyō* 'thou hearest'), preterite (*parō* = 'they bore'), durative preterite with *šōn* (varṇat asthewa—*they went*), conj. present (*vamān* 'I will do'), perfect (*gōh* = 'you have given'), *gāṭim* 'I have come', optative (*gāpar* I. sing.), imperative (*ḥōr*, *śawm*), infinitive (*nīn̄ak* 'to pull', *xswart* 'to eat'), participles active present -*dān*, -*āk*, -*ād*, passive preterite -*t* (*ḥārt* 'given'), adjectival form -tak (*aṃswtak* 'prepared'). The augment a is prominent, see H. Reicheht, *Beiträge zur sogdisch-iranischen Grammatik*, 1931. In Saka there is present (*dītē* 'he sees'), pres. injunctive (*kaḥtā* 'he will know'), pres. conj. (*kāmāt* 'he will be'), optative (*yanyī* 'he would do'), imperf. (*tō* 'go'), the preterite is expressed by inflected participle (*vijī*, fem. *vita* 'was'), plural *vita*, fem. *vīta* 'were'), compound tenses (*tātī vijī* 'he was seated'), participles (*mūhāndu* 'resembling'), *śāna* 'lying down', *jāta* 'slain', *kvāna* 'to be spoken'). The noun is fully inflected in Saka in three genders, and in Sogdian traces of nominal inflection are preserved (see P. Tedesco, in *Z.f.I.,* iv. 94 sqq.; E. Benveniste, *Gram.,* 1956, pp. 77). Since the Indian Brāhmī script is used in writing Saka, verbs as well as consonants are fully known.

Chorasmian is still little investigated. Apart from words quoted in Arabic writers, particularly the calendrical terms to be found in al-Birrānī (*Chronology*, ed. Sachau, p. 47, 173, 192), material has been collected by Ahmet Zeki Valhali (*Hdı̇n̄°msic Sätze in einem arabischen Faks-Feile, in Islamica*, iii., 1923). Here *mānix* is 'milk', cf. Sogdian *aixix* 'milk'; *aixix* 'deep', cf. Avestan *jafrā* 'deep'; *kān* 'nose', cf. Sogdian *nīx* 'nose'.

An exhaustive study is still awaited.

Middle Osotic is known in names (see W. Miller, *Osettisch: Etyudy*, iii. 39 sqq.; M. Vamoser, loc. cit.) such as *Buropot*, *Buropot*, *Burakhat*, and in loanwords in Hungarian (circa 800 A.D.) such as *gont* 'care', *kusdak*, *gazdag* 'rich', *kara* 'sword', *tēsē* 'drink' (see H. Skold, *Die ossetischen Lehnwörter im Ungarischen*, 1925). They suffice to indicate the phonology of this period.

In the West two Middle Iranian dialects are known, which can be assigned to North and South respectively. The southern dialect is closely related to literary New Persian. Phonology and vocabulary distinguish these two dialects sharply (see P. Tedesco, *Dialektologie der nordostiranischen Turfanfragmente, in M.O.,* xv. 1923; W. Lenz, in *Z.f.I.,* iv. 251 sqq.): in the North *aman* 'woman', *dūn* 'ten', *kē* 'three', *tēfār* 'four', *bīrī* 'second', *bīrā* 'new', *kūn* 'make' coincide with the South: *cēn*, *dasm* *svār*, *sahr*, *dūl*, *bīl*, *kun.* Other dialect influence can be detected, as e.g. in the change *wē* -to *gē* (cf. New Persian *ganak* 'sin'). Nominal inflection is absent from the Manichean texts. It is possible that the frequent final *y* of the Sāsānian inscriptions represents the remains of the old oblique case in *y*. The *dān* ending (in Old Persian *dānān* is gen. plur.) appears as nom. plur. *ardvān* 'the righteous'). The verbal system of the southern dialect agrees largely with that of early Persian of the Muslim texts (see Henning, *Das Verb der Mittelpersischen der Turfan texte, in Z.f.I.,* ix., 1933). The Old Iranian present bases

are represented by *hī*- 'leave', *sīy*- 'live', *parvaw*-

*ghy*, *sān*- 'strike', *brāz*- 'shine', *vind*- 'find',

*dān*- 'know', *kun*- 'make', *īn*- 'gather', *sāy*- 'bring forth'. The trans. preterite is expressed by the participle in *t* in passive sense: *nīn*āmāh kēn 'and you have clothed me', but the form *kīn bānd* 'they have done' (as in New Persian *kānd*') is found. A passive is expressed by *yakh*- *istāyāh* is 'raised'. Beside the present indicative with the endings -*dān*, -*ēt* (*ēt*), -*ēm* (and -*om*), -*ēd* (and -*and*), a full present conj. is attested with the endings -*dān*, -*āy*, -*ād*, -*ām*, -*ād*.

An optative 3rd sing. in -ēt occurs. The infinitive is in -ēn, the present participles in -*dān*, and (adjectival) -anāy. The vocabulary has many words lost to New Persian lexicography.

New Irānian. The third period may be dated from the introduction of a new orthography by the writers in Arabic. In the early Arabic books many Irānian words and names, Persian, Sogdian and Chorasmian, are recorded, stripped of the old historical spelling.

The Arabic alphabet was long insufficient to represent the Irānian sounds, while certain signs were superfluous (cf. گ گ گ). Hence some symbols had double employment: چ چ چ چ چ چ. In final position, the guttural (which was written, e.g. in Pahlavi *kīk* 'house', Turfan texts *yag* 'house', and has moreover survived in some New Irānian dialects, Kumzāri hūmāy 'fuel', as in Turfan texts *yng* 'fuel', Balōkī W. hāmāg, E. hāmāy 'raw') was indicated by *y* or *b* (*sāzn* *sāzn* *sāzn* *sāzn* and medially by *y* or *b* (*bīqgān* *bīqgān* *bīqgān* *bīqgān*). To indicate vowels a new system was adopted in accord with Arabic usage. The older Aramaic system did not distinguish the quantities of *t* and (only partially of *d*), nor the qualities of *y* *a:* *Alif,* *y,* *s* served to express *d* *t* *t* *t.* But in the Arabic script *alif,* *r* *s* served medi ally for *ā* (sometimes *w*), *l* *b* (the Arabic diphthongs *ai,* *au*).

New Persian, which is closely connected to the colloquial language, deviating widely from the literary norm, of the western cities, and the Tādžiki of the eastern Irānian region, Afghānistān, the Pāmirs, Turkistān (see the references in W. Lentz, *Pamir-Dialekte,* 1. 29 sqq.), is in strict accord with the language of the Old Persian inscriptions (Old Persian *musa* 'son', *dīn* 'know', New Persian *pūz,* *dūn*), and the southern dialect of the Sāsānian inscriptions and the Manichean texts, but from its earliest monuments after the introduction of ʿĪslām it appears as a dialect largely mixed with forms of other dialects. The mixture had been brought about already in Sāsānian times. As successors of the Parthians whose dialect was of northern type the Sāsānians took over part of the official vocabulary (e.g. *sahr* 'country', *tāh-pāhr* 'king's son') as proper name). Forms of both dialects occur in the Zoroastrian books and among the loanwords in Armenian. A few words entered from the eastern dialects (*fajfār* "divine son" as title of the Chinese emperor). Hence New Persian has two forms side by side: *bāz,* *bīj,* *bīz* 'tribute', *dūn,* *fardān* 'wise', *zamī,* *zamīn,* *dāmīk* 'earth'. In the vocabulary of New Persian, the Irānian verbs have been greatly reduced in number. Verbs which are found still
in use in other dialects have disappeared or survive only with preverbs or in nominal derivatives. Such is the case with an- 'breathe', ruu- 'speak' (in jian 'say', warn, morat- 'scream', darb- 'scream', darb- 'scream', sew (in darz 'stream', darz 'tailor', dil 'enclosure'), nor- 'send', nun- 'lead', yad- 'lead', dow- 'bind', build), vind- 'find', barz- 'boil', saidh- 'throw', shoot, gund- 'dress', daz- 'thorn', mon- 'put on', bar 'weep', ar- 'grind', gow- 'come upon', fond- 'tied', saidh 'make wet', suz- 'pull out', kaf- 'fall' (cf. kukan 'old', Turfan Texts kofawon, ti- 'see', snag- 'snow', nan- 'perish' in gunah 'sin'), tirp- 'steal', har- 'go', tard- 'split' (in istaidan 'split', yaz- 'Old Persian tur- 'take away' (in zyan 'loss'), say 'to wind'. Nominal forms have also been lost: Farsi dialect of Badingen pah 'small cattle', Ossetic sel 'bridge', Balouch zer 'house', Kiz 'milk', Pashto 'known'.

These and these are not represented in New Persian. Arabic has continued encroaching upon the vocabulary. The Iranian character of New Persian is however still easily recognised in its morphology (plur. of nouns -an, -an; pronouns man, tu, t, m, thu, kih, teh, an, in; verbal forms, pres. tense kunam, kunad, kunum, kunand, pret. kard, the verb substantive am, i, ast, and.).

New Iranian dialects have been preserved by their isolation, although except Ossetic and Kumzai by reason of their position, they are everywhere yielding to the prestige of New Persian. Recent research has brought knowledge of most of the existing Iranian dialects. Isolated places may, as perhaps in the Khoti Table region, still conceal unknown dialects, elsewhere and especially in the Farsm iran has been largely increased. These dialects have so widely diverged from Old Iranian that the whole complex development cannot be indicated here. It must suffice to point out in the various groups certain developments in phonology and morphology.

Phonology. The developments of Old Iranian u, he, die, z, s, d, j, v, b, may be here selected to illustrate the divergence.

1. Ossetic (in two dialects, Digoron and Iron, in Ossetia in the Caucasus): (Digoron) nad 'storm', nadvag 'self', dazh 'door', zarin 'heart', zoun 'dog', du 'three hundred', radnng 'window', decatkar 'open-eyed', mad 'dead', arat 'three', fort 'son'.

2. Vaghohi (in the Vaghohi valley between the Zanafsh and Hajj ranges): set 'willow', suh 'wind', up 'self', shi 'door', bizam 'to know', pas 'to cook', zarim 'I live', arat 'flour', trai 'three', pula 'son'.

3. Shughun (in the Pamirs): war 'willow', oxar 'to eat', davd (Davrgam daw, Oroshoi 'daw'), wadzin 'to know', sam ' I', pah 'to cook', ed 'knife', pala 'son'.

4. Ishkohni (in the Pamirs, closely with Sangleh): sem 'to see', sar 'to eat', war 'door', pran 'to know', sbah (Sangleh bahr) 'brother', sonj 'woman', kef 'knife', raf 'three'.

5. Wakh (in Wakh, in the Pamirs): winun 'I see', bu 'mother-in-law', far 'door', vil 'two', sas ' I', san 'brother', selvan 'I cook', sitzn 'I milk', dare 'now', mor 'dead', vil 'flour', trai 'three', pot 'son'.

6. Mandj (in Mandjan, in the Pamirs, related to Vudgh): siv un 'I see', wa 'willow', crd shan 'I eat', xob 'mother-in-law', inow 'door', siv 'to know', siv 'to sow', as ifren 'I strike', kuy 'knife', fir 'three', far 'son'. A development peculiar to Mandji (and Vudgha) is that of s to s': mon likam 'I saw'. Initially and mediially replaces d: bpat 'daughter', kld 'when'.

7. Pashti (in several dialects, with a more isolated dialect Wanzo): siva 'willow', wins 'the sees', siva 'sweet', sivat 'mother-in-law', dar 'door', siv 'I', zar 'heart', plar 'father', rizw 'day', zon 'life', sava 'knife', mom 'dead', daz 'three', siv 'fire'.

8. Ormuri (in two dialects, of Logar and Kaniyagah, Afghanistai): yor 'to rain', raw 'self', bar 'door', koi 'other', as 'I', sii 'heart', gai 'I', sii 'father', ron 'day', siv 'to strike', koli 'knife', maf 'tied'.

10. Balochi (in several dialects: the following forms are from the western dialect): gur 'wind', gosan 'to choose', saqag 'to eat', swat 'self', sazu 'son-in-law', sarh 'heart', brai 'brother', ron 'day', palag 'to cook', jinag 'to strike', mora 'dead', son 'three', siv 'fire'.

12. Yazdi (from material written down in Yazd, at the dictation of a Zardush in 1932): me vizin 'I see', vod 'willow', me wax 'I eat', be 'other', beil 'again', me sone 'I know', sode 'white', ron 'day', me vishin 'I speak', sefen 'needle', jenin 'women', e hewstring, membari 'I bore'.

13. Nain (closely connected with Anarak and Yazdi): mbi sain 'I see', xarag 'to eat', xar 'other', mbi sain 'I know', vod 'wind', saz 'hundred', mi sani 'I say', mi sazi 'I burn', bu 'borne', siv 'dirt' he had, par 'son'.

14. Natanzi (closely with the dialects of Yaran and Farizand): vod 'willow', xayon 'I see', xayon 'I eat', bar 'door', bu 'other', zonon 'I know', vod 'wind', xayon 'I say', siv 'woman', b heard 'I bore', kez 'knife', par 'son'.

15. Suri (from material collected in Isfahun and Soh in 1932): airun 'the sees', buqen 'he has eaten', ebi 'other', sam 'he knows', ebit 'white', avan 'he says', ege 'they cook', je 'woman', b ode 'strike', ait 'flour', klawed 'he had done'.

16. Khumsari: bes 'zain 'I see him', utsun 'I eat', bar 'door', am zain 'I know', dig 'saw', bir 'brother', idoven 'I say', izacio 'I burn', etsim 'theay struck', wick 'man', bimbari 'I brought'.

17. Gazi (near Isfahun): shini 'the sees', xirin 'he eats', falla, ebi 'other', zaine 'he knows', wo 'white', hersa 'arrived', rie 'he pours', siwe 'he burns', peine 'he cooks', saudu 'alive', re 'gum', bizen 'he knocked', dyrde 'he had', par 'son'.

19. Simnāt (in North Persia, east of Tīhrān): via 'willow', ṣan 'wind', a musurun 'I eat', bar 'door', ma swam 'I know', rūz 'day', a dumārūn 'I pour', jānī 'woman', sānīa 'wife', kārd 'knife', na bābardān 'I bore', šīr 'son', hārīne 'three'.

20. Sangsār (related to the dialect of Lāgzīrd): ẓi 'willow', bāxānār 'I eat' (Aor.), ẓīnī 'knee', saī 'hundred', rūz 'day', bēdūz 'I say' (Aor.), ẓīn 'woman', bēstān 'to strike', āft 'fire', āft 'three', šīr 'beer', šīr 'son'.

21. Talisht (on the west of the Caspian Sea): va 'snow', han 'sleep', hanī 'to sing', ba 'door', az 'I, zone 'to know', darsan 'needle', ka 'house', si)pī 'white', rūz 'day', zi 'live', ẓīn 'woman', pard 'bridge', kārd 'to do'.

22. Gilaki (closely connected with Māzandarānī and the dialect of Gozarakh): ẓarv 'snow', šārīn 'I eat', sānī 'son-in-law', barar 'brother', sufan 'I burn', pāq 'cooking', zan 'to strike', bān 'I bore'.

23. Gūrīnī of Kandilā (dialects of Kandilā, Pāwa, Aurāmān, Rījavē, Barājālān, Talahadehk are recorded): ṣevarom 'rain', ẓvrv 'snow', ẓvrv 'sun', wārm 'sleep', ẓi 'heart', sānī 'son-in-law', mardī 'he pours out', rūzin 'window', ẓi 'bowstring', sān 'woman', ẓār 'kārd that made'.

24. Kurdi (in several dialects: the following is from the Mukri): baʃr 'snow', ẓo'art 'eaten', dark 'door', dašnzīn 'I know', si)pī 'white', rūz 'day', dašnzī 'it is burnt', ẓīn 'woman', kīr 'done', hānī 'I sent', šīr 'three'.

25. Zātā (dialects of Siwerek, Bījāq, Čabakhūr, Kīghī, Kor, Čenmūn and Pālu are recorded): ẓa'ur 'snow', ṣvrv 'wind', var 'to eat', bar 'door', saan 'to know', ẓārīn 'fire', rūz 'to flow', rūz 'day', pan 'to cook', ṣāf, ṣāf 'to say', jān 'to strike'.

27. Tātī (on the Apsheroun Peninsula): ẓarv 'snow', ṣvrv 'widow', āzwar 'sister', dar 'door', dzmbar 'son-in-law', dnmstān 'I know', zmstān 'winter', zūkn 'tongue', bīzan 'to be', diran 'to see', ṭos 'brother', ṭos 'autumn', mīžirm 'I lift', ṭus 'day', sun 'woman', ẓīsān 'to live', xōrdān 'to eat'.

28. Fārsī (dialects of Somghīn, Paflpn, Māsām, Būrīngīn and Ḫamārāde-Zamān Ishūl): mīnūnī 'I see', šīr kīrān 'to send', mīnrān 'I slept', nimīzānī 'I do not know', zārīn 'knee', ẓārīy 'given', mīmpāz 'I cook', za 'struck', šūr 'bored'.

29. Lūt, Bakhūrtā: ẓarv 'snow', hānī 'tent', ṭurow 'sleep', xōrdan, xōrdān 'to eat', dmv 'son-in-law', zat 'tongue', izpēd 'white', di 'smoke', ḍed, ḍed 'willow', bēz 'to sift', rūz 'day', zādān 'to strike', zinā 'woman', ord 'four'.

The following general tendencies may be especially noticed: t.μ. is replaced by a guttural in Baloch, Khūri, Ormūrī, Parātī and partly also in New Persian; 2. the correspondence of Ossetic h- (Iron dialect g-), r- d, Yaghūnī γ̣, τ̣, δ̄, Shughrī and Yazgulāmī γ̣, τ̣, δ̄, Mundjī γ̣, τ̣, δ̄, Pāshū ɣ̣, w̄, l, marks a distinction within the eastern group: 3. ɛ- tends to be modified in the eastern dialects: Ossetic ba, qan 'ear', Ormūrī goy, Parātī gī, Mundjī yāy, Pāshū goy, Waqats poy, Shughrī qoy, Iskāshīmī gar, Sarīk gol, Sarghīn jī, Bartangī and Oroshorī gay, Yazgulāmī γ̣ỵān, contrasting with New Persian gāy (gū).
Verb. The divergence from the Old Iranian system, already marked in Middle Iranian, has developed further in New Iranian. New verbal systems have been evolved. In spite of independent growth, however, a general resemblance is found, for example, between New Persian and Ossetic. In New Persian means are to hand to express active and passive, indicative, conjunctive, optative, imperative, infinitive, present (punctual and durative), imperfect, pretetrite, perfect (punctual and durative), pluperfect, future and conditional.

Infinitives. The infinitives show independent derivation from Old Iranian verbal nouns. Old Persian -tana'ya reappears in New Persian -tan, Swandi berd 'bear', Vonishin burtan, Songisari bebartan, Avestan badan 'be', Modern Kurdish kit 'draw', Gilaki giftan 'say', Tâst diwan 'see', and other western dialects, beside a second infinitive (representing the Old Iranian verbal noun -iti, which serves in the dative in Avestan -iti as infinitive): New Persian gafiat 'speak', Avestan ke- 'make', Modern Kurdish knis 'kill', Avestan w3 'say', Zoroastrian behter 'bear'. Other verbal nouns are found: Ossetian sar 'task', Avestan kordman 'mountain' (with related dialects), Yasdr beth 'pour out', dedan 'give', Gurs (Austrā) bali 'come', kardali 'make', Zāza kordi 'make', Balādī jam 'kill', Yaghadī karok 'do', Wakhī xanak 'speak', Ormuri ×ant 'laugh', Parāzī kuy 'make', Sanglī sun 'go', Ishkāshim xaruk 'eat', Yaghadī irectional 'bear', Mundji zoh 'know', Kirghiz 'reap', Yaghadī karok 'make', Pashī xaf (here -i represents the Old Iranian -a). Present tense. In Old and Middle Iranian pres. indic. and pres. conj. are clearly separated. Both modes of thought are expressed in New Persian. Conj. pres. inflection, distinct from indic. pres., is preserved in Yaghadī (kantī 'he does', conj. kowt) and Ossetic (kən 'does', conj. kana). Other dialects have one form of present inflexion, which therefore serves to express both present and aorist (with meanings of fut. and conj. pres.). In certain dialects, as in early New Persian kwan 'I do', Mundji xarom 'I eat', Yaghadī xey 'I put', Oroshori kintim 'I do', Shaghad xarom 'we eat', 1 plur., Sanglī xarom 1 plur., this form appears alone in both senses. But greater precision was attained by use of prefixes, suffixes, and periphrastic forms marking off the present. So in Khūrī di- (diferon 'I eat'), Turki dixi (dixim 'I fall'), Kumandī shab- (xabam 'I fall'), Abdū tā- (tāram 'I bring'), Mahāštī dē (dēm 'I come'), Nānī i (i: mi 'I bring', inia 'he runs'), Luri Baghtūštī (baghtūstan 'I do'), Yaranī a- (afram 'I be'), Farāzandī a- (abaran 'I bear'), Zoroastrian a-' (zarin 'I bear'), Sūrī a- (šarin 'he grinds'), Gurskian Kandīdā mā (mādāl 'I make'), New Persian hamī, mi (mikunam 'I do'), Yazi ne- (ne wēšat 'I cook'), Gaz-e (orē 'he grinds'), Žāza of Siwerek -an- (žāmāzān 'I weep'), Lārgārdī -m- (m均使其 'I say', Žon xordan 'they say'), Sangisari -n- (n: wond 'I say'), Ormūri bū, b- (baman 'I take', bu k 'he makes'). Periphrastic forms are used in Parāzī: 2nem xarān, 2nem xarām (I eat). Gilaki has amandaron 'I am coming' (infinite amon 'to come' with davan), beside the durative preterite amonde bū 'I was coming', and Balōcī kāyā 'I am doing', Zāza kordi 'I am doing'. Nātanzī born 'I bear' and Gilaki būrīn have no prefix. The aorist (in meaning fut. and
Along with the perfect and pluperfect, the perfect and pluperfect were also used in Semitic and Germanic languages. In Semitic languages, the perfect and pluperfect are formed by adding the participle to the verb root. For example, in Arabic, the perfect past tense is formed by adding the particle "ال=" to the root, as in "أَتَمْهَدَ" (أَتَمْهَدَكَ). In Germanic languages, the perfect past tense is formed by adding the participle to the verb root, as in "I have eaten" (in English).

(H. W. Bailey)

III. Persian Literature.

Definition. By Persian literature we understand all works written in modern Persian, in contrast to middle Persian (Pahlavi), or in other words the whole of Persian literature from the Arab conquest to the present day. It should be observed however that this literature can be regarded as a unity only up to a certain point. The vicissitudes of western Asiatic history brought it about that Persian became the literary language of a number of peoples whose vernaculars had no connection with Persian. Persian became the language of the upper classes of these peoples, just as French became in the xviiiith century for various peoples in Europe. The result is that Persian literature in the wide sense includes not only the literature of Persia, but also the literature of Central Asia, and to some extent of Turkey, India and Afghanistan. Although down to the xivth—xvith century these literatures were very slightly differentiated, in modern times the differences between them have become so strongly marked that their literatures can no longer be considered as a single whole. This circumstance makes a comprehensive survey of all the literature which may be called Persian an impossible task and forces the student to set more precise limits, which must also apply to this article. Here therefore by Persian literature we mean only the literature of Persia, and such writers as belong to Central Asia, India or Afghanistan will be more or less disregarded.

The beginnings. It has so far not been possible to trace the initial stages of Persian literature exactly. There is, it is true, no lack of authorities relating to these first steps but they are so obviously unreliable that they are hardly worth consideration. It is of course natural that these early stages could only have been recorded by chance, as from the point of view of later ages they appeared of very little value.

Nevertheless the fragments that have survived make it possible to put forward certain hypotheses which are probably not too far from the actual truth. The early centuries after the Arab conquest saw a gradual decay of Pahlavi literature. At first sight it might appear that literary activity in Persia ceased completely. But this was not the case. If we turn to the Arabic literature of this period we find that a large number of Persian poets and scholars were writing in Arabic. The valuable anthology of al-Tha‘alihi (d. 1038), Yatmat al-Dahr (pr. 1885), contains most interesting information which shows that already in the xith century Arabic had become the literary language of the upper classes in Khorasan and Transoxania.

But at the same time there were signs of activity in the opposite direction. The political situation of Persia, whose rulers were trying to cast off the Arab yoke, and the gradual exhaustion of the caliphate demanded not only political opposition to the Arabs but also the ending of the domination of the Arabic language in the field of literature. But the 150 years of the supremacy of Arabic did not pass without leaving a trace. Pahlavi had become a dead language; there was therefore only Persian to oppose to Arabic as a literary language. On the other hand, there prevailed, especially in poetry, Arabic forms (kaṣīda, ghīṣal) and the Arabic quantitative metre (‘arūd), which so firmly established rhyme, probably foreign to Pahlavi, that a return to the poetical technique of the Sasanian period was impossible. Arabic poetry had however to submit to certain changes, such as the introduction of the very long syllable into prosody, which was not possible in Arabic at all and probably arose in the process of inserting Persian words into Arabic lines. How and when the first lines of verse entirely in Persian arose it will hardly be possible to ascertain with certainty. Persian sources profess to consider the fragments that survive of a kaṣīda by ‘Abbās Mawāzi said to have been composed in Marv (Sog) in honour of
Ma'mūn, son of Ḥarūn al-Raṣīd, is the oldest poet in Persian. Unfortunately it is still somewhat difficult to express a definite opinion on the genuineness of these lines. The anthologies (tālikhārūn) and dictionaries (notably Asadi's valuable Lughat-i Fars) contain isolated lines from poets like Abū Ḥafs Ṣughdī, Ḥānjala bāḏghīš, Maḥmūd Warrāḵ Harawī, Firūz Māshrikī, Abū Saʿīd Gurgānī, Abū Saʿīd Ṣughdāl, and others. These fragments however are but miserable remnants, which give evidence of the existence of poetry but do not enable us to obtain a clear idea of Persian verse in its earliest period.

The tenth—eleventh century. As early as the tenth century we find these early efforts attaining a very high degree of artistic perfection. The courts of the various princes around whom the poets gathered formed centres of literary activity. But as the poets were usually directly dependent on their patrons, and had to some extent to adapt themselves to their taste, it is quite natural that almost every dynasty in Persia was surrounded by a group of poets who present a certain unity, especially from the point of view of style, so that the classification of Persian poets by dynasties, as has been usual in Persia from early times, has a certain amount of justification in literary history. In order to give some lucidity to our account of the rather complicated process of the literary evolution of Persian poetry, we shall retain this classification, at the same time subdividing our account according to the various kinds of poetry so that the links may not be broken. In the first section the following kinds of poetry are mainly concerned: a. lyrical court poetry, b. epic, c. mystic. Prose hardly comes into consideration at all in this section, as the older Persian literature scarcely ever uses prose for belles-lettres. Prose is for old Persia the language of scholarship only. But it is to be noted that for the pre-Mongol period the language of scholarship is predominantly Arabic so that even in this field a higher degree of development of Persian prose is only slowly attained. a. The Court Lyric. While as early as the time of the Tāhirids and Saffārids we can recognize the first approaches to the formation of a characteristic court style, we do not see it in its full perfection till the time of the Sāmānids (875—999), whose capital was Buhārā. Although here also the devastation wrought by time has left us only a few remains, it is still absolutely clear that at this time a flourishing literary activity in Buhārā was in full swing. Round the Sāmānīd court gathered a large number of distinguished poets, who on the one hand were engaged in singing the praises of the rulers in sonorous κασίδαs and on the other in bitter outcries with one another for pre-eminence, a struggle carried on with poetical weapons also, i.e. satires (kājfa, kīḍā). Of all these poets the greatest was the celebrated Rūdkāki [q.v.] of Samarkand. His κασίδα Mādār-i māi is an unsurpassed masterpiece. Rūdkāki seems to be the first creator of the type of the Persian poet which all others endeavoured to copy: poet, aristocrat, liberal, frivorous, amorous, wine-loving, chivalrous, devoted only to the joys of life, never touching its gloomier sides. In the field of didactic poetry also he won great fame by a version (which has unfortunately not come down to us) of the Kātīla wa-Dīmān. But he introduced another theme into Persian poetry, the lament for lost youth, which he expressed in moving language. His younger contemporary Kīsāʾi [q.v.] (b. 953) of Marw dealt with the same theme. It may be assumed that these laments were not simply exercises in style but had a genuine foundation in the circumstances of the Persian poet. His duty was to adorn the court of his prince, to share his pleasures and to amuse him; a soured old greybeard was not suited for this and was no doubt, little appreciated in spite of former services. No less characteristic are the laments of the famous Shāhid of Balkh who is said to have been the first to collect a complete Dīwān. He laments principally the injustice in the distribution of the world’s goods, which clearly points to his lack of success at court. The language of all these poets is clear and lucid; they are still very moderate in the use of poetic artifices and observe the limitations of poetry. Of second class (or perhaps by chance less known) names of this circle of poets the following may be mentioned: Maʿrūfī Balkhī (c. 954—961), Abū Ḥafs Ṣughdāl, Abū Saʿīd Ṣughdāl, Mahir al-Rawānī, Ḍiyāʾbār Bakhrā'ī, Abū al-Aḥsādī, Buhkhrā'ī, Rawānī, Maʿnawī, Abū ʿl-Fath Būstī (known also from his poems in Arabic) and Ammār al-Marwāzī.

After the fall of the Sāmānids a new literary centre arose in Ghazna at the court of the celebrated Sulṭān Maḥmūd (q.v., 998—1030) and his successors. This school received its key-note from the famous poet Unṣūrī (q.v., d. 1050) of Bakh. His κασίδαs, which celebrate the Sulṭān and his campaigns and endeavour to prove his claim to the throne of Persia by theological hair-splitting, are very fine examples of the more serious court poetry. Rūdkāki’s frivolity would have been out of place at the court of the rigidly orthodox Sulṭān. Two other poets who were mainly active at the court of his brother Muḥṣīl recall in their joi de vivre more the poetry of the Sāmānīd period. They are Mīnūqīr (q.v., d. 1050) of Damghān, who has given us in several poems fine specimens of pre-Islamic legends, and Fardkūsh of Sīstān (q.v., d. 1037—1038), whose Persian literary historians are fond of comparing with the master of the Arabic κασίδa al-Mutanabbi [q.v.]. The glowing colours of his descriptions of nature are really marvellous expressions of the imagination. As a theorist also he is known for his treatise Tarjumān al-Balūţa. No less important is Asadī (q.v., d. between 1039—1041) of Tūs, who was the first to enrich the varieties of court poetry with the muwāṣara or disputation (like the temone of Southern France). Two poets of this name are usually distinguished; the younger, author of the Garšānā-nāma, is said to be a son of the elder. But there are reasons for thinking such a distinction unnecessary and the existence of two Asadis doubtful. Under the successors of Sulṭān Maḥmūd, who were no longer able to hold together their father’s vast empire, poetry was still held in high honour. Of the poets who adorned their courts the master of the κασίδa Abū ʿl-Farādī Rūnī (d. about the beginning of the viii = xith century) and his pupil Masʿūdī Sāʿīd-i Salmān (d. 1131) were specially prominent. The latter in particular, who spent a great part of his life in prison, created a new kind of poem, the Habbīyat (prison κασίδa), in which he lamented his cruel
late. No less important is ʻUḥmān Muḥḥarī (d. about the middle of the viii—ixth century) in whose poems the learning of his time gradually penetrates into poetry. The other dynasties who shared the power with the Ghaznavids, but were hardly on the same level, also endeavoured to attract poets of talent to their courts. Mention must thus be made among the poets of the Būyids (932—1055) of Kāmāl-al-Dīn Būndūr al-Rāy, who in addition to literary Persian used the dialect of Rāyī for his poems. The celebrated Kāțrān Dżābilī (q.v., d. 1072—1073) also sang the praises of the Būyids, but he was for the most part in the service of the rulers of Adharbalδān and his poems were long thought to be the work of Rūdākī. Even beyond the Oxus among the Turkish Ilk-Khans (931—1155) Persian poetry flourished. The best poet of this school was the brilliant ʻAmḵā (d. c. 1148), who shared his fame with Ṣhīdī and Nadjībī Farḡhānī. ʻAmḵā's ḵāšās are especially distinguished by their unusually fresh and joyous nasīns, which are full of unexpected turns of speech.

As already mentioned, prose played very little part at this period in the life of the court. But we must mention at least three works of the greatest importance for the history of the development of Persian prose style, namely the universal history in Persian of the Sāmnādī vizier Aḥbū ʻAlī Balḵāmī (q.v., d. 996), the highly interesting history of the Ghaznavids by Aḥbū 'l-Fāḍī Bahākhī (q.v., d. 1077—1078) and the ʻAṣḠān-nāma (begun 1082) of prince Kāī-Kaṭār b. Iskandar b. Kābūs.

Court poetry undoubtedly reached its highest development in the time of the Sālḍūjīs (q.v.) (1037—1300). But the simplicity and the vigour and freshness of colour which so delight us in Sāmnādī poets gradually disappear; the ḵāšā becomes more arid, but attains more and more technical dexterity, which finds expression in the one hand in an accumulation of poetical artifices and on the other in the utilisation of all branches of scholastic learning to create choice and unusual images. While in the time of Sultān Mahmūd the works of the court poets were readily intelligible to any reader of some education, the later Sālḍūjī period produces poems which presuppose a well-educated reader and could be a source of pleasure only to specialists. Many works of this period are really only intelligible through commentaries, which have been preserved. Among the poets of this period the following are outstanding: Aẓrākī of Herāt (q.v.; d. c. 1113), who procured a somewhat doubtful fame as author of the Alfiya-Shafīyya, a didactic poem on the art of love. Aḥbī Šābīr, the great master of the ḵāšā, who was sent by his sovereign on a political mission to the Khwārizmshāh where he met a tragic end (between 1145—1151). The favourite of Sultān Sandžar, Aḥmīr Muʾizzī (q.v.), about whose wealth and fabulous greed the biographers have much to say. Lāmīʿī (q.v. of Džārdūn) of Abū al-Wāsī Dżabālī (q.v.; d. 1260) who has quite a peculiar style and brings many animals into his ḵāšās with great skill. The place of honour among all these masters must be given to the unrivalled Anwarī (q.v.), whose ḵāšās, among which are the famous "Tears of Khwārīznāmā" are undeniably the finest that this complicated style was able to produce (d. between 1189—1191). The rulers of Khwārīznāmā endeavoured to check Anwarī's influence with the work of Ṣaḥīd al-Dīn Waṭwāt (q.v.; d. 1182—1183). This poet, who is also entitled to credit for his work as a theorist, is distinguished by unusually caustic language but as a poet he can scarcely be compared with Anwarī, beside whom only the characteristic figure of Ḥākānī (q.v., d. 1199), who sang the praises of the Šahs of Šīr-wān, remains unfaded. The difficulty of the language of this original poet is proverbial in the east but nevertheless his recognised to this day as the greatest master of the ḵāšā. Șāzānī of Šārmarḵān (d. 1173—1174) was also an occasional panegyrist of the Sālḍūjīs but he was known chiefly for his satires and parodies which are often obscene but very witty. Women also wrote poetry; for example we have a few lines by Sultān Sandžar's friend Mahīstī, which show great talent although they unfortunately contain unusually cynical expressions. Nīzāmī ʻArūḏī (q.v.) of Šārmarḵān was a poet at the Ghurid court; he is chiefly notable for his ʻAbār Malālā, one of the most important sources for the biographies of poets. The end of this period is marked by the two last great poets of ḵāšās, Žāhir al-Dīn Fār ūbī (q.v., d. 1202), whose poems in spite of facility of technique show in comparison with Anwarī a certain decline of the court style, and Kāmāl-i ʻİsmāʿīl called Ḥaṭībī al-Malānī or "Creator of Spiritual Ideas" (d. 1237). This last poet turned in his later years from the court style and preferred the contemplative life of a Šūfī šaḥīk to success at court. His best work is already full of the spirit of Šūfī mysticism and in this field also he succeeded in creating real masterpieces.

b. Epic. The first essays in epic poetry, a genre which had been practically unknown to the Arabs and which, so to speak, represented the Irańian national element in Persian literature, were made by Persian poets even before the time of the Sāmnādīs, in the period of the first wars against the Arab emirs. In this field therefore the Persians had no foreign models but were completely dependent on pre-Islāmic tradition and to some extent on popular poetry. Unfortunately once more only fragments of the oldest works have come down to us, which do not permit us to gain anything like a clear idea of their character. In this field it was again the old master Rūdākī who created the first work of any size, namely the celebrated version of the ʻAṣḠān-nāma of which only some 50 baits have come down to us. At the same court the talented young and vivacious poet Daḵēḵī (q.v.) undertook a larger work, namely a metrical version of the official Sāsamān book of kings, the ʻAṣḠān-nāma. His premature death prevented him from carrying out this grandiose scheme. All that he left was about 1,000 baits, which seem to have given the stimulus to the greatest achievement of Persian poetry, the ʻAṣḠān-nāma of the celebrated Abū ʻl-Ḵāṣīm Fīrdawṣī (q.v.) of Țūs (born c. 934, d. between 1020—1026). This gigantic work, which according to the poet himself contains 60,000 baits and combines the whole epic tradition of Persia into one whole, became the foundation for a long series of later poems or mathnawīs, as this genre is called, from an Arabic technical term. Fīrdawṣī's second work, finished when he was well over seventy years of age, namely his Yūsuf u-Zulayḵā, is from the artistic point of view little
inferior to his masterpiece. The story of Joseph, which with later poets (Dżamī) became a song of songs of mystic love, becomes in his hands a moving lament of the boy carried off to a strange land, which may well describe the feelings of the aged and homeless poet in Baghdad. Firdawsi's first successors followed his example closely and wrote regular epics, among which the already mentioned Gargāsh-nāma of Asadī and works like the Barzūn-nāma, Sam-nāma etc. may be particularly noted. But very soon the character of the epic changes and it gradually becomes a romance of chivalry. Thus for example the Wāmiḳ wa-Adhrā is, now lost, of the already mentioned 'Uṣūrī, in spite of its many descriptions of fighting, is mainly concerned with the love-story of the hero and heroine. This transformation is still more evident in Fāhār al-Dīn Gurgānī's (see ĐURĐIĆI) celebrated Witi u-Rāmin (written about 1048), the Persian counterpart of the European Tristan story, in which the hero, regarded from the point of view of the heroes of old Persia, is almost entirely devoid of knightly qualities. The court epic attains its zenith in the quintette (Khāmeśnī) of the great Nūrī (q.v.) of Gandja (d. 1203). Some of his poems have really very little connexion with the old epics and are, like Lālit u-Mudjānīn, predominantly lyrical and romantic in tone. After Nīẓām the Persian court poets hardly ever attempted to treat of new subjects and remained within the bounds already laid down for them.

c. Mysticism. We have so far been mainly concerned with the court poetry, but the other current in Persian literature has its source in very different circles. Sūfīsm (see TAŞAVVUF), arising on Arab soil, entered Persia also and spread among the artisans and to some extent also among the merchants who populated the towns of Persia. In its quite early stages Sūfīsm became connected with the futuwwa movement (q. v.) and the mystical note became more and more emphasised. So far as we can judge, the oldest Sūfī lyrics arose out of the demand for a poetry of their own which should brighten the public meetings of the Sūfī bodies. Isolated lines, quatrains and kīf's of pronounced Sūfī colouring arose as early as the tenth century, but the first more or less extensive collections belong to the first half of the eleventh century. While the famous Bābā Ţahir 'Uṛyān (see ŢAIR; d. 1019) expresses pronounced Sūfī views only in his prose works and in his quatrains follows the model of the popular poetry (even in language, for a number of them are written in dialect). Bābā Kuḥī Shīrāzī (d. 1050) is already a mystical through and through in the full sense of the word. His Dīvan which has come down to us is, it is true, much corrupted, but the theories of the 11th century are quite apparent from his verses which are interspersed with Kur'ān verses and ḥadhīths. Until quite recently it was generally thought that the earliest Sūfī poet was the celebrated Shaikh Abū Sa'id of Māhāna. But there is no longer any doubt that he only once in his life composed a quatrain on the spur of the moment. All the other poems ascribed to him are either forgeries, or possibly were really declaimed by him during his sermons without having been composed by him. The mystical lyric attains a higher degree of perfection in Anṣārī (q. v.) also called Pir-i Anṣār or Pir of Herāt (1006-1088), whose principal work is the celebrated Munāḍjāt, ardent prayers full of feeling in rhymed prose. The soil was now sufficiently prepared and Persian mysticism began to bear its finest flowers, which have given Persian poetry world-fame. But before we pass to these great masters we must briefly mention two names which it has hitherto been the custom to mention in connection with Sūfīsm. These are the famous scholars 'Omar Khayām (q. v.; d. 1123) and the preacher of Ismā'īlism Nāṣir-i Khašāwa (q. v.). To return to orthodox Sūfīsm we must first mention Sa'nā'ī (q. v.; 1048/1049-1141), the poet of Ghazna. If his Dīvan, half secular, half mystical, reveals further development along the path laid by Anṣārī (q. v.), his didactic poems, among which we may mention the Ḥadiḳat al-Ḥaḳīḳa, represent the first attempt to enliven the theories of Sūfīsm by inserting parables of a popular character. This device, only sparingly used by Sa'nā'ī, is brilliantly exploited by his successor, the celebrated Farād al-Dīn Aṭṭār (see AṬṬĀR; 1119-1230). In his poems the inserted tales attain full development and frequently display the greatest artistic perfection in their simplicity. The climax of this ascending series is formed by the incomparable and gigantic work of the great Ḡalāl al-Dīn Rūmī (q. v.; 1207-1273) also known as Māvā-yi Rāmī. His didactic poem which bears the proud title of Mathnāwī, i.e. "the poem par excellence" (perhaps with allusion to al-Kur'ān), is the finest thing that Oriental mysticism with its unlimited riches has produced. The famous Sa'dī (q. v.; 1184-1292?) is also usually reckoned among the mystics, although really only a few of his works have a distinctly mystical tinge. Sa'dī is rather a teacher of practical wisdom; he endeavours to show his readers the way by which in his troubled period the all too heavy blows of fate could be softened.

d. Prose. We have already observed that classical Persian literature was accustomed to clothe belles-lettres with a metrical garb, and preferred Arabic for learned works. The prose literature of this period is therefore not so rich as the poetry is. Along with the already mentioned work of Fāhār we may also note the famous Abū 'Alī b. Sīrāq (Avicenna; q. v.), who in addition to his works in Arabic wrote an encyclopedia of philosophy in Persian, the Dānish-nāma-yi Āṭā'ī. The dialect of Tabaristān was used at the end of the tenth century by Marzbān b. Rustām (q. v.) for the Marzbān-nāma, a version of the Kalīla wa-Dīmina (q. v.). Unfortunately this work is now lost and known only from Sa'd Warāwinī's Persian translation (written between 1210-1215). The Siyāṣat-nāma of the Sālījk wazir Nīẓām al-Mulk (q. v.; d. 1092) is an important book, which besides containing valuable historical material well reflects the political ideas of the period. This list of the most important works shows quite clearly that there is practically no belles-lettres proper. The first work that we can put in this class is the Persian translation of the Kalīla wa-Dīmina finished in 1144 by Abū 'l-Ma'ālī Naṣr Allāh [see Naṣr Allāh]. But here again it must be pointed out that the book was not then regarded as light literature but as a kind of "mirror for princes", that is to say as a learned work. The aim of the Persian translation of the Farādāy ha'd al-Shādīla completed in 1155 by Ḥusain al-Mu'āyядī was similar, but with particular stress on the didactic element. The end of the 12th century
brings a series of romances of chivalry and versions of pre-Islamíic material, the greater part of which is known only in later versions, often only in the form of popular romances. We may mention here the romance Kitáb-i Sumák'íyá by Šadáka Shirzáí composed in 1389, the fantastic and enormous romance of Amír Ťamza, the Basháyár-náma and the romance of the Beduin hero 'fátim Táyí. To conclude this section, we may mention that in this period we already find a certain development of historical writing, a series of works on poetics, and the first attempts at anthologies (tadhkíra, among them 'Awhí's [q.v.] valuable Lúbí al-
Aláá). But as this compressed survey of Persian literature is forced to confine itself to belles-lettres such works cannot be dealt with here.

From the Mongols to the sixth century.

The early years of Mongol rule were a period of tribulation for Persia. Although later Mongol rulers took an interest in the restoration of the country, the destruction done in the early invasions was so vast that the land could only recover slowly. In the general havoc it could hardly be expected that Persian literature would continue on its earlier lines. Yet it is this period that produces the great series of eminent historians whose works form the foundation of all research by European scholars. Without going into further details we must at least briefly mention the more important names. These are Atá Malik Džwainí [see Džwainí, Wáşåf [q.v.], the great Rashíd al-Dín [q.v.] Fádí Allah and Hamd Allah Mustawfí [see Kázwiní]. Poets on the other hand became rare and few, and poetry and mysticism. Court poetry after the destruction of the brilliant court life survived mainly in outlying parts of the country which had suffered less in the general destruction. But this poetry could not for the most part rise above the level of the classical period and seeks to surpass its predecessors in dexterity of technique. Several poets who knew that they possessed a certain perfection of style left their native land and sought refuge with the rulers of India. For example Bád-rí Cáče, a fairly skilled master of the küsáá, left Central Asia to become court poet of Muhammád b. Tughlék (1325—1351); there he was followed by Káni't of Tús who however afterwards went to Asia Minor. An endeavour to give new life to the court language, which had become arid and formal, by the addition of Mongol and Turkish loan-words was made by Pár-Báhá-yí Džámí, who described the earthquake at Níshápúr in 1267—1268 in a successful küsáá. Only the mystical poets still retain traces of the eschatology which filled the works of their predecessors. Of great importance is Fákhr al-Dín 'Iráki of Hamadáñ (d. 1280) who in his Lámadát, suggested by Aósárí's Manábíát, produced a work sui generis; his 'Usáfsh-náma also contains much that is valuable.

Less known but interesting is Awhád al-Dín Kirmáííí whose Mísháh al-Arzábáí in many ways recalls the Divina Commedia. Awhádí [q.v.] of Marágha attained great renown. His Džám-i Džámí, which is now very little read, was copied 400 times in a single year. For European scholarship the Gulštán-i Ríz of Muhammád Shábístáí (d. 1320) had considerable importance. This was the first work from which a clearer idea of the teachings of Sáfísm was obtained. A further development of the mystical quastrain is found in Ahsálo al-Dín Kásháí (also called Bábá Ahsáal; d. 1307), who also can claim mention as the author of several treatises of a philosophical character. Among all these quite a special position is occupied by Nizárí Kúhístáí (d. 1320). Although an Ismá'ílî, like Náshir-i Khúsraw at an earlier date, he is distinguished from the latter by sarcastic outbursts against orthodox litterateurs, with such drastic effect that almost all authorities declared his writings heretical and hostile to religion. As a result manuscripts of his works are very scarce. Some of his longer poems (like Mustíkhr n-Ázhár) read like deliberate parodies of the aphorisms of Sádí and the court epic.

If Persian literature in the Mongol period had fallen into a kind of lethargic trance, under Timúr and his successors (1370—1405) it experienced a renaissance. The reason for this is probably that, with the decline of Mongol sovereignty, a large number of petty local dynasties arose who were all anxious to restore the ancient usages of court life and to adorn their courts with poets. This period therefore became a new flowering-time of Persian poetry and it may well be called the second classical period. Although the greater part of its poetry lacks the freshness and vigour of the pre-Mongol period, some of its poets succeeded in surpassing their predecessors. Of the masters of this period the following may be mentioned: Ibn Yámin [q.v.; d. 1368], for a time court poet to the Sarbádárs in Százáwr, a great artist in the kífá, which was very little cultivated before him and that mainly for vers d'occasion. Khwádá Kírmáíííí [see Kírmáíííí] and his disciple a Khámsí which endeavours to discard the rather pedantic learning of Níshámi and is distinguished by grace and lightness of touch. His ghazals also show an endeavours to cast off Sádí's moralising tendency and to melt into pure expressions of feeling. 'Cháidí [q.v.] Zífáííííi (d. 1371), one of the most original figures of Persian literature, whose occasionally rather bold parodies contain ruthless criticism of and contempt for the Persian aristocracy. Sálmán [q.v.] Sáwadíííí (d. 1376), celebrated for his difficult play on words, witticisms and technical skill, and lastly Lísán al-Há'ísí Khwádá Há'íísí [q.v.] Shirzáí (d. 1389), the incomparable master of the ghazal, who was able to combine the greatest freshness and depth of feeling with the elegance demanded by the taste of the age and brought the ghazal to the height of its development, never again reached by any one after him.

Two less talented parodists must be mentioned as characteristic representatives of the period: Ahsí Isfá'ál Ahtíma, the poet of cooking, and Kári Ya'ádí (second half of the sixteenth century), the tailor poet. Their works show that the grand style of the court poetry was already in decline and a new way was about to break which revealed its weaknesses and had made them humble objects the subject of its art. Among the poets we may here mention Diyá al-Dín Nákhsháíííiííiíííí [see Nákshsháíííííííí], whose book of the parrot (Fá'tí-náma, 1330), a version of the old and now lost Sindhdá-náma, had a great success and was lost by several later writers. His short prose romance Gárlís should also be mentioned.

Under Timúr's successors the striving after artificiality increases still further. The poet's object is not to be generally understood. On the contrary his aim is to write only for a few select connoi-
seurs who are able to appreciate his difficult tours de force. Outwardly this aim finds expression in the widespread use of a new form of poem, the mu’amma [q.v.], a kind of riddle on names in verse. The best poets of this period were not ashamed to devote their attention to the mu’amma and even the mystical Dżam, who had cut himself off from the world, wrote a treatise on the theory of it. The authors of this period are all more or less influenced by Şīqism, which was probably a result of the years of trial and of the great invasions, which had clearly shown even to the great ones of the earth the transitoriness of worldly fortune. The famous šaikh and much honoured saint Ni’mat Allāh Kirmānī [see Ni’mat Allāh Wali; d. 1431] who founded a darwish order which bore his name, left, in addition to some 500 short prose treatises, an extensive Dhuwān which is not without a certain beauty. The mystic Kāsim al-Anwar [see Kāsim-i Anwar; d. 1535-1534] is important; in his Dhuwān he used not only Persian but also Turkish and even the dialect of Gilān. Kātibī [q.v.] Niẓāmārī (d. 1434-1435) returned to the scheme of the Ḥafiz but almost all five of his parts are pervaded by mystical allusions and endeavour to conceal a certain adherence to stereotyped patterns by artifices of technique. ‘Arīf of Herāt (d. 1449) achieved great fame by his celebrated Ḥal-i-nāma also called Gūr u-Cawgan. Ṭṣamatu Bihārī’i (d. 1425—1426), who was able to work up an old Šī’ā lefeg in his Aḏḵam-nāma to a beautiful work of art, is also of interest. Ḥusain Wā’Tī Kāhlīfī [see Ḥākhīfī] (d. 1504—1505) occupies a prominent place; he achieved great fame by his version of the Kāhlīf wa-Dīmna called Aḥwā’i Ṣahāḥī and set the pattern which has never been surpassed for a highly artificial and unusually difficult prose style. The greatest master of this period is undoubtedly ‘Abd al-Raḥmān Mīrī [see Mīrī; d. 1492], a prolific poet who in addition to his most extensive Dhuwān and many treatises. In spite of great versatility and a certain depth of feeling (as, for example, in his celebrated Vīṣūf u-Zulākhī or Lailī u-Majdūnī) all his work shows traces of decline, which is especially apparent when his poems are compared with works of the classical period. In this period also the writing of history flourished, and out of a number of distinguished historians we may mention Ḥāfiz-i Abru [q.v.], ʿAbd al-Razzāq [q.v.] Samarḵandī (d. 1482), Mirḵwānd (q.v.; d. 1498) and Khwāndamīr (d. after 1534).

It has been the custom in Europe to close the history of Persian literature with the Timurid period. The Šafawīd period is, it is quite true, a period of great decline in Persian poetry. As these rulers did not encourage praise of the secular government, the poets of this period sought in their kashīds to celebrate the supposed ancestors of their rulers, the imāms of the Šī’ā, which gave the poet Muḥtaṣab Kāhānī (d. 1588) the opportunity to compose his famous Haftband in honour of the imāms. Many other names could be mentioned such as Ḥāfiz [q.v.]: d. 1520—1521), Bā Política [see Pisch; d. 1519], Čūdī (d. 1519 or 1523—1524), the two Aḥlis, Turshīzī (d. 1527—1528) and Shirāzī (d. 1535—1536), Hilālī (q.v. d. 1528—1529). Lisānī (d. 1533—1534), Wakhshi (see Wāshī Naḵfī; d. 1583). But it must be confessed that very little attention has so far been paid by orientalists to these poets and practically nothing has been written about most of them. It seems however that isolated works, such as the Farhad u-Shirīn of Wakhshi, deserve attention and might afford quite interesting material for the student.

A characteristic feature of the xviith and also of the xviiith century is the migration of Persian poets to India, attracted by the brilliant court of Akbar and his successors. The result was that a second centre of Persian poetry arose in India and gradually a peculiar Indian style developed, which in turn exerted a considerable influence on the literature of central Asia. The best known of these Indo-Persian poets are ʿUrfī [q.v.] Shīrāzī (d. 1590—1591), who endeavoured to replace bombastic rhetoric by impressiveness and “sweetness” (halīwāt), and his teacher Faḍī [d. 1595], a distinguished scholar, who studied the religious doctrines of India and even translated several works from Sanskrit into Persian. The xviiith century again shows a long series of names, among which we mention those of Shāh ʿAbbās (d. 1601—1602), the last great master of the atraisn, Zulāfī (q.v.; d. 1615), author of Sez Saff, those longish poems of which the most notable is Mahdid u-Atīz, Tālib-i Āmulī (d. 1626—1627), the author of an interesting romance of adventure in verse, and lastly the Ḥāfiz of the xviiith century: Şāʿib [q.v.] Ta北京时间 (d. 1677—1678) who is still much read in India and Central Asia. Şīqism, which was mercilessly persecuted by the Šafawīs, falls almost completely into the background in this period, but instead a very copious theological literature of the Šī’ā develops in Persian. As the theologians of this period wanted their works to be as widely disseminated as possible, they succeeded in creating a peculiarly light and elegant prose style, which is very favourably distinguished from the artificial periods of the Timurids and prepares the ground for modern Persian literature. Philosophical literature also was considerably enriched by the works of the great Mollā Šadīr (see Šadīr al-Dīn; d. 1640—1641) and his successors.

The Kādijārs and modern Persia. The Kādjar monarchy established at the end of the xviith century brought in its literary revival in Persia. While Fath ʿAli’s court poets still followed the old traditions and produced little of value, a distinct change becomes apparent in the second half of the xixth century, the result of a closer contact with the European powers who were vying with one another for predominance in Persia. Fath ʿAli’s court poets, like Naḵshāt (q.v.; d. 1828—1829) with his tender lyrics, ʿAbbās (d. 1822—1823) with his Šāhānšāh-nāme, an imitation of Firdawsi’s, which celebrates the wars of ʿAbbās Mirzā with the Russians, or the “Djam-i of the xixth century”, Wiṣāl, all have much that is admirable to their credit, but nevertheless they are only epigones who lack originality completely. Quite a new note is struck in the works of the three great masters of this period: Kāˈānī (d. 1853—1854), Shāhīnāt (q.v.; d. 1888) and Ṭāqā (q.v.; d. 1860). Although Kāˈānī studied both French and English and translated several books from these languages, his kashīds are still, broadly speaking, repetitions of the long obsolete court style. But in the nashīs these hombastic exercises in style there are many wonder-
fully realistic scenes which would be quite impossible in the "golden age". Șahîbânî, who suffered great injustice from the Kâdîjîs, strikes a gloomy and pessimistic note and bitterly laments the rottenness of the whole structure of the Kâdîjî monarchy. Vâjmâ, perhaps the most interesting of all three poets, whose life was an unbroken chain of sorrows, attacked the Persian notables in bitter satire and ended with even blacker pessimism and a complete denial of the possibility of a happy life. His effort to purify the Persian language of Arabic loanwords is of interest. A great influence on further development was exercised by the Dâr al-Funûn (1852), the first educational institute intended to further the study of western learning, the teachers in which were almost exclusively Europeans. The work of this institute required the translation of a series of western textbooks. This task however revealed that the admired prose of the classical period could not be used for such a purpose. The works of these first translators, who in addition to the textbooks also translated several novels, chiefly from the French, was of tremendous importance for the literary language of Persia and prepared to some extent the way for the literature of contemporary Persia. The Dâr al-Funûn was also of great significance for learning in Persia. Its first director Râd Kûlî Khân (q.v.; d. 1871), who used the ta'kallû havâyât for his poetry, was one of the greatest literary historians of Persia. Among his pupils were the famous historian Șânî al-Dawla, later known as Lihtâhûm al-Salâtîn (d. 1896), whose works are still one of the most valuable sources for the history of modern Persia. The efforts of the Dâr al-Funûn also produced a widespread desire to help in making known the achievements of European science. Remarkable in this respect is the work of Mirzâ ʿAbd al-Râhîm Nâvdîrây-zâdâ, who under the name of Tâlibof published a series of popular works which dealt with the most varied subjects. Of these works the most important are the Kîbî-eh Ahmâd and Marâlîk al-Muhsinîn. Of the greatest importance for Persian literature of the xixth century was the introduction of printing (first press in Tabriz in 1816—1817), which also made newspapers possible. But the first newspapers were intended only for court circles. It was not till 1851 that the first newspaper of any size appeared. The press made remarkable progress during the great struggle for the constitution (mashrûha) especially after the opening of the Mâdîsî.

This struggle hastened the literary revolution, which had been prepared for by the work of the writers of the xixth century. The political struggle made quite new demands upon the participants. Literature was no longer to be the special property of the aristocracy but had to speak clearly and intelligibly to the masses. Satirical poetry, which was particularly cultivated during these years (1896—1909), therefore broke away from the old tradition; instead of the old literary language which was difficult to understand it uses the language of the street and of the bazaar, instead of the dry old classical forms it sets out to imitate the street ballad (ta'âsfi). The vernacular also found its way into prose. ʿAli Akbar Dîkhbûdâ (Dâkhbûdâ), the great master of the feuilleton, wrote his biting and humorous pamphlets Ārân-fârân, which brightened the revolutionary paper Sûr-i Irâfîl. This style was also adopted by later writers and influenced two of the best satirical works of recent years, namely the incomparable collection of stories Yaki bid yakî na-bid ("Truth and Fiction") by ʿAbû Saîyîd Muḥâmâd ‘Ali Dâmâl-zâdâ (1922) and the trilogy by Muḥâmâd Masûd (M. Dîhâlî) the last part of which appeared in 1934 under the title Ashgâf-i Mashûhûrî ("the Crown of Creation").

In the war against the antiquated, the dramatic form, unknown to the classical literature, was also used. While old Persia had had only farces ("wandering players") and religious mysteries (ta'âsîvā q.v.) or aza, the comedy after the European model made its appearance in the form of Persian translations of the famous works of the Adharbaîjânî author Fâth ‘Ali Akhund-zâdâ, which were translated by Mirzâ Djâfâr Kârawadâhî. These plays obviously served as models for the original plays by the well known politician and founder of freemasonry (fârâmîk-hânîn) in Persia, Mirzâ Malikum-Khân. If the theatre was influenced on the one hand by Adharbaîjânî literature, on the other acquaintance with the Turkish drama made possible the appearance of versions of Molière's plays, among which we may mention Le médecin malgré lui, Le Mariage de Figaro and Tartuffe. The lack of a regular stage in Persia however made the further development of the drama impossible for the time being.

Only in recent years has tragedies appeared in Persia, among which the historical Dâsin-i lûmîn (1926) by Saîyîd ʿAbd al-Râhîm Khân-îlî, Akhûm yâd-dîrî Nâdîrîy (1927) by Saîd Nafissî and Farûnî (1951) by Sadîk Hûyât may be mentioned. The wave of satire in the first decades of the xixth century also produced the first satirical novel Sîyâhat-nâmâ-i ibrahîm-kây by Bâdîjî Zain al-ʿAbîdîn of Marâghâ (d. 1910). This work, planned in three parts on the model of the Divina Commedia, had a fabulous success and is still of value as a characterisation, exaggerated it is true, of the defects of old Persia.

The Present Day. In order not to destroy the continuity we have already been compelled to mention some of the most recent works. It would be very difficult to give at this time a comprehensive sketch of the last few decades. The period after the War and the great changes that have taken place in Persia naturally have also had their influence on literature. Yet it is not so easy for Persian literature, particularly poetry, to cast off the thousand-year-old traditions of the classical literature. The struggle with these traditions found expression mainly in two ways: on the one hand prose attempts to gain predominance over poetry and thus to reverse the old proportions, and on the other the new poetry endeavours both in form and matter to break through the old limitations. This second task is the more difficult as it requires unusual ability to prevent the efforts of the innovators appearing as mere schoolboys' work alongside of the perfection of the classics. For this reason the greatest of the modern poets still adhere rather tenaciously to the traditional forms, even if as regards matter they are far removed from the old models. The greatest of the modern poets, Saîyîd Muḥâmâd ʿAbîb-i Pîshâwârî (d. 1931), can hardly be distinguished as regards form from the classical poets, of whose
Müftüf Mustafa Kazimi in his *Thürani mañeh* (2nd ed. 1924). The same author has also published several shorter novels. Ahmed 'Ali-Khan Khuda'da deals with the sufferings of the peasant in his *Rusi styrh kürger* (1927). The novel *Majnûn al-Diwânaqân* (1925) of the already mentioned 'San′at-izâda is fanciful and Utopian; the same author in 1934 published another Utopian novel, *Rastum dar Kâni bist ud-dawr*, in which he endeavours to demonstrate the inadequacy of the old ideals of chivalry.

This compressed survey, which can only mention more important works, shows that modern Persian prose has developed much more vigorously than poetry. If we consider the difficulties which the Persian moderns had to overcome, there can be no doubt that the next few years must produce an ever greater literary revival and that new Persia will soon produce works of art, which will be able to take their place beside the noble creations of the classical period in the literature of the world.

(Ed. Berthels)

Pertew Pasha, the name of two Ottoman statesmen.

I. Pertew Mefned Pasha, Ottoman admiral and wezir, started his career on the staff of the imperial harem, became kapudan bâshî [q. v.], later Agha of the Janissaries and in 1657 he was advanced to the rank of wezir; in 1668 (1657) he was appointed third wezir, in 1672 (1574) second wezir and finally commander (serdar) of the imperial fleet under the kapudan pasha Mu'ezzîn-RA `Ali Pasha. He later fell into disgrace and died in Stambul where he was buried in his own türbe in the cemetery of Eyiwh.

II. Pertew Mehmeth Sau'd Pasha, Ottoman dignitary and poet. He was of Tatar descent and was born in the village of Darīdža near ʿUmmiya in his early youth he came to the capital Stambul and entered upon an official career. In Muḥarram 1240 (Sept. 1824) he became ʿaylāhi ʿefnā, i.e. State referendary and in Şahrizād 1242 (March 1827), head of the imperial chancery (rahis al-katāḅ). Two years later he lost the post of chancellor and went on a special mission to Egypt. On his return he became in 1246 (1839) assistant (khuwā) to the grand vizier. On the 23rd Dhuʾl-Qaʿda 1251 (March 12, 1836) he was appointed minister for civil affairs (muṣīkiyye ʿumāṛ) and given the title of marshal (müzājkir). In the spring of 1836 he was given the title of Pasha but was dismissed by the autumn. In the beginning of Sept. 1836 he was banished by Muḥammad II to Scutari in Albania. Pertew Pasha set out a few weeks after his banishment to the place of exile but did not reach it. He died in Adrianople three hours after a banquet which the governor there, Muṣṭafā Pasha, gave in his honour (according to Gibb, H. O. P., iv. 333: Emin Pasha). No one doubted that his sudden death was due to poison and public opinion ascribed the crime to Muḥammad himself. On his family see Sıdıllı-i șəffār, ii. 38. His son-in-law, who shared his views, was the intriguing private secretary to Muḥammad II. ʿAbd al-Rasāl Pasha, a highly educated man but lacking in character and accessible to bribery, who lost his office about the same time as Pertew Pasha and was banished to Tokat in Anatolia; cf. G. Rosen, Geschichte der Türkei, i. Leipzig 1866, p. 255 sq. Pertew Pasha’s successor was his political opponent (ṣ̄abīḥ Pasha, cf. Babinger, G.O.W., p. 357 sq. — As a statesman Pertew Pasha took up a pronounced anti-Russian attitude and was no less hostile to the Christians, whom he oppressed with long obsolete and forgotten laws. His feeling against the Christians increased with advancing years.

As a poet, Pertew Pasha composed a Dīvān, which was esteemed as a model of the poetical art of the period of Muḥammad II. There are two editions of it: Būāk 1253 (89, 91 pp.) and Stambul 1256 (89, 130 pp.). On other works by Pertew Pasha see Brüssl Mehmed Tahir, Othmanlı Mu'ellifier, i. 114 sq. — His valuable library, rich in manuscripts is now in what was formerly the Selimiye monastery in Scutari.

Bibliography: G. Rosen, Geschichte der Türkei, i. Leipzig 1866, pass., esp. p. 255 sq.; Gibb, H. O. P., iv. 334 sq. with references to Jawannin and J. van Gaver, Turanien Paris 1843, for an account of the death of Pertew Pasha in Adrianople; Mehmed Thureiya, Sıdıllı-i șəffār, ii. 38; Sāmi Bey Frāhstār, Kamāl al-'Ālam, i. 1494 sq.: Brüssl Mehmed Tahir, Othmanlı Mu'ellifier, i. 114 sq. — This Pertew Pasha is not to be confused with the statesman and poet Pertew Edhem Pasha who died on the 7th Dhuʾl-Qaʿda 1280 (Jan. 6, 1873) as governor of Kastamuni [q. v.], a number of whose poems have been published e.g. a Şəhānname and Lālah, s.l. (= Stambul) n.d., and İlah al-Afsar fi 'Abd al-Abbār, Stambul 1304. On him cf. Mehmed Tahir, op. cit., i. 114 sqg.

PESANTREN. [See Pasantren.]

PESHĀWAR, a district, tahsil, and city in the North-West Frontier Province of British India. The district which lies between 71° 25' and 72° 47' E. and 33° 40' and 34° 31' N. has an area of 2,637 square miles and a population of 947,321 of whom 92 per cent are Muslims (1931 Census Report). It is bounded on the east by the river Indus, which separates it from the Pindari and Hazara, and on the south-east by the Jhelum Ghusha range which shuts it off from the district of Kohat. Elsewhere it is bounded by tribal territory. To the south lie the territories of the Ḥasan Khēl and Kohāt Pass Afridis; westwards, the Khāber Afridis and Mullāgūris. Farther north, across the Kābūl river, the various Mohmand clans stretch to the Swāt river. The northern boundary of the district marches with the territories of the ʿUṭmān Khēl, the Yūsufzais of Swāt and Buner, the Khudū Khēl, Gaduns and ʿUtmanzais. Mountain passes famous in frontier history connect it with the surrounding tribal tracts. In the north-east, the Mora, Shākot, and Malakand passes lead into Swāt. The historic gateway of the Khāber connects it with Afghanistan, while, to the south, the Kohāt Pass runs through a strip of tribal territory, known as the Djiwaki peninsula, into the neighbouring district of Kohāt.

References to the district occur in early Sanskrit literature and in the writings of Strabo, Arrian, and Ptolemy. It once formed part of the ancient Buddhist kingdom of Gāndhāra, for, from the Khāber Pass to the Swāt valley, the country is still studied with crumbling Buddhist stupas. Here, too, there have been unearthed some of the best specimens of Graeco-Buddhist sculpture in existence, while one of Asoka’s rock edicts is to be found near the village of Shāhbāzgarha in the Yūsufzai country. Both Faḥiḥ, in the opening years of the fifth century A.D., and Hüden Tsang, in the seventh century A.D., found the inhabitants still professing Buddhism. It is also on record that Purushapura was the capital of Kanishka’s dominions. Through centuries of almost unbroken silence we arrive at the era of Muslim conquest, when, between the thirteenth and sixteenth centuries, numerous Pathan tribes from Afghanistan spread over and conquered the country roughly corresponding to the modern North-West Frontier Province (T. C. Plowden, Kalil-i Afghānī, chap. i.—v., Selections from the Tarkhā-i Muraṣā). Toward the end of the fifteenth century, according to local tradition, two large branches of the Pathan tribes, the Khaḵhāi and the Ghōriya Khēl, migrated from their homes in the hilly country around Kābul to the Dīlahālād valley and the slopes of the Safīd Kōh. The most important divisions of the Khaḵhāi were the Yūsufzai, Gugiyān and Tarkālān; the Ghōriya Khēl were divided into five tribes, the Mohmand, Khaḵhāi, Dīlāzāis, Camkānis, and Zeinānis. The Yūsufzais, advancing into the modern Peshāwar district, expelled the inhabitants, known as Dilāzās, and finally conquered the country north of the Kābul river and west of Hotī Mārdān. By the opening years of the sixteenth century, the Ghōriya Khēl had also reached the Khāber area. Eventually these powerful tribes dispossessed the original inhabitants, driving some to the Swāt Kōhīstān and forcing the Dilāzās across the Indus. Later, the Ghōriya Khēl attempted to oust the Khaḵhāi.
branch but were signally defeated by the Yusufzais.

Since the modern Peshāwar district lay athwart the route of invading armies from the direction of Central Asia, much of its history resembles that of the Pandjāb. The Pačhāns of this part of the frontier proved a thorn in the side of the Muslim rulers of India, and although nominally incorporated in the Mughal empire, they were never completely subjugated, even Akbar and Awanzāb contenting themselves with keeping open the road to Kābul. With the decline of Mughal power this area became a part of the Durrant empire founded by Āhmād Shāh Abdālī. Disintegration set in under his weak successors and eventually in the early nineteenth century Peshāwar was seized by the Sikhs of the Pandjāb. Sikh rule was of the loosest type, and Peshāwar groaned under the iron heel of the Italian General Avitable. With the annexation of the Pandjāb in 1849, the Peshāwar valley came permanently under British control and remained an integral part of the Punjab until the formation of the North-West Frontier Province in 1885. (A detailed examination of British administration and of the various expeditions against the frontier tribes will be found in The Problem of the North-West Frontier by C. Collin Davies.) In recent years this area has been the scene of the activities of Ābhād al-Ghaffār Khān, the founder of the "Red Shirt" movement, which, although ostensibly based on Gandhī's creed of non-violence, has seriously disturbed the peace of the Peshāwar valley.

Peshāwar City, the capital of the North-West Frontier Province, has a population of 87,440 and is situated near the left bank of the Bārā river about 13 miles east of the Khāiber Pass. Its importance as a trading centre on the main route between India and Afghanistan has increased since the construction of the Khaiber railway in 1925. It has 16 gates which are closed every night and opened before sunrise. The richest part is the Andarshahr where the wealthier Hindus have taken up their abode. In this quarter, conspicuous on account of its high minarets of white marble, stands the mosque of Mahātā Khān who was governor during the reign of Shāh Djahān. On the north-west the city is dominated by a fort known as the Bālā Ḥiṣar. The Shāh Bāgh with its spacious and shady grounds is a favourite resort of the inhabitants in the spring. The fame of the Kīsha Kexpression or Storytellers Bazaar is known throughout the length and breadth of the frontier and beyond.

Two miles to the west of the city are the cantonments (population 34,426), the principal military station in the province. Some three miles to the west of the cantonments is the famous Islāmābād college which, although essentially a Muslim college, opens its doors to students of all castes and creeds.

PESHWA. [See Peshwa.]

PETERWARDEIN. [See Petrovaradin.]

PETROVARADIN (Hungarian Pétérvarád, Turkish Varadin), a famous fortress and town in Sirmia (Yugoslavia) on the main railway line Belgrad—Petrovaradin—Novi Sad—Subotica-Budapest, lies on the right bank of the Danube opposite Novi Sad (Neusatz), chief town and headquarters of the Danube banate, with which it is connected by two bridges and since 1929 also administratively. There are two fortresses, an upper one which rises 150 feet above the Danube on rocks of serpentine surrounded on three sides by the river (forming the most northerly spur, 400 feet high, of the Fruška Gora) and a lower one which stands at the foot of the cliffs on the north. In the upper fortress there are no private houses but only military buildings, including the celebrated arsenal with many trophies from the Turkish wars, while the other fortress has a fine market, a main and two side streets. Numerous trenches have survived within the area of the two fortresses which have room for 10,000 men. The town proper lies half on the Danube and before its union with Novi Sad it had over 5,000 inhabitants (1921). There are many vineyards in the vicinity.

There was a settlement here even in Roman times called Caesum in which definite traces of the cult of Mithra have been found. According to one legend, the settlement received its later name Petrocium from Peter the Hermit, who assembled the armies for the First Crusade here. In any case the town was known as Petrikon in the wars of the Byzantine emperor Manuel Comnenus (1143—1180) with Hungary. After belonging for a brief period to Byzantium, Petrovaradin returned to the kings of Hungary, and Bela IV in 1237 presented the town and the royal palace to the Cistercian abbey there of the B. M. V. Belefontis de monte Varadinipetri. This abbey survived throughout the middle ages until 1521 but from 1430 it and the town of Petrovaradin passed under the control of the ban of Maća.

In Sulaimān's second campaign against Hungary, the first blow was dealt at Petrovaradin: the grand vizier and brother-in-law of the sultan, Ībrāhīm Pasha (cf. Sūfīlī, ʿotbāmānī, i. 93—94), stormed the town on the 15th and the fortress after a brave resistance on the 27th July. The Turks held Petrovaradin till 1687 when they began to withdraw gradually after the fall of Ofen. Soon afterwards the town was occupied by the Austrians (finally in 1691) and after Sürmeli ʿAlī Pasha had besieged it in vain for 23 days in 1694 (from Aug. 20) it was definitely ceded to them by the peace of Carlowitz 1699. But it is from the war of 1716—1718 that Petrovaradin is best known. The grand vizier Şahīd ʿAlī Pasha (on him cf. ʿAbd al-Rahmān Sharaf, ii. 138 and Sūfīlī ʿotbāmānī, iii. 528—529) with an army of 150,000 men encountered Prince Eugène of Savoy near the town and tried to begin
a regular siege. The Austrian general however foiled this attempt and instead fought a five hours pitched battle with his 64,000 men which ended in the defeat of the Turks (Aug. 5, 1716). This battle, in which 'Ali Paša himself fell, with the fall of Temesvár and Belgrade (1717) about a decision in the war and led to the peace of Požarevac [q.v.] which established the Turkish frontier much farther south of Petrovaradin (indeed over the Save). A little later the empress Maria Theresa built the new fortress. In the Hungarian war of independence (1848—1849) Petrovaradin was for over nine months in Hungarian hands until it surrendered to the Austrians in Sept. 6, 1849. On the dissolution of the Austro-Hungarian monarchy in 1918 the town passed to Yugoslavia.

Bibliography: (in addition to references in the article): Ewliya Čeibî, Sîyahnamese, viii. (Stanbul 1928), p. 145—147 (gives a very full account of the capture by the Turks; the other statements are rather vague as most of the figures are left unfilled); Hammer, G.O.R., ii. 50; iii. 866 und iv. 145; Zinkeisen, G.O.R., ii. 652 and v. 533—534; Sh. Şâmî, Kâmûs al-'Alâm, ii. 1498 (wrongly thinks, that Petrovaradin remained Turkish down to the reign of Ahmad III [1703—1730]); 'Abd al-Râhîm Sharâf, Türâkhi-Devletî-i OTTOMAN, ii. 143; Meyers Reisebücher: Turkei etc., Leipzig-Vienna 1898. p. 33; J. Modestin in Naradina encyclopedija, iii. (Zagreb 1928), p. 336—337 (where some further literature is given); Almanah kroatische Jugoslavije, Zagreb 1931, p. 531; Glasnik Istoriskog društva u Novom Sadu, vol. vii, Heft 1—2, Sremski Karlović 1933 (special number devoted to Novi Sad and Petrovaradin with important contributions and several old plans [from 1688] of the latter town).

FEHMISIAHRAKTAREVIÇ

PHARAO. (See FINNIAH.)

PIÎLE PASHA. Ottoman Grand Admiral, came according to St. Gerach, Tage-Buch (Frankfurt a/M. 1674, p. 448), from Tolma in Hungary and is said to have been the son of a shoemaker probably of Croat origin. Almost all contemporary records mention his Croat blood (cf. the third series of the Relazioni degli ambasciatori Veneti al Senato, ed. E. Alberi, Florence 1844—1845, and esp. iii/ii. 243: di nazione creto, vicino al confluente dell'Ungheria; p. 357: di nazione creto; iii/iii. 294: di nazione unghiera; p. 418). Following the custom of the time his father was later given the name of 'Abd al-Râhîm and described as a Muslim (cf. F. Balinger, in Litteraturdenkmale aus Ungarns Turkenzeit, Berlin and Leipzig 1927, p. 35, note 1). Piîle came in early youth as a page into the Serai in Stambul and left it as kapudan pașa [q.v.]. The year 961 (1554) saw him appointed Grand Admiral (kapudan pașa: q.v.) with the rank of a sandjak bey and four years later he was given the status of a beylerbey (J. v. Hammer, G.O.R., iii. 403). He succeeded Sinâm Pașa, brother of the grand vizier Rustu Pașa [q.v.], in the office which he had held from 959—961 (1548—1554). When after his capture of Djerba and other heroic achievements at sea he thought he might claim the rank of vezir with three horse-tails, Sultan Süleyman, thinking it too soon for this promotion and regarding it as endangering the prestige of the vezirate (cf. Hâddîdd Khalîfî, Ta'fıfat al-Kirâr, first edition, fol. 36 and J. v. Hammer, G.O.R., iii. 406), married him to his grand-daughter Djâher Sultan, a daughter of Selim II (cf. J. v. Hammer, G.O.R., iii. 392: summer of 1562). It was not till five years later that he received the three horse-tails as a vezir related by marriage (dâmûd) like Mehmed Sükollî Pașa. In the meanwhile he had carried out several of his great exploits at sea and attained the reputation of one of the greatest of Ottoman admirals. Along with Torghud Reis, at the instigation of the French ambassador d'Aramon, he had harassed the coast around Naples, besieged and taken Reggio and carried off its inhabitants into slavery. In 982 (1553) he endeavoured in vain to besiege Elba and Piombino (cf. J. v. Hammer, G.O.R., iii. 418) and finally took the fortified harbour of Oran in Algeria with 45 galleys. In the following year with 60 warships he occupied the port of Bizerta (Bish-Zerr) and a year later ravaged Majorca with 150 galleys and burned Sorrento near Naples. In 985 (1558) he lay inactive with his fleet, 90 in number, before Valona in Albania in order to watch the enemy fleets there which were preparing an enterprise against Djerba and Tripolis. July 31, 1560 saw his greatest exploit at sea, namely the capture of Djerba which had shortly before been taken by the Spaniards: this he did with 120 ships setting out from Modon. On Sept. 27, 1660, he held his triumphant entry into Stambul, to which he had sent in advance the news of his victory by a galley (cf. J. v. Hammer, G.O.R., iii. 421 sqq.). The Grand Admiral did not take the sea again till four years later when in Aug. 1564 he took the little rocky peninsula of Peñón de Vélez de la Gomera from the Spaniards and in order to prepare for the conquest of Malta, which the sultan's favourite daughter Mîhrîmâ [see RUSTEM PASHA] was conducting with all her resources. This time however fortune no longer favoured him, for the siege of Malta in June—July 1565 failed against the heroic courage of the Christian defenders who performed miracles of bravery and inflicted heavy losses on the Ottomans. During the Hungarian campaign of Süleyman in the spring of 1566 Piîle Pașha was placed in charge of the harbour and arsenal of Stambul (cf. J. v. Hammer, G.O.R., iii. 438), after previously undertaking a successful raid on Chios and the Apulian coast (ibid., iii. 506 sqq.) in which the island of Chios and its harbour passed into his hands (Easter Sunday 1566). Under Selim II, his father-in-law, he was disgraced and deprived of office of Grand Admiral because, it was alleged, he had kept the greater part of the booty of Chios for himself (according to the report of the embassy of Albrecht de Wijs of May 1568 in J. v. Hammer, G.O.R., iii. 782) and replaced by Mu'ezzin-zade 'Ali Pașa. He at once endeavoured to regain the imperial favour by new exploits at sea. In April 1570, he set sail with 75 galleys and 30 galleots, landed first of all on the island of Tine which he captured and next took part in the conquest of Cyprus. On January 20, 1578 — according to Ottoman sources on the 12th Dhu l-‘Khâdîdhi (Jan. 21, 1578) — he died in Stambul according to Stephan Gerlach (cf. Tage-Buch. Frankfurt a/M. 1674, p. 448). His vast estates passed some to the imperial treasury and some to his widow and children. His widow later married the third vezir Mehmed Paşa and his second son became Sandjak Bey of Klis (Clissa) above Split (Spalato in Dalmatia) in 1584 (cf. the Italian record quoted by J. v. Hammer, G.O.R. iv. 104, note 1: La
Sultana fo moglie di Piale era di Mohammadbessa terzo vizir, ha ottenuto dal Sign. il Sangio di Clissa per il secondo suo figlio con Piale. Piale Pasha is buried in Stambul in the Kasm Pasha quarter in the mosque founded by him (cf. Häfiz Hüsein, Hadżkât al-Djawânî, ii. 25 sqq.).

Bibliography: In addition to works quoted in the text the histories of Zinkessel and Iorga, and Râmiz Pasha-zâde Mehmêd Efendî, Sharî'î-i Kapûddînî: Deryâ, Stambul 1285; also Häfiz Hüsein, Hadżkât al-Djawânî, ii. 25 sqq. and Mehmêd Thûrâyî, Sûfîli-i ihanna, ii. 41 sq. (Franz Badinger)

PIASTRE. [See GHRUSH.] PIE. [See Pall.] PINANG or PULAU PINANG, an island on the western shore of the Malay Peninsula, lying in latitude 5° 24' N. and longitude 100° 21' E. The area is 276 km.²; it is separated from the mainland by a channel from 3 to 16 km. broad. The town of Pinang is built on the northeastern promontory, 4 km. off the shore of the mainland. The official names, Prince of Wales' island and Georgetown, never became popular and exist only in official documents. — The island was acquired in 1786 for the East India Company against a yearly payment of £1,500. The Sultan of Kêdah by an agreement with Capt. Light, who founded the colony in the same year. He hoped the place would become an emporium of the eastern seas. It was practically uninhabited at the time and was made a penal settlement shortly afterwards. It remained the penal station of India till 1857. In 1805 it became a separate Presidency. When in 1826 Singapore and Malaka were incorporated with it, Pinang continued to be the seat of government; in 1837 Singapore was made the capital. In 1867 the Straits Settlements were created a Crown Colony; since that year Pinang has been under the administrative control of a resident responsible to the Government of the Straits. He is also the representative of the Malay State of Kedah. Unofficial members of the legislative council of the colony, which holds its sittings in Singapore, are appointed with the sanction of the Secretary of State for the Colonies to represent Pinang. — Pinang has an excellent harbour and is an important as a port of call; there is regular steamer-communication with the Dutch East Indies, Singapore, (British) India etc. The terminus of the Federated Malay States' railways is on the mainland opposite. Trade is adversely affected however by the proximity of Singapore, there are no port duties. — The island is now well opened up, the population has rapidly increased; it is largely Chinese and Tamil, though Malays are well represented, most of these originating from the Malay Peninsula and Sumatra; all of them are Muhammadans of the Şâhî's rite. — Wellesley Province, a strip of land opposite on the mainland, forms part of the settlement of Pinang. It was acquired in 1800 from the Sultan of Kêdah against a yearly sun paid for it and includes a district which was purchased in 1874 from the Sultan of Perak. The soil is well cultivated; there are large estates owned by Europeans and Chinese. Until recently a second strip of territory on the mainland and adjoining islands, known as the Dindings, formed part of the settlement; it was ceded by Perak and has now been restored to that state. — The population of the whole settlement, Dindings included, was 304,000 according to the census of 1921, that of the town 123,000; the number of Muhammadans is not known.

(P. A. KERN) PIR (P.), elder. In the Sûfî system he is the murîd, the "spiritual director". He claims to be in the direct line of the interpreters of the esoteric teaching of the Prophet and hence holds his authority to guide the aspirant (murîd) on the Path. But he must himself be worthy of imitation. "He should have a perfect knowledge, both theoretical and practical, of the three stages of the mystical life and be free of fleshly attributes". When a pir has proved — either by his own direct knowledge or by the spiritual power (wilâyât) inherent in him — the fitness of a murîd to associate with other Sûfî's, he lays his hand on the aspirant's head and invests him with the kîrka. The murîd need not necessarily receive his investiture from that pir who gave him instruction, who is called the pir-i şûhât. Pir also is the title given to the founders of derwîsh orders. — [See BIBLIOGRAPHY.]

PIRÎ MEHMEÐ PASHA, an Ottoman grand vizier, belonged to Amasîa and was a descendant of the famous Djalâl al-Dîn of Alâsî, and therefore traced his descent from Abû Bakr. He took up a legal career and became successively kâdi of Soňîa, Sîlîrî and Galatas, administrator of Mehmêd II's kitchen for the poor (îmaret) in Stambul and at the beginning of the reign of Bâyazîd II attained the rank of a first defterdar (boğh defterdar). In the reign of Selîm I he distinguished himself by his wise counsel in the Persian campaign (cf. J. v. Hammer, G. O. R., ii. 412, 477 sqq.), was sent in advance to Tabrîz to take possession of this town in the name of the sultan, and at the end of Sept. 1514 was appointed third vezir in place of Muşfâ Pasha who had been dismissed (cf. J. v. Hammer, G. O. R., ii. 420). He temporarily held the office of a kâmînakân of Stambul and after the end of the Egyptian campaign was appointed grand vizier in place of Yûnus Pasha, who had been executed on the retreat from Egypt in 923 (1517). In this capacity he took part in the conquest of Baghdâd in 1521. Soon after the occupation of Rhodes, Piri Pasha fell from the sultan's favour as a result of the slanders of the envious Ahmed Pasha who coveted his office, and was dismissed with a pension of 200,000 aspers on the 13th Sha'bân 929 (June 27, 1523). His successor was İbrahim Pasha [q. v.], a Greek from Parga. Piri Mehmêd lived another ten years and died in 939 or 940 (1532–1533) at Sîlîrî, where he was buried in the mosque founded by him. One of his sons, Mehmêd Beg, had predeceased him in 932 as governor of Kîlî. Piri Mehmêd Pasha created a number of charitable endowments, among them a mosque in Stambul called after him (cf. Hâfiz Hüsein, Hadzâkât al-Djawânî, ii. 308), a madresse and a public-kitchen as well as what was known as a tâb-khânî. — While his lâkûb was Piri, he used Remzî as a makhlâs for his
PIRI MEHMED PASHA — PIRI MUHYI 'L-DIN REIS

poems, which are of moderate merit (cf. J. v. Hammer, Geschichte der Osmanischen Dichtkunst, ii. 137 sqq. with the wrong year of death and also i., p. 187 under Piri without the identity of the two being recognised, also Latifi, Ta'dhib, p. 168 under Remzi).

Bibliography: Mehmeh Thauriya, Safiyya- 13th Sihman, ii. 43, more fully in ‘Othmânîa- Mehmed Tâbi, Hâdîkat ‘al-Wasir, Stambul 1271, p. 22 sqq. and the Ottoman chronicles of the xvith century. — Brüsîf Mehmed Tahir, ‘Othmânîa- Mu’allefîler, ii. 111 sqq. deals with Piri Mehem Peasha as a literary man. According to him he wrote a small collection of poems (Divanî) and an exposition of a part of the Mahomet and of the Şâkiti entitled Tuhfe- Mihr but both works are described as still in MSS.

PIRI MUHYI 'L-DIN REIS, Ottoman navigator and cartographer, was probably of Christian (Greek) origin and is described as nephew of the famous corsair Kemal Reis (on the latter see the Bonn dissertation by Hans-Albrecht von Bunsdi. Kemal Reis, ein Beitrag zur Geschichte der türkischen Flotte, Bonn 1928 and especially J. H. Mordtmann, Zur Lebensgeschichte des Kemal Reis, in M.S.O.S., xxxii., part 2, Berlin 1929, p. 39 sqq. and p. 231 sqq.), who was probably a renegade. His father is said to have been a certain Hayreddin Mehemed, while he himself in the preface to his sailing-book calls himself the son of Hayreddin Hayreddin, who is perhaps only to be taken as a name chosen to rhyme with Piri (cf. Smâm b. ‘Abd al-Mannâr or Dâwâd b. ‘Abd al-Wadid and similar rhyming names of fathers of renegades usually formed with ‘Abd). As Hayreddin cannot be an ‘adam but at most a maâshûr, the pure Turkish descend of Piri is more than doubtful, if he was not called simply Hayreddin Mehemed, i.e. bore a name for which there is evidence, for a later period it is true, in the Safiyya- 13th Sihman, ii. 239.

The same source (ii. 44) says that the corsair’s full name was Piri Muhuyî ’l-Din Reis. In any case it may safely be assumed that Piri is to be taken as a translation, while the real name (‘adam) was probably Mehemed — the combination Piri Mehemed was quite customary in the xvith century — i.e. an ‘adam to which Muhuyî ’l-Din corresponded as khiibas (cf. Ist., xi. 1921, p. 20, note 3). Of the life of Piri Reis, who made many voyages under his uncle Kemal Reis (d. 16th Shawwal 916 or 16 Jan., 1511) and later distinguished himself under Khair al-Din Barbarossa (q.v.; July 4, 1546) we only know that on these raids he had acquired an unrivalled knowledge of the lands of the Ottoman world. He afterwards held the office of kapudan of Egypt and in this capacity sailed from Suez on voyages to the Persian Gulf and the Arabian Sea. In 1545 (1547) he occupied ‘Aden (cf. Die osmanischen Chroniken des Rastem Paasha, ed. by Ludwig Forrer [Turk. Bibl. xx., Leipzig 1923], p. 174 sqq. with full commentary). In 1559 (1551) he lost on the coast of Arabia several of his 30 ships, took the port of Masqat and carried off a number of its inhabitants as slaves. He then laid siege to Hormuz but raised the siege and returned to Basra, having accepted bribes to do so (it is said according to Pecewi, ‘Alî, Ḥâdîdî Khâli, Tuhfat al-Khârî, first edition, fol. 28 according to J. v. Hammer, G.O.R., iii. 435).

A report that an enemy fleet was approaching decided him to return hurriedly home with only a few galleys but with all the treasure he had collected. He was wrecked on the island of Bahrain, but succeeded with two ships in reaching Suez, then Cairo. Khâbîr Pascha, the governor of Basra, had in the meanwhile reported to the Porte that the expedition had been a failure, which resulted in an order for the execution of Piri Reis being sent to Cairo. He was beheaded there, in 962 (1554-1555), it is said, but probably rather in 959 or 960 and his estate sent to Stambul. After his death envos are said to have rived from Hormuz representing the plundered inhabitants to demand the return of the treasure he had carried off; they were naturally not successful. The post of kapudan of Egypt was given to another noted corsair, Murâd, the dismissed sandjakê of Kâfif (probably the same as survives in the proverb, according to H. F. v. Diez, Denkwürdigungten von Aten, part i., Berlin 1811, p. 55, as Murâd kânpîn).

Piri Reis’s is generally known as the author of a sailing-book of the Aegean and Mediterranean known as Bâhirye in which he describes all the coasts he had voyaged along with an account of the currents, shallows, landing-places, hays, straits and harbours. Piri Reis had already begun the work in the reign of Selim I (d. Sept. 1520) although he says in the preface that he did not begin it till 927 (end of 1520), in order to make the dedication to Selimân the Magnificent be more impressive. He presented the completed atlas to the latter in 930 (1523). Paul Kahle has published an edition with text and translation based on the known manuscripts, entitled Piri Reis, Bahriye, Das türkische Segelhandbuch für das Mittelländische Meer von Jahren 1521 of which so far (middle of 1935) vol. i., text, part 1 and vol. ii., part L, section 1—28 have been published, Leipzig and Berlin 1926. Separate sections had been previously published, e.g. H. F. v. Diez, op. cit.; E. Sachau, Sallston, in Centinario della Nascita di Michel Anari, ii, Palermo 1910, p. 1 sqq.; R. Herzog, Ein türkisches Werk über das Ägäische Meer aus dem Jahr 1520, in Mitteilungen des Kaiserl. Deutschen Archäolog. Instituts, Athenische Abteilung, xxvii., 1902, p. 417 sqq.; E. Oberhammer, section Zypern, in: Die inseln Zypern, Munich 1903, p. 427—434 — Other sections in Carlier de Pinon, ed. E. Blochet (with pictures) and K. Foy, in M. S.O.S., part ii., xi. 1908, p. 234 sqq. Cf. thereon F. Taebscher in Z.D.M.G., lxvii. (1923), p. 42 with other references.

The so-called “Columbus map”, found in October 1929 by Khalil Edhem Bey in the Seray Library in Stambul, according to his signature on it of the year 1513, seems also to go back to Piri Reis’s; it is in Turkish in bright colours on a parchment, 5½ by 60 cm., and represents the western part of a map of the world. It comprises the Atlantic Ocean with America and the western strip of the Old World. The other parts of the world are lost. It has been supposed that this is the same map as Piri, according to a statement in his Bahriye, presented to Sultan Selim in 1517 which would explain its preservation in the Imperial Library. On it cf. Paul Kahle, Imprinte Cuskutz in una Carta Turca del 1517, in La Culture, year x., vol. 1, part 10, Milan-Rome 1931; do., Una mappa de America hecho per il turco Piri Reis, in el año 1513, havandose in una mappa de

(FRANZ BÄRINGER)

PIŠHWĀ, THE TITTLE GIVEN TO ONE OF THE MINISTERS OF THE BAHMANT-sULTĀNS OF THE DECCAN; THE CHIEF MINISTER OF SHIWADJI; THE HEAD OF THE MARĀTHĀ CONFEDERACY. (Persian ‘leader’; Pahl. pīshîpāy; Arm. pishpahy. For older forms see Hubschmann, Armeische Grammatik, i. 230.)

Shiwadji, the founder of Marāthā political power in the Deccan, was assisted by a council of ministers known as the Ashta Pradhan, one of whom was the Pishwā or Mahāysa Pradhan. The office of Pishwā was not hereditary and the nature of Shiwadji’s autocratic rule can be gauged from the fact that his ministers were not even permitted to select their own subordinates or nāthās, all of these being appointed by Shiwadji himself. Next to Shiwadji the Pishwā was the head of both the civil and military administration, placing his seal on all official letters and documents. During the reign of Rādjâram the power of the Pishwā was eclipsed by that of the Pant Pratindhâ. It is usual to regard Bāllâjī Visvânāth (1714—20) as the first Pishwā because he was the real founder of a line of rulers who gradually supplanted the rādjas of Sâtâr as heads of the Maratha confederacy. But there were really six pishwās before this time, namely, Shâmândhâl Nikânâth Roòker, Mora Trimbak Pînglè, Nikânâth Môreshwar Pînglè, Pâramâm Trimbak Pratindhâ, Bâhiro Môreshwar Pînglè, and Balkrishnâ Visaùdev.

Bâllâjī Visvânâth Bhaṭṭâ (1714—20), the founder of the dynasty of the pishwās, was an able Cîtpâwân of Konkanasth Brahman whom Shâhâj (1778—1799) appointed as chief minister. The difficulties facing Shâhâj, the political confusion in Mahârâstra, and the weakness of the later rādjas of Sâtâr were the chief factors underlying the growth of the power of the pishwās. The imprisonment of the Pratindhâ Dâdôba (Dajâlîvanâro) at the time of Shâhâj’s death removed another obstacle to their advancement and marks the end of Deshasth Brahman political influence in the Deccan. Bâllâjī Visvânâth found the country torn by civil war: he left it peaceful and prosperous. By complicating the revenue accounts he increased Brahman control over the state finances. During his period of office the Mughal emperor, Muhammad Shâh, recognized the right of Shâhâj to levy lâwâth, a contribution of one-fourth of the land revenue throughout the Deccan, and permitted him to supplement this levy by an additional tenth of the land revenue, called nardemukhâ. His son, Bâldâji Râo I (1720—1740), adopted a policy of territorial aggrandizement. The year before his death, a treaty, principally of a commercial nature, was concluded with I.aw, the Governor of Bombay (Aitchison, vi., No. i.). The third Pishwā, Bāldâji Bâldâji Râo (1740—1761), entrusted the government to his cousin, Sâdânâv Râo, the Bâlî and the command of his armies to his brother, Râkgûhânîth Râo, better known as Raghoba. His period of office was marked by the rapid extension of Marâthâ power, his armies ravaging the country from the Carnatic to the Pandâjâd until their crushing defeat at Pânîpat [q. v.] in 1761. As a result of an agreement in 1755 an Anglo-Marâthâ expedition crushed the power of Angria, a pirate chief whose depredations were a constant menace to the shipping of the Konkan coast. At the end of this expedition a treaty (Aitchison, vi., No. iii.) was made with the Pishwā which provided for the exclusion of Dutch traders from Marâthâ territory. Dissensions broke out after the death of this pishwā which seriously impared the strength of the Marâthâs. Power now passed to the Marâthâ generals, Sindhiâ of Gwâllîor, Bhonsâl of Nâgpur, Holkar of Indore, and the Gaekwâr of Baroda.

During the rule of Mâdhu Râo (1761—1772) Sindhiâ, in 1771, once more re-established Marâthâ influence in northern India, and Sâdânâv Râo, the Mughal emperor, who had deserted the English, became a puppet under Marâthâ control. Mâdhu Râo was succeeded by his brother, Nârâyan Râo (1772—1773), who was murdered at the instigation of his uncle Raghoba. For a time the Marâthâ confederacy was divided into two hostile camps, the supporters of Raghoba, who was a pretender, and the pîshwâsh, and the Court Party under Nânâ Phadnavis, who supported the claims of Mâdhu Râo Nârâyan (1774—1795), a posthumous son of Nârâyan Râo. The action of the Bombay Government in supporting the claims of Raghoba led to war between the English Company and the Marâthâs which ended, thanks to the exertions of Warren Hastings, with the Treaty of Sâlbâi in 1782. This treaty which virtually recognized the independence of Sindhiâ secured peace between the English and the Marâthâs for twenty years. Marâthâ history now becomes a struggle between Nana Phadnavis (Bâlîdâjî Djanardhun), who attempted to bolster up the power of the pîshwâ, and Mâhâlâdji Sindhiâ, who strove to control the Pîshwâ in order to use him as a cloak to cover his aggressions.

The seventh and last pîshwâ was Bâldâji Râo II (1796—1818). During the governor-generalship of the Marquis Wellesley, after the death of Nana Phadnavis, in 1800, there followed a struggle for supremacy at Pûna between Holkar and Dâwlât Râo Sindhiâ who had succeeded Mâhâlâdji Sindhiâ in 1794. During this struggle the Pîshwâ fled to Bassein where he threw himself upon the protection of the English. In 1802, by the Treaty of Bassein (Aitchison, vi., No. xiii.) Wellesley constituted himself protector of the Pîshwâ who agreed to accept a “subsidiary” force and to permit the
English to mediate in his disputes with the other Indian princes. This naturally did not prove acceptable to the other members of the Maratha confederacy. Unfortunately Bādžī Rāo came under the influence of an unprincipled favourite, Trim-bakūjī, who was privy to the murder of the Gaekwar’s emissary who had been invited to Pūna under a guarantee from the English of his personal safety. When Elphinstone, the Resident, reported that the Pishwā was secretly conspiring to form a Maratha coalition against the English, the Pishwā was forced to come to terms and sign the Treaty of Pūna (1817), which completed the work of Bassein. But Bādžī Rāo’s promises were written in water, for when Lord Hastings proceeded to crush the Marāthās, the Pishwā rose in revolt and plundered the British Residency. Eventually his forces were defeated and the plāhsāwip was abolished. Bādžī Rāo, however, was granted a pension and allowed to reside at Bīthūr where he died in 1851. His adopted son, Nānā Sāhib, disappeared in 1858.

**PIST (P.),** a kind of food compounded of the liver of gazelles or almonds etc. A daily portion of the size of a pistachio (pistah) is taken by those derelvers and others who undertake long fasts, e.g. the illa or forty-day fast, and is sufficient to maintain life.

**Bibliography:** Vullers, _Lexicon Persico-Latinum_, s. v. pist, illa. (R. LEVY)

**PLATO.** [See _AFLĀTŪN_.]  

**PLEVEN** (Plevna, Plevna, Turkish Plewne پیلیو), an important town in Northern Bulgaria, 350 feet above sea-level, in a depression formed by the little river Tăzenica (τήταιθα), which flows not far from the town on the right into the Vid, the right bank tributary of the Danube. Surrounded by hills and at the intersection of the high roads to Vidin, Nikopol, Sofia and the passes of the Balkans, Plevna has long been a place of strategic importance; it is now also crossed by one of the main railway lines (Sofia–Plevna–Sumen–Varna). This busy town, the capital of a circle, where the chief business is in cattle and wine, and which has museums, which recall the Russo-Turkish War, is rising rapidly and in 1926 had 29,063 inhabitants.

Although in the vicinity of Pleven there are the remains of Roman settlements, the town really arose only under the Turks. We have however very little definite information about this period of the town’s history. Ewliya Celebi’s statement that Plevna was built by the Wallachian ban Ladka (لاذک) has of course to be taken with caution; on the other hand, his assertion that “in the year 720 (1830) in the time of the Ghāzī Khudāwendi, it was taken by Mīkhal-Beg”, is not free from objections on chronological grounds. According to the same writer, Plevna after the conquest was an araplık-şef of the sons of Mīkhal- Beg, and at a later date was still within the sphere of influence of the noble family of the Mīkhal- oglu [v. v.], who had several buildings erected there. According to Ewliya Celebi and other Turkish sources (cf. vol. iii., p. 493a and _Glasnik Skopjske naučne društva_, xiii. 73 and 81), Plevna is the last resting-place of Mehmed Beg, a son of Kose Mīkhal, who died in 825 (1422), as well as of the celebrated Ali Beg Mīkhal-oglu who is said to have died after 1507. According to Ewliya Celebi, Ali Beg was buried in the mosque founded by him. That Plevna was the capital of a district in the sandjak of Nikopol we know not only from Ewliya Celebi but also from Bādžī Kāfat (Rumeli und Borna, transl. by v. Hammer, _Sperneth_, xvii. 23). In the xviiith century, when Ewliya Celebi visited the town, it had 2,000 houses, a ruined fortress, a college founded by the above mentioned Ali Beg, 7 schools, 6 tekkes and 6 mosques etc. — In the best days of Turkish Plevna had, according to Sh. Sāmī (Kūmānī al-Āfīm, ii. 1522–1533), 17,000 inhabitants and 18 mosques but, as many Muslims migrated after the Russo-Turkish war, the population sank to 14,000 and most of the mosques were described in 1889 as in ruins.

But it was not till the Russo-Turkish war of 1877–1878 that Plevna became world famous. When the Russians after crossing the Danube on July 19, 1877 appeared before Plevna, they met with the unexpected resistance of Othman Paşa, who had come up from Vidin. They attacked unsuccessfully on July 20 and 30 and suffered heavily. As Plevna was not fortified, Othman Paşa now had strong and extensive earthworks thrown up around it. On Sept. 11 and 12 the Russians with the help of the Rumanians, whom they had summoned to their assistance, made a third attempt to take Plevna by storm and were again repulsed with great losses. After these and further failures (on Sept. 18 and Oct. 19, the allies decided upon and began a regular siege of the town which was conducted by Totleben, the defender of Sebastopol, in person.

In spite of all Othman Paşa was not yet shut in on his west side and received munitions and supplies from there until Oct. 10. In the middle of November he was completely surrounded and on the morning of Dec. 10 he undertook a last desperate sortie in an attempt to break through the western lines of the besieging army of 120,000 men (including the Czar). This bold effort was accompanied by success for a few hours but in the meanwhile the heroic Othman Paşa (the “Lion of Plevna”) was himself wounded, and towards midday on the same day was finally forced to surrender with some 40,000 men. The Russians
had already forced their way into Plevna, the five
months’ siege of which had cost them and the
Rumanians over 40,000 men.
The fall of Plevna opened the way for the
Russians to Adrianople and on to San Stefano,
where they dictated the peace which was there
concluded.

Plevna. [See Plevna.]

Polei, transcribed by Arab writers as بّلٰد, is
the old name of a stronghold in the south of Spain
the site of which is the modern Aguilar de la Frontera, a little town with about
13,000 inhabitants, in the province of Cordova, 12 miles N. W. of Cabra and of Lucena. The identification of Polei with Aguilar was made by
Doyi on the strength of information supplied by
a charter of 1258. The town which played a considerable part in the rising of the famous 'Omar b. Hafṣān (q. v.) against the Umayyad emirs of Cordova is again mentioned in the xiiith century
by the geographer al-Idrisi. The ruins of a fortress
which dates from the Muhammadan period can
still be seen there.

(E. Évy-Provençal)

Pomak, the name given to a Bulgarian
speaking Muslim in Bulgaria and Thrace.
This name which is usually given to them by their Christian fellow-countrymen, used also to be given occasionally by Bulgarians to Muslims speaking Serb in western Macedonia. There however the Serbian Muslims are usually called torbeši (sing. torbe) by their Christian fellow-citizens, sometimes also potwir, more rarely kurki etc. How far these Serbian Muslims are still called Pomsaks by some people depends mainly on the influence of the Bulgarian school and literature and would only be correctly applied when used of Muslims who had migrated actually from Bulgaria, e. g. in 1877—1878 (cf. J. H. Vasiljević, 'Jeanne Stara Srbiya, i. 187—188. 207 and 236). In the Rhodopes the Bulgarian Muslims are also called akhrjani (ch = čh) or agjarjani (Ischirkoff, ii. 15). In some
parts of Southern Serbia and Bulgaria the name šitak (pl. šitaci) is occasionally heard and it used
sometimes to be said (most recently by A. Urošević,
in Glasnik Srpskog naučnog društva, vol. v., 1929,
p. 310) that this name was only given to
Serbs converted to Islam; the truth seems to be
however that this name is limited to Turks in the
two countries (cf. H. Vasiljević, Muslimani..., p. 34 and Elezović, in Srpski književni glasnik,
xxvii., 1929, p. 610—614 and in Rečnik knjovsko-
metohiskog dijalka, ii. 449). No more correct is
the statement that apovi is the name given to
Serbian Muslims in Southern Serbia; for this seems to be a name applied to one another only by
Albanians who are closely related to one another
(brothers and cousins, according to H. Vasiljević,
Muslimani..., p. 34).

The origin and the etymology of these names
are in part more or less obscure and arbitrary.
The usual explanation that the name Pomak comes from the verb pomoti "to help" and means helper (pomagat) i. e. auxiliary troops of the Turks, was
first given by F. Kanitz (Donau-Bulgaren und
der Balkan, vol. ii., Leipzig 1882, p. 182) but
was soon afterwards (1891) declared by Jireček
(see Bibliography) to be inadequate. Another equally improbable etymology is that which explains Pomak by the Bulgarian word mok = "torment, force", and justifies this explanation by stating
that the conversion of the Bulgarians to Islam on
a considerable scale was carried out by force and
strains (Ischirkoff, ii. 15). Quite recently Iv. Lekov
(see Bibliography) has explained the name Pomak from poturnjak (lit. "one made a Turk"). Whether the word pomak which in Turkish means "club, cudgel", in Uigur "Muslim" and in South Russia "pedlar" (cf. Barthold, Oerta Asia..., p. 82—83), is in any
way connected with Pomak, or has been influenced
by the Bulgarian poturnjak or confused with it
is still to be investigated.

The history of the conversion of the "Pomaks"
or "Torbeši" is very little known in detail. In
any case the adoption of Islam did not take place
everywhere at once but was gradual and at different
periods. A beginning was made immediately after
the battle of Marica (1371) and after the fall of
Tmovo (1393); many Serbs and Bulgars at this
time, especially as Jireček thinks, the nobles and
the Bogomils among these, adopted Islam. After
these first conversions under Bayazid II consider-
able numbers of converts were made according to
native tradition in the reign of Selim I (1512—
1520); for this purpose he is said to have sent his "favourite Şinān Pasha" into the territory of the Sar-mountains. The highlands of Çepino (in the
Rhodopes) were converted according to local
histories in the beginning of the xviith century,
according to Jireček (Fürstenthum, p. 104) how-
ever, not till the middle, in the reign of Mehmed IV
(1648—1687); the grand vizier Mehmed Koprulu
is said to have taken a leading part in the work.
The conversion to Islam of the Danube territory
(Loveć etc.) is put in this period. Towards the
end of this century (xvith) further conversions
took place among the Serbs in the Debar region.
In some districts Islam only gained a footing on
a large scale in the course of the xviith century
and sometimes not till the beginning of the xixth
(e. g. in Gora, south of Prizren).

Until recently one was very often inclined to
believe that these conversions to Islam were made
under compulsion, even by force of arms, but now
the view is beginning to prevail that the authorities

The Encyclopaedia of Islam, III.
never took any direct steps to proselytise them. Christian subjects; conversion was on the contrary voluntary and for quite different reasons except in a few exceptional cases (cf. e. g. H. Vasiljević, Muhsmans..., esp. p. 53–61).

Towards the end of the sixth century when the process of conversion had ceased for decades everywhere, the great majority of the Slav Muslims (Bulgar and Serb) were to be found in the Rhodopes and the mountains of eastern Macedonia and in groups of considerable size up and down Macedonia as far as the Albanian frontier, a wide area which stretched in the north from Plovdiv (Philippopolis) to Salonika in the south and in the east from the central course of the Arda over the Vardar and even beyond the Cni Drim, i.e. across the districts of Ohrid, Debar, Gostivar and Prizren to the west. At that time only a small part of this territory which was interspersed with Christian areas belonged to the principality of Bulgaria; the greater part was still Turkish and only after the Balkan War did it pass to Serbia or after the World War to Yugoslavia. — In addition to the main body of Muslim Bulgars in the Rhodopes mountains, there were at the same time also sporadic groups north of the Balkan range in the Danube territory, in the circles of Loveč, Plevn (Plevna) and Ochrovo (Rahov).

Since then however the frontiers of the "Pomaks" have receded considerably. During the siege of Plevna almost all the Bulgarian Muslims fled from the Danube districts to Macedonia; although they returned in 1889 they soon afterwards migrated into Turkey. After the union of eastern Rumelia and Bulgaria in 1885 the Rhodopes "Pomaks" also began to emigrate. — The frontiers of the "Torbeši" likewise were not unaffected. The Balkan War and the World War brought about certain changes which resulted in the migration of some bodies of Serbian Muslims out of Southern Serbia.

As a result of various wars and the territorial changes that followed them, the statements regarding the number of Muslim Slavs in Bulgaria, Macedonia (or Southern Serbia) and Thrace as well as about their total number differ considerably and are often unreliable. For example Jireček (1890) estimated the total at about 300,000 including 100,000 in Loveč and Plevna (see Bibl.). At the beginning of the 20th century Gavrilov (see Bibl.) estimated the total at only 400,000 and Ishirkoff at about the same (1917).

As regards the distribution of these Muslim Slavs according to countries the following statistics may be quoted. In what used to be the principality of Bulgaria Jireček estimated (1891) their number at most 28,000 souls and before the Balkan War there were between the old frontiers of Bulgaria (according to official statistics of 1910) 21,143 (0.40% of the population). In the lands acquired in the Balkan War in Southern Bulgaria there were however many more Pomaks, mainly in the regions of the rivers Arda, Mesta and Struma so that the official census of 1920 makes their number 88,399 (1.82% of the whole population). A somewhat higher figure is given by the Annuaire du Monde Musulman for 1929 (p. 305), namely 16,000 Pomaks in Bulgaria proper and 75,317 in Thrace i.e. 91,337 in all. Finally the latest published statistics (1926 census) give 102,351 Bulgarian speaking Muslims in Bulgaria, i.e. 1.87% of the population, while the number of Muslims in Bulgaria without distinguishing their languages was then 759,296 or 14.41% of the population. — Of these 102,351 Bulgarian speaking Muslims only 5,799 lived in the towns and the remaining 66,552 in the villages; the proportion of men to women was 1,000 to 1,055.

Literate Pomaks in the whole of Bulgaria in 1926 numbered only 6,659 in 1926 (of whom 5,534 were men).

The number of Pomaks (in reality of Muslim Slavs) in Macedonia was according to S. Vranković (1889; see Bibl.) 144,051 men (this figure is therefore doubled in Deux cents ansludes sur l’ethnographie de la Macédoine, publ. by the Comité national de l’Union des organisations des émigrés macédoniens en Bulgarie, Sofia 1928, and amounts to 288,092 [with an error of minus ten souls]), according to G. Weigand (Die nationalen Bestrebungen der Balkanvolker, Leipzig 1898) 100,000 men, according to V. Kancov (1900; see Bibl.) 148,800 and according to V. Sis (Musulmnen, Zurch 1918) 150,030 souls.

As regards the number of Serbian speaking Muslims in Southern Serbia, they were estimated by H. Vasiljević (Muslimani..., p. 199) whose calculations are however in some extent based on the situation before the Balkan War, at 100,000 souls; now (1935) the figure is put at 60,000 and the number of Serbo-Croat speaking Muslims in the whole of Yugoslavia at about 900,000 (exact figures cannot be given because the statistics according to religions have not been published).

For Thrace the figure of 75,337 Muslim Bulgars has already been given from the Annuaire; in Western Thrace there were according to the intercalated census (of March 1920) 11,739 (cf. La question de la Thrace, ed. by the Comité suprême des réfugiés de Thrace, Sofia 1927).

On these statistics the following observations may be made. The Bulgars (e. g. Kancov) usually include as "Pomaks" all the Macedonian Slavs of Muslim faith, i.e. including Serbs from Southern Serbia. On the other hand as an account of their religion these Muslim Slavs are sometimes carelessly counted with the Turks. Moreover some statistics are not completely free from chauvinistic and political bias. The European estimates finally are based on approximations or are quite arbitrary.

In spite of the fact that the Pomaks and Torbeši are occasionally included among the Turks and in spite of the fact that they sometimes call themselves Turks, they are nevertheless the purest stratum of the old Bulgarian or Serbian population as the case may be who have preserved their Slav type and Slav language (especially archaic words) very well, sometimes even better — as a result of their being cut off from the Christians and their isolation in outlying districts — than their Christian kinsmen, who have been constantly exposed to admixture from other ethnic elements. They have a certain feeling of aversion for the Turks whose language they do not understand. It is only in the towns that we find that in course of time some of these Slavs have adopted the Turkish language. What bound them to the Ottomans was not language but principally a common religion with its prescriptions and customs (e. g. the veil of women) which along with Turkish rule naturally imposed upon them many Arabic and Turkish
words. In spite of this there survived among them many pre-Islamic customs and reminiscences of Christianity (observation of certain Christian festivals etc.).

That the Bulgarian Muslims in particular occasionally (esp. in 1876–1878) fought with the Turks against the Christian Bulgars may be ascribed to the fact that as a result of their low cultural level they made no clear distinction between nation and religion and that their Christian fellow-countrymen treated them as Turks and not as kinsmen. These mistakes were repeated in the Balkan War when the victorious Bulgarian troops and the orthodox priests were led to so far as to convert the Pomaks in the Rhodopes and other districts to Christianity mainly by pressure and force of arms. But on the conclusion of peace they returned to Islam again. This is frankly admitted by the Bulgarian geographer Bîrkov (Ishirkhoff) and the Bulgarian writer Iv. Karavanov (in his Bulgarian periodical National Education, Küstenid 1931, according to Cemalovic [50]2).

Fifty or sixty years ago the songs and ballads of the "Pomaks" were the subject of much dispute. A Bosnian ex-cleric, Stefan Verkovic (1827—1893), an antique dealer in Sarajevo, published under the title of Veda Slovna (i.e. the "Veda of the Slavs" Belgrad 1874, vol. i) a collection of songs which were alleged to have been collected mainly among Pomaks and which celebrated "pre-Christian and pre-historic" subjects (the immigration into the country, discovery of corn, of wine, of writing and legends of gods with Indian names, of Orpheus etc.). A. Chodzko, A. Dunon (Chansons populaires bulgares infiltres, Paris 1875; cf. also Recue de litterature comparée, xiv, 1934, p. 155 sqq.) and L. Geiter (Prestične tradicije Thrášk i Bulharh, Prag 1878) also strongly supported belief in this "Veda": it was even assumed that the Pomaks were descended from the ancient Thracians, who had been influenced first by Slav culture and then by Islam.

But of ballads on such subjects neither the Muslim nor the Christian Bulgars knew anything and Jireček, who investigated the question on the spot, repeatedly described this "Slav Veda" as the fabrication of some Bulgarian teachers (Fürstenthum, p. 107). We now know that Verkovic’s chief collaborator was the Macedonian teacher Iv. Gologanov (cf. Pentcho Slawejkoff, Bulgarske Volkslieder, Leipzig 1919, p. 15).

In view of the fact that the Muslims in question consist mainly of conservative dwellers in the mountains and villages — who are very industrious, honourable, and peaceful — they are for the most part illiterate and there could be no possibility of any literary activity among them. The only people among them who can write are the köhdjas, who frequently use the Turkish language and Arabic alphabet when writing. They also frequently use the latter alphabet when writing their mother tongue. Of earlier generations of Bulgarian Muslims who distinguished themselves in the Turkish army or otherwise in the Turkish service. The modern generation who have been educated in the state schools have more national consciousness and are more progressive but are too few in number to make themselves felt in politics or otherwise.

PONTIANAK, the name of a part of the Dutch residency "West-Andfeeling" of Borneo, also of the Sultanate in the delta of the river Kapuas and of its capital.

As a Dutch province Pontianak includes the districts of Pontianak, Kubu, Landak, Sanggau, Sekadau, Tajan and Meliana. The administration is in the hands of an assistant-resident whose headquarters are in Pontianak where the Resident of the "West-Andfeeling" also lives. The Dutch settlement is on the left bank of the Kapuas, where also is the Chinese commercial quarter. The Malay town lies opposite on the right bank. The sultanate of Pontianak with its capital of the same name is independent under the suzerainty of the Netherlands and is 4,545 sq. km. in area. In 1930 the population consisted of 100,000 Malays and Dayaks, 562 Europeans, 26,425 Chinese and 2,378 other Orientals. The term Malaya includes all native Muhammadans among them many descendents of Arabs, Javanese, Buginese, and Dayaks converted to Islam. The Dayaks
in the interior are still heathen. Roman Catholic missions are at work among the latter and the Chinese. This very mixed population is explained by the origin and development of Pontianak.

The town was founded in 1772 A.D. by the Sharif 'Abd al-Raḥmān, a son of the Sharif Ḥusayn b. Ṭāmīṣ b. ʿAbd al-Ṣamad b. ʿAbd al-Ḥalīm, an Arab who settled in Matan in 1735 and in 1771 died in Mampawa as vizier revered for his piety. In 1742 'Abd al-Raḥmān was born, the son of a Dayak concubine, and very early distinguished himself by his spirit of enterprise. He attempted to gain the ruling power, successively in Mampawa, Palembang and Bandjar-masin, from which he had to retire with his band of pirates, although the people had been his patron, after he had taken several European and native ships. By this time he had married a princess of Mampawa and Bandjar-masin and possessed great wealth. On his return to Mampawa his father had just died. As he met with no success here, he decided to found a town of his own with a number of other fortune-seekers. An uninhabited area at the mouth of the junction of the Landak with the Kapuas, notorious as a dangerous haunt of evil spirits seemed to him suitable. After the splinters had been driven away by hours of cannon fire he was the first to spring ashore, had the forest cut down and built rude dwellings there for himself and his followers.

The favourable position of the site and the protection which trade enjoyed there soon attracted Buginese, Malay and Chinese merchants to it so that Pontianak developed rapidly and Sharif 'Abd al-Raḥmān was able by his foresight and energy to hold his own against the neighbouring kingdoms of Matan, Sukadana, Mampawa and Sanggau.

He appointed chiefs over each of the different groups of people and regulated trade by reasonable tariffs. He was able to impress representatives of the East Indian Co. in Batavia to such an extent that they gave him the kingdoms of Pontianak and Sanggau as fiefs after the company had bought off the claims of Banten to Western Borneo. As early as 1772 the Buginese prince Radja Ḥādžiḍi had given him the title of sultān. After his death in 1785 his son Kāsim succeeded him. He was the first to change the Arab ceremonial at the court for more modern ways.

According to the treaty concluded with the Dutch Indies government in 1855, the sultān receives a fixed income from them while they administer justice and police of the country. The relationship to the Dutch Indies government has now been defined in a long agreement of 1912, which also settles the administration of justice and the taxes. From the local treasury, then constituted, the sultān receives 6,800 guilden a month; he also receives 50/9 of the excise on agriculture and mines. In keeping with the nature of its origin Pontianak is predominantly Muslim in character and a relatively large number take part in the pilgrimage to Mecca. For these pilgrims who are known as Džawa Funtiana, the sultān when he performed the pilgrimage in the 30's founded several wažf houses in the holy city.

The main support of the whole population is agriculture and along with it trade in the products of the jungle. The exports are copra, pepper, gambir, sago, rubber and roten, especially to Singapore and Java. Rice, clothing and other articles required by Europeans and now more prosperous Chinese and Arabs are imported. The import and export trade is mainly in the hands of the Chinese. They live together in the Chinese quarter in the European half of Pontianak on the left bank where also the other foreign Orientals have settled.

This is therefore the centre of trade and commerce in the valley of the Kapuas.

The Chinese traders maintain with their own steamers connections with the Chinese merchants farther up the river and also over seas with Singapore, both in competition with the Royal Paketfabri Co.

In the swampy lands of Pontianak, intercourse with the outer world is almost exclusively by water. Only in recent years have motor-roads been laid over the higher ground from Pontianak to Mampawa and Sambas, to Sungel Kakap and from Manior to Landak.

It may be particularly mentioned that Pontianak is a healthy place for the town is very often inundated and it is so far from the sea that there is no malaria.

PORT SAID, a Mediterranean seaport of Egypt at the entrance of the Suez Canal on its western bank, in 31° 15' 50" N., 32° 18' 42" E., 145 miles from Cairo by rail via Zagazig and Ismā'īlīya, 26 and 145 miles from Damietta and Alexandria respectively along the coast. It was founded in 1859, as soon as the Suez Canal was decided, during the reign of Sa'īd Pasha [q.v.], Viceroy of Egypt, and was named after him. Except for the strip of sand which, varying in width between 200 and 300 yards, separates Lake Manzala from the Mediterranean, the site of the present town was under the water. This site was selected by a party of engineers under Laroche and de Lesseps, not on account of being the nearest point across the isthmus to Suez, but because the depth of the water there corresponded most favourably to the requirements of the projected canal. As soon as work was started on the Canal, five wooden houses were constructed above the water, supported on massive piles and equipped with a bakery and a water-distiller for the use of the pioneers. A year later, dredgers began to deepen the waters of the newly established harbour, and the mud thus raised was immediately utilized for more buildings which soon numbered 150 houses, 150 cottages, one hospital, one Catholic and one Orthodox Church, and one Mosque, besides the workshops, covering 30,000 square metres in all. This, however, did not suffice for the rapid growth of the population as the work on the Canal progressed towards Ismā'īlīya. To meet this emergency and in the absence of stone quarries within reasonable reach of Port Sa'id, the manufacture of artificial stones capable of resisting the action of sea-water was begun by Messrs. Bossa. Details of this process are given in 'Ali Pasha Mührak's Khīyat (x. 38—40). These stones weighed about 22 tons each and were used both for the construction of the two huge breakwaters of the outer harbour and for the creation of further building ground. In the same year, mail boats sailed up the Canal to Ismā'īlīya while others brought imports to Port Sa'id. In 1868 the breakwaters were finished, and in 1869 the Canal was completed. As a result,
the town was thronged by consuls and representatives of many nations, and the population reached 10,000.

Like most Eastern foundations of this period, Port Said was from the beginning marked by a division of 1st European and 2nd Turkish. The town has grown up in the west and south-west around the mosque, officially inaugurated on Friday 14th Shābān 1300 (1883); and the second is situated near the Canal entrance and the beach towards the north and east-north. A regular water-supply now comes from the Nile by the Ismā'īliyya Canal and the pipes leading to a large reservoir (château d'eau) capable of holding several days' supply. The rapid growth of the town may be illustrated by the increase of its population, numbering 49,884 in 1907.

The town quickly rose to eminence as an emporium of Egyptian trade — second only to Alexandria in that country, and it also became one of the most important stations for sea-borne traffic between the East and the West. Its outer harbour, covering an area of 570 acres, is two miles or breakwaters built in such a way as to protect the canal from the continuous onrush of sea-water and sand-drifts, and its docks numbering originally 32 on the western bank, all had to be extended. A large floating dock (259 ft. long, 85 ft. wide and 18 ft. deep, with a lifting capacity of 3,500 tons) was constructed; and, further, in the years 1905—1909, new docks were established on the eastern bank. To accommodate the workmen on these docks, the new town of Port Fa'ādīl, named after the present King of Egypt, has sprung up on the east side.

To safeguard the ships approaching the Canal by night, the Khedive Ismā'īl ordered four lighthouses to be erected at the expense of the Egyptian Government at Rosetta, Burullus, Burdīj al-'Izba near Damietta, and Port Sa'id. The last is 174 ft. high and its beam is distinct from those of the other three and is visible at a distance of 20 miles. It lies at the base of the western mole which, at its sea-ward extremity, carries a colossal statue of Ferdinand de Lesseps by E. Ferrmi, unveiled in 1899.

Among the notable buildings of Port Sa'id are the offices of the Suez Canal Company. The town has a very cosmopolitan population and is noted for no special industry. Small dealers live on the sale of Oriental wares and curios to tourists on their passage to the East or to the West.

POZAREVAC (pronounced Pözhárevaţ; in the French orthography Pojárevaţ; Passarowitz is a corruption like the Turkish Passarofca), a rising commercial town in Yugoslavia (in the Danube banate), headquarters of the district of the same name in the fertile plain between Morava and Mlava, only 10 miles from the Danube port of Dubravica with 13,731 inhabitants (1930).

The town, the name of which is popularly connected with the Serbo-Croat word pozar ("fire") (M. Š. Miščević, Knjiga Srba, Belgrad 1876, p. 172 and 1058), is first mentioned towards the end of the 14th century. It must however have been previously in existence and have become Turkish like the surrounding country in 1459.

According to the Turkish treasury registers of Hungary of 1565 (A. Velies, Magyarországi török kincstári defterek, ii., Budapest 1890, p. 734), Pozarevac belonged to the Turkish sandjak of Semendre (Semendria. Smederevo), and in the middle of the 16th century Hādīji Khalifa describes it as the seat of a judge (bağdâcî) (cf. Spomenik, xviii., Belgrad 1892, col. 26). Towards the end of the century many Serbs migrated from Pozarevac and at the beginning of the 18th century it is sometimes mentioned as a village.

Pozarevac was however destined soon to become famous through the peace which ended the Austro-Turkish war of 1716—1718. At the end of 1714 Turkey had already, declared war on Venice on the pretext that the peace of Carlowitz was not being observed and in 1715 occupied Morea and some of the Ionian Islands. Austria, which at first intervened to negotiate as an ally of Venice, in 1716 entered the war herself and her armies led by Prince Eugene won three great victories, at Peterwardein, Temesvár and Belgrad, so that England intervened to secure peace. After long preparations (cf. von Hammer, G. O. R. 2, iv. 159—164) the congress of Pozarevac was convoked. The negotiations at which plenipotentiaries of Turkey, Austria, Venice with England and Holland as mediators took part began on June 5, 1716 and the Treaty was signed on the 21st July.

Peace was concluded on a basis of the country actually held by the opponents at the time (uti possidetis): Austria retained the eastern part of Sirmia, the banate with Temesvár, the whole of N. E. Serbia, with Belgrad, Pozarevac etc. and Little Wallachia; Venice also retained a few places she had taken on the Dalmatian and Albanian coasts, received certain commercial privileges and the island of Cerigo (Turkish Kapikonak) and had to restore to Turkey the whole of the peninsula of the Morea and the south-eastern districts of the Hercegovina. By a commercial agreement which was also concluded in Pozarevac on July 27 Austria secured certain trading and other privileges in the Ottoman Empire.

Following the traditional formalities observed after the conclusion of a treaty of peace the first Turkish plenipotentiary İbrahim Pasha went to Vienna with his retinue and Count Wirmitz, the Austrian representative in the negotiations, to Constantinople. A member of the Turkish embassy wrote in 1726 an interesting account which has been published by Fr. van Kraelitz in text and translation (Briefe über den Zustand des Gross-Botschafters İbrahim Pasha nach Wien im Jahre 1710, in S. B. Ak. Wiss., vol. 158 [1908]; in T. O. E. M., vii. [1832 — 1916], 211—227, the Turkish text of this edition was reprinted by A. Refik).

During the Austrian occupation (1718—1739) Pozarevac was the most important place in this territory. In the Serbian war of independence against Turkey it was besieged for a long period, and had finally to surrender to the Serbs (1804). In 1813, the town again fell into Turkish hands but became Serbian again in 1815.
In the years of peace that followed (1815–1915) Pozarevac developed. Prince Milos in 1825 made it his second residence and had two konaks (palaces) built there. Shortly afterwards a Prussian officer visited the town and left interesting notes on the conditions there (Otto v. Pirch, *Reise in Serbien im Spätherbst 1829*, Berlin 1830, part i., p. 119–171). In the second half of the 19th century the population increased steadily but otherwise the town offered “little of interest” (F. Kanite, *Serbien*, Leipzig 1868, p. 13).

At the beginning of the 20th century Pozarevac was one of the most important towns in Serbia. In the Great War it was occupied by the Germans in 1915 and by the Bulgarians (from Oct. 1916) but in the autumn of 1918 it was again occupied by the Serbs. Since then it has belonged to Yugoslavia.

**PRANG SABIL**

**Djihad** [q. v.] in the East Indian archipelago; *prang* (Indon.) = **war**.

The course of history has made it impossible for Muslims to fulfill their duties with respect to the *dijahd*. The representatives of the law however still teach and the masses readily believe that arms should only be allowed to rest against the *kafir* so long as any success must be despained of. In the Muslim countryside under non-Muslim rule like the Netherlands Indies the teachers however prefer to be silent. At most they say that under the prevailing conditions there is no legal inducement to conduct the *dijahd* in view of the superior forces and the comparative freedom enjoyed by believers. Or on the other hand, they expound particularly those texts which remove the more serious feuds between Muslim and *kafir* to the next world. — When political events, catastrophes, misfortunes of any kind result in disturbances, it is not at all uncommon for the Muslim population of the East Indian Archipelago to look at these things from a religious point of view. It may happen on such an occasion that the feeling of being bound to fight the unbeliever is aroused again. If the leaders utter the war-cry "prang sabil" it finds a ready answer. It is true that according to the law, the signal for the *dijahd* should be given by the imam. There is now no imam; but even in the time when the sultan of Turkey was still recognised as imam any misgivings were easily overcome if the imam remained inactive. Outside the boundaries of the territory in which

the holy war is proclaimed, the silent sympathy of the believers is with the fighters. Any forcible conversion which takes place, anywhere in the Archipelago as generally praised by Muslim chiefs and represented as a fulfillment of the more solid obligations of the *dijahd*.

This practical teaching of the *prang sabil* was of particular importance in Atjeh in the last quarter of the 19th century. Circumstances were very much in its favour. The Atjehnese were a self-satisfied people, convinced of their own superiority and also of a warlike disposition. Non-Muslims were everywhere hated or at least despised. At the same time those individuals who were in any way connected with divine worship were held in great honour. These qualities were however not in themselves sufficient to conduct a *prang sabil* with success against a disciplined attacking power. A military leader was necessary. There was indeed a sultan in Atjeh but he was a negligible factor as regards the situation in the country. The chiefs, the real rulers of the land, preferred to confine themselves to their own territory; they were not fitted for co-operation. Bands of armed men ravaged the country doing the *kafir* as much damage as possible but they could raise no claim for general co-operation and assistance as they were not waging war in the way Allah had willed. The law lays down the sources from which the costs of the *dijahd* can be met; pillage and plundering, as was the practice of these bands, could never be blessed by Allah. In addition the organisation of these bands was such that they never held together long. In these circumstances it was the *‘ulama* (also used as a singular) who took in hand the organisation of the war; among these the most prominent were the *‘ulama* of Tirto, from olden times a centre of study of sacred lore. They reproached the chiefs with their slothfulness and the people with preferring worldly advantages to heavenly rewards. Going up and down the country they preached the doctrine of the *dijahd* and there was no one who could openly oppose them; indeed they represented the divine law. In order to be able to wage war a war-chest was needed. The *‘ulama* claimed the share of the *saark* set aside for Allah’s purposes; the *‘ulama* of Tirto in particular used it to train a strong force of duly recruited soldiers. The *‘ulama* were for a long time the soul of the war. It is however clear that the authority which they had gained over the secular rulers could only last so long as they were able to inspire the people to continue fighting. When the war was over, they returned to their old still very influential position as representatives of the holy law. — Various writings which together form a regular war literature, proved an effective means of inspiring their warriors with enthusiasm. They were an accompanying feature of the *prang sabil*. *‘Ulama* wrote pamphlets and tractates in which attention was called to the duty of waging the holy war; emphasis was laid on the heavenly reward that awaited the *shahid*, and the *kafir* to be overcome were painted in the blackest colours. An elaborate poem, the *Hikayat Prang sabil*, of which there were many versions, was specially intended to be declaimed in order to increase the courage and contempt for death of those who heard it.

PRANG SABIL — PUL

1079

PUL (FULBE), a West African tribe, originally pastoral nomads, now to a large extent settled and agricultural. Fulbe, their name for themselves, is the plural of Pulo; they are called Fulani by the Hausa, Fulata by the Kanuri, and by French writers Peul. Their language is called by themselves Fulfulde.

They appear to have come in from the northeast, perhaps ultimately from Fezzân, but their lines of migration in more recent times have rather been from west to east. Migeod, in 1923, found them in what is now the British Mandated Territory of Cameroons, which they had penetrated during the lifetime of persons whom he met. Their main centres of distribution are Foutadjallon in French Guinea and Massina in Haut-Sénégal-Niger.

Ethnographically, although various theories have been advanced, they are now accepted as Hamitic by race. Meek (vol. i., p. 94) points out that they have a strong resemblance to the Proto-Egyptians. Delafosse was disposed to class them as hybrids between some mysterious Beni-Israel (not yet satisfactorily accounted for) and the tribe or tribes whom they found already in occupation; according to one account, the Tekrûr (now called the Toucouleur [q. v.]), Probenius (op. cit., p. 165) says they migrated to the S.W. from Fezzân in order to escape the oppression of the “Gara”, identified by himself and others with the Garamantes of Herodotus. He finds them spoken of in Soninke tradition under the name Bororo (still retained by the Nomad Fulbe in Adamawa at the time of Passarge’s visit in 1893) or Borojogo, as a despised subject race. He finds no originality in the legends collected from their “singing men” (mabube), but holds that, so soon as they become independent they adopted the traditions of their former overlords. In passing, it may be remarked that Probenius is clearly in error when he says (ibid.): “Schon Barthe identifiziert sie mit den Leucaethiopen”

Barth’s own words are (ii. 503): “Darum aber mochte ich sie nicht (f)ur die Leucaethioper der Alten halten”. Barth’s own view is that they are half-way between a mixed Arabo-Berber and a pure negro stock. His reference, in the same passage, to indications of a connection between their language and that of the “Kaffer Sudafríka’s” must be based on the existence of noun-classes in both, a fact which will be dealt with in a later paragraph.

Meek, after considering various hypotheses, comes to the conclusion (i. 98) that “the Fulani are probably a very ancient Libyan tribe whose original home was Egypt or Asia”. He considers the nomad Fulbe as the purest representatives of the Hamitic element in Nigeria (i. 26).

Their physical characteristics are perhaps best summed up in the following quotation from Meek (i. 26), which agrees in the main with the accounts of Mungo Park, Barth, Nachtigal, Passarge and other travellers:

“Their colour varies from a light to a reddish brown”; — Passarge says “hellrotlich gelb” — “their physique is slender and sinewy, and sometimes even effeminate; the face oval, the lips thin, the head dolichocephalic, the forehead rather receding towards the temple, the nose straight or even aquiline, and often slightly rounded at the tip. There is little or no prognathism, the hair is ringlety and often straight… On his chin a man wears a scraggy tuft of beard. The eyes are almond-shaped and overhung by long black silken lashes. The beauty of countenance and graceful carriage of Fulani women are well known. In character the Fula is distrustful and shy, shradd and artful. No African native can equal him for dissimulation and finesse”.

This estimate coincides on the whole with that of the observers previously mentioned. Passarge calls them “eine ritterliche Nation”, in the sense that they despise both manual labour and trade, regarding war, the chase and the care of cattle as the only occupations worthy of a man. They have more dignity and force of character than the negro; at the same time, “trage ich dem Fulla (sic) mehr oberlegte Hinterlist zu. Er ist der grössere Charakter, aber auch im gegebenen Moment der grössere Schurke”. Barth, also, says (ii. 503): “Die liebenswürdige Seite im Charakter der Fulbe ist ihre Einsicht und ihre Lebhaftigkeit, während sie andererseits einen ausserordentlich natürlichen Hang zur Bosheit haben und bei weitem nicht so gutmütig sind wie die eigentlichen Schwarzen”.

Passarge describes them as “fanatical in religion”, but, as the nomad Fulbe are still, at any rate to some extent, pagan (Meek, i. 200 and elsewhere), this must refer to the settled Fulbe, called by the Hausa Fulanim Gidda, who seem to have been converted to Islam, like the other tribes of Nigeria, about the eleventh century (Meek, ii. 1—11). Those settled Fulbe are “by free intermarriage and wholesale concubinage with the races whom they have conquered, fast being absorbed by the negro. Their noses are broadening, their lips are thickening, their hair is curling, their build is coarsening, and the prognathous mouth of the Negro type is beginning to appear. While they have profoundly modified the Negro type of those with whom they have settled, this modification must, in the absence of any fresh infusions of Fulani blood, tend rapidly to disappear… they do not intermarry with the nomad pagan Fulani” (Meek, i. 28).

According to Labouret, nomad Fulbe are scattered over the country in small colonies “généralement installées à côté des villages sédentaires pour en garder les troupeaux”. They supply the settled population with dairy products: Fulbe women selling milk and butter are a familiar sight to travellers.

The Fulbe reached the Upper Senegal region about 1300 A.D., when the Ghana empire was at the height of its power. About 1400, a section of the tribe, coming from Ternees in the north-west, established themselves in Masina, under chiefs of the Djallo family. This kingdom was conquered by Askia Omar, the Songhá chief, in 1494. About the same time or not much later, a Pulo Chief (arbo) named Tengella revolted against Omar, but was killed in 1512. His son, Koli, set up an independent pagan kingdom in Badian, on the Upper Gambia, and his descendants, known as the Denianke dynasty, remained in power from 1559 to 1776.

The Fulbe entered Bornu during the xvith century and, as they had done elsewhere, gradually penetrated
the country in the guise of inoffensive herdsmen, until, watching their opportunity, "by a sudden coup, they made themselves its political masters" (Meek). Towards the end of the xviiiith century, Shehu Usman dan Fodio (born 1754) initiated a religious revival which ended in the conquest of Northern Nigeria. Usman established his capital at Sokoto (built by his son Belo in 1810) and before his death in 1817 was acknowledged as Sarkin Musulmi or spiritual head of the Muslims within his empire. He was succeeded by his son Belo, the "Sultan Belo" visited by Denham, Clapperton and Oudney in 1821. He had his capital at Sokoto and later at Wurno, while his uncle Abdulahi ruled at Gando.

Meanwhile, in the west, a Pulo marabout, Seku Hamadu, had converted the Masina Fulbe to Islam about 1810. Seized Djennie and even (1826) made himself master of Timbuktu; but the dominion founded by him was short-lived, his grandson being overthrown by al-Haddj "Omar in 1862. Before this, in 1776, the Muslim Tektor, in Futa Toro, had revolted against the Fulbe Deniânke and established a "theocratic elective monarchy" (Delafosse) which lasted till the French annexation in 1881. — "Omar, at the head of another section of the Tektor, had conquered the local Fulbe and continued to give trouble to the French authorities till his death in 1864 (Delafosse).

The settled Fulbe do not differ greatly in customs from other Islamized tribes, though even these appear to retain some traces of their pagan ancestry. Animal tabus, which may or may not be connected with totemism, are observed by some Muslim families (Meek, i. 174); apparently Hausa are meant, but it would seem as if the statement were intended to include at least one "Fulani Muslim sub-tribe". Moreover, when Muhammad al-Tünsi says (Meek, i. 99): "In Sudan it is related that they descend from a chameleon", this, so far from being "a false invention for the purpose of contempt" may reflect a real totemic belief.

A system of castes, otherwise unknown in Negro and Bantu Africa is common to the Fulbe, Wolof, Malinke, Marka and Bamman, with this difference that, with the Fulbe, the "castes" originated in tribal distinctions ("werden durch bestimmte Völker gebildet"); Frobenius, p. 166), and therefore are rigid, whereas, among the Mandé, "werden die Kasten durch Sippen gebildet, die in ihrer Kastenzugehörigkeit schwanken". The castes of the Fulbe are:

- Nobles: Rimbe (plural of Dimu)
- Serfs: Rimaihe
- Traders and Herdsmen: Diawambe
- Singers and Weavers: Mabube
- Leather-workers: Sakebe (elsewhere Gargassabe)
- Wood-workers: Laobe (elsewhere Sekaebe)
- Smiths: Wailbe (plural of Bayl)

It is noteworthy that the Fulbe, unlike the other tribes mentioned, did not recognize a separate class of slaves. The serfs (called "Horige" by Frobenius) were the descendants of the Rimbe by captive women. The wood-workers' and traders' castes are peculiar to the Fulbe; the rest are common to all the other tribes.

In contrast to the Galla, Somali and other pastoral Hamitic tribes, the Fulbe do not seem to have any special customs or ritual connected with milk. They keep two distinctive breeds of cattle, one or both of which they are believed to have brought with them in their southward migration. Some particulars concerning their cattle are given by Meek (i. 115—118).

The Fulfulde language was long thought to be absolutely unique. If Barth found in "An- deutungen eines Zusammenhanges dieses Stammes mit den Kaffern Südafrikas", he must have had in mind the system of noun-classes, which, in some respects, resembles that of the Bantu speech-family, though both more complete and more logical than the latter. F. Müller placed the language in a class by itself, forming one division of the "Nuba-Fulah group", for which he could discover no other affinities. A. W. Schleicher (1891) attempted to connect it with Somali, relying chiefly on verbal coincidences, entirely disregarding the system of noun-classes, and admitting that one important grammatical feature of Fulfulde is not to be found in Somali. In so far as he classes the language as Hamite, he is partly in agreement with Meinhof who, somewhat later, came to the conclusion that it represents a pre-Hamitic stratum, from which were developed, on the one hand, the Hamitic languages as known to us to-day (Shilha, Saho, Galla, etc.), on the other, the Benue-Congo.

In addition to the class-system already mentioned (in which the plural is formed by a change, not, as in Bantu, of prefix, but of suffix), Fulfulde exhibits a remarkable cross-division into a. human and non-human; b. large objects and small objects. Here, the plurals are formed by a change of initial consonant according to certain fixed rules summed up by Meinhof as the Law of Polarity. From this latter classification, Meinhof worked out a hypothesis as to the origin of grammatical gender, which has much to commend it. This is set forth in his Sprachen der Hamiten (1912). More recently, however, he has found reason to modify his view of Bantu origins, and considers it at least possible that the class-system is not a primitive feature in Fulfulde, but might have been taken over from some Bantu or "Semi-Bantu" language (Westermann prefers the term "Klassensprachen" for the latter and would extend it to other than those enumerated in H. H. Johnston's Comparative Study). It has also emerged that Fulfulde is less of an isolated phenomenon than had at first appeared. It has points of contact with Serer and other adjacent languages, and in particular, with the little-known Biafoa of Portuguese Guinea, studied by G. A. Krause as long ago as 1895. Two important essays by A. Klingenheben in Zeitschr. f. Einigungen- sprachen, 1923—1924 and 1924—1925 are calculated to shed new light on a complicated problem. Fulfulde, like Hausa, possesses a written literature, for which the form of Arabic script, locally known as ajemi (Ar. 'adjami), has been used, probably, since the introduction of Islam. This script has peculiarities which cause it to differ markedly from that in use by the Swahili.

Some excellent facsimiles are to be found in Captain F. W. Taylor's Fulani-Hausa Readings. Bibliography: "Abd al-Rahmân al-Siddî, Tārîkh al-Sudân (transl. Houdas), Paris 1900; H. Barth, Reisen und Entdeckungen in Nord- und Central-Afrika in den Jahren 1849 bis 1855, 5 vols., Gotha 1857; Abbé P. D. Bolla, Esquisse Sinigalaise, physionomie du pays, eupeule,

PUNA, a city and district of British India in the Central Division of the Bombay Presidency. The district has an area of 5,332 square miles and a population of 1,169,798 of whom 54,997 are Muslims (Census Report, 1931). It was included in the powerful Andhra kingdom of the Dakhin which came to an end about the middle of the third century A.D. The available evidence also points to the fact that later the Western Calukyas, the Rashtrakutas, and the Deogiri Yadavas ruled over this area. With the Khalidji and Tughluq [see Muhammad Tughluq] invasions of the Dakhin it came under Muslim control. An interesting account of Puna when it formed part of the Bahmani kingdom has been recorded by the Russian traveller Athanasius Nikitin (1468-1474), who appears to have been the first foreign traveller whose impressions were preserved for us since the visit of the Chinese pilgrim, Fa-hien, in the beginning of the fifth century A.D. (R. H. Major, India in the Fifteenth Century, Hakluyt Society). Puna remained under Muslim rule until the growth of the Maratha power in the latter half of Awrangzib's reign. The district is therefore associated with the beginnings of Maratha history and closely connected with the career of Shivaji. Under the Pishwas [q. v.] it became the centre of Maratha power until the British conquest in the early nineteenth century.

Puna city, which is situated at the confluence of the Mula and Mula rivers, has a total population of 250,187, of whom 28,923 are Muslims (Census Reports, 1931). When but a village it was included in the nght of Maloji Bhonsla, the grandfather of Shivaji. Later, Shivaji finding Puna too exposed transferred his capital to Râgigad where his coronation took place. Puna was the scene of his daring attack upon Shâyista Khân. With the growth of the power of the Pishwas Puna once more became the capital and centre of the Maratha kingdom. The fortified palace of the Pishwas, known as the Shânwâri, was destroyed by fire in 1827. It was at Puna in the year 1885 that the first meeting of the Indian National Congress took place.

Pûst or Póst (P.), skin; Turkish: pöstäki; a tanned sheepskin, used as the ceremonial seat or throne of a pir or shâkh of a dervish order. The head, sides and foot had mystical significances ascribed to them. It corresponds to the Arabic bîtâf. According to Ewliya Celebi (Stambul, i. 495), the muwîd, after passing the test by the pir, is called şehîd pûst. On ceremonial occasions amongst the bâktâni order, the hall or convent was set out with twelve pîsts of white sheepskin in remembrance of the twelve imâms.

PUWASA (Skr. upavasa), in the East Indian Archipelago the name for the month of Ramadân and for fasting in this month or at other times. The Arabic names however are not unknown. Fasting is in Indonesia generally a favourite pious practice not only on the days prescribed or recommended by law but also as a means of attaining a desired end. The observation of the fast in Ramadân is here as elsewhere
PUWASA

regarded as the most important of the pillars of Islam; here also we find the popular belief prevailing that it can atone for the sins of the whole year. Not all however continue the fast to the end of the month; if any one finds it difficult he satisfies his conscience by fasting on the first and last days of the month; nevertheless such people or even those who do not fast at all are not at the same elevated sentiment which fills all and which stamps Ramadān as the Muḥammadan month like no other. Students, merchants, all whose business takes them away from home endeavour to spend this month at least in the family circle. In many districts the approach of puwasa is remarkable for the increase of slaughtering in the last days of the preceding month. The meat is preserved for use; meals in puwasa are somewhat heavier than usual in order to strengthen for the strain of fasting. The markets are also more animated towards the end of the month; this is the time to make purchases in view of the approaching end of the fast. The beginning of the month is publicly notified; e.g., the drums which form part of the equipment of the houses of prayer are beaten in a special way. The beating of the drums is repeated throughout the whole month at particular times of day, especially after sunset and shortly after midnight in order to warn the faithful that the time for eating is nearly over so that they can prepare the morning meal (Ar. ṣalār). Finally at the end of the month when the period of abstinence is over, the drums are beaten with particular vigour. The ascertainment of the end and beginning of Ramadān usually leads to friction every year. Those who are free-thinkers in religious matters use the calendar and do not hesitate to announce the end of the fast in advance; all who demand that the law should be strictly followed and these include the modernists, stick to ʿuruṣ (evidence of the senses). The tarawīḥ (Ar. tariqah) service is held in the public houses of prayer after the ʿiḥād; it is also eagerly attended by people who on other occasions do not observe the legal obligations of religion. The lack of seriousness and the unifying conduct of many participants induces the devout to avoid this tarawīḥ service and to observe it elsewhere with a small company of similarly minded people. It is worst in Atjeh; the tarawīḥ service here is simply a caricature (Smouch Hurgronje). A special importance is usually attached to the last five odd nights of the month devoted to religious exercises in connection with the ṣalāt al-kadr. They are not agreed as to which of these nights is most probably the correct one: the 21st and 27th are preferred but the practice varies in different localities. Part of the ceremonial observation of these nights consists in having illuminations in front of the dwelling-houses. In Java special emphasis is laid on the eating of meals together. Every one, if he can at all do it, gives a religious feast every evening. Later they go round their friends; open house is generally kept and time spent in rejoicing until far into the night. Besides these private entertainments there are meals of an official nature. The people of the village come to the house of the village headman to a religious feast; every one brings his share. The higher officials, especially the administrative officials, give a feast to their subordinates. The most splendid observance of these five nights however is found in the palaces of the Javanese princes. According to ancient custom, these feasts took place in great splendour after sunset; the broad forecourts of the palaces give an excellent opportunity for them. These feasts known as maṭlīman, with which many legends are associated, follow one another in a hierarchical succession. First the prince has his on the 27th, next the crown-prince, the princes of the blood, the governors and ministers; the dishes are intended for the hou’s subordinates. In recent years these maṭlīman have become restricted so that only the first of them retains its official character. The "little" feast is a day of rejoicing far surpassing the "great" feast. After the ʿftrā has been performed on the last day of Ramadān or even earlier and ablations have been taken with special care, in which the Javanese sometimes includes his cattle, a feast is prepared in the house in the evening after the breaking of the fast. The more devout make a modest meal precede this within the month of the fast to take farewell of the spirits of the deceased who wander about during Ramadān and now return to their abodes. The ceremonial ʿṣalāt on this 27th day in Atjeh but is a great ceremony in other places; there is no ʿṣalāt in the whole year which is better attended; many, who otherwise never enter a mosque never fail to be present on this occasion. In Java the regents, the highest native government officials accompanied by the whole of the staff of the regency, all in full dress go in the early morning, before sunrise from the regent's house to the mosque in order to take part in the ʿṣalāt there. After the end of the ʿṣalāt they return in the same way. The regent then receives the homage of all. The same custom prevails in the southern Celebes; except that here the native princes take the place of the regents. On this day the young people let off fire-works. After the ceremonial ʿṣalāt people set out in new clothes to visit relations and friends; congratulations are given on the successful conclusion of the fast and pardon is asked for any sins committed deliberately or involuntarily in the past year. It is a widespread custom to visit on this day the tombs of ancestors which have previously been cleaned, and there to spend some time scattering flowers and incense in pious devotion. In Java again we have the custom for the higher officials to treat their subordinates to what are called "mountains of food" (dishes of all kinds arranged in artistic forms). In the native states, at the end of the fast, one of the three public holidays is observed, the essential feature of which is the public representation of the unity of the kingdom in the person of the prince. The three feasts are on the whole on the same lines. The prince appears in oriental splendour and shows himself in the outer court of the palace before the assembled people. Large supplies of food have already been prepared in the royal kitchens and are ceremonially piled up into mountains of food of exactly defined form and preparation. These "mountains" which are so large that it takes several persons to carry one, are carried to the place of audience as soon as the prince has taken his seat and at his command taken on to the mosque. Here the food is distributed after the chief supervisor of the mosque has offered a prayer for prince and country. On account of the blessing associated with it it is lucky to get any of the food. The six days' fast in Shawwāl recommended by law is only observed
by a few very pious people; a minor festival is observed on the 8th of the month to mark its conclusion.

---

**QUETTA** (Pashtu: Kwaṭta), a taḥṣil and town in the Quetta-Pīghin district of British Balūčistān [q. v.]. The district, which contains the taḥṣil of Quetta and Pīghin and the administrative sub-division of Čaman, has an area of 4,806 square miles and a population of 147,541, of whom 107,945 are Muslims. Nearly all these Muslims are Pashtu speaking Paṭhāns, only a very small minority speaking Brahūl and Balūč. The district, which is very mountainous, is bounded on the north-west by Afghan territory, on the east by the Zhōb and Sibi districts, and on the south by the Balān Pass district and the Sarawan division of Kālāt.

The taḥṣil of Quetta, which is held on lease from the Khān of Kālāt, has an area of 543 square miles and a population of 76,649. The town of Quetta was destroyed by earthquake in 1935. In 1931 it had a population of 60,272, of whom 25,391 lived in the cantonment (Census of India, 1931, vol. iv., Balūčistān).

Until the middle of the eighteenth century, when Quetta finally came under Brahūl control, the history of Quetta-Pīghin is probably identical with that of Kandahār [for early history see the art. BALŪČISTĀN and KANDAHĀR]. Quetta was temporarily occupied by the British during the First Afghan War, 1839–1842 (see W. Hough, *A Narrative of the march and operations of the army of the Indus in the expedition into Afghanistan*, 1840). Its strategic importance was first recognized by General John Jacob who urged Lord Canning, in 1856, to garrison this important point of vantage (*Views and Opinions of General John Jacob*, ed. Pelly, p. 349). The proposal was rejected on the grounds that, surrounded by hostile tribes and cut off from its true base, the isolated position of the garrison would be extremely precarious. Ten years later, Sir Henry Green, the Political Superintendent of Upper Sind, seeking to improve the British scheme of frontier defence, proposed that Quetta should be garrisoned and connected by rail with Karāčī. Unfortunately for those who desired an advance into Bālūčistān the proposal had to face the united opposition of Lord Lawrence and his Council, all of whom were champions of non-intervention. Ten years passed. The exponents of "masterly inactivity" were no longer predominant in the Vicerey's council chamber; Khiwa [see *sīlōm*] had fallen before the Russiāns, who were drawing nearer and nearer to the gates of India; and, more dangerous still, the estrangement of Šir 'Ali had brought the Amir of Afghanistan and the Government of India to the brink of war. It was therefore decided, in 1876, to occupy Quetta. The British right to dispatch troops into Kālāt territory had been recognized by the treaty of 1854 (Aitchison, xi. 212–213). Chiefly owing to the efforts of Major (afterwards Sir Robert) Sandeman, this treaty was renewed and supplemented on December 8, 1876. by the Treaty of Jacobālūḏ (Parl. Papers, 1877, lxiv., c. 1808, p. 314–316). In return for an increased subsidy the Khān granted permission for the location of troops in, and the construction of railways and telegraph lines through, Kālāt territory. This was followed by the formation of the Bālūčistān Agency, for on February 21, 1877, Sandeman was appointed Agent to the Governor-General with his headquarters at Quetta.

The strategic importance of Quetta is now almost universally recognized. Protected on the south-west by the lofty Chiltan range and on the north-east by the Zagānč plane, it dominates all the southern approaches to the Indus valley.

RA', tenth letter of the Arabic alphabet, with the numerical value of 200. For its palaeographical evolution see the article ARABIA, plate i. It belongs to the group of the liquids and is frequently interchanged with l and n. It regularly corresponds to the r of other Semitic languages. It is not guttural but lingual.

(A. J. Wensinck)

RABÄB, the generic name in Arabic for the violin, or any stringed instrument played with a bow (kaws). The origin of the name has been variously explained: a. from the Hebrew rabāb (l'ad r being interchangeable); b. from the Persian rabāb (ravwoswa), which was played with the fingers or plectrum; and c. from the Arabic rabāb (to collect, arrange, assemble together). The first derivation is scarcely feasible. The second has a raison d'être, although the mere similarity in name must not be accepted without question. In spite of the oft repeated statement that the Arabs admit that they borrowed the rabāb from the Persians, together with the word kanūn for the bow, there is not the slightest evidence for it. No Arabic author (so far as the present writer knows) makes an admission of this kind, nor have the Arabs adopted the word kanūn for the bow; their own term kaws having been considered sufficient. It is true that we read in the Maṣūfah al-'Ulam (8th century) that "the rabāb is well-known to the people of Persia and Khurasān" (237), but this author was writing in hither Persia, and we know from al-Fārābī that the rabāb was also well-known in Arabic lands. One argument against the alleged borrowing from Persia is that the rabāb with the Persians has ever been a plucked and not a bowed instrument. Still, the Arabs may have borrowed the plucked instrument and adapted it to the bow. On the other hand, the Arabic root rabāb as the parent of the word rabāb has much in its favour. As the Arabic musical accousticians point out, plucked instruments such as the 'ud (lute), jambūr (pandore), etc. gave short (muntajil) sounds, but bowed instruments such as the rabāb gave long or sustained (muntajil) sounds. It was application of the bow which "collected, arranged, or assembled" the sound notes into one sustained note, hence the term rabāb being applied to the violin (see Farmer, Stud., i. 99).

The rabāb is mentioned as early as the Arabic polygraph al-Dihāqī (d. 868) in his Maḏma‘ī al-Raṣīl. Yet we cannot be sure whether this was the bowed rabāb or the plucked rubāb. At any rate, it already had a legendary history when he wrote. According to the Kashf al-Humūm (xvth–xvith century) it is first found in the hands of a woman of the Banū Ṭayy (fol. 263). Turkish tradition ascribed its "invention" to a certain 'Abd Allah Fārābī (Ewfiyā Celebi, Siyāhat-nāme, i/ii. 226, 234). An Andalusian legend places its invention within the Iberian peninsula (Delphin and Guin, Notes sur la poésie et la musique andres, p. 59). One thing is certain even if we have iconographic evidence of the violin in the viith or ixth century (cf. infra), the earliest literary evidence of the use of the bow comes from Arabic sources, i.e. from al-Fārābī (d. 950), the Ikhwān al-Safā (8th century), Ibn Sīnā (d. 1037), and Ibn Zālīla (d. 1048), as I have fully demonstrated elsewhere (Stud., i. 101–105).

Seven different forms of viol are known to Islamic peoples, viz.: 1. The Rectangular Viol, 2. the Circular Viol, 3. the Boat Shape Viol, 4. the Pear Shape Viol, 5. the Hemispherical Viol, 6. the Pandore Viol, and 7. the Open Chest Viol.

1. The Rectangular Viol. This consists of a wooden frame, more or less rectangular, over the face (wadāf) and back (sāhīr) of which is stretched a membrane (al-bilād). The neck (al-ma’lūd) is cylindrical and is of wood, whilst the foot (riqūf) is of iron. It has either one or two strings (waṭūr), generally of horsehair, Al-Khallīl (d. 791) says that "the ancient Arabs sang their poems to its [the rabāb’s] voice [or sound]" (Farmer, Stud., i. 100). In the Kashf al-Humūm (fol. 267) we read that it was used to accompany the pre-Islamic kasīda and the elegic poem. Probably the pre-Islamic rabāb was of this rectangular form. Lane (Lexicon, p. 1005) held this latter view. Ibn Ghāfīl (d. 1435) [q.v.] describes this violin of the bedouin as rectangular (musrābāh) and with a membrane face and back and one string of horsehair (fol. 78v). Nièbuh (l. 144) says that it was still called the musrābā in the xvith century. We certainly have a rectangular instrument shown in the frescoes of Kuṣār ‘Amra (Musil, pl. xxxiv), but it was played with the fingers and not with a bow. Yet even in modern times the rabāb of the desert was to be found played in this way as well as with a bow (Chritchton, ii. 350; Burckhardt, Bedouins, p. 43; do., Travels, i. 389; Burton, Personal Narrative, iii. 76). Nièbuh (Tah., xxvi, F) delineates a rectangular viol of two strings, although he says that he saw a viol of one string in Cairo. Villoteau (722–724: 913–918) distinguishes between the two instruments. In Egypt, he says, the rabāb al-ṣāfīr (poet’s viol) had one string, whilst the rabāb al-mughannī (singer’s viol) had two strings. Lane (Med. Egypt., chaps. xviii, xxi.) also describes them. These instruments never form part of a concert orchestra, being relegated to the folk. For other delineations of the instrument see Fétis (Hist., ii. 145), Engel.
1. **The Circular Viol**. The modern instrument of this form consists of a circular wooden frame or pan, the face, and sometimes the back, being covered with a membrane. There is no foot.

2. **The Boat Shape Viol**. This form is confined to the Maghrib. It consists of a piece of wood hollowed out into the shape of a boat. The chest (zadr) is covered with thin metal or wood pierced with ornamental rosettes (marseqārā'), whilst the lower part is covered with a membrane. The head (rād) is at right angles to the body, and it is generally furnished with two strings. It seems that it has been used by the Arabs and Moors of Spain since their invasion of the peninsula. It is praised by Ibn al-Durayd (684-756) and Ibn Bakr Yahyā ibn Hudhali (see al-Shalāḥī, fol. 15), and Ibn Ḥazm (see Muhammad b. Ismāʿīl, p. 472), and doubtless they refer to either this instrument or the **Pear Shape Viol** (see infra 4) since the **Glossarium Latino-Arabicum** (9th century) equates rabāb with *ivra dīcta a varietate*. If we have no ichnographic evidence of this violin from Arabian or Moorish sources, it certainly exists among the Spaniards, since the instruments in the **Cantigas de Santa María** (13th century) show definite oriental features; see Riaño (p. 129) and Rihera (pl. xi.). Ibn Khaldūn (d. 1406) is the first to describe this violin, although not very clearly (*Pr. IV. 354*). It is not until the time of ʿAbd al-Rahmān b. Fāsī (d. 1650) that we get any musical details of the instrument (*F. R. A. S.* 1931, p. 566). European travellers (Addison, Winthuys, Hōn, Shaw) mention the instrument as popular in the Maghrib, and to-day it is one of the principal instruments in ascendent rustic music. Host gives us one of the earliest delineations of the instrument from Eastern sources (Tab. xxxi. 2). For a sixteenth century description see F. Salvador-Daniel (p. 50) and for a design see Christianowitch (pl. i). Several delineations of both instruments and players may be seen in al-Hafīz (pl. 34: 39—52). Mahillon (i. 416—417), Fétis (*Hist.,* i. 146), Engel (*Cat.,* p. 143), Chouquet (p. 205), Sachs (*Reallex,* p. 317), etc. For the instrument of Northern India called the sārangī see Lavigne (p. 350) and Fétis (ii. 298).

4. **The Pear Shape Viol**. Probably, the earliest Arabic reference to this instrument is that made by Ibn Khurdābdīh (d. ca. 912) who, in an oration before Caliph al-Mutamid (d. 893), says that the Byzantines had a wooden instrument of five strings called the *lira* which was identical with the rabāb of the Persians and the *lira* of the Arabs (al-Masʿūdī, *Murājī*, viii. 91). We can probably identify the instrument in the famous Carama *Canticum* at Florence which dates from the 10th century (*L. A. T.*, 1596, p. 24). From the Siculo-Moorish woodwork of the Palatine Chapel at Palermo (13th century) we see to better advantage what the Arabic instrument was like (*B. Z.*, 1893, ii. 383). It was this form of the rabāb probably, with which al-Fārābī (d. 950) deals (see Land, *Researcher,* p. 130, 166). He gives full details of both the *acordatura* and scales. We know little about this instrument in Arabic speaking lands after the 10th—11th century, until it is described by Niebuhr (i. 143; Tab. xxv., D) in the 13th century, and even then it appears to have been favoured only by the Greek population. It had three strings. It may have been used in the Maghrib (Lane, p. 159—160), but neither Villetoeur nor Lane know of it in Egypt. In Turkey, it appears to have been adopted from the Greeks, possibly in the 13th century, and with the *ūd* and *lawāṭ* plays a prominent part in concert music today (Lavigne, p. 3015). Recently an attempt has been made to introduce this rabāb *turki* or *arabāb*, as it is now called, into Egypt (al-Hafīz, p. 661, pl. 35). Designs of the instrument may be found in Engel (*Cat.,* p. 210) and Crosby Brown (i, pl. 22), where they represent specimens in collections at South Kensington (London) and New York.

5. **The Hemispherical Viol**. This is, perhaps, the best known form of the violin in the Islamic east. The body consists of a hemispherical piece of wood, cooco-nut, or a gourd, over the aperture of which a membrane is stretched. The neck is of wood, generally cylindrical, and there is a foot of iron, although sometimes there is no foot. It is often known in Arabic as the kamāndja or more rarely as the ḥābk. The former is derived from the Persian kamān (lit. of kamān, “bow”) whilst the latter is derived from the Persian and Turkish ḥābk, ḥāhtak, ḥābk, ḥāhtak, ḥālak, etc., which may have had their origin in the Sanscrit *vahsaka*, an instrument mentioned in the pre-Christian *Nāyiga-vāstra* (cap. xxiii.). I believe that the words ḥābk and ḥānt are mentioned in the *Khvān-i ʿalāf* (Bombay ed., i. 97) and al-Shalāḥī (fol. 12) respectively, are copyist’s errors for ḥābk and ḥāhtak. The work kamāndja is first mentioned in Arabic by Ibn al-Fākīh (ca. 903) who says that it was used both by the Copts and the people of Sindh (*B. G. A.*). Of course this need not mean that the instrument mentioned was a hemispherical violin, because, being a Persian by origin, the author may have used the word kamāndja in its Persian generic sense meaning a violin. That Egypt had an early like for the kamāndja is borne out from various sources. Although in Egypt the hemispherical viol is nowadays called the rabāb *miyri* (Egyptian violin), in earlier days it was acknowledged that Egypt borrowed the instrument from Persia (*Kashf al-Humūm*, fol. 106). The kamāndja was certainly popular at the courts of the Ayyūbīd al-Kāmil (d. 1235), and the Mamlūk Baybars (d. 1277); see al-Maqrīzī, i, 136; Lane-Poole, *Hist. of Egypt*, p. 249. In the Persian *Kanz al-Tahaf* (14th century) the hemispherical violin is described and figured as the ḥālak, but in Ibn Ghāthī (d. 1355) where both the ḥālak and the kamāndja are described, the former is a larger type of the latter, having, in addition to its two ordinary strings, eight sympathetic strings (*Kanz al-Tahaf*, fol. 261); Ibn Ghāthī, fol. 78. In the 15th century the kamāndja is delineated by Russell (i. 152—153, pl. iv.), and Niebuhr (i, 144, Tab. xxvi., E). Both Villetoeur (p. 900, pl. BB) and Lane (*Mod. Egypt.*, chap. 18) give minute details.
of the construction and accoutrement. Mushāṭa also describes the Syrian kamānṣa (kamānṣa) of his day (M. F. O. B., vi. 25, 81). For the modern Persian instrument see Advielle (14 and pl.) and Lavignac (p. 3074). Turkishmanian instruments are given by Fitrat (p. 45) and Belnev (p. 54). For Malayia see Kaudern (p. 178); for India Lavignac (p. 349) and Fétis (ii. 295). For other designs see Farmer (Stud., i. 76). Fétis (Hist., ii. 136–137), Chouquet (p. 203), Sachs (Reallex., p. 207).

6. The Pandore viol. This form is practically a tambur, stīfr, or the like, which is bowed instead of being plucked by the fingers or a plectrum. The two best known examples from India are the errār and fēṣē. The former has a membrane on its face and has five strings played on with the bow together with a number of sympathetic strings. The latter is practically identical with the former but is adorned with the figure of a peacock (hence its name) at the bottom of the body of the instrument. See Lavignac (p. 351) and Mahillon (i. 131) for designs and details. With the Persians and Turkomans we see various kinds of pandores used with the bow. See Advielle (p. 14), Lavignac (p. 3074), Mironov (p. 27), Kinsky (p. 26).

7. The Open Chest Viol. This is unknown to the peoples of North Africa and the Near East, although it is popular in the Middle East. Unlike the preceding forms of the viol, the upper part of the face of the body or sound-chest is left open. The best known example of this is the sārīmā of India which has three strings. See Fétis (ii. 296). Lavignac (p. 351), Mahillon (i. 137), and Kinsky (p. 27), for both designs and details. In Turkomans a similar form is called the hāṭbā, which is very popular. It has two strings. See Bellev (p. 52), Mironov (p. 25), Fitrat (p. 43).

Kinsky, Geschichte der Musik in Bildern, Leipzig 1929; Chottin, Corpus de Musique Marcocaine, ii, Paris 1933.

(H. G. Farmer)
or mbang as far as Kuno, there was held up with his 8,000 men by some thirty Senegalese soldiers under the district commissioner Bretonnet and only overcame the resistance of this handful of heroes after eight hours fighting (July 18, 1899). On April 22, 1900, he was defeated at Kusri on the lower Chari by Commandant Lamy: Rabah and Lamy both fell in the battle. His extraordinary career had lasted 22 years and ruined a whole region of the Central Sidân.

(Maurice Delafosse)

RABAT, AR. Ribât Al-Mansûr, vulg. er-ribâṭ (Ethnic Ribai, vulg. Ribâṭ), a town in Morocco, situated on the south bank at the mouth of the Wādi Abū Raкра (Wed Bu Regreg) opposite the town of Sale [cf. Sāla]. Since the establishment of the French protectorate it has been the administrative capital of the Shaftian empire, the usual residence of the sultan of Morocco, and the headquarters of the mahkzen [q. v.] and of the French authorities. The choice of Rabat as the administrative centre of Morocco has brought this town considerable development in place of the somnolence in which it was sunk a quarter of a century ago.

The foundation of Ribâṭ al-Fath was the work of the Almohads [q. v.]. The site of the "Two Banks" (al-Idwâām) of the estuary of the Bu Regreg had previously been the scene of Roman and pre-Roman settlements: the Punic, later Roman Sale was built on the left bank of the river higher up at the site of the royal Marinid necropolis of Chella (Shâla; q. v.). The Muslim town of Sâla on the right bank had, from the beginning of the tenth century to protect it against the inroads of the Berghawâta [q. v.] heretics at the time when it was the capital of a little Ifnâd kingdom, fortified on the other side of the Bu Regreg a ribâṭ [q. v.], which was permanently occupied by devout volunteers who in this way desired to carry out their vow of ḫilâd [q. v.]: the geographer Ibn Ḥawkal is authority for its existence at this date (cf. B. G. A., i. 56). But we know very little of the part played by this ribâṭ in the course of the sanguinary wars later fought between the Berghawâta and the Almoravids. It is not even possible to point out its exact situation. It was perhaps the same fortified spot that is mentioned in the middle of the xiiith century under the name of Kašir Ḫani Tarâq by the geographer al-Fârâbî.

The final and complete submission of the Berghawâta meant that a different part was to be played by the ribâṭ on the estuary of Bu Regreg. In 545 (1150), the founder of the dynasty of the Muʿminid Almohads, ʿAbd al-Munîn, chose the fort and its vicinity as the place of mobilisation for the troops intended to carry the holy war into Spain. A permanent camp was established there and he provided for a supply of fresh water by bringing a conduit from a neighbouring source, ʿAin Ghâbûla. The permanent establishments, — mosque, royal residence — formed a little town which received the name of al-Mahdiyya. On several occasions very large bodies of men were concentrated around the ribâṭ, and it was there that ʿAbd al-Munîn died on the eve of his departure for Spain in 558 (1163).

The development of the camp went on under ʿAbd al-Munîn's successor, Abû Yaʿkûb Yusuf (558—580 = 1163—1184), but it was the following prince of the Muʿminid dynasty, Abû Yusuf Yaʿkûb al-Mansûr, who at the beginning of his reign gave the orders and opened the credits necessary for its completion. In memory of the victory gained in 1195 by the Almohads over Alfonso VIII of Castile at Alarcos [q. v.], it was given the name of Ribâṭ al-Fath. The camp was surrounded by a wall of earth flanked with square towers enclosing with the sea and the river an area of 450 hectares. The wall is still standing for the most part and is nearly four miles in length; two monumental gates, one north known as Bâb al-Kwâh (Bab er-Rûbi), the other west known as kašaba (Kasha of the Oudaya), date from this period. It was also Yaʿkûb al-Mansûr who ordered the building inside Ribâṭ al-Fath of a colossal mosque which was never finished; rectangular in plan it measured 610 feet long by 470 feet broad; the only mosque in the Muslim world of greater area was that of Sâmarra [q. v.]. It was entered by 16 doors and in addition to three courts had a hall of prayer, supported by over 200 columns. In spite of recent excavations more or less successfully conducted this mosque still remains very much a puzzle from the architectural point of view. But the minaret, which also remained unfinished and was never given its upper lantern still surprises the traveller by its unusual dimensions. It is now called the Tower of Ḥassân (Bâb Ḥassân). Built entirely of stones of uniform shape it is 160 feet high on a square base 53 feet square. Its walls are eight feet thick. The upper platform is reached by a ramp two yards broad and gentle slope. This tower in its proportions, its arrangement and decoration is closely related to two Almohad minarets of the same period: that of the mosque of the Kutubiyya at Marrakesh [q. v.] and that of the great mosque of Seville [q. v.], the Giralda.

Yaʿkûb al-Mansûr's great foundation never received the population which its area might have held and the town opposite, Sale, retained under the last Almohads and in the xiiith and xivth centuries all its political and commercial importance. Rabat and Sale in 1248 passed under the rule of the Marinids and it seems that Rabat in those days was simply a military station of no great importance, sharing the fortunes of its neighbour which had gradually become a considerable port having busy commercial relations with the principal trading centres of the Mediterranean. But a chance circumstance was suddenly to give the town of the "Two Banks" a new aspect. The expulsion of the last Moriscoes [q. v.] decided upon in 1610 by Philip III brought to Rabat and Sale an important colony of Andalusian fugitives who increased to a marked degree the number of their compatriots in these towns who had previously left Spain of their own free-will after the reconquest. While the population of the other Moroccan cities, Faz and Tetwân principally, in which the exiles took refuge, very quickly absorbed the new arrivals whom they had welcomed without distrust, the people of Rabat and Sale could not see without misgivings this colony from Spain settle beside them, for they lived apart, never mingled with the older inhabitants and devoted themselves to piracy and soon completely dominated the two towns and their hinterland. Rabat, known in Europe as "New Sale" in contrast to Sale ("Old Sale"), soon became the centre of a regular little maritime republic
RABAT — RABB

in the hands of the Spanish Moors who had either left of their own accord before 1610, the so-called “Hor
nachuelas”, or had been expelled in 1610, the so-called “Moriscos”, the former however being clearly in the majority. This republic, on the origin and life of which the documents from European archives published by H. de Castries and P. de Cenival have in recent years thrown new light, hardly recognised the suzerainty of the sultan who ruled over the rest of Morocco. While boasting of their dhikād against the Christians, the Andalusians of the “Two Banks” really found their activity at sea a considerable source of revenue. They had retained the use of the Spanish language and the mode of life they had been used to in Spain. They thus raised Rabat from its decadence.

Their descendants still form the essential part of the Muslim population of the town and they have Spanish patronymics like Bargáš (Vargas), Palá
mino, Moreño, López, Pérez, Chiñuto, Dinya (Span. Dénia), Runda (Span. Ronda), Múltin (Molino) etc.

The spirit of independence and the wealth of the Spanish Moors in Rabat soon made the town a most desirable object in the eyes of the sultāns of Morocco. Nevertheless the little republic with periods of more or less unreal independence, was able to survive until the accession of the ‘Alīd sultan Saiyidī Muḥammad b. ‘Abd Allāh in 1771 (1757). This prince now endeavoured to organise for his own behalf the piracy hitherto practised by the sailors of the republic of the “Two Banks”. He even ordered several ships of the line to be built. But the official character thus given to the pirates of Sale very soon resulted in the bombardment of Sale and Larache [v.] by a French fleet in 1765. The successors of Muḥammad b. ‘Abd Allāh had very soon to renounce any further attempt to wage the “holy war” by sea. The result was a long period of decline for Sale which found expression not only in the gradual diminution of its trade but also in a very marked hatred of each town for the other. At the beginning of the xixth century, Rabat like Sale had completely lost its old importance. They were both occupied by French troops on July 19, 1911.

Rabat is one of the towns of Morocco, the population of which is both kafarīya, i.e. essentially town-dwelling, and makhāṣṣa, i.e. used as residence by the sultan of the Sharifian empire. The nonEuropean population has increased in a marked degree since the establishment of the protectorate and its choice as permanent capital of the sultan. The number of inhabitants at the census of 1931 was 27,986 Muslims and 4,218 Jews (20,452 and 3,676 in 1926; Sale wich is a separate municipality had in 1931 22,145 Muslims and 2,387 Jews). They live almost entirely in the madīna, which is the site of the trapezoid, and its annexes formed by the Jewish melan [q. v.] and the kāshāa of the Udaya, a separate walled area with its own mosque, originally inhabited by contingents of the ghīth tribe (q. v.; Ar. ḏayḥ) of this name (Kašba of the Oudaya). The chief mosques of Rabat are the foundations of ‘Alīd sultan’s, Mawālī al-Rashid [q. v.] and Mawālī Subhān (Moulā Shīmān); the mosque near the imperial palace, the Dīānī al-Sunna, was built in the second half of the xviii century. Besides the monumental gates there are several other entrances in the Almohad enceinte: the Bāb al-Usūl (Bāb al-‘Alou) admits from the madīna to the cemetery and the cliffs which rise up from the ocean; the gate called Za‘rā (Bāb Za‘īr) is in the immediate vicinity of the Marinid royal cemetery of Chella (Shālīla).

The French town of Rabat built outside the madīna is developing rapidly: the palace of the Resident-General, the public offices, fine esplanades, villas surrounded by gardens give the new town a particularly attractive appearance. French Rabat at the present day is a masterpiece, famed throughout the world, of successful town planning and architecture. It is connected by railway to Casablanca and Marrākesh in the south, Tangier in the north, Fās and Algiers in the east. Since October 1935 it has been the final resting-place of Marshal Lyautey to whom it owes its position as capital and its reconstruction.

(E. LÉVI-PROVENCAL)

RABB (A.), lord, God, master of a slave.

Pre-Islamic Arabia probably applied this term to its gods or to some of them. In this sense the word corresponds to the terms like Ba‘al, Adon in the Semitic languages of the north where rabb means “much, great”. — In one of the oldest sūras (cvi. 3) Allāh is called the “lord of the temple”. Similarly al-Lat bore the epithet al-Rabbas, especially Tā‘īf where she was worshipped in the image of a stone or of a rock. — In the Quran rabb (especially with the possessive suffix) is one of the usual names of God. This explains why in Ḥadith the slave is forbidden to address his master as rabbī, which he must replace by sayidī (Muslim, al-Afīn min al-Adab, trad. 14, 15, etc.). — The abstract rūḥūsya is not found in either Kurān or Ḥadīth; it is in common use in mystic theology.

RABGHÜZI. [See RUBGHÜZI.]

RABI' (A.), the name of the third and fourth months of the Muslim calendar. The name is an Aramaic loanword and in the Syriac translation of the Bible corresponds to the Hebrew malkoth (late rain). This and the fact that the two months following Rabī' II are called Žumādāt (month of frost) suggested to Wellhausen that these four months originally fell in winter and that the old Arab year began with the winter half-year [see al-MUHARRAK]. Rabī' means originally the season in which, as a result of the rains, the earth is covered with green; this later led to the name Rabī' being given to spring. Al-Birūnī expressly describes autumn (kašīf) as the season indicated by Rabī'. As a result of the Kur'ānic prohibition of intercalation [see NAST], since the beginning of the Muslim era the two months no longer fall at a regular season.

Bibliography: Wellhausen, Reste, p. 97; Brockelmann, Lexicon Syriacum, s. v.; al-Birūnī, Aḏārār, ed. Sachau, p. 60, 325.

AL-RABI' B. YUNUS B. 'ABD ALLAH B. ABI FARWA (so-called from his entering Medina with a back), emancipated slave of al-Jāhid al-Haffār (slave-driver), emancipated slave of ʿOṯmān b. ʿAffān. He was really a bastard of obscure origin, a fact which was often brought up against him by his enemies later in his career. Born in slavery at Medina about 112 (730), he was bought by ʿIyād b. ʿAbd Allāh al-Hārijī who presented him to his master Abu l-ʿAbdāf al-Saffār, the first Abbasid Caliph. All his life, he served, with varying fortune, three more Abbasid Caliphs: al-Manṣūr, al-Mahdī and al-Hādī. He reached the zenith of his power under al-Manṣūr (135—158) who, finding him a capable and useful courtier, appointed him ṣāḥib and afterwards made him his wāzir in succession to Abū ʿAlī b. al-Mawrīyānī. His son al-Fāḍil b. al-Rabī', who was destined to play a prominent part in the forthcoming intrigues against the house of Barmaḳ, took his father's duties as ṣāḥib. After the foundation of Bagdad, the new town was divided into three masters of which he was given in fief by al-Manṣūr to al-Rabī' and was thus named after him (kūṭāf al-Rabī').

During the reign of al-Mahdī (155—169), his influence seems to have dwindled for some time. ʿAbd Allāh b. Abī ʿObeid Allāh (known as Abī ʿObāda) became wāzir. Hence al-Rabī' participated in the rising by exposing his son as a heretic (zīhān) in 163 (779—780). Even then al-Rabī' only retained his old office as ṣāḥib and never became Mahdī's wāzir. It was Abī Allāh Abī Yaʿkūb b. ʿAbdāf who succeeded the disgraced minister. On al-Hādī's accession (169 = 785), however, al-Rabī' was once more promoted to that dignity, but only for a period, after which he was entrusted with a secretariatship for the Caliph's ḥawīn (ḥawīn al-asimma). He remained in this capacity until his death after a short illness lasting eight days. His sudden end gave rise to the suggestion that he was poisoned by al-Hādī, but this is discredited by the most authentic sources. The exact date of his death is uncertain. While al-Dājjalīyārī and al-Tabari place it in 169, al-Khaṭīb al-Baghdādi and Ibn Ḫāliḳān assert that he died at the beginning of 170 (786).

THE ENCYCLOPAEDIA OF ISLAM, III.

Details about his administration are scanty, but it is certain that he was an able, industrious, temperate and tactful man of affairs. Even al-Mahdī, who was never lavish in showering favours on al-Rabī', once described him as the model of a good administrator (Yaḥūnī, ii. 456). The literary sources, however, do not single him out as a patron of letters, a quality which both his Abbasid masters and his Barmak successors possessed with distinction.

RABĪ'Ī AL-ADAWIYA, a famous mystic and saint of Baṣra, a freedwoman of the Āl Ṭāṭik, a tribe of Kays b. ʿArīḍ, known also as al-Kaṣīṭa, born 95 (713—714) or 99, died and was buried at Baṣra in 185 (801). A few verses of hers are recorded: she is mentioned, and her teaching quoted, by most of the ʿSīf writers and the biographers of the saints.

Born into a poor home, she was stolen as a child and sold into slavery, but her sanctity secured her freedom, and when celibacy, at first in the desert, then in Baṣra, where she gathered round her many disciples and associates, who came to seek her counsel or prayers or to listen to her teaching. These included Mālik b. Dīnār, the ascetic Raḥāl b. Kays, the traditionist Sūfān al-Thawrī and the ʿSīfī Shākhī al-Balkhī. Her life was one of extreme asceticism and otherworldliness. Asked why she did not ask help from her friends, she said, "I should be ashamed to ask for this world's goods from Him to Whom it belongs, and how should I seek them from those to Whom it does not belong?" To another friend she said, "Will God forget the poor because of their poverty or remember the rich because of their riches? Since He knows my state, what have I to remind Him of? What He wills, we should also will". Miracles were attributed to her as to other Muslim saints. Food was supplied by miraculous means for her guests, and to save her from starvation. A camel which died when she was on pilgrimage, was restored to life for her use; the lack of a lamp was made good by the light which shone round about the saint. It was related that when she was dying, she bade her friends depart and leave the way free for the messengers of God Most
High. As they went out, they heard her making her confession of faith, and a voice which responded, "O soul at rest, return to thy Lord, satisfied with Him, giving satisfaction to Him. So enter among My servants into My Paradise" (Sūra lxxxix. 27-30). After her death Rābi'a was seen in a dream and asked how she had escaped from Mulkar and Nakir, the angels of death, when they asked her, "Who is your Lord?", and she replied, "I said, return and tell your Lord, 'Notwithstanding the thousands and thousands of Thy creatures, Thou hast not forgotten a weak old woman. I, who had only Thee in all the world, have never forgotten Thee. That Thou shouldst ask, Who is thy Lord?'"

Among the prayers recorded of Rābi'a is one she was accustomed to pray at night upon her roof: "O Lord, the stars are shining and the eyes of men are closed and kings have shut their doors and every lover is alone with his beloved, and here am I alone with Thee." Again she prayed, "O O my Lord, if I worship Thee from fear of Hell, burn me therein, and if I worship Thee in hope of Paradise, exclude me thence, but if I worship Thee for Thine own sake, then withhold not from me Thine Eternal Beauty". Of Repentance, the beginning of the Sūfi Path, she said, "How can anyone repent unless His Lord gives him repentance and accepts him? If He turns towards you, you will turn towards Him". She held that Gratitude was the vision of the Giver, not the gift, and one spring day, when urged to come out to behold the works of God, she rejoined, "Come rather inside to behold their Maker. Contemplation of the Maker has turned me aside from contemplating what He has made".

She demonstrated the need for disinterested love and service by taking fire in one hand and water in the other and saying, when asked of the meaning of her action, "I am going to light fire in Paradise and to pour water on to Hell, so that both veils may be taken away from those who journey towards God, and their purpose may be sure and they may look towards their Lord without any object of hope or motive of fear. What if the hope of Paradise and the fear of Hell did not exist? Not one would worship his Lord or obey Him" (Alfākī, Muḥābīb al-ʾArifīn, India Office, No. 1670, fol. 114) Questioned about her love for the Prophet she said, "I love him, but love of the Creator has turned me aside from love of His creatures", and again, "My love to God has so possessed me that no place remains for loving any save Him". Of her own service to God and its motive-force she said, "I have not served God from fear of Hell, for I should be but a wretched hireling if I did it from fear; nor from love of Paradise, for I should be a bad servant, if I served for the sake of what was given me, but I have served Him only for the love of Him and desire of Him". Her verses on the two types of love, that which seeks its own ends and that which seeks only God and His glory, are famous and much quoted:

"In two ways have I loved Thee, selfishly; And with a love that worthy is of Thee. In selfish love my joy in Thee I find, While to all else, and others, I am blind. But in that love which seeks Thee worthily, The veil is raised that I may look on Thee. Yet is the praise in that or this not mine, In this and that the praise is wholly Thine".

Ghazzālī again comments, "She meant, by the selfish love, the love of God for His favour and grace bestowed and for temporary happiness, and by the love worthy of Him, the love of His Beauty which was revealed to her, and this is the higher of the two loves and the finer of them" (Iḥyāʾ, iv. 267). Like all mystics, Rābi'a looked for union with the Divine (waqf). In certain of her verses she says, "My hope is for union with Thee, for that is the goal of my desire", and again she said, "I have ceased to exist and have passed out of self. I have become one with God and am altogether His".

Rābi'a, therefore, differs from those of the early Sūfis who were simply ascetics and quietists, in that she was a true mystic, inspired by an ardent love, and conscious of having entered into the unitive life with God. She was one of the first of the Sūfis to teach the doctrine of Pure Love, the disinterested love of God for His own sake alone, and one of the first also to combine with her teaching on love the doctrine of Ḳaḥyīf, the unveiling, to the lover, of the Beatific Vision.

And my body is friendly towards its guests. But the Beloved of my heart is the guest of my soul". (Iḥyāʾ, iv. 358, margin)

RABĪ‘A AL-DAWLA ABU MAṢĀ‘IR B. AḤĀDĪ P ‘U M M B. A.-HUSAIN, A VIZIER.

When the vizier Abū Shu‘lā Muhammad al-Kūthaisrī (q.v.) made the pilgrimage to Mecca in 481 (1089) he appointed his son Rabī‘al-Dawla and the nakib al-mukabā‘ī Tīrād b. Muhammad al-Zainabī his deputies and in 507 (1113—1114) on the death of Abū l-Ḳāsim ‘Alī b. Fakhr al-Dawla Muhammad b. Dāhir (see the article ‘IN JĀHIR) 3 Rabī‘al-Dawla was appointed vizier of the caliph al-Muṣṭāhir (q.v.). In Dhu ‘l-Ḥijdād 511 (April 1118) the fourteen-year-old Muḥammad b. Muhammad succeeded his father as ẓaḥīquṣulītān and, when he was looking around for an able vizier, he was recommended to choose some one who had had the necessary training in the service of the caliph (min tarbiyytī dar al-khilafā‘), because there was no suitable man in the training of the young ẓulītān. The choice therefore fell upon Rabī‘ al-Dawla who was at once summoned from Baghdad to Isfahān and, as we know from al-Bundārī also, proved himself in every way fit for his difficult task. But his tenure of office was of short duration: he died in Rabī‘ I 513 (June—July 1119) ; according to another statement he died as early as 512 (1118—1119).

RAṬĪTA. [See Rāṭīta.]

RAṬĪTA (A.), Sucking; as a technical term, the sucking which produces the impediment to marriage of foster-kinsfolk. It is to be supposed that the idea of foster-kinsfolk was already prevalent among the ancient Arabs (cf. Robertson Smith, Kinship and Marriage in Early Arabia, 3, p. 176, 196, note 1); this is evident from, among other things, the way in which the prescription of the Kurān regarding this is interpreted in Tradition. In Sūra iv. 23, among the female relatives with whom marriage is forbidden are the foster-mother and the foster-sister. This must correspond exactly to the old Arab usage, which regarded blood-relationship also only in these two degrees as an impediment to marriage (cf. Robertson Smith, ter. cit.). But as the Kurān in the passage quoted extends the circle of prohibitions beyond that of blood-relationship, foster-kinsfolk was treated accordingly contrary to the unambiguous language of the passage. To justify this, it is frequently laid down in traditions, in keeping with the principle of the old Arab attitude, that foster-kinsfolk is an impediment in the same degrees as blood-relationship. The isolated case, which is decisive for the principle, that of the prohibition of marriage with the daughter of a foster-brother, is brought into

close personal relationship with the Prophet. Through the prohibition of marriage laid down in Tradition between the foster-children of two wives of the same man, relationship by marriage becomes included in foster-relationship, and in the tradition which expounds the verse of the Kurān quoted, foster-kinsfolk is given among the impediments to marriage on the ground of relationship in law. As a justification for this prohibition it is stated that the šemīn genitalis (which the milk has produced) is the same; against the view that blood-relationship is not to be combined with foster-kinsfolk, so that the brother of the husband of the foster-mother is not to be regarded as a foster-kinsfolk, there is a polemic in a tradition (Kanz al-Imāmī, iii., N°. 3911). The question of the amount of sucking necessary to produce foster-relationship is a very old point of dispute; some traditions do not consider isolated suckings by the sucking or one or two acts of sucking as sufficient, others demand not less than seven acts of sucking, others again say that the child must be fed entirely; on the other side, one group of traditions says the prohibition of marriage is the same whatever the amount of sucking that has been given. There is even said to have been a passage in the Kurān which in the older, later abrogated, version demanded ten feedings and in the later version five. This story which was obviously only intended to support this view is not trustworthy (cf. Noldeke-Schwalley, Geschicchte des Qur'ān, i. 253 sqq.; Kanz al-Imāmī, N°. 3,923 sqq.). That the practice of sucking adults in order to establish an artificial foster-kinship existed is certain; it is recognised by several traditions and by others directly or indirectly denied (by the legal maxim: al-rağīma min al-magā’ā‘, "suckling demands hunger"). The chief case for the validity of such an act of sucking is described as a privilege granted by the Prophet personally (Kanz al-Imāmī, N°. 3,919) and even the sucking of children to establish an impediment to marriage is in an isolated case described as illegal (Ib., N°. 3,885). To prove foster-kinship many traditions are content with the testimony of the foster-mother either or even without oath or with the testimony of a woman simply or with that of a man and of one woman; in refutation of this anomaly, obviously at one time permitted, another group of traditions demands the normal testimony of two men or of one man and two women. These points of difference found in tradition are continued in the differences of opinion among the older jurists. The views of the principal authorities are given in al-Shawkānī, Nā’il al-Awqāf, Cairo 1345, vii. 113 sqq. The most important new point in dispute, discussed in this later period but scarcely touched upon in the traditions, is the period within which foster-kinship can be established by a child; sometimes it is said to be the period till weaning, sometimes the whole of childhood without an exact limitation, sometimes the fixed period of two years, 1 1/2 or 3 or 7 years; for the period of two years the authority of the Kurān is quoted, Sūra ii. 233 ("Mothers shall suckle their children two full years if they wish to carry through the sucking to its end") (on the details cf. al-Shawkānī, op. cit., p. 120). The four regular Sunni law-scholars are agreed that foster-relationship exists between a man and all his descendants on the one side and his nurse, all her foster- and blood-relatives, her husband and all his foster- and blood-relations on
of Rādānūr, the capital of the state, has a total population of 11,225, of whom 3,694 are Muhammadans (1931 Census Report).

**Bibliography:** see *Falanūr.*

**AL-RĀDI BI’LLĀH, ABU’L-‘ABBĀS AHMAD (MUHAMMAD) B. AL-MUKTADIR, the twelfth *Abbasid* caliph. He was born in Raftib 297 (Dec. 909); his mother was a slave named Zalīma. He was proposed for the caliphate immediately after the assassination of his father al-Muktadīr [q.v.] but the choice fell upon al-Kāhir [q.v.]. The latter had him thrown into prison; after the fall of al-Kāhir, he was released and put upon the throne (Dīmād I 322 = April 934). As his adviser in this difficult period al-Rādī chose al-Muktidīr’s vizier āli b. Ḳis [see the art. IBN AL-DIJĀRĀʾI] who however asked to be excused on account of his great age, whereupon Ibn Muḳḥla [q.v.] was given the office. The most influential official however continued to be Muhammad b. Yaḵūṭ [q.v.] and only after his fall in Dīmād I 323 (April 935) did Ibn Muḳḥla gain control of the administration while the caliph himself fell completely into the background. But Ibn Muḳḥla’s rule did not last long; in Dīmād I 324 (April 936) he was seized by al-Muḥṣif b. Yaḵūṭ, brother of the above-mentioned Muhammad, and the impotent caliph had to dismiss him and in the same year summon the governor of Ḩaṣṣāt and Baṣra, Muhammad b. Raʾīf [q.v.], to Baghdād and entrust him with complete authority as wādi ṣulṭānī. This meant a complete breach with the past; the caliph was only allowed to retain the capital and its immediate vicinity and to abandon all influence on the business of government, while Ibn Raʾīf held power for nearly two years; his name was actually mentioned in the Buḥrān for the reigning dynasty along with that of the caliph; in Dū’l-Ḳaḍīa 326 (Sept. 938) however, he was replaced by Bedḵem [q.v.].

To the financial difficulties and the constant quarrels of the viziers and emirs there was now added war with foreign foes. In 935 al-Rādī endeavoured to remove from office the governor of al-Mawsīl Ṣāḥib al-Dawla [q.v.], but failed, and a few years later Bedḵem, accompanied by the caliph, attacked the Hamḍānids in order to force them to pay tribute levied upon them but had to make peace because the fugitive Ibn Raʾīf suddenly appeared in Baghdād. The war with the Byzantines was also continued; the Hamḍānids however in this war came forward as defenders of Islam. In Egypt Muhammad b. Ṭuḡhdī founded the dynasty of the Iḫṣāṣīs [q.v.] and at the same time Bedḵem had to fight with the Būyids who were advancing on several sides and a few years later victoriously entered Baghdād.

In the capital itself al-Rādī had to take measures against the political Hamḍānīs (323 = 935), who had many followers among the common people and committed all kinds of excesses. They entered private houses, destroyed musical instruments, ill-treated women singers, poured away wine that they found, interfered in business, annoyed passers-by in the streets, beat Ṣhaḥīfat and generally behaved as arbitrarily as if they represented a kind of tribunal of the Inquisition.

Al-Rādī died in the middle of Rabī’ I 329 (Dec. 940) of dropsy. The Arab historians praise his
piety, justice, clemency and generosity as well as his interest in literature and it is said of him, for example (Ibn al-TiCKETA, al-Fakhri, p. 380): "He was the last caliph, by whom a collection of poems exists, the last who retained his independence as a ruler, the last to preach a sermon from the pulpit on Fridays, the last to mix freely with his friends and to welcome men of learning, and the last who followed the principles of the earlier caliphs as regards rank, tokens of favour, servants and chamberlains". This characterisation may well be correct in its main lines but al-Radi was not independent; he was on the contrary a ready tool in the hands of his viziers and emirs.

RADIY. [See REDIF.]

RADJA. [See REDJU.]

RADJAB (A.), the name of the seventh month in the Muslim calendar. In the Dabilya it introduced the summer half year until, as a result of the abolition of the intercalated months, the months ceased to fall regularly at the same season of the year [see AL-MUHARRAM and NASI']. The month was a sacred one; in it the 'umra [q.v.], the essentially Meccan part of the pre-Muhammadan ceremonies of pilgrimage, took place. The peace of Allah therefore prevailed in it; the forbidden woman was fought in Radjab between Kuraish and Hawazin and in which the young Muhammad took part is called Firdar (parduy) [q.v.].

In the Kur'an as recorded in the article AL-MUHARRAM, only the "holy" month is mentioned and not the four which have become traditional from the sole reference ix. 36. If the reference in Sura v. 2, is to the 'umra we can therefore understand why the commentators in part identify the holy month mentioned in this verse with Radjab.

In Islam the month attained great importance through the memory of the Prophet's night journey to heaven which in later times was put on the 27th of the month (on the original dates see MI'RAJ). This night is therefore called Liitul al-Mi'raj and is celebrated with readings of the legends of the ascension.

(M. Plessner)

RADJM (A.), the casting of stones—K-dj-n—is a Semitic root, derivatives from which are found in the Old Testament with the meaning of "to stone, to drive away or kill by throwing stones" an abominable creature; radjma is "a heap of stones, an assembly of men, cries, tumult".

—In Arabic, the root means "to stone, to curse"; radjamun, "heap of stones", also means simply the stones placed upon tombs either as flagstones or in a heap, a custom which badit condemns and recommends that a grave should be level with the surface of the ground. On the hadith of 'Abd Allah b. Mughifal, it is discussed whether la turadij-dijmi al-fabi means "do not build my grave in a mound" or "do not utter imprecautions there".

—The lapidation and heaps of stones at Min'a are called djama'a, and djamarat al-arab means the groups of Bedouin tribes; we find there the two old meanings of the root which can be taken back to dj-m, in Arabic djamma and djama's "to reunit". The Arab grammarians derive djamra "lapidation" from djamarat al-arab; and we have to remember the double meaning of radjam and a metathesis from djama(a) == radjam.

In addition to the meaning of "ritual stoning as a punishment for fornication", radjam means the casting of stones at Min'a, which is one of the pre-Muhammadan rites preserved by Muhammad and inserted among the ceremonies of the pilgrimage. We may here refer the reader to the articles DJAMRA, HADJ DJ and MIN'A with their bibliographies.

The Kur'an does not mention this rite; but it knows radjama in its Biblical sense of "stoning of prophets by unbelievers", and also radjam (= marjdum) as an epithet of Satan, "driven away and struck with projectiles of fire by the angels", and lastly (xviii. 21) in an abstract sense which indicates a long semantic evolution.

The rite of casting stones at Min'a was regulated by hadiths in the classical collections. There is a model hadjat, that of the Prophet which we find in the manuals of manasik al-hadjd (e.g. in the Risala of Ibn Taimiya (cf. Rifat, i. 89-99)). Some hadjat of archaic form (e.g. Bukhari, Nikah, b. 2; Sahih, i. and 2: Umda, viii. 489) show that Muhammad had to lay down rules for the essential question of the we'if, the culmination of the hadjd; The Hums. i.e. the Kuraish and their allies, observed it at Djam (Mudzalifa), in the haram; the others, the 'Arab, at Arif, outside of the haram of Mecca. Having to choose between his companions of two different origins, the 'Arab of Najd and the Anjar, Muhammad decided with the latter for 'Arif, but he retained a secondary wufif at Mudzalifa, and the two Ishaa, the new combination of rites culminating in the throwing of stones at 'Aqaba.

Situated at the bottom of the valley of Min'a, on the slope of the defile towards Mecca, al-'Aqaba is "not in Min'a but it is its boundary on the side of Mecca" (Umda, iv. 770) On the morning of the 10th Dhu l-Hijaja the pilgrim goes down into the valley, passes without saluting them in front of the great djamar, 500 yards farther on the middle one, and 400 yards beyond he comes to djamarat al-'Aqaba (Rifat, i. 328). There he throws 7 stones and this is one of the four ceremonies which on the tenth day are intended to remove his state of sanctity. He must also have his hair shaved (haif), sacrifice a victim (nafir)
and return in procession to Mecca (ifāda). This last rite prepares the sexual deconsecration; the three others together abolish the prohibitions of the ḥadījī but the legists are not agreed on the order in which they have to be accomplished. The hadīths say that the Prophet replied to the pilgrims who were worried, not having followed the order in which he had himself followed them: "īl ḥarāfa: no harm (in that)" (Bukhārī, Ḥadīqī, b. 125, 130 etc.). It is explained that the Prophet: on this day of rejoicing did not wish to hurt the feelings of the ignorant Beduins. We may imagine that these 'Arab did not follow the customs of the Kurāshī and that Muhammād had neither the time nor the inclination to impose his own choice between the varying customs.

Muhammād began with the lapidation at al-'Aṣāba. After the ḍalīʾ, the sacrifice and the isfāha, he returned to spend the night in Minā. Then on the 11th, 12th and 13th, he cast 7 stones at the three djamarāt ending with that of al-'Aṣāba. The pilgrims imitating him ought therefore to throw $7 + (7 \times 3) = 70$ stones. But in general they take advantage of the liberty (rubkhā) given them by the hadīth to leave Minā finally on the 12th and therefore only to throw $7 + (7 \times 2) = 19$ stones. It is probable that there was no ancient usage; the presence of the bodies of the sacrificial victims made Minā a horrible place. It is difficult to see how Wavell (Pilgrims, p. 202) threw 63 stones, i.e. $(7 \times 3)$; this is however the number of victims which, according to tradition, Muhammād sacrificed with his own hand, one for each year of his life.

The lapidation of al-'Aṣāba is done on the 10th by the pilgrims in ṣurūq, those of the three days following by the deconsecrated pilgrims. The whole business is not a fundamental element of the pilgrimage (rubkhā).

Little stones are thrown, larger than a lentil, but less than a nut, what the old Arabs called ḍaqa 'l-khaddīf which were thrown either with the fingers or with a little lever of wood forming a kind of sling (mikthāsa: Tirmidhi, iv. 123). A hadīth forbids this dangerous game, which might knock out an eye but is not strong enough to kill an enemy: it must therefore have had something magical or pagan in its character. The stones have to be collected of the proper size and not broken from a rock. Gold, silver, precious stones etc. are condemned; but some texts allow, in addition to date-stones, a piece of camell-dung or a dead sparrow which we find are the means used by the women of the Dīhiliya at the end of their period of isolation to remove the impurity of their widowhood and prepare a new personality. — It is recommended that the 7 stones for the lapidation of al-'Aṣāba should be gathered at the masqār al-karam at Muzdalīfā, outside of Minā. As a rule, the 63 others are gathered in the valley of Minā, but outside of the mosque and far from the djamarāt to avoid having their already been used (Ibn Taimiya, p. 383). Besides it is thought that stones accepted by Allāh are carried away by angels. — Stones collected but not used should be buried; they have assumed a sacred character which makes them dangerous.

The model pilgrimage of the Prophet fixed the time of the djamarat al-'Aṣāba for the day of the 10th. It shows him beginning the ḫisāfa of Muzdalīfā after the prayer at dawn (fādr) and casting the stones after sunrise. But by survival of an ancient custom more than for reasons of convenience other times are allowed by law. Al-Shāfiʿi, against the three other imāms, permits the ḥāṣāba ceremony before sunrise (Rifāʿi, i. 113); in general, the time is extended to the whole morning (ṣawātil), till afternoon (ṣawātil), till sunset, till night, till the morning of the day following: these infractions of the normal routine are stoned for by a sacrifice or alms, varying with the different schools. — The djamarāt of the three days of the tashrīk take place in the sawātil; here again there are various opinions (Bukhārī, Ḥadīqī, b. 134). — In fixing the time of the lapidations the law has always endeavoured to avoid any Muslim, etc. prob, coinciding with one of the three positions of the sun by day, rising, noon, setting. A. J. Wensinek has shown (E. L., ii. 200) the probability of the solar character of the pagan ḥadīqī.

Muhammād made his lapidation at al-'Aṣāba from the bottom of the valley, mounted on his camel, turned towards the djamarāt, with the Ka'bah on his left and Minā on his right, standing at a distance of five cubits (eight feet). But there are other possible positions. — Rifāʿi (i. 328) gives the djamarāt the following dimensions: 10 feet high and 6 feet broad on a rock 5 feet high (see the photographs, ibid.). It is said to have been removed at the beginning of Islām and replaced in 240 (854—855) (Araški, p. 212). — Muhammād made the lapidations of the other two djamarāt on foot turning towards the ḥib'é. In brief, the stones are cast in the attitude one happens to be in. The position facing the Great Devil is explained by the nature of the ground, but it would also be in keeping with the idea of a curse cast in the face of a fallen deity. The position which makes the pilgrim turn towards the Ka'bah is due to the Muslim legend of the tempter Satan and to the rule of the tabbr which will be explained below.

According to the sunna, the stones are placed on the thumb and bent forefinger and thrown, one by one, as in the game of marbles. However the possibility of the stones having been thrown together in a handful as has been foreseen. and it was decided that this should only count as one stone and that the omission could be made good.

— The stone should not be thrown violently nor should one call "look out! look out!" (Tirmidhi, iv. 156), a pagan custom which the modern Beduins still retained quite recently (Rifāʿi, i. 89). It seems that Muhammād put some strength into it for he raised his hand "to the level of his right eyebrow" (Tirmidhi, iv. 135) and showed his armpit (Bukhārī, Ḥadīqī, b. 141).

In Islām the casting of each stone is accompanied by pious formulae. It is generally agreed that the tablibiya is no longer pronounced at 'Arba or at least before the lapidation of al-'Aṣāba (Bukhārī, Ḥadīqī, b. 101); some writers however approve of it after al-'Aṣāba. The tabhīl and tabhīb are permitted, but it is the tabbr which is recommended (Ibn Taimiya, p. 382; Bukhārī, Ḥadīqī, b. 138 and 143). The spiritual evolution of the rites even sees in the stone the essential feature of the rite, the throwing of the stone and the figure formed by the stones, the throwing of the thumb and forefinger forming an 'ājād which represents 70, being no more than symbolic and mimerial gestures. "The throwing of the stones was only instituted to cause the name of God to be repeated" (Tirmidhi, iv. 159).
To Ghazâlî (Ikhshî', i. 192) it is an act of submission to God and of resistance to Satan who seeks to turn man away from the fatigues of the hadîdî but the rite is without rational explanation min gharî' hâzîn 'l-lâzîl wa l-mazîl fitki (cf. Goldziher, Richtungen, p. 252). — The devout man adds a prayer (dârû) which is as a rule quasi-religious. The usual one is: Allahumma 'd'khîn hadîdîn maharrîn wa-dhannan mahfûrân wa-sâ'în mazkûrân "Lord, make this pilgrimage a pious one, pardon our sins and recompense our efforts!". There is, as matter of fact, after thestoning a halt, a wukfîb, before the two higher djamarât, that at the second being especially long: the duration is calculated by the recitation of the sûra of the Cow (ii), or of Joseph (xii), or of the family of 'Imrân (iii) by altering the indication in the hadîdî (Bukhârî, hadîdî; b. 135, 136 and 137). This would take the place of an ancient ceremony of impregnation.

Breaches of the rules for the performance of these diverse ceremonies, especially as regards the number of stones thrown and the time when they are thrown ('l-mâdî, iv. 167 et al.; Rîf'ât, i. 113), are punished by acontones the evident nature of which the legists delight to vary from the sacrifice of a victim to the giving of a muddî of food in alsms.

The Muslim teachers have sought to explain the lapidations of Minâ. Some exegetists (e.g. Ñâbîr, Tâfîlr, xxv. 167) have seen quite clearly that they represent ancient rites and have compared the rwa'iy of the tomb of Abû Râjdî. Others are known, for example at the well of Dhu 'l-Hulafa (Lammens, Ihlyets, p. 94). The works quoted (E. f.) show the spread of this rite and the cases in which we are certain that it is a question of the driving away or the expulsion of evil; they might be further added to. Stones used to be thrown behind an individual whom one wished never to return (Hâmaghâmî, Masâhmû, ed. Bârîrî, p. 23). At Alexandria, tired people used to go and lie down on a fallen pillar, throw 7 stones behind them on the pile "like that of Minâ", then go away quite recovered (5 al-Maghâmî, Sahî al-Ashâb, iii. 322). But comparisons would take us out of Arabia (Lods, Prophètes d'Isrâ', p. 354).

Popular legend has connected the lapidation like many other rites with Abraham. It was Abraham or Hagar or Ishmael or even Muhammad that Satan wished to deter from accomplishing the rites of the hadîdî and who chased him away with stones. If we conclude that he is râjdîm, we are some way to the explanation of Sûra lxvii. 5 (cf. above).

One would like to be able to locate the lapidations among the rites of the pre-Islamic pilgrimage. One would first have to have a clear idea of the meaning and details of the ceremonies and of the part played by lapidations and sacred piles of stones in Semitic and Mediterranean antiquity. — Stoning seems to have been a rite of expulsion of evil which and seems to have been a return to everyday life. It is possible that lapidations at one time followed the sacrifices which perhaps took place at 'Arafa and Muzdalîfâ.

Bibliography: Add to the Bibliographies of the articles quoted: Ibrahim Rîfat Pascha, Mirâj al-Haramain, Cairo 1344, 2 vols.; Ibn Taimiya, Risâlat Manâzil al-Hadîdî, dans Mâdîminât al-Kulûb, Cairo 1323, ii. 355. (Gaudefroy-Demobynes)

Râjdîpûts, inhabitants of India, who claim to be the modern representatives of the Kshatriyas of ancient tradition. (From the Sanskrit râjdîputra "a king's son".) For the connection between Râjdanya and Kshatriya see Macdonell and Keith, Vedic Index, i., s. v. Kshatriya.

The term Râjdîpût has no racial significance. It simply denotes a tribe, clan, or warlike class, the members of which claim aristocratic rank, a claim generally reinforced by Brahman recognition.

The origin of the Râjdîpûts is a problem which bristles with difficulties. The theory which at present holds the field is that propounded by Bhandarkar, Smith and Crooke. According to this theory the Râjdîpûts can be divided into two main classes, the foreign and the indigenous. The foreign clans, such as the Cauhâns, Calukyas, and Gurdjaras, are the descendants of invaders of the vii and viii centuries of the Christian era. The indigenous Râjdîpûts include the Rashtrakutas of the Deccan, the Râdhors of Râjdûtpûna proper, and the Candels and Bundelas of Bundelkhand.

The theory that certain Râjdîpût clans are of foreign extraction is chiefly based on Râjdîpût legends and folklore according to which their heroes are the descendants of branches of Râjdîpûts: the Strajdîbanshi, or Solar race; the Candrabanshi, or Lunar race; and the Agni Kula, or Fire-group. The legend relates how the Agni Kula Râjdîpûts, that is, the Cauhâns, Calukyas, Parihârs (Parihâras), and the Prâmâra, originated in a fire-rite around Mount Abu in southern Râjdûtpûna. From this it has been concluded that the four clans in this group are related and that the fire-rite represents a rite of purification by which the taint of foreign extraction was removed. Since these writers believed the Parihârs to be invaders of Gîdjar stock, it was concluded that the other three Agni Kula clans were also invaders.

According to Smith the Gurdjaras were invaders who founded a kingdom around Mount Abu. In time the rulers of this kingdom who were known as Gurdjara-Prâtihâras conquered Kauvalî and became the paramount power in northern India about 800 A.D. Smith contends that the Prâtihâras were a clan of the Gurdjara tribe. This seems to be the chief evidence produced by these writers for the foreign extraction of certain Râjdîpût clans.

It seems wrong to base this theory of foreign descent principally upon the Agni Kula legend, for Waidy and other writers have proved this to be a myth first heard of in the Prâtihârs-râjasa of the poet Cand who could not have composed this work before the xiith century A.D. Recent research has brought to light the fact that the inscriptions of the Prâtihâras and Cauhâns before the xiith century represent them as Solar pûts, while the Calukyas are represented as of the Lunar race. The Agni Kula legend does not therefore deserve the prominence given to it by Smith and other writers.

Even the contention that the Prâtihâras were a branch of the Gurdjara tribe has met with much hostile criticism.

According to the orthodox Hindu view the Râjdîpûts are the direct descendants of the Kshatriyas of the Vedic polity, but this claim is based on fictitious genealogies. The Kshatriyas of ancient India disappear from history and this can probably be explained by invasions from Central Asia which shattered the ancient Hindu polity. It is accepted that these invading hordes, such as the Vûhechî and Hûnas, became rapidly Hinduisized, and that
their leaders assumed Khatriya rank and were recognized as such. Out of this chaos arose a new Hindu polity with new rulers, and the families of invaders which became supreme were recognized as Khatriyas or Rajputs. In later times many chiefs of the so-called aboriginal tribes also assumed the title of Rajput.

It is therefore safe to assert that the Rajputs are a very heterogeneous body and probably contain some survivors of the older Khatriyas. A mass of legend arose assigning to the various septs a descent from the sun and the moon, or from the heroes of the epic poems. These are the legendary pedigrees recorded in great detail by Tod. The main argument which can be brought forward in support of the foreign descent of certain Rajput clans is the incorporation of foreigners into the fold of Hinduism to which the whole history of India bears testimony. Even though the Agni Kula, legend he discredited it is still possible to argue that the Rajputs are not a race. Anthropologically they are definitely of mixed origin. That some Rajputs were of foreign origin can be proved by the acceptance of the Hindus in the recognized list of Rajput tribes.

Whatever may be the origin of the Rajputs we know that disorder and political disintegration followed the death of Harsha, and that until the Muslim invasions of northern India the chief characteristic of this period was the growth and development of the Rajput class. Except for about two hundred years, when the Gurjara-Pratihārās were the paramount power in Hindustān, there was constant intertribal warfare between the various Rajput kingdoms. This weakness considerably facilitated the Muslim conquest. It was not however until the days of Muhammad of Ghūr that the Rajput dynasties in the plains were finally overthrown [see above, iii. 742b]. Driven from Dīlī and Kanauj they retreated into modern Rajputāna where they eventually built up a strong position and were able to resist the Muslim invader, for it cannot be said that the Sultans of Dīlī ever really subdued the Rajputs of Rajputāna. Nevertheless, throughout this period there was constant warfare, fortresses and strongholds frequently changing hands. The Rajputs nearest to Dīlī were naturally the weakest because the eastern frontier of Rajputāna was exposed to attack. The Sultans of Dīlī appear to have realized the value of communications with the western coast and we find that the route between Dīlī and Gudjārāt via Aḏḏār was usually open to imperial armies. The chief menace to the Rajputs was not from Dīlī but from the independent Muslim kingdoms of Gudjārāt [q. v.] and Mālwā [q. v.].

The outstanding feature of the period from the end of the so-called Saiyid rule to the final invasion of Bābur was the growth of Rajput power in northern India under Rānā Sāṅgā of Māwar. Taking advantage of the weakness of the Lodis under Tāhūm [q. v.] and of the war between Gudjārāt and Mālwā he had extended his sway over the greater part of modern Rajputāna. The battle of Khānāūn in 1527, when Bābur shattered his power, marks a turning-point in the history of Muslim rule in India, for the Rajputs never again attempted to regain their lost dominions on the plains and contented themselves with remaining on the defensive. After Khānāūn the place of the Sosodias in Rajput politics was taken by the Rāthors, the growth of whose power under Mālēdē of Māwar was facilitated by the struggle between Humāyûn [q. v.] and Shīr Shāh. Akbar's Rajput policy was based on conquest and conciliation. The fall of Cīrān and Ranthambhār made him master of the greater part of Rajputāna, with the exception of Māwar which was not completely subdued until the reign of Dhāhāṅgīr [q. v.]. The reversal of Akbar's conciliatory policy produced the great Hindu reaction of Awrangzēb's reign, when, faced at the same time with the Rajputs of the north and the Marāṭhās of the Deccan, Awrangzēb [q. v.] was unable to concentrate on either campaign. But internal dissensions once more prevented the Rajputs from taking advantage of the decline of Mughal power and, in the second half of the eighteenth century, they proved no match for the Marāṭhās who easily overran their country. It was not until the beginning of the nineteenth century when the British were at war with the Marāṭhās that they entered into political relations with the Rajput states. Before the end of the year 1818 the group of states which now comprise Rajputāna had been taken under British protection.

To-day India contains 10,743,091 Rajputs distributed throughout the country as follows: United Provinces, 3,756,936; Pandījāb, 2,351,650; Bihār and Orissa, 1,412,440; Rajputāna, 660,516; Central Provinces and Berar, 506,027; Gwālīor, 393,076; Central India, 388,942; Bombay, 352,016; Dījjāmū and Kashmir, 256,020; Western India States, 227,153; Bengal, 156,978; Baroda, 94,893; and Haidarābād, 58,434 (1931 Census Report). It will be noted that in Rajputāna only 660,516 Rajputs are to be found out of a total population of 11,225,712. The states of Rajputāna are ruled by Rajputs, with the exception of Tonk which is Muslim, and Bhatāpur and Dholpur which are Dījāt. The chief Rajput clans in Rajputāna are the Rāthor, Khānwa, Cāuñhān, Dījāon, Sesodia, Panvas, Parāhār, Tonwār and Dījālā. Rādžaśmrānī is the mother tongue of 77 percent of the inhabitants of this area. It is interesting to note that in some parts of India Rajputs have embraced Islam, as for example the Mānhs, Kāṭīls, and Sahalīs of the Pandījāb.

RAFI. [See RAPA.]

RAFIL AL-DIN, MAWLĀNĀ SHĀH MUHAMMAD, b. SHĀH WALI ALLĀH B. 'ABD AL-RAḤĪM AL-OMĀRĪ (after the Caliph 'Omar b. al-Khattāb), was born in 1163 (1750) in Dihli, in a family which enjoyed the highest reputation in Muslim India for learning and piety, from the xviiiith century onwards, and produced a number of eminent scholars up to the "Mutiny" (see Siddīq Ḥasan Kān, Iḥāṣ al-Yūbatāt), Cawnpur 1288, p. 296 sq.: F. A. S. B., xii., 310. He studied hadīth with his father, who was the most celebrated traditionist in his time, in India.

After the death of his father in 1176, he was brought up by his elder brother Shāh 'Abd al-ʿAzīz (1159—1239 = 1746—1823) with whom he completed his studies in the usual sciences, being specially interested in hadīth, kalām and usūl. When about twenty, he entered upon his career as muḥtis and muḍārris, and later succeeded in these capacities his brother and teacher, who, in his old age, had lost his eye-sight, and had indifferently health. He died on the 6th Shawwāl 1233 (Aug. 9, 1818), at the age of 70 (lunar years), of cholera, and was buried in their family graveyard outside the city of Dihli.

He wrote about 20 works, mostly in Arabic and Persian, and a few in Urdu. He is praised for the subtility of his ideas and the conciseness of his language. His works are:

In Urdu:
1. a translation of the Qur'ān, interlinear to the Arabic text, which it follows closely and faithfully. He and his brother ʿAbd al-Ḵādir [q. v.] were the pioneers in this field, though their work was considerably facilitated by their father, Shāh Wali Allāh's Persian translation of the Qur'ān (entitled Fath al-Rahmān fi Tahrījamat al-Kur'ān). The first edition of Shāh Rafi'al-Din's translation appeared in Calcutta in 1254 (1838—1839) and another, in 1265 (1849—1850). For some of its numerous editions (from 1866 onwards) see Blumhardt, Cat. of the Hindustān Printed Books of the Libr. of the British Museum, London 1859, p. 290 sq., and the Supplement to the same, London 1900, p. 403.

In Arabic:
1. Takhīm al-Ṣinā'a or Takhīm li-Ṣinā'a al-ʿAdhkhān, dealing with a. logic, b. taḥfīz, i.e. principles of dialectics, teaching, learning, authorship and self-study, c. Muḥābdh min al-ʿUmūr min al-ʿumāma (some metaphysical discussions) and, d. Taḥfīz al-Arūd (i.e. an inquiry into the causes and the criteria for judging conflicting opinions in religious matters). A considerable portion of the work has been quoted in the Akhīfād al-ʿUṯūm, p. 127—135 and 235—270; 3. Muḥaddimāt al-ʿilm, see Akhīfād al-ʿUṯūm, p. 124; 4. Risālāt al-Mahabbā, a discourse on the all-pervading nature of love; see Akhīfād al-ʿUṯūm, p. 254; 5. Tafsīr Ayāt al-Nūr, a commentary on Sūra xxiv. 35; 6. Risālāt al-Aʿrūd wa ʿl-Kabāya: see Aḥbād, p. 915; 7. Daʿwāt al-ʾBīṭil, dealing with some abstruse problem of the ʿilm al-ḥaḵīf. 8. a gloss on Mīr Zāhid al-Ḥarawī's commentary on Kūf al-Din al-Rāzī's Risālāt al-Taṣawwufa wa ʿl-Taṣdīk (see Brockelmann, ii. 209); 9. Iḥāṣ al-Bārāhīn al-hikmatīya wa ʿl-ʿUsūl al-Ḥanābī.[Nrs. 4—9 are unpublished.]

In Persian:
10. Kānīm al-Nāma (Lahore 1339; Haidarābād, unedited ed.), on the last judgment, also called Kānīm Nāma (see Browne's Supplementary Handlist, p. 189). For the two poetical versions, in Urdu, of this popular work, viz. Aḥār-i Maḥshar (chronogrammatic name, which gives 1250 as the date of composition), and Aḥār-i Kīvāmā, see Sprenger, Ouḍh Catalogue, p. 624, and Blumhardt, Caith., p. 290, and for an Urdu prose version, Kīvām Nāma or Daʿī al-Ḥakār, see Blumhardt, loc. cit.; 11. Faddās, Dihli 1322; 12. Mawdūʿa al-Ṭīr al-Qulwā (Dihli 1314), 3 small treatises on religious and mystical topics; 13. Shāh al-Sudur bi-Shāh al-Maṣūm wa ʿl-Kubār, an eschatological work, covering ff. 2002 of a small size, in a MS. copy in the Dār al-ʿUlam, Deoband, which institution also possesses the MS. of his 14. Laṭīf al-Khamsa, a mystical work (ff. 32).

(MUHAMMAD SHAṬI')

AL-RAḠĪB AL-ISFĀHĀNĪ, ABU ʾL-KĀSIM AL-HUSAIN B. MUḤAMMAD B. MUḤAMMAD (according to others: al-Faḍl, al-Sayyid, etc., wrongly: Muḥammad b. Muhammad). A rabbinical writer, of the details of whose life nothing is known beyond that he died at the beginning of the viiiith century, perhaps in 502 (1108). Some regarded him as a Muʿtazili but Fakhr al-Dīn al-Rāzī in his Aṣās al-Taṭbīkīs established his orthodoxy. His work was concerned with Ḥaḏīthic exegesis and editorising. His studies on the Qur'ān from which al-Brāhīwī is said to have taken a great deal were opened with a Risāla muḥkamah ʿalā sawda al-Qur'ān now lost, perhaps identical with the Muḥaddimāt al-Tafsīr, pr. at Cairo 1329 at the end of ʿAbd al-Dībābīr's Taṭbīkāt al-Qur'ānī ʿṭālāt al-Maḥbūn. He next compiled an excellent dictionary of the Qur'ān arranged alphabetically according to the initial letters entitled Kitāb Muḥaddimat Ālīn al-Qur'ān, which in addition to the MSS. mentioned in G. A. L. i., 289, survives in many others in Stambul [see e.g. M. O., vii. 106, 127] and in Bankirop (Cat., xviii. 1454) and under the title al-Muḥaddimāt fi Ṣawād al-Qur'ān was printed on the margin of Ibn al-Athīr's Nikāya, Cairo 1322 and edited by Muhammad
al-Zuhri al-Ghumrāwī. Cairo 1324. In the preface he outlines the prospect of a second work that was to deal with the synonymy of the Kurān (al-ʿAlif; al-mutawadda ʿala l-ʾAlif, wa-ʾl-wādāʾī wa-ʾl-wādāʾī wa-ʾl-wādāʾī wa-ʾl-wādāʾī), the Tafsir al-Kurān, Aya Sofia 212, perhaps came to be compiled in this way. The reference might however be to the Diwār al-Tawāʾil, on the Kurān verses found in more than one passage although expressed differently, Brun. Mus. Or. 5784 (Descriptive List, ibid. A. G. Ellis and E. Edwards, p. 3) which is probably identical with the Hall Mutashābhat al-Kurān, Stambul, Rāzhīg 180. As a quotation in the preface shows he had already written his principal work on ethics Kitāb al-Dhārī ila Maqārim al-Shariʿa, before the Kitāb Mufradāt; al-Ghazzāli is said to have always had a copy of this by him. In addition to the MSS. mentioned in G. A. L., it is also preserved in Brun. Mus., Or. 7016 (Deser. List, No. 62) and in Stambul (see e.g. M. O., vii. 101–102; M. F. O., B., v. 460) and finally in Cairo, 1299 (ʿSarkis 1899, 1324. The Tafsir Tafsir al-Naṣif al-Wādāʾī wa-ʾl-Tawāʾil al-Suwāṭain, pr. Cairo n. d., ed. by Tāhir al-Dārārī from the Jerusalem MS. Khtilidiya, No. 71, in 963 A. H. Barût 1319, 1323 is a companion work: on both works see Asin. Patience, Aherkhān de Cordero, ii. 19. His most popular book was the work on adab: Muḥaddad al-ʿUdārāʾ wa-Muhaddad al-ʿUdārāʾ wa-ʾl-Bulghārāʾ or simply Kitāb al-Muḥaddad, which is divided into 25 ḥudūd, which are again divided into faṣūl and abwāb, which deal with the usual adab themes beginning with intelligence and stupidity and ending with angels; dūn and animals in quotations in prose and verse; in addition the MSS. preserved in G. A. L., it is also preserved in Stambul Selim ʿAghā, No. 957; Damascus, ʿUmmūliya, Siyūṭī, 96, 5, 7; in Cairo, Fihrist, 2, ill. 334. A synopsis by al-Suyūṭī, ibid., p. 345; an anonymous Berlin, No. 8350 and Damascus, loc. cit., 8a. In Europe the work was first made known in the part edited by G. Flugel as "Der vertraute Gefährte des Einsamen im schwebenden Gegenstand" von Abu Mansur Abdulmelik ben Muhammad ben Ismaʿıl Etteṣailī aus Nisahur mit einem Vorwort von J. v. Hammer, Vienna 1829 (see Gildeimper, Z. D. M. G., xxciv, 171). The work (with Ibn Ḥiḍjadi’s Ṭamārat al-ʿAwwāz on the margin) in 2 vols., is printed in Bālā, 1284, 1287, 1305; Cairo (without the edition on the margin) 1310, 1324, 1326. Ibrahim Zaidan published in Cairo in 1902 a synopsis, which only contains 12 ḥudūd, which lacks 10 and 13 of the Vienna MS., and is abbreviated in other ways. A Persian translation entitled al-Nawādir by Muḥammad Sāḥib b. Muḥammad Bākīr al-Kazwīnī is in Teheran (see Y. Etteme, Cat. de la Bibliothèque du Madjles, ii. 308). Lastly there is also an adab al-Shirhandī in Kasan (see Menzel, in., xxvii. 94). The work on adab: Tahākī al-Bayān (on language and writing, ethics, dogmatics and philosophy, "al-ʾawālī") cited in the preface of the Kitāb al-Shariʿa is founded in Maḥād, 5 (Okṭá, Fihristi Kutubhānā-i mazālikā-i Aṣṭani Kudsi Rēdē, 1845, i. 24, No. 56). Bibliography: al-Suyūṭī, Buḫayyāt al-ʾUwāʾīt, p. 396; al-Dhahabi, Tabākāt al-Muṣafāratīn (Cod. Bankiopere), fol. 121b; Muḥammad Bākīr al-Khwānsārī, Rauḍat al-Lanūṭī, p. 249; ʿSarkis, p. 922 sq.; Brockemann, G. A. L., i. 269. (C. Brockemelen)

RAGUSA (Rausium), a town in Dalmatia, formerly a free state (now Dubrovnik), on the south side of a peninsula which runs out into the Adriatic, picturesquely situated (50 feet) at the foot and on the slopes of Mount Sergius with about 14,500 inhabitants, mainly Croats, was founded in the viiiith century by Romance fugitives from Epidaurus which had been destroyed by the Slavs, later belonged to Byzantine Dalmatia which had been settled by a Romance population. At the end of the tenth century the town, which had become strong and rich through its prosperous maritime trade, was paying homage to the Venetians under whose suzerainty it remained after various interludes continuously from 1204 to 1358. In this year Ragusa passed to Hungary and soon attained such power through its flourishing trade that it formed a free state with an aristocratic form of government. Authority was in the hands of the nobles (Grand Council) who chose the Senate (45 members). The latter chose the Little Council (16, later 7 members) which chose every month a Rector (rector) as head of the state. Al-Idrīsī [q. v.] mentions Ragusa in his Kitāb al-Rudger as ʿAlam al-Rugūs (other readings: ʿAlam al-Rugūs) and is evidently quoting Frankish sources (cf. thereon Wilh. Tomaseck, Zur Kunde der Humat-Halbinsel: II. Die Handelswege im XII. Jahrh., nach den Erkundungen des Arabers Idrişī, Vienna 1887 = S. B. Ak. Wiss., phil.-hist. Kl., vol. xxii., fasc. 1). In the Ottoman period the Slav name Dubrovnik is found exclusively, in place of Ragusa. Ragusa's relations with Islām, at first completely hostile, go back to a remote date. When the Arabs in the ninth century conquered Sicily and established themselves on the mainland in Bari (Apulia) they besieged Ragusa on one occasion which defended itself bravely and was relieved by the navy of the emperor Basil I (867–886). Under the emperor Romanus III (1028–1034) the Ragans distinguished themselves in the sea-fights between Byzantines and Arabs. It was not till a later date that relations became more peaceful when Ragusan commerce, which extended to Egypt and Syria, to Tunis and as far as the Black Sea, began to flourish. As early as the xivth century, corn was exported to Ragusa from the harbours of Anatolia and the rest of the petty states (pōvā뜨i: milhē) in Anatolia were well established. The first document related between Ragusa and the Ottoman empire belong to the period of Bayazid I. Vildirm (1380–1402; q. v.) as the relations of the free state to Orkhan [q. v.] and Murad I [q. v.] mentioned in later Ragusan histories will not be serious investigation. It is however certain that at quite an early date it became necessary for the Ragusans to remain on good terms with the Ottomans, who were advancing westward, for the sake of their trade. They were able to deal with tact and skill with their new neighbours. Ragusan trade in Turkey developed considerably as the many frontiers and customs offices of the numerous petty rules of the Balkans, which had been disappeared by the Turks, disappeared and the Turkish duties were uniform and low. Articles manufactured in Ragusa itself, like cloth, metal, soap, glass, wax etc. or goods imported from Italy for the Balkan peninsula were taken into the interior on safe roads. There was a caravan trade which went from Ragusa via Trebinje, Tien-
tiste, Foča, Goražde, Plešivje, Prijeponje, Trgoviste, Novi Bazlar [q. v.], Niš, Sofia, Philippiopolis to Adrianopole and later to Stamboul (cf. J. J. Jireček, Die Handelsstrassen und Bergwerke von Serbon und Bosnien während des Mittelalters, Prag 1875, p. 149: Von Ragusa nach Niš). In the interior of the Peninsula there were the factories of the Ragusans like Rudnik, Prizren, Novo Brdo, Pristina, Zvornik, Novibazar, Skopje, Sofia with many other settlements extending as far as the mouths of the Danube. On May 12, 1392 the Little Council of Ragusa gave the nobleman Teodorico Gisla in Novo Brdo orders to travel to the Turkish sultan and to make representations about the capture of some Ragusan merchants. There is a Turkish safe-conduct (litera securitatis) of June 20, 1396 prepared for Ragusan merchants. In 1397 Sultan Bayazid I allowed the Ragusans to trade unhindered in the Ottoman empire, and a few years later (1399), the first Ottoman embassy led by Kefalija Firuž (Firuz)-Beg arrived in Ragusa from the citadel of Zvečan (in Kosovo) (cf. F. V. Kraelitz, Die ersten ernsten Verhandlungen zwischen Sarajevo, Berlin, 1879, p. 30). The first embassy from Ragusa to the Sublime Porte was however not sent until 1430. It was received by the sultan in his court at Adrianopole and received from him the extant charter of trading privileges, dated Adrianopole, Dec. 6, 1430 (cf. Ciro Truhelka, Turskojedjni spominici dubrovačke arhite, in Glasnik senažnog muzeja u Bosni i Hercegovini, Sarajevo, vol. xxii. [1914], No. 2). To protect her widespread trade on the Balkan Peninsula Ragusa, after the first temporary conquest of Serbia by the Ottomans, found herself forced to offer the Porte an annual present of 1,000 ducats in silver plate (argentiferi) but when Georg Branković restored the independence of Serbia in 1444 this promise was promptly withdrawn; on the final subjection of Serbia by the Turks in 1459 this tribute (štarići) became a regular institution. From 1459 it was 1,500 ducats and gradually increased to 15,000 ducats. From 1481 it was 15,000 ducats and was annually brought to the imperial court by special captarii with very detailed instructions (cf. the text of these commissions for the Paladins Marino de Gondola and Pietro di Uccari of 1458 and of a later one for the ambassador of the tributary too Gio. Mar. di Resti of 1572 in Ljus knez Vojnoci, Dubrovnik i osmansko carstvo. Prva knjiga: Od prve ugovore s portom do usvojenja Hercegovine, Belgrad 1898, p. 118—155 and p. 256—266;) (cf. C. J. Jireček, Die Beleidung von Ragusa etc., note 49. A number of the earliest documents relating to these missions have been published by F. Kraelitz-Greifenhorst, in his Osmanische Urkunden in türkischer Sprache aus der zweiten Hälfte des XV. jahrhunderts (= S. B. Ak. Wiss., phil.hist. Kl., vol. 197, Vienna 1922); they come without exception from the area of Ragusa, part of the Turkish portion of which is at present in Albania.

On their journey the envoy had to give all kinds of presents, for example to the Sandjak of the Herzegovina in Sarajevo [q. v.] and the Begarberg of Rumelia whose headquarters were in Sofia. The readiness with which the Ragusans adapted themselves to the requirements of dealings with the infidel Turks did not at first find approval at the Holy See. Paul II in 1468 gave the Ragusans express permission to trade with the heathen Ottomans (cf. W. Heyd, Histoire du commerce du Levant, ii., Leipzig 1885, p. 347 sq. with further references to Ragusan trade with the Ottomans). The lands of the free state of Ragusa which stretched from the mouth of the Cattaro (Kotor) to the Gulf of Cattaro (Kotor), thanks to the skilful policy of its leaders, thus remained intact till its end in 1808. Only occasionally the Ragusans had to suffer from the covetousness of Ottoman rulers, e.g. about 1667 when Kara Muštafa [q. v.] demanded from the Ragusan envoys 150,000 talers “blood money” for the Dutch ambassador G. Crook who perished in the great earthquake in Ragusa (April 6, 1667) (cf. J. v. Hammer, G.O. K., vi. 203 sq.), or when ten years later the same grand vizier endeavoured to extort the same sum and threw the ambassadors of the free state into prison (cf. J. v. Hammer, G.O. K., vi. 346). When Ragusa had fallen several years behind with the tribute, it had in 1695 to pay a considerable sum in compensation (cf. J. v. Hammer, G.O. K., vi. 616). In 1722 a similar case occurred (cf. J. v. Hammer, G.O. K., vii. 312 sq.) when three years in arrears. It is however a fact that Ragusa cunningly used every opportunity to avoid its oppressive obligations (cf. the significant saying in the Levant quoted by von Hammer, G.O. K., vii. 29: Non sanno Christiani, non sanno Ebrei, ma perovi Ragusi), until the peace of Carlowitz (1699) made it possible for the Ottomans to collect the tribute again (cf. J. v. Hammer, G.O. K., vii. 29). From 1703 it was paid every three years and in 1804 delivered for the last time in Stamboul by the envoys Paul Goze and Blasius Menze.

In the Turkish wars of 1683—1699 and 1714—1718 the Venetians occupied the hinterland of Ragusa and Trebinje but at the peace of Carlowitz and Passarowitz the Ragusans, protected by Austria and the Porte, negotiated so skilfully that Turkey was not only left the land as far as the Ragusan frontier but also two strips of territory on the coast (Klek and Sutorina) so as not to become direct neighbours of Venice. This was the last great coup of Ragusan policy.

With the decline in Ragusan trade, which came about for the same reasons as the general decline of Italian trade in the Levant, the political decline of the republic set in. In 1808, Napoleon sent General Marmont, afterwards Duc de Raguse, to dissolve the Senate and a year later made Ragusa a province of Illyria. In 1815 the town passed to Austria and since 1918 it has belonged to Jugo-Slavia.

The Ottoman traveller Ewliya Celebi [q. v.] in his Sīyāḥetname (vi. 443 sq., esp. p. 445—453) gives a full description of Dobrua Venetik which he contrasts with Bunduzi Venets (i.e. Venice (cf. on these terms F. Babinger, Aus Südosteuropas Türkenzeit, Berlin 1927, p. 38 note and H. v. Milt, Beiträge zur Kartographie Albanien, in Geographia Hungarica, series geographica, tomus III, Geographia, 1929, p. 659—19, note 88). In 1074 (1664) he came via Izjibomir, Popovo to Dubrovnik from which he went on to Castelovovo (Hercegovina). On Hungarian and Serbo-Croat translations of this section cf. Babinger, Ewliya Celebi's Reiseritte in Albanien, Berlin 1930. p. 1 and 2, note 8.

Statistics regarding the population of Ragusa in the older period are not available. The town had 800 houses. The whole district had 50,000 inhabitants. With the prosperity and long period of peace, a literary life began; poetry — Latin
RAGUSA — AL-RAHBA

and Slav — was definitely cultivated from the end of the xvth century. Latin was used in the offices for over 1,000 years, in recording the proceedings of the Senate till 1808. Within its walls Ragusa frequently sheltered illustrious fugitives from Turkish persecution (e.g. Skanderbeg).

The archives of Ragusa, kept in the Rector’s palace, still await thorough study and contain a large number of unpublished Turkish documents and countless documents of value for the history of Turkish rule in S.E. Europe. Cf. Friedrich Giese, Die osmanisch-türkischen Urkunden im Archiv des Rektorenpalastes in Dubrovnik (Ragusa). in Feitschrift für Georg Jacob zum siebzigsten Geburtstage, Leipzig 1932, p. 41—56. Cf. also J. Gelitch (Djelić), Dubrovacki arhiv, in Glasnik zemaljskog muzeja u Bosni i Hercegovini, xxii., Sarajevo 1910, and Milan v. Rešetar, Dubrovacki arhiv, in Narodna Eucilikofeka, i. 584 sqq.

Ragusa had busy commercial relations with other Muslim states besides Turkey. In 1510 for example, Ragusa received from Kānṣūl al-Q̄adirī (q. v.) a treaty in which it gave its trade with Egypt protection and freedom (cf. Giacomo Luccari, Copiose ristrette degli Annali di Rusa, Venice 1605, p. 126 and thereon Fr. M. Appendini, Notizie sulle istorico-critiche antichità, storia e letteratura de’ Raguzi, Ragusa 1802, i. 213 with erroneous conclusions). The relations were, it is true, not always of a peaceful nature as the “state of war” in 1194 (1780) between Ragusa and Morocco showed (cf. thereon F. Babinger, Ein marokkanisches Staatschreiben an den Freistaat Ragusa vom Jahre 1194 (1780), in M. S. O. S., xxx., Berlin 1927, part ii., p. 191 sqq. and ibid., xxxi., p. 98 sq.). The archives of Dubrovnik contain further unpublished Moroccan documents of the end of the xvth century, e.g. a government document of the 9th Rabi II, 1195 (April 4, 1781).

Bibliography: In addition to the works mentioned in the text cf. also the older travellers in so far as they describe the road through the Balkan Peninsula (Slaonov), especially Jean Chesneau, Les Voyages de Montesquieu d’Aramon (1547—1588), ed. by D. Schefer (Des Hayes de [Cournenin], Voyage du Levant fait par le commandement du roy en l’année 1621 par le Sire D. C. F. Paris 1632; Les Voyages de M. Quillet à Constantinople par terre. Paris 1664 and frequently; Sir George Wheler, Journey into Greece. London 1682 or French translation Voyage de Dalraitte, de Grice et du Levant. Amsterdam 1689, 2 vols. — A scholarly account, particularly one based on the documents, of the relations of Ragusa with the Ottoman Empire is still lacking as is a full commercial history of the republic. — The principal work on the history of Ragusa is the Geschichte des Freistaates Ragusa, Vienna 1807, by Johann Christ. v. Engel (1770—1814). On other relations between Ragusa and the lands of Islam see Vladimir Mažuranić, Študijen iz Diesten des Islams (v. X. bis ins XVI. Jahrhundert), transl. into German and publ. by Camilla Lucerna, Zagreb-Leipzig 1928, 55 p., a work which however does not on any point stand the test of strict examination. — On the coinage of Ragusa see Milan v. Rešetar, Dubrovacka numismatika, 2 parts, 1924—1926. — Of the Ragusan historians of the older period in addition to S. Razzi, La storia di Ragusa, Luča 1388 and Jun. Resti, Chronico Ragusina (in the Monumenta Slav. Merid., vol. xxv., Agram 1893), Giacomo di Pietro Luccari [= Jakov Lukarević (1551—1615)] most deserves mention, but a thorough study of the probably unreliable sources of his Copiose ristrette degli Annali di Rusa (Venice 1605, xxxvi., 176 p., 4° and Ragusa 1790, 325 p., 8°) is still a desideratum; cf. for the present V. Mažuranić, Itwori dubrovacka historika Jakova Lukarevića, in Narodna Starina, Zagreb 1924, No. 8, p. 121—153. — An excellent and exhaustive bibliography on Ragusa is given in the introduction to the work of Ivan Đuđević, Avvisi di Ragusa. Documenti sull’ Império turco nel secolo XVII e sulla guerra di Candia, Rome 1935, which is also of great importance for the history of relations between Ragusa and Turkey. — There is no collection or edition of the surviving reports of Ragusan envoys on their journeys to the Porte on the lines of the long available Venetian relationi. The only possible exception is the Relazione della relizia e delle feste dell’ Europa sottofatta al dominio del Turco di Matthaus Gundulič (Gondola) who was in Turkey for 28 months until July 1674 written in Rome in 1675, ed. by Banduri, Imperium Orientale, Paris 1711, vol. i.: Animadversiones in Constant. Paraphrophag. de administrate imperii, p. 99—106 (cf. thereon Drinov in Periodičko Spisanje of Braila, ii. 65, who did not know this edition and published extracts from another manuscript). Nor is there a list of these envos available (cf. J. von Hammer, G. O. R., ii. 318) among whom we find representatives of almost all the noble families of Ragusa, like the Bona, Caboga, Gocze, Gondola, Menze. Pozza, Resti etc. Ragusa being a tributary country the Porte never sent ambassadors to it but only commissioners (cf. J. v. Hammer, G. O. R., ii. 331), so that we have no Turkish reports at all. (Franz Babinger)

AL-RAHBA, RAHIB MĀLĪK b. ṬAWK or RAHIB AL-SHāʾIM, a town on the right bank of the Euphrates, the modern al-Miṣfād. Hardy: anything definite is known mainly from the history of the town before the Muslim era. In the middle ages it was usually identified as the Ḥābiḥ b. Nāḥār of the Bible (Gen. xxxvi. 37) i.e. Ḥābiḥ on the river the Euphrates (Esphratus) especially in the Talmud and by the Syriac authors (e.g. Mich Svr., cf. index, p. 63): Barhebræus, Chron. syr., ed. Bedjan, p. 273 and passim, who usually call it Ḥābiḥ, Ḥabat (M. Hattmann, in Z.D.P. I., xxii., p. 42 note 1). A. Musli (The Middle Euphrates, New York 1927, p. 340) takes it to be the Thapsakos of Tolemy, which he — certainly wrongly — wants to distinguish from the well-known town of the name at the bend of the Euphrates (ibid., p. 315—320) instead of seeing only an erroneous location by the Alexandrine geographers (cf. the article THAPSAKOS in Pauly-Wissowa, R. E., v., A. col. 1272—1280). The name al-Rahba is explained by Yakīt (Muṣjam, ed. Westenfeld, ii. 764 following the grammatical Manhar b. Shumail) as the flat part of a wādī, where the water collects (E. Herzfeld, Archäolog. Reise im Euphrat- und Tigri-Gebiet, ii. 382: cf. A. Socin, in Z. D. P. V., xxii. 45).

According to Arabic accounts it was at one time called Furdat Nu'm (al-Tabari, ed. Goeje, 917) or simply al-Furqa (Ibn Miskawaih, Tadijar,
ed. Caetani, p. 87); in the vicinity was a monastery, Dair Nuʿm (Yākūṭ, ii. 704; iv. 797).

According to al-Baladhuri (ed. de Goeje, p. 180), there was no evidence that al-Raḥba below Ḥaḍramīya is an old town; on the contrary it was only founded by Malik b. Ṭāwūb b. ʿAttāb al-Taghlibi (cf. Abu ʿl-Mahāsin, ed. Popper, ii. 34) in the caliphate of Maʾmūn (813−833) (a legendary embellishment of the story of its foundation by ʿUmar al-Bīsṭāmī in Yākūṭ, ii. 764). The new foundation was in the form of a long rectangular head cloth (qatālašān). After the death of its founder (Ibn al-ʿAṭār, ed. Tornberg, vii. 188) in 260 (873−874) he was succeeded as ruler of the town by his son ʿAbd Allāh who was driven out of it in 883 by Ibn Abī ʿl-Sādār, lord of al-Anbār, Ṭārīḵ al-Furāt and Raḥbat Ṭawk (al-Ṭabarānī, iii. 2039).

The ʿAlmaṭī tribe who in 1161 had plundered the district of al-Ḥilla and the Kufa returned to Raḥbat al-Shām followed by the government troops where they were reinforced by other nomads and scattered the enemy (Ibn al-ʿAṭār, xi. 182 sq.). Nūr al-Dīn granted the Kurd Asād al-Dīn Shīrkuh b. Ahmad b. Shādī of Dīn, Salādīn’s uncle, in 599 (1164) al-Raḥba and Ḥims (Mich. Syr., ii. 325; Barhebr., Chron. syr., p. 330). The latter entrusted the government of al-Raḥba to an officer named Yūsuf b. Malikshī Khurshā built al-Raḥbat al-Diādīna with a citadel about a farsaḵk (3 miles) from the Euphrates because the town of Raḥbat Malik b. Ṭawk was now in ruins (Abū ʿl-Fida’, Tuhfāt al-Bāḥrīn, ed. Rénaud, p. 281; Ḥudaydī Khalfī, Diwān al-Khalīfī, p. 444). The new town of al-Raḥba became a caravan station between Syria and the Trak, as we learn from Ibn ʿAbd Allāh among others (Tuhfa, ed. Defrémy and Sanguinetti, iv. 315) who travelled from there via al-Suḵkha to Taḥmūr.

The town remained for a century in Shīrkuh’s family until in 1264 Baibars installed an Egyptian governor there (Ibn al-ʿAṭār, xi. 341; xii. 189; Abū ʿl-Fida’, Anales Misleim, ed. Reiske-Alder, iv. 142; v. 16). Sonḵor al-Asāhḵar of Damascus who rebelled against Kalaʿūn in 678 (1279) fled after a defeat to al-Raḥba to the emir Ḳīsā and from there appealed to Abaḵa Ḳaṭūf for protection (Barhebr., Chron. syr., p. 543).

Muhanna and his family, the Ḳīsā, were driven from the district of Salāmiya in the spring of 1320 and pursued by the Syrian troops as far as
Al-Rahba

Rahba and Āna (Abu 'l-Fidā', v. 340 sq.)—the town was perhaps destroyed on this occasion.

In 1331 the Euphrates inundated the country round al-Rahba (Ibn al-Athir, Vienna MS. in Musil, The Middle Euphrates, p. 3, note 3).

According to the Muslim geographers, al-Rahba lay on the Euphrates (Kathāna, in B. G. A., vi. 233; Ibn Isma'il, ed. Vossesx, in B. G. A., iii. 138; al-Idrisi, transl. Jaubert, ii. 137 sq.; al-Dimishki, ed. Mehren, p. 93; Abu 'l-Fidā', ed. Reinand, p. 51) and also on the site of the Sa'id led off from it at Fām Sa'id on the right bank, which rejoined the Euphrates below the town, the gardens of which it watered, and above al-Daliya also called Dalīyat Mālik b. Ţawk (Suhāh, ed. v. Mīkh, in Bibl. arab. histor. u. Geogr., v, Leipzig 1930, p. 123; Yākūt, iv. 840; Abu 'l-Fidā', Tākāmī, p. 281). The town lay 3 farsāks from Kārkišiya (al-Āzīnī, in Abu 'l-Fidā', ed. Reinand, p. 281) and, according to al-Makdisī (B. G. A., iii. 149), a day's journey each from this town, al-Daliya and Bā', (the latter statement is quite inaccurate; cf. Musil, op. cit., p. 253 sq.) Musil (ibid., p. 250) wrongly takes al-Daliya to be al-Sūliya, which is impossible as 8—10 miles above it the Euphrates flows close to the foot of Djabal Abu 'l-Kāsīm, so that the Sa'id canal must have flowed north of it back into the Euphrates (cf. the Karte von Mesopotamien of the Prussian Survey, Feb. 1918, 1:400,000.

Sheet 52: 'Āna; Cumont, Foulles de Douara-Europes, Paris 1926, Atlas, pl. i.: Cours de l'Euphrate entre Circeium et Douara-Europes d'apres l'Observatoire de 'l'Armee du Levant' on the same scale and the maps in Sarre-Herzfeld, Arch. Reise. The town of al-Rahba was a Jacobite bishopric (a list of the bishops in Mich. Syr, iii. 502); that it — for a time at least — was also a Nestorian bishopric is shown from a life of the Katholikos Eliyā I (on him see Baumstark, Geschichte der syr. Literatur, p. 286 sq.) who shortly before his death on May 6, 1049 appointed a bishop to this town (Assemi, in B. O., iii. 263).

In the statements of the Arab geographers, it is clear that the old Rahbat Mālik b. Ţawk lay on the bank of the Euphrates (al-Iskāhri, in B. G. A., ii. ed. v. Meherzi, p. 172; Ibn Hawāk, B. G. A., iv. 135; al-Makdisī, B. G. A., iii. 138; Vākūt, Muğamān, v. 860; Ibn Khurādābīhīb, B. G. A., vi. 233) i.e. presumably corresponded to the modern al-Miyādīn (plur. of miyādīn) (G. Hoffmann, Auszüge aus syr. Akten pers. Martyrer, p. 165; E. Herzfeld, Arch. Reise, ii. 382, note 1; A. Musil, The Middle Euphrates, p. 253, 340) while the new al-Rahba, as we see, was built a farsāk from it, where in the S.W. of al-Miyādīn there still are the ruins of the citadel al-Rahaba or Rāba. According to Abu 'l-Fidā‘ (ed. Reinand, p. 281), towers were still standing among the ruins of the old town. Opposite al-Rahba on the left bank of the Euphrates stood a fortress, taken by Marwān II (744—750) in the fighting with Hishām (Mahdīb in Mandāb, Kītāb al-U'mūn in v. Road. Orient., v. 517 sq.) In this fortress Musil (op. cit., p. 338 sq.) has recognized al-Za'īna (al-Āludūr, al-Doveji, p. 180; Tabāri, ii. 1457 sq.; Ibn Khurādābīhīb, p. 74) and the ancient Za'ād which is still called al-Marwānīya after this caipht, but really is not opposite al-Miyādīn, but fourteen miles farther down.

Ibn Hawāk (B. G. A., ii. 155) praises the fertility of the well-watered region of Rahba, where the orchards on the east bank of Euphrates also produced date-palms; their quinces were also famous (al-Makdisī, in B. G. A., iii. 145). The Karte von Mesopotamien (1:400,000 mark, at "Mājādīn", the first (most northerly) palm) dates really only ripen in specially favourable weather in the region of Alūd Kamāl (Musil, op. cit., p. 342). According to al-Istakhri (B. G. A., i. 77), Rahbat Mālik b. Ŷawk was larger than Kārkišiya; al-Makdisī (B. G. A., iii. 142) calls it the centre of the Euphrates' district (aman al-Furāt or nāḥiyat al-Furāt) as in the early Muhammadan period the fertile plain from Dar al-Zawr to Alūd Kamāl with the towns of al-Rahba, Dāliya, 'Āna and al-Hadjīth was called (Herzfeld, op. cit., ii. 382). According to him the town was built in a semi-circle on the edge of the desert and defended by a strong fortress.

Yākūt visited the town, which according to him was eight days' journey from Damascus, five from Halab, 100 farsāks from Baghdād and a little over 20 farsāks from al-Ḳaḥkā. In al-Dimīthā (ed. Mehren, p. 202) it is called Rahbat al-Furātīya (in the time of Ḫālid al-Fārūkī (Zubda, ed. Ravaisse, p. 50) it belonged to Ḫalab. According to al-Umrānī, Syria, to be mentioned among the cities, marched to the capital Hims, reached as far as al-Rahba; he mentions there "a citadel and a government and there are Bahrit's, cavalry, scouts and mercenaries stationed there" (al-Umrānī, transl. R. Hartmann, in Z.D.M.G., lxx, 23, 39). Ibn Baṭṭīta (op. cit.) calls the town "the end of al-'Irāk and the beginning of the Shām". Ḫālidī Khālīfa reckons from 'Āna to al-Rahba three days' journey and from there to al-Dair one day's journey (Zihārīn-nunā, Stambul 1145, p. 483; cf. thereon Musil, op. cit., p. 257). The Venetian jeweller Gasparg Balbi who passed the town on Feb. 6, 1588 on the Euphrates says (Viaggi dell' Indie orientali, Venice 1590, without pagination) "vedemmo castello Rahabi appresso il qual castello si vede una città rovinata, ma in alcuni lati di essa habitatà da alcune poche persone di nome di Rahaballecito" (on the form Rahabi, cf. M. Hartmann, in Z.D.P.F., xxi. 44, no. 596). Pietro della Valle (Viaggi, Venice 1544, i. 571) with the town of "Rahasa" at a distance from the Euphrates and heard that there were some old buildings there. Tavernier (Les six voyages, i., Paris 176, p. 285) mentions a place called "Machet-rahba", i.e. Maschhad al-Rahba (six miles S. W. of al-Rahba).

In modern times al-Miyādīn and the ruins of the Rahba (the usual formation) have been repeatedly visited (see Bibl.). The plan of the castle forms a triangle with flattened angles; pictures of the castle will be found in Musil, The Middle Euphrates, p. 7, fig. 2 or Sarre-Herzfeld, Arch. Reise, iii., pl. lixxix sq.

RAHBANIYA (A.), monasticism. The term is derived from rāhīb [q.v.]; it occurs in the Kurān once only, in a passage (Sūra lixi. 27) that has given rise to divergent interpretations:

"And we put in the hearts of those who followed Jesus, compassion and mercy, and the monastic state, they instituted the same (we did not prescribe it to them) only out of a desire to please God. Yet they observed not the same as it ought truly to have been observed. And we gave unto such of them as believed, their reward; but many of them were wicked doers".

According to some of the exegists the verb "we put" has two objects only, viz. compassion and mercy, whereas the words "and the monastic state" are the object of "they instituted". Accordingly the monastic state appears here as a purely human institution, which moreover has been degraded by evil doers.

According to others, however, the object of the words "and we put" is: compassion, mercy and the monastic state. According to this exegesis monasticism is called a divine institution. Professor Masson has pointed out that this exegesis is the older one; the younger one expresses a feeling hostile to monasticism, which coined the tradition "No rahbāniya in Islām".

This tradition does not occur in the canonical collections. Yet, it is being prepared there. When the wife of ʿOṯmān b. Maʿṣūn [q.v.] complained of being neglected by her husband, Muhammad took her part, saying: Monasticism (rahbāniya) was not prescribed to us (Abū Ḥanīfah, vi. 226; Dānīl, Nikāb, bāb 3). The following tradition is less exclusive: Do not trouble yourselves and God will not trouble you. Some have troubled themselves and God has troubled them. Their successors are in the hermitages and monasteries, "an institution we have not prescribed to them" (Abū Dāwūd, Adāb, bāb 44).

Islām, thus rejecting monasticism, has replaced it by the holy war: "Every prophet has some kind of rahbāniya; the rahbāniya of this community is the holy war" (a tradition ascribed to Muhammad in Aḥmad b. Ḥanbal, iii. 266; to Abū Saʿīd al-Ḵudrī, ibid., iii. 82). Cf. also Ṭvariqa, zuhd.

H. K., xvii. 193–194: xxvii. 314. (A. J. Wensinck)

RAHĪB (A., plur. rahbūn, rahābīn, rahbānāna), a monk. The figure of the monk is known to pre-Islamic poetry and to the Kurān and Tradition. The pre-Islamic poets refer to the monk in his cell the flight which by the traveller by night sees in the distance and which gives him the idea of shelter.

In the Kurān the monk and the ʾıṣāl, sometimes also the ṣabīr, are the religious leaders of the Christians. In one place it is said that rabbis and monks live at the expense of other men (Sūra ix., 34) and that the Christians have taken as their masters instead of God their ṣabīr and their monks as well as al-Masīḥ b. Maryam (Sūra ix. 31). In another passage the Christians are praised for their friendship to their fellow-believers which is explained from the fact that there are priests and monks among them (Sūra v. 57). In Ḥadīth the rāhīb is frequently encountered in stories of the nature of the ʾīṣā al-anbāyā (cf. Buhārī, Anbāyā, bāb 54; Muslim, Zuhār, Tr. 75; Tawāb, Tr. 46, 47; Tirmidhī, Tafsīr, Sūra 85, Tr. 2; Māniḥāb, Tr. 3; Naṣāʾī, Musāḏārīd, Tr. 11; Ibn Māḏūla, Flītan, Tr. 20, 23; Dāmirī, Faḍāʾil al-Kurān, Tr. 16; Aḥmad b. Ḥanbal, i. 461; ii. 434; iii. 337, 347; v. 4; vii. 17, 18). From the fact that in the Muhammadan literature of the early centuries a.h. the epithet rāhīb was given to various pious individuals it is evident that there was nothing odious about it. Cf. however the article RAHBANIYAH.

Bibliography: cf. that of RAHBANIYAH. (A. J. Wensinck)

RAḤIL, in the Bible Rachel, wife of Jacob, mother of Joseph and Benjamin, is not mentioned in the Kurān. There is however a reference to her in Sūra iv. 27: "Ye may not have two sisters to wife at the same time; if it has been done formerly God now exercises pardon and mercy". This is said to allude to Jacob's marriage with Liyā and Rāḥil; before Moses revealed the Torah, such a marriage was valid. Ṭabārī gives this explanation in the Annals, i. 356, 359 sq. Ibn al-Athīr, p. 90, adopts it. But already in Tafsīr, iv. 210, Ṭabārī explains the verse correctly: Muhammad forbids for the future marriage with two sisters but he does not dissolve such marriages concluded before the prohibition. — Islamic tradition generally adopts the view that Ya稷ūb only married Rāḥil after Liyā's death. So already in Ṭabārī, i. 355, Zamakhshārī, Baidawī, Ibn al-Athīr etc. Al-Kisā'i even thinks that Ya稷ūb only married Rāḥil after the death of Liyā and of his two concubines. Here again Muslim legend differs from the Bible, in making him not marry Rāḥil until after 14 years of service; in the Bible, Jacob serves seven years, marries Leah and after the wedding week Rachel
and serves another seven years. — Ya'küb's wooing and Laban's trick by which he substitutes Liyā for Kāhūl as 'neither lamp nor candle-light' illuminate the bridal chamber, is embellished in Muslim legend.

Kāhūl is also of importance in the story of Yūsuf. Yūsuf inherits his beauty from Kāhūl; they had half of all the beauty in the world, according to others two-thirds, or even according to the old Haggadic scheme (Ḳiṣṣat al-Ḳabail, 409), nine tenths Ṭḥalabī, p. 69. — When Ya'küb left Lāban, he had no funds for the journey; at Rachel's suggestion, Yūsuf steals Lāban's idols. — As Yūsuf, sold by his brothers, passes the tomb of Kāhūl, he throws himself from his camel on the grave and laments: "O mother, look on thy child, I have been deprived of my coat, thrown into a pit, stoned and sold as a slave". Then he heard a voice: "Trust in God". The old Haggada does not know this touching scene. But it has found its way into the late medieval book of stories Ṣefer Ḥagadot (ed. Goldschmidt, p. 150). The Jewish-Persian poet Ṣahin (sixth century) adapts this motif from Firdawsi's Yāsān u-Zulālāigha in his book of Genesis.

(B. HELLER)

RAHIM. [See ALLAH, i. 303b, 304b.]

AL-RAHIM. [See KISRAW FRIZ].

RAHMA, compassion [See ALLAH, i. 303b, 306.]

RAHMANIA, Algerian Order (farība) called after Muhammad b. 'Abd al-Rahmān al-Ghūthtul, al-Darbārī, al-Qasīm, al-Qādir, who died 1208 (1793-1794). It is a branch of the Khalwaṭa and is said to have at one time been called Bahāt after Muṣṭafā b. Muḥammad al-Bahrāmī. At Nefta, in Tunisia, and some other places it is called Ṭāzūtī after Muṣṭafā b. Muḥammad b. 'Azīzū, life of the Founder. His family belonged to the tribe Aṭīma, part of the confederation Gaḥūta in the Kabīliya Ḳabīlā: having studied at his home, and then in Algiers, he made the pilgrimage in 1152 (1739-1740), and on his return spent some time as a student at al-Ḳazāh in Cairo, where Muḥammad b. Ṣālim al-Ḥanawī (d. 1181: Silk al-Darbūr, iv. 50) initiated him into the Khalwaṭ Order, and ordered him to propagate it in India and the Sudan; after an absence of thirty years he returned to Algeria, and commenced preaching in his native village, where he founded a sāwīya; he seems to have introduced some modifications into Khalwaṭ practice, and as his Seven Visions of the Prophet Muḥammad made some important claims for his person and his system; immunity from hell-fire was to be secured by affiliation to his order, love for himself or it, a visit to himself, stopping before his tomb, hearing his dhikr recited. His success in winning adherents provoked the envy of the local mārahīn, in con-

sequence of which he migrated to Ḫamāna in the neighbourhood of Algiers. Here too his activities met with opposition from the religious leaders, who summoned him to appear before a madfīta under the presidency of the Mālikī Muḥammad b. 'Abd al-Mumin, and under the influence of the 'Turkish authorities, who were impressed by the following which he had acquired, he was acquitted of the charge of unorthodoxy, but he thought it prudent to return to his native village, where shortly afterwards he died, leaving as his successor Aḥmad al-Ḳādirī, al-Maghribī. His corpse is said to have been stoned by the kānūnīs and burned in a great pomp at Ḫamāna with a Ḳubba and a mourning over it. The Ait Smālī however maintained that it had not left its original grave, whence it was supposed to have been miraculously duplicated, and the title Aḥmad al-Kabīrī "owner of two graves" was given against him.

**History and propagation of the Order.** Aḥmad al-Ḳādirī was undisputed head from 1208 (1793-1794) to 1251 (1835-1837); his successor died shortly after, and from the following year, though the Order continued to win adherents, it divided into independent branches. This was owing to the objections raised by the Ait Smālī to the succession of al-Ḳādirī, Aḥmadb, another Maghribī; in spite of the support of Aḥmad al-Kādirī (the famous enemy of the French) he had to quit his post, which was held for a time by the widow of 'Ali b. Ṣālim, who, however, owing to the dwindling of the revenues of the sāwīya had ultimately to surrender to Aḥmad. Meanwhile the foundresses of other sāwīyās were assuming independence. After the death of Aḥmadb in 1259 (1843-1844) her son-in-law al-Ḳādirī 'Anamī succeeded to the headship. Finding his influence waning owing to his failure to participate in the attack on the French organized by Bū Baḡlah he in August 1856 called his followers to arms and obtained some initial successes; he was however compelled to surrender in the following year, and his wife (or mother-in-law) at the head of a hundred kānūnīs shortly after. Aḥmadb retired to Tunisia, where he endeavoured to continue the exercise of his functions, but he was not generally recognized as head of the order, and his place among the Ait Smālī was taken by Muhammad Aẓmān b. Ḳāḥdāḥ al-Ṣaddūk, who at the age of 80 on April 8, 1871 proclaimed Ḫudayr against the French, who had recently been defeated in the Franco-Prussian War. The insurrection met with little success, though it spread far, and on July 13 the kānūnīs surrendered to General Saudier, who sent him to Bougie. The original sāwīya was closed as a precautionary measure.

His son Aẓiz, who had been transported to New Caledonia, succeeded in escaping to Djidda, whence he endeavoured to govern the community; but various muḥaddīnīs, who had been appointed by his father, as well as other foundresses of sāwīyās, asserted their independence. Lists are given by Depont and Coppolani of these persons and their spheres of influence, which extend into Tunisia and the Maghrib. In the Seven Visions of the Prophet Muḥammad made some important claims for his person and his system; immunity from hell-fire was to be secured by affiliation to his order, love for himself or it, a visit to himself, stopping before his tomb, hearing his dhikr recited. His success in winning adherents provoked the envy of the local mārahīn. In con-

Practices of the Order. The training of the mārahī consists in teaching him a series of seven
names", of which the first is the formula la 'ilākh illsa 'ilāhā, to be repeated from 12,000 to 70,000 times in a day and night, and followed by the others, it the šahāq is satisfied with the neophyte's progress; these are 2. Allāh three times; 3. huwa; 4. ḥādh three times; 5. qayyūm three times; 6. ḥābyr three times (Rinn's list differs slightly from this). Rinn states that the dījār of the Order consists in repeating at least 80 times from the afternoon of Thursday to that of Friday the prayer ascribed to Shādūli, and on the other weekdays the formula la 'ilākh illsa 'ilāhā. Favourite lessons are the "Verse of the Throne" followed by Sārasī, etc.-xiv. (prescribed in the Founder's diploma, translated by A. Delpech, in R. A., 1874) and the Seven Visions mentioned above (translated by Rinn, p. 487).

Literature of the Order. Most of this would seem to be still in Ms.; the founder is credited with several books. A. Cherbonneau, in J. A., 1852, p. 517 describes a catechism called al-Qāhāmīyā by Muhammad b. Bāṣṭarzī with a commentary by his son Mustaḥfīz, perhaps identical with a work called by French writers Présentations dominicaux. Another work belonging to the Order, which they mention is called al-Raṣūd al-bāṣīm fi Mānāzib aš-Šāhīyā Muhammad b. aš-Šāmī.

RAHINT (A.), pledge, security rāhin, the giver and murtāhin, the taker of the pledge. The Kūfān (ll. 282), obviously in confirmation of pre-Islamic legal usage, provides for the giving of pledged rīkānān maṣhaba in business in which a definite period is concerned, if the preparation of a written document is impossible. The part here played by the security as evidence of the existence of an obligation is in Islamic law much less important than that of securing the fulfilment of a demand. From the latter point of view the traditions are mainly concerned with two questions: a. whether the security in case of non-fulfilment passes without more ado into the ownership of the creditor or not (the two answers are crystallised in the legal maxims al-rāhin humā fih al-rāhin la yaghšūt); and b. who is entitled to use it and to how he is to use it (the answer is found in earlier authorities that the taker of the pledge may enjoy its use if he sees to its maintenance, later fell out into disuse). According to the doctrine of Muslim law, the giver of the pledge is bound to maintain it, but can enjoy the use of it only according to the Shāfī; its use by the taker of the pledge is also forbidden (except by the Ḥanbalī); the yield (increase) belongs to the giver of the pledge but also becomes part of the security (except with the Shāfī); the taker of the pledge is responsible for it according to the Ḥanafī and (with limitations) the Mālikī. Among the Shāfī and the Ḥanbalī the agreement regarding the security is regarded as a bailment-relationship (with much less responsibility). The basis for the condition of a pledge must be a claim (dārī); the accessory character of the security is in general allowed, but exceptional cases are recognised in which the debt is extinguished by the disappearance of the security i.e. the risk passes to the taker of the pledge. While the ownership of the pledge remains with the debtor, he has no power of disposal over it and possession passes to the creditor; the latter has the right to sell it to satisfy his claim if the debt becomes overdue or is not paid. Mortgage is unknown as well as a graded series of rights to the same object of pledge. To be distinguished from the pledge is the disposition (habs) of a thing to enforce fulfilment of a legal claim, which represents a concrete right afforded by the law in individual cases so that it has contacts with the legal right to pledge.

RA'IS AL-KUTTAB, RA'IS EFENDI. [See REF.]

RA'AY, the ancient Ra'ā, a town in Media. Its ruins may be seen about 5 miles S. S. E. of Teheran [q. v.] to the south of a spur projecting from Elburz into the plain. The village and sanctuary of Shāh 'Abd al-Āṣim lie immediately south of the ruins. The geographical importance of the town lies in the fact that it was situated in the fertile zone which lies between the mountains and the desert, by which from time immemorial communication has taken place between the west and east of Iran. Several roads from Māzandarān [q. v.] converge on Ra'ay on the north side.

In the Avesta, Widētātā, i. 15, Ra'ā is mentioned as the twelfth sacred place created by Ahrō-Maza. Yasna, xix. 18, calls it ta'ārutāt Ra'āgā zarān birdza "Zoroastrian Ra'āga possessing four degrees of hierarchy" because at Ra'ā the representative of the prerogatives going back to Zoroaster (Zarān birdza) held also the powers of a prince (ratāt dāhynūb) while elsewhere these two dignities with the three categories of chief subordinates, formed five degrees of hierarchy. The Middle Persian commentary deduces from this that Zoroaster must have belonged to Ra'ā. The town is also called birān birdza (Widētātā, i. 15) which Bartholomeus interprets as possessing "three districts" (drei Gaue besiedeln) although the explanation of the Middle Persian commentary is: "possessing three estates (social classes) for the priests, warriors and cultivators there were good" (cf. Bartholomeus, Aliāran. Worterbuch, col. 579, 811, 1497; cf. Marquart, op. cit., p. 122). The later commentators put Ra'ay in Atrapatene in conformity with the late tendency to localise events in sacred history in this province.

In the Old Persian inscriptions (BH. 2, 10–18) Ra'ā appears as the province of Media in which in the autumn of 521 B.C. the false king of Media Frawartish sought refuge in vain; from Ra'ā also Darius sent reinforcements to his father Wīshāspa when the latter was putting down the rebellion in Parthia (BH. 3, 1–10).

Rages is also mentioned in the apocrypha. Tobit sent his son Tobias from Niniveh to recover the silver deposited in Rages with Gabel, brother of
Raiy (Tobit, i. 14). The book of Judith (i. 15) puts near Ragau (if it only were Ragha) the plain in which Nebuchadnezzar defeated the king of Media, Arphaxad (Phraortes).

In the summer of 336 B.C., Alexander the Great following Darius III took 11 days to go from Ecbatana to Rhagae (Arrian, iii. 30 a). Dio-dorus relates that Antigonus passed near Rhagae after his victory over his rival Eumenes (316 B.C.). According to Strabo, xi. 9, and xii. 136, Seleucus Nicator (322-280) rebuilt Rhagae under the name of Eupropus (in memory of his native town in Macedonia) and that near Eupropus the towns of Lacin and Apamaea and Herculea were peopled with Macedonians. After the coming of the Parthians the town was renamed Arsakia. It is however possible that all these towns although situated in the same locality occupied slightly different sites for they are mentioned side by side in the authorities. Rawlinson (J. G. S., x. 119) would put Eupropus at Warraim (q.v.). Athenaeus in Deipnosophistae, says that the Parthian kings spent the spring at Rhagae (iv Pauca) and the winter at Babilon (see the details in A. V. W. Jackson, and Weissbach). The Greek popular etymologies which explain the name Rhagae as alluding to earthquakes seem to reflect the frequency of this phenomenon in this region so close to Damavand.

In the Sassanian period Yazdgird III in 641 issued from Rāi y his last appeal to the nation before fleeing to Khurrašan. The sanctuary of Bībi Shahr-Bānāt situated on the south face of the already mentioned spur and accessible only to women is associated with the memory of the daughter of Yazdgird who, according to tradition, became the wife of Husain b. Aft. In the years 486, 499, 553 A.D. Rāi is mentioned as the see of bishops of the Eastern Syrian church.

Arab conquest. The year of the conquest is variously given (18 = 639-644) and it is possible that the Arab power was consolidated gradually. As late as 25 (646) a rebellion was suppressed in Rāi y by Abi Wālī. The Arabs seem to have profited by the dissensions among the noble Persian families. Rāi y was the fief of the Mihrān family and, in consequence of the resistance of Sīwakbāsh b. Mihrān b. Bahram Cūbin, Nuʿaṁ b. Mūkarrin had the old town destroyed and ordered Farrukhan b. Zainab (Zainabi 2) b. Kūla (cf. Masmūghan) to build a new town (Tabari, i. 365). In 71 (690) again a king of the family of Farrukhan is mentioned alongside of the Arab governor.

The passing power of the Omayyads to the Abbasids took place at Rāi y without incident but in 136 (753) the "Khurrami" Sunbadh, one of Abi Musīm's stalwarts, seized the town for a short time. The new era for Rāi y began with the appointment of the heir to the throne Muhammad Mahdi to the governorship of the east (141 = 758-768). He rebuilt Rāi y under the name of Muhammadiya and surrounded it by a ditch. The suburb of Mahdi-Bābād was built for those of the inhabitants who had to give up their property in the old town. Hārūn al-Rashid, son of Mahdi, was born in Rāi y and used often to recall with pleasure his native town and its principal street. In 95 (810) Muḥammad's general Tāhir b. Ḥusayn won a victory over Amlas' troops near Rāi y. In 250 (865) the struggle began in Rāi y between the Zāidi 'Alids of Tabaristān and first the Tāhrids and later the caliph's Turkish generals. It was not till 272 (885) that Adhḫū-ṭeqīn of Kāzīm took the town from the 'Alids. In 261 (874) the caliph Ma'amīd wished to consolidate his position appointed to Rāi y his son, the future caliph Muktāfī. Soon afterwards the Sāmānids began to interfere in Rāi y. Isma'il b. Ahmad seized Rāi y in 289 (902) and the fait accompli was confirmed by the caliph Muktāfī. In 296 Ahmad b. Isma'il received investiture from Mūktādīr in Rāi y (Gardizi, p. 21-22).

In the tenth century Rāi y is described in detail in the works of the contemporary Arab geographers. In spite of the interest which Baghdad displayed in Rāi y the number of Arabs there was insignificant and the population consisted of Persians of all classes (abhar; Ya乎bīb, in B, G. A., vii. 276). Among the products of Rāi y Ibn al-Fakhrī, p. 253, mentions silks and other stuffs, articles of wood and "lustrous dishes," an interesting detail in view of the celebrity enjoyed by the ceramics "of Rhages". All writers emphasise the very great importance of Rāi y as a commercial centre. According to ʿIsāḥārī, p. 291, the town covered an area of 1/2 by 1/2 farsaḵhs, the buildings were of clay (jin) and the use of bricks and plaster (dīḏ = gav) was also known. The town had five great bazaars and eight large bazaars. Mūkaddaši, p. 39, calls Rāi y one of the glories of the lands of ʿIslām and among other things mentions its library in the Raḥba quarter which was watered by the Sūrkanī canal.

Dailami period. In 304 (916) the lord of Adhharbalīdīn Yūsuf b. Abī l-Sādī occupied Rāi y out of which he drove the Dailami Muhammad b. Abī Ṣulṭān who represented the Sāmānīds Nuʿaym (Ibn al-ʿAthir, viii. 74). This occupation is commemorated in coins struck by Yūsuf at Muḥammadābād, it was the beginning of a troubled period. Rāi y passed successively into the hands of the Dailami Abī l-Wahshābīn, Ṣafīḏ Bektāmīrī, the Dailami Ahmad b. Abī and of Nuʿaym, slave of Yūsuf (in 313 = 925; cf. R. Vasmer, O monetāhaj Sadžī, Baku 1927). Lastly the Sāmānīds encouraged by the caliph succeeded in bringing Rāi y again within their sphere of influence but soon their general Aṣfār (a Dailami) became independent in Rāi y. In 318 (930), Aṣfār was killed by his lieutenant Mardāwīdī [q.v.] (a native of Gilān and one of the founders of the Zīyārīd dynasty) who took over his master's lands (C. Huy, Les Zīyārīdīs, 1922, p. 363 = 11).

After the assassination of Mardāwīdī (123 = 925) the Buyids established themselves in Rāi y, which became the fief of the branch of Rūkūn al-Dawla which held out there about 100 years. In 390 (1002) the last Sāmānī al-Muṭnasir made an attempt to seize Rāi y but failed. In 420 (1027) the Buyid Majdī al-Dawla was ill-advised enough to invoke against the Dalaitids the help of Mahmūd of Ghazni, who seized his lands (cf. Muhammad Nazim, Sulṭān Mahmūd, 1931, p. 80-85). The brief rule of the Ghaznavids was marked by acts of obscurantism, like the destruction of books on philosophy and astrology and the atrocious persecutions of the Karmatians and Muṭtaṣilīs (Gardizi, p. 91; Ibn al-ʿAthir, ix. 262).

The Saldūrīs. The Ghūz laid Rāi y waste in 427 (1033) and in 434 (1042) the town, where Majdī al-Dawla still held out in the fort of Tabarah (Ibn al-ʿAthir, ix. 347), fell into the power of the Saldūrīs and became one of their principal cities. The last Buyid al-Malik al-Raḥīm died a prisoner
Raiy

The ruins of Raiy. Olivier in 1797 sought them in vain and it was Trulhierr and Gardane who first discovered them. The earliest descriptions are by J. Morlier, Ker Porter and Sir W. Ouseley. The first has preserved for us a sketch of a Sasanian bas-relief which was later replaced by a sculpture of Fath 'Alī Shāh. The description and particularly the plan by Ker Porter (reproduced in Sarre and A. V. W. Jackson, Persia) are still of value because since his time the need for agriculture and unsystematic digging have destroyed the walls and collapsed the strata. Large numbers of objects of archaeological interest and particularly the celebrated pottery covered with paint have flooded the European and American markets as a result of the activity of the dealers. Scientific investigation was begun by the universities of Philadelphia and Boston in 1954 (cf. The Illustrated London News, June 22, 1955, p. 1122—1123; E. F. Schmidt, The Persian Expedition [Raiy], in Bulletin University Museum, Philadelphia, v., 1936, p. 41—49; cf. p. 25—27). In the citadel hill, Dr. E. R. Schmidt found a great variety of pottery and the remains of buildings among which the most interesting are the foundations of Mahdi's mosque (communication by A. Godard to the Congress of Persian Art at Lenigrad in Sept. 1935). In an interesting passage, Mukaddasī, p. 210, speaks of the high domes which the Būyids built over their tombs. According to the Siyāsat-nāma, p. 145, in the time of Fakhr al-Dawla a rich Zoroastrian built an arzdān with double roof (sīvādān ba-du pūzō)h on the top of the hill of Tabarakan, above the domed tomb (gubād) of Fakhr al-Dawla. The arzdān, turned to a new use received the name of did-a-yi sipāh- sālārīn "fort of the commandants" and was still in existence in the time of Nizām al-Mulk. The two towers now to be seen among the ruins of Raiy [both are round in plan, but one repaired under Našir al-Dīn Shāh has ribbed flanks] are attributed to the Sallūds but may continue the Dailami type of building. The hill of Tabarakan on which was the citadel (destroyed in 588 [1192] by Tughrīl III) according to Yākūt was situated to "the right" of the Kūrāsan road while the high mountain was to "the left" of this road. Tabarakan therefore must have been on the top of the hill opposite the great spur (hill G in Ker Porter's plan: *fortress finely built of stone and on the summit of an immense rock which commands the open

The life of man was not completely extinguished at Raiy is evident from the dates of pottery which apparently continued to be made in Raiy (cf. Guest, A dated Rayy bowl, in Burlington Magazine, 1931, p. 134—135; the painted bowl bears the date 640 = 1243). The citadel of Tabarakan was rebuilt under Ghāzān Khan (1295—1304) but certain economic reasons (irrigation?) if not political and religious reasons, must have been against the restoration of Raiy and the centre of the new administrative Mongol division (the tumān of Raiy) became Warāmān [q.v.] (cf. Nasihat al-Kulub, in G.M.S., p. 55). After the end of Hūlagi's dynasty, Raiy fell to the sphere of influence of Tughā-Timūr [q.v.] of Āstābād. In 1384, Timūr's troops occupied Raiy without a striking blow but this must mean the district and not the town of Raiy, for Clavijo (ed. Srezenyevskī, p. 187) who passed through this country in 1404 confirms that Raiy (Xaharīpīra = Shahr-i Raiy) was no longer inhabited (agera deshabitata). No importance is to be attached to the mention of "Raiy" in the time of Shāh-Rukh (Muša'-i Sa'dān, [1192], under the year 841 = 1437) or of Shāh Ismā'īl, Ḥābīb al-Siyār.

From the reign of Ghīyāth al-Dīn Mas'ūd (529—547 = 1133—1152) Raiy was ruled by the amir Inandī whose daughter Inandī-Khāṭūn became the wife of Pahlāwan, son of the famous atabeg of Ardabārī Khan, Ildigiz. When the latter put on the throne Subh al-Arslān-Shāh (whose mother he had married) Inandī opposed this nomination but was defeated in 555 (1160). Inandī withdrew to Būstān but with the help of the Khwārizmshāh II-Arslān the cannot was murdered at the instigation of Ildigiz who gave Raiy as a fief to Pahlāwan. Later the town passed to Kultūgh Inandī b. Pahlāwan who, like his maternal grandfather, brought about the intervention of the Khwārizmshāh Takhīg in the affairs of Persia (538 = 1192). Two years later in a battle near Raiy, the seven Dājdūk Tughrīl III was killed by Kultūgh Inandī but the country remained with the Khwārizmshāhs. In 614 (1217) the atabeg of Fars Sa'd b. Zangī succeeded in occupying Raiy but it was almost immediately driven out by the Khwārizmshāh Djalâl al-Dīn (cf. Nasawī, ed. Housâdī).

Civil wars. Muḥammad, p. 391, 395—396 mentions the dissensions (gayyābīr) among the people of Raiy in matters of religion. Under 582 (1186—1187) Ibn al-Ṭahur, xi. 237, records the damage done in Raiy in the civil war between Sunnis and Shīʿis: the inhabitants were killed or scattered and the town left in ruins. Yâkūt who, fleeing before the Mongols, went through Raiy in 617 (1220) gives the results of his enquiry about the three parties: the Ḥanāfīs, the Shīʿis, and the Shīʿis of which the two first began by wiping out the Shīʿis who formed half the population of the town and the majority in the country. Later the Shīʿis triumphed over the Ḥanāfīs. The result was that there only survived in Raiy the Shīʿi quarter which was the smallest. Yâkūt describes the underground houses at Raiy and the dark streets difficult of access which reflected the care of the inhabitants to protect themselves against enemies.

The Mongols. The Mongols who occupied Raiy after Yâkūt's visit dealt it the final blow. Ibn al-Ṭahur (xii. 184) goes so far as to say that all the population was massacred by the Mongols in 617 (1220) and the survivors put to death in 621 (1224). It is however possible that the historian, echoing the panic which seized the Muslim world, exaggerates the extent of the destruction. Djiwâini (ed. Muḥammad Ḥān Khārīzīn, i. 115) only says that the Mongol leaders put many people to death at Kābīr Raiy (in the country inhabited by Shīʿis) but it only appears that there were only two of the Shīʿi who submitted to the invaders (il ëchûd), after which the latter went on. Rashīd al-Dīn (ed. Bērzine, in Trūlī V. O., xv. 135 [transl. p. 89]) admits that the Mongols under Djihe and Subudai killed and plundered (ākhiżīh wa-chârāt) at "Raiy" but he seems to make a distinction between Raiy and Kūm in which the inhabitants were completely (ba-kullī) massacred.

RAKIM. [See `ABBâD AL-KAHÎF.]

AL-RAKKA, capital of Diyar Muṣar in al-Djazira on the left bank of the Euphrates, shortly before it is joined by the Nahr Bâlîkh (Bâlîkh, Bâlkhe, Bâlghâ). The town was in antiquity called Kallinikos. Nikophoros is to be located in the same region (Strabo, xvi, 747; Isidors of Charax, in Geogr. Graeci Min., p. 247; Dio Cass., x, 13; Pliny, Nat. Hist., vi, 86; vi, 119; Poelamy, Geogr., v, 17; Stephen Byz.); but its usual identification with Kallinikos is certainly wrong and it may be a case of two adjoining towns as with the "black" and "white al-Râkka" of the middle ages. Nikophoros was, according to Appian (Spyr., v, 57), a foundation of Seleucus I Nikator; later it was ascribed to Alexander the Great (Pliny, Nat. Hist., vi, 119; Isid. Char., c, 1) who can hardly have been here and it is hardly likely that towns were founded so shortly before the battle of Gaugamela (cf. Pauly-Wissowa, R. E., v, A, col. 1274, s. v. Thagadai).

Kallinikos owed its name to Seleucus II Kalli- nikos, who founded the town in 244 or 242 B.C. (Chron. Pasch., ed. Dindorf, i, 330; Mich. Syr., ed. Chatob, iv, 78). Libanios (Epipt., p. 21, s, Opera, ed. Förster, x, 19, 8–19) wishes to derive the name from the soiht Kallinikos who was murdered there; it is however hardly likely that the town, the name of which (Syracal Kolonikos, Kallinikos) the Christian Syrians retained in the middle ages, was called after a pagan orator, and in any case, if it were so, we would expect a name like Kallinikela. In any case the site of Kallinikos corresponds to that of the mediaeval al-Râkka, with which the Syrian historians always identified it. In the time of the emperor Julian, Kallinikos was a strong fortress and an important commercial centre (Amnian. Marcell., xxiii, 3, 7). In the year 361 a.p. it was burnt by the Christians in the Cæsarean Callinicum; the emperor Theodosius therefore ordered the bishop of the town to rebuild it (Ambrosius, Epist. ad Theodosii. Migne, Patrol. Lat., xvi, col. 1105 sqq.). The emperor Leo in 777 (Jul. 466 A. D.) rebuilt Kallinikos in Osroene, called it Leontopolis and appointed a bishop there (probably the successor of the Damians mentioned in 451 and 458 (Edessene Chronicle, ed. Hallier, in Texte u. Untersuch., i, 1, Leipzig 1893, p. 116, 152; Barherb., Chron. syr., ed. Bedjan, p. 77; Leontopolis: Hierokl., Synchrdem., p. 715, s. Geogr. Cypr., ed. Gelzer, p. 897). Towards the end of the year 503, Timostratos bravely defended the fortress against the Persians and took one of Kâwâd I's officers prisoner but had to release him as the king threatened to destroy the town completely (Joshua Syltes, ed. Martin, in Abh. K. M., vi, 1, Leipzig 1896, p. 1xv). The Syrian church historians from the beginning of the 6th century frequently mention the monastery of Nazakken, Arabic: Dar Zakka, in the area formed by the Nahr Balîkh and the Euphrates or the Nahr al-Nil Canal not far from Kallinikos (Vitae virror. apud monophysitae celebrat., ed. Brooks, in C.S. C. O., ser. iii, vol. xxv, Paris 1907, p. 38; Mich. Syr., iv, 414 sq.; al-Shushtâh, Kitâb al-Diyârâd., ed. Berol., fo., 95; Yaḥyâ, Mu'âjam, ed. Wustenfeld, ii, 664; iv, 862). Between al-Râkka and Balîsh lay the celebrated monastery of Dair Ḥannâni not far from Sur (G. Hoffmann on Zacharias Rhetor, transl. Ahrens-Kruger, p. 159, 201; Johann. v. Epheus., iv, 22; Mich. Syr., iii, 453 and passim; Barherb., Chron. eccles., ed. Abbeloos-Lamy, i, 244, 250; F. Nau, in R.O.C., xv, 1910, p. 63, note 1; Yaḥyâ, iii, 350 and passim; often wrongly called "monastery of Ḥanânil", e.g. in Muhl, The Middle Euphrates, p. 329).

In 529, Justinian enacted that trade with the Persians should be conducted at the frontier towns of Nisibis, Kallinikos and Antoaxata (Cod. Iust., ed. Kruger, iv, 53, 49; 188; Sury, History of the Later Roman Empire, ii, 1923, p. 3). Khusraw I on his third campaign against Syria (542) took the town without difficulty (Procop., Bell. Pers., ii, 21, 31; Anecd., iii, 31) because at the time the walls had been partly taken down in order to be rebuilt. The town was destroyed but later fortified again by Justinian with walls and bulwarks and "made impregnable" (Proc., De aed., ii, 7; James of Edessa, Chronol. Canon, ed. Brooks, in Z.D.M.G., iii, 300; Mich. Syr., ed. Chatob, iv, 287). The khan `Amrâq, Maurikios in 580 had to retire to Kallinikos before Adharmahan but put him to flight there (Theophil. Sim., iii, 17, 8 sq.; Chapot, La Frontière de l'Euphrate, p. 289, note 3 and F. Hirthfeld, Archäol. Reise, i, 159 make the "emperor" Maurikios flee to the fortress before Hormisdas).

The Arabs in 18 (539) or 19 (540) under `Iyâd b. Ghanm encamped before the N. W. gate of the town, Bâb al-Ruḥâ'; after 5 or 6 days the Patriarche who governed the town asked for peace and surrendered it to him and the inhabitants.
AL-RAKKA

1109

were promised security of life and property. Their churches were not to be destroyed or occupied so long as they paid their tribute and committed no act of hostility; on the other hand, they were not to build new churches or sacred places and to observe Christian customs or festivals publicly (al-Baladhuri, Futuḥ al-Buldān, ed. de Goeje, p. 173 sq.; Ibn al-Athir, ed. Tornberg, ii. 439). On the death of 'īyād, Sa'd b. 'Amir b. Dijāḏam became governor of al-Dżāzira; he built a mosque in al-Rakka (al-Baladhuri, p. 178; Herzfeld, Arch. Reis, ii. 353). It was built of bricks of clay and marble taken from ancient buildings (Herzfeld, op. cit., with fig. 324-329); its Manārat al-Mun Alright still marks the ruins that represent the ancient al-Rakka.

In the great battle of Sīfīn in 36 (656) 'Ali crossed the Euphrates at al-Rakka on a bridge of boats, which he ordered the inhabitants to build, with his infantry and whole equipment to the Syrian bank (al-Ṭabarī, i. 3529; Ibn Miskawayh, Taʾrīḵ al-Sultānī, ed. Caetani, p. 571). According to the Diwan of ʿUthmān b. Ḥakīm al-Rakīyāʾ, who died in 690 (ed. Rhodokanakis, in S. B. Ak. Wiem., cxlix., Vienna 1902, p. 222), al-Rakka and al-Kalas (?) were then in ruins and practically uninhabited but this is poetic exaggeration (Musil, The Middle Euphrates, p. 329 sq.). He calls the town (p. 285) al-Rakka al-Sawdāʾ to distinguish it from al-Rakka al-Balādī, which is mentioned in the Diwan of al-Aḫṭalīf for example (ed. Sāḥbātī, p. 304). The name al-Rakka itself may be of Arabic origin ("swampy marshes on a river with periodical inundations"); the similarity of the names of al-Rakka and al-Ra kita to those of two Aramaic tribes of the Assyrian period, Rakišu (sic!) and Rapišu (Herzfeld, Arch. Reis i. 159, note 9) is no doubt quite accidental.

On the south bank, opposite the town between two canals (al-Ḥanī wa l-Ṭawr), was the suburb of Yābkūt al-Rakka, where Ḥishām b. 'Abd al-Malik build two houses of brick and a bridge over the Euphrates (Yābkūt, ii. 802; iv. 889, 994; Ps.-Dionysos of Telmahre, ed. Chabot, p. 26, 31; Mich. Syr. iv. 457: Barhebr., Chron. syr., ed. Bedjān, p. 118). The governor of the al-Rakka, the Kāṣīf Manṣūr b. Ḥaḍaʿwāna b. Ḥafiẓ al-ʿAmīrī, after whom Ḥiṣn Manṣūr was called, was executed after his rebellion in 414 (758-759) by the ʿamīl of Abū l-ʿAbbās, al-Manṣūr, in al-Rakka (al-Baladhuri, p. 192).

The caliph al-Manṣūr in 155 (772) built alongside of al-Rakka a new town al-Rakka and settled Khurāṣānians there who were devoted to his dynasty (Ibn al-Fakih, in B.G.A., v. 132). The superintendence of the building of the new town was given by him to al-Mahdi, the heir-apparent. It was planned in the shape of a horse-shoe and was in many respects modelled on the round city of al-Manṣūr in Baghdaḏ (al-Ṭabarī, iii. 276, 372 sq.; Ibn Ḥawkal, in B.G.A., ii. 153; al-Baladhuri, p. 798; al-Yaḵḥūzī, Kātib al-Baḥrī, in B.G.A., vii. 278; Tāʾrīḵ ed. Houtsma, ii. 430; Ibn al-Fakih, in B.G.A., v. 132; Yābkūt, Muṣʿab, ed. Wüstenfeld, ii. 734 sq.; Mich. Syr., ii. 526, 10, 297 = iv. 476, 483, 640; Ps.-Dionysos of Talmahre, p. 120 sq.; Herzfeld, op. cit., i. 160). Two canals were led from the Euphrates and from the region of Sarṭūḏ to supply the new town with water (Mich. Syr., ii. 10). This new town to which the name al-Rakka came to be transferred from the old town now falling into ruins, had, according to Arab authors (e.g. al-Baladhuri, p. 179), no remains of antiquity and indeed the modern al-Rakka, the "horse-shoe city", except for a few fragments built into the walls seems to possess no ancient ruins. The ancient Kallinikos has therefore wrongly been located here (Sachau, Reise in Syrien u. Mesopot., p. 242; Chapot, La Frontière de l'Euphrate, p. 289 sq., where fig. 8 "Nichphorum-Cullenium" is really the plan of the medieval al-Rakka).

Between al-Rakka (al-Hamra of Musil's map) and al-Rakka there soon rose a suburb with bazaars to which the markets of al-Rakka (including the largest, Sīk Ḥiṣām al-ʿAtīḵ) were transferred by 'Ali b. Sulaimān b. 'Ali, governor of al-Dżāzira, and as a result the two adjoining towns gradually developed into a twin city (al-Rakkaṭan) (al-Baladhuri, p. 179; Yābkūt, ii. 734, 802; Ibn Ḥawkal, B.G.A., ii. 153). This suburb was burned in 1123 Sel. (812) by the rebels "Amr and Ṣaʿīd b. Ṣaḥabah along with the adjoining "pilared monastery" (Mich. Syr., iii. 26). Abū al-Malik b. ʿṢāḥīf (q.v.) died in the same year in al-Rakka. In the fighting that followed, the "ʿĀlāʾīyāʾ (of al-Raḵīa) became lords of al-Rakka and the Persians of al-Rakka (Mich. Syr., iii. 30). In the reign of Maʿmūn in 816, Tāhir built a wall between al-Rakka and al-Rakka (Mich. Syr., iii. 36).

The walls of the old town fell into ruins at quite an early date (Aḥmad b. al-Tājīyīb al-Sarḵāšī in Yābkūt, loc. cit.), and in 375 (985-986) the old al-Rakka was now only a suburb of the western town. As the name al-Rakka came into use for the latter (Yābkūt, loc. cit.), in the end it became no longer possible to distinguish between al-Rakka and al-Rakka (also al-Makdisi, cf. E. Herzfeld, Arch. Reis, i. 160, note 7, p. 161). At the beginning of the xiii century the old al-Rakka was completely in ruins (Yābkūt, ii. 734, 751; Ibn Ḥawkal, p. 153; al-Makdisi, p. 141; Abū l-Fīḍāʾ, ed. Reinaud, p. 277).

Besides al-Rakka, the capital of Diyar Ṭaḡar, al-Makdisi and others mention also "burned al-Rakka" (al-Rakka al-Muṭṭarīkā, i.e. al-Rakka al-Sawdāʾ on the Balikh, a farṣābakh below the "white town" (Yābkūt, i. 31; ii. 802; Ibn Rū斯塔, p. 90; al-Makdisi, p. 20, 54, 141). It was also called "crooked al-Rakka" (al-ʿAbdārā) and corresponds to the present ruins of al-Rakka al-Samrāʿ.

Badr al-Dīn Abū al-Raḥmān al-Baʿlabakī (Ahlwardt, v. 413, on No. 6104) wrote a risāla on al-Rakka.

According to Herzfeld, the following larger groups of ruins lie in the area of al-Rakka in addition to Hirākla which is in the neighbourhood:

1. The "horseshoe town" with high walls, still standing, which form a semicircle on the north, while in the south they run in a straight line. The banks of the Euphrates and enclose an area of 1.92 sq. km. (Herzfeld, Arch. Reis, ii. 356 sq.). This is a plate, or platform, which corresponds to al-Rakka founded by Maṣūr, to which the name of al-Rakka was later transferred. Roughly in the centre of the northern part of this part of the town lie the ruins of a large mosque, the "mosque intra muros" the front of the court of which with a round minaret (Sarre-Herzfeld, ii. 359; iii. pl. lxv.-lxxiv. and fig. 33-340), according to an inscription, was restored by the Zangid Nūr al-Dīn Maḥmūd in 561 (1165-1166) (van Berchem in Sarre-Herzfeld, i. 4-6). Nūr al-Dīn occupied al-Rakka in 554 (1159) and gave it from 562 (1167) to 566 (1171) to his brother Maḏwūd.

RAKKĀDA, residential city of the Aghlabid emirs of Ifrīqiya about 6 miles south of Kirawān, was founded in 263 (876) by Ibrahim II, seventh prince of the dynasty. Until then the Aghlabids had resided in Ṭabbisyia [q.v.] nearer the capital. A chance trip into the country by Ibrahim, it is said, determined the site of the new residence. The emir was suffering from insomnia and on the advice of his physician, Ishāb b. Sulaimān, went out to take the air. Stopping in a certain place he fell into a deep sleep and decided to build a palace there which was called Raḵkāda, the "soporific". The story is probably based on a popular etymology of the name, which is found elsewhere in North Africa. Another explanation, equally suspect, is that which attributes the name to the memory of a massacre of the Warfaḍjīma by the Ībashī chief Abū l-Khaṭībah [q.v.] in 141 (758) and the many dead left lying there.

In the same year that the work of building was begun, Ibrahim settled in Raḵkāda in the Castle of Victory (Kaṣr al-Faṭḥ). He was to live there the rest of his life, as were his successors, except for the stays the emirs made in Tunis. Raḵkāda became a regular town as al-Abbasīya had been before it. Besides Kaṣr al-Faṭḥ (or Kaṣr Abī l-Faṭḥ) there were several other castles in it: Kaṣr al-Baṭr (the castle on the lake), Kaṣr al-Saḥn (castle of the court), Kaṣr al-Muḫṭar (castle of the elect) and Kaṣr Baghdaḏ, a large mosque, baths, caravanserais and sūḥ. Al-Bakrī says that it had a circumference of 24,040 cubits (over 6 miles), al-Nuwairi makes it smaller (14,000, nearly 4 miles). A wall of brick and clay surrounded this vast area, and this wall was renovated by the last Aghlabid with a view to final effort at resistance. Al-Bakrī further tells us that the latter part of the encinte was filled with green. The soil was fertile and swampy. The emirs and their followers enjoyed in Raḵkāda a liberty of movement which would have caused a scandal in Kirawān. The sale of nāḏīk [q.v.], forbidden in the pious old city, was officially permitted in the royal residence.

It was from Raḵkāda that Ziyādat Allāh III, the last of the Aghlabids, fled on the approach of the Shīʿis. The victorious Abū ʿAbd Allāh [q.v.] installed himself in Kaṣr al-Saḥn. His master, the Mahdi, Ubaḍa Allāh, lived in Raḵkāda until 308 (920) when he moved to al-Mahdiya. After being deserted by the ruler, Raḵkāda fell into ruins. In 342 (955) the caliph al-Muʿizz ordered what was left of it to be razed to the ground and ploughed over. The gardens alone were spared.

A few traces of the Aghlabid foundation are still to be seen at the present day. A great rectangular reservoir with thick walls strengthened by buttresses may be identified with the lake (ba‘r) which gave its name to one of the palaces. A pavilion (?) of four stories stood in the centre. Nothing is left of it, but on the west side of the reservoir may be seen the remains of a building which must have been reflected in the great mirror of water. Three rooms may still be distinguished with their mosaic pavements. The technique and style of decoration closely connect these Muhammedan buildings of the third century A.D. with the Christian art of the country.

RAMADÁN (a.), name of the ninth month of the Muhammedan calendar. The name from the root r-m-d refers to the heat of summer and therefore shows in what season the month fell when the ancient Arabs still endeavoured to equate their year with the solar year by intercalary months [see NAS’].

Rama’dân is the only month of the year to be mentioned in the Kur’ân (Sûra ii. 185; eastern numbering): “The month of Rama’dân (is that) in which the Kur’ân was sent down”, we are told in connection with the establishment of the fast of Rama’dân. The discussion on the origin of this edict cannot yet be considered ended; to what has been said in the article SAWM have to be added the researches of F. Goitein, Zur Entstehung des Rama’dân, in Isis, xviii. (1929), p. 189 sqq., who in connection with the above mentioned verse of the Kur’ân calls attention to the parallelism between the mission of Muhammad and the handing of the second tablets of the law to Moses, which according to Jewish tradition took place on the Day of Atonement, and the Day of Rama’dân (‘Ashârâh; the predecessor of Rama’dân) and actually was the cause of its institution. Goitein suggests that the first arrangement to replace the ‘Ashârâh [q.v.] was a period of ten days (SAWM ma’dû’du’dât, Sûra ii. 184), not a whole month, which ran parallel with the ten days of penance of the Jews preceding the Day of Atonement and survives to the present day in the 10 days of the ‘I’tikâf [q.v.].

If we consider further that the Muslim ideas of the Lailat al-Kadr which falls in Rama’dân, in which according to Kur’ân lxxvii. 2, the Kur’ân was sent down, coincide in many points with the Jewish on the Day of Atonement, we must concede a certain degree of probability to Goitein’s suggestions, in spite of the undeniable chronological difficulties (alteration of the length of the period of the fast, within a very short time) and although the final settlement of the term as a whole month is not thereby satisfactorily explained. On the other hand to strengthen Goitein’s position, it ought perhaps to be pointed out that the Lailat al-Bara’â [q.v.] precedes Rama’dân in the middle of the preceding month of Shawâbân. The ideas and practices described by Wensinck in the article ‘I-d’ân, which are associated with this night really to some extent resemble Jewish conceptions associated with the New Year — which precedes the Day of Atonement by a rather shorter interval than the Lailat al-Bara’â Rama’dân — that the connection between the latter and the Day of Atonement is thereby strengthened. If we try to connect the so far unexplained word bara’â with the Hebrew bërâ‘ “creation” and reflect that according to the Jewish idea the world was created on New Year’s Day (numerous references in the liturgy of the festival) we have perhaps a further link in the chain of proof; but first of all the age of the ideas associated with the Lailat al-Bara’â must be ascertained.

The legal regulations connected with the fast of Rama’dân are given in the article SAWM [cf. also TARÂWÎTH]. Of important days of the month, al-Birînî, among others, mentions the 6th as birth-day of the martyr Husain b. ‘Ali, the 10th as the day of death of Khâdîjâ, the 17th as the day of the battle of Badr, the 19th as the day of the occupation of Mecca, the 21st as the day of ‘Ali’s death, and of the Imam ‘Ali al-Ridâ’s, the 22nd as birth-day of ‘Ali and finally the night of the 27th as Lailat al-Kadr [q.v.].

The name of this night is Khûrânîc; Sûra xxvii. is dedicated to it. It is there described as a night “better than a 1,000 months” in which the angels ascend free from every commission (bi-tîhâm Allâh min kull amr) and which means blessing till the appearance of the red of dawn. The revelation of the Kur’ân, as already mentioned, is expressly located in it. The same night is obviously referred to in Sûra xliiv. 2 as a “blessed” one. The date, the 27th, is however not absolutely certain, the pious therefore use all the odd nights of the last ten days of Rama’dân for good works, as one of them at any rate is the Lailat al-Kadr [cf. ‘ITIKÂF].

Trade and industry are largely at a standstill during Rama’dân, especially when it falls in the hot season. The people are therefore all the more inclined to make up during the night for the deprivations of the day. As sleeping is not forbidden during the fast, they often sleep a part of the day; and the night, in which one may be merry, is given up to all sorts of pleasures. In particular the nights of Rama’dân are the time for public entertainments, the shadow plays [cf. KHAYYÂL-IZ ZILL] and other forms of the theatre.

On the termination of the fast by the “little festival”, cf. ‘ID AL-FITR.

(M. PLESSNER)
RAMADAN-OGHULLARI, a petty Anatolian dynasty. The earlier history of the Ramadän-Oghullari is, like that of most of the minor Anatolian principalities (jewed-i muluk), wrapped in obscurity. According to tradition, this Turkoman family came in Ergözrûl time from Central Asia to Anatolia where they settled in the region of Adana and founded their power. Their territory comprised the districts of Adana, Niz, Ayas, a part of the territory of the Waspak Turkomans, Tarsûs, etc. The date of the earliest known prince of the dynasty, Mir Ahmad b. Ramadän (see below), is put at 780–819 (1359–1416). Nothing definite is known about the real founder, Ramadân-Beg. The French traveller Bertrandon de la Broquière, thus characterizes Mir Ahmad b. Ramadân: “lequel estoit tresant personne d’honneur et tershardy et la plus vaillante espée de tous les Turcsc et le mieulx ferant d’une mache. Et avoit esté filz d’une femme crestenne laquelle l’avoit fait baptiser à la loy gregiesque pour luy enlever le flaire et le senetr qu’ont ci ne sont point baptisés. Il n’estoit ne bon crestenne ne bon sarazin” (cf. Le Voyage d’Outremer de Bertrandon de la Broquière, ed. Ch. Schefer, Paris 1892, p. 90 sq.).

Mir Ahmad was succeeded by Ibrahim Beg (819–830 = 1416–1427). The beginning of his reign is put by some, e.g., Mehmed Nûzhet Bey, as early as 810, while its end is put in 819. Khalîl Edhem Bey was the first to propose a new chronology, which is here followed. Ibrahim Beg was deposed before his death (831) by his eldest son ‘îzîz al-Dîn Hamzâ-Beg, who reigned from 830 to 833. He was succeeded by his uncle Mehmed Beg b. Mir Ahmad and the latter’s brother ‘Altîn, who seem to have reigned jointly. Of his successor, his nephew Arslân Dâ’ûd b. Ibrahim, we only know that he fell in 885 (1480) in a battle in the vicinity of Dıyârbakr. His body was brought to Aleppo and buried there. The history of the Ramadän-Oghullari now becomes a little better known. His son and successor, ‘Hârs al-Dîn Khalîl, known from a number of inscriptions (cf. Max v. Oppenheim and Max van Berchem, Inschriften aus Syrien, Mesopotamien und Kleinasiën, Leipzig 1909, p. 109 sqq.), ruled for 34 years with his brother Mahmûd-Beg and died in battle in 916 (1510). The date of his death (beginning of Djûmâda I 916 = beginning of Aug. 1510) is known with certainty from his epitaph in Adana, in M. v. Oppenheim and Max van Berchem (op. cit., p. 110, No. 145). His son Pir Mehmed Paşa, who appears as ruling from 916–976 (1510–1568), distinguished himself as an Ottoman vassal, fighting against the rebels of Iç-eli (Anatolia; cf. J. v. Hammer, G. O. R., iii. 71) in May 1528 (‘îsâbân 934) as well as in the civil war between the princes Bâyazid and Selim at Konya (May 1559; cf. J. v. Hammer, G. O. R., iii. 368 sqq.). He died in 972 (1568) in his capital Adana. He had an equal command of Persian and Turkish and composed a Dînutsan. His son Derwîsh-Beg, who had been mutessarîf of Tarûs in his father’s life-time became after his death governor (wâli) of Adana but died young in 986 (1578). He was succeeded by his eldest brother Ibrahim Beg, who had previously been sanâjîh-beyî of ‘Aintûb. He acted as governor at his father’s capital till his death in 1002 (1594). His son Mehmed Beg was the last dynast of the Ramadân-Oghull but he can only have had a nominal rule. The family of the Ramadân-Oghulli however has survived to the present day. (Franz Baringer)
AL-RAMÁDI, whose full name was 'Abū 'UMAR (wrongly Abū 'Amr) Yūsuf b. ḤARUN al-KINDĪ al-KURTUDI al-RAMÁDI, poet of Muslim Spain, who lived in the fourth (tenth) century and died early in the fifth (eleventh) century in 403 (1013), on the day of the 'Adūr or Feast of St John (June 24), according to Ibn Haiyān (in Ibn Bashkawāl, cf. Bibli.), in 413 (1022—1023), according to al-Maḳkāri (quoting the same Ibn Haiyān); he was buried in the cemetery of Cordova known as Maḳḳārat Kala’.

The ethnic al-Ramādi is explained in two ways: 1. the poet is said to have come from al-Ramāda, a little town between Alexandria and Barqa; this explanation is to be rejected for al-Ramādi (with gemination of the mim — and this orthography is attested by the geographers who mention the place, e.g. al-Ya‘qūbī, al-Bakrī and al-Idrīsī) — would not give an ethnic like al-Ramādi (with one m); 2. the second explanation which derives Ramādi from ramādī: “ordinary ashes” or “ashes for washing”, is the only possible one; the poet perhaps in his youth followed the trade of an ash-merchant; in confirmation of this we may call attention to the Romance surname which was originally given him: Abū Qaṭār (wrongly Abū Šaṭīḥ in the Yatimmat al-Dahr), i.e. padre senzana, “father cinders” or “cinderman”.

Al-Ramādi, a native of Cordova, spent all his life in his native town except for a brief period of exile in Saragossa. His life was dominated by three great factors: his attachment to Abū ʿAlī al-Kālī, his devotion to the cause of the kadhīj Abū l-Ḥasan al-Muṣṭafī and his love for Khwāla.

Abū ʿAlī al-Kālī, summoned from the east to Spain by the Umayyad caliph Abū al-Raḥmān III al-Nāṣir (300—350 = 912—961) had from his arrival in Cordova in 330 (942) no more faithful disciple than al-Ramādi who studied under his direction the Kitāb al-Ṭarādīr (“the book of philological rarities”). The young scholar’s admiration found expression in a poem which has remained famous (rhythm li, metre kāmil) of which some thirty lines are preserved in the Yatimmat al-Dahr of al-Thālīlī and the Muṣṭafī al-Āmīn of al-Ṭaḥā b. Khākān (cf. Bibli.). It is this poem which gained him the title of Muṭamābbī al-Gharb (which had already given to Ibn Ḥāni al-Andalusī and which was later to be given to Ibn Darrādī al-Kastallī and to Abū Ṭalīb (Abū al-Djāḥbār). Al-Ramādi studied also under an Andalusian scholar named Abū Bakr Yaḥyā Ibn Ḥusayn al-Kaṭif or al-Āmīn (“the blind”), of whom we know very little.

When at the height of his powers, al-Ramādi became laureate to the Umayyad caliph al-Hakam II al-Muṣṭafī (350 = 961—976), then to his son and successor hisgām II al-Mu‘ayyad (366—390 = 976—1009); but his attachment to the cause of the kadhīj Abū l-Ḥasan Dja‘far b. Ḥuṣayn al-Muṣṭafī and his participation in the plot fomented by the eunuch Dja‘far to overthrow Hakam II and proclaim another caliph than his son hisgām brought down upon him the wrath of the great minister al-Maṣūrī Ibn Abī ‘Amir. Thrown into prison at al-Zahrā’, he suffered all sorts of ill-treatment: during his imprisonment, he wrote the most touching verses (including a poem in ḥi, metre ṭawwāl, and another in ḥuṣi, metre ṭawwāl) and he prepared a poetical work on birds, the description of which concluded with a poem in praise of the heir-presumptive hisgām II. Liberated through the intercession of friends he had to go into exile. He went to Saragossa to the governor Abū al-Raḥmān b. Muḥammad al-Tudjīhī whose merits he celebrated in a poem in miṣr. Amnestied by al-Maṣūrī he was able to return to Cordova, but on condition that he did not go into society. Finally, he pardoned, he entered the entourage of the all, powerful kadhīj as a pensioner (murtazīf) and it was in this capacity that he took part in an expedition against Barcelona in 375 (985). During the sināa which was to lead to the collapse of the Umayyad caliphate and the formation of petty independent states ruled by the murtakī al-ṭawāfīf, al-Ramādi led a miserable existence and it was in the greatest distress that he died in the early years of the fifth (eleventh) century.

Al-Ramādi became celebrated chiefly for his chaste love for the enigmatic Khwāla (wrongly: Ḥalwa or Ḥulwa) whom he met one Friday in the public gardens of the Banī Marwān on the left bank of the Guadalquivir at the end of the bridge but was never able to see again. It was Abū Muḥammad Ibn Ḥazm al-Zahīribī, whose ascetic tendencies on this subject are well known, who did most to spread this love-story; but it seems that the memory of Khwāla occupied the heart or mind of the poet only very little; if it still possessed him at Saragossa to the extent of inspiring all the nasīḥāt of the penury in honour of the Tudjīhī governor, on his return to Cordova, it disappeared completely for we see al-Ramādi henceforth completely overwhelmed by a new passion, the object of which is not a woman but a Mozarab boy to whom the poet gives the name of Yahyā (John) or Nusair (Victor?).

The Divān of al-Ramādi never seems to have been collected; of his book on birds, Kitāb al-Ṭair, written in prison, there survives only the Lāmiyya in which he described the falcon hunting; the more important fragments that have survived have already been mentioned. A pupil of Abū ʿAlī al-Kālī, al-Ramādi is inclined to imitate the poetry of the east, but after Ibn Abī Rabbībī and before ʿUbda b. Mā al-Samīb, he shows a marked fondness for the mawṣawṣūḥ into the construction of which, he introduced several innovations. In spite of its classical structure, his verse has a very personal character, especially when he calls upon Khwāla or describes his sufferings in the prison at al-Zahrā’. The few lines in which he alludes to the weakness of hisgām II and to his complete domination by his mother Šābī and by the kadhīj al-Maṣūrī, the in which he speaks of Dja‘far’s plot are not without historical interest; finally the information which he gives about Mozarabs (worship and costume) in connection with his favourite enable us to check what Abū ʿAmir Ibn Shuhaid says on the same subject and for this reason of some documentary importance.

Rám-Hormuz (the contracted form Rámis, Rúmas) is found especially as early as the tenth century, a town and district in Khuzistan [q. v.]. Rám-Hormuz lies about 55 miles southeast of Ahwáz, 65 miles S.S.E. of Shush, and 60 miles N.E. of Behbehan. Ibn Khurátúbí, ibn al-Maghribí, 'Ur-ßân al-Murúšt, Bálík, ed., p. 57; al-Nuwarí, Niñayat al-Áraá, Cairo, x. 213; Ibn Faádl Alláh bi-Márrí, Maráth, Paris MS., No. 2237, fol. 56 (H. Perks).

**Rám-Hormuz**

(Rám-Hormuz) was executed in Rám-Hormuz, but Tabárí, i. 834, says that Mání was exposed on the "gate of Mání" at Dánda-Sabur (cf. also al-Brítin, Chronology, p. 208). The Nestorian bishops of Rám-Hormuz are mentioned in the years 577 and 587 (Marquart, Erdkunde, p. 27, 145). Al-Mukaddásí, p. 414, says that 'Abd al-Dawla built a magnificent market near Rám-Hormuz and that the town had a library founded by Ibn Sawwar (according to Schwarz, the son of Sawwar b. 'Abd Alláh, governor of Básra, who died in 157 = 773), and was a centre of Mu'tazilite teaching. According to Ibn Khurdáábí, p. 42, Rám-Hormuz was one of the 11 kíras of Kháristán (Kúdáma, p. 242, and Al-Mukaddásí, p. 407: one of the 7 kíras). Its towns (Mukaddásí, v. 3, 99, 118; Sanabil, Isha'áq [q. v.], Tyrm [?], Bánk, Lád, Ghrwa [?], Bájadí, and Kúrzak, all situated in the highlands. To these Yákit, i. 183, adds Arbuk (with a bridge, 2 farsákhs from Ahwáz). On the other places in the kíra of Rám-Hormuz (Ásak, Bústán, Sásán, Táshán, tr) see Schwarz, op. cit., p. 342—345. According to Mukaddásí, p. 407, Rám-Hormuz had palm-groves but no sugar-cane plantations (in the xivth century however, Mustawfí, Náxät al-Kálb, p. 111, says that Rám-Hormuz used to produce more sugar than cotton); among the products of Rám-Hormuz Isájkírí (p. 93) mentions silks (díyáb abrástam) and Dimishkí, p. 119 (transl. p. 153) the very volatile white naphtha which comes out of the rocks. At the present day the Anglo Persian-Oil Company possesses deposits above Rám-Hormuz.

V. Minorsky)

**AI-RÁMÍ**, whose full name was Háshán b. Múhammad Sha'ír al-Dín, a Persian stylist. No details of his life are known; even the few chronological references that we possess are rather vague. His importance lies in his well known work Anís al-'Ukkásh, a treatise on the most common poetical figures for describing the different parts of the human body. According to his own statement, the author made up his mind to compile this work while he was in Marágá on a visit to the observatory of the famous Násir al-Dín Túsí. The book is dedicated to Suláman Abú 'l-Áthar Uwais Bahádúr (1356—1373). Ikáni of Ádharbáýján, and according to Hádíjí Kháltá (ed. Flugel, i. 488) was finished in Shawwál 826 (Sept. 1423). This is in obvious contradiction to chronology for at this date Ádharbáýján had belonged to the Timúrid Sháhrukh since 823 (1420). The author further mentions in this work the poet Awhádí (d. 738 = 1337) as his contemporary and a certain
Hasan b. Mahmud Kashi (d. 710 = 1300) as his teacher. It may therefore be assumed that Hadjdi Khaifa's statement is based on a misunderstanding and that the work was written not later than 1373. The work is divided into 19 chapters, each begun with the hair of the head and end with the feet and deal with the human body from head to foot. Besides this book, which is of great value for the study of classical Persian poetry and was used by the great Turkish commentator Mostafa b. Shahbani Sururi (d. 909 = 1561) in his Bahre al-Ma'arif, Sharaf al-Din Rami also prepared a commentary on the well-known work on poetics of Rashid al-Din Waywati, Hadidk al-Sahir (new edition of the Persian text by 'Abbas Ikbai, Teheran 1930) entitled Hadidk al-Hadidk or Sanati al-Badai (Hadjdi Khaifa, ii. 77), a work called Hulat al-Maddah of which nothing else is known (Hadjdi Khaifa, i. 112) and a Dawa, which consisted of kadidas, kita's and quatrains, but as early as Dauwla's time it could only be found in the 'Irak, Agharbadjiyan and Fars. Nothing of all these works has come down to us except the Anis al-'Insha. There is said to be a kasida of Rami's in the Dauwlar al-A'arr (compiled in 840 = 1436-1437) of Shaikh Adhari (d. 866 = 1461-1462) (Hulat al-Maddah, Ta'khirat al-Madara, ed. E. Browne, p. 308). 

Rami Mehemed Pasha, an Ottoman grand vizier and poet, was born in 1665 or 1666 (1654) in Eiyüb, a suburb of Stambul, the son of a certain Hasun Agha. He entered the chancellery of the Re's Efendi as a probationer (qadari), and through the poet Yusuf Nabi (q.v.) he was appointed an annuitant as muqaf kadih, i.e. secretary for the expenditure of the palace. In 1695 (1684) he was transferred to the influence of his patron, the newly appointed Kapudan Pasha (q.v.) Mustafa Pasha, he became davam efendi, i.e. chancellor of the Admiralty. He took part in his chief's journeys and campaigns (against Chios) and on his return to Stambul became re's kedatari, i.e. persuasor to the Re's Efendi. In 1102 (1690) he was promoted Beylikdji, i.e. Vice-Chancellor and four years later Re's Efendi in place of Abu Bakr, in which office he was succeeded in 1108 (1697) by Kuzuk Mehemed Celebi. After the battle of Zenta (Sept. 12, 1697), he became Re's Efendi for a second time and was one of the plenipotentiaries at the peace of Carlowitz by the conclusion of which "he put an end to the ravages of the Ten Years War but also for ever to the conquering power of the Ottomans" (J. v. Hammer).

As a reward for his services at the peace negotiations he was appointed a vizier of the dome with 3 horse-tails (tagh) in 1114 (1703) and in Ramad'an 6, 1114 (Jan. 24, 1703) appointed to the highest office in the kingdom in succession to the grand vizier Daltaban Mustafa Pasha. In this office he devoted particular attention to the thorough reform of the civil administration, through the reforms in which he saw the security of the state threatened (cf. J. v. Hammer, G.O.R., vii. 64). "By lessening the burden of fortresses on the frontiers in east and west, by raising militia against the rebel Arabs, by securing the pay of the army from the revenues of certain estates, by making aqueducts, by restoring ruined mosques, by taking measures for the safety of the pilgrim caravans and for the security of Asia Minor, by settling Turkmen tribes, by ordering the Jewish cloth manufacturers in Sisamik and the Greek silk manufacturers in Briza in future to make in their factories all the stuffs hither imported into Turkey from Europe" (J. v. Hammer), he exercised a most beneficent activity, which however soon aroused envy and hatred, and, especially as Rami Mehemed Pasha as a man of the pen entirely and not of the sword, was unpopular with the army, particularly the Janissaries, finally was bound to lead to his fall (cf. J. v. Hammer, G.O.R., vii. 72). In the great rising in Stambul which lasted four weeks, beginning with theenthronement of Selim Mustafa and ending with his deposition (9th Rabii ii, 1115 = Aug. 22, 1703), his career came to an end. He was disgraced, but pardoned in the same year and appointed governor, first of Cyprus, then of Egypt (Oct. 1704). His governorship there terminated as unhappily as his grand viziership (cf. J. v. Hammer, G.O.R., vii. 133 following Rashid and La Motraye). In Djumada i 1118 (Sept. 1706) he was dismissed and sent to the island of Rhodes, where he died in Djumada ii (March 1707) either under torture or as a result of it (cf. J. v. Hammer, G.O.R., vii. 134 quoting the interminstus Talman). Rami Mehemed Pasha is regarded as a brilliant stylist, as the two collections of his official documents (inghad) containing no less than 1,400 pieces, distinguished by their simple clear and elevated style, amply show (cf. the MSS. in Vienna, Nat. Bibl. Nrs. 296 and 297 in G. Fligel, Die arab., pers. u. türk. Hist., i. 271 sq.). Rami Mehemed Pasha also left a complete Divan of which specimens are available in the printed Tezkire of Sisolm (cf. F. Babinger, G. O. W., p. 272 sq.; Stambul 1315). His poetical gifts were inherited by his son Abd Allah Re'fet (cf. Brussali Mehemed Tahir, Othmanli Muwelliferi, ii. 187). His son-in-law was the tezkireci Solim (q.v.).

(Franz Baringer)

Al-Ramlah, capital of Filastin. 25 miles E.N.E. of Jerusalem. The Umayyad caliphs liked to choose little country towns, usually places in Palestine, to live in rather than Damascus. Mu'awiya and after him Marwan and others frequently resided in al-Sijasbara on the south bank of the Lake of al-Tarba, Ya'qub I in Hawwara, Adhriy, 'Abd al-Malik in al-Djibiyah, Walid in Usai (now Tell Sais S. E. of Damascus) and al-Karyatain and his

In the reign of al-Walid his brother Sulaimān was governor of Filsāni. Stimulated by the examples of ʿAbd al-Malik, the builder of the Kubbat al-Ṣakhrā in Jerusalem, and of his brother who had restored the mosque of Damascus (Yaḥūṭ, Muʿājam, ed. Wustenfeld, i. 818), he founded the new town of al-Ramla and removed to it the seat of the provincial government which had been in Ludd since the “plague of Anwās” (q.v.) in 16 (638—639). As caliph also he continued to live in al-Ramla, (96—99 = 715—717).

The whole population of Ludd was transferred to the new capital of the Ḥidjdja of Filsāni and the latter fortified, which was allowed to fall into ruins. Sulaimān first of all built his palace (fār) then the “house of the dyers” (dār al-ʿabbaṣ, ʿānīn) which was provided with a huge cistern; at a later date it was consecrated with all the property of the Ṣamūyāḍ and came into the possession of the heir of the ʿAbbāsidīs, ʿAlī b. ʿAbd Allāh. Sulaimān also began to build the mosque and continued it when caliph. It was finished under ʿOmar b. ʿAbd al-ʿAzīz although not on the scale originally intended. The financial management of the building of the palace and of the chief mosque was in the hands of a Christian of Ludd, al-Bayṭirī b. al-Nakā (al-Baladhuri, ed. de Goeje, p. 145 sq.; var.: Bayṭirī b. Bakā in Ibn al-Ḥakīm, B.G.A., v. 103, and Ibn Bayṭirī in Yaḥūṭ, ii. 818). According to Yaḥūṭ (ii. 817) the latter asked the people of Ludd to give him a house near the church, and when they refused, he decided to pull down the church; according to al-Maḳṣūsī (B. G. A., iii. 164 sq.), the caliph Ḥiṣām threatened the people of Ludd that he would destroy their church if they did not hand over the marble columns, which they had intended for a splendid building and concealed. Sulaimān also began to bring a canal called Barada to the new town and to dig wells of fresh water, as it was 12 miles distant from the nearest river, the Abī Futrus (Yaḥūṭī, B.G.A., vi. 328). The considerable cost of keeping up the canal was later taken over by the ʿAbbāsid Caliphs and at first voted annually but from the time of al-Muṭʿaṣim included as current expenditure in the budget.

The advantages and disadvantages of the new town are vividly described by al-Maḳṣūsī. Rich in fruits, especially figs and palms, good water and all foodstuffs, it combined the advantages of town and country, those of a position in the plain with the proximity of hills and sea, of places of pilgrimage like Jerusalem and coast fortresses. It had a splendid chief mosque, fine bānā, comfortable baths, commodious dwellings and broad streets. On the other hand in winter, it was like a muddy island, in summer a sandbank and as it was not on a river bed the ground was hard and without grass, and the lack of ample running water was the chief defect of this otherwise so favoured town, for the little drinking water in the cisterns was not accessible to the poorer part of the population. The town covered an area of a whole square mile. Its buildings were of fine building stone and brick. The town's wares were exported chiefly to Egypt.

The chief gates of al-Ramla were: Darb Bīr al-ʿAskār (called after the al-ʿAskar quarter; cf. Yaḥūṭ, iii, 674; Safī al-Dīn, Marāṣīl, ii. 258), Darb Maṣjīd ʿAnnabah (as it was called, as de Goeje conjectured, from the town elsewhere however called "Annaba 4 miles E. of al-Ramla), Darb Bāīs, Darb al-Madīs, Darb Bīs (i.e. Bāīs or Bāţīgh; or Kāyata al-Ṭabāla, the ancient Kīratat Bāʿala now Abu Ghawāḥ), Darb Ludd, Darb YaĪsī, Darb Diṣr and Darb Diṣdūn, the latter called after a neighbouring town with a mosque, mainly inhabited by Samaritans (Bīth Dagon, now Bīt Diṣdūn).

In the centre of the market-place of al-Ramla was the chief mosque Dāmīr al-Abīyāq, the miḥrāb of which was regarded as the largest of all that were known, the pulpit of which was second only to that in Jerusalem and whose splendid minaret was much admired.

Whether there had been an older town on the site of al-Ramla is problematic. The old attempt to identify it with Arimathia, Ramath or Rahab have now been generally abandoned. An ancient Pekāsmek, “Camp”, should rather be considered, a place-name particularly frequent in Palestine, which was borne for example by the camp of Jerusalem (Hēbr., xii. 11, 13; Act. Apost. xxii. 34—xxviii. 32) and bishoprics in Palestine I (now a Bīr al-Zaūrā, e.g. Fēderin in Gēnēr, Vie de S. Euthyme le Grand, p. 104—111) and in Iōnīkhe Libanias (R. Aigrin, art. Arōbēs, in Dict. d'hist. et de géogr. ecclés., iii. 1194—1196; for the Egyptian al-Ramla 4 miles N.E. of Alexandria corresponds to an ancient Nicopolis and later Parembole. But the Arabic writers say there was no town previously on this site but only a sandy area after which the town was named (al-Baladhuri, p. 143 etc.).

The population of al-Ramla was in the time of Yaḥūṭī (B. G. A., viii. 327 sq.) a mixture of Arabs and Persians (on the settlement of Persians in Syria cf. al-Kindī, Gouvernor de l'Egypt, ed. Guest, p. 19); the clients were Samaritans.

The great cistern ʿUmāziyya (ʿAneẓiye) to the N. W. of al-Ramla near the road to YaĪsī, known as the cistern of St. Helena, has a Kīfic inscription of Duḥ ʿl-Hidjdja 172 (May 789), i.e. of the time of Ḥārūn al-Rašīd (van Berchem, Inscri. arabes de Syrie, Cairo 1897, p. 4—7; M. de Vogüé, La citerne de Ramla, in Comptes-rendus de l'Acad. des Inschr. et Belles-lettres, xxxix., 1911, p. 352—493 sq.).

By the Frankish pilgrims the town is first mentioned in 870 as 'Ramula'. The Crusaders made it a bishopric. In the 13th century there was built the beautiful church of the Crusaders now the mosque (Dāmīr al-Kabīr, in the east of the town) with its noble Gothic portal, to which was later added very unskilfully an inscription of Sulṭān Kathūgī. It also has an inscription, according to which its square tower (now replaced by a round minaret) was built or restored in 714 (1314—1315) by Sulṭān Muḥammad.

The old "white mosque" was restored by Šalādīn in 587 (1191) and given by Baibars in 666 (1267—1268) two domes, above the minaret and the miḥrāb. The Esquiline gate opposite it (Mudījr al-Dīn, Bāīṣī, p. 419: transl. Sauvage, p. 207; the inscription in van Berchem, op. cit., p. 57—64). The minaret, the so-called "tower of al-Ramla" or "Tower of the 40 martyrs", was, according to Mudījr al-Dīn and an inscription over its gateway, rebuilt in
Shābān 718 (Oct. 1318) [Zwei arabisch Inschriften, in Jerusalemer Warte, lixx., 1913, p. 100 sq.]; the mosque as well as the minaret have both been wrongly cited for the work of the Crusaders (cf. against this van Berchem, op. cit., p. 63 sq.).

Nāṣir-i Khusraw who visited al-Ramla in Ramadān 438 (1047), calls it a large town with high and strong walls of stone and gates of copper; the inhabitants had a receptacle for the collection of rain-water at the door of each house. There was also a large cistern for general use in the middle of the Friday mosque.

An earthquake of Muharram 15, 425 (Dec. 1034) destroyed a third of the town and its mosque fell into ruins (cf. also Ibn al-Athir, ix. 298).

Most of the public and private buildings and public streets fell with marble and adorned with fine sculptures and ornaments. Figs were the chief export of al-Ramla. The name of the province of Filaštīn was also given to the capital al-Ramla (Clermont-Ganneau, Reconnu d’Arch. Orient., vi. 101).

Saladin in 583 (1187) destroyed the town so that it never again fell into the hands of the Franks and it remained in ruins (Yākūt, i. 818; Sāfī al-Dīn, Muhāfazat, i. 483). Ibn Bāṭṭūta visited it in 756 (1355); he mentions the Dālī’ al-Ābyād in which, he was told, 300 prophets were buried. A Latin monastery was founded in 1420 in al-Ramla by Duke Philip the Good, and restored at a later date by Louis XIV.

In 1798 the town was Napoleon’s headquarters.

The modern al-Ramla has about 6,500 inhabitants; it has a healthy climate and fertile country round it.

(E. Honigmann)

RAMPUR, an Indian state in Rohilkhand and under the political supervision of the government of the United Provinces. It is bounded on the north by the district of Naini Tal; on the east by Bareilly; on the south by the Baisauli tahsil of Buduān; and on the west by the district of Morādabad.

The early history of Rāmpur is that of the growth of Rohilka power in Rohilkhand. After the establishment of Muslim rule in India large bodies of Afghans or Pathans settled down in the country. So powerful did they become that they were twice able to establish their rule in northern India, under the Lodis [q. v.] in the second half of the xvth century, and under the Surs [q. v.] in the time of Shīr Shāh. After the death of Awrangzīb and with the decline of the Mughal empire Afghān settlements increased until in the words of the Sīyar al-Mutākīhārīn “they seemed to shoot up out of the ground like so many blades of grass”. The name Rohilla was applied to those Afghans who settled in what is now known as Rohilkhand.

The real founders of Rohilla power were an Afghān adventurer, named Dādū Khan, who arrived in India immediately after the death of Awrangzīb, and his adopted son, ‘Ali Muhammad Khan, who succeeded him as leader of a band of mercenary troops. It was during the lifetime of ‘Ali Muhammad Khan that his possessions came to be called Rohilkhand or the land of the Rohillas. In course of time ‘Ali Muhammad Khan became so powerful that he refused any longer to pay his revenues to the central government, in which course he was encouraged by the anarchy consequent upon the invasion of Nādir Shāh [q. v.]. The growth of his power so alarmed Šafī ‘Alī of Oudh [see Oudh] that he persuaded the emperor to send an expedition against him, as a result of which ‘Ali Muḥammad Khan surrendered to the imperial forces and was taken prisoner to Delhi. After a time he was pardoned and appointed governor of Sīrkīnd. In 1748, according to the Marthās Rāmūnī, he was transferred to Rohilkhand, but it seems more probable that he took advantage of the invasion of Ahmad Shāh Durrānī [q. v.] to recover his former possessions. Two factors contributed to the growth of Rohilla power: the weakness of the central government and the fact that they were able to take advantage of the internal struggles between the various Rajput chiefs and zamindārs of Rohilkhand.

‘Ali Muḥammad Khan left six sons, but the absence of the two eldest in Afghanistan, combined with the extreme youth of the other four, meant that all real power remained in the hands of a group of Rohilla sardārs, the most important of whom were Ḥāfiz Rāmūn Khan, and Dūndū Khan. This naturally produced intrigues and disputes and eventually weakened the Rohilla power.

In 1771 the Marthās turned their attention to the conquest of Rohilkhand, whereupon the Rohillas applied for aid to Šudjā’ al-Dawla, the nawāb-wazir of Oudh. It was agreed that Šudjā’ al-Dawla should receive forty lakhs of rupees for his services (Aitchison, i. 6–7), but the Rohillas later refused to abide by their pecuniary engagements. In accordance with his promise at the Conference of Benares in 1773, Warren Hastings agreed to assist the nawāb-wazir in expelling the Rohillas from Rohilkhand, for which he was to receive forty lakhs of rupees. On April 23, 1774, the Rohillas were defeated and their leader, Ḥāfiz Rāmūn Khan, slain. At the end of this war Faujullāh Khan, a son of ‘Ali Muhammad Khan, concluded a treaty with Šudjā’ al-Dawla at Lالدāng (India Office MSS., Bengal Secret Consultations, October 31, 1774; see also extracts from the Persian interpreter’s journal, February 14, 1775).

By this treaty Faujullāh Khan received a ғāzīr consisting of Rāmpur and other districts with a
RAMPUR — RANGOON

RAMPUR. Several Indian poets have used this tākhallus. The Rijād al-wifāk of Dhu 'l-Fikār 'Afi, biographies of Indian poets who wrote in Persian, and the Tadhkira of Yusuf 'Ali Khan (analysed by Sprenger, A Catalogue of the Arabic, Persian and Hindustani Mss... of the King of Oudh, i. 168 and 250) mention five of them. The first, a native of Kashmir, lived in Delhi in the reign of Muhammad Shāh (1719-1748); his ghazals were sung by the dancing-girls. — The most celebrated, however, was Sa'ādat Vār Khān of Delhi. His father, Tāhmasb Beg Khān Turānī, came to India with Nadir Shāh and settled in Delhi where he attained the title of haft-hāzārī and the title of Muḥākmīn al-Dawla. In his turn, Sa'ādat Vār Khān entered the service of Mirzā Sulaimān Shikh, son of the emperor Shāh 'Alam, who lived in Lucknow. He was a good horseman and able soldier; for a time he commanded a part of the artillery of the Nīpām of Haiderābād but he gave up this post to go into business. He was in his youth a friend of the poet Ināhā in Lucknow; a pupil of the poet Muḥammad Ḥafīm of Delhi (cf. Ram Bahū Saksera, A History of Ondu Literature, p. 48; Sprenger, op. cit., p. 235), he afterwards submitted all his verses to the criticism of Nīhār (cf. Sprenger, p. 273); then of Muṣafīr (Saksera, p. 90); he died in 1251 (1835) aged eighty (or a year later; cf. Garcin de Tassy). — The following are his works in Urdu: Mathnawi Dilpasr, a poem of romantic adventure (1213 = 1798); Ijādī al-Rāngīn, a mathnawi of fables and anecdotes (Lucknow 1847 and 1870); another mathnawi of anecdotes: Muqarr bī-Agāhī or Qurābī al-Mughūr (lit. Agra and Lucknow); four divāns collectively known as Naw Ratan ("the Nine Jewels"), the two first lyrical, the third humorous and partly in rikhāhi (language peculiar to women), the fourth in this same language with a preface by Rangīn explaining the principal words (on the development of rikhāhi and Rangīn's skill in this licentious genre, cf. the article URDU vol. iv., p. 1026v, l. 1—11, and Saksera, op. cit., p. 94); in prose a treatise on horsemanship (Faraa-nāme, 1210 = 1755; several times re-edited) and a collection of critical observations on a number of poets, entitled Mājūš-i Rāngīn. In Persian (if the work is really his; cf. Sprenger, op. cit., p. 54, No. 462), Rāngīn under the title Mihr u-Māhī, sung of the adventure of a son of a sāyīd and of a daughter of a jeweller, based on an incident that occurred in Delhi in the reign of Dhañhāngīr (cf. Gr. i. Ph., ii. 254).

RANGOON, a city in the Pegu division of Burma lying on both sides of the Hning river at its point of junction with the Pegu river and the Pazuandaung creek, twenty-one miles from the sea.

Legend, not entirely undocumented, relates that the great pagoda at Rangoon (Mon, Yaikd Logun; Burmese, Swwe Dagon) was founded during the life-time of the Buddha and was repaired by the emperor Apyoka (7 B. R. S., xxiv. 4 and 20).

History proper begins with the establishment of Pegu as the capital of a Mon kingdom in 1369.
A convenient port was required for this kingdom. Bassein, which had been the chief port of Burma in the early middle ages, was too distant and too difficult to control. Martaban on the Gulf of Sittang was nearer but had no good river connection with Pegu. It was natural, therefore, that the Rangoon or Hlaing river, of which the Pegu river is a tributary, should come into prominence as a line of approach for over-seas trade. Syriam, to the southeast of Dagon at the mouth of the Pegu river, and Dala, now part of Rangoon on the opposite bank of the Hlaing, were the chief ports. But the Shwe Dagon pagoda standing on the last spur of the Pegu Yomas was a landmark to ships coming up the river and was chosen by a succession of kings for the exercise of their pujy.

An inscription on the Dagon pagoda hill, engraved by order of King Dhammazedii in 1845 A.D., records additions to the pagoda by his royal predecessors for a century back, as well as by himself (J. B. R. S., xxiv. 8). Similar works of merit by subsequent kings are recorded in the histories (by this period fairly reliable) culminating in the rebuilding of the pagoda by King Bay in Nauang after it had been damaged by an earthquake in 1568 A.D. There are also frequent references by early travellers, such as Ferdinand Mendez Pinto, Caesar Frederick, and Gaspar Balbi to Dagon and its celebrated pagoda.

It was the customs revenue of the Rangoon river that financed the Portuguese adventurer de Brito, who rose to power in Syriam between 1600 and 1612. Later in the eighteenth century the Dutch, French, and English from time to time maintained trading stations.

The capital was transferred from Pegu to Ava in 1635 and royal authority gradually declined, but even the weakest kings contrived to keep control of the Irrawaddy and the now important customs station of Syriam. With the seizure of Syriam by the Pegu rebels in 1740 the kingdom of Ava, deprived of its revenues, necessarily came to an end.

The recovery of Syriam was one of the first objects of Alaungpaya, the founder of the dynasty which ended with King Thibaw. His siege operations were for some time unsuccessful and he had to be content with the capture of Dagon in 1755. It is recorded that as he had been successful over all his enemies (yan ake) he changed the name of the town to Yangon (Rangoon). Syriam fell in 1756 and was destroyed. A governor was appointed at Rangoon, which now replaced Syriam as the principal sea-port of Burma.

The history of the early kings of the Alaungpaya dynasty was to encourage foreign trade. A British factory was established at Rangoon and maintained till 1782. Parsi, Armenian and Muslim traders settled here and flourished. But with the weakening of the central government the exactions of the local officials increased and constituted a serious discouragement to commerce. Symes describes Rangoon as a flourishing port in 1795 and estimates its population at 50,000 (p. 214).

Rangoon was first captured by the British in 1824 during the first Burmese war but was evacuated in accordance with the terms of the Treaty of Yandabo at the end of the war. According to the Kon-baung set maha-yazaw-in-dji (vol. ii., p. 15), a Burmese history of the Alaungpaya dynasty, King Tharawaddy visited Rangoon in 1841 (1203 b. e.) and founded a new town south and west of the Shwe Dagon pagoda, to which the population of the old town on the banks of the river was ordered to remove. The order was not at once obeyed, but, by the outbreak of the second Burmese war in 1852, the transfer of the population was pretty complete and the British government was unimpeaded in the measures, which it lost no time in undertaking, for the reclamation and lay-out of the riverine area. In the space of three years Rangoon rose from a squatted collection of huts into a thriving and populous town. [For improvements to Rangoon and development of Pegu, see Fyfe's Burma Past and Present, ii., appendix G]. To-day it is the capital of Burma and has a population of 400,415, of whom 70,791 are Muhammadans (1931 Census Report).

(R. A. Kern)

RAPAK (Jav.: Ar. raḍ?) is a technical term used among the Javanese, in this one case only, for the charge made by the wife, at the court for matters of religion, that the husband has not fulfilled the obligations which he took upon himself at the ṭalḵ of ḥalāf [see TALKA]. These obligations are of a varied and changing nature. Among the conditions the following always occurs: “If the man has been absent a certain time on land or (longer) over seas” i.e. without having transmitted nafaṣa [q.v.] to his wife. A clause that is never omitted is the following: “If the wife is not content with this”. She is therefore at liberty to be quite satisfied with the husband’s non-fulfilment of his vows, without taking steps for a divorce. The work of the court is only to ascertain the fulfilment of the condition and the arising of ḥalāf. As always, the ḥalāf is still entered in the register. — It is evident that this procedure guarantees the integrity of the law otherwise endangered.

RĂS AL’-AIN (‘Ain Warda), a town in al-Dżaira on the Khabur. In ancient times it was already known as Resan-Theodosiopolis (Notitiae dignitatum, ur. xxxvi. 20) or Ḥāriya (Steph. Byz.), Syriac Resh ‘Ainā. On account of its position at the sources of the Khabur it has been identified with the road-station Fons Scabora of the Tabula Peutingeriana (fons Chabura in Pliny, Nat. hist., xxxi. 37; xxxii. 16) (E. Hersfeld, Reise im Europä-
and Rās al-'Ain. The latter was taken by Joscelin and a large part of the Arab population killed and the remainder taken prisoners (Mich. Syr., ii. 228; Barhebr., Chron. syr., ed. Bedjan, p. 259). But the Franks cannot have held the town for very long.

Saif al-Din of Mawṣil and 'Izz al-Din Masʿūd of Ḥalab in 570 (1174—1175) attacked Salāḥ al-Din and besieged Rās al-'Ain but were soon afterwards defeated by him at Kūrīn Ǧama. In 581 (1185—1186) Salādīn crossed the Euphrates and marched against Khwārizm, Rās al-'Ain and Dārūr to Balad on the Tigris. His son al-ʿĀdīl in 597 (1200—1201) received from al-Adīl the towns of Sumaṣṣa, Sarūḏī, Rās al-'Ain and Dūmāla; when he then marched on Damācsus, Nūr al-Dīn of Mawṣil and Ḥuṭb al-Dīn Muḥammad of Sinjār again took the Džāzira from him but fell ill in Rās al-'Ain in the heat of summer and concluded peace again. In 599 (1202—1203) al-ʿĀdīl took from al-ʿĀdīl the towns of Sarūḏī, Rās al-'Ain and Dūmāla (other fortresses also are mentioned). When the Kūrūd (Georgians) who had advanced as far as Khišāt in 606 (1210—1210) learned that al-ʿĀdīl had reached Rās al-'Ain on his way against them, they withdrew (Kamāl al-Dīn, transl. Blochet, in R. O. L., v. 46). Malik al-ʿĀṣfāra, who had defeated Ibn al-Mashīḥ in 616 (1129—1220) forgave him for rebelling and gave him Rās al-'Ain as a fief (Kamāl al-Dīn, op. cit., p. 61; according to Barhebr., Chron. syr., p. 439, however, Ibn al-Mashīḥ died in prison in Harrān).

Salādīn's nephew al-ʿĀṣfāra in 617 (1220—1221) was fighting against the lord of Mārdīn. The lord of Mārdīn made peace between them, when Rās al-'Ain was ceded to al-ʿĀṣfāra, Muwazzar and the district of Ṣhabākhtān (around Dūnaisir) to the lord of Mārdīn. In exchange for Damācsus, al-ʿĀṣfāra, in 626 (1229) gave his brother al-Kāmil the towns of al-Ruḥā, Ḥarrān, al-Rašāq, Sarūḏī, Rās al-'Ain, Muwazzar and Dūmāla (Kamāl al-Dīn, in R. O. L., v. 77; Barhebr., Chron. syr., p. 458) who occupied them in 634 (1236—1237) (Kamāl al-Dīn, op. cit., p. 92). After the defeat of the Khwārizmīs at Džalāt Džalāhānīn near al-Ruḥā, the army of Ḥalab in 638 (1240—1241) took Harrān, al-Ruḥā, Rās al-'Ain, Dūmāla, Muwazzar, al-Rašāq and the district belonging to it (Kamāl al-Dīn, in R. O. L., vi. 12). But in 639 (1241—1242) the Khwārizmīs, who had made an alliance with al-Malīk al-Muṣaffar of Māyyāfīrīn, returned to Rās al-'Ain, where the inhabitants and the garrison, including a number of Frankish archers and crossbowmen, offered resistance. An arrangement was made by which they were admitted to the town by the inhabitants, whose lives were promised them, and captured the garrison. When al-Malīk al-Manṣūr had returned to Harrān and al-Muṣaffar had retired to Māyyāfīrīn with the Khwārizmīs, they sent their prisoners back (Kamāl al-Dīn, in R. O. L., vi. 14). In the same year also the Tatār came to Rās al-'Ain (ibid., p. 15). When the Khwārizmīs and Turkmen raided al-Džāzira, the army of Ĥalab under the emir Džamal al-Dawla in Dūnaisir II 640 (1243—1244) went out against them and the two armies encamped opposite each other near Rās al-'Ain. The Khwārizmīs combined with the lord of Mārdīn and finally a peace was made by which Rās al-'Ain was given to the Ortoqīd ruler of Mārdīn (Kamāl al-Dīn, in R. O. L., vi. 19).
In a Muḥammadan cemetery in the North of Rās al-'Ain, M. von Oppenheim found an inscription of the year 717 (1317–1318). The Syrian chroniclers mention Rāshid al-'Ain as a Jacobite bishopric (11 bishops between 793 and 1199 are given in Mich. Syr., iii. 502) in which a synod was held in 684 (Barhebræus, Chron. ecle., i. 287). Towards the end of the sixth century the town was sacked by Timūr.

Rās al-'Ain is built at a spot where a number of copious, in part sulphurous, springs burst forth, which form the real “main source” of the Ḫubāri (al-Dimashqi, ed. Mehren, p. 191). The Wādī al-Lūjjādib, which has not much water in it and starts further north in the region of Wirāḥāsher, and which may be regarded as the upper course of the Ḫubāri, only after receiving the waters from the springs of Rās al-'Ain becomes a regular river, known from that point as the Ḫubāri. According to M. von Oppenheim (cf. his map in Petrosianus Mutilus, 1911, pl. 18), the springs at Rās al-'Ain are called ‘al-Hasan, ‘al-Ankal-bitt and ‘al-Ain al-Zarkā; according to Taylor (J.R.A.S., xxviii. 349, note) ‘al-Ain al-Bajādī and ‘al-Ankal-bitt are the most important; he also gives the names of 10 springs in the N. E. and 5 in the S. of the new town.

The Arab geographers talk of 360, i.e. a very large number of springs, the abundance of water from which makes the vicinity of the town a blooming garden. One of these springs, ‘al-An-zahiriyā was said to be bottomless. According to Ibn Hawkal, Rās al-'Ain was a fortified town with many gardens and mills; at the principal spring there was according to al-Majdisi a lake as clear as crystal. Ibn Rusta (B.G.A., vii. 106) mentions Rās al-'Ain, Ka‘ṣīf, and Rās al-Akka as districts of al-Džazīra. Ibn Lūbbâr in 580 (1184–1185) saw two Friday mosques, schools and baths in Rās al-'Ain on the bank of the Ḫubāri. According to Ḥamd Allāh al-Muṣafī (xivth century) the walls had a circumference of 5,000 paces; among the rich products of Rās al-'Ain, he mentions cotton, corn, and grapes. The historical romance Fawād Ḍiyār Rābū wa-Diyār Rābū (with century) wrongly ascribed to al-Wāqīfī, which contains much valuable geographical information, mentions at Rās al-'Ain a plain of Muḥāṣṣilāb and a Mardj al-Jīr (var. al-Dair); it also mentions a Nestorian church in the town and several gates (in the translation by B. G. Niebuhr and A. D. Mordtmann, Schriften der Akad. von Hamburg, i, part iii., Hamburg 1847, p. 76, 87: the “gate of Istacherm” in the east and the “Muḥtakhaus or gate of Chubur” not precisely located. I have not been able to see the Arabic text of Ps.-Wāqīfī, ed. Ewald, Göttingen 1827).

At Rās al-'Ain were the Jacobite monasteries of Beh Irīr and Sperulos (speculæ; Ps.-Zacharias Rhet., viii. 4, transl. Ahrens-Krüger, p. 157; so also for Apholos in Mich. Syr., iii. 50, 65, cf. ii. 513, note 6; Saphylus in Mich. Syr., iii. 121, 449, 462; Barhebræus, Chron. ecle., ed. Abbeleos-Lamy, i. 281 sq.; Sophocles, Add., p. 397 sq. probably so to be read through).

(E. HONIGMANN)

AL-RAŚHID BI 'LLĀH ABD UL-QĀDIR AL-MANṢŪR B. AL-MUSTAŻARHID, ‘ABBĀSĪD caliph. On the 24th Rabī‘ II, 513 (July 13, 1119) the caliph al-Mustaṣāhid [q.v.] had homage paid to his twelve-year-old son Abd al-Qādir al-Manṣūr as heir-apparent and in Dhu ’l-Qa‘da 529 (Aug.—Sept. 1135) the latter was acclaimed caliph under the name al-Raṣḥid bi ‘llāh. When the Sāluḫid Sultan Mas’ud b. Muḥammad [q.v.] soon afterwards demanded 400,000 dinārs from him, al-Raṣḥid refused, because, as he said, he had no money. Mas’ud’s envoy then attempted to search the caliph’s palace and seize the money by force; but the caliph re-issued the Sultan’s troops were scattered and his palace plundered. Several emirs also withdrew their homage from the sultan. His nephew, Dāwūd b. Maḥmūd, advanced from Aḏharibājīdān against Bagdād and reached it in the beginning of Safar 530 (Nov. 1135). In the meanwhile the number of the caliph’s supporters increased. He was joined among others by the Aṯābog of al-Mawṣil ʿImād-al-Dīn Zangi [q.v.] and Dāwūd was proclaimed sultan in Bagdād. On hearing this Mas’ud prepared for war, advanced on Bagdād and laid siege to it; he did not succeed in taking it, so after some fifty days he withdrew to Nahrawān [q.v.] and then went to Hamadhān [q.v.]. Toronāñi, governor of Wāsiṭ, then appeared and placed a sufficient number of boats at his disposal so that he was able to cross the Tigris and occupy the western bank. The result was that the allies separated. Dāwūd returned to Aḏharibājīdān and Zangi with the caliph to al-Mawṣil, while Mas’ud in the middle of Dhu ’l-Qa‘da 530 (Aug. 1136) entered the ancient city of the caliphs, where he forbade looting and other excesses and restored order. He then summoned an assembly of judges and legists who accused the fugitive caliph unworthy of the throne. The latter was accused among other things of having broken his oath to the Sultan; he was said to have solemnly promised Mas’ud never to take up arms against him nor to leave the capital; he was also accused of other crimes. In his stead, his uncle Abd al-Ālih Muḥammad al-Muṭafī b. al-Muṣṭarḥ [q.v.] was appointed commander of the faithful.

THE ENCYCLOPAEDIA OF ISLAM, III.
Al-Rashid however did not stay long in al-Mawsil but went to Almarā'īdān where he joined Dāwūd. Several emirs, dissatisfied with Maš'ūd, also made common cause with Dāwūd with the object of restoring al-Rashid to the throne; the latter however took no part in the military operations (see also the article Maš'ūd). On Ra'mādān 25 or 26, 532 (June 6 or 7, 1138) the former caliph, who had not quite recovered from an illness, was murdered by Assassins near Isfahān.

(K. V. Zettersten)

RASHID, MEHMET, an Ottoman imperial historiographer, belonged to Stambul, where he was born as the son of the Kâdi Muluk Mustafa, a native of Malatya. He completed his studies in his native city where he was appointed official historiographer (waqā'ī nuwāṣ, q.v.) in 1126 (1714). He held this office till his appointment as kâdi at Aleppo in 1134 (1720). Later on he went as ambassador to Persia with the rank of Kâdi of Mecca, became in Šahbān 1142 (Feb. 1730) Kâdi of Stambul, was dismissed a few months later and on 1st Jamādā 1147 (Oct. 1734) appointed kâdi 'Aziz of Anatolia. He died in 1148 (July 10, 1735) in Stambul (cf. Subhi, Tarihi, fol. 13, 22, 66 remarkably brief) and was buried opposite the mosque of Al-Fadlāzē in the Kāra Gurmuk Street. On his tombstone see Brässlali Mehmed Tāhīn, Oğlanının Müelliflerleri, iii. 55 note.

Mehmed Rashid in continuation of Našīmā's (q.v.) work wrote a history of the Ottoman empire from 1071 (1660) to 1134 (1721) usually called briefly Taʾrīkh-i Râshid (cf. Haşibī Khāfī, No. 14,526) which is the authoritative source for this period. His successor in the office of imperial historiographer was İsmāʿīl ʿĀṣim, known as Küçük ʿĀṣim-bey (cf. Rashid, Taʾrīkh, iii., fol. 114).

In addition to numerous MSS. (cf. F. Babinger, G. O. W., p. 269 to which we have to add Cpsala, No. 667—668 [Rashid's autograph] and Stambul Lālā İsmail, No. 378) Rashid’s history has been twice printed (folio, Stambul 1153, 4 vols.; octavo, 6 vols., Stambul 1282; cf. theron F. A., 1868, i. 477). Portions have been translated by M. Norberg, Türkiska rikets annaler, Hernosand 1822, iii. 635—709, and J. J. S. Sekowski, Collectanea des Dieipljov Turcekich, ii., Warsaw 1825, p. 1—208.

Bibliography: cf. F. Babinger, G. O. W., p. 269 sq. (Francis Babinger).

AL-RASHID. [See ‘Abd al-Wajhid, Harun.]

AL-RASHID [Mawlah] b. AṢHRIF b. ‘Alī b. MUHAMMAD b. Qayyim. ‘Ali, ‘Alī ʿAlīd ʿAlīd Sultan of Morocco and the real founder of the dynasty which still rules the Sharifian empire. He was born in 940 (1530—1531) in Tafilalt (q.v.) in the south of Morocco, where his ancestors, the Ḥasanī Shāhāra (Sharfa) (q,v.), of Sidjumāsa (q.v.), had founded a flourishing zāïviya (q.v.) and gradually acquired a fairly considerable political influence, which increased with the decline of the Saʿād (q.v.) dynasty.

Morocco being at this time plunged into anarchy, the Shorfa of Tafilalt were able rapidly to become masters of the great tracts of steppe-like country in the north of the cordon of oases which formed their appanage. The eldest son of the chief of the zāïviya, Mawlah Muḥammad, having successfully fought the marabout of the zāïviya of Ilīgh in Tāzārāwā (S.W. of Morocco), 'Abd ʿAbd Ḥassān, who had political ambitions of his own, assumed a royal title in 1050 (1646). He did not however yet succeed in crushing the power of the marabouts of the zāïviya of al-Dīla' in central Morocco; he had to be content, after a very brief occupation of Tāzā and Fāz in 1650, with effective sovereignty over eastern Morocco only.

On the death of Mawlah al-Shārīf in 1069 (1659) his son, Mawlah al-Rashid, not trusting his brother, Mawlah Muḥammad, left the ancestral zāïviya for the rival zāïviya of al-Dīla', where in spite of a superficially warm welcome, he was soon given the hint to go; he proceeded to Āṣrīl, then to Fāz, which, regarded as an undesirable by the lord of the city, the adventurer al-Duraydī, he was not allowed to enter. He next went to eastern Morocco, and very soon succeeded in gaining a large number of followers, particularly, in the important tribe of the Banū Ināsān (Ben Saessen), the ʿAlīsh, ʿAlīsh, a religious dignitary, then of great influence. At the same time he attacked a very rich Jew, who played the regular lord and lived in the mountains of the Banū Ināsān, at the little town called Dār Ibn Maḥāl: al-Rashid slew him and seized his wealth. This coup vividly impressed the imagination of the people of the district and was to give rise, as P. de Cenival has brilliantly shown, to a legend, the memory of which still survives in the annual festival which follows the election of the ʿṣulān (the hadib) at Fāz. Mawlah al-Rashid by this murder not only acquired considerable material resources, but also a real ascendency over the people of the neighbourhood. In 1075 (1664) the large tribe of the Angād rallied to his authority, and he set up in Ujādā (q.v.) as a regular ruler. On the news of the proclamation of al-Rashid, his brother Mawlah Muḥammad, much disturbed, hurried from Tafilalt to eastern Morocco; his troops were met by those of al-Rashid, and Mawlah Muḥammad having been killed early in the battle, his men then went over to the surviving prince. Thenceforth Mawlah al-Rashid went on from success to success.

He very soon seized Tāzā without difficulty, and directly threatened Fāz, but he first of all took care to secure his position at Tafilalt; the cradle of his line, and added to his lands the mountains of the Rif (q.v.) on the shores of the Mediterranean, which were then ruled by an enterprising individual named ʿAbū Muḥammad ʿAbd Allah ʿAāraṣ. This shaykh had made an agreement, first with the English and then with the French, for the establishment of factories on the Rif bay of Alhucemas (transcribed in the documents of the period as Alouzème). Mawlah al-Rashid deprived him of the Rif in March 1666, just when the Marseillais Roland Fréjus, having obtained from the King of France the privilege of trading in the Rif, was landing on the Moroccan coast. Fréjus then went to see Mawlah al-Rashid at Tāzā, but the negotiations into which he endeavoured to enter with the shaykh soon collapsed.

Al-Rashid without delay turned his attention to
the capital of northern Morocco, Fas, which still withstood his authority. He laid siege to it and took it by storm on the 3rd Dhu 'l-Hijja 1076 (June 6, 1666); the adventurer in command there, al-Duraidi, took to flight. Al-Rashid took vigorous steps to punish certain of the notables of the town, and the people proclaimed him sultan. He was at the same time able to rally to his side the important group of Idrissid Shorfā' in the political and cultural atmosphere of his time.

The years that followed were used by Mawlawi al-Rashid to extend his possessions towards west and south. He first made an expedition against the Charb, out of which he drove the chief al-Ra'id al-Ghalānān, and seized al-Kasr al-Kabīr (Alezaarqu'or [q. v.]; he also took Meknes [q. v.] and Tetuan [q. v.] as well as Tārāz, the inhabitants of which had rebelled. In 1079 (1668) he took and destroyed the zāwiyah of al-Dlā'ī after having routed its chief Muhammad al-Hāfdjī at Baṣṭ al-Rumman. The same year, Mawlawi al-Rashid seized Marrākeş and put to death there the local chief ʿAbd al-Karim al-Shabbāni, surnamed Karum al-Hāfdjī. In 1081 (1670) he undertook an expedition into Sūs [q. v.] where agitators still disputed his authority. He took Tūrīdānt [q. v.] and the fortress of Ṭīghī and returned to Fās, now lord of all Morocco. At this time, says the chronicler al-Ifrīnī, "all the Maghribīs, from Tlemcen to the Wādī Nāl on the borders of the Sahara, was under the authority of Mawlawi al-Rashid'..

The next year the sultan went from Fās to Marrākeş where one of his nephews was endeavouring to set up as a pretender to the throne. During his sojourn in the southern capital, Mawlawi al-Rashid, not yet 42, died as a result of an accident on the 11th Dhu 'l-Hijja 1082 (April 9, 1672): the horse he was riding having reared, he fractured his skull against a branch of an orange-tree. He was buried at Marrākeş, but later his body was brought to Fās where he was interred in the chapel of the saint 'Alī Ibn Ḥirzīmūn (vizg. Sūdī Ḥirzām)." His brother, Mawlawi Ismaʿīl [q. v.] who succeeded him, was proclaimed sultan on the 15th Dhu 'l-Hijja 1082.

The brief political career of Mawlawi al-Rashid was, we have seen, particularly active and fruitful. The Muslim historians of Morocco never tire of praising this ruler whose memory is still particularly bright, especially in Fās. He was he who built in the town the "Madrasa of the Rope-makers" (Madrasat al-Sharrāfīn), the bridge of al-Rafīṣ, the ḥāsiba of the Ṭārāz (Casba of the Cherrada) and 2½ miles east of Fās, a bridge of nine arches over the Wādī Sabū (Sebou).

RASHID AL-DĪN SINĀN (or, as the Ismā'ilīs themselves usually call him, Sinān Rāshīd al-Dīn), the famous leader of the Syrian Ismā'ilīs in the second half of the 11th century, is better known to the world as Sīyīzhī dī-series, the "Old Man of the Mountain". His full name was Abū ʾl-Ḥasan Sinān b. Sulaimān b. Muhammad. He was born near Bayra, educated in Persia, and, in 558 (1163), was appointed by Imām Ḥasan of Alamūt as the head of the Syrian Ismā'ilī (Nīżārī) community. This post he occupied till his death at an advanced age in Ramādān 589 (Sept. 1193), at Mašrūf. He played a prominent part in the Syrian and Egyptian politics of his time, successfully defending his people from the continuous pressure of the orthodox Muḥammadan rulers, especially the famous Salādīn [q. v.], on the one hand, and against the Crusaders on the other. The fact that this small community still continues to exist (in the villages near Ḥamā, in spite of the persistently hostile attitude of its neighbours, must to a great extent be attributed to the solid foundations laid by him. References to him are to be found in the works of all historians who deal with the events of his period, but the most detailed account is given in the paper by Stanislav Gourayd, Un grand maître des Assassins, au temps de Saladin (J. A., 1877, p. 324–489). It gives the original Arabic text of the Fāsī, a genuine Ismā'ilī work probably by a contemporary of Sinān, containing the swahelī about him, i.e. various anecdotes based on the oral tradition of the sect. This text is accompanied by a French translation and an introduction containing a detailed review of the historical information about Sinān, and the Ismā'ilī sect in general, which, in the main, still preserves some value. The Fāsī appears to be now unknown to the Syrian Ismā'ilīs; they do not appear to have any reliable and genuine histories of their own community. The recently published al-Falak al-dawwār fi Samā' al-Asmā' al-ašrāfī, by an Ismā'ilī author, 'Abd Allāh b. al-Murtuḍā from Khaważī (Aleppo 1352 = 1933), shows no trace of such local tradition, and the account of Sinān given in it is entirely based on well-known general histories, such as those by Ibn al-Aţār, Abū 'l-Fādī, etc.

The stories connected with Sinān chiefly centre around his organisation of jādīdān, which he used as an instrument for removing his political opponents by assassination. Undoubtedly there is some grain of truth in these stories; but it is obvious that excited bazaar rumours greatly exaggerated them, wrongly attributing to him and his organisation many exploits for which they were not responsible. Many historians state that
he was regarded as the supreme and superhuman head of the sect. Unfortunately, he is never referred to in any available genuine works of the Persian Isma'is, and it is difficult to ascertain what was his real position in the sectarian hierarchy. Most probably he occupied the highest rank after the Imam, i.e. that of the kudghat, which, according to the reformed Naari doctrine, implied a considerable "dose" of the superhuman. In any case, there is no reason to think that he either claimed to be, or was regarded as an Imam, although, just as in the case of other eminent Isma'ilis, such as Nasir-i Khusraw and Hasan b. al-Sabbah, popular tradition furnished him with noble descent from ʿAli himself.

Bibliography: given in the article.

(W. Ivanow)

RASHID AL-DIN ṬABĪB, one of the greatest historians of Persia. Faqih Allah Rashid al-Din b. Imad al-Dawla Abu l-Khair was born in Hamadan about 1247. He began his career in the reign of the Mongol ruler Abaqa Khan (1265—1282) as a practising physician. But as in addition to a remarkable knowledge of medicine he was an exceedingly talented and farseeing statesman, he rose under Ghazan Khan (1295—1304) from his earlier position to the rank of a sandr (and also court astrologer) which was given him after the execution of Sa'dr-i Dihyan Sadr al-Din Za'djamia (May 4, 1298). In 1303 he accompanied his sovereign in this capacity on a campaign against Syria. Under Uljaitu (1304—1316) Rashid attained the zenith of his career. He used his fabulous income for a number of charitable buildings. For example in order to beautify the new capital of the Mongols in Persia, Sulṭānīya, he built a whole new suburb, called after him Rub-i Rashidiyah, which consisted of a mosque, a madrasa, a hospital and several thousand houses. At the same time he was working steadily on his history of the world, the first volume of which he presented to his sovereign on April 14, 1306. At this period there was no limit to his influence. He even succeeded in converting Uljaitu to the teaching of the Shāfs. Two eminentBaghdad scholars, Sihāb al-Din Sahrawardi and Djamal al-Din, who were accused of negotiating with Egypt and were expecting death, were rescued by him. In 1309 he resumed his building activity and erected a new suburb near Ghāzānīya, east of Tabriz, the water for which he provided by a great canal from the Sarawrūd. But his high position now procured this great man a number of enemies. In 1315 he experienced considerable unpleasantness through the shortage of money which prevented the soldiers being paid. After Uljaitu's death his enemies exerted every effort to destroy Rashid al-Din. In October 1317 he was dismissed from his high offices and the death of his patron Amir Sawīndjū (Jan. 1318) deprived him of his last support, until finally he was executed with his young son Khwadja Ibrāhim on a false charge of having poisoned his former master Uljaitu (July 18, 1318). His corpse was exposed to every contumely, his pride, the Rub-i Rashid, destroyed and plundered. His elder son Ghiyath al-Din, however, succeeded in retaining a high office even after his father's death, but in 1336 he also was sentenced to death. Even after death Rashid's body was not allowed to rest in its grave, for eighty years later Tumb's son, the mad Murān-
 Already in his last years at school he showed a fondness for art and literature and therefore decided to become a writer, and to this profession, or, as he himself calls it: the Sublime Porte Road (Bâb-i 'Alil Dâdâst), he has remained faithful, untroubled by all the political changes that have taken place. Like many other writers he began as a journalist, and almost all the more important Turkish papers received contributions from his pen, such as the Lider-i Havâdî, Tercânânâ-i Hâkîat, Iskâm, Sabâb, Târik, Şâde, Mâlîmât, Taqrî-i Afkar and Hâkî, and periodicals like Zâvuri-i Funun and Râsimî Gazete. He afterwards collected his numerous articles and essays, for example in the two volumes "Articles and entertaining Sketches" (Maqâllât va-Imâmât, 1325) and in the four volumes "Life of a man of Letters” (Omri-Edebi, 1315—1318). The latter is not an account of his life but reflects his spiritual development and his feelings and emotions reflected in publications of different years.

Ahmad Râsim's output became in time very extensive; in all there are said to be over 100 works of larger or smaller size from his pen. Nevertheless he was not a polygraph in the bad sense of the word, but before he dealt with a subject he always first studied it thoroughly and then wrote on it seriously, sometimes also in the lightly humorous fashion of which he is a master, or again in a pleasing conversational way, but always with artistic feeling and in a particular style which is his own. He always well knew the taste of his readers and he had great success with them. His style was a new one and independent of existing schools and coteries; he created a school himself and his influence must long and strongly be felt in Turkish literature.

His literary work covers the fields of the novel, long short story and tale, e.g. his early novels, "Heart's Inclination" (Mâlî-Dîl, 1890) and "Life's Experiences" (Taqûârîb-i Hayât, 1891); short analysis of both in Horn, Geschichte der türkischen Moderne, p. 46 sq.), also his patriotic novel "The Difficulties of Life" (Maqâllât-i Hayât, 1308), the stories "Inexperienced Love" (Telî-yi ibisâz, 1310), "My School-friend" (Mekteb-i Arzû), 1311), a little later "The Unfortunate Man" (Nâkim, 1315) and another patriotic novel "A Soldier's Son" (Aster Özbüli, 1315) and somewhat more lyrical "The Book of Grief" (Kifâye-i Şâhâm, 1315) and "Nightingale" (Andûlîb, in verse). At the same time he had from the first a preference for history. He does not, of course, in any way claim to further this study of history by independent research but rather sees it as his duty to arouse an interest in history among his countrymen by presenting it in popular form, and from this point of view his historical writings may be regarded as carefully prepared compilations. In his early period he wrote a history of ancient Rome (Eski Româli, 1304), a short history of civilisation (Ta'rikh-i mukhtasar-i Beher, 1304), on the progress of knowledge and culture (Tûrekkiyet-i 'ilséy ve-nesâneti, 1304), later essays on similar subjects entitled "History and Author” (Ta'rikh ve-Muâharrî, 1320 = 1911), a history of Turkey from Selim III to Murât V, entitled Istîhâddâm hâkîm-i milâyâtî in two volumes, 1341—1342, and a meritorious general survey of the history of Turkey, "Othâmînî Ta'rikhî in 4 volumes, 1326—1330. A valuable supplement to these historical works is
formed by the four volumes of "City Letters" (Şehir Mehkâbi, 1328–1329), in all 216 epistles, which we have an unsurpassed description of the city life in its religious aspect, written moreover in a very stimulating and vivid, sometimes bantering, fashion which makes it one of his best works. In "İslâm's Pages of Honour" (Mənâbi-i İslâm, 1325), the Muslim festivals, mosques and other religious matters are dealt with.

It seems to be only recently that our author has turned to the history of literature, e.g. in his book on Şıhâsî [q. v.], which is intended to be an introduction to the history of the Turkish Moderns (Məfâ'it Ta'Rîkhiye Madâhil, ilk büyümük Muhammîr-kerden Şıhâsî, 1927), while his personal recollections of Turkish writers are collected in another book (Məfâ'it al-Qâbir-i Lokma, Muhammîr, Şıhâsî, Ašt'ar, 1924), also recollections of his own school days, and the old system of education in general, in his "Bastînda" (Falâka, 1927).

Ağhâd Rasim was also prolific as a writer of schoolbooks on grammar, rhetoric, history etc. He also wrote a letter-writer (İlâhî bül Kilise-i Meşkûlî yahut mukemmêm Münch'ûlt, 5th impression, 1318). In all his works are to be found translations, and a large collection from his early period is called "Selection from Western Literature" (Adâbiyyat-i qâbir-i Vedîr bir Nâbûsû, 1887).

For this great literary activity Ağhâd Rasim required considerable freedom, such as did not exist under Abd al-Hamid, and such as he could hardly have had as at all a state official. He was however twice a member of a commission of the Ministry of Education, Conseil de l'Instruction Publique (Endüstrîn-i Tefîstî ve-Müdîyanâ), but only for a very short time. He showed his interest in religious matters in 1924, when after the abolition of the caliphate he wrote an article in Wâlî on March 4, 1924 on the relics (amânûn, muhâkâtây) of the Prophet, cloak (gâhrû), banner (înci), praying-carpet (ndsîgâda) etc., which also appeared in Cairo and Damascus in Arabic. He proposed to make these relics accessible to the public in a Museum (cf. Nâlînî, in Ö.M., iv. 1924, p. 220 sq.).

In recent years Ağhâd Rasim has so far been politically active as to be a deputy for Stambul along with men like Abd al-Hâkîm in his "Sublime" (cf. Ö.M., vı. 1927, p. 416 and xi., 1931, p. 227 and Mehemd Zekû, Encyclopédie biographique de Turquie, i., 1928, p. 23 and ii., 1929, p. 88).

RASSIDS, name of a dynasty. Zaidi historians make no distinction between the Zaidi imâms in Dailâm [q. v.] and those in the Yemen [q. v.]; this article deals only with the Yemen. For some periods the Zaidi historians are detailed, for others there are only casual references in writers whose main interest was elsewhere, so details are often uncertain and it is doubtful if some rulers claimed to be imâms. The name is taken from a property near Mecca, al-Rass by name, which belonged to the grandfather of the first imâm, al-Kâsim al-Rassi, who was a descendant of Hasan, the son of 'Ali b. Abî Tâlib. In 280 (893) Yahûdî, named al-Hâdî ila 'l-Hâkî, entered the Yemen from the Hijâz and advanced nearly to Şan'a'(q. v.) but, failing to conquer the country, had to retreat. Later he was called back and in 284 he occupied Şâ'da [q. v.] and conquered Nadjîrân [q. v.] though his hold on these districts was not secure and there was constant fighting. He took Şan'a'(q. v.) more than once and his son was again held captive there in 290. Then the Karmaţians [q. v.] appeared in the Yemen, took Şan'a' in 294 and held it for three years, besides taking many other towns. The imâm helped to drive them out of Şan'a' but could not hold the town for himself. He died in 298 (910—911). During his lifetime 'Abbasâd governors and troops were in the Yemen. Yahûdî fought seventy battles with the Karmaţians and was so strong that he could obliterate the stamp on a coin with his fingers. He was a Însâfî in law and wanted to set up an Islamic state where women wore the veil and soldiers divided booty according to the precepts of the Kurâân. He tried to make the 'Âjîmîs [q. v.] of Nadjîrân sell any land they had bought during Islam; he had to be content with imposing a tax of one ninth of the produce.

Homage was at once paid to his son Muhammad who kept Şâ'da as his capital and ruled Nadjîrân, Hamdân [q. v.], and Kâhwâlân. He died in 301 and was followed by his brother Ağhâd who was always fighting various chiefs and the Karmaţians. In 322 (934) he was defeated by the Banût Ya'fur [q. v.] and died, Şâ'da being occupied by the victors for four months. A son îsân claimed to be imâm but homage was paid to another son al-Kâsim al-Mu'khrîr. Discord ensued and at last both brothers were deposed; still al-âzîm could capture Şan'a' in 345 (956), though he was murdered before the year. Hasan had died earlier. In the troubles that followed Yûsûf al-Dâ'î was lord of Şan'a' until he was driven out by a new-comer from the north. In 388 (998) there was propaganda in the Yemen for al-Kâsim al-Mansûr, then delegates met him in Hîsâ [q. v.] and, helped by the tribe of Kâhthâm, he established himself in Şâ'da and took Şan'a' while prayers were said in his name in Kafrân and Mikhâf Dâ'fâr. He died in 393 and his son ruled from Alhân to Şâ'da and Şan'a' till he was killed in 404. Some said that he was not dead but was the mukhîd [q. v.]; another report says that he made this claim for himself. Up to this point one may perhaps speak of a dynasty of imâms; afterwards the name does not apply. The army consisted of about 1,000 horse and 3,000 foot. The next imâm came from the Hijâz and had some success; before he died another outsider, Abu 'l-Fath, came from Dâîlâm in 430 (1038—1039), captured Şâ'da and other places, and was killed fighting the Sulâhîd [q. v.] sultan. It is said that Abû Tâlib Yahûdî (d. 520 = 1126), the imâm in Dâîlâm, was recognised in north Yemen where he appointed a governor, Ağhâd b. Sulâimân was proclaimed in 532 and ruled
The text you provided includes a historical account of the Tahirids, a dynasty that ruled in the region of Yemen. The Tahirids were opposed by the initial imams, who were followed by Malik ibn Anas, a key figure in Islamic jurisprudence. The text also mentions Malik ibn Anas's death and his influence on future generations.

The text further describes the conflict between the Tahirids and the Tahirid dynasty, which led to the deposition of Malik ibn Anas. The Tahirids were eventually defeated by the Yaman, and their rule came to an end.

Bibliography: The text concludes with a bibliography, listing works such as "Kur'an," "Historia Yemanae sub Hassan Pasha," and "Admiralty Handbook of Arabia."
RASUL — RASULIDS

Old Testament (Exodus, iii. 13 sq.; iv. 13; Isaiah, vi. 8; Jeremiah, i. 7). The term rasul Allāh is used in its Syriac form (dzēdēk dalēka) passim in the apocryphal Acts of St. Thomas.

Post-Kurānīc teaching has increased the number of apostles to 313 or 315 without giving the names of all (Ibn Saʻd, ed. Sachau, i. 10; Fikih Akhbar III, art. 22; Reland, De religione mohammedica, sec. ed., Utrecht 1717, p. 40).

The doctrine that they were free from mortal sin is part of the faith [see ‘tima]. For the rest, the difference between rasūl and nābi — apart from the considerable difference in point of numbers — seems in later literature to disappear in the general teaching about the prophets. Thus, in the ‘Ajīda of Abū Ḥāfiz ʿUmar al-Nasafi the two categories are treated together and the author makes no difference between rasūl and nābi. Similarly al-Idji deals with prophets in general, so far as can be seen, including in them the rasūls. If one difference can be pointed out, it is that the rasūl, in contrast to the prophet, is a law-giver and provided with a book (commentary on the Fikih Akhbar III by Abu al-Munthahā, Ḥaḍārahūb 1321, p. 4). According to the catechism published by Reland (p. 40–44), the rasūl-lawgivers were ʿĀdām, Nūḥ, Ibrāhīm, Mūsā, ʿĪsā and Mūḥammad.

In the catechism of Abū Ḥāfiz ʿUmar al-Nasafi, the sending of the apostles (risāla) is called an act of wisdom on the part of God. Al-Taftāzānī’s commentary calls it waqāya, not in the sense of an obligation resting upon God but as a consequence arising from his wisdom. This semi-rationalist point of view is not however shared by all the scholars:— according to e.g. al-Sanāʾī (cf. his ʿUmm al-Ba-rādīn), it is wāsīṭ in itself but belief in it is obligatory.

RASULIDS, a name of a dynasty. The family of Rasul came to the Yaman [q. v.] with Tārānsāḥ, the Ayīyībīd [q. v.] conqueror. Rasul was probably a Turkmen though descent from the royal house of Ghassān [q. v.] was claimed for him; he got his name because a caliph employed him as ambassador. ʿAlī b. Rasul and his three sons became important. The last Ayīyībīd Masʿūd put two of the sons in prison in 624 (1227) but the third Nūr al-Dīn ʿUmar, who had already been governor of Mecca, was made atābek [q. v.] and, on the departure of Masʿūd, governor of the Yaman and on his way to Egypt so ʿUmar prepared to make himself independent. Zābīd [q. v.] was his capital and from 627 on he captured many places in the hills, such as Saḥā [q. v.], Taʿīz [q. v.], and Kawkabān [q. v.]. After two temporary successes he took Mekka in 638 and held it for fifteen years. In 628 he made peace with the Zaidī sharifs and there was little fighting till the imām Ahmad b. Husain declared himself in Thulā [q. v.] in 646 (1248–1249). ʿUmar may have declared himself independent in 628 but he was not recognised by the caliph till 632. In 645 his nephew, Asad al-Din Mūḥammad, quarreled with his uncle and fled to Dhamar [q. v.]. He allied himself with the imām but was soon reconciled to his uncle and fought against the sharifs, the descendants of the imām ʿAbd Allāh b. Hamna. ʿUmar was murdered in 647 by mamlūks in al-Djanad. His kingdom stretched from Mecca to Ḥadramawt though many places in the hills were independent. He was a great builder of schools and mosques and a patron of letters like most of his family. His reign is an epitome of the dynasty; family quarrels, wars with the imām and the sharifs, who were often at variance with the imām.

The murderers won over the rest of the mamlūks, proclaimed a nephew of the dead man, and marched on Zābīd. Palace intrigues had banished al-Musaffa Yūsuf, the sultan’s eldest son, to Mahdjam. With 150 horse he too marched on Zābīd where the inspired resistance to the pretender. He gathered troops as he advanced and the mamlūks surrendered to him the murderers and the pretender. He had to reconquer the country, for his two brothers each hoped to be sultan, Asad al-Dīn Mūḥammad was in a strong position at Ṣaḥā [q. v.], and the imām, Ahmad b. Husain was active; even the caliph was disturbed at his power. At the end of three years Ṣaḥā, Taʾizz, and the strong fortress of Dumulʿa had been retaken and peace made with the imām, who broke it by joining Asad al-Dīn; though the latter soon returned to his duty. In 658 he joined many of his kin in prison, staying there till his death. Ṣaḥā was taken in 652 but could not be held. The imām Ahmad had been appointed with the approval of the family of his predecessor but dissensions arose so the sharifs with the help of the sultan fought and killed him in 656. One imām was captured in 658, another was taken and blinded in 660, and a third was proclaimed in 670. The sharifs were tribal or territorial chiefs, sometimes the enemies and sometimes the allies of the sultan. In 674 rebel mamlūks in Ṣaḥā [q. v.] joined the imām and sharifs but the combination was signally defeated. Zafār [q. v.] in Ḥadramawt was taken in 678 and an embassy came from China. Yūsuf was a strong and successful ruler, and al-Kharradī calls him caliph at the end of his reign. He died in 694 (1294–1295).

His son and successor reigned only three years and encouraged the cultivation of palms round Zābīd where others had tried to introduce corn. His brother, the governor of Shīb [q. v.], took ʿAden [q. v.] and tried to make himself sultan but was defeated and imprisoned. From prison he was called to rule as al-Muʿayyad Dāwūd in 696. His reign was a succession of small fights both in the hills and the plains, the same places and opponents recurring again and again. In 697 (1247–1248) he took two castles from the Karmātians [q. v.]. In 709 the Kurds in Dhamar rebelled, joined the imām and attacked Ṣaḥā and later some of the Kurds killed some of the Ghuzz. In 712 peace was made with the imām Mūḥammad b. Mūṣīr for ten years at a price of 5,000 dinārs yearly. Five years later the sultan broke the treaty. Warfare was savage and usually accompanied by the destruction of houses and trees; the heads of the slain were cut off. In 718 the army was reorganised on the Egyptian model. Towards the
end of the reign governors were changed frequently, perhaps a sign of weakness. It was easy for a foreigner to rise to high rank. More than once the same man was chief minister and chief kadi. In 721 a son, al-Muqābīlī ʿAbī, succeeded but he was soon in prison where he stayed four months only till he was set free by his friends and the usurper took his place. In 724 he was a sultan without a kingdom; ʿAden was lost, one cousin al-Zāhir was independent for ten years, other relatives set up for themselves in Bait al-Fakhr [q.v.], mamluks attacked Taʿizz and took Zabid; it was not till they had been in rebellion some months that their pay was stopped. Sharifs defeated the mamluks; troops came from Egypt but did so much damage that all were glad when they soon left. The imām's death in 728 removed a dangerous enemy, and the sultan did establish some sort of order. Sons and other relatives revolted as did the mamluks because their pay was in arrears. The sultan crushed the Maʿṣūba, a tribe of the plains or foothills, and made a woman chief of what was left. In 736 (1335—1336) the peasants fled from the district of Zabid because of a combination of taxes and a new coinage. An officer touring to collect taxes used his Ghuzz escort to put to death an insubordinate chief's son. The sultan went on pilgrimage in 751 and was carried off to Egypt, being allowed to come back a year later. From this time on the Arabs of the plain gave trouble. Normally the tribes kept each other in check but the sultan had so weakened one side that now the Maʿṣūba could raid at will, they even cut communications between Zabid and the north. The government policy was to deprive them of their horses. A tyrannical governor was killed and the murderer was not punished. Mahdī was captured by a sharif, a rebel governor defied the sultan for two years, and three sons of the sultan rebelled. Al-Afaṣṣ al-ʿAbbās succeeded in 754. One of his rebel brothers joined the imām, attacked Ḥarad, and later Shīr Zabīd was taken by the Arabs, other places by sharifs, the imām Saḥāb al-Dīn raided as far as Zabīd, there was fighting round Dhamār, and the sultan died in 778. Al-Afṣār ʿIsāmīl was chosen as successor. The mamluks mutinied, a sharif was lord of Sanʿa, and the imām was actively hostile till his death in 793. His son ʿAbī was driven out of Sanʿa by a rival and made Dhamār his capital. The imāmāte seems to have been hereditary in one family for at least five generations. In 798 the imām ʿAbī sent presents to the sultan. It is clear that much of the highlands was lost and there was continual trouble in the plains. Yet the sultan was still powerful; he kept a firm hand over his officers and received letters, presents, and embassies from India and Abyssinia. He died in 803 and is called a good ruler. The next sultan, al-Nāṣir Ahmad, worthily upheld the state. In the north he made Ḥaṭā [q.v.] accept him as overlord, in the south the imām who had attacked his vassals, the Banū Tāhir, and in Wusāḥ he captured forty castles. Rich gifts came to him from Mecca and China. A brother rebelled and was blinded. At his death in 827 the state rapidly went to pieces. A series of short reigns with many rebellions of the mamluks ushered in the end. The land was ravaged by plague, the imām died of it in 840 leaving his authority to a daughter. In the same year died another imām, Almād b. Yahiyya, who was a prolific writer. Civil war was complicated by attacks by the Arabs, who sacked Zabīd in 846. A new imām, al-Nāṣir Muhammad, strengthened his position by marrying a granddaughter of ʿAlī of Ṣaʿd. The Banū Tāhir joined in the fighting and took Ṭabīṣ and ʿAden, till in 858 (1454) the last Rasūlīd abdicated before them and went into exile at Mecca.

Most of the sultans were builders of mosques and madrasas, some were writers. In the byeday of the dynasty the sultan regularly spent a holiday in the palm groves of Zabīd (these were called sabūr) and at the sea. The land was governed by officials or by vassal chiefs who paid tribute. In all big towns were two officers, one called wālī or amīr and another called nāṣir, zimām, or mūsāhadd. High officers regularly went on tour to collect the taxes. The army consisted of the cavalry of the state, mamluks both Kurds and Ghuzz, and levies. A thousand horse and ten thousand foot made a big army. A man's horses were sometimes slain at his funeral.

Rūṭūb (A., plur. rawṭūb), a word meaning what is fixed and hence applied to certain non-obligatory šalāt or certain litanies. The term is not found in the Kurʾān nor as a technical term in Ḥadīth. On the first meaning see the article NAFTILA, p. 826. As to the second, it is applied to the dhikr which one recites alone, as well as to those which are recited in groups. We owe to M. Snouck Hurgronje a detailed description of the rawṭūb practised in Atchin.

(AR. WENSNICK)

Rāṭl, unit of weight dating from pre-Islamic times, varying with countries and periods. Ṭarīqī (p. 3, 5) says that, except for the mithkāl, which had remained uniform, the pre-Islamic weights were double the Islamic ones, and that the ratio contained 12 ṣūḥā or 144 dirhems. In medieval Damascus it equalled 600 dirhems and in Aleppo 720 dirhems. In modern Egypt it is uniform = 1/100th ṣaḥūr = 12 ṣūḥā = 144 dirhems = 0.449 kg. = 0.99 lb. avdp. 2.75 raṭa = 1 օkք = 1.248 kg. = 2 lb. 11 oz.

(R. S. ATIYAH)

Rāwalpindi, a division, district, tahsil, and town in the north-west of the Punjab. The division has an area of 21,347 square miles and a population of 3,914,849 of whom 3,362,260 are Muhammadans. The district, which is divided for administrative purposes into four
RAWALPINDI — RAWANDIZ RUIYNDIZ

tahí, has an area of 2,050 square miles, with a population of 634,357 (524,965 Muḥammadans). The tahí covers an area of 770 square miles and supports a population of 289,073 (212,256 Muḥammadans). The town and cantonment, situated on the north bank of the river Lih, have a population of 119,284, about half of whom are Muḥammadans (1931 Census Report).

Since Rawalpindi lies in the path of invaders from the north-west much of its history resembles that of the Pandž [q. v.]. The district formed part of Gandhāra and was included in the Persian Empire of the Achaemenids. About ten miles to the north-west of the town lie the ruins of the ancient city of Takshaqāla (Taxila) which was an important seat of learning in the fourth century B.C. The Muslim invaders experienced much trouble from the turbulent Gakkhar tribes of this area who are still the most important tribe socially in the district. In the days of Akbar [q. v.] the territories included in the modern district of Rawalpindi formed part of the sarkar of Sind Sūgar Dīnāb in the rūba of Lahore (A¬-i Akhbar, trans. Jarrett, ii. 324). To-day Rawalpindi is one of the most important military stations in northern India.

Marshall, Archaeological Discoveries at Taxila, 1913; do., Guide to Taxila, 1918; Rawalpindi District Gazetteer, 1907; ii. A. Rose, A Glossary of the Tribes and Castes of the Punjab and North-West Frontier Province, 1919, s. v. Gakkhrs. (C. COLLIN DAVIES)

RAWANDIZ RUIYNDIZ (the first word is composed of two elements: rawánt, of uncertain etymology and dis meaning fortress; the second word of this word, sahá, capital of the kingdom of Rawánt, in the wilayet of Mawsil on the caisran route, halfway between this town and that of Sādūlālūk [q. v.], including the following maháls (the names and figures given in brackets are those of the corresponding Kurd tribe and the number of the hearses: n. nomad; s. settled): Ḩalwán (Zerāš, s. 500); Ḥarir (Helān, n., 800; Māsān, n., 2,000; Māsām, s., 500); Wellish (Bālek, s., 2,000); Dergel (Dergelli, s., 700); Deš-t-i Diyan (Bāleikyān, s., 800); Piresniyān (Pīrān, s., 1,000); Rawendik (Ravendik, s., 600); Deš-t-i Baragir (Barādsot, s., 1,000); Beresiyān and Mergesia (Sirwān, s., 1,200). The Sidan and the Sertiž, two subdivisions of the powerful tribe of the Hurka, number about 6,000 hearths and have their winter-quarters between Rawándiz Ruiyndiz and Arbil (Hawler in Kurdish) while the Mīndān, the third section of this tribe, serve the winter around Akra. The summer pastures of all three are in Persia at Mergawar. Under the Kurd feudal system the district of Rawándiz Ruiyndiz contained the following subdivisions: Ḥevdíyan, Sheteneh, Dūlemeri, Sidekēn, Khaktīr, Piresni, Deš-t-i Sīrān, Bāsīt, Rawándiz, Akīlan, Bālekān. After the League of Nations (Dec. 1925) had given Mawsil to the Iraq, Rawándiz Ruiyndiz became definitely a part of the mountainous Kurdistan zone running along the Persian frontier which was given the name of Southern Kurdistan at the establishment of the British mandate. The figures given for the population here are only approximate, the tribes having in some cases been decimated by war and influenza in 1918—1919. According to the census of 1935 the town of Rawándiz Ruiyndiz had 2,176 inhabitants and the sahá 38,342.

Topography. The district of Rawándiz Ruiyndiz, which roughly speaking lies on the other side of the bend made by the Great Zāb when it leaves the mountainous part of its course (running westwards to the Tigris), consists of parallel valleys and chains which rise gradually as they approach the Persian frontier and which have a general orientation from N.W. to S.E. The average height may be put at over 1,500 feet. The two principal watercourses of the region, the Rūbar Rawándiz and Rūbarı Rūkūk, left bank tributaries of the Great Zāb, have their sources on the Persian frontier. The roads are naturally more practicable in the direction N.W. to S.E. except the passages in the vicinity of the Great Zāb with its deep gorges. The Great Zāb is 500 feet above the level of the sea. Rawándiz Ruiyndiz, at the present day an insignificant little town, owes its importance mainly to its position with relation to the roads of Kurdistan.

Road system. It would be in a way wrong to mention, in the matter of high roads which from all time have connected the Iranian plateau with the adjoining countries in the west, only 1. the silk route in the north (Justi, Geschichte Iranis, p. 476) going from Trebizond via Khoi to Lhithinos Pygros (the modern Taş Kurgan), and 2. the southern road, that from the Median gate or the defile of the Gyndes (Dyāla). Besides these two main arteries of traffic, axial to the route always taken by commercial and cultural relations and in time of war, and lying between them is the road which went from Niniveh to Media and forked twice at Arbil and Rawándiz. At Arbil the road entered Persia by the pass of Gomeshān, Khoi Sandjāk, Rānān, Seredjāt and thence by the pass of Kurtek at Sādūlālūk [q. v.] to Kūrān. The Achaemenid royal road also passed this way (Justi, op. cit., p. 475). It was, we believe, the southern section, running towards the land of Elam, while, according to Th. Reinauch (Un pays oublié, les Mattiennes, in Rev. des Et. Gr., vi., 1894), the main highway from Sardeš ran through modern Armenia and central Kurdistan, although we cannot say exactly on which side of the Zagros it lay. Among the Arab geographers, Yākūt alone gives a few notes on the road through Rawándiz Ruiyndiz (ed. Wusentfeld, p. 441). The road Arbil-Margāh was known to the Mongols after their occupation of Arbil (1298). The itinerary by the pass of Garū Shinka (Zinwe-Shaikh) has been described by Perkins (J. A. O. S., ii., 1853, p. 83 sq.) and Thielmann (Streifzüge im Kaukasus, Leipzig 1875, p. 321 sq.). The latter (cf. Yākūt) mentions as stages, starting from the pass: Rāyāt-Dargula (ruin of a fortress); Rawándiz; Kāt-Atmān (Kānī Wermān 9); Derre Brusht (ford on the Great Zāb, between Girدمامish and Kāzān); Tez-Kherāb; Mawsil, in all seven stages from Sādūlālūk. According to information received from Russian soldiers who took part in the expedition against Rawándiz Ruiyndiz (summer of 1916), the pass of Garū Shinka (6,000 feet) is a kind of promontory with valleys on either side starting from the ruins of Khāneh (Persian Lāhishān) and joining on the other side in Turkish territory. There is a siyārāt there under the Nāsibhānī Shāhīd Dīmašl to the influence of which is to be attributed the parti-
cipation of the neighbouring Kurdish tribes in the villages of Badflan and Bapfštán (should we not recognise in the these ba prefixes the remains of the Semitic beth? [cf. e.g. BÁDAMÁJ]). Becoming rich — some say by having found a treasure —, the ancestor established himself at Badflan, acquired houses and fields and became mayor there. His heirs in time became agá, then beg. Arrogant and rapacious, they had at the same time the reputation of being patrons of learning (čilm u-mudhráfát). At the beginning of the xiiith century, one of them, Menmed Bék the Blind, established at Rawándiz, was honoured by Sulán Mqdíd who gave him the title of pásá, whence his sobriquet of Pásá-i Kárá. He had some claims on Mergawar and Šmíň in which he met with the resistance of Āziz Bék of Letán near Nálos. With the help of guns founded for him at Rawándiz by a certain húsú (= utsú) Réggb, he broke this resistance. Since then the tribe of Letán has not had any independent tribal existence. Its remnants were absorbed into the neighbouring tribes of Šamdıán. The Blind Pásá next took possession of Arbl Kerkuk, Suláimáníye, Šamdıán, Ākrá, Amádiya. The resistance he encountered in the tribe of Žbári and notably that of its hero Āzó of the village of Sáwti has become legendary. Taken prisoner, Āzó is said to have replied to the offer to take him into his service by the Pásá, who had no son, that he would make him one. The Pásá built several fortified towers the ruins of which can still be seen (Sidákán; among the Šjirváníaŋ; Ākrá, Rawándiz, Dárz). He also repaired the road in the pass of Rawándiz “with nails of iron”. He built many schools. In his time plunder, robbery and rapine disappeared. “The grapes hung above the roads till autumn and no one dared to touch them”. Justice was administered by ʿulámá. Finally in 1836 the Pásá was defeated by the Turks after a sieze of four months and died soon afterwards in Constantinople, or others say in Cyprus. Of the descendants of the Pásá his grandson Saʿíd Bék was kálımμákám of Rawándiz. He was murdered by his servants. Yúsuf Bég, son of Muṣṭáfá Bég at Badflan, ağa of the tribe of Fíresínán, was of the same line and in constant rivalry with Saʿíd Bég of Rawándiz. The memory of the Pásá seems to have been kept alive in the tribe of Múkri where F. de Morgan records a curious game of this name, in which one of the players pretends to be the “Blind Pašá”. A Kurdish work (Mírání Sóran by Saïyíd Husáin Ḥusní Múktrání, Rawándiz 1935) gives a full account of the story of the Pašá, his struggle with the Turks, his relations with Persia and with Mehméd ʿAli Pásá of Egypt, giving as its principal source, a Kurkish MS. (Melikṣá by Mirá Múhammadí Weḵáyé Nígár). The Pašá struck coins in his own name: darakā fi Raويةd z al-Amr al-Mansúr Muḥammad Bég. — During the Great War the Rawándiz road was used in the winter of 1914—1915 by Hálil Bey’s troops advancing on Urmía (contrary to H. Grothe, Die Türken und ihre Gegner, Frankfurt a. M. 1915) and later in July 1916 by the Russian Ribálenko, a column which Major K. MASON (Central Kurdistan, in J. R. G. S., 1919) wrongly accuses of massacring 5,000 Kurds, women, children and old men at Rawándiz. After the armistice and during the period till Dec. 1925, when the League of Nations made its decision, Rawándiz was occasionally the head-
quarters of an English political officer; sometimes it slipped from the English and was a centre of concentration for hostile Kurdish elements. Thus in Sept. 1922 (cf. B. Nikitine, L'Iraq économique, in Rev. des Sc. Pol., July–Sept. 1923) the English were forced to withdraw their feeble forces from the mountains and to occupy the line Arbil–Kirkük–Kifri. A Kurdish government was then proclaimed in Sulaimaniyya with a "Pādišāh of Kurdistān", a role assumed by a certain Šāhīk Mahmūd, of a noble Kurd family. Driven out by the English in 1919 after the rising, which he had led, he was pardoned in 1922 and his followers proclaimed him Pādišāh. Threatened by English aeroplanes and without resources, Šāhīk Mahmūd retired to Rawandž and to the Turkish emissaries. Finally in April 1923, Rūyندž was taken by the Anatólian Mesopotamian troops composed almost exclusively of Assyrio-Chaldean highlanders. Two months later in the name of H. M. King Faisal a more tractable Kurdish administration was installed there as throughout southern Kurdistān (cf. above). The first governor thus appointed was a certain Saiyid Ṭa of the family of Šādāte Nehrt (cf. Shāmīnān). A brief history of Rūyندž since the war is given in Mirānd Şāvān. At the present moment the Persian government is considering a system of roads which may give Rawandž a certain importance. It is a question of a carriage road connecting Taurus to Mawṣil via Rawandž. The Teherān government is anxious to have an outlet without the necessity of going through Trauscaucasia.

Humān Geography. The route through Rawandž as well as the roads leading from it have never played a part comparable to that of the two historic arteries of traffic. This is explained by the lack of security, which is the first condition for the making of a trade route. Now this region has always lain between two hostile states: Assiyria and Media, Muṣṣār and Zamau, Turkey and Persia, Turkey and the ʿIrāq. The configuration of the country, the mode of life of its people contribute rather to break them up than bind them together. The road, the means of communication, has here the character of a weapon or line of defence except for brief periods of peace.

Language. Kurdish is the language spoken in this region, except by the town dwellers (Arbil, Alṭūn Kepru, Kirkuk etc.) of Turkish origin. With the establishment of the Kirmānic administration and the opening of Kurdish schools following the decisions of the League of Nations, Kurdish will probably develop still more and we may look for the creation of a Kurdish intellectual centre. According to O. Mann (Die Mundart der Māhr Kurden, ii. 205), the dialect of Rawandž is very like that of Shāmīnān, but E. B. Soane does not share this opinion (Kurdish Grammar, London 1913). F. Jardine's manual, Bahdānīn Kurmany, a grammar of the Kurmanji of the Kurds of Māṣil division and surrounding districts of Kurdistān, London 1922, is more particularly devoted to this dialect.

Cartography. The Government of India Survey is preparing a revision of the maps of this region. Until their results are published as well as those being prepared for other reasons by the Turkish Petroleum Co., there is accessible the excellent geographical material in the Report presented in 1925 to the League of Nations by the Commission of Enqvary whose task it was to collect material of an ethnographic and economic nature regarding the wilāyat of Mawṣil (League of Nations, Question of the Frontier between Turkey and ʿIrāq, Report submitted by the Commission instituted by the Council Resolution of September 30, 1924 [C. 400 M. 147, 1925, viii]).

Kurdistān, in Z.A., xv., 1900 (p. 267, 382), on the ancient and Sāsānid periods; Hammer, Iḥānān (li., p. 125 and 337), on the Mongol period. The Sherēf Namek, St. Petersburg 1860 (i., introd.) mentions the castle of Roukh (read Rawyem).

AL-RAWDA. One of the series of large islands in the bed of the Nile before it divides into the Danialita and Rosetta branches. Situated near Old Cairo and extending to ʿAṣr al-ʿĀmī, it is separated from the right bank by a narrow canal known as al-Khalīḍīj, while the river runs to full width on the other side between the Island and Giza (Dīzā).

In early medieval times, it was used for three purposes: 1. as a convenient site for the Nilometer [cf. Mīḵāyās] on the S. E. side, rebuilt in the reign of al-Mustāʿīn (862–886); 2. as a dockyard for the construction of the fleet (Masʿūdī calls it "the island of shipbuilders") until the reign of the first Kāhshīdī who transferred the docks to the Mīṣr bank of the Nile further north in the direction of the present port of Būlāq, which developed at a still later date; and 3. as a naturally fortified resort in case of danger on the mainland, by destroying the customary bridge of boats which connected it with the fort of Babylon. Mūḵawaks did so when he wished to preserve his freedom in negotiating with the Arabs. Realizing this, Ibn Ṭūlūn built a fort on the Island (c. 877) and al-Sāḥīb Ayyūb built another where his body was concealed after his death by his wife Shādjar al-Durr [q. v.] until the defeat of the French at Manṣūra (1249). As a fortification, al-Rawda reached its highwater-mark under the Bahri Mamlūks who returned to it after the death of al-Sāḥīb Ayyūb and, entrenched behind the water of the Nile, ruled Egypt for nearly a century and a half. They further strengthened the defence of the Island by building walls and towers along its shores. In earlier times it was occasionally used as a pleasure resort where spacious gardens were planted and magnificent palaces erected, such as the Rawdādī built c. 1255 by the Caliph al-ʿĀmīr for his Benguin mistress. During the Bahri Mamlūk period, noble buildings increased in number to house the rulers of Egypt and a mosque and a madrasa (whose remains are still to be seen) were established for the use of the inhabitants.

During the Dārūji Mamlūk period, Mīṣr and the quarters outlying the Citadel were better favoured, though at the time of the Ottoman conquest Selim I found in the Island a safer residence. When Egypt became an Ottoman province, Mīṣr and the Citadel became the seat of the Turkish governor, while the Mamlūk forces took to the Dīzā side of the River. As a result, al-Rawda was deserted, its fortifications ruined, and it furnished robbers and highwaymen with refuge.

The Island did not again attract the rulers of Egypt until the time of Muḥammad Ṭallī, whose
son 'Ibrahīm Pāsha ordered large gardens to be planted there. At present it has become an Egyptian residential quarter connected with Cairo by two bridges and with Djeza by a third. The facilities of modern means of communication have brought it within easy reach of the centre of the capital. The construction of a new large hospital is planned as a substitute for the antiquated Kašr al-Āzīn on the northern extremity of the Island, where

Bibliography: See Bibliographies of articles on CAIRO and MIKYĀS. An elaborate account of the Island and especially the Miḥrāṣ is to be found in ʿAli Pāsha Mubarrak: al-Ḳhitat al-Tawfiqīyā, 20 vols., Cairo 1906, xxvi. 2–111; Ibn Duʾnīkār, Description de l’Égypte, ed. Pollers, Cairo 1893, iv. 109–120. (A. ĀTĪYA)

RAY (A.), opinion. As a technical term denoting the purely intellectual function it is used in the system of Islam in opposition to such terms as ʿilm, sunna, Kīthār Allāh, ʿinān, and hadīth. See the art. Fiqh.

RAWSHANIYA, Afghan sect founded by Bāyazīd b. ʿAbd Allāh, who took the title Pir-i Rawshāni: called by their enemies Tārīkhān.

1. Life of the Founder. Bāyazīd was born at Dūjjilān in the Pandjāb about 931 (1525), his father’s native place being Kaniguram, an Afghan town, whither his parents returned. When his mother Banūn was divorced by ʿAbd Allāh, Bāyazīd became alienated from his father, who disapproved of his seeking the solution of religious difficulties from a poor relation, the ascetic Ismāʾīl; he started earning his living by transporting goods from Samarkand to Hindustān with Turkish horse. In the town Kālīnjār, S. W. of Allāhābād, he became acquainted with one Mullā Sulaimān from whom he imbibed Ismāʾīlī doctrine. Returning to Kaniguram he lived as a hermit in a cave, and evolved eight precepts for his followers; he was in consequence attacked and wounded by his father. Thence he fled to Nirgrahar, where he was given protection by a Mohmand chief Sulṭān Ḵām, and presently won adherents among the Ghoria Khel in the neighbourhood of Peshāwar from the Ḵālil and Mahmūdīzā, who had recently overrun the Peshāwar plain. He established himself at Kalīdhār in the territory of the ʿUmrāzī, and sent out missionaries who were also raiders. At this time one Sayyid ʿAli Tirmīdīh aided by Akhūnd Derwezech (one of the authorities for his biography) started controversies with him; they were unsuccessful, and Bāyazīd, at some time had taken the title Pir-i Rawshāni (Luminous Shaikh, parodied by his enemies as Pir-i Tārīk), conceived the idea of annexing the empire of Akbar, on whose treasury he presently issued drafts. He was arrested by Muḥṣīn ʿĀlī Tārīkh, governor of Kābul, whither he was taken. He was there accused of heresy before the ʿulamāʾ, who however, for a consideration, acquitted him. He retired first to Tekī, thence to Tārīkh, where he proposed to substitute a new religion for Islam. After a time many of his Tārīkh followers reverted to Islam, and were expelled by him; they fled to Nirgrahar, and were attacked by Bāyazīd, who however was defeated with great slaughter by Muḥṣīn ʿĀlī. He fled to a village in Kalapani, where he died (993 = 1585).

2. Later History of the Community. Bāyazīd’s activities were resumed by the eldest of his five sons, ʿUmar, who attacked the Yūṣūfzān, a tribe which had followed Bāyazīd, but reverted to Islam; in the battle which ensued ʿUmar was killed, as was also his brother Khāir al-Ḏīn; another brother, Nūr al-Ḏīn, was put to death by the Gujārīs. The youngest son, Djalāʾ al-Ḏīn, was captured by the Yūṣūfzān, who surrendered him to Akbar in 989 a. H. Escaping from Akbar’s court he returned to Tārīkh, where he assumed the role of sovereign of Afghanistan, and Akbar found it necessary to send an army against him in Safar 994. This army met with a serious defeat, which was repaired by a later expedition (995).

The numbers of the Rawshānīs are given on this occasion as 20,000 foot and 5,000 horse. A further expedition was sent in 1000 a. H. (or 999) which captured some 14,000 men (according to Badauni) with Djalāʾ al-Ḏīn’s wives and children, but not apparently himself; since in 1007 he took Ghazni, but was unable to maintain himself there, and on retiring was attacked by the Hāzārā, wounded and put to death. This last affair is by some assigned to a son of his bearing the same name.

The next head of the community was Djalāʾ al-Ḏīn’s son Aḥḍād, who figures in the history of Djalāʾ al-Ḏīn. In 1020 A. H. he surprised Kābul in the absence of its governor Khān Dāvrān. The attack was beaten off with great loss to the raiders, yet in 1025 Aḥḍād was again in the field, but sustained a serious defeat at Peshāwar by Fīrūz Khān. After a series of enterprises with varied success he was besieged in the fortress of Nuqāhar, and killed by a musket-shot.

The historian of Shāh Djalāʾ, Muḥammad Sāḥib Kāsī, asserts that in the second year of his reign (938) that monarch took effective steps to suppress the heresies started by Bāyazīd; nevertheless in the following year he records how the Afghān Kamāl al-Ḏīn was joined in the attack on Peshāwar by ʿAbd al-Ḵādīr, son of Aḥḍād, and Kurīmdād, son of Djalāʾ al-Ḏīn (Djalāʾ al-Ḏīn). The place was relieved by ʿṢaʿīd Khān, and ʿAbd al-Ḵādīr induced to submit; in 1043 he was recommended by ʿṢaʿīd Khān, “who had caused him to repent of his evil deeds” to Shāh Djalāʾ, who gave him a command of 1,600 horse. Other members of Aḥḍād’s family received honours and rewards in 1047. In the same year Kurīmdād, who had taken refuge in the Mohand country, but had been recalled by the tribes of Bangash, was attacked, captured and executed by ʿṢaʿīd Khān. It is asserted that some relics of the community still exist in this region. A branch of the sect, called ʿIsawī, was founded at Swat by one Sayyid ʿIsā of Peshāwar (T. C. Plowden, translation of the Kālid-i Afghānī, Lahore 1875).

3. Doctrines of the Sect. According to the Dabīstān, which is friendly to the sect, Bāyazīd’s doctrine was extreme pantheism; “If I pray” he said, “I am a musḥīḥ; if I pray not, I am a kāfīr.” He marked eight stages (maṣāfāt) in religious progression: khātirā, iṣqū, ḵāṣṣā, maṣrīfā, kurbā, sqaṭta, wǎḥda, suḥīna; the four last are said to be technicalities of his system. The explanation of these stages, quoted from Bāyazīd’s Pālāmai, inculcates lofty morality, e. g. to hurt no creature of God. The account which follows is inconsistent with this, as noxious persons were to be killed because they resembled wild creatures, harmless persons who did not possess self-knowledge might be killed, because they resembled domestic animals. They might be regarded as dead, and their property
might be seized by the “living”. Further he abrogated the direction of prayer and the preliminary ablution. Other details are furnished by a hostile writer, the historian of Shāh Ḍjahān quoted above, copied in Muntakhab al-Lubāb. Marriage, he says, is without a contract, there being merely a feast at which a cow is slaughtered. Divorce is ratified by placing some pebbles in the wife’s hand. The widow is deprived of inheritance, and indeed is at the disposal of the heirs, who may marry her themselves or sell her to some one else. When a son is born to one of them, an incision is made in the ear of an ass, and the blood dripped on the infant’s tongue. This in order to ensure that the infant shall be bloodthirsty and have the mind of an ass. Any stranger who falls into their hands is enslaved and can be bought or sold. Daughters receive no share in the inheritance. They massacre whole tribes when they conquer them. Even on the Day of Judgment their victims, though martyrs, will not hold them to account. — According to others, however, they recognized neither Paradise nor Hell.

4. Literature of the sect. Bāyāzīd is said to have written much; works by him cited in the Dabestān are the Ḥabībān or autobiography, mentioned above, and Kāhin al-Bayān, the sacred book of the sect, in the style of the Kurān, addressed by the Divine Being to Bāyāzīd. This was issued in four languages: Arabic, Persian, Hindi and Pushto. A work in Arabic, Makān al-Munidnān, by him is also mentioned.

Bibliography: The account of the sect given by J. Leyden, in Asiatic Researches, xi. 363–428, London 1810, based on the Dabestān al-Maḏghāhīb (p. 247–253 in ed. Bombay 1922) and the Pushto work Maḵān al-Isānān of Akbund Derw verbal, furnished the material for the account of the sect in Graf T. A. von Noe’s Kaiser Akbar, Leyden 1855, ii. 179 sqq., and largely for that in Glossary of the Punjab Tribes and Castes, Lahore 1915, iii. 355 sqq. Notices of the sect were also got from Indian historical works; from the Akbar-nāme (printed, Calcutta 1891) by M. Elphinstone, History of India, London 1866, p. 517 etc., from the Tababār- Ḍakhār (lith., Lahore 1892) by H. Elliot, History of India, London 1873, v. 450; from the Tāsāʿī-l Ḍajhāṅgīrī, transl. A. Rogers and H. Beveridge. London 1909 by Beni Prasad, History of Jāhāṅgīr, Oxford 1922, who also uses the Ḏajhāṅgīrī, translprinted, Calcutta 1865. For Shāh Ḍjahān’s time the Shāh Ḏajhāṅgīrī is called ‘Amal-i Ṣāḥib of Muhammad Ṣāliḥ Kambo, ed. Ghulam Yazdani, Calcutta 1923 and 1927, is the chief authority. The printed text of the Bādāsh-nāme (Calcutta 1867, 1868) which, according to Muntakhab al-Lubāb (Calcutta 1869), should contain an exaggerated account of the atrocities of the sect, has very little about it.

(D. S. MARGOLIOUTH)

AL-RĀZĪ, ABU BAKR MUHAMMAD b. ṢAKARĪYA, a celebrated physician, alchemist and philosopher. Almost nothing is known of his life. He was born in 250 (864) at Raiy. There he seems to have studied deeply in mathematics, philosophy, astronomy and belles-lettres. He perhaps also studied alchemy in his youth. It was only after attaining a rather advanced age that he devoted himself to medicine. Entering the service of the ruler of Raiy, he soon became head of the new hospital in this town and later we find him in the same capacity in Baghdad. We do not know exactly how long he remained there. The reputation of being the greatest physician of his time brought him from one court to another. The fickleness of the favour of princes as well as the uncertainty of the political situation are the causes of his unsettled life. He returned several times to his native town where he died in 313 (925) (according to al-Bīrūnī on 5th Shāban 313) or in 323.

We are no better informed regarding Rāzī’s teachers. Several Arabic biographers regard him as a pupil of the physician ‘All b. Rabāḥ al-Ṭabarī which is chronologically impossible. As his teacher in philosophy the Fihrist mentions a certain Bālkhi (not the geographer Abu Za‘id al-Balkhī) from whom Rāzī is said to have taken some ideas. Nāṣir-i Khusraw says the same thing about a rationalist philosopher with the curious name of Erānshābī (cf. Zād al-Mustūfīrī, p. 73, 98; cf. also al-Bīrūnī, Hindī, p. 4, 326; ‘Alī, p. 222, 225); it is very probable that the two sources refer to the same individual. Although the influence of Rāzī was considerable, we know nothing of his pupils. The philosopher Yāhūy b. ‘Adī, an Aristotelian, Jacobite and disciple of Farābī, is said to have begun to study philosophy with Rāzī (cf. Mas‘ūdī, Kitāb al-Tanāṣī wa-l-Tabrīz, and a later source (Hudjwīrī, Rāzī al-Maḏghāhīb, transl. Nicholson, p. 150) speaks of connections between him and the mystic al-Hallādī. It was in Šīrāz circles that the philosophical doctrines of Rāzī left the deepest mark. Abu Ḫasqīr Barmānī b. Nawshakht, a theologian of the “Twelvethe” Šī’a, borrows from him, in his Kitāb al-Yāḥūt, his theory of pleasure, and the Ismā‘īlīans Abu Ḫātim al-Rāzī (d. 322 = 926), Kirmānī (d. after 412 = 1021) and Nāṣir-i Khusraw (q.v.) attempted to refute certain parts of his philosophical system. Among the other authors who combated his views may be mentioned Farābī, Ibn Hašām, ‘Ali b. Riḍāwān and Maimonides.

Rāzī is above all a physician and he is rightly regarded as the greatest physician of Islam. In addition to numerous monographs on various maladies of which the most famous is his treatise on smallpox and measles (Kitāb al-Qāhara ‘l-Ḥasba), he wrote several large manuals of medicine which were the most remarkable that the middle ages knew. A number of his works were translated into Latin and down to the xvth century the authority of al-Rāzī was undisputed. His Mansūrī (Liberr Almanor) is dedicated to Mansūr b. Ḫātīq, governor of Raiy, and his Muḥi-l-Dīn (Regius) to ‘Ali b. Wēh-Sūkhān of Tabaran. The Ḥāwī (probably the same as the Ḫawī) is the largest medical encyclopedia in Arabic. Rāzī is said to have devoted 15 years of his life to writing it and seems to have died before finishing it. The book is a compilation of extracts from all the Greek and Arab physicians on every problem of medicine and Rāzī concludes by giving the results of his own experience. While accepting earlier tradition, Rāzī is the least dogmatic of the Arab physicians and in the field of medical practice surpasses the knowledge of the ancients. We still possess his clinical notebook in which he describes very carefully the progress of his patients.

The same empirical spirit is found in the other branches of science which he studied. In chemistry, about which we are better informed, Rāzī, rejecting
all occultist and symbolic explanations of natural phenomena, confined himself exclusively to the classification of substances and processes as well as to the exact descriptions of his experiments. In spite of the statement of the Fikhrīd, Rāzī does not seem to have been acquainted with the alchemical writings attributed to Dājībīr b. Hālāyān. Pseudo-Madhūrī in his Kītāb Rūḥūt al-Ḥākim endeavoured to reconcile the alchemy of Rāzī with that of Dājībīr. Of his writings on mechanics we only possess a synopsis of his treatise on the balance (mīṣālāt ābi'). All his works on physics, mathematics, astronomy and optics, of which a large number are enumerated by the bibliographers, have perished.

It is the same with his metaphysical works of which we only have a few fragments preserved in later authors. Besides the Shī'a theologians mentioned above, we must make particular mention of al-Bīrūnī, who in his various works frequently refers to Rāzī. He also devoted a complete risāla to a study of the life and works of Rāzī.

The following are the characteristic features of his metaphysics: Rāzī asserts the existence of five eternal (kadim) principles which are the Creator, Soul, Matter, Time and Space. The eternity of the world is, according to Rāzī, the necessary corollary of the concept of God, the unique and immutable principle (the line of argument of the Aristotelian philosophers). Now Rāzī denies this eternity. Only the plurality of the eternal principles, their opposition and combination, can explain temporal creation. The origin and destinies of the world are imagined by Rāzī under the form of a myth with gnostic affinities. The Soul, the second eternal principle, possessing life but not knowing, is seized with the desire to unite with matter, and to produce within itself forms susceptible of procuring corporeal enjoyments. But matter is elusive. The Creator then in his pity creates this world, with its durable forms in order to permit the soul to enjoy and to produce man. But the Creator also sends the intelligence (āfār) partaking of the substance of his divinity to awaken the sleeping soul in its abode (kathal) which is man and to teach that this created world is not its true home, the place of its happiness and of its peace. To escape the bonds of matter there is only a single means for every man, which is the study of philosophy. When all human souls have attained liberation the world will dissolve and matter deprived of forms will return to its primitive state.

In his physics, Rāzī, an opponent of the Aristotelians and mutakallimīn, relies on the authority of Plato and the pre-Socratic philosophers. His atomism, fundamentally different from the parallel theories of the kalām, is related in many ways — an exceptional case in medieval philosophy — to the system of Democritus. In Rāzī's view matter in the primitive state before the creation of the world (haybīlā muṭlabak) was composed of scattered atoms (ἀόσια Ταῦτα ἀτομικά). Atoms possessed extent. Mixed in various proportions with particles of the Void — of which Rāzī against the Aristotelians affirms the positive existence, — these atoms produced the elements. The latter are five in number: earth, air, water, fire and the celestial element. All the properties of the elements (lightness and heaviness, opaqueness and transparency etc.) are determined by the proportions of Matter and Void entering into their composition. Earth and water, dense elements, tend towards the centre of the earth, while air and fire in which particles of the void predominate, tend to rise. As to the celestial element, a balanced mixture of Matter and Void, circular movement is peculiar to it. Fire springs from the striking of iron on stone because iron as it moves cleaves the air and rarifies it so that it is transformed into fire.

Rāzī distinguished universal space (masālī kulli) or absolute space (masālī muṭlaq) from partial (dunyāi) and relative (muṭlaqi) space. Absolute space, denied by the Aristotelians, is pure extent, independent of the body which it contains. It extends beyond the limits of the world, is infinite. There is reason to believe that Rāzī affirms the plurality of worlds. The term relative or partial space is applied to the size or extent of any particular body.

In his theory of time, which he says is Platonistic, Rāzī differentiates in analogous fashion absolute (muṭlaq) time and limited (muṭlaqi) time. It is only to limited time that the Aristotelian definition of time, considered as a number of movement (in the first place the movement of the celestial spheres), is applicable, according to the Prior and Posterior Analytic. Absolute time is an independent substance which flows. It existed before the creation of the world and will exist after its dissolution. Abandoning a distinction made in the Timaeus and handed down by the Neo-Platonists to the Arabic philosophers, Rāzī identifies it with eternity (dahr, ḍaw'). To attack the Aristotelian conceptions of space and time, Rāzī makes use of the view of the man in the street with a healthy mind not broken in to philosophical subtleties.

In his ethics, Rāzī, in spite of his pessimistic metaphysics, is against excessive asceticism. Socrates, whom he regards as his model, far from being the ascetic of cynical tradition, took an active part in public life. According to the maxim of Aristotle, blame cannot be attached to the human passions but only to their excessive indulgence. At the basis of his moral teaching is a special theory of pleasure and pain. Pleasure (al-ga'yu) is not something positive but the simple result of a return to normal conditions, the disturbance of which has caused pain (al-zāyū). The sīra fālṣafya (μίσος φιλοσοφικός) aspires, according to the saying of Plato (Thetetēs, p. 170b), to resemble the Creator to be, like him, just towards man, indulgent to his faults.

In view of the individualistic ethics of Rāzī, we can understand his critical attitude to established religion. In many writings he refuted the Mu'tazili theologians (Qāḥiq, Nashī, Abū 'l-Kāsim al-Balūkhi, Mīsma'ī [= Ibn Akhī Zurhān]) who attempted to introduce scientific arguments into theology. Nor was he sparing in his criticism of the extreme Shī'a (refutation of Ahmad al-Ka'īyānī) and of the Manicheans. Among his adversaries in philosophy we find, besides the Dāhri Abū Bakr Ḥusayn al-Tāmārī al-mutuṣabbīh, the Sabean Thābit b. Kurra, the polyhistorian Mas'īdī and Ahmad b. al-T'aiyib al-Sarākhshī, a pupil of al-Kindi.

Unlike the Muslim Aristotelians Rāzī denies the possibility of a reconciliation between philosophy and religion. Two heretical writings figure in his bibliography: the Māḥkūrī al-Anbūyā or Hiyy al-Mutanabbiyyah was read in heretical circles in Istām and notably among the Karmātians (cf. Bagdādi, Fārīk, p. 281). It seems even to have influenced the famous theme of the De Trīnus
The principal theses of this book are as follows: all men being by nature equal, the prophets cannot claim any intellectual or spiritual superiority. The miracles of the prophets are impostures or belong to the domain of pious legend. The teachings of religions are contrary to the one truth: the proof of this is that they contradict one another. It is tradition and lazy custom that have led men to trust their religious leaders. Religions are the sole cause of the war which rages humanity; they are hostile to philosophical speculation and to scientific research. The alleged holy scriptures are books without value. The writings of the ancients like Plato, Aristotle, Euclid and Hippocrates have rendered much greater service to humanity. Rāzi’s book undoubtedly contains the most violent polemic against religion that appeared in the course of the middle ages. It takes up to some extent the arguments of the contemporary Manichaeans against positive religions but above all it seems to be inspired by the criticism of religion in antiquity.

Rāzi believed in a progress of scientific and polemic knowledge. He claims to have advanced beyond most of the ancient philosophers. He even thinks himself superior to Aristotle and Plato. As regards medicine, he had attained the level of Hippocrates and in philosophy he feels himself close to Socrates. But after him there should other learned men who would reject some of his conclusions just as he had sought to supplant the teachings of his predecessors.

(P. Kraus and S. Pines)

AL-RĀZĪ, the name of three historians of Muslim Spain. Muhammad b. Muṣā b. Bāṣhr b. Dīyāk b. l. Ṭaqī b. al-Kinānī al-Rāzī, who took his nība from the town of al-Rāyi in Persia where he was born, came from the east to Cordova about the middle of the third century A. H. (884 A. D.) to trade there. His high degree of Arabic culture gave him a welcome in intellectual circles in the Umayyad capital and the emir Muḥammad b. Abū al-Raḥmān entrusted him on several occasions with diplomatic missions in the east or in Spain itself. His successor, his son al-ʿAbd al-Muḥammad b. Mandhūr, showed him the same confidence that was on his return from an embassy to Elvira ([q. v.] for this prince that al-Rāzi died in Rabi' II 373 (Sept. 5—Oct. 3, 886).

We would have known nothing of Muḥammad al-Rāzī as an historian but for a statement by Muḥammad Ibn Muzain reproduced by the Moroccan writer Muḥammad al-Wazīr al-Ghassānī in his account of an embassy to Spain in 1691, entitled Risāla al-Wazir fi 'ṣīhāk al-Āsīr (cf. E. Levi-Provençal, Les Historiens des Chorfa, Paris 1922, 284—286). Ibn Muzain there says that in 471 (1078—1079) he found in a library in Seville a little book by Muḥammad b. Muṣā al-Rāzī entitled Kitāb al-Rażīt, relating to the conquest of Spain by the Muslims and giving details of the Arab contingents, each distinguished by its standard (rāziya) who entered the Peninsula with Muṣā b. Naṣair [q. v.]. The passage of Ibn Muzain has been reproduced in the Madrid edition of the Fath al-Andalus of Ibn Kūṭya (cf. the Bibl.). However little we know of this work of Muḥammad al-Rāzī, we cannot but regret its loss bitterly.

arábigo-española, Barcelona-Buenos Aires 1928,
p. 130.

Ahmad b. Muhammad, son of the preceding,
surnamed al-Tāriqī ("the chronicler"),
the first in date of the great historians of
Al-Andalus. He was born in Spain on the 10th
Dhu 'l-Hijjād 274 (April 26, 888) and died on the 12th
Rājdāb 344 (Nov. 1, 955). He was the pupil of Cordovan scholars of repute like Ahmad
b. Khalid and Kāsim b. Aṣbahān. He wrote several
monographs on the history of Spain: a Tāriqī
dalīlī al-Andalus; a description of Cordova (Kitāb
fi ḥībat Kūrtubā) written on the plan of the
description of Baghdād by Abu l-Fadl Ibn Abī
Ṭahir; a book on the Spanish mawāsī; lastly
a voluminous work on the genealogies of the Arabs
of Spain, Aṣba al-Itlāb, which was to form one of
the essential sources of the Qamārāt al-Ansāb
of Ibn Ḥazm [q. v.]. These various works have
unfortunately not come down to us and until quite
recently we had only a few quotations from Ahmad
al-Rāzi preserved by later writers. The recent
discovery of a fragmentary manuscript of a chronicle
relating to the 13th century in Spain now puts at
our disposal a work that we may reasonably extol
from this author and from his son ʿIṣā (see iii.); these
passages are collected in Documentos inéditos d'histoire
hispano-maṇiyade, to appear shortly.

The majority of Ahmad al-Rāзи's biographers
do not attribute to him any geographical work,
but some, e.g. al-Daybi and Yākūt, note a Spanish
geographer whom they call Ahmad b. Muḥammad
al-Tāriqī who is clearly Ahmad al-Rāzi; this
individual, according to these authors (al-Makārī
ttributes it directly to Ahmad al-Rāzi), wrote a
lengthy work on the routes (marāzīk) of Al-Andalus,
its anchorage (marāzī), its principal towns (um-
mahāt al-mudīn) and the six Arab ġundūs [q. v.]
which were settled there after the conquest. This
description of Spain has been preserved in a
Castilian translation published in 1580 by P.
de Gayangos as an appendix to his Memorias sobre
la autenticidad de la Crónica denominada del Mundo
Rasis (supplemented by R. Menéndez Pidal, Catá-
logo de la Real Biblioteca. Manuscritos, Crónicas
generales de España, Madrid 1898). The description
forms the first part of this Crónica and in its
present Castilian form comes from a translation
into Portuguese, now lost, prepared by order of
King Dom of Portugal towards the beginning
of the 16th century, by a cleric named Gil Pérez;
the latter was no doubt the author of the second
part and in the third he confined himself to summing
up very briefly the historical work in the strict
sense of Ahmad al-Rāzi.

The description of Spain by al-Rāzi, in
spite of the many difficulties offered by the fact
that it has passed through two translations, both
very inaccurate and corrupt in the place-
names, is nevertheless a very important document
from the geographical, as well as the political
and social point of view for the Muhammadan part
of Spain in the reign of ʿAbd al-Rahmān III. After
a number of general reflections on al-Andalus, its
situation with regard to the rest of the inhabited
world, and its climate, we have an individual
description of each of the principal districts, of
which special use was made by Yākūt [q. v.]
for the Spanish references in his Muqām al-Buldān.
A comparison of the Spanish text of al-Rāзи's
description with that of Yākūt enables us to discover
a close relationship between the two works. They
both give the same number of administrative titles
(kūtāb) in Umayyad Spain of the 3rd century, 41
in all: Cordova, Cabra, Elvira, Jaen, Todmir, Valencia,
Tortosa, Tarragona, Lérida, Barbatiaria, Huesca,
Tudela, Saragossa, Calatayud, Baruhsa, Mèlinaceli,
Shantabaniya, Rucupel, Zorita, Guadalajar, Toledo,
Oroto, Fafs al-Ballūt (Llano de las bellotas), Fīrīsh,
Mērida, Badajoz, Bēja, Oconosba, Santarem, Coimbra,
Exitania, Lisbon, Niebla, Sevilla, Carmona, Moron,
Sidona (Shadhāna), Algēciras, Reyo, Ecija and
Takorannā.

de la Península ibérica en los escritores arabes,
Granada 1921, p. 287. ʿIṣā b. Ahmad b. Muhammad,
son of ii., grandson of i., continued his father's Umayyad
court down to his own time and extended the
portions dealing with earlier periods by using
sources which had not been available to Ahmad
al-Rāzi. He has not been the subject of notice by
any of the Spanish biographers already published
but he is frequently quoted by later historians,
notably by Ibn Haiyān [q. v.], Ibn Saʿīd [q. v.]
and Ibn al-Abbār [q. v.]. According to the
latter, he also wrote a monograph on the ʿabdiggīs [q. v.]
of the Umayyad court of Cordova: Kitāb al-
Hujīfābī l-Iṣbāla bi l-Andalus.

(E. LEVI-PROVENCAL).

Amin Ahmad Rāzī, a Persian biographer.
Hardly anything is known of his life. He belonged
to Ra'i where his father Khwādja Mirāz Ahmad
was celebrated for his wealth and benevolence.
He was in high favour with Shāh Tahmāsp and
was appointed by him kalātār of his native town.
His paternal uncle Khwādja Muḥammad Sharīf
was vizier of Khurasān, Yazd and Isfahān, his
cousin Ghiyāth-Beg a high official at the court
of the Emperor Akbar. Amin himself is said to
have visited India. The work to which he owes
his fame is the great collection of biographies
Haft Eklīm (finished in 1592 = 1594). For many
years he collected information about famous men
until finally he yielded to the entreaties of one
of his friends and arranged his material in book
form. The final editing of it took six years. The

The Encyclopaedia of Islam, III.
biographies are arranged geographically according to the 7climes. In each clime the biographical part is preceded by a short geographical and historical introduction which is followed by notes on poets, ulama’s, famous shaikhs etc. in chronological order. The work is of special importance for the history of Persian literature, as the biographies of poets contain numerous specimens of their works, some of which are very rare. It contains the following sections:

Clime I: Yaman, Bilad al-Zandj, Nubia, China.
Clime II: Mecca, Medina, Yamuna, Hurmut, Dekkân, Ahmadnagar, Daculabil, Golkonda, Ahamdabad, Sûrat, Bengal, Orissa and Kâsh.
Clime III: Bârat, Baghdân, Kûfa, Nadaf, Bâya, Vâzî, Fârî, Sistân, Kandahâr, Ghâzîn, Lâhûr, Dîhil, India from the oldest times down to Aklâr, Sirya, Egypt.

(E. BERTELS)

REDIF (Ar. rîdîf), “what follows immediately after a person or thing (Fagran, Additions); one mounted on a croup, pillion-rider”: cf. for use in the figurative sense in a composite epithet in Turkish (Persian): o râyî zîzê rîdîf “the victorious, another (one which has his victory on his croup)” (Târîkh-i Lîzâdîr, 1293 A.H., 1. 223). The synonyms rîdîf and, more rarely, rîdîf, “the act of causing to follow or join, to make to accomplish”, are also sometimes used in Turkish as well as the words tevâxân and sâbîx. As a technical term rîdîf, pronounced rîfî, has been used: 1. in Persian and Turkish prosody; 2. in the Ottoman army.

1. PERSIAN AND TURKISH PROSODY. — Redî is a kind of “hypermetre” (taking this word in a wider sense than in classical or even English prosody), i.e. the part of the line which follows the rhyme (kâzâr: in Neo-Turkish: âkâr) or more exactly the last syllable of the latter (râzî), or which comes between two words forming a rhyme. The rîdîf may consist of one or more suffixes, particles or dependent words. The old theorists however disputed the quality of rîdîf to repeated suffixes and gave different names to each of the (Arabic) letters representing them: râzî (first letter); khâbâhî (second); nîzî (third); mâdâ (fourth). In Persian and Turkish prosody the same rîdîf is repeated at the end of all the lines of a piece of poetry. Although it made its appearance in Turkish as early as the sixth century, the redîf is an especially Persian invention. Indeed in the national Turkish poetry (syllabic metre) suffixes or particles repeated at the end of the lines count as rhyme (Kowalski, Ze studije nad formou perské literatury dle-slovene, Cracow, 1922, p. 33). The redîf existed in classical Arabic only in an embryonic form and under another name (Garcin de Tassy, Rhétorique, p. 143). The redîf fell into disuse in Turkey in the sixteenth century, probably under the influence of French poetry.

In addition to this special use in prosody the name redîf is sometimes given to the second term of an idbîf, i.e. of a hendiatre (mayaddâ) of which the two terms rhyme or are alliterative, as for example Pers. fuzûn bûzûn, bûzûn fuzûn, khâbâhî mâyâhî, Turk. ùzûn ùzûn, ùzûn ùzûn (“Turkmên-kûl”), Turk. transl. p. 328, 329, 371). Mutâdâf (mutâdâ’if) means “synonym”.

2. TURKISH MILITARY USAGÉ. — Mahâlîd b. Abû al-À mãdîd gave the name of redîf (nasîhîr redîf-i mensûre) to the reserve army created in 1834 (Jouanin and van Gaver, Turquie, p. 425). The historian Lüftî (iv. 144) speaking of the project for this army, under the year 1249 (May 21 1833—May 9 1834) explains the meaning of the term by saying that it was a force “came after” the regular army (meyvâzâyef-e redîf olavâb). They were therefore not soldiers who had, at need, to mount behind the cavalry on the croup, like the Roman velites. Redîf was contrasted with nizî (or asâhîr-i nizîmî) or asâhîr-i maywâzeyf, taken in the strict sense of active or regular army (standing army) and with tibyayf “reserve of the regular army”. For the lack of an exact equivalent we may say militia in English and “armée de réserve” or “garde nationale” in French. The German term “Landwehr” is perhaps nearest it but in the Prussian rather than the Austrian sense. Sometimes the redîf are included in the nizîmîye, taking the latter term in a wider sense of regular or disciplined troops (synonym musettel). Lüftî (loc. cit.) calls the redîf bir nemî “asâhîr-i nizîmîye “a kind of regular troops”.

The characteristic feature of the redîf army was the existence of permanent cadres, whence its mixed character. It was linked with the regular army by its officers and with the reserve by its men (sefâd-î redîf). It was the object of its creators that this army should provide a large number of men if necessary without imposing too long a period of service on the rural population (Lüftî, ibid.).

It was decided from the first that the redîf should consist of battalions (tabûr) and indeed this organisation by battalion depots (tabûr dîvîvride) remained in force as long as the redîf existed. The commanders of these battalions (biynîbâsh) were at first chosen from the chief local families (mahrûlleri khâbânînûdwan). The first battalions formed in 1250 (May 10 1834 to April 28 1835) were those of the sanâbâb, q.v. of Kâráshâr Shâhî, Anâkara, Kangîrî (Çankîrî), Siroz and Mentelles. Ismâ‘îl Bey, hereditary Kurd governor of Palu, was appointed colonel of the three battalions in the karâs known as those of the “Imperial Mines” (mâyâdâ-i humâyûn) in the eyâlet of Siwâs (Lüftî, iv. 171). There were three to four battalions in the sanâbâb, or 10 to 12 to the eyâlet. The officers received a quarter of the usual pay, but were only expected to serve and wear uniform two days a week (Musta‘fâ Nâ’i Pâshâ, Nezîdî al-Wâshîlî, iv. 109).

In 1252 (April 18, 1836 to April 6, 1837), the redîf was organised in wide groups with a high command: muhîrîb (mohîrîb) or “marshals’ ship” (cf. muhîrîb) of redîf, conferred upon the çûlîs. The first were those of the eyâlets of Karaman (Konya), Kusdâwendigzâr (Brusa: guard or kâzî), Anâkara, Aydîn, Erzurum, Edirne. At
the same time plans were made to raise the money required for this purpose. The wall-marshals were given the hârâvâni (kharâmâni) or cloaks of their new rank. Just as the troops of the line (memûrî) were dismissed and those from those of the guards (khâlîf) so there were redif-i memûrî and redif-i khâlîf. The appointment of commanders of divisions was to follow (for details see the Takvî-i ʿâli or report of the grand vizier Mehemd Emin Raʿû Pasha in Lutfî, v. 165—170). If we may believe the khâlîf-i hârâvâni promulgated on this occasion by Mahmûd II, these first steps gave every satisfaction (ibid., p. 74).

When the Military School (mekteb-i harbiye) instituted in 1251 began to supply officers, the redif under arms was converted into active forces and the officers were sent back to their ojdikas (Neşîdîh ul-Wuḥûfiât, iv. 109—110). The service as redif (khidmet-i redif) was now definitely to assume the character of a kind of period of service in the reserve or intermittent service the duration of which (muḥâli-i redif) was to be fixed under conditions which we shall explain below.

In the khâlîf-i hârâvâni of Gûlûhâne (Nov. 31, 1839) there is an allusion to an approaching improvement in the system of regional recruiting. In 1828, five years had been fixed as the period of service in the regular army, previously practically unlimited (one saw young married soldiers leaving their families for life), but this measure did not immediately make its effect felt (cf. von Molske, Lettres sur l’Orient, n.d., p. 211, letter No. xlvii.).

On Sept. 6, 1843 the military law of the seʿâdâr Rıza Pasha (Engelhardt, i. 71) was promulgated, a law of fundamental importance, half French and half German in character, the principles of which have survived even in the most recent legislation. It confirmed the period of regular service at five years (later reduced to four), to be followed by a period of seven years during which a redif could be recalled to the colours for a month each year (later every two years). Each ordu (army corps) was to have its redif contingent (ṣînî-i redif) placed in time of peace under the orders of a brigadier-general (liwa, brigade) who lived at the headquarters of the ordu. In 1853 (Ubicini, i. 456) the redif were organised into 4 (out of 6) ordu, namely those of Khâlîf (Scutâ: [Asia] and Smyrna), Derîseʿâdet (Istanbul and Anâka), Rumelî (Manastîr) and Anatolia (Harput). The ordu of Archives and the ʿIrâq were still to be organised. Ubicini adds this observation: “By means of this organisation the government has secured … a force at its disposal equal to the regular army, and capable of being moved in a few weeks either to the line of the Balkans or to any other point in the empire”. According to Bânciu (Guide de la conversation, 1852, p. 230), the organised reserve (mûrette redif) was then 150,000 men compared with 300,000 of the regular army.

Hussein ʿAwni Pasha’s law of 1869, more clearly French in character (Arastarchi, iii. 514; Engelhardt, ii. 37 sqq.), provided for 4 years active service and one of ḥizâyâ if in the active reserve, a period of 6 years in the redif in two bands (ṣînî-i muḥâliyân and ṣînî-i tahâliyân) of 3 years each (according to Engelhardt of 4 and 2 years respectively). In practice in 1877 there were 3 bands, the third (ṣînî-i tahâliyân) being represented by the territorial army (muṣṭâhîz) then mobilised (Zboinski, p. 98). A conscript who obtained a lucky number in the draft was drafted directly into the redif army (art. 17).

The law of 27th Şâfâr 1304 = 18th Teşrih-i ʿâsâni 1302 (Nov. 25, 1856; resumed by Lamouche, p. 77 and Young, ii. 394) prepared by a commission of reorganisation which included Muṣaffar Wali Rıza Pasha and von der Goltz Pasha, fixed the period of redif service at 9 years, but was soon afterwards followed by a special law (redif kanunun) of 10th Muḥarram 1305 (Sept. 28, 1887). According to this, which was however not put into force till 1892, the period of redif service was 8 years. The ranks in the redif were the same as in the regular army from general division down to sergeant-major. These officers formed at the same time the personnel of the recruiting offices for the whole army.

According to the law regulating the uniforms of the army on land (elbîs-i askeriye nişâm-nâmesi) of the 29th Dhumâdâr I 1327 = 5th Hazirân 1325 (June 18, 1909), the redif soldiers wore as distinctive badge a dark green (nīzîf) piping (ṣīr, Pers. sîr, Arab. zîf) at the bottom of the collar (yaka) of the tunic (ṣaḥket or ʿirîket, modern spelling: şeket, ʿiriket). The officers wore a piece of cloth of the same colour 7 centimetres in length fastened on the collar of the undress tunic (cetek) or the full dress tunic (ceṭet, older cetek; cf. Pers. ceṭet) (Dustûr, Tertib-i ʿıdâni, i. 276; A. Biliotti and Ahmad Seddâd, Législation ottomane, Paris 1912, p. 171 sqq.).

The redif system was abandoned by the Young Turks. The law of 18th Ramadân 1330 = 19th Aghosts 1328 (Aug. 31, 1912) without proclaiming the dissolution of the corps ordered the formation of units of muṣṭâhîz with elements furnished by the battalion depots in the second inspection (muṣṭenîvât) of redif (Dustûr, Tertib-i ʿıdâni, i. 615). The Young Turks have been reproached with this measure and some have even seen in it the cause of the Turkish defeat in the Balkan War.

(J. Deny)

Redif, an Ottoman poet and Hürâfî. Of Redif’s life we only have a few hints from himself; the Ottoman biographers and historians do not seem to mention him at all. He himself describes how in his youth he studied many branches of knowledge but did not know what he should believe, and how sometimes he turned to the Sunna, sometimes to philosophy and sometimes to
materialism. He often travelled a great distance to visit a particular scholar but always was disappointed. The poet Nesimi [q.v.] was the first to teach him the grace of God and the truth, and ordered him to teach this truth in his turn to the people of Kain, and for this purpose he had to speak in Turkish. He therefore wrote his Resatetname, "the message of joy", which he finished on the first Friday of Ramadan 811 (Jan. 18, 1409). This work is not yet printed; it is quite short and written in the same metre as Ashik Pascha's Gharibname, a remel of six feet with irregular prosody. The Hurufi teaching is expounded in a very prosaic style, the means of the names and letters, the sacred number 32, the prophets, the throne of God, the human countenance, the splitting of the moon, Fa'il Allah [q.v.], the founder of the Hurufi sect—all this is dealt with from the usual Hurufi point of view. As sources an As-adname, a Djawadianname, and a Mahab'atname are quoted; the latter third are probably the works of the same names by Fa'il Allah, the second according to Rieu was written by Af'dal Kashi (d. 707 = 1307).

Another of Resi's works is the "Book of Treasure" (Gendjname). It is printed in the Stambul edition of the Diwan of Nesimi. The Gendjname is better as poetry and on the whole less Hurufi than generally Süfi in tone. Man from the Hurufi and philosophic point of view. Fa'il Allah and Ali Mad (Muhammad), the 72 sects, the greatest Name (ummi'd jam), the water of life etc., are discussed in it.

Nesimi and his pupil Resi seem to be the only Ottoman Hurufi poet of importance, and while the sects, in spite of all persecutions, continued to exist long after and even had connections with the Bektaşhiye, these two poets as such do not seem to have produced any school. So far as I am aware no historian of Turkish literature has taken any interest in Resi, until quite recently Koprulu-Zaide Mehmed Fuad, who has even promised us a special study of him. Bibliography: Gibb, H. A. R., i. 336, 341, 344, 351, 369-380: Mehmed Fuad, Türk Edebiyatında ilk Mutfaksefer, Stambul 1918, p. 363, 3882—MS. of the Gendjname: Vienna, Flugel, ii. 261 sq., No. 1908 (incomplete) and 1970; London, British Museum, Rieu, p. 164 sq. Add. 5986; of the Gendjname: Vienna, Flugel, ii. 720, No. 178, fol. 51-58; printed in tahl-i Diwan-i Nesimi, Stambul 1260 (1844), p. 9-14: both works in the Browne MS.

**RETIs UL-KUTTAB** or **RETIs EFENDI** (Ar., used in Turkey), properly "chief of the men of the pen": a high Ottoman dignitary, directly under the grand vizier, originally head of the chancery of the Imperial Diwan (devsi-i humâyûn), later secretary of state, or chancellor and Minister of Foreign Affairs. According to d'Herbelot he was called also Reis Kicik.

This office, unlike many others, is purely Ottoman, at least as regards the particular line of development that it took. Establishing itself at the expense of the functions of the nishândgi [q.v.], we may say that it owes nothing to the influence of the more or less iranised Salâtâ, nor to the Byzantines. Its origins it seems rather to be connected with a more general and more vague institution of the East, one which deserves more profound study: that of the secretaries of the diwan or chiefs of the secretariat of the diwan. This office is found in different Muslim countries under different names: persânâmeh among the Mongols of Persia, diwan beg among the Timurids, musâhi in Persia, (cf. Chardin, vi. 175; Ewliya Celebi, ii. 267). In the Ottoman provinces there was attached also to the wâli an important official known as the diwan efendisi; in Egypt, under Mehemed Ali, the diwan efendi became a kind of president of the council of ministers. The resis ul-kuttab were in brief the diwan efendisi of the capital. It is perhaps to this that we owe the use of the title resis efendi, by which they were more commonly known. We know that the term efendi was generally applied to people of the pen. This usage seems to have already been noticed by E. Blochert (Voyage en Orient de Cartier l Pinon, Paris 1920, p. 85).

Until the time of Sultanmé the Magnificent, the title resis ul-kuttab (or resis efendi) was not used. At least this is what we are told by Ahmad Resmi, who quotes in this connection the Bedî'î-ul-Wegâči of the historian Köda Hüseîn Efendi of Sarajevo (cf. Babinger, O. W., p. 186). The latter, who was himself resis ul-kuttab, says that before Sultanmâ, the official correspondence was in the hands of the eunûh-ahîman or "depository of the decisions (of the Diwan)" along with the nishândji. This point of view has been adopted by other historians (v. Hammer; cf. also the Sâhînîn-i Neşâret-i Kürâgît). There is however no agreement as to who was the first resis ul-kuttab; it is usually said to have been Ljâf (Ijâf)-Zâde Mustafa Celebi [q.v.] (cf. Babinger, O. W., p. 102). This well known historian, whose genealogy is taken back to the legendary founder of Byzantium, Yankâ B. Mâdâ, was resis ul-kuttab in 931 (1524-1525) before becoming nishândji, but the Nihâkât-ul-Tâbûrî of Mehemed B. Mehemer refers to his death in 930 (1523-1524) of a resis ul-kuttab of the name of Hâdar Efendi. According to other indications, it would even appear that the office goes back to Mehemer II [cf. the article NISHÂNDJ]. The resis or office of resis efendi lasted over three centuries during which its holder changed 150 times, the average tenure of office being 2 years and 5 months, which reveals a remarkable lack of ministerial stability: some of the occupants held the office once, twice, and even four times. Duties of the resis efendi. As secretary state the resi kept records of memoirs and reports (telkhiy and takfir) presented to the sultan by the grand vizier acting as representative of the government and of the Diwan. These documents which were prepared by the amâdel-i diwan-i humâyûn or umââde (referendar or reporter of the Imperial Diwan) were brought in a bag (kise) kept for the purpose to the ceremonial sitting of the Diwan by the resis himself who handed them to the grand vizier. After being read they were given to a special officer, the telkhiy, whose duty it was to present them to the sultan. As chancellor the resis had a kind of jurisdiction over all the civil functionaries and was the immediate
head of the department of the Imperial Divan (divân-i kümâyûn kälemi).

This chancellory was divided into three offices (oda or kalem):
1. the beylik, the most important, saw to the despatch of imperial rescripts (firmân), orders of the viziers, and in general all ordinances (evâmîr) other than those of the department of finance (defterdâr dâ'îresi). This office kept copies of them as did the grand vizier also. Ordinances bearing on the back the signatures of the clerk, of the chief editor (mi'me'yiş), and of the head of the office (beylîkî) were submitted by the latter to the reîs who placed his sign (resid) upon them and, if it was a firmân, sent it to the nîşângî the for the tâhsha [q.v.] to be placed upon it. — The beylik in addition retained the originals of civil and military regulations (kânûn or kânûn-nâmâ) (usually elaborated by the nîşângî as well as of treaties and capitulations (sad-nâmâ) with foreign powers. The reîs had to consult these treaties, notably when certifying the der-kênar or "marginal" answers put by his subordinates on the requests or notes, known as verbal (tâhirî), which the ambassadors addressed to the grand vizier. It is this side of his activity which, gradually becoming more and more important and absorbing, ended by making the reîs a Minister of Foreign Affairs.

2. office of the takwîl or "annual renewal" of the diplomas of the governors of provinces (berât), of the brevets of the mollaâ or judges in towns of the first class (takwîl), of the brevets of the timariots or holders of military fiefs (zâbt firmân). 3. office of the reîs or "provisions" of different officials, as well as of the orders for pensions from the treasury (tepêgî) or from wa'îfîs (cf. the details of the organisation of this office in Mouradog d'Ohsson, p. 107).

The reîs accompanied the grand vizier to the audiences which the sultan gave him and to those which the grand vizier himself gave to ambassadors. He shared with his master the midday meal as did the awâneh beşî or (cf. awâne) and the two tekeredîji, except on Wednesdays when these two were replaced by the four judges of Istanbul.

In the official protocol the reîs had the same rank as the awâneh beşî, with whom he walked in official processions, before the defterdârs (which showed he was of lower rank than the latter). The elîbî or epistolary formula to which they were entitled will be found in Ferîdûn, Munsârûlî, p. 10. It is the same as for the aghas of the stirrup [cf. riqandar] and the defter emini. For the dress of the reîs see Brindesi, Anciens Costumes Turcs, pl. 2; Castellain, iv. 107.

According to Mouradog d'Ohsson, the reîs used to act as agents for the khans of the Crimea.

Administrative career of the reîs. The reîs, like all Ottoman officials, were chosen by the sultan or grand vizier as they pleased, but except in case of appointment by favour, they followed a fixed line of promotion (parîk) in the administration. It was in the administrative offices, i.e. among the khejizâ'ân (Persian plur. which was given as an honorific title to the principal clerks or khejî or kalem zâbitîlerî) that this career was spent.

In examining the Sefînet ut-Rı'â'îd of Ahmed Resmi, we find that up to the reîs Boyall Mehmend Efendi (Pâsha) (d. 977 = 1569-1570) there is no information available about the career of the reîs, but starting with him we find that the reîs were regularly chosen from among the former tekeredî of the wa'îfîs or of the grand vizier. From Sheikhzâde 'Abdi Efendi (d. in 1014 = 1605-1606) the reîs were mainly taken from the wa'îfîs mektübgî or private secretaries of the grand vizier. These secretaries were themselves at the head of an office (oda) which contained a very small number of officials (khalîfe or kalifa, pl. khalîfâ). There were only two between the years 1090 and 1100. When the number increased (at a later date there were about 30) the career of the future reîs was as follows: khalîfe in the office in question, called also mektüb-i sard-i 'ali odaî, then see-khalîfe or bakâ-kalifa "chief clerk"; then mektübgî. The post of mektübgî was much sought after. It brought its holder into close contact with the grand vizier and it was then very easy to advance oneself. More rarely the future reîs rose through the similar but less important office of secretary to the lieutenant to the grand vizier or Kâhya Bey (kethânda kâtibî odaî).

The riyâsîd did not mark the end of a career but gave access to still higher posts (see art. nishângî for the old rules of promotion by which the reîs became nishângî). It was one of what were known as the "six [principal] dignities", mektübî sitte, namely, the nishângî, defterdâr, reîs ul-kütâb, defter emini, shikbi-thânî defterdâr, shikbi-thânî defterdâr (Ahmed Rûsmî, Tâhâlî, p. 756).

According to the Nâşihatnâmê (p. 39-40 of the French translation; cf. this Encyclopaedia, iv. 815-816), the reîs was under the authority of the Grand Defterdâr (for financial matters only).

Increasing importance of the office of reîs. — The growing influence of the reîs is explained by the increasing importance of foreign policy in Turkey (the Eastern Protocol).

Down to the end of the xvîth century the nishângî were certainly superior to the reîs; they controlled and even revised the orders and decisions of the divân (akbâm), but from the xvîth century onwards reîs like Oâqût-zâde Mehmend Shân Efendi, Lâm-Allî Cîlebi and Hükmê Efendi sêd a certain lustre on their office. From 1066 (1659) the incapacity of certain nishângi precipitated the decline of their office in spite of the ephemeral efforts by grand viziers like Sheikh 'Ali Pâsha and of the nishângî appointed by him (Râshid Efendi and Selim Efendi). It was in this period that the office of beylîkî was created (cf. above).

The Ottoman protocol (tekhîrât) was nevertheless still to revert for a long time traces of the originally rather subordinate position of the reîs. For example they did not sit in the office of the Divân itself, called Divân-akbâm (in the Top Kapu Sarayî or "Old Serai"), but remained seated outside of the room in a place called reîs tâhkâr, "the bench of the reîs"; where there were also seats for certain other officials to wait upon. In the formal sittings, even in those like the distribution of pay (çulîfe) to the Janissaries which took place in the presence of foreign ambassadors, the part played by the reîs was rather limited. He carried in with slow step and the sleeves of his jacket turned up the bag containing the vîkhis (cf. above). He kissed the hem (etek) of the grand vizier's robe, placed the bag on his left, kissed the hem of his robe again and withdrew to his place. He came in again to open the bag, handed the documents to
the grand vizier, took them back from him to fold them (kühüllüms); sealed them and gave them to the teşkilât. If he was unable to be present, the bag of the teşkilât was handed to the grand vizier by the şuâ's teşkeleği (Kamu-nâme of Ābd ul-Rahmân Pasha, p. 85, 123 etc.).

Lucas (Società It. San Remo) Paris 1712, p. 216) writes that during the audience given by the grand vizier to the French Ambas-sador "le Ray Afsendy ou Grand Chancelier demeuré debout et appuye contre la muraille".

Things were changed at the reform of the Diwan effected at the beginning of his reign (1792) by Selim iv., by limiting the power of the grand vizier. The old Diwan consisted of six wazirs of the dome (having only one consultative voice), of the Mafi (Šaikh al-Islam) and the two kâşîbers. The new Diwan was to consist of 10 members, by right of office and others chosen in different ways (about 40 in all). The members, by right of office were the Kâsha Bey, the Re's Efendi, the Grand Deftednâ, the Çelebi Efendi, the Tersânci Eminî, the Çawsh Bâhi (Zinkesm, Geschichte, viii., 1861, p. 321).

The office of reis tended more and more to become the Ministry of Foreign Affairs of the Sublime Porte, parallel to the post of Kâsha Bey (interior). Suppression of the dignity of reis. — The title of reis was suppressed by the kâçi-kümayrân of Sultan Mahmut II addressed on Friday 27th June "Kâsha 1251 (March 11, 1836), to the grand vizier Mehmed Emin Pasha. The Turkish text will be found in the Silâhname of the Turkish Ministry of Foreign Affairs: the French translation (or at least parts of it) was published in the Moniteur Ottoman of April 23, 1836 (according to A. L. Vicent, Lettres Sur la Turquie, p. 38, note 1). This document at the same time created two new minisîres (meczîret) which in memory of their origin are continued in the end by the same building as the grand vizierate [cf. Fâti'ül in Suppl.]: 1. the Ministry of the Interior (originally of civil affairs or umâr-ü mârûf, later hâşhâbi) replacing the department of the Kâsha Bey, and 2. the Ministry of Foreign Affairs (hâşhâbi) replacing that of the reis. The preamble said that, abandoning the old regulations of the service, the sultan had thought it advisable to create real posts of wazir (meczevîret) and not honorary ones, but without its being necessary to give the new wazir of foreign affairs the title of pâsha (q.v.), "which is mainly a military one".

Bibliography: By far the most important source is the work known as Seifalet al-Kâri'c, which consists of: 1. Ahmad Resmî's work (Babinger, G. O.R., p. 300 sqq.) which contains the biographies of 64 reis down to Râhîb Mehmed Efendi (1157 = 1744), and 2. its continuation by Sulaimân Fâti Efendi which contains the biographies of 30 reis down to Ahmad Wâsîf Efendi at the beginning of the 19th century. According to the preface to Sulaimân Fâti's (not Fâtik) continuation, Ahmad Resmî had entitled his work Halefs al-Kâri'c in imitation of the Halefs al-Wazirât of ʿOthmân-nâme Tâhi, but changed it at the suggestion of Râhîb Pasha to Seifalet al-Kâri'c. The references in the Catalogue of Turkish MSS. in the Bibliothèque Nationale by E. Blochet, n. 158, should be corrected accordingly. The word hâşhâbi apparently makes no sense, that of hâshîfat which is usually found in other works (Flügel, Cat., ii. 407, No. 1250; Babinger; Brusali Mehmed Tahir, iii. 59 note), does not seem correct either. One ought undoubtedly to read khâşîfat (which rhymes with the hâshîfat of the prototype). The Seifalet al-Kâri'c was published by the State Press in Istanbul in 1869. Cf. also in addition to the references in the text: Mouradgea d'Ohsson, Ekat de l'Empire Ottoman, vii., 1824, index; Joseph von Hammer, des Osmanischen Reichs Staatsverfassung und Staatsverwaltung, Vienna 1815, ii. index; Kanun-nâme of Tewfik (nizâamî) Ābd ul-Rahmân Pasha, written in 1887 (1676–1677) and ed. by F. Koprulu (M. T. M., p. 508); Es'âd Efendi, Teşkefîâtî Develî-i 'Aliyê, p. 85, 123 etc.; Silah-nâme-i Neîşet-i Khâlîfîye, 1st year, 1301 (1885). Impressive Ebuzziya, Istanbul (contains in addition a historical resume and a chronological list of all the grand visiers and all the reis). Charles Perry, A View of the Levant, particularly of Constantinople etc., London 1743, p. 36. — On the şâhib al-dowlan or reis ('al-dowlan, see Kâsha Khâşib, Sâbâ al-Asbâb, i. 101 sqq.; vi. 14, 17–18, 50: Massé, Code de la Chancellerie d'Etat... d'Ibn al-Sa'îrâf, in R. F. C. C., xi. 79 sqq. — Among the Sâjidüs, the offices of şâhib al-dowlan and peraâme were quite separate: cf. Houtsma, Recueil d. Textes... Seldi, iii. 105. (J. Deny) REIYO, the name given in Muslim Spain to the administrative circle (kâra) comprising the south of the Peninsula, the capital of which was successively Archidona (Arabic: Irdughâna) and Málaga. The usual Arabic orthography is ج. م. A particular this is the form found in the Muğan al-Bulûn of Yâkût: but some Spanish MSS. give the true orthography ج. م. more in keeping with the local pronunciation Reiyo (Raiyû) attested by Ibn Hawkal. It is only, as Dozy thought, a transcription of the Latin regio (no doubt Malacitana rei): the suggestion put forward by Gayangos of a connection with the Persian town-name al-Raiy - of course untenable. When the fiefs in the south of Spain were assigned to the former companions of Baldâb Mehzeh (q.v.), the district of Reiyo was allotted to the dâmir of Aljôn (al-Ordûm). During the Umayyad caliphate of Cordova, the kâra of Reiyo was bounded by those of Cábra and Algeciras in the west, by the Mediterranean in the south and by the kâra of Elvira in the east. Bibliography: al-Idrisî. Description de l'Afrique et de l'Espagne, ed. and transl. Dozy and de Goeje, p. 174, 204 of the text, 209, 250 of the transl.: Yâkût. Muğan al-Bulûn, ed. Wustenfeld, n. 892 (cf. ii. 826); Ibn 'Abd al-Mu'min al-Himyari, al-Rawd al-mâsîr, Spain, No. 81; Dozy, Recherches 3, i. 317–320; Alemany Boulanger. La geographie de la Peninsula ibérique en los escritores arabes, Granada 1921, p. 118: E. Lévi-Provençal. L'Espagne musulmane au XVe siecle, Paris 1932, p. 116–118. (E. Lévi-Provençal) RESHT, first a district, then a town, and lastly the capital of the province of Gilan in Persia. As Y. Barthold points out (Gilan p. 1), it belonged to the Umayyads, but in the first Clement, and afterwards, to the Seljuks. The Seljuks held it as a portion of their domains in Persia, and it was a seat of learned men and of an independent college (tâleke), under the name of the "Sâhib al-Dowlan," till the end of the 13th century.
information regarding the history and historical geography of Gilān is so far very scanty. Le Strange's remark that the position of the chief towns of Gilān cannot be exactly given is still true. The Tumanski MS. (tenth century) is the earliest to inform us that before the foundation of towns their names were already in existence as those of districts. In particular seven districts are mentioned in the eastern part of Gilān on this side of the river — Biepas (Islam having penetrated there from the east), and eleven in the western part on the other side of the river — Biepas. Among the seven eastern districts we find one called Lāhidjān (i.e. Lāhidjān) and among the eleven western ones that of Resht. The towns of this name did not exist at this time. They are not mentioned, in fact, until the Mongol period.

General. Gilān is now divided into 19 districts (of which five are called Hamse-yi-Tavārīk), that of Mawāzī with Resht, capital of the province, being the most important. According to Rabino (1917), the town of Resht has a population of 30,000 and the district of Mawāzī 90,500 out of the total of 339,300 for the province. These figures must have increased by now. Resht, also called Dar ul-Marz or “frontierland”, lies between two small rivers, the Sīhātrūrāb or Seigilān in the east and the Gowher-rūd in the west, which unite and flow into the Bay of Enteli (now Pehlevi), which is eight miles from the town. The bazaars occupy a considerable part of the centre of the town, which is traversed by dark and narrow streets. Only a few years ago Resht had very few broad streets and was only partly paved. Recently there have been steps taken to improve matters. The town is divided into 7 ma‘alles: Zāhedān, Ma‘alles-yey-bāzār, Khumairān, Khumairān-e-Zāhedān, Šātam Sēra, Čumār Sēra and Kiyāb. It has some 6,000 houses, 3,300 shops, 20 caravanserais for merchants and 25 for caravans, 40 mosques, 12 sanctuaries, 36 tekkes, 6 medreses, 35 baths, and 7 bridges (all these figures refer to the period before the War). Among the mosques only the Masdjid-i Şafī, the oldest, seems to be of any interest. Ḥasan Beg, author of the Ahsan al-Tawārīkh, calls it Masdjid-i Şafī and adds that when Ismā’īl Šāh fled from Ardabil to Gilān, he spent some time near this mosque. In its courtyard there is a well into which women throw silver in order that their prayers may be granted. The Imām-Żade Sāyiḏ Abū Dja‘far is the most important sanctuary of Resht, near the governor’s palace. The holy man buried there is called Abī Ḥalīl Fūmeni Šuṭān Dja‘far whence the name of the quarter Šuṭān Sēra. The ladies of Resht have always had the reputation of being of easy virtue. According to a poet of the country, Mewla Sa‘īd Gilānī: “the young women of Resht, like intoxicated peacocks, used to go seeking a purchaser in every bazaar, holding in their hands the knot of their trousers”.

There are in Resht two important classes: the Ta‘īfe-yey Hādījī Sāmī (who came originally from Tabriz) and the Al-e Umīsh (of very humble local country origin). The language of the common people of Resht is a dialect of Gilaki. The upper, lower, and middle classes use Persian. Azari-Turkish is also spoken. The inhabitants are all Shi‘is except for a few Bahā‘. Gilān was converted to Islam only at the beginning of the tenth century by the ‘Ali l-Imām Ḥasan b. ‘Ali al-Uṯrash after a popular rising against the Djuştānīds (cf. Barthold, Istoriya-Geografskii Obzor Irana, St. Petersburg 1903, p. 156). All the people of the Biepas were of the Hanbalī school except the chiefs of Fūmen and the inhabitants of Kūcīsphān (Ṣāfā‘īs). It was only after the annexation of Gilān to the kingdom of Persia by the Šafavīs that the people of the Biepas became converted from the Sunna to the Shi‘a. According to another story however, Islām was preached in Dālam and Gilān in the year 290 (903) by the Saiyid Nāṣir Kāber, one of the ‘Alī pretenders to the caliphate, who belonged to the Zaidī Shi‘a, “of which he was one of the learned men and an author”; in this account the conversion to Islām is placed under the auspices of the Shi‘a (cf. Sheikhār-e-pan nām by S. A. Kasrawī Tabrizī, Teherān 1928, l. 32). The last traces of the religion of Zoroaster have not yet disappeared from Gilān. People look for white cocks because their crowing presages good fortune; the custom is observed of lighting a fire and jumping over it (for šombe-yi Zigzer-e-šāh). On the road from Fūmen, about one mile from Resht, a place preserves the name of Ateşghād. S. A. Kasrawī (op. cit., p. 31) does not however seem certain that Zoroastrianism was widespread in Gilān. Generally speaking, the people were indifferent in matters of religion. We may however note that many trees, called saints, ṣīr or buṣurg-wār, are objects of worship, especially on the part of women (cf. notably: Wellān near the Arteḵ bridge; Čehel Dōkhter and Aghā Bibi Zaināb).

Resht is the principal export and import market for trade with Russia. Its importance as the economic centre of Gilān varies with the rise and fall in the silk-culture. Barthold thinks (op. cit.) that the development of urban life and industry in Gilān belongs to a period later than the tenth century. The geographers of the tenth century mention the cultivation of the silkworm and silks only in Tabariţeh and Kāshān. In the eleventh century and later the silk of Gilān was particularly famous. At the end of this century, the silk of Gilān, according to Marco Polo, was sought by Genoese merchants, whose vessels first appeared in the Caspian shortly before Marco Polo wrote.

History. S. A. Kasrawī (op. cit.) gives a sketch of the dynasties of the Djuştānīds (end of the second to the beginning of the fourth century A.H.), Kangāxids (beginning of the fourth to the middle of the fifth century A.H.), and Șāfīxids (fourth century) who, especially the first, played a certain part in the destinies of Gilān.

In Rabino’s work we have a complete historical survey from the Mongol conquest (1307) to the Persian revolution. The Tumanski MS., unknown to Rabino, contains some information about the preceding period.

In it Gilān is described as a populous and wealthy country. All the work was done by women. The men had no occupation except fighting. Throughout Dālam and Gilān in every village there were one or two fights a day: every village fought with every other. Many people were often killed in a single day. These quarrels and battles went on until the men went to war or died or grew old. When they grew old they became pious and were called mawṣūd mard-e-rā‘īf (knowing the customs). In all the districts of Gilān, if any one insulted another or became intoxicated or committed any act that caused injury, he was punished with
The Tumaniski MS. does not give the distances between the towns nor any form of itinerary. The only one known is that of Makhkīzī who wrote some years later than the author of the Tumaniski MS. The principal town of Gilān at this time was Dūlāb. As Rabino points out, the only period of independence in the history of the district of Resht (Reshtān), was between the beginning of the eighth century (706 = 1306-1307) and the end of the ninth (850 = 1457-1467) which was spent in fighting with neighbouring chiefs of Fūmen and Lāhīdjān. The former were victorious and for a time the Biepas, including Resht, was under the _LSākī dynasty of Fūmen. With the coming of sulṭān Ahmad Khān of Biepal the Lāhīdjān dynasty won the upper hand. This period lasted from 911 (1506) till 1592 i.e. till the annexation of Gilān to Persia by Shāh 'Abbās. Among the events of this period was the establishment in Gilān, of which Resht became the administrative and economic centre, of the “Moscowite Company” founded in 1557 (Anthony Jenkinson, Richard and Robert Johnson), who taking the Russian route sent ten expeditions into Persia between 1561 and 1581. It is to note-worthy that the last independent ruler of Gilān, Ahmad Shāh, sent ambassadors to Moscow to seek help against Shāh 'Abbās and obtained promises of protection which however came to nothing. The Cossacks at the same time were plundering in Gilān and Resht and trying to gain the support of the Persian court. The most notable invasion was that of Shēnka Razīn who sacked Resht in 1645 (1636). On the 2nd Safar 1082, the day of Shēnka’s execution, the Persians in Moscow at the time were invited to be present at it (cf. the magazine Kātedr. No. 12, N.S., Dec. 1, 1921). From 1732 to 1734, Resht and Gilān were occupied by the Russians (Shipov, then Matshikhin) invited by the governor who was threatened by the Afghāns. In 1734, Gilān was restored to Persia after a treaty. Rabino quotes a Persian testimony in favour of the Russian occupation. For military reasons the Russians cleared the jungle round Resht.

The history of Gilān and that of Resht, which has always played a preponderant part in it, merges into the general history of Persia after its annexation. We may however touch on a few points in the very modern period short of which Rabino’s work stops. During the Persian Revolution, a body of Social Democrats was sent by the Regional Committee of the Caucasus to Resht, and there helped in Feb. 1909 to overthrow the authority of the Shāh and to establish a revolutionary committee which elected as governor the Sepedhār ʿArām, who played a prominent part in the history of the period along with Serdār Asad Bakhtryārī (cf. Persia v borše za mexavëšmentor, Pavlovic i Transilvanii, Moskow 1925). Resht then became the base of operations of the northern revolutionary army. A few years later, during the Great War, Resht again attracted attention in connection with the movement of the djangeli. Created by Mirza Kūtik Khān, the object of which was to fight against foreign occupation of Persian territory. Assisted by German (von Paschen), Turkish and Russian officers, an armed force was organised to oppose the passage of the English troops under General Dunsterville on their way to Bākū, without much success however (battle of Mendjil, June 12, 1918). The English were able to force their way through with the help of Bıčerákhon’s detachment of Cossacks and established a garrison in Resht. A second battle with the djangeli in the town itself on July 20, 1918 also ended in an English victory. On Aug. 25, peace was signed with Kūtik Khān at Enzeli. At one time, at the end of March 1918, the position of Kūtik Khān was so strong that the capture not only of Kazdın, but even of Teherān was feared. The English Vice-Consul at Resht, Mr. Maclaren, the manager of the Imperial Bank of Persia in this town, Mr. Oaksbot. and Captain Noel of the Intelligence Service were taken prisoners by the djangeli, the latter being held for five months (cf. The Adventures of Dunsterforce by Maj. Gen. L. C. Dunsterville, London 1920).

Resht again became the arena of the revolutionary movement in 1920. After the capture of Bākū on April 28, 1920, by the Reds, the White Fleet sought refuge in the port of Enzeli, which was held by the English. Comrade Raskolnikov, commander of the Red Fleet in the Caspian, pursuing the Whites occupied Enzeli on May 18, 1920 and forced the English to beat a hurried retreat. The appearance of Soviet troops at Enzeli encouraged the revolutionary movement in Gilān and on June 4. a revolutionary and anti-English government of Northern Persia was proclaimed at Resht with Kūtik Khān at its head.

At the first appearance of Red forces at Enzeli and Resht, the peasants had refused to take the land which the communists proposed to take from the landowners. The peasants feared that the khāns would return and make them pay dearly for their expropriation. But at the second occupation (Oct. 1920) of Resht by the Reds the peasants greeted them frantically. Large numbers of them came among the Red soldiers and said that now they would not deliver rice to the landowners any longer and that they would seize all the harvest. The military situation was however confused. After the evacuation of Enzeli the English at first remained on in expectation of events, but they were forced to retire from Resht in June, setting fire to all their military stores. A month later they left Mondjil blowing up the bridge over the Sefid Rūd and began to return to Baghādād. In the meantime the Teherān Government had sent a military expedition against the revolutionaries in Resht. After initial successes, the Persian Cossack brigade suffered checks. It was after this that the second occupation of Resht by the Reds mentioned above took place.

On their side, the English demanded on Oct. 25, 1920 the dismissal of the Russian (White) officers, the instructors of the brigade, who were to be replaced by English. Musht al-Dawla’s government refused to agree to this and resigned on Oct. 27. It was replaced on Nov. 1 by that of Sepedhār, which acceded to the English demands, so that all the armed forces of Persia were now under English control. The latter then on Dec. 19, 1920, sent an ultimatum to the Teherān government ordering the meqlit to be summoned with a view
to the ratification of the Anglo-Persian treaty of Aug. 9, 1919. The English plans were however thwarted by the rapprochement between Persia and the Soviets. On May 20, 1920, Teheran notified Moscow of her recognition of the Soviet Republic of Adharbaidjan, and her desire to enter into pour-parders with the R.S.F.S.R. Having reached Moscow at the beginning of November the Persian delegate Musghawar al-Memalek opened negotiations for the conclusion of a treaty with the Soviets. On Nov. 28, Moscow asked Teheran to accept the Soviet envoy, M. Rothstein. After an attempt in Jan. 1921 to regain the position lost in the north of Persia, where the Soviets still had their troops, by inspiring the Persian note of Jan. 23, which demanded that the Soviets should withdraw their forces from Gilan, the English, in view of Moscow’s firm refusal, took the first steps to remove their troops from Persia and on Feb. 26, 1921 Persia and the R.S.F.S.R. signed a treaty re-establishing diplomatic relations between the two countries. On April 25, 1921, M. Rothstein came to Teheran and in the course of the year the Soviet and English troops left Persian territory. Gilan and Resht then returned definitely to Persia. The last echoes of the revolution in Gilan were the risings of Kerbeli Ibrahim and of Saiyid Djilali in 1921 and 1922.

Bibliography: H. L. Rabino’s work, Les Provinces Caspiennes de la Perse, Le Gilan, in R. M. M., xxxii., 1915–1916, is authoritative. It contains a very complete bibliography to which we can only add, in addition to a few books and articles mentioned above in the text, a curious brochure entitled Teyseyiye Hafiz, written by Hadrji Saiyid Mahmod of Resht and published in 1910. It deals with the agrarian system in Gilan.—La domination des Dailamites by V. Minorsky (publ. by the Societe des Etudes Iran., No. 3, Paris 1932) may also be mentioned.

(E. NIKITINE)

RESMI, AHMAD, OTTOMAN STATESMAN AND HISTORIAN. Aljmad b. Ibrahim, known as Resmi, belonged to the Kethunyo (Turk. Resmo: hence his epithet) in Crete and was of Greek descent (cf. J. v. Hammer, G.O.R., viii. 202). He was born in 1112 (1700) and came in 1146 (1733) to Stamboul where he was educated, married a daughter of the Reis Efendi Ta’bdkji Musafa and entered the service of the Porte. He held a number of offices in various towns (cf. Siqjil-i ottmanii, ii. 380 sq.). In Safar 1171 (Oct. 1757) he went as Ottoman envoy to Vienna and on his return made a written report of his impressions and experiences. In Dhu l-Ka’dad 1176 (May 1763) he was again sent to Europe, this time as ambassador to the Russian court in Berlin. He also wrote a very full account of this mission, which early attracted attention, in the west also, for its views on Russian policy, its description of Berlin and its inhabitants and all sorts of observations on related topics. After filling a number of other important offices he died on the 2nd Shawwal 1197 (Aug. 31, 1783; on this date cf. Babinger, G. O. W., p. 309, note 2) in Stamboul. His tomb is in the Selimiye quarter of Scutarli.

In addition to the descriptions already mentioned of his embassies (cf. for instance) to Vienna and Berlin, Aljmad Resmi wrote in connection with the Russo-Turkish war and the peace of Küçük Kaynarzane, (1769–1774) a treatise entitled Khatteset-ul-Pitakah, in which as a participant in the campaign and eye-witness, he gave his impressions of this important period in the history of Turkey. Of especial value are his biographical collections, particularly his Khattset el-Ri’esa (composed in 1157 = 1744) with the biographies of 64 chancellors (reis efendiler), and his Humicdlet (Hamidlet) ul-Kubara, in which he gives the lives of the chief eunuchs of the Imperial Harem (bijdar aghzalar). Of a similar nature is his continuation (written in 1177 = 1766) of the “deaths” (cf. Savat) of Mehem Emin b. Haddji Mehemd called Alay-Beyli-zade, in which he gives in twelve lists the deaths of famous men and women (cf. the accurate list of contents in J. v. Hammer, G.O.R., i. 187 sq., No. 14). He also wrote several other works on geology and proverbs. His reports of embezzles are available in numerous manuscripts (cf. the list in Babinger, G. O. W., p. 311, to which should be added: Berlin, SansKri, MS. Or. 4° 1502, fol. 239 to 46 [incomplete], Paris Bibl. Nat., Suppl. Turc No. 510 [2], Paris, Cl. Huart Coll.), printed editions and translations, which are listed by Babinger, G. O. W., p. 311.

To these is to be added the Polish translation Podroz Resmi Ahmed-Efendego de Polski i poselstwo jeg do Prus 1777 (according to Wasif, Ta’bdk, i. 239 sq.) in J. S. Sekowsky, Collectanea z Dziejopisw Turcickich, vol. ii., Warsaw 1825, p. 222–289.

Bibliography: Siqjil-i ottmanii, ii. 380 sq.; Brussali Mehemd Tahir, Ottmanii Med’lifleri, iii. 58 sq. (with list of works); F. Babinger, G. O. W., p. 309–312.

(FRANZ BABINGER)

REWANI, AN OTTOMAN POET. His real name was Ilyas or Shuda and he belonged to Adrianople. He is said to have taken his pen-name of Rewani from the river Tandja which flowed past (rewani) his garden. He entered the service of Sultan Bayazid II (1481–1512) in Stamboul and was sent by him as administrator of the suqer, the annual sum for the poor of Mecca and Medina, to the holy cities to distribute the money. He embalmed part of it however and on the accusation of the Meccans his salary was stopped; a malady of the eyes, which then affected Rewani, was described by a poet hostile to him as the just punishment of God, whereupon Rewani answered him, also in verse, and calmly confessed: “He who has honey licks his fingers”. He then fled to the court of Prince Selim in Trebizond and entered his service. But he had to disappear from here also as he had committed some indiscretion and his property was confiscated (some sources put his appointment to the suqer at this date); he was however pardoned by Selim and henceforth served him all the more faithfully. When Selim in 918 (1512) came to Stamboul to dethrone his father Bayazid, Rewani is said at the last decisive council of war to have thrown his turban in the air with joy and to have praised the day. After Selim’s accession he was appointed superintendent of the kitchen (maftab bah emini), then entrusted with the administration of the Aya Sofya and of the hot baths (kutuhija) in Brusa. He built a mosque in the Kik Cehme quarter of Stamboul which was called after him and he was buried there on his death in 930 (1523).

Rewani left a dervish and a mehmetu entitled ‘Isher-name or Kitab-i Walla’i. In the still unpublished mehmetu, which is not very long, he describes the drinking bouts of his time in all
brought it within the range of Islamic expeditions on several occasions.

In the first century of the Hijra, the Caliph Mu'awiya [q. v.] sent a fleet under the command of Diuana b. Abi Umayya al-Azdi to invade Rhodes. The date is variously placed in 52 and 53 (672-73) (see Caetani, Chronographia Islamica, for this variance in the sources). Little is known about this early expedition, except that the Arabs founded a short-lived settlement, which was evacuated in 60 (679-680) by the order of the second Umayyad Caliph Yazid [q. v.]. The island was thus recovered by the Byzantine Empire with whose historical sources the Arab occupation is long remembered by the complete destruction and sale of the famous bronze "Colossus of Rhodes" to a Jewish merchant of Emesa. The metal is said to have amounted to 880 camel-loads.

In 1308 or 1310 A.D., during the reign of Andronicus II Palaeologus, Rhodes was seized by the Knights Hospitallers who had been expelled from 'Akkā in 1291 by Sultan Khalil [q. v.], son of 'Abd al-'Azīz. The Order of Saint John of Jerusalem now came to be known as the Knights of Rhodes, under whose rule the island became a thorn in the side of Islam as one of the strongest outposts of Latin Christianity in the Levant. Thence the Knights played a prominent part in most of the forthcoming crusades against Turkey and Egypt, notably in the capture of Smyrna in 1444, the sack of Alexandria in 1565 and in the Crusade of Nikopolis (q. v.) in 1396. The second of these attacks determined the Egyptians to start a series of counter-offensive expeditions against Cyprus and Rhodes. Three naval expeditions in 1424, 1425 and 1426 resulted in the annexation of Cyprus as a tributary state to Egypt.

The Mamluks then turned their plans to the conquest of Rhodes during the reign of Çânak. In 1440, they manned a flotilla of 15 galleys with 200 regulars and several hundred volunteers. These sailed from Damietta to Cyprus for revictualling and to 'Alīya in Asia Minor, where its Muslim Amir reinforced them with more warriors and four galleys, then direct to Rhodes. The Knights were, however, prepared for the attack, and, after a few skirmishes, the Mamluk fleet retreated under cover of night. In 1443, another fleet sailed from Damietta to Barli, Tripoli, Larnaca, Limassol and Adalia to collect free provisions from subject and friendly states. Their first objective was the little island of Châteauroux or Castellorizo, known in the contemporary Arabic sources as Khâshi al-Rūbi. This island belonged to the Knights, and the Egyptians had no difficulty in occupying it. Afterwards they returned to Damietta owing to the approach of winter. In 1444, a third and more elaborate expedition was launched against Rhodes. The Egyptian fleet, carrying no less than a thousand Mamluks, sailed from Damietta to Tripoli and direct to Rhodes. This time they succeeded in landing on the Island and in setting siege to the city of Rhodes for a period of forty days, during which they pillaged all the neighbouring villages. Finally, the Knights sailed from the beleaguered town and took the offensive. Thus taken by surprise, the Egyptian army sustained considerable losses and sailed back to Damietta.

The success of the Knights in the repulse of so strong an enemy as Mamluk Egypt may be ascribed to three main causes: first, the system

**Table of Contents**

- Rhodes, the furthest island of the Archipelago to the east. Rhodes extends from S.W. to N.E. and is about twelve miles off the south coast of Asia Minor. Its length is approximately 45 miles and its greatest breadth from 20 to 25 miles. The island rises gradually from the sea to a central range of mountains, the highest peak of which is that of Mount Artamiti. 6,000 feet above sea-level. Its geographical situation within reasonable reach of the three Continents of the Old World explains its importance in maritime history; and its nearness to the empires of the Arabs, Egyptians and Ottomans in succession...
of espionage which the Order maintained in all hostile countries in order to keep their headquarters in perfect readiness for effective action at the appropriate moment; second, the great strength of the fortification of Rhodes which was made possible by its prosperity as one of the chief centres of trade in the Levant; and third, the nature of the military training of the Knights, their unity and their extraordinary valour in battle. Peace was eventually established between Egypt and Rhodes through the mediation of Jacques Cœur, the great French merchant prince of the fifteenth century, who was in favour at the court of the Sultan. The task of a decisive counter-crusade against Rhodes remained for the Ottoman Sultans. Muhammad II besieged the capital with some slender measure of success in 1480; but it was not till the reign of Sultan the Magnificent [q.v.] that the Knights were finally overthrown after one of the most heroic defences ever known.

On December 24, 1522, the island became the seat of a Turkish Pasha, and remained under Ottoman sovereignty until it was captured by Italy during the war of 1912 and finally passed to Italian rule by virtue of the Treaty of Lausanne (July 24, 1923).

In the year 1912, during the war between Turkey and Italy, the Italians occupied the island of Rhodes and the Southern Sporades and held them till 1923 when Turkey (treaty of Lausanne) renounced all claim to Rhodes and the islands, which are now under the sovereignty of Italy, and constitute the "Possedimento delle isole italiane dell'Egeo"; the principal islands are 14 in number; we give them here with their historical Turkish names which are really Greek, in brackets (with the exception of Indjirda): Rodi (Rodos), Calchi (Karki and Khaki), Calino (Kalimnos), Caso (Kaşhî), Castelrosso (Kastelorizo, Meyis), Coo (Istankoy), Lero (Leros), Lissos (Lipnos), Nisiro (Nisinos, Indjirdî), Patmo (Patmos), Piscopi (Piskopis, Tilos, Eliyäki), Scarpanto (Kerpe), Simi (Sambeki), Stampalia (Astropalai). The extent of the "Possedimento" is 2,607 km. and the total population 130,855 (census of April 21, 1931) of whom 54,818 are in the island of Rhodes. The inhabitants are distributed as regards language and religion as follows: 104,485 Greek Orthodox speaking Greek, 8,276 Muslims speaking Turkish, 4,481 Jews speaking Spanish Hebrew, 8,000 Roman Catholics speaking Italian. The Muslims are in the islands of Rhodes and Crete. Like the rest of the population, the Muslims are exempted from military service; they have elementary schools, a madîresse in Rhodes, special unearthly at Rhodes and Crete for questions of private law.

Turkish and Muhammadan monuments. The Turks did not modify very much the topography of Rhodes; at most they did something to intensify an appearance already generally oriental; they turned the churches into mosques and built new ones; the most remarkable are the mosque of the Sultan Pasha (917 = 1540–1541), the mosque of Redjeb Pasha (996 = 1587–1588), the mosque of Murâd Re'îs (celebrated Re'îs killed in a naval battle off Cypria in 1609), built by Âbu Bakr Pasha in 1646 (1636–1637) and repaired by Murâbît (Hasan Bey in 1212 (1717–1718), the mosque of Sultan Mustâfî (1178 = 1764). The mosque of Sultan Sulaimân is modern.

We may also mention the library at Rhodes which contains Arabic, Persian and Turkish MSS., founded as a waqf between 1791–1792 and 1799 by the Rhodian Hâfîz Ahmed Agha.

The Muslim cemeteries, which lie under the walls of the fortress, go back in part to the siege of 1522; there are many tombs of men of note who died in captivity or exile in Rhodes in the enclosures of the tekke of Murâd Re'îs; among them we may mention: Djânî Girîş Khan (d. 1636), Shâhîn Girî Khan (killed 1640), Sa'âdet Girîyân Khan (d. 1665); Sâfi (the pretended son of Husain, Shâh of Persia, d. 1175 = 1755–1756), the poet Hashîmet (d. 1182 = 1768–1769), the grand vizier Yusuf Pasha (killed in 1757), the general 'Abd al-Karim Pasha (d. 1302 = 1884–1885).

RIBA (A), lit. increase, as a technical term, usury and interest, and in general any unjustified increase of capital for which no compensation is given. Derivatives from the same root are used in other Semitic languages to describe interest.

1. Transactions with a fixed time limit and payment of interest, as well as speculations of all kinds, formed an essential element in the highly developed trading system of Mecca (cf. Lammens, La Meque à la veille de l'islam, p. 139 sqq., 155 sqq., 215 sqq.). Among the details given by the Muslim sources, we may believe at least the statement that a debtor who could not repay the capital (money or goods) with the accumulated interest at the time it fell due, was given an extension of time in which to pay, but at the same time the sum due was doubled. This is clearly referred to in two passages in the Qurʾān (Sūra ii. 130: xxx. 39) and is in keeping with a still usual practice. As early as Sūra xxx. 30 of the third Meccan period (on the dating cf. Noldeke-Schwally, Geschichte des Qorʾān, i.) the Qurʾān contrasts ribā with the obligation to pay zālidḥ without the foresight for it. What ever ye give in usury to gain interest from men's substance shall not bear interest with Allāh, but what ye give as zālidḥ in seeking the face of Allāh, that shall bear double.” The express prohibition follows in Sūra ii. 130 (Mecca, obviously earlier than the following passage). “Believers, do not seek usury as a gain double” (this prohibition was to be intensified in Sūra ii. 275–280, evidently of the earlier Medinese period, cf. on the following passage). “Those who devours ribā shall only rise again as one whom Satan strikes with his touch; because they say, ‘selling is like usury’. but Allāh has permitted selling and forbidden usury. He therefore who receives a warning from his Lord and abstains shall have pardon for what is past and his affair is with Allāh; but they who relapse to usury, are the people of Hell, they shall remain in it for ever. Allāh abhors usury and maketh alm散布 bring interest; Allāh loveth not sinful unbelievers. … Believers, fear Allāh and remit the balance of the ribā if ye be believers. But if ye do not, be prepared for war from Allāh and his apostle. If ye repent, ye shall receive your capital without doing an injustice or suffering injustice. If any one is in difficulty, let there be a delay till he is able to pay, but it is better for you to remit if ye he wise”. To evade the dogmatic difficulty of an eternal punishment for the sin of a believer, the passage in question (already presupposed in Tabari) has been interpreted to mean that by relapse is meant the holding lawful and no:

the taking of interest; in any case the Qurʾān regards ribā as a practice of unbelievers and demands as a test of belief that it should be abandoned. It comes up again in Sūra iv. 161 (of the period between the end of the year 3 and the end of the year 5, this also gives a clue to the date of the preceeding passage) in a passage which sums up the reproaches levelled against the Jews: “And because they take ribā, while it was forbidden them and nevour uselessly the substance of the people”. The fact that the principal passages against interest belong to the Medina period and that the Jews are reproached with breaking the prohibition, suggests that the Muslim prohibition of ribā owes less to conditions in Mecca than to the Prophet’s closer acquaintance with Jewish doctrine and practice in Medina. In the later development of the teaching on the subject as we find it in tradition, Jewish influence is in any case undeniable (cf. Juynboll, Hand- leiding, p. 286).

2. The traditions give varying answers to the question what forms of business come under the Qurʾānic prohibition of ribā, none of which can be regarded as authoritative. The ignorance of the correct interpretation is emphasised in a tendentious tradition, obviously put into circulation by interested individuals (the tradition is probably older than Lammens, op. cit., p. 214, thinks); according to this view, the principal passage in Sūra ii. 280 is the latest in the whole Qurʾān, which the Prophet could not expound before his death. That the rigid prohibition of usury in Muhammadan law only developed gradually is clear from many traditions. Alongside of the view repeatedly expressed, but also challenged, that ribā consists only in (the increase of substance in) a business agreement with a fixed period (nasalat, nasīrat, dain) we have the still more distinct statement that there is no ribā if the transfer of ownership takes place immediately (raḍan bi-yayf). But even in arrangements with a time limit, a number of traditions presuppose a general ignorance of the later restrictions: for example we are told that in Baṣra under the Tabārānī gold was sold on credit for silver (this may be an anti-Umayyad bias — cf. below on Muʿawya—but it is illuminating); but at a later date such details of the traditions against ribā were to some extent dropped. What was generally understood in the earliest period as the ribā forbidden in the Qurʾān, seems only to have been interest on loans (chiefly of money and foodstuffs); anything that goes beyond this is to be regarded as a later development. The reason for such prohibitions is at different times said to be the fear of ribā and sometimes we have underlying the recognition that there is no tradition of the Prophet relating to this. This is also expressed in the form that nine-tenths of the permitted is renounced or that ribā was conceived as going as far as ten times the capital. The view which later became authoritative is laid down in a group of traditions of which one characteristic example is added: “gold for gold, silver for silver, wheat for wheat, barley for barley, dates for dates, salt for salt, the same thing for the same thing, like for like, measure for measure; but if these things are different, sell them as you please if it is (only) done measure for measure”. Another common tradition expressly forbids the exchange of different quantities of the same thing but of different quality (cf. below).
Other traditions demand equality of quantity even in the sale of manufactured precious metals. This last case seems to have been especially discussed, and on more than one occasion Mu‘āwiyah appears as champion of the opposite view and practice (this again has a distinctly anti-Umayyad bias). Particularly conscientious people went even further in their limitation of ribā than the generality and would only exchange wheat for barley in equal quantities. Still stricter was the view that the exchange of even the same quantities of the same thing, especially of precious metals, was ribā. This view must be older than a difference from the usual opinion (e.g. Muslim, Rîbî bâ’i uthâram miṣbâh bi-miṣbâh), which is based on the secondary interpretation of an already recognised tradition, which obviously only forbade the exchange of different quantities of the same thing but of different quality (cf. above). This same general prohibition of exchange is also given for dates. The question whether any party to an agreement can voluntarily give the other a bonus, is denied for an exchange, but affirmed for a loan. The reduction of the amount of the debt if the loan is voluntarily paid before it falls due, is sometimes approved as the opposite of ribā, sometimes disapproved, sometimes forbidden as being equivalent to ribā; in any case it is clear that the practice existed. On the sale of an animal for an animal on credit, opinion is also not unanimous.

Numerous traditions forbid ribā without defining it more closely; the Prophet is said to have uttered this prohibition at his farewell migration (scarce historical). Ribā is one of the gravest sins. Even the least of its many forms is as bad as incest and so on. All who take part in transaction involving ribā are cursed, the guilty are threatened with hell, various kinds of punishment are described; in this world also gains from ribā will bring no good. In spite of all this tradition foresees that ribā will prevail.

In connection with ribā tradition mentions various antiquated forms of sale of special kinds, like muḥāṣala, muḥāṣara, muḍābana etc., which concern the exchange of different stages in the manufacture or development of the same thing, or of different qualities, and which are forbidden: an exception is made, obviously because of its undeniable practical end social necessity, of what is known as arṣa (plur. arṣâ), fresh dates on trees intended to be eaten, which is permitted to exchange in small quantities for dried dates.

3. While the existence of the Karâr nichrome of ribā has never been doubted, the difference of opinion that finds expression in tradition regarding the relevant facts is continued in the earliest stage of development of Muḥammadan law. Uncertainty prevails regarding the main lines of the limitations to be imposed upon the exchange of goods capable of ribā (māl ribāwî); it is only permitted if transfer of ownership takes place at once and, so far as goods of the same kind are concerned, only in equal quantities. In the case of a loan it is forbidden to make a condition that a larger quantity shall be returned without regard to the kind of article. Gold and silver are generally regarded as māl ribāwî (only quite exceptionally are coins of small denomination included). All the greater are the differences of opinion as to what things outside of the precious metals are liable to the ribā ordinances. In isolated cases one still finds views that show themselves un influenced in principle by the authoritative group of traditions (cf. above), e.g. when everything realisable is subject to the ribā ordinances (Ibn Kaisân) or all business dealings in things of the same kind (Ibn Sirin, Ḥammâd) or when everything liable to zakât is considered capable of ribā (Kâbî b. ‘Abd al-Râhîm). Other opinions differ in the treatment of property capable of ribā from that group of traditions, although it is not known what they understand by this; possibly if at an exchange of the same kind of thing not equality of quantity but equality of value in two quantities is demanded (Ḥasan al-Ḥâṣîr) or equality of quantity also in the exchange of different kinds apparently within a limited circle of goods capable of ribā (Sa’d b. Ḥujâlarî). The old interpretation that there is no ribā if the transfer of possession takes place at once is ascribed to ‘Aṭâ’ and the jurists of Medina. The views of most authorities however and in particular those which survive later in the law schools assume the literal acceptance of the text of that group of traditions and differ only in its interpretation. Thus there are mentioned as precursors of the later Zâhirî doctrine: Tâwâs, Masrûs, al-Sha’bî, Ḥâtâdâ, Ŝalmân al-Bâttî; as precursors of the Ḥanafî view: al-Zâhùrî, al-Ḥâkâm, Ḥammâd (cf. however above), Sufyân al-Thâwîrî; as precursors of the earlier view of al-Shâfî: Sa’d b. al-Muṣâyiüb and others; as precursors of his later view: al-Zâhûrî (cf. however above) and Yâhya b. Sa’d. On the question whether a loan can be made in another kind and whether or not defects are revealed in an exchange of māl ribâwî after it has changed hands, there are old differences of opinion.

4. In the above mentioned group of traditions the following goods in addition to gold and silver are expressly mentioned as bearing the prohibition of ribā at their exchange: wheat, barley, dates and salt (sometimes also raisins, butter and oil). The Zâhirîs, as a result of their refusal on principle to accept analogy (kiyâs), assume that the prohibition applies only to the six things especially named (the other kinds are rejected as not well attested). The other schools of law, on the other hand, consider the kinds mentioned in tradition only as examples of the variety of things that come under māl ribāwî, but differ from one another in their lists of these things. According to the Ḥanâfîs and Zâdîs (also al-Awāzî), gold and silver represent examples of the class of things defined by weight (mâṣâlah) and the four other things those sold by measure (mâlikî). The Islamic teaching is practically the same. According to the Mâlikîs and Shâfîs, gold and silver represent the class of precious metals and the four other things the class of foodstuffs: the latter, in the Mâlikî view, including actual edibles so far as they can be preserved, according to the older view of al-Shâfî, provisions which are sold by weight and measure; according to his later view, which is also that of his school, foodstuffs without any qualification. The teaching of the Ḥanbalîs corresponds to that of the Ḥanâfîs; as regards the “four kinds”, two further opinions of Aḥmad b. Ḥanbal are handed down which correspond to the two views held by al-Shâfî. In these, wheat and barley are regarded as two different kinds by the Ḥanâfîs, the Shâfîs and the better known tradition of the Ḥanbalîs (as well as Zâhirîs, Zâdîs and Ima’mîs); as one kind
RIBĀ — RIBĀT

according to the Hanbalis (also according to al-Kath'īb b. Ṣadr and al-Awāzī'). The Hanafis and the Ḥanūfīs, in contrast to the other schools, are content, in so far as it is not a question of the exchange of precious metals, with fixing the quantities, and do not demand actual change of ownership during the negotiation (madā‘īrī). The Zāhiriyya, in the strict interpretation of the text of one tradition, in every case demand a change of ownership in the fullest sense at once. The sale of fresh dates for dried dates is forbidden by all schools except the Hanafis on the authority of one tradition, the bari‘āt on the other hand is not permitted by the Hanafis., but regulated by the other schools, without any uniformity: as regards exchange of the same material in different stages of manufacture there are many differences of opinion. As regards the exchange of goods of the same kind which are not māl nūbūg, the difference of quantity is generally permitted, postponement (yusī‘a, nāsī‘) of the single payment still forbidden by the Hanafis and Zāhiriyya, but permitted by the other schools (with differences in detail). At the sale of wares, even of those which are māl nūbūg, for precious metal, the payment at later date (salām) and sale on credit (bar’āt al-bimar) with postponement of delivery or of payment is permitted. The apparent contradiction of analogy in the salām, which forms a type of transaction by itself, has given rise to discussion on principle. The postponement of both sales of the transaction is regarded on the authority of a tradition as entirely forbidden in all agreements regarding sale or exchange.

The prohibition of ribā plays a considerable part in the system of Muhammadan law. The structure of the greater part of the law of contract is explained by the endeavour to enforce prohibition of ribā and māsit (i.e. risk; q.v.) to the last detail of the law (Biegstrasser, in ib., xiv. 79) Ribā in a loan exists not only when one insists upon the repayment of a larger quantity, but if any advantage at all is demanded. Therefore even exchange (tanzf) is sometimes actually forbidden (as by the Sha‘fi‘īs) because the vendor, who is regarded as the creditor, reaps the advantage of avoiding cost of transport. This did not prevent the widespread acceptance of this arrangement in the Arabic middle ages and its influence upon European money-lending. But they were always conscious that a direct breach of the prohibition of ribā was a deadly sin. Most Muslims to this day therefore not infrequently refuse to take bank interest. The importance of the prohibition of ribā on the one hand deeply affecting everyday life and the requirements of commerce on the other have given rise to a number of methods of evasion. Against some of these there is nothing formally to object from the standpoint of the law; they are therefore given in many lawbooks and expressly said to be permitted. The Sha‘fi‘īs, the later Hanafis and the Ḥanūfīs have recognised such methods of evasion which the Mālikis, the Hanbalis and the Zāhiriyya reject them. The recognition of these methods of evasion is not contrary to the strict enforcement of the prohibition in the fiqh. The inner significance of decrees of the divine law naturally cannot be understood by the mind of man. This is shown in the case of ribā in the limitation to certain kinds of goods. The Zāhiriyya are thus among the most energetic defenders of evasions of the prohibition of ribā. Their line of argument is based not only on their formal negative rejection of deduction by analogy but also upon their positive estimation of the intention underlying the evasions.

One of the oldest transactions of this kind against which several traditions are already directed, is the double contract of sale (from one of its elements it is called bar’āt al-fr‘is, credit sale par excellence); one sells to someone who wants to lend money at interest something against the total sum of capital and interest which are to be due at a fixed date, and at the same time buys the article back for the capital which is at once handed over. This transaction was taken over in mediaeval Europe under the name of mahātra (from the Ar. mahāṭara; cf. Juynboll, Handulding p. 289, note 1, and E. Basd, in Rivista di storia del diritto italiano, v., part 2). Another method of evasion consists of handing over to the creditor the use of a thing as interest by a fictitious agreement to sell or to pledge. All these practices are still in use and in spite of the prohibition of ribā money-lending is a flourishing business in most Muslim countries (50% is often regarded as moderate interest).

(JOSEPH SCHACHT)

RIBĀT (A.), a fortified Muhammadan monastery. Of the various explanations that have been given of this word from the root rat'āt: "to bind, attach," the most reasonable is that which refers to the Qur‘ān, vii. 62: "Prepare against them (the enemies of Allah) all that ye possess of strength and places for horses..." (muta‘ribāt 'l-khailī). The ribāt is originally a place where the mounts are assembled and hobbled to
be kept in readiness for an expedition. Ribāt also has the closely related meanings of relay of bances for a courier, caravaner. The word however was early applied to an establishment at once religious and military which seems quite specifically Muhammadan.

The institution of the ribāt is connected with the duty of the holy war [see DIHĀD], the defence of the lands of Islam and their extension by force of arms. The Byzantine empire was acquainted with the fortified monastery, like Mandrakion built at Carthage near the sea, mentioned by Procopius; but it seems doubtful if the monks living in it played any military part. The regular or occasional occupants of the ribāt are essentially fighters for faith. The ribāt are primarily fortresses, places of concentration of troops at exposed points on the Muhammadan frontier. Like western castles, they offer a refuge to the inhabitants of the surrounding country in time of danger. They serve as watch-towers from which an alarm can be given to the threatened populace and to the garrisons of the frontier and interior of the country who could support the efforts of the defenders. The structure of the ribāt therefore consisted of a fortified surrounding wall with living rooms, magazines of arms and storehouses for provisions and a tower for signalling. This architectural scheme, the development of which will be indicated below, was of course often very summarily treated. The ribāt in many cases was reduced to a watch-tower and a little fort like those the Byzantines built on their frontiers. This explains the considerable number of ribāts mentioned by the geographers. We are told that in Transoxiana alone there were no less than 10,000 (Ibn Khallikān, transl. de Slane, i. 159, N. 3). The coasts were also amply provided for. There were ribāts all along the coast of Palestine and of Africa. The fire-towers, attached to the ribāt or isolated, enabled messages, we are told, to be sent in one night from Alexandria to Cæuta. This is clearly an exaggeration. Nevertheless we may note a fairly rapid system of signalling and the mention of Alexandria, the pharos of which seems to have served as a ribāt. The Spanish coast also had its ribāts, as had the frontier against the Christian kingdoms, especially after the coming of the Almoravids, which saw an intensification of the rifāʿ. For Sicily, Ibn Ḥawḵal gives some curious information about the ribāts near Palermo and the little town of Rabato in the island of Gozo in the Maltese archipelago.

Devotion to religion stimulated individuals to multiply their foundations, notably in Ifriqiya in the vicinity of towns like Tripoli and Sfax. It was a work of piety to build a ribāt at one’s own expense or strengthen its defences. It was equally meritorious to urge men to go there to serve the cause of Islam, to revictual the garrison, lastly and above all to go there oneself. For the coast of Palestine, al-Muḥammadī tells us of another use of the ribāt equally pleasing to Allah. Their fires were used to signal the approach of Christian vessels bringing Muslim prisoners whose exchange had been arranged. Everyone endeavoured to take part in this according to his means.

The building of the large ribāts and of many of the smaller ones was naturally the task of the sovereigns of the country. In Ifriqiya the first was that of Monastir [q. v.] built by the ‘Abbasid governor Ḥaṭṭama b. Aʿyān (179 = 795). The third (ninth) century was the golden age: the Aghlabids all along the eastern coasts multiplied ribāts in the strict sense and muqāras; this word means a fortified area containing a small garrison or a watch-tower. Monastir retained the pre-eminence which the Prophet himself is said to have foretold for it. In the xith century the dead were brought from al-Mahdiyya to enjoy the blessing of being buried there. But the ribāt of Sus founded by the Aghlabid Ziyādat Allah in 260 (821) had assumed considerable importance. We know that Sus was the port from which the troops embarked for the conquest of Sicily.

Compared with the east coast of Ifriqiya, which was directly threatened by attacks of the Rūm or which was the base for expeditions across the sea, the rest of the Barbary coast was less well supplied. There were however ribāts on the coast of the extreme Maghribi, at Nakūr and Arzila to prevent raiding by the Normans pirates, and at Salé to facilitate the war against the Barghawata [q. v.] heretics.

If the majority of the ribāts were official foundations, the service done by the combatants in them does not seem to have been in any way compulsory. The men of the ribāt, the muḥāsifūn, were volunteers, pious individuals who had taken a vow to devote themselves to the defence of Islam. Some may have entered the ribāt like a monastery, to end their days in it, but the great majority only stayed in them for longer or shorter periods, and the garrisons were changed completely several times a year. In the ribāt of Arzila, this change in the garrison took place with the festival of ‘Aḥrār (10th Muḥarram), the beginning of Ramadan and al-ʿId al-Kabīr. An important fair was held on the occasion. In case of alarm the garrisons were reinforced by able-bodied men from the country round, summoned by the beating of drums (Palestine, according to al-Muḥammadī).

Life in the ribāt was spent in military exercises and on guard, but also in devotional exercises. The marabouts prepared themselves for martyrdom by long prayers under the direction of a venerated shāikh. The traveller Ibn Ḥawḵal however reveals a dark side to this edifying picture. Speaking of the ribāts of Palermo in the fourth (tenth) century, he tells us that "they were the rendezvous of the bad characters of the country who thus found a means of livelihood outside of regular society and at the expense of the pious and charitable".

The double character — military and religious — of the life of the marabouts found expression in the architecture of the old ribāts that have survived. Tunisia has preserved those of Monastir and Sus. The first is still very imposing but the frequent restorations have complicated the original plan. The second which is simple may be taken as typical. With its high square wall flanked with semi-circular towers at the corners and the middle of the sides, it recalls the Byzantine forts of the country. The only entrance was by one of the salients in the middle of the wall. A staircase went down in the interior into the central court surrounded by covered galleries and very simple cells. The first storey, reached by two staircases, also consisted of cells on three sides of the court. Along the fourth side was a hall with a niḥāba. This was the oratory of the ribāt. The kiḥla wall was pierced with embrasures. On the level of the
terracas which are above this first storey, is the door of the signal tower, cylindrical in form, which rises from the square base of a salient at one corner and dominates the fortress from a height of about 60 feet. A little douce which also rises above the terraces crown, as in the mosque of the period, the square area in front of the mausoleum in the oratory.

The ribāt of Śūs takes us back to the heroic times when the institution had distinctly a warlike character and these frontier posts played a strategic role on the borders of the lands of Islam. It retained this character in the xi-th—xiiith century in the extreme Maghrib where the struggle with the Christians in Spain kept alive the tradition of the diyād. We know that a ribāt built on an island in the Lower Seguél was the starting place of the career of the Lamtūna Berbers and gave them the name of Almoravids (al-murābīṭīn) under which they became famous in history [see Almoravids]. The Almohads, who succeeded them had also their ribāts, two of which at least are worth mentioning. The ribāt of Tazā [q.v.] was fortified in 528 (1138) by 'Abd Al-Mu'min at the time when he was conducting against the Almoravids a campaign which had all the appearance of a diyād. The Ribāt al-Fath, the term which survives of that of the town of Rabat [q.v.], was, if use was made of embarkation, at least the great camp of concentration for the armies preparing to cross to Spain. The prestige of this Almohad foundation survived the dynasty which built it. Rabat, or rather the adjoining little town of Sbala, also regarded as a ribāt, was the necropolis of the Marinid princes, who in being buried there hoped to share in the merit of the warriors of the faith.

In the xivth century to give Warnung of landings by the Christians on the coast, maqur and signal towers were still being built "to serve as ribāta". Ibn Marrāk, the historiographer of the Marinid Abu 'l-Ḥasan, who tells of them, says however that this task was occupied by paid soldiers. They were not true ribāts, the garrison of which consisted of volunteers. If however we find down to the xvith century, in the extreme Maghrib, a ribāt like that of Asfi playing a military part in the struggle with the Portuguese, in the east, in the lands where the infidels no longer threatened Islam, the institution had changed its character or rather the ascetic discipline and the pious recitations which were the regular practices in the old ribāts had entirely taken the place of military exercises. From the viith (xvith) century or perhaps even earlier, the development of mysticism and the grouping of the Sufis into communities gave these barrack-camp-like structures a new raison d'être by making them monasteries. From Persia, where it originated, this evolution of the ribāts rapidly spread through the Muslim world. In the east the ribāt merged into the Persian khānāka, Ibn Djbair (ed. Wright and de Goeje, p. 243) refers to a khānāka founded by Sūfis which was also called a ribāt, at Rās al-'Ain to the north of the Syrian desert. When however a writer like Ibn al-Shihna describing Aleppo seems to distinguish the khānāka from the ribāt, the difference between them escapes us. It may be supposed that the khārānākī were inhabited by prominent residents who spent their whole lives there and that the ribāts, as before, received devout men for limited periods, but one cannot assert definitely that this was the distinction. In any case the four ribāts within the city of Aleppo (one attached to a madrasa and the mausoleum of its founder with Kur'ān readers and Sūfis) had no longer anything of a military character. It was the same with the two ribāts of Mecca mentioned by Ibn Baṭṭūta. In Cairo the only inscription found by Van Berchem in which a ribāt is mentioned is that of the convent of Malik Āshraf Ṭanāl (860 = 1455). In Barbary, which the wave of eastern mysticism had reached in the xi-th—xiiith century, the term ribāt was likewise retained but applied to the zāwiya [q.v.] in which ascetics gathered round a shaikh or his touch. As a matter of fact Babā Yūn. The ribāt—zāwiya connection makes a distinction which nevertheless still remains obscure. Speaking of the zāwiya founded by Abu 'l-Ḥasan, his master, he tells us first that khānāka, a Persian word, has the same meaning as ribāt and adds: "In the terminology of the fakirs, one understands by ribāt the act of devoting oneself to the holy war and to guarding [the frontiers]. Among the Sūfis it means on the contrary the place in which a man shuts himself up to worship the divinity". This last use of the word seems to be the usual one in his time. The ribāt al-'Ubd ad is the group of pious foundations near Tiemeniz that have grown up around the tomb of the famous mystic Sūfī Madāni. The ribāt of Tarakeddelt to the south west of Oran is dedicated to a saint of the Banū Ismā'īl; the ribāt of Tafertaṣt on the borders of the Wādi Sībī contains the tomb mosque of two Marinid princes and apartments for Ṭanāl [Kur'ān readers].

With this erroneous use of the old Arabic word we might connect the parallel change undergone by the word murābīt (marabout). It is applied to a saint, an individual who by his own merits or the mystic initiation which he had received or his relationship with a zāwiya [q.v.] enjoys the veneration of those around him.

In Muslim Spain, the last land of the diyād, we may suppose that the ribāts continued to study the "successive frontiers with the reconquesta" imposed on the lands of Islam; but to be certain we must wait until the study of the texts and the enquiry being conducted by F. Hernandez and H. Terrasse into the military architecture of Muslim Spain give us precise details regarding the date of the castles and their object. The evolution in meaning of the word ribāt would lead one to think it had ceased to mean a fortress. Among the Arabic authors of Spain and al-Makārī as among the fakirs mentioned by Ibn Marzuk, ribāt is often used to mean a holy war, generally defensive, and it passed into Spanish in the form ribato as J. Oliver Asin has shown with the meaning of "sudden attack executed by body of horsemen, keeping with Muslim tactics". If the Arabic term had lost its original meaning, however, another word derived from it was commonly used in a slightly different meaning. Spain saw the ribāt multipliy and their memory is preserved in place-names in the forms Rápita, Rávita, Rābida. The word ribāt was also known in Barbary. It meant "a hermitage to which a holy man retired and where he lived surrounded by his disciples and his religious servitors" (cf. Makūd, transl. Colin, p. 240 and the article ZAWIYAH). Everything points to its having been the same in the Peninsula. The multiplication of ribātas in Spain and their possible confusion with ribāts are
In preparation:

MATÉRIAUX POUR UN DICTIOINNAIRE ÉTYMOLOGIQUE DE LA LANGUE ARMÉNIENNE

ÉTYMOLOGIE, ORIGINE, COMPARAISON DE 10.000 MOTS

PAR

BEDROS KERESTEDJIAN

Directeur des traductions et de la correspondance étrangère du ministère des finances de Turquie et auteur du dictionnaire étymologique de la langue Turque

ÉDITÉ PAR

SON NEVEU HAIG F. R. A. S.

The "Dictionnaire Étymologique de la langue Arménienne" by Bedros Kerestedjian, a recognised specialist on the subject, and the result of 30 years research, will be published by me in one volume of about 1000 pages and completed probably in 1937. The specimen pages represent the treatment of the linguistic technic and material in an abbreviated yet illustrative form.

The publication of such a scientific book of some 10,000 lemmata is naturally very costly, therefore, for the convenience of purchasers, the book will be published in about 16 parts of 80 pages at 2.50 guilders a part. Payment may be made upon receipt of a part.

It is respectfully requested that all interested students, kindly sign and return the enclosed card at the earliest convenience, so that I get an approximate idea as to the number of copies required, which will materially help to quicken the publication.

The publication will not be undertaken before at least one hundred subscriptions have been received. To ensure securing copies, therefore, subscriptions should be made now. Payment may be made upon receipt of a part. An order from is enclosed.

Once started the completion of the work will take about two years.

LEIDEN

Respectfully yours.

connected with the great movement of mystic piety which, starting in Persia, had brought about the substitution of monasteries — khānāqāh — in the east, sāriwī in Barbary — for the foundations, more military than religious, of the heroic age of Islam.

**RIDA,** an Ottoman biographer of poets. Mehmed Rıdâ b. Mehmed, called Zehir Márid which, belonging to Adrianople. Of his life we know only that he was a time mutafl in Uzun Kopru (near Adrianople) and died in 1082 (1673) in his native city. Besides a collection of poems (*Divân*) Rıdâ wrote a *Tedhkiret-i Shāh*, a biographical collection in which he dealt successfully in alphabetic order with the poets who lived in the first half of the 14th century A.H., i. e. c. 1591-1640. In the introduction he deals with eleven sultans who wrote poetry. The book was completed in 1660 (1640) and in the *ta'dīb* shows. It has been edited by Ahmad Djevedt Bey (*Tedhkire-rı Rıdâ*, Stamboul 1316, 109 p. 9th).

**RIDA KULI KHAN,** b. Muhammad Hadi b. Ismai'îl Kamal, Persian scholar and man of letters, "un des hommes les plus spirituels et les plus aimables que j'ai rencontrés dans aucune partie du monde" (Gobineau). A descendant of the poet Kamal Khudjandi [q. v.], the grandfather of Rıdâ Kulî, chief of the notables of Carah Kaleh (district of Dâmghân), was put to death by the partisans of Karim Khân Zand against whom he supported the Shahs (cf. *Khan* i. *H. A. H.* p. 235). His father became one of the dignitaries of the court of the Kâdjar; in 1215 (1800), while on a pilgrimage to Mashhad, he heard the birth of a son in Teheran to whom he gave the name of the imām. Becoming an orphan in 1802, Rıdâ Kuli spent his early years in Fars; he was brought back from Fars to Teheran, lived some time with relatives at Barfurush (Mazandaran), then returned to Fars where he received his education; he then entered the service of the state under the patronage of the governor-general of Fars. His earliest efforts in poetry were published under the pseudonym of Čikir which he soon changed to that of Hidâyat. In 1829 on the occasion of Fath Ali Shah's stay in Shiraz, he composed a panegyric and other poems which gained him the royal favour; but a serious illness prevented him from leaving Shiraz. In 1838 Muhammad Shâh showed such esteem for him that he entrusted his son 'Abbas Mirza's education to him. The political troubles that followed the Shah's death in 1848 sent Rıdâ Kuli into retirement. In 1851 Nasır al-Din Shâh recalled him and sent him on an embassy to Khiwa. He was next appointed to the Ministry of Education, became Director of the Royal College (dâr al-funun), then fifteen years later, tutor (*vali-bāsi*) to the crown prince Musaffar al-Din whom he followed to Tabriz where he spent several years. He returned to Teheran where he died in 1288 (1871).

Of his very numerous works, several are still unpublished, e. g. some treatises on theology and letters (we mention only the *Mifldh* al-`arab, a commentary on difficult verses in Kajānî, and the *Nizâm-nâme* Salţānî-i *ṣagam-*hādî, on early Persian dynasties: analysed in *T. R. A. S.*, xviii., p. 198). The bulk of his lyrical poetry (*Divân*) is also still unpublished; it totals about 30,000 lines. Of his six *mahmowîl* (enumerated by himself, *Magdum al-*Fı̄rhis, ii. 582) only the epic entitled *Bekirî-nâme* (or *Galistanî-i Fram*), lith. *Tabriz, 1270 = 1853* is published: it celebrates the tragic loves of the hero and the Persian poetess of Arab origin Râbaa Kâdiâr Balîgh, known as Zain al-`Arab. His other works which are published are mainly of a documentary nature and therefore very important. The *Fihrist al-*Tawârîk *(-Repertory of Chronicles*), chronology, lith. in part at Tabriz, was presented to Nasır al-Din Shâh before the author's departure to Khâvarizm (1851); the *Aqīdî al-*Tawârîk *(-I. Tabriz 1283) is a short précis of the history of Persia composed for the crown prince Musaffar al-Din; the *Kawdât al-*Ṣafî-yî Nâsîrî, continuation of the *Rawdât al-*Sufî of Mir Khân and down to 1270 (1853) (*Teheran 1270, 3 vols. fol.), is a work of considerable size, based on eastern sources (of which several are still unpublished) and on official documents, most of which are reproduced in full; in addition to the record of political events the work contains much geographical, literary and artistic information. The *Rıdâ* al-*Arîfîn* (*Gardens of the Initiated*), biographies of mystical poets, with an excellent introduction on Sûfism, was prepared for Muhammad Shâh (not lith. until 1305, Teheran). It is closely connected with the *Magdum al-*Fı̄rhis *(-Assembly of eloquent Individuals*)", of first importance for the history of Persian poetry (lith. Teheran, 2 vols. fol., 1294); this last work, the author's best, contains an introduction to the history of Persian poetry, biographies and select pieces from all the poets (the poet-laureates to form the first section); at the end is an autobiography and an anthology of the poems of Hidâyat (lith., p. 581-678), autobiography and a number of the verses reproduced by the author of the *Fars-nâme-yî Nâsîrî*, ii. 125-
The researches necessary for these last two works showed Hidāyat the inadequacy of the dictionary at his disposal; he intended to remedy this defect in his *Fārsi-i-nāmān-i-ārā-yi Nāṣrī* (lith. Teherān 1288) which, preceded by a remarkable introduction, gives the different meanings of each Persian word, with quotations from the classical poets, and with many examples taken from different poets. Lastly we owe to Hidāyat the first editions of the *Dīwān* of Manūchīr (lith. Teherān 1297), of the *Kūsha-nāmeh* (ibid. 1275) and of the *Nafshat al-Maṣūd* (history of the fall of the Khiwārizm empire) of Muhammad Zastārīrī (publ. posthumously, Teherān 1308). Its autobiographical character gives the attractive "Narrative of a Journey to Khiwārizm" (*Nafshat al-Maṣūd* ed. and transl. Schefer, in *P.E.L.O.V.*, Paris 1879) a special place among his works; he undertook this journey in 1853 as ambassador sent to settle the differences between the courts of Teherān and Khwānah. This journal is a valuable document for the history of the Khānates and has been utilised by later Persian historians (notably Muhammad ʿHasan Khān; q.v.); besides valuable historical, archaeological and geographical matter, the book, which is written in a simple and natural style, is a contribution to the study of the manners and customs of the period (notably conditions of travel); we find in it pretty pictures of native life and charming landscapes. Several of Hidāyat's descendants have taken a prominent part in literature, politics and administration.

(I. MASH)
sistance; his troops scattered and there was nothing left for him but to return to Halab. Yâghi Basân then went over to Dûkâk and suggested he should besiege Ridwan in Halab. The latter however appealed to Sûkmân b. Ortoq in Sarâqib, who at once hurried to his assistance, and when the two brothers met at Khânarânî [q. v.], Dûkâk was completely defeated and had to recognise Ridwan as his overlord (489 = 1096 or 490 = 1097). In order to receive financial and military support from the Fāṭimidûs, Ridwan for four weeks had prayers said for al-Mustâsîf, the caliph in Egypt; but on the representations of Sûkmân and Yâghi Basân, who had in the meanwhile made peace with him, he again paid homage to the ‘Abbasîds and asked for forgiveness from the Caliph al-Mustâghâfir in Bâghdâd. About the same time Djanân al-Dawla left Ridwan, settled in Hîmûn, and improved the defences of the town. He then took up a more independent attitude to his overlord Ridwan, on behalf of whom he left the province before.

In June 1098 Antîkîyâ was stormed by the Crusaders and the Muslim army of relief, which included Ridwan, repulsed whereupon Bohemund was recognised as prince of Antîkîyâ. As his nearest neighbour, Ridwan was soon at war with him. In Sha‘bân 493 (July 1100), he set out to drive the Franks from the country round Halab but was defeated. He then joined forces with Djanân al-Dawla; but when the Christians withdrew and Ridwan became jealous of his ally, Djanân al-Dawla returned to Hîmûn. Soon afterwards the Christians under Bohemund and Tancred again threatened Antîkîyâ. But when the latter appealed to the council of Malatyâ [q. v.] by a Muslim army [see DAKSHMANIYÂ], they suddenly withdrew. Bohemund fell into an ambush and was taken prisoner, Ridwan and Djanân al-Dawla won several successes, but in the end quarrelled with one another, and a year or two later (495 = 1102 or 496 = 1103), the latter was murdered at the instigation of the Assassins of Halab. In Sha‘bân 498 (April—May 1105) Tancred, who had succeeded Bohemund as prince of Antîkîyâ and was also count of Edessa, won a brilliant victory over Ridwan. When Tancred besieged the fortress of Artaç, the governor there appealed to Ridwan for help. But being afraid of the numbers of the Sâliyân army—Tancred was the head of a powerful army and the two forces met near Khânasîr. On seeing the superiority of the Muslim forces, Tancred wanted to open peace negotiations; Ridwan, for his part was not unwilling to meet him but allowed himself to be persuaded by a subordinate commander to refuse, and when the battle began, the Franks at once took to flight but returned and cut down the Muslims while they were plundering. Tancred then occupied Artaç. In 499 (1105—1106) the latter also took the important fortress of Afâmîya (Apamea). An Assassin named Abû Tâhir [cf. ASSASSINS] who was on good terms with Ridwan, had disposed of the commandant there, Khâlaf b. Mula‘îbîn. One of his sons had to Tancred and asked him to expel the supporters of Ridwan; Tancred who had already received an appeal from the Christians of Afâmîya, laid siege to the town. He withdrew after a time but soon returned and starved the town into surrender.

When Cawâli Saqâwû, governor of al-Mawsîl, lost the favour of the Sâlîjûk Sultân Muhammâd b. Malikshâh [q. v.] and was replaced by Mawdûd b. Altunegîn, he gave count Baldwin and Joscelin, who were prisoners there, their liberty on condition that they paid a ransom, liberated Muslim prisoners and assisted him against his enemies. But when Tancred refused to restore the county of Edessa to Baldwin, hostilities broke out and the latter sought the help of Cawâli. After peace had been restored between the Frankish leaders and Edessa was restored to Baldwin, Ridwan wrote to Tancred and warned him against Cawâli, who, he said, had already taken the town of Bâliûn, and was now threatening Halab whereby he might become dangerous to Christian rule in this region. In Safar 502 (Sept.—Oct. 1108) Cawâli, who had joined Baldwin and Joscelin, was defeated at Tell Bâshîr [q. v.]. He lost Bâliûn, and since he could not hold his own against Ridwan and Mawdûd, he had to make his peace with the sultân. The Christian princes then combined to besiege Tripolis, Sâdîâ and Bâlûrut. Tancred took the fortresses of al-Athîrîb and Zârdanûa and when the news reached them, the Muslims abandoned Mânûbîjû and Bâliûn again, and Ridwan had to purchase peace very dearly (504 = 1110—1113). When sultân Muhammad summoned the princes, his vassals, for a vigorous attack on the Franks under the leadership of Mawdûd, the latter was appealed to for help by Ridwan, whose lands the Christians were laying waste in revenge for the damage done by him in Syria. Mawdûd came to his assistance but when he appeared before Halab, Ridwan, who no longer needed him, shut the gates and took no part in the war against the common enemy.

Ridwan died in the last days of Djamâd I 507 (Nov. 1113). As a partisan of the Isâmî Assasins he had at first held Abû ‘Abdâl ‘Allî b. Siwâlî; he even had two of his brothers, ‘Ali Talib and ‘Ali al-Ma‘âmî, assassinated. Ibn al-Athîr (x. 349) also says that his manner of life was by no means laudable (kâmam umr Ridwan ghair muyhînâ).
of Oriental scholars like Jaubert, Jamoud, Sylvestre de Sacy and Cauvin de Perceval. He made rapid progress and soon had a deep knowledge of the French language. From his stay in Paris dates a lively and interesting account entitled *Turki al-farisi* (Bâbîk 1853) in which every line reveals a charming naiveté, and the enthusiasm aroused in this Oriental mind by the manifold aspects and lights and shades of French life and culture (cf. Carra de Vaux, *Penseurs*, v. 232 sqq.). On his return to Egypt (1852) he was attached as interpreter and professor of French to the school of medicine directed by Dr. Clot Bey and also entrusted with the editorship of the *Informations égyptiennes* which later became the *Journal Officiel*. In 1852 he was transferred to the school of artillery and in 1853 appointed Director of the school of foreign languages (originally the "Translation Office"). He remained in this post until the accession of Abbas II. In this role he continued the brilliant work of his predecessor: the school of languages was closed and its director sent— a disgrace barely concealed— to the Sûdân to organise the high school at Khartûm.

On the death of 'Abdûl, Rifâ'a returned to Egypt. Sa'id Pasha appointed him Director of the military school, for a very brief period, however, for the school in its turn was closed and Rifâ'a found himself unemployed.

In the reign of Isâmî in 1853, the school was reopened and our author again became Director of the "Translation Office". In 1870, he became editor in chief of the educational review *Bagdad al-Mafrîsî* (fortnightly) and died in 1875. Rifâ'a Bey was one of the most important Arab writers of the 19th century and his name is closely associated with the brilliant revival of literary and scientific activity in the modern east. An enquiring spirit of unusual intelligence, he left behind him a considerable amount of work in all fields: history, geography, grammar, law, literature, medicine etc.; details will be found in Sarks, *Dictionnaire bibliographique*, p. 942—947. We may note here only his translations of Telemâque, of Malte-Brun's *Geography* and the French Code Civil.

To appreciate the magnitude of the part he played, it must be remembered that at the dawn of the last century, the Arab world was in a state of semi-torpor and separated from European learning by a dense barrier: it was with difficulty that al-Ashâr shed a dim light on the darkness that covered this period.

As a result of his works, his activity and the phalanx of experts and translators which he gave the country, Rifâ'a accomplished the miracle of popularising European science, of opening the east to modern ideas, enlightening the minds of his contemporaries, awakening dormant energies and preparing the ground for future developments.

We can measure the effort if we reflect that he and his pupils translated into Arabic and Turkish nearly 2,000 works.

On the other hand by expanding the framework of the old classical language and by varying it and enriching it with a mass of new words, he enabled Arab thought to adapt itself to progress and to extend its light over modern Islam.

(Maurice Chemouil)

**AL-RIFA'I, ABD AL, FOUNDER OF THE RIFA'I SCHOOL**, died 22nd Dhu- 

Mâdâ i, 578 (Sept. 23, 1183) at Umm 'Abâda, in the district of Wasôt. The date of his birth is given by some authorities as Muharram 300 (Sept. 1109), but others say Rajab 12 (Oct. 1118); at Kayrat Hasan, a village in the district of Bassâ. These places being in the region called al-Baṭarî (q. v.), he has the further nickname al-Bâtâlî; al-Rifa'i is usually explained as referring to an ancestor Rifâ'a, but by some is supposed to be a tribal name. This ancestor Rifâ'a is said to have migrated from Mecca to Seville in Spain in 217, whence Ahmad's grandfather came to Bassa in 450. Hence he is also called al-Maghribî.

Ibn Khallîkân's notice of him is meagre; more is given in Dhababi's *Turkî al-Islâm* (Boileau MS.), taken from a collection of his *Manahîj bi Mu'ayyî 'l-Dîn Ahmad b. Sulamîn al-Hasanî*, received by him to a disciple in 688. This book does not appear in the lists of treatises on the same subject furnished by Abu l-Hâdhâk Efendi al-Kâfî al-Kâfîlî al-Sâ'yîdî in his works *Tarkîr al-Ashâr* (Cairo 1306) and *Kâfîdat al-Dawla* (Bairût 1301), the latter of which is a copious biography, frequently citing Târîkh al-Muhâminî by Taqî al-Dîn 'Abd al-Rahmân b. 'Abd al-Mu'sîn al-Wâsîtî (d. 744); known to Hâjjî Khâtûb, 'Umûm al-Barânihî by Khâsim b. al-Hâjjî, al-Nafî'; al-Mu'âkîya by 'Izz al-Dîn al-Fârûhî (d. 694), and others. Al-Hammâni's statements are cited from *Ya'qûbî b. Kurâz, who acted as mu'âlikî for al-Rifa'i*. Great caution is required in the use of such materials.

Whereas according to some accounts he was posthumous child, the majority date his father's death 519 in Baghdad, when Ahmad was 73 years old. He was then brought up by his maternal uncle Mânûsîr al-Bâtîshî, resident at Nahr Danâ in the neighbourhood of Bassa. This Mânûsîr of whom there is a notice in Sha'râni's *Lawai'î al- 

Anwarî*, i. 178) is represented as the head of a religious community, called by Ahmad (if he is correctly reported by his grandson, Kâthîbî, p. 85) al-Rifa'îyya; he sent his nephew to Wâsît to study under a Shâhiî doctor Abu l-Hasîl 'Ali al-Wâsî, and a maternal uncle Abu Bakr al-Wâsî. His studies lasted till his 27th year, when he received an idhâsa from Abu l-Hasîl, and the kâfîra from his uncle Mansûr, who made him establish himself in Umm 'Abâda, where (it would seem) his mother's family had property, and where her nephew al-Nadjîlî al-Ansâri was buried. In the following year (540) Mansûr died and bequeathed the headship of his community (mawlâyakhas) to Ahmad to the exclusion of his own son.

His activities appears to have been confined to
Umm 'Abida and neighbouring villages, whose names are unknown to the geographers; even Umm 'Abida is not mentioned by Yāqūt, though found in one copy of the Marājī al-Rifā'ī. This fact renders incredible the huge figures cited by Abu l-Hudayf for the number of his disciples (murađūn) and even deputies (khulaḍūf) he so proudly states and the colossal buildings in which he entertained them. Sībū Ḣabīl al-Jauza in Miftah al-Zamān (Chicago, 1907, p. 236) says that one of their shaikhs told him he had seen some 100,000 persons with al-Rifā'ī on a night of Shab'aın. In Shajārat al-Dhahab the experience is said to have been Sībū Ḣabīl al-Jauza's own, though this person was born 581, three years after al-Rifā'ī's death. In Tānīrī al-Akefī (p. 7, 8) his grandfather as well as himself is credited with the assertion.

His followers do not attribute to him any treaties, but Abu l-Hudayf produces 1. two discourses (maṣarīf) delivered by him in 577 (3rd Raḍāb) and 578 respectively; 2. a whole diwan of odes; 3. a collection of prayers (ad'īyā) of devotional and strophic values (auvīrād), and incantations (ašāh); 4. a great number of casual utterances, sometimes nearly of the length of sermons, spoken by frequent repetitions. Since in 1, 2 and 4 he claims descent from 'Alī and Fāṭima, and to be the substitute (aštāh) for the Prophet on earth, whereas his biographers insist on his humility, and deeming such titles as kuth, gawālī, or even šāhīk, the genuineness of these documents is questionable.

In Shajārat al-Dhahab (iv. 260) it is asserted that the marvellous performances associated with the Rifā'is, such as sitting in heated ovens, riding lions, etc. (described by Lane, Modern Egyptians, i. 305) were unknown to the founder, and introduced after the Mongol invasion; in any case they were no invention of his, since the like are recorded by Tānīrī in the fourth century A.H. The anecdotes produced by Ḩabīl al-Dhahabī (repeated by Subkī, Tahāsāt, iv. 40) imply a doctrine similar to the Indian aśīna, unwillingness to kill or give pain to living creatures, even lice and locusts. He is also said to have inoculated poverty, abstinence and non-resistance to injury. Thus Miftah al-Zamān records how he allowed his wife to labour him with a poker, though his friends collected 500 dinārs to enable him to divorce her by returning her marriage gift. (The sum mentioned is inconsistent with his supposed poverty.)

Inconsistent accounts are given of his relations with his contemporary 'Abd al-Kādir al-Gilānī. In Bahdījat al-Ašūr it is recorded by apparently faultless 'Inād on the authority of two nephews of al-Rifā'ī, and a man who visited him at Umm 'Abida in 232/847-8, that when 'Abd al-Kādir in Baghdād declared that his feet was on the neck of every saint, al-Rifā'ī was heard to say at Umm 'Abida "and on mine". Hence some make him a disciple of 'Abd al-Kādir. On the other hand, Abu l-Hudayf's authorities make 'Abd al-Kādir one of those who witnessed in Medina in the year 555 the unique miracle of the Prophet holding out his hand from the tomb for al-Rifā'ī to kiss: further, in the list of his predecessors in the discourse of 578 al-Rifā'ī mentions Mansūr, but not 'Abd al-Kādir. It is probable therefore that the two worked independently.

Details of his family are quoted from the work of al-Faḍḥi, grandson of a disciple named 'Umar. According to him, al-Rifā'ī married first Mansūr's nece Khaddīja; after her death, her sister Rabī'ah; after her death Nafisa, daughter of Muhammad b. al-Kāsimiya. There were many daughters; also three sons, who all died before their father. He was succeeded in the headship of his order by a sister's son, 'Ali b. Ummān.

Bibliography: The sources of this account have been cited above. (D. S. Margoliouth)

RĪHĀ, the name of two towns.

1. The Arabs called the Jericho of the Bible Rīhā or Ariḥā (Clermont-Ganneau, in J.A., 1877, i. 498). The town, which was 12 mi. E. of Jerusalem, was reckoned sometimes to the Dūnad of Fīlasīn (Yāqūt, Muḥīyā, iii. 913, e.g.) and sometimes to the district of al-Balṣā (Yāqūtī, in B.G.A., vii. 113); sometimes however it was called the capital of the province of Jordan (al-Urdunn) or of Ghawr, the broad low lying valley of the Jordan (Nahr al-Urdunn) from which it was 10 mi. distant (Yāqūtī, i. 227). As a result of its warm moist climate and the rich irrigation of its fields the country round the town produced a sumptuous vegetable; among its products are mentioned, some already known in ancient times, dates and bananas, fragrant flowers, indigo (prepared from the waṣma plant), sugar-cane, which yielded the best Ghawr sugar. Not far from the town were the only sulphur mines in Palestine (Ahu 'l-Fidā', ed. Renaud, p. 236). There were however many snakes and scorpions there and large numbers of fleas. From the flesh of the snakes called tīriyākīya found there was made the antidote called "Jerusalem tīriyāgī" (ṣāmikā Fāsumkā).

In the Kurān, Ariḥā is the town of the giants captured by Joshua; there was shown the tomb of Moses and the place where, according to the Christians, their saviour was baptised. The eponymous founder of the town (Ariḥā) was said to have been a grandson of Arphakshād, grandson of Noah. The town was particularly prosperous during the Crusades but then began to decline and was in ruins in the fifth century. The modern Eriḥā in the Wādī el-Kelt occupies the site of the town of the Crusaders; it is about 800 feet below the level of the Mediterranean.

RIKA. [See Arabia, i. 387.]

RIKĀB (A., Turkish pronunciation: rikāb and rekāb, "stirrup") in Persian and Turkish usage at Muhammadan courts: "the sovereign himself or his presence, the foot of the throne" (metonymy like those of kūltum in Saljūq usage: kōret or kōret, kāšt-i poy etc.).

In Turkish (Ottoman, Altai, Çağhatāi) the stirrup was called uzung (uzung), older form ustung, uzung (kondigung Bileğ, Batšt, ed. Kāzān, p. 49). This word passed into certain foreign languages without the initial vowel: Ar. Svr. ṣangāy and şangānā "stirrup, ladder or other means of assistance in mounting a horse" (Freytag, Cuche, Kazimirski, Böhtor, Bélot, Berggren; ṣangāy is disputed by Dözy); Bulgarian ṣangīya (alongside of ṣangīya and ṷangīya, with a final -ya quite independent of that of the Arabic) "stirrup". In Turkish also there are traces of its use without the initial vowel: Çağhatāi ṣeng (ladder, steps) (Pavet de Courteille; cf. the Arabic al-qalāma "steps, stirrup, mounting-stone"), ṣeng kušši (old Turkish and Persian usage; cf. RIКANĐA). These comparisons show that at first a distinction was not always made between the stirrup and the mounting-stone (Aṣḥāy al-rakāb, Türk. birec tašlī, Persian from the Ottoman usage seng-i rikāb, as in the Türkīḫi Wāṣif, Būṣāq 1246, i. 179). In spite of these semantic coincidences and correspondences like Türk. ṣeng “rich” for Persian ṣeng “heavy, precious”, the resemblance of ṣeng and ṷangīya may be only accidental.

The figurative expression rikābī humāyūn (Turk. pronunciation: rikābī kūmāyūn), or (more rarely) rikābī šāhāne or simply rikāb is already found in Persian of the Saljuq period applied to the sultan himself or his entourage in the field or...
travelling. For example one said that so-and-so was "in the service of the imperial stirrup" (Houtsma, Recueil... 373; ii. 18), or "in the service of the parasol (taht) of the imperial stirrup" (ibid., iv. 7). In modern Persian one says "to be at the stirrup of a prince" for "to be attached to his court" (Kazimirski, Dialogues, p. 493 and 482—483).

In Turkish usage the same expressions were applied to:

1. The imperial cavalcade and the procession formed on this occasion. However, in order to avoid confusion with other uses of the word rikāb, there was also used, especially in the reigns of Mahmud II and ʿAbd al-Medjīd, the Turkish word binîş which was applied to all public appearances of the sultan, whether on horseback or in a boat (Mouradjea d'Ossian, vii. 141, 144; Fouani and van Gaver, Turquie, p. 377 note; Androcsy, Constantinople et le Bosphore, p. 33, 494). The prince's procession was also called mawakib (mez-kib-i hamayyin) (Houtsma, iii. 18; on these words in Ottoman and Egyptian usage, cf. J. Deny, Sommario degli Archivi del Cairo, p. 104 and following).

Cf. also the name of rikāb selâqi given to the eight selâqi lieutenants who walked by the sultan's stirrup in the great procession (Mouradjea d'Ossian, vi. 25, 317).

2. The audience given by the sultan (rum-i rikāb or simply rikāb), whether or not he was in procession. The grand vizier himself could only be introduced to the sultan's presence by the latter's formal order and his admission was called rikāb. There were ordinary rikāb and ceremonial rikāb (Mouradjea d'Ossian, vii. 133 sqq.). Cf. details of the barāma rikāb tehzīfî in Aḥī Târîḵî, p. 29; cf. Zenker, Dict., i. 408; Ahmad Râsim, Târîḵ, iv. 1014.

3. The service of the sultan or simply his presence (Sękowski, Collectanea, Warsaw 1824, ii. 24). The presence was not necessarily immediate. Thus the expression rikāb-i hamayyin (in the locative) "with the sultan" was used in speaking of the troops (kaţ-u-sül) of the capital (ʿAbd al-Râhtmân Sheref, Târîḵ, p. 292) or of the grand vizier in so far as he was endowed with the full powers of the sultan (M. T. M., p. 528). Similarly the words rikāb-i hamayyin (in the dative) were used for petitions (arsušâl) addressed to the sultan (Meninski, Theaurum; "Sulaiman's Canon" or Nâsitāt-nâme, p. 151), whereas the expression mardwrât-i rikābiyye applied to these petitions.

It is from this connection that we have the use of the words rikāb-i hamayyin or rikāb in the sense of interim or substitute. When the grand vizier moved from place to place, the government was thought to go with him and there was appointed "to the sovereign a substitute for the grand vizier who was called rikāb kâ'immaṣdim" (Bianchi, Dict., 1st ed.; Perry, A view of the Levant, London 1743, p. 37). The other chief dignitaries of the Sublime Porte had also their substitutes "of the imperial stirrup".

Rikāb aghâlarî or aghâyan-i rikāb-i hamayyin or ʿezegî aghâlarî. — These names were applied to a certain number of important officers or dignitaries of the palace (from 4 to 11 according to the different sources). They were the mirdânam or "standard-bearer", the two mirdâkâr (imbrokar) or "squires", the kāpûşâlar bâlsâṭ or "chief usher" and other dignitaries with different offices (cf. Lufit Pasha, Aref-nâme, in Türk. Bibliothek, xii. 18 and 21 of the Turk. text ed. by Tschudi; Beauvoisins, Notice sur le Cœur du Grand Seigneur, 1809, p. 54; Mouradjea d'Ossian, vii. 14; v. Hammer, Staatsverj, ii. 61, with references to Castellani and 'Ali; esp. M. T. M., p. 526, for the ʿezegî or "usages" regarding the aghâlar of the stirrup; Feridum, Munvâḫem, p. 10, for the rikāb or protocol relating to them). The following is a translation of the passage in the Aref-nâme which is a comparatively old text (Lufit Pasha died in 1539): "The defterdârs of the finances have precedence (ṭasādṭar) over the sandjak beyi and the ʿezegî aghâlarî. The principal (baḥ ᵒlâm) of these is the aghâ of the Janissaries, next comes the mirdânam, then the kâpûşâ beyi, after him the mirdâkâr, then the šâbri-bi beyli, the teẓwîgir-bi beyli and the boluk aghâlarî." (starting with the aghâ of the Janissaries, we have here then an enumeration of the ʿezegî aghâlarî).

Considering the authority of these sources, we must conclude that the variations are the results of changes which actually took place. We must conclude that the tradition of the palace left the sultan a certain freedom in this respect. We know moreover that admission to the rikāb was in general subject to the istezân or "approval, pleasure" of the sultan.

The most important function, at least in principle, of the aghâlar of the stirrup was exercised when the sultan mounted his horse: the grand mirdâkâr held the inner stirrup (ṭ rikāb), the baḥkâpûşâ-beyi aghâ, the outer stirrup (rīkāb); the mirdânam held the bridle and the teẓwîgîr-bi beyli assisted the sultan by holding him under the arm or "under the arm pit" (boluk-i girîmek). The kâpûşâ beyi or "chamberlains" stood all around and the aghâ beyli (kafâf) held the horse's head (M. T. M., p. 526).

On the functions of the chamberlains, who to the number of 150, headed by the baḥkâpûşâ-bi beyli, already mentioned, were in the service of the stirrup, and for other details see Mouradjea d'Ossian, vii. 18 and especially M. T. M., loc. cit. Their duties were to take to the province important firmans and to carry out various confidential missions.

Sometimes epithets rhyming in -āb were added to the word rikāb in the language of the court: e.g. rikāb-i ʿamātrâb "stirrup shining like the moon" (Târîḵ-i Wâṣf, i. 105); cf. also the epithets: ʿamātrâb-ārī gûrūn dyōnâb, doâvet-inkâ̄sâb (Meninski, Thaurum).

The tribute which the Woiwods of Wallachia and Moldavia sent to the sultan in their own name, supplementary to that (ṣiṣṭâ) paid by their subjects, was known as rikābiyye and ʿīṣâye (Ahmad Râsim, i. 380; cf. Sâneṣneu, Influencia orientala, Bucest 1900, i. 249).

Bibliography: Cf. the works quoted in the text.

(J. Deny)
rikâbdâr meant "a kind of squire, groom or riding attendant who had charge of the care and maintenance of harness and saddlery and of everything required for mounting on horseback". The pronunciation with an 'i' in the second syllable (rikâbdâr or rîkâbdâr) used alike in Egypt (Dozy; Sprio, p. 198) and in Turkey (Moldavian-Wallachian rehîçpâr or ruhîçpâr in Simeanu, ii. 99) is due to a (Persian) corruption analogous to that found in the words šitâbudâr for šîtâbdâr and šîmîd for šîmîd (cf. the Turkish translation of the Burhânî-šâfî, p. 495). In Arabic we find the forms rîkâbî and şîhâl al-ričâb. (Below we leave out of account the use of rikâbdâr in the sense of cup-bearer, derived from rikâb 'cup' [used for drinking the "stirrup-cup"].) If this explanation is correct, the two rikâbdârs may very well be the same.

Makâkî mentions a personage who was şîhâl al-ričâb already to the first Umayyad caliphs of Spain (153–172 = 756–785; cf. Analecites, i. 605, reference given by Dozy). In Egypt at the court of the Fâtîmîd sultan Nasir al-Dîn (1326–1360), there were 2,000 rikâbî or şîhâl al-ričâb al-kâfî, so called "on account of their costume (saçît)", whose duties were the same as those of the šîțâbdâr and šêrîbâr of the time of Kâlakshâdî (Spandone, i. 545). As to the Persian form rikâbdâr, it must have been in use among the Sâlîdîs for we have to admit by analogy that it was from them that the Aiîyâbîds and later the Mâmûlîs borrowed the term, like many others of the same kind.

In Persia itself, the term rikâbdâr was replaced by its (Turkish) synonym uesta (or əz̧taş) kürşîtî (cf. Chardin, 1711 ed., vi. 112; Père Raph. du Mans, État de la Perse, p. 24). According to the Burhânî-šâfî, the rikâbdârs were replaced by the şerîbârs (from şerîbâr, bridge), but it should be noted that the office of the latter was contemporary with and independent of that of uesto kürşîtî.

In Egypt the rikâbdârs of the Mâmûlîs, also called rikâbî, were members of the rikâb-kâmâla, like the other "men of the sword" (arâb al-sâlihî), such as the şandûţâkûr, mahmûdîl, kara-şûlûm and şulûm-mâmûlî. The rikâb-kâmâla (the kâmâla al-sâlihî of the Fâtîmîd sultans) was the depot for harness and in general for all the material required for horses and stables. The heads of this service were called mîkârî (cf. the Ottoman mîcher whose duties were different and humbler). The rikâbdârs were under the command of the emir dântî, "Marshal of the Court" (cf. the khâfedîl khawâṣîl of the Ottoman court). Cf. Kâlakshâdî, iv. 12, 20; Kâhiîl al-Şâhîrî, p. 124; Guedfroy-Demombynes, Syria, p. 112, lv.

The word rikâbî is found in the 1001 Nights, where it is translated "palefremier" by E. Gauthier, vi. 168 and "groom" by Burton, x. 365, note 2. From the context we might also suggest "riding attendant". Bothor gives (for Syria?) r-kâhdâr under the French écurier (qui enseigne à monter à cheval) and r-kîbî al-khîlî under "groom (celui qui monte à cheval)". The synonymous expression şîhâl al-ričâb, in the sense of "good squire, one who mounts a horse well", is found in the romance of 'Antara. In contemporary Egyptian usage rikâbdâr or rabâbdâr means *jockey, groom* (Sprio, Habeliche). (According to the Burhânî-šâfî [Turk. transl.], the rikâbdâr of Egypt were replaced by the sarâdî *saddler* mentioned by Volney and others).

Turkish usage. — In Turkey the office of rikâbdâr must have been taken over directly from the Sâlîdîs but instead of becoming assimilated to that of humble grooms or rikâbî, as in Egypt, it became an important dignity at the sultan's court reserved for a single officer. It is in the reign of Orkhan (1326–1506) that we find the first Ottoman rikâbdâr: he was called Ködja Elyas Ağa (*Atâ Türkî), i. 94). It was however only under Selim I (1512–1520) that the duties of the rikâbdâr were defined. According to the organisation at this time, the rikâbdâr ağa was a kâbâdodîl, i.e. he was one of the kâbâdodîl (and not odâtî) or "company of the corps" (Mouradgea, D'Ohsson; chambrière suprême (Castillan); innerse Kammer (v. Hammer)) which was the first of the six groups of officers of the household (il or enderûn) of the Selâlîs and consisted of the fixed number of 40 officers or pages including in theory the sultan himself. It had been formed by Sultan Selim to guard the relic of the Prophet's mantle (*kîrîk-i tebâdet*) brought back after the conquest of Egypt ("Atâ, i. 208; for details of the organisation see ibîd., and Mouradgea d'Ohsson, vii. 34 sqq.). The rikâbdâr was the third of these officers in order of precedence (following the šîtâbdâr and the şahâdâr and preceding the dișâkodîl ağa). An officer passed in this order from one office to another. The four officers just mentioned were the only kâbådodâl who had the right to wear the turban.

According to the usual definition repeated everywhere, the chief duty of the rikâbdâr ağa was to hold the sultan's stirrup. It may have been so at first, but none of the documents available show the rikâbdâr performing this duty in practice. Indeed we have seen [cf. RIKÅ] who were the *ag剌s of the stirrup* entrusted with this duty. Now in spite of his name, the rikâbdâr was not one of these. The Arabic version of the *Afâs-nâme* (Baîrî, p. 9, note 7) and the German translation (Turk. Bibl., No. 12 [1910], p. 17, note 1) have therefore confused rikâbdâr ağa and rikâb ağa, which has given rise to an erroneous interpretation of the whole passage [cf. the corrected translation in the article RIKÅ].

On the other hand, western writers of the xvith century mention as the third officer of the household (*teğçêhâna*) after the šîtâbdâr and şahâdâr a *"cup-bearer"*! Theodore Spandon (Spandonyn Cantacain) calls him sharâbâdâr (cf. Garzoni, 1573) and Leunclavius kîpîdâr "bearer of the (water-) jar", a name also found in Lonicer (p. 69). This water-carrier was given other names later. D'Ohsson (pl. 158) and the *Atâ Türkî* (i. 282) speak of a *hâşêhêî* or "keeper of the *kîsê*, probably for the Arabic-Persian kâšî (or water-jar)." Wearing a beraza, he carried a ewer (*maggorna*) of warm water at the end of a stick. V. Hammer calls this official mâtâradji or bearer of the gourd (*matesfor matâra*).

The use of warm water is easily explained by the fact that, as an author writing in 1631 tells us, the third gentleman of the sultan's chamber "carried him 'sherbet' to drink, and water to wash with" (De Stochave, *Voyage du Levant*, Brussels 1662, p. 84: Ischiopitar, for rikâbdâr; cf. Baudier who jokes: rechiptar).
who went on his hands and knees on the ground (Castellan, Mours, ... i., 139; "Ata, loc. cit.; d’Ohsson, pl. 157). He was the iskemle aghash or iskemlefilji (musician), chosen from among the eldest grooms (kapudan ehlisi). Wearing a dolama and a kele, he rode like the water-carrier on horseback in processions (rikabdar). Probably through some confusion Castellan calls him rikabdar, but adds that in his time the rikabdar was chosen not from among the kapuz (literally, but from the iskemle (mistake for kapudan) ). Nor must we confuse, as Saineanu (Influência oriental, i., 104, s. v. sessceniago) does, the iskele (or iskemle) aghash with the special commissioner of this name who was charged, along with the sanjab aghash, to install on the throne (iscunus) the new hadipers of Moldavia and Wallachia (cf. Milanges Iorga, 1933, p. 202). There were also iskemle aghais similar to those of the sultan in certain provinces (Rousseau, Description du pachalik de Bagdad, Paris 1809, p. 27).

Among the special duties of the rikabdar, we shall only mention the custody and care of the harness etc. of the sultan (as among the Mamluks) and his pabul or shoes and idzime or boots (Kanlin of Sulaiman or Natiqat-name, p. 132).

It should be noted that, according to the ‘Afża Türkiki (i., 208), the services of the rikabdar like those of the eokhadrars were only required on gala days (eipâm–e famzhe). This practice is said to have been introduced under Mustafa III (1757–1774) out of consideration for the age of these concerned for them they were generally over 60 and had spent 40 years in the service of the court (ofigir yola). According to the same work, these duties were reduced to very little. During the ceremonies (sendâmle) of the Prophet’s birthday (mewul or mewulû), the two barians and at the birik or ceremonial appearances of the sultan, the rikabdar sat opposite the sultan in the imperial barge with the silhdar, hâzîzoda bashi and the two eokhadrars.

From all this we may conclude that if there really was a rikabdar in the time of Orghan he performed not only the duties of a squire but also those of a “cup-bearer” and we know that in Persian rikabdar means “cub-bearer”. In time, the rikabdar became a more and more important personage, these duties were divided between two special officers: on the one hand, the hâzîzoda and similar officers, and on the other, the iskemle aghais.

The rikabdar aghas, like the eokhadrars, received a daily salary of 50 tips (kâfe) while the silhdrar drew 45 (Ilerfenfen, MS. A.F.T. of the Bibliothèque Nationale, fol. 189). Like the eokhadrars they had in their service two ladas of the hâzîzoda, a karabâkkû, a hattach with tasseled caps (silhû), two sofâli, a hekbieh and two yedektâz. The rikabdarars who did not attain the rank of silhdarar were put on the retired list (became tîrek) with a pension of 60–100,000 piastres. In the absence of the eokhadrar, the rikabdarar performed the duties of the silhdrar. On the quarters in the palace occupied by the rikabdarar, cf. "Ata, i., 312, sq.

The four chief officers of the hâzîzoda, including the rikabdarar, were often called by the name — not official, however — of kozuk vërsleri or "visiers of the armpit" because they had the privilege of touching the sultan, particularly of giving him their hand or taking him by the arm during a walk and they frequently attained the rank of

weâr (Cantemir, Hist. Emp. Ott., Paris 1743, iv, 119–121). The rikab ağhaları [cf. rikab] were also koltuk westleri.

The same four officers were also called 'arz ağhaları because they had the right to present (arz) to the sultan any petition which reached them, like the master of petitions (Rycaut, Bk. i., p. 97 of the French transl.; Castellan, iii. 183). According to Ahmad Kâsim (ii. 639), in processions, the iskemle aghais had the task of returning to those concerned petitions which were not granted.

The rikabdarars were abolished by Mah mùd, probably about the same time as the kozuk (in 1248 = 1832–1533; cf. Lutfi, iv. 68) and the silhdarar (in 1246; cf. Lutfi, iv. 61); cf. v. Hammer, Hist., xvii. 191.

Bibliography: See the works already quoted above of which the most important is the ‘Afża Türkiki. See also Ahmad Kâsim, Türkîkî, i. 186, 479; ii. 526; Hammer, Hist., viii, 15 for references not used here. (J. Deny)

RISALA. [See Rusâm].

RIYÂDÎ, Ottoman biographer of poets. Molla Mehmèd, known as Riyâdî, was the son of a certain Müsâfa Efendi of Birge (S.E. of Smyrna) and was born in 1566 (1572). He was first of all employed as a muqarrî, later became kâfat of Aleppo and died on 9th Safar 1054 (April 17, 1644) (according to J. v. Hammer, G. O. W., i., 44 in Cairo). He was known as al-Asâm, the "dumb". His chief work is his Riyâd al-Sagwar, a biographical dictionary of poets containing 384 names. It is known to have been finished by 1018 (1609). He also wrote an abbreviated translation into Turkish of the Wafâyât al-Ayyân of Ibn Khallikan. The lexicon has not yet been published but is accessible in a number of manuscripts, a list of which is given by F. Bâtlinger, G. O. W., i., 178 (add. Sambul, Lâl Ismaiîl, N°. 314). On a German translation of an extract from it by V. v. Rosenzweig-Schwannau, cf. Z. D. M.G. xx. (1866), p. 439, N°. 3 (filling 20 pages).

FRANZ BARINGER.

RIYÂH, an Arab tribe, the most powerful of those that, regarding themselves as descended from Hûlîl [q. v.], left Upper Egypt and invaded Barbary in the middle of the vth (xith) century. Their chief at that time was Mînûn b. Yâhîya of the family of Mîrdas. The Zirid emir al-Mu‘izz [q. v.], who did not foresee the disastrous consequences of the entry of the Arabs into Ifrikia, tried to come to an arrangement with him and to win over the Riyâh. The latter were the first to lay his country waste. But thanks to the protection of the chiefs of the Riyâh, to whom he had married his daughters, al-Mu‘izz himself succeeded in escaping from Kairawân and reaching al-Mahdiya (983).

At the first partition of Ifrikia which followed the invasion, the Riyâh were naturally the best served. They obtained the greater part of the plains, which the Berbers had abandoned to seek shelter among the mountains: they had thrust their relatives, the Abughlij, towards the east. They held Bedja which the caliph in Cairo had allotted to them in anticipation. The people of Gabes took
the oath of loyalty to Mūnis. "It was", says Ibn Khaldūn, "the first real conquest of the Arabs".

The Ḍajānim, a family related to the Riyyah, made Carthage a regular little capital, which they adorned with their buildings. Lastly, a chief of the main tribe, Muhītib b. Ziyād, made himself a fortress in al-Mu'allalā (a Roman circus?), among the ruins of Carthage. The powerful lords of al-Mu'allalā, however, supported the policy of the Zirids of al-Mahdiyya, and joined them in their resistance to the Almohads.

This resistance did not long impede the expeditions sent by the Maghribis against Ibrīkiya in anarchy. Defeated by ʿAbd al-Muʿāmin in 546, 555, 583 (1152, 1160 and 1187), the Arabs were ordered to supply contingents to the holy war in Spain. ʿAbd al-Muʿāmin, leaving a section of the Riyāḥ in Ibrīkiya under command of ʿAssākir b. Sulṭān, took the others to the Maghrib with their chief, ʿAssākir's brother Mazīd, known as al-Mulūk ("the axe"); cf. Dora, Sūsana, 311. (Ed. By Dora, Sūsana, 311.) They halted them in the Moroccan plains to the north of Ḫil Regeg. This control was little in keeping with the traditions of the Riyyāḥ; Mazīd fled to Ibrīkiya and there gave his support to the Banū Ghāniyya [q. v.] who were trying to revive for their own advantage the Almoravīd power.

We know how the trouble stirred up by the Banū Ghāniyya led to the Almohad caliph's appointing a governor of Ibrīkiya invested with very extensive powers, Abū Muḥammad of the Ḥafṣīd [q. v.] family. This governor naturally attacked the Riyāḥ and in order to be rid of them, encouraged the settlement in the country of the Sulaim Arbāds hitherto quartered in Tripolitania. Under the pressure of the Sulaim, the Riyyāḥ, the principal family of whom at this time was the Dawāwīda, migrated to the plains of Constantine where they were henceforth to remain.

In their new home the position of the Riyāḥ remained a very strong one. They had rights over all the centre of the modern department of Constantine, approximately from the region of Guelma to that of Bougie. In the Zāb [q. v.] they were on terms — which were sometimes friendly but more often hostile — with the Banū Moẓi of Biskra, who ruled this Ḥafṣīd province. This is how the Banū Moẓi had to fight against that curious movement, at once religious and social, stirred up by the Riyyāḥi marabout Saʿāda. The Dawāwīda, and in particular their most powerful family, the Awlād Muḥammad, held winter lands and enjoyed revenues paid by the people of the Ḫār in the Sahara region of the Wāḍi Righ.

By the end of the xvith century, the two chief branches of the main tribe, the Awlād Muḥammad and the Awlād Sūbā, were actively engaged in the politics of the Ḥafṣīd princes and the Abū al-Wāddīs of Tlemcen, in the enterprises of the pretenders who threatened their dynasties. The power of the Riyyāḥ of central Barbary lasted till the xvith and xviith centuries. According to Bernardino de Mendoza, they had in 1536 10,000 horsemen and large numbers of foot. The xviith century saw them assuring the Turkish Bey of Constantine, to whom they were connected by marriage and the independent sulṭān of Tuggurt. In 1844, Carette and Warnier noted that the name Dawāwīda was still synonymous with "noble Arabs".

Another group of the Riyyāḥ played a notable part in the history of the Zénāt states. In the extreme Maghrib, bodies of them transported by the Almohads to the plains of the coast faithfully served this dynasty, by trying to check the advance of the Marinids [q. v.]. Defeated near the Wāḍi Shū in 614 (1217), the Riyyāḥ were mercilessly punished by the victorious Marinids. Decimated and weakened, and driven northwards, they submitted to the humiliation of paying an annual tribute. Their name no longer figures on the map of modern Morocco except at a place near the road from al-Kashr to Tangiers.

Finally, at the other end of Barbary, in their first home, the name survives in the nomenclature of the tribes. The Tunisian caidate of the Riyyāḥ lives between Tebrursk and the hills which surround the Gulf of Tunis.

(Roger de Marches)
de Férone Manrand d'Antibes à Constantineople (1544), ed. by Léon Dorez, Paris 1901 (we also find there exceptionally riva, ríal and ritél).

For the pronunciation we may compare the Turkish ríyal with the Turkish ríyal, Šir, ríyal, for the Spanish real (del plata), name of a coin [cf. ríval]; cf. the French "gros royal," Turk, şıra, şıra, şıra, şıra, mod. ānta "piastre, formerly: écu" [cf. āntare]. Here also we find the prothetic form ríyal (Hindouglou, p. 200, s. v. "écu"); Another gives ríyal, under "real""). In the west, the Turkish word ríyal was sometimes transcribed reala, no doubt regarded as more correct (Herbert, L'Ambassade turque sous le Directoire, Paris 1902, p. 238). We cannot see whence comes the spelling with an aspirated ā (rikila), even in Arabic orthography, which we find in Garcin de Tassy, Memoire sur les monnaies propres... mus., p. 87 and in Jal under ríela (we have perhaps a graphical reaction against the hiatus).

The rank of ríyal, as well as those of kapudana and patrona to be discussed later, was at first known among the Turks only as applied to officers of the navies of Christianandom (cf. e.g. Ewliya Ėlɛbî and the Ottoman historians like Na'imâ and others). These ranks came into use among the Turkish sailors, at first unoffically, in the time of Sultan Mehmed IV, 1648—1687 (cf. below in connection with patrona). D'Ohsson, undoubtedly by confusion, says that they were used in the time of Mehmed II (1451—1481). We do not however find these titles of foreign origin in the Tarih ûl-Kibar or Hâdidî Khalifa (1656) nor in Hâdefen (d. 1691). It was, it appears, under Āb d-Al-Hamîd I (1774—1789) that they were officially adopted (Mehmed Şıke, Eşâd-i bâbî-ye ṭeğmanîye [1306 = 1890], i. 145).

We are well informed about the hierarchy of the naval high command at this period, thanks to the Teğrîfî-af kâlime, a work of Naşîática-Sheikhî-nâde Esâd Mehmed Efendi (d. 1848). On p. 1029 we have a list of the old establishment which combined the non-seagoing officers of which we shall be content to give a list here, and the seagoing officers who will be dealt with in more detail because the ríala was one of them and bore like them a name taken from the Venetians.

a. General officers of the Admiralty (terâşni-şârine).

(All three seem to have had, but perhaps only from the beginning of the sixteenth century, the right to the title of pasha).

1. The kapudan-pasha [q.v.] having the rank of vezîr (veziyet). He was the Captain of the Barbary (kapudan-ı derya) or, as was also said, the kapudan par excellence. The name kapudan from the Venetian kapitãne and its modernised form, probably under the influence of English, kapitan was further applied to any commander of a ship, small or large, foreign or Turkish. (The vowel u in the second syllable is due to the influence of the neighbouring labial p and Trévoux's Dictionary gives the intermediate form cauptanâ) under kapitan-bacha; cf. also Relation des 2 rébellions arrivés à Constantinople en 1730 et 1731, The Hague 1737, p. 23): 2. Terâşni-şârine omnîs ağa (câ字段 teşîlet) "Intendant de l'Arsenal" (d'Ohsson), Germ. "Intendant des Arsenal" (Hammer), Engl. "Intendant of the Marine" (Perry). He took the place of the Grand Admiral in his absence. From 1246 onwards: mutfîr.

3. Tarâsan-i âmirî ketkûbâsl (kochâsî) ogâ "Intendant des galères", "Lieutenant of the Arsenal", "Sachwalter des Arsenalen". He was particularly concerned with the police of the Admiralty.

b. Admirals with the title of bey.

(Except the 4th, these officers were sea-going admirals and took the name, of Venetian origin, of the vessels they commanded. The name might have the addition of humâyûn "imperial" in a Persian construction whence the official barbarisms: bashtarra-i humâyûn, kapudan-i humâyûn, etc. The full titles in theory were: bashtarra-i humâyûn kapudanî, kapudan-i humâyûn kapudanî etc.

1. Bashtarra, bashjarda, bashjarda (i humâyûn) - Ital. bastarda, Fr. bastarde or bâtarde. This was not the largest unit of the fleet. In Turkish as in Venetian usage the bastarda was a galley larger than the gala sensile (Turk, kadîâga or tekeâga), but smaller than the galeaza or galianz (Turk, mava) and had a very rounded poop "like a water-melon" (galeaz, sklî). Among the Turks it contained 26—36 otrââ or benches of 5—7 rows. The one which had the Kapudan pasha on board was called kapudan-pasha bashjard and had 26—36 otrââ. It was distinguished by the three lanterns (fener) attached to the poop in addition to that on the main mast (Tâbî, fol. 69; Dâire-i Pasha Türkîhî, 1309, p. 131). As it flew the flag of the Grand Admiral, it was sometimes (Menin-ki, Thevenac, i. 663; Barbier de Meynard) called "captain" but we shall see that among the Turks this name was given to another vessel. Chance has willed it that the first syllable in the word bashjard means in Turkish "head, chief" but it is difficult to say that the Ottomans gave first place to this ship simply as a result of a popular etymology. The disappearance of the ship propelled by oars resulted in the abolition of the bashjarda. Officially dismissed in 1764, according to d'Ohsson, it was still used from time to time on certain ceremonial occasions. The sailing-ship (başman, "galley") which became the flagship of the kapudan-pasha, was commanded by the "Flag-Captain" who, according to d'Ohsson, was called in Turkish shwarî kapudanî "captain of the ship-commanders" and, according to von Hammer (Staatsverf., ii. 493), sandjaş kapudanî, Germ. "Flaggenkapitain", Engl. "flag captain". Esâd Mehmed Efendi calls this officer, probably by an archaism, bashjard (i) humâyûnî pasha (commander of the imperial bashjarda of the (kapudan) pasha.

2. Kapudan-bey. Kapudana comes from the Venetian (galle or nave) capitana "galley or ship carrying the leader of a naval expedition, flagship" (Jal). In France it was called "la capitaine" or "capitannes" but these terms disappeared in 1669 with the office of general of the galleys, and in the French navy pride of place was given to the Rêale [see below]. On the kapudana which took part in the naval battle of Ceyme (1779) cf. Jaubert, Grammaire, appendice, p. 3. Kapudana and kapudan have often been confused (Hammer, Staatsverf., ii. 291; Blochet, Voyage de Cartier de Pinon, p. 128; Douin, Navarin, p. 250, 276, 295, 311). We find the full title of kapudan-i humâyûn kapudanî, e.g. in a letter from Mehmed 'Ali Pasha (of Egypt) to the grand vizier of the
of different colours [cf. below]. It was what the Venetians called the giunetta or cana (canna), from canna d’India. “Indian cane”, often taken in the sense of “bamboo” from which we also have the English word “cane”. They alone wore small turbans and fur-trimmed robes (cf. d’Ohsson, pl. 228).

When under ‘Abd al-Hamīd I [q.v.] or later under his successor Selim III, the naval hierarchy was organised and to some extent modernised, three grades of admiral were instituted (independent of the kapudan paša, who was the Grand Admiral or “amiralissimo”). They were:

1. the kapudana bey “Admiral”. Mehemd Shukri regards his rank as equivalent to the modern one of şhâri-i bâhiye reisi “president of the Higher Council of the Navy”. He had a fixed monthly salary of 4,500 piastres (1 piastre = 3 fars.) and in addition received pay for 1,000 men (on which he was liable to make various grants) but with the obligation to give to the kapulpaşas spica or djâisse to the value of 4,000 piastres.

It may be noted that in theory there was only one officer of each of these ranks at one time. All three took part in the battle of Navarino in 1827 (Douin, Navarin, p. 250 and passim). They were under the command of Tahir Paša who had the rank of mirmiran. He was himself patrona but this does not mean duplicating the office of the patrona who was subordinate to him because the commanders-in-chief of the fleet (terâsker or bash-kâğı) were chosen without regard to rank. Hizir-Elyas (Endüřan Türükî, p. 481) mentions a liman reisi with the rank of patrona in 1826.

The flag-commander of the kapulpaşa retained his functions but seems to have occupied a position on the edge of the hierarchy which the presence of the Grand Admiral on board sometimes made unenviable (v. Hammer, Staatsverf., ii. 293).

We do not know at what period these ranks were replaced by the more modern terms of muşhir, ferik and iyec. The equations of rank varied considerably. The riyalas are regarded as mir alay, mirmiran, iyec, ferik and even ibinijji ferik. It is probable that it was necessary to choose a grade between these. At Sebastopol in 1854, the Turkish fleet was commanded by a patrona, Ahmed Paša (cf. Ahmad Kusim, Türükî, p. 115).

In Egypt under the Khedives there was for a time a riyalas paša in command of the fleet.

Bibliography: Only d’Ohsson gives definite information about the officers mentioned above. Bk. viii. of vol. vii. (p. 420–438) (Tableau de I’Empire Othoman), devoted to the Navy will be read with interest. Cf. also Ubicini, Lettres sur la Turquie, second ed., Paris 1853, i. 484
ROKAIYA, daughter of Muhammad. That he had four daughters by Khaddija is repeated by all authorities, but there is no agreement regarding their order, which clearly shows that they aroused little interest in the early period. It is further suspicious that practically the same story is told of two of them, Rokaiya and Umm Kuhlum. They are both said to have married sons of Muhammad's uncle Abū Lahab [q.v.] but were forced by their father to divorce them when Muhammad began his career as a prophet. Still more suspicious is the circumstance that it is told of both that the marriages had not been completed when the divorces took place (lam yakun dakhala biha) although some time must have passed before there was a breach between Abū Lahab and his nephew. If we wish to save the tradition, we must assume that the sisters, like 'Aisha at a later date, were betrothed to Abū Lahab's sons and that the divorce took place before the wedding was carried through. It is however more probable that this story is an invention in order to keep the holy family pure from any contamination by relatives of the Prophet's arch-enemy [see also UMM KULTHUM], but the difficulties which this involved were not clearly seen. After the divorce the fair Rokaiya was married by 'Uthman b. Affân and went with him and other Muslims to Abyssinia, from which they returned after a time. They then went with the Prophet and other Muslims to Madīna. But when Muhammad was preparing for his raiding expedition to Bādīr, Rokaiya fell ill and died before her father returned home victorious. After several miscarriages she presented 'Uthman with a son who however lost his life as the result of an accident (a cock pecked him on the face).

RONDA (Ar. Runda), ethn. al-Rundi, a town in the south of Spain to the north of Algeciras and west of Malaga, 2,400 feet above sea-level in the centre of a vast mountainous amphitheatre at the edge of a rocky plateau which ends in precipitous walls on the western side and is cut in two by the great natural cleft of the Tajo 500 feet in depth, at the bottom of which runs the torrent here known as Guadalevin (Wâädî al-Laban) and later known as Guadiaro (Wâädî Aro). Its peculiar position makes it an almost impregnable natural fortress. At the present day the town is the capital of a partido judicial of the province of Malaga; it has a population of nearly 21,000 souls. The Muslim town of Ronda, which succeeded the ancient Roman and Visigothic Arunda, was from the viiith to the xvith centuries always reckoned one of the most important strongholds of Andalusia. Under the Umayyads [q.v.] it was the capital of the khâra of Takorônî [q.v.]. A number of descriptions of it, unfortunately very brief, have been preserved by the Arab geographers; al-Idrisi however does not mention it. We still see there several remains of the Muslim period, such as a remarkable gate in the suburb of San Francisco. The cathedral of Santa Maria La Mayor has taken the place of the great mosque; the ancient citadel or Alcazaba of the Nasîrid period was destroyed in 1808.

The principal fortress of the district of Tâkaronân was for a long period Bobastro [q.v.] which was the headquarters of the rebel 'Umar b. Ḥafṣün [q.v.]. On the fall of the Umayyad caliphate of Spain, Ronda became the capital of a little independent state in the hands of the Berber Banû Irân; among these rulers were Abû Nîr Hîlî b. Abî Kurra b. Dûnâs who was proclaimed in 431 (1039) and died in 449 (1058) after having been the prisoner of his redoubtable neighbour, the king of Seville, al-Mu'tadid [q.v.] Ibn ʿAbbâd, and his son Abû Naṣr Fâlîb, who after having held out for some months at the capital of his principality was killed at the instigation of the 'Abîdîd ruler, who annexed his state in 450 (1059). Ronda then became the residence of a prince of Seville until a son of al-Mu'tamîd [q.v.], al-Râjî, had to surrender it to the Almoravid forces under Gâdîr in 1091.

Ronda played an unimportant part under the Almoravids and Almohads. In the Nasîrid period [q.v.] it was for some time the appanage of the vizier and family of the Banû ʿl-Hakîm and was directly concerned in the internece fighting of this period. It was taken by the Catholic Kings after a siege of 20 days on May 20, 1485.

ROSETTA (Arabic Ras-Hîlîd), a town in Egypt, situated at 31° 24' N., 30° 24' E., on the Western bank of the Rosetta branch of the Nile (the ancient Balbitine) about ten miles above its mouth, which is known as al-Ârûsîyya and is dangerous to enter. Till the ixth century A.D., ships sailed direct to Fùwa; but owing to the excessive depositing of the silt in this region, Rosetta began to take its place during the reign of al-Muta-wakîl. In the xith century, however, Abu 'l-Fidâa remarks that it was still smaller than Fùwa; and, in the xivth, Ibn Dûmâkj (v. 114) says that it was exclusively inhabited by garrison troops (âhî hâdihi l-madîna kullumum mutûfîn). After the Ottoman conquest of Egypt in 1517 A.D. and the decay of European trade through Alexandria, Rosetta became an important centre for maritime trade with Constantinople and the Aegean territory of the Turkish Empire. The Viceroy ʿAli Pâšâ, in 915 (1509), restored its old khâns (warehouses) and fundûks (hostelries), built new ones, and cleared the silt from its docks. The town continued to flourish until Muḥammad ʿAli [q.v.] reconstructed the Mâhüdiyya Canal for navigation between Alexandria and the Nile, and thus diverted the course of trade from Rosetta which declined rapidly to a mere fishing town with but few minor local industries such as rough cotton weaving, rice pro-
dication and oil manufacture. Its population in 1907 was only 16,666.

The topography of the town is largely medieval in character and it still retains many noble buildings which mark its past prosperity. Its streets and lanes are both narrow and circuitous with only one large fish market. Till modern times its wall was maintained for defence against Arab raids. At the mouth of the River, near Kûm al-‘Afrâh, two castles guarded the waterway entrance to Rosetta in the past. Vansleb, who saw these castles in May 1672, describes them thus: *one stands at the East-side of the River, and the other on the West. That which is about a mile and a half from Rosetta is square, encompassed about with strong Walls, built according to the old Model, having four Towers. One hundred fourscore and four *fantasures are in the Garison... The other Castle is but a *Monume, before it stands seven Pieces of Artillery on the Guard: Here commands also an *Aqu over a Company of *Moors, who examine all that go in, or out of the City* (State of Egypt, London 1678, p. 105).

In history, only few events may be gleaned about Rosetta. In 132 (749—750) it was the scene of a great but abortive Coptic Revolt, in 356 (962) the ʿAbd-‘al-Malik fleet of Tāṣū‘ under the admiral Shāmil routed the North African fleet of ʿObaid Allāh al-Mahdī [1], v. commanded by a certain Sulaiman in the waters of Rosetta; in 1218 (1803) it witnessed al-Hārid’s victory over the combined sea and land forces of the Ottoman Porte; and in 1222 (1807) it was saved by the English who came to help al-Must and his Mamlûk successors. It must also be remembered that in 1799 a.d. in the neighbourhood of the town, Boussard, an officer of the French Expedition, discovered the famous Rosetta Stone now in the British Museum.

Bibliography: See works already mentioned in articles on other Egyptian towns.

(Al-S. Atiya)

ROUBA B. AL-‘ADJDÁDJ AL-TAMYÍ, an Arab poet. The name Ru’ba is more frequent among men from eastern Arabia than is generally supposed. Arabic philologists give many explanations of this peculiarity: I am however certain that it is the Persian word رُبّā meaning *flute*. Al-Tamim in the *Kitâb al-Mu’talaf wa l-Mu’allaq* mentions three poets of this name (p. 121—122), but only Ru’ba b. al-Adjdâd b. of the tribe of the Banû Malik b. Sa’d b. Zaid Manâb b. Tamim became celebrated as a poet of *rajaz* verses, in which genre he surpassed both his father and the latter’s rival Abu l-‘Najîm al-‘Idîjî. Of his life very little is known. Like his father he spent most of his life in the desert (*ṣâï̄f*), and only came into the towns when he sought presents for his panegyrics from the great. Born about 65 (685), in his middle years he went about with the armies which were spreading the power of Islam. His earliest productions are certainly lost, but we have a panegyric (N°. 22) on al-‘Kâsim b. Muhammad al-Thâkifî, the conqueror of Sîdîn, on his return from India in 94 (713). As in the following year al-‘Kâsim was thrown into prison and murdered, the date of this poem is fairly certain. Our poet then travelled in Eastern Persia, either as a soldier or a merchant, and a further poem by him (N°. 26) is dedicated to another governor of Sîdîn, ʿAbd al-Malik b. Kâîs al-Dhibî who was there about 10 years later. Whether he was in Khurāsân during the troubles that broke out after the death of Khâtab al-Husîm (90 = 715) is not certain, but several poems are dedicated to individuals who took part in the fighting there. His poem attacking al-Muhabal (N°. 27) shows that he was against the Yamanis as do his poems in praise of Mâlama b. ʿAbd al-Malik whom conquered Yazîd b. al-Muhabal and killed him (102 = 720). But he must have again been in eastern Arabia or the Ṣlāk, as is shown by his poems on Khâlid b. ʿAbd Allâh al-Kâsîrî, Abân b. al-Walîd al-Badjâlî and al-Muhabalî b. ʿAbd Allâh al-Kilâbî. At a later date, he dedicated poems to men who were active in Persia like Muhammad b. al-Asâfîth al-Khuzîî who was in Kirmân in 129 (747) and particularly Naṣr b. Saiyâr, who failed to put down the rising of Abu Muslim and died in 131 (749). A poem (N°. 41) is dedicated to the last Umayyad caliph Marwân b. Muhammaal of whom he still hopes that he will conquer all his enemies.

As he had in this way shown his attachment to the Umaiyads, it is no matter for surprise that Ru’ba did not feel his life safe when he was summoned before Abu Muslim. Of the audience we only know that Abu Muslim showed himself a connoisseur of Arabic. Two poems of his, in praise of Abu Muslim are to be found in Geyer’s *Nachtrag* (Diiamb 4 and 6). Several other poems in praise of members of the new dynasty have survived; one (N°. 55) is dedicated to Abu l-‘Abbâs al-Saffîfî and two to his uncle Sulaimân b. ʿAli (Nrs. 45 and 47), and the latest poems of Ru’ba are in praise of al-Manṣūr, who succeeded his brother as Caliph in 136 (754) (N°. 14 and Diiamb 8). He was then an old man and is said to have died in 145 (762).

All Ru’ba’s poems are in the *rajaz* metre; the few verses in other metres ascribed to him I have found to be by other poets and wrongly attributed to him. He had learned the art from his father, whom he even accuses of having taken credit for his poems when Ru’ba began to write, and we actually have a poem by Ru’ba against his father (N°. 57). From his father he also inherited a fondness for unusual words and his poems are among the most difficult in the Arabic language, as they are full of words which are never or only very rarely found in other poets. One even suspects that for the sake of effect the poet coined new words which did not previously exist. He is fonder than any other poet of a kind of alliteration or, to be more accurate, an accumulation of a number of forms from the same verbal root. No one can make this sort of thing beautiful and Ru’ba’s poems have probably survived only because the lexicographers found them a rich quarry for unknown words. A proof of this is the number of lines from his poems which are quoted in the great dictionaries, and in the *Lišân al-‘Arab*, for example, run to several thousands.

It is no wonder then that the learned men of al-Bâṣra and, less often, of al-Kûfâ visited him to increase their knowledge of the *lungh* until he became tired of them. We even find that Ibn Khâlalwâhî in his *Fraîh Îtâqîn Sûrâ* quotes Ru’ba for readings of the Kûran which have no other justification that they are different from the known readings. Ru’ba simply claimed to know better.

Ru’ba had two sons, ʿAbd Allâh to whom two poems are dedicated (20 and 56), and ʿUkba who
also wrote poems in the same metre as his father (Dīthīkī, Rūbāt, i. 23; Ibn Kūtalū, Shī‘rī; Marzūbān, Muwāshāhāt, p. 218 and 366; Ibn Rakhīqī, Ūmda, i. 136).

Rūba‘ī’s poems were collected by several scholars, among them Abū ʿAmr al-Šabābī, Ibn al-ʿArabī, and al-Šukkārī, of whom the last two are probably represented by the surviving manuscripts (cf. Diamb. 40—44). The contents of these manuscripts have been edited by Ahlwardt (Berlin 1903), unfortunately without the commentary which is absolutely necessary for the poems of Rūba‘ī, and in the alphabetical order of the rhymes which makes it difficult to recognize the original arrangement of the collection. As this edition was incomplete, Geyer in 1908 published in a collection of several rubā‘īs poets eleven further poems with the commentary under the title Altarabische Diyamen. Ahlwardt had in his editions of other poets added a collection of verses which he had found in various works quoted as Rūba‘ī. This collection was extended by Geyer in his Beiträge zum Dwân der Rūba‘ī (S. B. d. A., Wiss. Abt., Leipzig, 1908, 165—197). Even then there remain lines attributed to Rūba‘ī which have escaped both editors, while many lines are not by Rūba‘ī but belong to other poets. Confusion seems to have begun at quite an early date between the poems of Rūba‘ī and those of his father al-ʿAdīdājī. Ahlwardt also published a complete German translation of the whole Dwân in rhyme. The value of this translation is unfortunately small as it is really only a paraphrase and does not help us with the difficulties of the Arabic text.

Biography: Biographical notices on Rūba‘ī are found in Djiama bī, Tāhā bī, ed. Hell, p. 147 (where unfortunately the MSS. have a lacuna); Ibn Kūtalū, Kītāb al-Shī‘rī, ed. de Goeje, p. 376—381; Marzūbān, Muwāshāhāt, p. 210; Kītāb al-Aghdānīkh, xxi, 84—91; Ibn Khallikān, ed. Cairo 1310, i. 187. — Lines by Rūba‘ī are quoted in large numbers in all the large dictionaries.

(F. Krenkow)

RUBĀĪ, quatrains (plural rubā‘īyat, from the Arabic rubā‘ī, ‘quadripartite’). Its fundamental characteristics have already been defined (cf. the article ‘Arba‘ī, i. p. 470); on p. 468 sq. are given the forms of Arabic popular songs in quatrains. It consists of two distichs (ba’it) or four hemistichs (miyār) rhyming together with the exception of the third (aaba), the third being called khāfīi (‘castrated’); the two hemistichs of the first ba’it (muṣarrat) must rhyme. The ruba‘ī in which the two hemistichs have the same rhyme is found particularly among the old poets (cf. ʿIṣārī’s Dīwān). The ruba‘ī lends itself to every kind of inspiration. According to one theorist, the first three hemistichs serve as an introduction to the fourth which ought to be sublime (buland), subtle (laft) or epigrammatic (izā). According to E. G. Browne (Lit. Hist. of Persia, i. 472), the ruba‘ī is “almost certainly the oldest product of the poetical genius of Persia”. The Persian philologists attribute the invention of this metre to a child playing at nuts with its playmates: one of the nuts having fallen out of the hole by a rebound then fallen back rolling, the child called out ghālān ghālān hāmī rastāfī bu nābī-ī saw, “rolling, rolling it goes to the bottom of the hole”. According to the Tādākhara of Dawlatshāh (ed. Browne, p. 30), the child was the son of the emir Yaḥbū b. Lālī the Safarīd and the officials of the court recognised in this hemistich a variety of ḥazāf, “the second hemistich (miyār)” to it with the same scansion, then a second line (laft) which they called dū-ba’iti ("poem in two verses"); but some scholars, considering that it consisted of four hemistichs (miyār) adopted the name rubā‘ī and Rūdākī was the first to excel in it” (it should be noted that Asadī’s dictionary Lughatī Frās, ed. Horn, quotes two rubā‘īs by poets at least as old: Abū b-Mu‘ayyad, p. 68 and Ṣāhīd, p. 112). The anecdote is again found in a work written in 1220 (nearly three centuries before Dawlatshāh), the Muḥammad ibn Ḥāfiz al-Šaybānī ‘Aḥādīm of Shams-i Kās (ed. Mirzā Muḥammad and Browne, p. 88): one holiday, in a street of Ghaznī, the poet Rūdākī (“at least I believe so”, says the author) was watching some children playing at nuts: a boy of ten or fifteen improvised the same hemistich in the same conditions. “These words seemed to the poet a suitable metre, a pleasing poetical form; he consulted the rules of prosody and recognised in it one of the derivatives of the haṣaṣf; ... on account of the high place which needed fine eyes, Rūdākī confined himself to two lines (ba’it) for each poem; ... as the inventor of the metre was a young and innocent boy (tor), Rūdākī called the metre tarānum” (cf. Horn, Grundr. der neu-persischen Etymol., No. 382 and n. 3: Nīẓāmī’s hemistich is no doubt quoted from the Farhang-i Dīwānī: bul tarānum tarānum miyārī, ‘every young man was singing verses’). The Haft Kūlūsī describes tarānum as the rubā‘ī of which the four hemistichs (miyārī) have the same rhyme (which is at least disputable). According to Shams-i Kās (op. cit., p. 90), “the connoisseurs of poems set to music (maḥfīz) called tarānum the ruba‘ī set to music and du-ba’iti the ruba‘ī without music, because it had no more than two lines; the arabised Persians (musta‘riba) called the ruba‘ī the dū-ba’it, because in Arabic the haṣaṣf has four maṭalīn [while in Persian it has eight]; each line of this [Persian] metre makes two Arabic lines [in other words: a Persian miyār is equal to an Arabic ba’it]. From the fact that the metrical change used in this metre did not exist in Arabic poetry, Arabic was not written in this metre, but now the modern poets use it freely. Arabic ruba‘īs have become common in Arab lands’. On this point in his Dmawat al-Karīm (Aleppo 1349, p. 174), al-Bakhārizī (10th century; q.v.) says that his father repeated several Arabic ruba‘īs to him; these may be reckoned among the earliest in this language. In the Sādīqā period the vogue of the ruba‘ī seems to have reached its height. Rawandi (Rūhāt al-Ṣadīr, ed. Muḥammad ʿIqbal, p. 344) says a propos of a man of letters of Hamadān: “He was called Nādjam (al-Din) Dūbait; he possessed wealth which he lavished on men of talent; with an inkwell and a pen he put into writing all ruba‘īs that he found; he left neither property nor furniture; his heirs shared 50 ma‘n of manuscripts containing du-ba’its”. No Persian metre admits of so many variations. Indeed, the theorists number 24 types of ruba‘ī derived, half from the haṣaṣf-i ʿakhrān, half from the haṣaṣf-i aḥkrān (the latter more pleasing to the ear, according to Shams-i Kās). The Khurāsanī philologist Ḥasan Ḥatīn divides these two series into two trees (haṣaṣf) which figure in the treatises on prosody (Shams-i Kās, p. 92; Blochmann, Prosody of the Persians, p. 68)
and which clearly show the variations (za'ajj) of the hada'i muqaddamân salâm (maflâlu'), 5 times. Four different metres may figure in the four hemistichs of rubâ'i. Shams-i Kâis thus explains the mechanism of this poetical form: "The beginning of the hemistichs of the dib-bati is maf'ulun (called aṣkârâh) or maf'ulun (called akhrâm). When the first foot is maf'ulun, the second becomes maf'ulun (salâm) or maf'ulun (called aṣkârâh) or maf'ulun (called akhrâm). When the first foot is maf'ulun, the second becomes maf'ulun or maf'ulun or fâllûn (this last aṣkârâh). When the first foot is maf'ulun or maf'ulun, the third becomes maf'ulun or maf'ulun; when the second foot is maf'ulun or maf'ulun or maf'ulun, the third becomes maf'ulun or maf'ulun. The last foot which follows maf'ulun or maf'ulun becomes fa' (aṣkârâh) or even fa' (azalî); that which follows maf'ulun or maf'ulun becomes fa' (aṣkârâh) or even fa' (azalî) or even fa' (aṣkârâh)."

Further, according to Shams-i Kâis, some poets have written maqâdâmât (pieces of several lines) in this metre, e.g. Abû Ţûlîr Khâtûnî (from whom he quotes a passage); Farrâqî also deliberately composed a kaṣâda [q.v.] in the dib-bati metre, sometimes retaining the same rhyme in the two hemistichs so that some rubâ'î can be taken from it. It may be recalled that the formula fa' hawâlî wa-lâ kawâwi alâ bi 'llih (maflâlu' maf'ulun maf'ulun fa') was used as mi'dîrî in certain quatrains (quoted by Aghâ Ahmâd 'Alî, Kūsân-i Târîkh, ed. Blochmann, 1867, p. 9). Most Persian poets composed rubâ'î in the metre mentioned. Some owe their fame to this metre: Abû Sa'îd [q.v.]: 'Umar-i Khvâyânî; Bâbâ Aâfî al-Dîn Khâshî (ed. Sa'id Nâfîsî, Teherân i.d., p. 550); the attribution of this poem is attributed to Du'bâl al-Dîn Khámti (Stambul 1312, p. 37). On the other hand, the name rubâ'î is wrongly but traditionally associated to the quatrains of Bâbâ-Ta'îr [q.v.] in hada'i muqaddamân maflâlu' (maflâlu' maf'ulun fâllûn) and other quatrains in dialect (fâkhâriyat; cf. H. Kohî Khâmâni, Tâbân-i nîlî, Teherân 1310): these are really ba'tâs. On the quatrains in Arabic, cf. Dâyî, Supplement, s.v. Ben Chêbî, Thulif al-Albâfi Mi'âm Ablâr al-'Arîb (Algers 1928, p. 113-117); in Turkish: Gûbî, Ottoman Poetry, p. 85; in Hindûstânî: Garînî, Tâsûtî, Lût. hindouste, 2nd ed., i. p. 36-37 and his edition of the Dîwân of Wâlu (passim).

HENRI MASSE

RUDAKî, Abî 'Abd Allâh Diwâ'âr B. Muhammâd B. Hâkîm B. Abî al-Râjîmân B. Ādâm, a native of Rudak in the vicinity of Samarkand; he is said to have been the first good poet in the Persian language; according to al-Bâlîmî, vizier of Ismâ'îl b. Ahmad, emir of Khurasân, he had no equal among either Arabs or Persians; he died at Rudak in 329 (940-941) (Samâ'î, Jâmi'î, in G.M.S., vol. 262; similar text in E. G. Browne, Hand-List of Muhammadan MSS. in the University of Cambridge, p. 701). To be more accurate, Rudagi was born and died at Bannudj (Yâkût, Mu'âqâm, s.v.) near Rudak. Some writers wrongly say that his tabâlîni came from his skill in playing the lute (rud, rudâk). In any case the pronunciation Rûdâkî should be abandoned. We know few details of his life. From scattered allusions in his poems, it seems that Rudaki left his native village to go to Bâdhîs to the Sâmânid amir Nâsîr b. Ahmad, whose panegyrist he became. Later he accompanied the amir to Bâdhîs and Herât. There is located the incident, recounted by several biographers, of the courtiers desiring of returning to Bâdhîs to spend the winter there begging Rudaki to use his influence with the amir Nâsîr; the poet composed his famous poem ("The scent of the river Mûlyân", etc.) which decided the prince to return at once; richly rewarded, Rudaki returned to Samarkand, travelling sumptuously. Two verses attributed to Rudaki refer to journeys to Sarâghûs and to Nishâpur.

The poets Abd-al-Salâm and Samî both attribute to a certain 'Aliyân, the favourite slave of Rudaki. The biographers say that he was born blind, but a number of his verses which describe in glowing colours the beauties of the sensual world (quoted in Nâfîsî, p. 550 sqq.), prove that he lost his sight at an advanced age; it has been supposed that the blindness was caused either by a clumsy oculist or was a reappearance of the protégés of the vizier Bâ'ârî. Rudaki, banished from the Sâmânid court on the dismissal of the vizier (326), is said to have retired to his native village; from this period (his three last years) date the verses in which he regrets his youth and his brilliant past (Nâfîsî, p. 561). In his earlier days, according to his biographers and the allusions of later poets, his talents had considerably enriched him. Following Abî Sa'îd Idrîsî (d. 405), author of a history of Samarkand, Samînî says that Rudaki was buried at Bannudj, "behind the garden of the vizier", which text illuminates an ancient quatrains which proves his fame after death). According to some writers, Rudakî wrote 1,300,000 bâit six mâqânasî (the Farhâng-i Lâkhângî mentions one of them: Dawrânî, ûsîfî) in addition to his diwân of lyrics; on the other hand, Thâ'âlîbî, Firdâswî and others agree in saying that he put the Kâlîta wa-dînî (q.v.) into verse from a translation into Persian prose by order of the Sâmânid emir Nâsîr. Of his works only a few fragments remain. E. Denison Ross (J. R. A. S., 1924, p. 609 sqq.) has shown that the edition of the Dîwân of Rudakî (Teherân 1315) consists chiefly of the poems of Kafrân of Tabriz [q.v.] who lived a century later. Does this confusion come from the name Naşr, borne by the patron of both poets and figuring in their panegyrics? E. D. Ross agrees that this attribution took place early to supply the loss of the poems of Rudaki, whose fame had remained. Hasan Râzî b. Luft Allah in his madâkîrî entitled Maqûlîn (finished in 1409) says he had examined some copies of Rudaki's Diwân and only attributed a dozen haftâs and 20 quatrains after collation to Rudakî, the remainder to Kafrân. In all, according to Ross, we may attribute to Rudaki the authorship of the following:

1. the isolated verses quoted in the Lâkhângî Fûri of Asadî (ed. Horn, p. 18-19); 2. six distichs from the translation of the Kaflîa quoted in the Thulif al-Mulûk (J.R.A.S., 1924, p. 638); 3. four pieces quoted by Baihâkî (J.R.A.S., loc. cit., p. 639); 4. the 2 quotations in Shams-i Kâis (Maflâmî, ed. Mirzâ Muhammad and Ernc. index); 5. the famous ode on the river Mûlyân (Nâfîsî 'Arâdî, Cabâr Mâhlâ, transl. Browne, p. 33); 6. the haftâ (q.), No. 6 in Ethé's collection (Rudakî, der}
the pulpit mosque of the district was in Kardaji, known as Karadji Rūdhawar to distinguish it from the same place near Ḫisāḥān, Karadji Abī Dūlāf.

Burkiyaruk in 495 (1001–1002) went from Rūdhawar via Marjā Karatgein to Sāwā ( Ibn al-Ādīr, x, 137). Ḥamīd Allāh al-Mustawfī calls the district Ṣādūrdū with the towns of Sirkān and Tujū. On modern maps we still find Sirkān at the southern base of the Alwand, and Tujū after which the district is now called, a little farther south.

Not far from the village of Rūdhawar, i.e. presumably of Karadji, was a village called Muṣglān (al-Sayyid al-Murtada, Tādī al-ʿĀrūs, Cairo 1307, vii, 178; P. Schwarz, Iran im Mittelalter, v, 552).

The present ruins of Rūdišāwar (De Morgan, Mission en Perse, ii, 136) are certainly those of Karadji, capital of Rūdhawar (Le Strange, East Caliphs, p. 197, note 1).

(E. HONGMANN)

**Al-RUDHAWARI** ZAHR AL-DIN ABU SHUQAR MUḤAMMAD B. AL-IJUṢAIN B. MUḤAMMAD B. ʿABD ALLAH B. IBRĀHIM, an ABBASĪD vizier. Al-Rūdhawarī was born in al-Ahwāz in 437 (1045–1046); his father Abū Yaʿqūb al-Iṣausan, who had died just as he was about to take over the vizierate to which he had been appointed by the Caliph al-Kāʿim [q. v.] (460 = 1067–1068), was a native of Rūdhawar, a little town near Ḫamadhān. He studied in Baghdad under the direction of ʿAbd Abī Ḥašāk al-Sayyid and in 471 (1078–1079) was appointed vizier by the Caliph al-Muqtaṣad but dismissed after a short period of office. After the fall of ʿAmīd al-Dawla b. ʿAṭārī [see ʿAMĪD ʿAṬĀRĪ 2.] al-Muṣfadī again gave him the vizierate in Shībān 476 (Dec. 1083–Jan. 1084), and this time he held office for several years. In ʿAṣaf or Rābiʿ I, 484 (April or May 1091) he was dismissed at the instigation of the Sālīkān Malīkshāh [q. v.] and retired to Rūdhawar. From there he went in 487 (1094) on the pilgrimage to Mekka; in the vicinity of al-Rabādhā however, the caravan was attacked by Beduinos and al-Rūdhawarī is said to have been the only one who escaped. He then settled in Medina where he lived till his death in the middle of Dajmāyd II, 488 (June 1095). He was buried on the Bahīz al-Gharqad near the tomb of Ibrāhīm, the son of the Prophet.

Al-Rūḍhawarī is praised by eastern historians not only for his piety and devotion to duty, but also for his eloquence and poetical gifts. He wrote among other works a continuation of the Tafṣīr al-Umām of Ibn Miskawīh [q. v.] (Dīwān Ṯafṣīr Tafṣīr al-Umām) containing the years 385–389 (979–999), edited and translated by Amedroz and Margoliouth, The Eclipse of the ʿAbbāsid Caliphate, Oxford 1920–1921.

**Bibliography:** Ibn Khalīlīk, Wafâyāt al-Aʿyān (ed. Wustenfeld), No. 712 (transl. de
But the souls that turn away through asceticism from the sensual world, prepare themselves by good deeds and — this is the most important — purify and perfect themselves by love and knowledge, can, either in ecstasy ("Theology", p. 8; cf. thereon Massignon, _Timiæs inédits_, p. 131 sq.) or after death raise themselves to their origin (συνών, νυκτήν, τρίσφος, ταταξίθεν = Greek ἔφοβος), where they see the ἀφέλει and through it God himself in light and beauty. Plato had already spoken of this elevation (e.g. _Republic_, vii., p. 517 B: τὸ εἰκόνον τοῦ ἱεροῦ ἄνωτέρω ὁμοιόμορφον ἔφοβον). According to the "Theology" (p. 9 sq.), Herakleitos, Empedocles and Pythagoras also urged the soul to this ascent; the ἵππων al-Ṣā‘īd add Polémoy, the astronomer, and interpret the ascension of Christ and Muhammad’s journey to heaven (μετάνοια) in a spiritual sense. Muslim philosophers and mystics did the same.

After what has been said, it is evident that the elevation (συνών) of the soul to its origin (ιδιαὶ θείαι) can be called a return. It is more closely defined as a return to its interior, to its own being (ἰδιαὶ διάταξις). It is an entering into itself, a becoming conscious of one’s own self; not a losing of being, not a destruction. The speculative mystics in Islam went a great deal farther in this direction.

According to the "Theology" (p. 18 sq.), the return to the origin or being can only be a state (βαίνει) of the soul, not of the mind. The ἀφέλει always remains and therefore never needs to return to itself; thinking, thinker and thought are always one in its being. When in the _Liber de causis_ (ed. Bardenhewer, § 6, cf. § 14) a return to its being is predicated of the ἀφέλει, this can only be interpreted as an uninterrupted self-consciousness.

So far the doctrine of the fall and return of the soul can be presented as fairly uniform. It shows a pessimistic conception of the life of the soul in combination with the body. But it also finds an optimistic interpretation ("Theology", p. 10 sq.). With Plotinus it is observed that Plato talks in another language in the _Timaeus_ (cf. p. 28 sq.), that of the _Phaedo, Phainomena_ and _Republic_. According to the _Timaeus_, God created this beautiful world and equipped it in his great goodness with mind (ἀφέλει) and life (ς σοῦ). Not only has he sent the all-soul into the world but also our (part-)souls so that the world may be as perfect as possible. If the individual soul can only conceive the sensual world correctly, i.e. as the image of the intelligible world, its combination with the physical world will not be a misfortune for it. Both worlds have come from God, the pure good. The only question is, what is the purpose of the soul in this world.

To this the "Theology" answers (p. 43): that the union of the soul with a body is not a final aim for the individual soul. In any case, union with the world soul and the contemplation of the ἀφέλει and of God gives it a higher bliss for which it longs; but first of all it has to prepare itself for this. It has a divine task. If it descends into the corporeal world, it receives strength from above to form and guide a body. Provided it does not sink too low, it derives advantage and knowledge from it. Its previously dormant strength and the nature of this new become known to it. This is its very purpose, that it should come to know itself and its origin. The journey through the corporeal world is for it a course of training. Therefore (p. 80) the individual soul should not be blamed for leaving the spiritual world and coming into this world to...
adorn it and to reveal its own nature. After it completes its work it returns to its origin.

Both expositions of the fate of the soul, pessimist and optimistic, have influenced Muslim thinkers. With the gnostics, the Ikhwan al-Safa and many mystics, pessimism predominates, while from Fârâbî onwards the philosophers are more inclined to optimism. It is to be noted that the terminology of the «Theology» was only partially adopted. Rudjîn, for example, is found only when from the context neo-Platonic influence can be deduced; but it did not become a proper technical term. In place of rudji and marji we usually find ma'dâd and 'asad which are explained as return in the neo-Platonic sense.

That the teaching of the Ikhwan al-Safa turns almost entirely on the spiritual substantiality of the soul and its immortality is well-known. God's belief has often and expressly pointed out this out (e.g. Vortrâungen, p. 31, 163 and Koranauslegung, p. 183 sqq.). The third part of their encyclopaedia is wholly devoted to the soul (on ma'dâd, especially râsûl 32 and 38 sqq., Bombay ed.). The 38th treatise is entitled: Fi 'l-Ba'd wa 'l-Nâdîr wa 'l-Kiyâma: these are three synonyms for resurrection, here interpreted in a spiritual sense. But in other parts of this work also (i. 3, ii. 27—29; iv. 43 sq.), there is much to the point. The famous passage in the «Theology» on the Plotinian ecstasy (i. 3, p. 69) is quoted, and the pseudo-Aristotelian «Book of the Apple» modelled on the Phaedo of Plato is mentioned (iv. 2, p. 119 sqq.). The value of life in the world is, it is true, sometimes recognised but the misery of the wandering soul is more strongly emphasised. It is frequently pointed out that the weak souls cannot help themselves, that they require advice and instruction from prophets and philosophers as guides in the community of life. We believe so that they may be put upon the right path of return. The principal thing is the gnostic, for what food and drink are to the body, knowledge and wisdom (ilm and hikma) are to the soul (ib. 27, p. 313 sqq.). Like the physician Rasûl and the philosopher Kindi the Ikhwan chose the Socrates of Hellenistic tradition as their first leader; he is however not the only one. The individual souls require many philosophers and prophets and also living guides (generally a late Hellenistic principle). With their help the good, wise soul advances to union with the world-soul and through this with the 'âgd and God. The union of the individual soul with the world-soul is the minor resurrection (kîyâma); the major resurrection takes place when the world-soul separates itself entirely from matter and returns to the higher world of the spirits and of God (cf. Tj. de Boer, Wür- bezüge in den Islam, Haarlem 1921, p. 77 sqq., esp. p. 98 sqq.).

The doctrine of the ma'dâd became more complicated after the theory propounded by Fârâbî and more clearly developed by Ibn Sinâ of the ten spirits of the spheres (nûlî). The individual souls endowed with intelligence, according to this, do not descend from the world-soul as parts of it, but they are, like the bodies of the earthly world, products of the last spirit in the series of emanation, i.e. of the 'âgd fa'dâl. The purified soul longs for this spirit and its return is the first place to it. Its longing goes further, to come as near as possible to God and to become like him, so far as it is possible for man. The philosophers are distinguished from the speculative mystics by the fact that from Fârâbî to Ibn Rusîd the first question they put is: How is the union (littîqal) of our soul with its origin (the 'âgd fa'dâl) possible? The mystics, on the other hand, however differently their inner states and stations are described, desire nothing else than becoming one with God himself (littîhâd).

According to Fârâbî, the soul finds its return by the way of right knowledge and pious acts, but knowledge is esteemed more highly than deeds. Deeds remain in the world but knowledge enters into the spirit [cf. the article 'AMAL in the Supplement].

With the doctrine of the ecstatic conditions of the soul Fârâbî combines in exemplary fashion his prophetology, especially in the «Model State», a copy of Plato's republic, but interpreted in the metropolitan spirit of the Stoics. This turns upon in the harmony of religion and philosophy. The agreement is based on the fact that they both come from the same source: the difference is explained by the fact that the souls of the prophets and philosophers take up different attitudes. In their ascent in the ecstatic condition to the 'âgd fa'dâl the soul of the prophet receives revealed truth through its imagination, while the soul of the philosopher receives illuminating wisdom through its intellect. But the truth is one and the same, so the philosophers down to Ibn Rusîd and Ibn Sâhîn, (sixth = xiiith century), teach, and many mystics are of the same opinion. Cf. Fârâbî, Ab-handlungen ed. Dieterici, p. 69 sqq. and Muttersaat, p. 46 sqq.

According to Ibn Sinâ's «Division of the Sciences of the Mind» (Ikhân al-'Ulam al-'âshiyah in Tis. Rasûl, Constantinople, p. 76 sqq.), metaphysics (with Aristotle here called Theology) presents in the fundamental parts (mu'âal) among other things the theory of emanation, but on the other hand deals with the doctrine (ilm) of ma'dâd along with prophetology as derived or applied parts (furwî). This means that the theory of fa'id possesses a higher place than the doctrine of the return.

Ibn Sinâ here again supports Fârâbî. More definitely than the latter he adopts the neo-Platonic doctrine of the spirituality and immortality of the soul. This is not merely the form of its body, as Aristotle taught, of course inconsistently, but a spiritual and therefore indestructible substance. Against Plato and Pythagoras it is asserted that it has no pre-existence in the world-soul and does not migrate from one body to another. The 'âgd fa'dâl gives (presumably from an inexhaustible supply) a suitable soul to each body that is sufficiently prepared for it. In sense one can say that it has come into existence, but it will never perish. Fârâbî was, as Ibn Tufail (Ibad, ed. Gauthier, p. 11) remarks, what unbridled in his opinion on the return of all souls, even of the wicked, Ibn Sinâ, on the other hand, not; but both interpreted the rewards and punishments in the next world in a spiritual sense, as was also the case with the Ikhwan al-Safa. It is also to be noted that Ibn Sinâ, especially in his mystical writings, uses terms of a more Sûfi character than Fârâbî.

Ghâzâlî took over from the philosophers just mentioned the doctrine of the spirituality and immortality of the soul, without however, at least in his principal works, drawing from this its logical spiritual deductions regarding the next world. In his Tahâfut (ed. Bouyges, p. 344 sqq.) he defends
the orthodox doctrine of the resurrection of the bodies on the last day, while in his esoteric writings he speaks in allegory after the Sufi fashion (cf. Ibn Rushd, in Tuhfisit al-Tahifut, ed. Bouyges, p. 530 sqq.). Ibn Rushd therefore accuses him of contradiction, defends the philosophers and observes that the Sufis believe in a spiritual return (mdad țihdan) and are still regarded as good Muslims. But what is the personal opinion of this philosopher? It looks as if he hesitated to come out with his real opinion. It must therefore be sought in his larger works on metaphysics and psychology which have not yet been sufficiently investigated. But it is often very difficult to say where the commentator on Aristotle stops and the philosopher begins. Thory was the position to say that Ibn Rushd more than Fârâhi and Ibn Sinâ regards the soul as the form of its body. With this its spiritual substantiality and individual immortality would disappear.

(T. de Boer)

RÜH, [See NAFL.]

RÜH, HATIM b. KABIŞA, governor of IFRÎKIYA, was appointed to this high office by the caliph Hârûn al-Rashid in 171 (789). Under al-Manûrî he had been dâjîb, then governor of al-Haţarâ; then he was appointed by al-Mahdi successively governor of al-Kufa, Sînî, Tabâristân and Palestine. He must have been advanced in years when Hârûn al-Rashîd sent him to Ifrîkiya in the year after his accession to the throne. He belonged to the family of al-Muhammadî, which had already sent two governors to the same province and was to supply two more after him. "It seems that at this period the caliph thought of entrusting the affairs of IFRÎKIYA to a vassal family" (Vonderheyden). The governorship of the Muhamîdîs which preceded that of the Aghlabîs, was very successful. The rebel Berbers appeared to be finally overcome and the Khârijî agitation was suppressed; so successfully was the position that Rûh b. Hatim when he arrived at Kairawân in Rajab 171 (Dec. 787–Jan. 788) had no serious difficulties to face. Besides, he had brought with him new contingents of the djund, 500 horsemen, who were joined soon after by 1,500 others brought by his son Kabişa. For the three years of his governorship, the country was peaceful. Rûh even succeeded in concluding a peace with 'Abîd al-Walâhî (q. v.), the Rustamî mînâm of Tâhert. The authors who are our authorities upon him, notably Abu 1- 'Arab and Ibn 'Idâhî, make special mention of his generosity, his stoicism in face of adversity and of his skill in disarming his opponents. As he was showing signs of senility, the postmaster and a kâdî of the province requested the caliph to appoint a successor to him secretly, who could take his place if necessary. Following their advice. Hârûn al-Rashîd appointed Nasr b. 1âbîb. Rûh b. Hatim died on 10th Ramadan 174 (Feb. 3, 791), and his son Kabişa was formally recognised as his successor in the great mosque of Kairawân. But the postmaster and the kâdî informed Nasr, the governor designate, and Kabişa had to give way to him.

AL-RÜHÀ: [See ORFA.]

RÜHî, is the maâkhir of the historian, whose work was until 1925 known only from the references in 'Ali's [q. v.] Kûnh al-Alkhârî and in Munêjdi-jîmbashi [q. v.], J. H. Mordtmann (M. O. G. ii., 129 sqq.) was the first to identify by conclusive arguments several manuscripts of the anonymous original work. They tell us practically nothing about the personality of the author and it is only a hypothesis (cf. F. Babinger Die friihemansischen Jahrhücher des Uruddh, Hanover 1925, p. xiii.) that connects the historian Rûhî with a certain Rûhî Fâdîl Efendî who, like Muhyî al-Dîn Djâmî (cf. F. Babinger, G. O. W., p. 72 sqq.), was a son of Zenîbîlî 'Ali Efendî, distinguished himself as a poet and died young, in 927 (1528) it is said. As he is also called Rûhî Edrâseni, i.e. Rûhî of Adnânapol, this hypothesis may be correct. But elsewhere (cf. Sehl, Thihibîre, p. 127), this Rûhî Fâdîl Efendî is said to have been born and to have died in Stamboul.

The history of Rûhî entitled Tawârîkhi Alî 'Othmân is written in a simple style and divided into two parts (kîm). The author calls the first mekâbî, i.e. beginnings, the second mekalî, i.e. elucidations. The first part falls into two sections of a general nature, the second contains eight chapters each of which describes the reign of one sultan. The chronicle was written in the reign of Bâyazid II (1481–1512) and ends in 917 (beg. March 31, 1511). Rûhî's work has not been further investigated nor is there a critical edition of the text, which could easily be prepared from existing old and good manuscripts (Berlin, Oxford, Algiesir; cf. F. Babinger, G. O. W., p. 43). It is clear however that Lutfî Fâsha's [q. v.] Chronicle is dependent on that of Rûhî.

Bibliography: Id., xiii., 159; M. O. G., ii. 129 sqq. (J. H. Mordtmann); F. Babinger, G. O. W., p. 42 sqq. In addition to Sehl, the following mention men named Rûhî: Lafîf, Tedhikir, p. 172 and Mehmed Thureyî, Siḏîjîl othmânî, ii. 421. Cf. Brûsa Mehmed Tahir, 'Othmânîl Mu'telifîlerî, iii. 54. (FRANZ BABINGER)

RUKN AL-DAWLA, ABU 'ALI AL-HASAN B. BOGE, second in age of the three brothers that founded the Buyid dynasty [q. v.]. His fortunes followed those of the elder brother 'Ali (later Imam al-Dawla [q. v.]) up to the latter's occupation of Fars in 322 (934); Rukn was then given the governorship of Kâzarun and other districts. But shortly afterwards he was forced by the Abbâsîd general Yûkî, at whose expense the Buyid conquest of Fars had been made, to seek refuge with his brother; and when Yûkî was in turn defeated by the Ziyârid Mardwîdî [q. v.], the Buyids' former overlord against whom they had revolted, Imam, who then found it advisable to conciliate Mardwîdî, sent Rukn to
him as a hostage. On Mardawīd's assassination in the following year (323 = 935), Rukn escaped and rejoined Ḳāmid, by whom he was supplied with troops to dispute the possession of the Ḫōljābī with Mardawīd's brother and successor, Washqanī. Rukn succeeded at the outset in taking Ḳāfṣān; but the first round of his contest with Washqanī ended in Rukn's ejection from that city in 327 (939), when he again fled to Fārs.

In the next year Rukn's help was sought by his younger brother al-Ḥusain (later Muʿizz al-Dawla [q.v.]), who had meanwhile set himself up in Khūzestān, against the Barīdī [q.v.]; whereupon Rukn, being possessed of no territory, attempted to take Wāṣīṣ but was obliged to retire when the caliph al-Rādi [q.v.] and the amīr Badjāk [q.v.] opposed him. Almost immediately afterwards, however, he succeeded in recovering Ḳāfṣān, owing to Washqanī's championship of Makān b. Ḳaṭārī in a quarrel with the Ṣamānid Naṣr b. Āḥmad [q.v.]; and when the latter ruler died in 331 (943), Rukn, who had meanwhile supported the Ṣamānid cause, was able to drive Washqanī as well from al-Raiy, of which he had momentarily regained possession on the retirement of the Ṣamānid general Ibn Muḥṭārī.

With al-Raiy Rukn gained control of the whole Ḫōljābī; but for two short intervals (of about a year in each case) retained it for the rest of his days. Up to 344 (955—956), however, his position was highly precarious. For not only Washqanī, but also the Ṣamānids continued to challenge it. It was only by playing them off against each other and sowing dissensions between the Ṣamānīd princes and the officers they sent against him that Rukn was able to maintain it. Even so (as indicated above) he was driven from al-Raiy, and his representatives were expelled from most parts of the province, once in 333 (944—945) and again in 339 (950—951), in each case by Ṣamānīd forces. Indeed he was obliged in the end to become the Ṣamānīds' tributary (at least two agreements for the payment of tribute being recorded); it was on this basis that he first made peace with them in 344 (955—956) as again in 361 (971—972). In the course of his long contest with Washqanī, who, until he killed himself in an accident in 357 (968) never ceased to intrigue with the Ṣamānīds against him, Rukn on several occasions invaded Ṭabaristān and Gurgān, but was unable to incorporate these provinces permanently in his dominions. And though in 337 (948—949), after he had defeated an attempt on al-Raiy made by the Sālrādī Marzubān b. Muḥammad, whom he took prisoner, he gained control of southern Ḳāhbarādijān, his election two years later from al-Raiy itself [see above] naturally cost him this as well.

Rukn received his lāfāb simultaneously with his brothers in 334 (945—946), on Muʿizz's entry into Baḡdād; and on Ḳāmid's death in 338 (949), succeeded him as head of the family and amīr al-ṣanṭur (though this title was also held by Muʿizz). The last two years of his life were rendered unhappy — so much so that he never recovered from the shock induced by the news — owing to the conduct of his son, Ḳādūd al-Dawla [q.v.], in taking advantage of an appeal for help sent by Baḡtītyār [q.v.] (son of Muʿizz and his successor in the rule of al-ṭrīk, to imprison the latter, and, in conjunction with Rukn's own amūlī, Abu l-Fāṭīm Ibn al-ʿĀmid [q.v.], who had been sent likewise with a force to Baḡtītyār's aid, to seize that province for himself. And though Ḳādūd obeyed his command to release Baḡtītyār and return to his government in Fārs, Rukn was only with difficulty persuaded to visit Ḳādūd in 365 (975—976) at Ḳāfṣān, in order to ensure that by receiving a confirmation of his appointment as heir, he should succeed without dispute. Rukn died at al-Raiy in Muharram of the next year (September 976).

Rukn al-Dawla was fortunate in his employment of the remarkable waṣīṣ Abu l-Faḍl Ibn al-ʿĀmid [q.v.] from 329 (941) for thirty years until his death in 359 (970), though, as that minister himself complained (see Miskawaih), he was prevented by the prince's lack of royal blood and of culture from governing properly. Rukn (so he said) was in fact no more than a predatory soldier, who could secure the allegiance of his supporters only by means of largesse, and was not able to forgo revenue in the expectation of subsequently increasing its yield. On the other hand he is said to have been just and humane towards his troops and his subjects, and gave proof — especially in connection with the episode of Ḳādūd al-Dawla mentioned above — of a tender sense of honour.

HAROLD BOWEN

RUKN AL-DIN, Sulaimān b. Khūdī Arslān II, a Salduk ruler in Asia Minor. His father Khūdī Arslān b. Masʿūd [q.v.] in his old age divided his kingdom among his many sons. The consequence of this was that the latter set up as independent rulers and began to fight with one another so that at his death in Shabān 588 (Aug. 1102) complete anarchy reigned. In the course of time however, Rukn al-Din brought the whole kingdom under his sway. Kuṭb al-Din Malikshāh who had received Siwās and Aḵṣarā at a beginning by his brother Nūr al-Din Mahāmid, lord of Kaisariya. The latter was killed and Kaisariya passed to Kuṭb al-Din. On the latter's death Rukn al-Din who ruled in Tok̄āt (Dikāt), attacked Siwās and took possession of it. He next seized the two towns of Aḵṣarā and Kaisariya. After some time, he turned against his other brother Ghiyath al-Din Kaḵīrsaw in Konya and laid siege to him. The latter had to give in and ceded his territory to his brother. In Ramadān 597 (June—July 1201) Malatya which belonged to Muʿizz al-Din Kaḵīrsaw b. Khūdī Arslān was captured. Erzurum was the next to pass to Rukn al-Din. When the latter's troops approached, the governor there, Aḥṣim al-Din b. Malikshāh, the last of the Saljuq dynasty, began negotiations by which the town was surrendered to Rukn al-Din, who gave it to his brother Tughrilshāh. Another of his brothers, Muḥyī al-Din, who had obtained Angora when the kingdom was divided, long resisted Rukn al-Din's lust for conquest, and only after a three years' siege found himself forced to capitulate when supplies were completely cut off, but was promised suitable compensation. Rukn al-Din promised him
RUKN AL-DIN — RUM

a fortress in a remote part, but laid an ambush for him in which he was attacked and killed as he left the town. Soon afterwards however, Rukn al-Din fell ill and died before the news of his brother’s murder reached him. He was succeeded by his son Kiliq Arslân III [q. v.], Ibn al-Atîr (xii. 128) gives the date of his death as the 6th Dhu lan Kà’dà 600 (July 1, 1204); according to another statement (xii. 59) however, the surrender of Angora and the death of Rukn al-Din did not take place till 601 (1205-1206).

Ibn al-Atîr describes Rukn al-Din as a strong and vigorous ruler; he is said to have held certain heretical views (mulkhab al-qalCEFîa) on religious matters, which however, he concealed from fear of his subjects.

RUKN AL-DIN. [See Bairârs I., Bârkhârûk, Tâhirî-Beg, Kiliq Arslân.]

RUKNÂBÁD (or Ab-i Ruknî: the water of Rukn al-Dawla), a canal (kânâtî) which runs from a mountain (called Kulà’sa: P. Schwarz, Iran im Mittelalter, u. 48, No. 7) about six miles from Shirâz. Enlarged by a secondary canal, it follows for a part of the way the road from Isfâhân to Shirâz. Its waters reach as far as the village of the town towards the cemetery in which it is buried, when they are not entirely absorbed for irrigation purposes. According to Hâfan Fâsâî’s (Firàns-nâmé Nâghtî, part ii. p. 20), “all the waters of the plain of Shirâz came by subterranean channels except the water from the spring of Dushek... The best waters are those of the Zangi and Ruknî canals... The Kânâtî Ruknî (i.e. Ruknâbâd) was made in 338 (949-950), one and a half farshâqs N. E. of Shirâz by Rukn al-Dawla Hasan the Dailamî (ed. Bïrûni): its waters rise in the ravine of Tâ’lîb Allah Akbar a mile north of Shirâz: it waters the plain of al-Musâligha [q. v.]... In the fourteenth century, Ruknâbâd is mentioned by Ibn Bâqîta and by Hâfiz Allah MiCCâwî Kâzîmî (Nizhât al-Kalâb, transl. Le Strange, in G.M.S. p. 113: “The water comes from subterranean canals and the best is that of Ruknâbâd”). But it is to the poets that this canal really owes its fame. In the sixteenth century Sâ’dî declares himself charmed by the land of Shirâz and the waters of Ruknâbâd (Kullihât, Calcutta 1791, fol. 296• l. 4). In the following century Tâ‘bîdî Zâkîn sings: “The rephrî which blows from al-Musâligha and the water of Ruknâbâd remove from the stranger the memory of his native land” (text quoted by E. G. Browne, who finds in it an echo of Sâ’dî, Persan lit. under Tartar Dominion, p. 238). Hâfîz in particular immortalized Ruknâbâd in his verses: “Pour cup, cup-bearer, the wine that is left, for in Paradise thou shalt find neither the stream of Ruknâbâd nor the promenade of al-Musâligha” (ed. Kûhâkhi, Teherân 1306, No. 3, v. 2): “Shirzî and the wave of Rukn and the sweet breeze of the rephrî, blame them not, for they are the pride of the universe” (ibid., No. 35, v. 7): “The rephrî which blows from al-Musâligha and the wave of Ruknâbâd will never allow me to depart” (ibid., No. 168, v. 9); “May God a hundred times preserve our Ruknâbâd, for its limpid waters give life as long: as that of Khidr” (q. v.) (ibid., No. 277, v. 2), and in a piece which may be apotropaic (ibid., part 2, No. 71): “The water of Ruknî, like sugar, rose in al-Tângi (i.e. Allah Akbar”). According to later writers, Ruknâbâd, which Ibn Bâqîta called a great water-course (al-nâkr al-kabîr), gradually dried up. Among the notable travellers of the eighth century, Chardin, almost alone in mentioning it, saw only a large stream and gives Ruknâbâd the fanciful meaning “Ruknenabat, vein or file de sucre” (Voyages, ed. Langles, viii. 241). At the end of the eight century, W. Franklin praises the sweetness and clearness of the waters of this little stream to which the natives attribute medicinal qualities. At the beginning of the ninth century Scott Waring notes that its breadth was nowhere more than six feet. Ker Porter observes that the canal has become choked up through neglect. The Khâtîmân nânché deplores the disappearance of the groves that surrounded it. At a later date we have the same observation by Godinou (Cet onde poétique ne m’apparut que sous l’aspect d’un trou bourgeois), Curzon (“a tiny channel filled with running water”) and Sykes (“a diminutive stream”).

The Firâns-nâmé Nâghtî mentions a second Ruknâbâd in Fars: “The source of the warm stream of Ruknâbâd is part of the district of Bîkheî Fâl (Lariûtân), it is over a farsâq north of the village of Ruknâbâd: having a bad flavour and an unpleasant smell, it is of no use for agriculture; it works in a few minutes eggs put into it; one can only bathe in it at some distance from the spring” (ii. 318 middle and 288).

RUM, the name in Persian and Turkish for the Byzantine empire. Rum means the land of the Romans (pâyiwa) or Byzantines although in Central Asia Rum is also used for the Roman empire. In course of time the conception
became narrower. While Rûm still is the old name for Konya (q. v., and Rûm-Salûqûs), in the early Ottoman period Rûm comprises the district of Amasia [q. v.] and Siwâs [q. v.], while Anatolia included the so-called province with the capital Kütîhiya [q. v.] (cf. Est., x., 1920, p. 144, note 1). From the earlier name Rûm for old Hellas (cf. Ishandar-i Rûmî, i. e. Alexander the Great), Eastern Roman and Byzantine, it was applied in Turkey to designate the modern Greeks (also Urûm) in contrast to the ancient Greeks who were called Yânîniyân or Ionians. Rûm also sometimes meant Turkey in general; cf. the expression Rûm Pâlîshâhî for the sultân. Rûm later was used in a derogatory sense. Rûm Meşkîrb was said of the Greek character, faithless, unreliable, flattering.

Cf. also Erzerum (i. e. Erëfi Rûmî) and Kumelia.

(Franz Baringer)

**Rûm Kâla**, a fortress in Northern Syria. According to Arnold Noldeke's description, it is situated on "a steeply sloping tongue of rock, lying along the right bank of the Euphrates, which bars the direct road to the Euphrates from the west for its tributary the Merzimian as it breaks through the edge of the plateau, so that it is forced to make a curve northwards around this tongue. The connection between this tongue of rock, some 1,500 feet long and about half as broad, and the plateau, which rises above it, broken by a ditch made by man about 100 feet deep. The walls of the citadel with towers and salients follow the outlines of the rock along its edge at an average height of 150 feet above the level of the Euphrates, while the ridge extending along the middle of the longer axis rises 100 to 120 feet higher" (A. Noldeke, in Petermanns Mitteil., 1920 p. 53 sqq., where the main road up to the citadel, the buildings etc. are also described).

The unusual position of the fortress on a high cliff suggests that it corresponds to the tower of Şaitamrat "hovering like a cloud in the sky", which Salmanassar III took in 855 B. C. (F. Hünemann, art. Syria, in Pauly-Wissowa, R. E., iv., A, coll. 1569, 1592).

While Th. Noldeke (V. G. W. Götze, 1876, p. 12, note 2) wished to distinguish Rûm Kâla clearly from Oûmay and identify with the former place the modern Orûm, Hûrum on the Euphrates, above Balkis, Urîma is now generally identified with Rûm Kâla (Marmier, B. Moritz, Cumont, Dussaud etc.). The name of the old bishopric of Urîma last appears in Mattëos of Edessa (ed. W. Rieger, 1868, p. 323): in 561 Arm. (1112—1113 a. D.) the Armenian Kögh Wasil returned to Tancerd of Antioch the lands of Harîn Murzî, Thôrîch and Ùremn, which he had taken from the Franks. The first two are Hezî Manşîr and Trîshî (Turush) and Ùremn is Urîma (Hist. or. des croisâ, Docum. arm., p. 102; J. Markwalt, Südarmenien und die Tigrisgebiete, Vienna 1930, p. 182, note 1 of p. 177). The Syriac chronicles record (Mich. Syr., iii. 199; Barhebraeus, Chron. syr., ed. Bedjan, p. 279) that Kögh Basil or after his death Kurîg, who acted as governor for his widow, held the towns of Kaisâm, Ra’dân, Başhînesî and Kâla’ Rômâmaî. It is very probable that the latter, the Syriac for Rûm Kâla, here corresponds to the Ùremn of the Armenians, which is later in Armenian always named Hromklay and by similar names.

Rûm Kâla later belonged to the county of Edessa. The metropolitan Abu l-Parâd b. Shum-

In the decades following, the Jacobite patriarch Ignatius III (1264—1282) had to defend his possession of the Barṣawma monastery at Gargar in a desperate struggle with the physician Shem'ôn of Ka'ât Rûmâlat; both had received or alleged they had received new charters of ownership from Hülegü and Abâkâ (Barhebraeus, *Chron. eccl.*, i. 753—766; ii. 439 sqq.); later on they made up their quarrel (Barhebraeus, i. 769). After the death of Ignatius, the presbyter Yakûb ibn Kalât Rûmâlat made his nephew Philoxenos or Nematûn patriarch in 1283 (Ignatius IV). The latter died at the beginning of July 1292 in the monastery of Barṣawma (Barhebraeus, *Chron. eccl.*, i. 781); after his death the Jacobite patriarch disintegrated and three rivals appeared in Malatya, Cilicia (Gawîtûk monastery) and Nairûn and as a result of this permanent schism the Jacobite church sank to complete insufficiency (Barṣawma [2], additions to Barhebraeus, *Chron. eccl.*, i. 781 sqq.).

It was perhaps not merely chance that the end of the united Jacobite patriarchate which in recent years had been closely associated with the town of Rûm Ka'ât, happened almost at the same day as the collapse of the Armenian Catholicate of Hômîklî.

In the reign of Ka'âtûn an Egyptian army of 9,000 horse and 4,000 foot under Baisari as well as Syrian forces under Hûsâm al-Dîn of Aintab had come to Rûm Ka'ât and laid siege to the fortress of the Patriarch on May 19, 1280. The sultan demanded that the Catholics should surrender the fortress and move with his monks to Jerusalem, or if he preferred, to Cilicia. When the Catholics refused to do so, the Egyptians laid waste the country around the town which was inhabited by Armenians, on the next day forced their way over a wall only recently built into the town and set it on fire. The whole population fled into the citadel. After the Egyptians had ravaged and plundered the country round for five days, they retired.

In the reign of al-Ashraf Khalîl they undertook a new expedition against Rûm Ka'ât in 691 (1292) in which the prince of Hîmâm, Malik al-Muqaffar, took part with Abu 'l-Fida' in his retinue (Abu 'l-Fida', *Annales Musulmîni*, ed. Reiske-Adler, v. 102 sqq.). On Tuesday, the 8th Dju'mâ II, the Egyptians appeared before the town and erected 20 pieces of siege artillery. It fell after a siege of 33 days. On the 11th Kajab (June 29, 1292) it was plundered and a massacre carried out among the garrison of Armenians and Mongols. Among the 1,200 prisoners who were mostly taken to the sultan's arsenal on June 28 (al-Nuwarî, MS. Paris, fol. 100 sq., in Quatremer, *Hist. des Sult. Mamlûk*, ii., p. 141; note 30) was the Armenian Catholicos (Arab. *Khalîla al-Ma'ât*; now they call *Kâthûkia*; cf. Yakût, iv. 164), Stephanos IV of Rûm Ka'ât with his monks; he died a prisoner to surrender any authority over the monks living there. When they stubbornly refused, the patriarch excommunicated them and established himself in a cave on the Euphrates but was brought back by the Armenian Catholics. Later on he fell ill, and after a reconciliation with the Bnî Ishî through the offices of the Katholikos, died in Rûm Ka'ât on June 14, 1252 (Barhebraeus, *Chron. eccl.*, i. 691 sqq.).
in Damascus (Barhebraeus, Chron. syr., p. 579).
According to the inscription of ownership in a
manuscript (Brit. Mus., MS. Syr., N. 2057), it
belonged to a certain Rabban Barsawmā of Kaṭā
Rūmān, a high priest of Rābān who in a note refers
to the harsh imprisonment which he suffered from
the Egyptians; Armenian verses on the fall of
the fortress are preserved on a relic casket (Wright,
Catal. syr. Ms. Brit. Mus., i. 231 b; Carrière,
Inscription d'un reliquaire arménien, in Mélanges
orientaux, Paris 1883, p. 210, note 1; Promus,
Mem. dell' accad. di Torino, xxxv., 1884, p. 125–
130). The inscription on the gate of the
citadel which was restored by al-As̲hfāf (cf. above,
vol. ii., p. 235) speaks of him as a victor who
among other feasts had put the Armenians to flight,
an allusion to the capture of Rūm Kaṭā (van
Berchem, in F. A., 1902, May–June, p. 456; the
inscription published by Sobberman, in Isrl., xv.,
1926, p. 176). The siltān sent boastful bulletins
of victory to the cities of Syria in which he
proclaimed the capture of this impregnable citadel
as an unprecedented feat of arms and concluded
with the words: "After the capture of this fortress,
the road is open to us to conquer the whole of the
East, Asia Minor and the Ḩalq so that with
God's will we shall become owners of all the
lands from the rising of the sun to its setting".
(al-Nuwarī, MS. Leyden, fol. 58, transl. by Weil,
Gesch. d. Chalifen, iv. 189 sq.).
The fortress of Kaṭāl al-Rūm was rebuilt by
orders of the sultan by the sāls of Syria, Sanjar
Shuqalai, and given the name of Kaṭāl al-Rūm al-Mamlūn; another part of the town was left in ruins
however (Quatremère, Hist. des Sultans Mamlouks,
iii., p. 139 sq.).
The successor of the imprisoned Armenian
patriarch Stephanos, Grigor VII of Anavarza
(1293–1307) took up his residence in Sis in
Ciālia, which henceforth was the seat of the Catho-
licos. Rūm Kaṭā, in spite of its restoration as a
frontier fortress (cf. also Abu l-Fidā', ed. Reinaud,
p. 226; al-Dimashqī, ed. Mehren, p. 214), under
the Mamluks never seems to have recovered from
the blow. In 775 (1373–1374) much damage was
done by floods in Kaṭāl al-Mislūmūn as well as in
Ḥalab, al-Ruḥā, al-Bīra and Baghdād (al-Ḥasan
b. Ḥabīb, Durrat al-As̲hfāf li Dīwāl al-ʾArāk, in
Weijers, Orientalia, ii., Amsterdam 1846, p. 435).
In the spring of the year 1477 the Mamlūk siltīn
Kaṭālī māde a tour of inspection as far as Kaṭāl
al-Mislūmūn (described by al-Djīfār an Abu l-Bāγī,
ed. R. V. Lanezno, Flagio in Palesitina e Soria
di Kai ʾBa, Torino 1878; transl. R. L. Devonshire,
After the battle of Mardī Dābik, the fortress became
Ottoman and in modern times came under the
pāshālik of Ḥalab (Ḥādījī Khalīfa, Qibṭān-numa,
p. 598).

The Armenian and European authors give the
name Rūm Kaṭā or Kaṭāl al-Rūm in many forms.
Among the Armenians we find the forms Ḥrom-
klay, Ḥrom-Hofomakan, vulg. Arm. Outoum-gala
(ward of St. Nersēs, St. Petersburg, p. 86; his
poems, Venice, p. 224, 277; Indijjdean, Alter-
tamen Armeni, iii, 278; Saint-Martin, Mémories,
Tyrus (Histor., xvii. 16) writes Runcatbat; but it
is no doubt identical with his Rangulatūt (xi.
11; French text, ed. Paulin Paris, ii., Paris 1850,
p. 164), which however he takes to be a quarter

of Edessa. Schiltberger (Reise, p. 47) calls the
fortress Urunkūla.
Only a few remnants of the fortress now remain
as well as of an Armenian monastery and a mosque
(plans of the fortress in Moltke and following him
in Humann-Puchstein, Reise, ..., p. 175, and in
A. Noldeke, in Peterm. Mitt., 1920, pl. 3, map:

RUMELI, RUMELIA. The name Rūm-ṭī, Rūm-ṭī (i.e. land of the Rhomaean) was given in the
narrower sense to the province proper of this
name, which comprised Thrace and Macedonia i.e. an area which was bounded on the north by the Balkans, in the east by the Black Sea and the Bosporus, in the south by the
sea of Marmara and the Aegean, the so-called
White Sea, then by the Olympus range and in the
west by the Pindos, Barnos and Shar-Dagh
(Šar planina), embracing the old territories of
Thrace, Bulgaria, Macedonia, Serbia and Albania
as well as the ancient Hellas, with the exception
however of the strip of coast and all the islands
of the Aegean or Archipelago, which were a separate governorship (jičir-) under the Grand
Admiral (kapudan pașa; q. v.): after 1849 the
jičir-ı Bahri-i Şefid formed an eyalet, cf. Reise
der Orient, xvi., 117, and later a āyâlet).

The governorship of Rumelia (Rum-ṭī āyâlet)
was bounded in the north by Austria and Wallachia, in the northeast by Moldavia and Russia, in the east by the Black Sea, in the southwest by the Ionian Sea and in the west by the Adriatic, in the northwest by Austria and Bosnia [q. v.]. It is to be noted that these boundaries include the sanjak [q. v.] belonging to the governorship of the Archipelago (Izmir [= Ayvalik]) Gallipoli [q. v.], Negropont (Egirdir), Eufoea and Ainebakhhi (Nau-
pactos), the former of which comprised the coast from Stamul to the exit of the Kara Su into the Aegean Sea with a considerable stretch of land running into the interior, the second and third of which comprised the east and south coast of Greece proper with the exception of the Morea (Peloponnesus).

The area of the province at its greatest extent was estimated at about 5,100 square miles while the population was estimated at not more than 5–5½ million of different nationalities (millet), Turks (Ottomans), who, although the ruling nation, formed the smallest part), Tatars, Greeks, Slavs, Arnauts, Armenians, Jews and Gipsies. The predominant religion was Islam, while the Christian confessions of the so-called non-Quay Greeks was the largest.

The residence of the beylerbey of Rumelia was at first Philippopolis (Filiisi, now Plovdiv), which was conquered by the Ottomans in 1363. The first governor to reside there was Ilaš Sahin Paşa, conqueror of that country, whose turbe is still to be seen not far from Stara Zagora. In 1873 (1858) there appears Timurtash-Bey [q. v.] as beylerbey (cf. J. v. Hammer, G. O. R., i, 191, following Ferđan-Bey) with his residence in Sofia.

The governorship of Rumelia was divided into sanjaqs, the number of which varied in course of time and the boundaries of which were constantly changing. About 1830 there were 24 of them, namely: Wiza, Kirk Kilise [q. v.], Silistra (Silistra), Nikopolis [q. v.], Vadin, Sofia, Çirme, Kustendil, Sejnik [q. v.], Tirčala (Tirikka; q. v.), Yama (Ioannina), Delvina (Delvina), Axhola (Axhola), Izin, Kalkans (cf. F. Baugniet, Die Grundlagen von Selanik in M.S.O.S., ii, vol. xxxiv., 1913, p. 84–93), Izskenderie (Scutari,entina, Bulgaria), Dukagin (Dukadzin), Okhr (Obard, Ochrida), Pirzerin (Prizren), Veler (Vëçtër), Uskub (Skopjes), Aladja Ilisu (Kruševec) and Semendra (Semendrija, Smolendrovo). By an imperial khatfi shrine of 6th Rabi I 1252 (June 21, 1836) the area under the Rumi-wilâyet, governor of Rumelia, was defined. As previously the position of Sofia as the centre of administration had favoured the rebellion of treacherous vassals and attempts to secure independence by the mountain tribes especially in Ali Pasha (Tolli Mustafar; now Bitolj) at the S. E. extremity of this area was chosen as the centre of government. The province of the Rumi-wilâyet was divided as follows: 1. the district of the town of Monastir directly under the governor, 2. the personal estates of the sultan's mother (wilâlet) or the land of Okhr, 3. the sanjaqs of Elbasan, Kavaja, Tirana [q. v.] and Lesh (Lesia), which were governed by Arnaut governors who could be dismissed, 4. the pashaliks of Ishkodra (Izskenderie, Scutari), Pirzerin (Prizren) and Ipek (Pec) which were under military officers (generals of division, ferik's), 5. the ayași's Podgorica, Bar (Antivari), Ulcinj (Dulcigno), which were under native hereditary ayași whose powers were very minutely regulated, 6. the districts of Zadrin, Mirdit, Dibra (Debar) which were under chiefs self-elected, the only Turkish officials being those who collected the taxes. The pashaliks of Pristina, Ili [q. v.] and Tetovo, originally part of the eyalet of Rumili, were transferred in 1839 to the millet of Sofia. The pashaliks of Uskub (Skopje) and Kalkandelen (Tetovo) were only under the political supervision and not the administration of the Rumili wilâyet, while the northern Arnaut tribes and Montenegro (Karađag), although nominally under the governor of Rumeli and in particular the pasha of Scutari, in reality was in no connection with the Ottoman government (cf. Josef Müller, Albanien, Rumelnien und die österreichisch-montenegrinischen Grenzen, Prague 1844, p. 2–3). The remainder of the former Rumili was divided into pashaliks of which Adri-

Anpoule (formerly called sanjaq of Çirme), as Adriano-
poule was the chief residence of the sultan; in 1840 there were still law-courts in Çirme) and the three Bulgarian pashaliks of Rusjak [q. v.], Vidin and Silistra were the most important (cf. Ami Boué, La Turquie d'Europe, vol. iii., Paris 1830, p. 181–189 with further details of the division and of the officials in 1840). The division continued to change frequently so that J. G. v. Hahn in 1860 found the eyalet of Rumelia divided into four divraks, namely Iliškodra, Okhr, Monastir and Kestrine (Kastoria) of which Ochrida comprised the whole of Central Albania i.e. down to the coast of the Adriatic (cf. J. G. v. Hahn, Reise von Belgrad nach Salonik, Vienna 1861, p. 116 = Denkschriften der Wiener Ak. d. Wiss., phil.-hist. Kl., vol. xi.). Rumelia remained divided in this way until 1864, when the first wilâyet law — i.e. the law the object of which was to create larger provinces and entrust them to able governors — was promulgated. The new governors were to carry through the progressive plans of the government with the help of expert officials and numerous subordinate governors (muttegriş). The government pashaliks, formerly eyalets, were now wilâyet (wilâyets) and the head of which was a wilâyet, remained divided into levâis, formerly sanjaqs, at the head of which was a muttegriş. A small model province the Danube wilâyet (Tuna wilâyêt) was first created in Radżab 1281 (Dec. 1864) and entrusted to Midjaž Pasha [q. v.] who had already made a name for himself as governor of Nis and Prizren. The wilâyet of Salonica and Yânia (Ioannina) were formed in 1867. The name Rumilli, Rumelia disappeared completely until it was revived in 1878. In this year by the treaty of Berlin, the new principality of Bulgaria, which was declared an independent tributary principality recognising the suzerainty of the sultan, was created and limited to Bulgaria on the Danube, the former Danube wilâyet (Tuna wilâyêt). From the trans-Balkan district of southern Bulgaria, an autonomous province of Turkey was formed and called eastern Rumelia (cf. Carl v. Sax, Geschichte des Macht-

versfalls der Turkei, Berlin 1913, p. 373, 446). Aleko Pasha from 1879 to 1884 and Gavrili Pasha from 1884 to 1885 acted as governors there. Western Rumelia formed part of the Ottoman empire and was divided into three wilâyet: Adrianople, Sandjak and Monastir. While Western Rumelia was occupied by the Bulgars in 1885, by the peace of Bucharest (1913) Monastir (Bitolj) was ceded to Serbia and Salonica to Greece and
only the wilayet of Adrianople [q. v.] remained to the Ottoman empire.

The history of Islam in Rumeli, which is closely associated with the expansion of Ottoman power on European soil, is still very obscure, at least as regards the xivth-xvith century. Political dissensions and the mixture of peoples favoured in Rumelia more than elsewhere the formation of sects, so that even directly after the arrival of the Ottoman on European soil (cf. Jh. Draseke, Der Ubergang der Osmanen nach Europa im XIV. Jahrh., in Neues Jahrbuch für das klassische Altertum, xxxi. 7 sqq. and H. A. Gibbons, The Foundation of the Ottoman Empire, Oxford 1916), perhaps even earlier in the Byzantine period, as is clearly shown by the not sufficiently explained problem of the Shi'ite sectarian Şarî Saltık Dede (q. v.; i.e. “Father Yellow Pate,” as an English traveller of 1652 explains the strange name), not to speak of the obscure history of the Turks in the Wardar valley (Wardariantos), all kinds of Muslim sects developed in Rumeli, the study of which has not yet been begun. Islam has been built upon all kinds of religious ideas, and a kind of sectarianism was created which raises difficult problems for the study of religions.

In particular we must recall the converts to Islam, formerly Bogomiles, who inhabited certain areas of Bulgaria, Bosnia and the Herzegovina, and the Muslim sects and dervish monasteries of northern Bulgaria, where the Čălbaşlii have flourished down to the present day, being undoubtedly favoured in their rise by the remarkable sectarian Şaha'i Badr ed-Dîn Mahmûd (d. 1416 in Serres: cf. Ibn Kâfi Simavna and Fr. Babinger, Şaha'i Badr ed-Dîn, der Sohn des Richters von Simav, Berlin and Leipzig 1921), who gained an astonishingly large following in Southern Bulgaria, particularly in Deli Orman [q. v.]. Closely connected with the advance of Ottoman power is the history of the Bektâshi [q. v.] in Rumeli. They founded settlement everywhere (cf. F. W. Hasluck, Christianity and Islam under the Sultans, Oxford 1929, 2 vols.), and quickly propagated Şifa views as far as the coast of the Adriatic. At the same time in Bulgaria, in the inaccessible forests of the vast Deli Orman, the Čălbaşlii seem to have made considerable progress (cf. thereon also T. Kowalski, Les Turcs et la langue turque de la Bulgarie du Nord-Est, Cracow 1933). Their still unelucidated history there seems to be closely connected with the holy man Demir Baba and his brothers and descendants who are still to be found there (cf. F. Babinger, Das Bektashi-Kloster von Demir Baba, in M.S.O. S. ii., vol. xxiv., Berlin 1931, p. 84 sqq.; cf. thereon already Ewliyâ Celebi, Siyâṣatname, vol. v., p. 579). After the prohibition of the dervish orders in Turkey, banished shaihs and monks to some extent have sought refuge here and found followers. As well as in Bulgaria the dervishes have flourished in the modern Southern Serbia whose monasteries of the different orders are still to be found (cf. D. G. Gadzânov, in vol. i. of the Makedonski Pregled, Sofia 1925, p. 59—66). A problem not yet fully explained is raised by the Pomakas [q. v.] in the Rhodope mountains and round Loča (now Lovec; the so-called Pomâk nâmâye; cf. A. Boué, loc. cit., vol. ii., p. 24) and the Gâgauz on the coast of the Black Sea. But even the history of official Islam in Rumelia still requires investigation. It is certain that in many places like Adrianople [q. v.], Philippopolis, Sofia, Šumla (Šumen), Razgrad (Herzegrad), Dupnica, Kustendil, Loča (Lovec), Plevna (Pleven), where there were the numerous and rich mansions and buildings of the Mihâjlo-oglu; cf. Jordan Trifunov, Istoria na gradia Plevna do osvoboditelnata revoluta, Sofia 1933, p. 35—41), Uskub, Istip (Stip), Prizren, Pristina, Kalkandelen (Tetovo), Prilep, Monastir (Tolli-Monastir, Bitoli), and particularly in Thessaly and Macedonia, there were formed centres of Muslim culture, as the schools, mosques etc. founded there show. In these centres were born men who made a name for themselves in the intellectual history of Turkey, Uskub, Prizren and Pristina in particular are rich in such names and it may be assumed that their bearers were mainly South Slavs converted to and Islam. Epirus, Albania play a special part in the cultural history of Islam; from there the Ottoman empire, apart from Bosnia and the Herzegovina, drew its ablest and greatest statesmen and generals, for the supply was in the main maintained by the tribute of youths (devshirmes q. v.) levied in the Balkans. The remnant of men of religious, noble education which made an important part in the political and intellectual life of Turkey is legion. They were almost exclusively natives, not Ottoman immigrants, the number of whom must always have been small, as the Turks confined themselves to exploiting the land, divided into large and small fiefs (çanem and timâr; q. v.). Ami Boué put the number of Turkish fiefs at 614 çanem and 8,360 timâr (cf. A. Boué, La Turquie d'Europe, vol. iii., Paris 1840, p. 182, without however saying to what date his figures refer).

The rule of the Ottomans in Rumeli, which began with the crossing of the Turks to European soil (1356—1357) and soon found visible expression in the capture of Adrianople in the spring of 1361 (cf. F. Babinger, in M.O.G. u. 311 and the article oğlan), is only very superficially known, so far as the xivth and even the first half of the xvth century is concerned. It is to be supposed that certain bases such as Salonica frequently changed hands, which is the simplest way to explain the different dates given of the capture of this town for example. In view of the great political dismemberment of S. E. Europe the advance of the Ottomans met with varying degrees of resistance, and it looks as if the great Ottoman generals of the xivth and xvth centuries, who distinguished themselves on Rumelian soil and soon won tremendous influence as marques and great landowners — e.g. the Ewrenos-oglu, the Mikhal-oglu, the Timurtash-oglu, the Malkoč-oglu, the Kâwanoğlu, a “feudal family of Asia Minor” (C. J. Jireček), who ruled in and around Tatar Bazarić since the xvith century, but perhaps already much earlier, till the year 1835 when the wali of Rumelia for the second time Kâwanizade Hussein Pasha died (cf. Sülük-i ottomâni, ii. 223 sq. and ibid., ii. 206), families [see the articles on them] who were able to hold their hereditary estates in some cases down to the xith century — were able to win over by an elastic policy the people who had lost their own princes and chiefs. In the courses of centuries some of the tribal chiefs were here and there (especially in Albania and Epirus and in Thessaly) to make themselves more or less independent of the Porte so that they had to be granted a certain degree of autonomy. This is shown by the Yurükhegs, of whom there were 7 in Rumelia about 1840, and
particularly of the aýan in Albania who were able to make themselves more or less independent. The case of 'Ali Pasha of Janina [q. v.] and his whole family is the most eloquent example of this. Although the decline of Turkish rule in Rumelia has now been going on for over a century, the influence of Turkish culture there is in many ways so distinct that even if there were no monuments of the Muslim period to recall the past, it will remain in manners, customs and traditions.

Bibliography: In addition to the numerous books of travel of all periods which form the most important source for the history of Turkish rule in Rumelia and of which the following are specially important: A. Gireschbach, Reise durch Rumelien und nach Brausa im Jahre 1839, Gottingen 1841; Josef Muller, Albanien, Rumelien etc., Prague 1844; Ami Boné, La Turquie d'Europe, Paris 1840 (fundamental work also in German: Die europäische Türkei, Vienna 1889); also his Recueil d'itinéraires dans la Turquie d'Europe. Détails géographiques, topographiques et statistiques sur cet empire, Vienna 1854; the following may also be consulted: Maximilian Friedrich Thielen, Die europäische Türkei, intended as a work of reference for the newspaper reader, Vienna 1828; also A. M. Perrot, Itinéraire de la Turquie d'Europe et des provinces danubiennes. Description géographique et militaire de toutes les routes, villes, forteresses et ports de mer de cet empire, Paris 1855; C. Mostras, Dictionnaire géographique de l'Empire Ottoman, Paris 1873; E. Paris, Isambert, Itinéraire descriptif de l'Orient, Paris 1874; very full statistics regarding administration, population, religion etc. of Rumelia are given in the following: A. Ubicini and Pavet de Courteille, État présent de l'Empire Ottoman d'après le Satînîmeh (annuaire imposé) pour l'année 1203 de l'hégire (1817—1818), Paris 1876 and T. X. Bianchi, Le premier annuaire de l'empire ottoman, publié à Constantinople pour l'année de l'hégire 1247 (1857), Paris 1845; A. Ubicini, Lettres sur la Turquie, Paris 1834 (reprinted from the years 1850—1852 of the Moniteur Universel, also English Letters on Turkey, London 1851; and Italian Lettere sulla Turchia, Milan 1853); F. Crouse, La Péniène gréco-slave, son passé, son présent et son avenir, Paris 1876; Bianconi, Ethnographie et statistique de la Turquie, Paris 1877; Jovan Cvičić, La Péninsule balkanique, Paris 1918; Paul de Réglia, La Turquie officielle, Paris 1890; Guillaume Le Jean, Ethnographie de la Turquie d'Europe, Paris 1886; an able survey of social conditions in Turkey in Europe about 1840 is given by Jérome-Adolphe Blanqui (1789—1854, called Blanqui aîné) in his Considerations sur l'état social des populations de la Turquie d'Europe, Paris 1841, German by Hch. Roth: Betrachtungen über den gesellschaftlichen Zustand der europäischen Türkei, Sudenburg-Magdeburg 1846, based on a journey made in Rumelia for the French Academy on which he gave a Rapport sur l'état social des populations de la Turquie d'Europe, Paris 1842, and described in his Voyage en Bulgarie pendant l'année 1841, Paris 1843. — On the educational system in European Turkey cf. François-Adolphe Belin, De l'instruction publique et du mouvement intellectuel en Orient, reprint from Le Contemporain, recue d'économie chrétienne, Paris 1866. — The Slav peoples of Rumelia are dealt with by: Albert Dumont, Le Balkan et l'Adriatique, Les Bulgares et les Albanais. L'administration en Turquie. La vie des campagnes. Le Panislamisme et l'Hellénisme, Paris 1873; Paris 1873; Cyprien Robert, Les Slaves de Turquie, Serbes, Monténégros, Bosniaks, Albanais et Bulgares, leurs sources, leurs tendances, et leur progrès politique, Paris 1844, with atlas; H. F. Toser, Recherches in the Highlands of Turkey, 2 vols., London 1869; Anton Tuma, Die östliche Balkan-Halbinsel, Vienna 1885; do., Griechenland, Makedonien oder die südliche Balkan-Halbinsel, Vienna 1888; Léon Hugonnott, La Turquie inconnue. Roumanie, Bulgarie, Macédoine, Albanie, Paris 1885; Dora d'Istria (i.e. Helene Prinstein Ghica), Excursions in Roumélie et en Morée, Paris 1882—1885; E. Parmentier, Voyage dans la Turquie d'Europe, Paris 1890; James Baker, Turkey in Europe, London 1877 (German transl.: Die Türken in Europa, transl. by Karl Emil Franzos, 1st and 2nd [title] ed., Stuttgart 1878—1879; French: La Turquie d'Europe, Paris 1882); Sir Charles Eliot, Turkey in Europe, London 1908; Heinrich Barth, Reise gaur durch das Innere der europäischen Türk (in the Berlin Zeitschrift für allgemeine Erdkunde, 1863—1864, also separately). — The principal Ottoman sources for our knowledge of Rumelia are: Hajdiži Khalila [q. v.], Rumel und Bosna, transl. by Jos. v. Hammer, Vienna 1812 (cf. thereon Fr. Taeschner, in M.O.G., vol. ii., Hanover 1826, p. 308 sqq.); and the travels of Ewlija Celebi [q. v.], parts of whose sections on Rumelia have been translated into various European languages: Albanian: cf. Fr. Babinger, Ewlija Celebi's Reise in Albanien, Berlin 1930; Greek: S. A. Hadradoğlu Theotodotos, in Εξωτικα, vol. iv., Athens 1890, suppl. 1891; and Italian Evidenze sulla Turchia, Milan 1853. — Voyages in Rumelia during the XIXth century and Ioannis Spazarias, in Ουράνια, vol. iv., Athens 1933, p. 113—128, vol. v., Athens 1934, p. 179—217, also Jean Deny. Un voyageur turc en Transylvanie, in Hubert Pernet, Introduction à l'étude du dialecte Transylvain, Paris 1934, p. 497—508; Bulgaria: D. G. Gadjanov, in Periodičesko ispitanie na bulgarsko kătouhno drevnsto v' Sofija, vol. lxx., Plovdiv 1909; on South Slavia cf. the literature collected by F. Babinger, Ewlija Celebi's Reise in Albanien, p. 1 note; on the Dobrudzha, Rumänia etc. of the extensive literature collected by F. Babinger, Robert Begrage, Un voyages dans les pays roumains du temps de Basile Lupu (1652) (= Academia Română, Memoriile sectiunii istorice, seria III, tomat XVII, mem. 7, Bucarest 1936), p. 10, note 3. — On the Ottoman geographer Mehmed 'Aşılık b. Omer, who included Rumelia in his work, cf. F. Babinger, in M. O. G., i. 163 sqq. and do., G. O. W., p. 138 sq.

(Franz Babinger)
in the xivth and early xvth centuries the silver tanka [q.v.] of the sultans of Delhi had become so debased that when Sher Shâh (1530–1545) reformed the coinage, the name could no longer be given to a silver coin. To his new silver coin, corresponding to the original fine silver tanka, he therefore gave the name rupiya = rupee, i.e. the silver coin (Sanskrit, viḍyā, viḍakā), and tanka became a copper denomination. The weight of the rupee was 178 grains (11.53 grms.) and it rapidly established itself in popular favour. Under the Mughals it was struck all over India at over 200 mints and with the decline of Mughal power continued to be struck by their successors, notably the English East India Company. In the xvith century Akbar and Dâjangir struck many square rupees; on one coin of Akbar the name rupiya occurs. Dâjangir for a short period struck a heavy rupee of 220 grains (14.59 grms.), but on the whole rupee grains showed little variation in weight. In the xixth century the English rupee gradually drove the local issues out of circulation and with few exceptions the local mints have now been closed. Such native states as still issue their own rupees strike them on the same standard as the Indian government rupee.

Ahmad Shâh Durrânî adopted the rupee as his monetary unit on becoming independent and until quite recently it remained the standard coin of Afghanistan. The Hindu kings of Assam also struck the rupee.

The Indian rupee having become current in British East Africa, it was adopted in 1890 as the standard coin of German East Africa also.

RÚS, the Russians; at first the Normans, then the founders of the dukedom of Kiev.

The Rûs of the west. In his description of "pain Ya'âbî, B.G.A., vii. 354, says that in 1229 (843–844) "the Madjûs called Rûs" invaded Seville and committed all kinds of depredations. The name Madjûs [q.v.] is regularly applied to the Normans. The name even passed into the Spanish Primera Crónica General (xiiith century) according to which the Almâuis were worshippers of fire (!). The origin of this use of madjûs is obscure. Did the Arabs and Spaniards allude to such rites as the cremation of the dead? [cf. Ibn Faḍlân] Masûdî, Murâdî, i. 364–365, speaking of events in Spain about 300 (912–913) also uses the term Rûs although he gives it a special meaning.

The Rûs of the east. There is quite a literature on the origin of the name of the Russians. The "Norman" school claims that the name Rûs [q.v.] belongs to the Normans; the Finns call the Swedes Ruotsi whence in Russian Rûs (Pyma), the name of the Finns Suomi similarly becomes in Russian Sûm (Cyma); the basis of Ruotsi/Rûs must be a Scandinavian word (cf. the names of the coast Roslagen and of its inhabitants Rods-kurar "rowers"). The names of the earliest Russian princes are undoubtedly Scandinavian (Rûrûk < Hrueskr, Igor < Íngvar etc.); the testimony of Constantine Porphyrogenetus (chap. ix.) is equally positive; in his list of the cataracts on the Dniepr, he gives the names "in Russian" (porfíyrovite) and "in Slav" (válnyrovite), e.g. Òdârâpôce < in Scandinavian "ódlm isle" + fors "rapids" = Òdârâpôce < in Slav estreuley "of the isle" + prag "the cataract". The "anti-Norman" school pronounces in favour of the native origin of the name but its arguments are mainly useful to show certain contaminations of the term Rûs (in Greek ὶΘας, ὶΘοι) by names in Hebrew (Ṭâs, Ṭezék, Septuag., xxxviii. 2–3; xxxix. 1), Greek ὶΘάς ἔστειλε (the red boats) etc. [It is evident that the asjih al-Rûs mentioned in the Kur'an with the ʾAd and Thamîlid (Sūra xxv. 40 and l. 12) have nothing to do with the Araxes or the Russians, in spite of the latest texts, Diminski, text, p. 106, transl. Mehren, p. 131 and the families of European commentators like v. Hammer, Sur les origines de l'état russe, St. Petersburg 1825, p. 24–29].

According to the Russian Chronicle, the Varangians (Var'ag; see below) came from beyond the sea in 859 and leved tribute on certain Slav and Finnish peoples until in 862 they were driven away by the latter. The civil wars which broke out soon afterwards among them, however, forced these tribes to invite from beyond the sea "the Varangians called Rûs". The Rûs at first settled in the region of the great Russian lakes (Ilmen, Ladoga) but in 882 Oleg (< ÊHÎGû) moved to Kiev. This was certainly not the first appearance of the "Russians" for previously under 839 the Annales Bertiniani mention the arrival at the court of Louis the Flous of a Byzantine embassy accompanied by envoys from the Rûos whom their king Chacannus had sent to Constantinople and who now wished to return home. An enquiry as to their identity showed that they were Swedes (gratis esse Suevum). The Normans in Kiev were not numerous and their marriages with Slav women accelerated their assimilation. Svatoslav (born in 942) already has a Slav name and c. 1000 the process of slavisation of the Normans was complete (cf. Thomsen, cf. cit., p. 123–124).

The sources of the xth and xth centuries. The Muslim sources are acquainted with the Rûs from their first appearance in eastern Europe. Ibn Khurdadhâbîh, p. 154, mentions only Rûs merchants whom he regards as "a kind of Slavs" (dîns min al-Saâfilîh), and describes their journeys (by sea: from the remotest parts of the Saâfiha to the Black Sea, to the Khazar capital and the Caspian Sea, and by land: from Tangier to Damascus, Baghûdâ, Baasyr and then into India and China; or again they travelled still farther beyond = to the north of) Rome through the Slav countries to reach the Khazar capital, Balkh, the lands of the Toghuughuz and China; cf. Ibn Fa'âkhî, p. 271). Ibn Khurdadhâbîh does not assign any definite territory to the Rûs. It is true that the available text of his book is incomplete but another detail is significant. Ibn Khurdadhâbîh, p. 154, speaks of "nâm nahr al-Saâfiha" which de Goeje identifies with the Tanaïs (Don) [Marquart, Strifzügel, p. 352, reads Tín for Don]. The term later disappears from geographical literature but Ibn Hawkal, p. 276, and the Hudâd al-Ālôm
The meaning they give to the term is doubtful, it is possible that their nomenclature indicates the formation of the Slavinto Rūs while Ibn Khuradhdhibh reflects the situation before the consolidation of Norman power in Russia. [In Idriši, ii. 385, the Nahr al-Kūfiyā is certainly the Don].

On the other hand, the common source [Muslim b. Abi Muslim; cf. Masudi, Tanbih, p. 190] used by Ibn Kusta, the Hudūd al-ʿĀlam, Gardizi, ʿAvfi, etc. formally distinguishes between the Kūs and the Slavs. The latter (probably the western Slavs) lived under their own princes, while the Kūs occupied an island three days' march in length and breadth, situated in the middle of a lake. Their king bore the title of ḥākrān Rūs. This version seems to refer to the sojourn of the Norman chiefs in the region of the great Russian lakes (cf. Novgorod, in Scandinavian Hölm garðr “the Town of the Lake”). The Hudūd al-ʿĀlam adds that the Russians have many towns and Gardizi says that the population of the island is 100,000 men (masūlām); these addenda may reflect the gradual expansion of the Kūs or rather their amalgamation with the Slavs.

The third tradition is represented by ʿIṣṭakhri and Ibn Hawkal (< Abū Zaid Balkhi) who place the Rūs between Bulghar and the Slavs. The point from which the description starts must be the town of Bulghar on the Volga. Three groups of Rūs are described. The king of the group nearest the Bulghar lives in Kūšāla (Kiev; Const. Porph., ch. 9: Kiefta, Kipr). The most remote are the ṣafāzān, probably the ancient inhabitants of Novgorod, the Svetlana. The third group are the ʿArṭāshān whose king lives in Arţā (many variants, reading doubtful). They are savages who kill strangers; they come down the rivers to export the skins of black saṃtār and lead (ṛiti). Since the time of Frazan, Arţā has usually been explained as Erz a, the name of the eastern branch of the Finnish people Mordva (in the basin of the Soura, a tributary of the Volga to the west of Kazan). Another explanation (Reinaud, Chwolson) which starts with the variant ʿArta and explains ʿArta ma by Biarmia (Perm) is very doubtful. In both cases, it is necessary to suppose the previous subjection of these regions by the Rūs. In a recent work P. Smirnov seeks to prove the existence of a Russian “ḥaḵkānaṭ” in the region between the Volga and the Oka, cf. the incident quoted above from the Annals Bertiniani. Cf. also M. Vasmer, Wikingerspreu in Russland, in S. B. Fr. Ak. W., 1931, p. 649-674, on the traces of Scandinavian place-names on the Irpin River on the Volga.

The fourth independent source is Masʿudi (cf. Marquart, Streifzüge, p. 330-353). In the Murādī, ii. 15, he calls the Black Sea “sea of the Rūs” for they are the only people who sail upon it and they live on one of its shores. This last allusion may be to the Russian colony of Totmarakan (Tαυτομαράκας, the ancient Φαμαράκαν on the peninsula of Taman) [although Westberg and Marquart, op. cit., suppose the Baltic to be meant there]. Among the many tribes that composed the Rūs, Masʿudi, Murādī, ii. 18, mentions Ṣūrṭi, who trade with Spain, Rome, Constantinople and the Khazars. This name is probably identical with ʿArta ma = ʿArta ma al-Urdmān. 

Waranak. Another name applied to the Normans, Waranak (old Russ. Värjen), usually explained as “member of a merchant association who has taken the oath”, from the Scandinavian var “promise, contract”, is found in Muslim literature at a much later date. Abu 'l-Fida', ed. Reinaud, p. 35, says that he found the term Bahr-Waranak only in al-Bīrūnī and in the Tadhkīra of Nasir al-Dīn Tūsī. Cf. al-Bīrūnī, al-Tadhkīra, ed. R. Wright, 1934.
negotiations [cf. THERMAN]; a curious paragraph no. the Russians is to be found in the Bustan al-
Siya'ah of Zain al-Abidin Shirwân, Teheran 1315,
p. 299; of no value from the geographical point of view, it is curious as reflecting the ideas of the
Persians about 1830: the Russians, like the other
Firangs, are clever in worldly matters (dar sharārī),
but devoid of spirituality (dān naḍārān).

Bibliography: See the article SLAVS. A
bibliography of the Muslim sources will be
found in the commentary on the Hūdūd al-
Ālam by V. Minorsky (in G. M. S., in the press).
The principal studies on the Muhammadan sources
are: Frachm., Ibn Fussals and anderer Araber
Berichten über die Russen, St. Petersburg 1823;
Chwolson, Izvestiya lbn Dašta (read: lbn Rusta)
etc., St. Petersburg 1869; Garkavi (Harkavy),
Skazaniya musul'man. pisatel'ye, St. Petersburg 1870
and 1871 (translations from 26 + 6 Arab authors;
and the necessity for a new edition of these
texts and the preparation of a Corpus of Arabic
sources on the Russians etc. see Krackovskiy,
in Zap. Inst. Vost., 1932, i. 55—62); Dorn, and
Kunik, in Caspia, in Min. Ac. SPb., series vii.,
vol. xxiii., 1. 1, 1875 (Russian edition ibld.,
vol. xxvi., app. i., 1875); Kunik and Rosen,
Izvestiya al-Bekr, St. Petersburg, 1. (1878) and
ii. (1903); A. Seippel, Rerum Normannicarum
fontes arabici, fasciculus i., textum continem,
Christiania, i. (1898), ii. (1928) (volumes, critical
remarks), Westberg, Zi Klaung oriental.
Quellen, in Bull. Ac. SPb., 1899, vol. xi., 4
and 5, and Aknaticz rastotnikh ilošnikov, in
Marquart, Streifzüge, p. 330—353 (Mavdi on the
Russ). A general survey of the literature on
Russian origins has recently been given by V.
Mosin, Var'go-russkiy vopros, in Slavist., x.
(1931), 1—3. A still valuable survey is that of
Thomsen, The relations between Russia and
Scandinavia and the origin of the Russian state,
Oxford 1877 (new edition in Thomsen, Samlede
Afhandlingar, i., 1919, p. 231—444); many
difficult questions are dealt with in the works of
Kunik, Marquart, Streifzüge, paras., and West-
berg. Among recent works must be mentioned
P. Minorsky, Vosl'skii ish'ak ("The Volga route
and the early Russians"), Kiew 1928 (in Ukrainian;
an original work). (V. Minorsky)

AL-RUSĀFĀ (RUSAFAT AL-SHAṬ, RUSAFAT
HIGHĀM), a town in the desert in the Syrian
Palmyrene, 4 faršāk, or 25 miles
south of the Euphrates.

The town already bore this name in the pre-
Muhammadan period. The Assyrian lists of eponyms
mention it in the years 540, 583, 804, 725, 747,
and 737 n.C., a town Ra-sap-pa as the residence of
the Assyrian governor (shahīm). On a relief
state of Adānārī IV Raşappa is mentioned among
the lands governed by Urigallu-eresh and formed
with Kane (now Tell Dejjil on the Khabur) an
administrative district (Unger, Reliefsste Ada-
nārī's III. aus Saba', Publikationen der Klv.
Osmannen's Museum, ii., Stambul 1916, p. 10—12,
pl. 2, i. 23 sqq.). The identification of Raşappa
with Beled Sindjār by E. Förster (Provinzteilung
des assyr. Reiches, Leipzig 1921, p. 15) can hardly
be maintained (Musil, The Middle Euphrates, New
York 1927, p. 210 sq.). In the Bible (2 Kings
xix. 12; Isaiah xxxvii. 12) Rešef, for which we
should no doubt read Rašef, is mentioned along
with the Rocky Mountains. The

179

About 434 the town was raised to be a bishopric against the otherwise usual practice by the patriarch Ioannes of Antioch, not by the Metropolitan Alexander of Hierapolis. It was than famous for its church of St. Sergios dedicated to the memory of the martyrdom of the two officers of the imperial palace Sergios and Bacchos ("in the reign of Maximianos") (the *Acta Martyr.*, ed. in Greek by Delahaye, in Anul. Boll., iv. 373—395; in Syriac by Bedjan, *Acta martyror. et sanctorum*, iii. 283—322, do not bear historical criticism; Harnack, *Chronologie der altchristl. Litteratur*, ii. 481, note; Delahaye, in Anul. Boll., xxiii. 478). The first bishop of *Tyvrqaw* was Marinianos, who is mentioned in 434, 444 and 451 (is not mentioned in the list of bishops of Resapha-Sergiopolis in Le Quien, in O. C., ii. 951 sq.; cf. E. Honigmann, in *Orientis Christiani*, xii. 214—217). The emperor Anastasius (491—518) had the thumb of St. Sergios brought from Resapha to Constantinople and stories of the miracles associated with this relic spread even as far as Gaul (Gregor. Turonensis, *Hist. Franci*, vii. 31). In honour of this event the town was given the name Sergiopolis and the privileges of an ecclesiastical metropolis (Ioannes Diakrinomenos in Cramer, *Anecdota Graeca et cod. Paris.*, ii. 109). Perhaps we have *Σεργίουσα* as early as 512 in the trilingual inscription of Zebed (Neubauer in Sachau, *Reise in Syrien und Mesopotamien*, p. 126, note 1; otherwise in Prentice, *Publ. of the Americ. Archel. Exped.*, Greek and Latin Insr., p. 262).

Georgios Kypros (ed. Gelzer, v. 863) knows as a third name of the town *Ἀρμανιαπολισσι*, the correctness of which has wrongly been doubted; probably the great basilica in al-Ruşafa also dates from this emperor (Jussaud, *Topographie de la Syrie*, p. 254, who however also wrongly takes Tetrapyrgeia to be a name of al-Ruşafa). The Syriac name also remained in use (στελεάζα; Ioannes Moschos, *Pratum spiritualis*, chap. 180, in Migne, *Patr. Græc.*, lxxxviii/iii., col. 3052). The Armenian Basileios who in the 6th century sought to transform the profane geography of Georgios Cypros into an ecclesiastical handbook added to the town the epithet ᵃ ὁ σάμαρος Τετταράς (M. Hartmann, in Ze. A., iv. 340 sq.; Chapot, *La Frontière de l’Euphrate*, p. 330, note 8).

The town, which was situated in the desert Ṣamāḥ al-ṣālī, (Procop., *Bell. Pers.*, ii. 5, 29; Theophyl. Simoc., ed. de Boor, v. 13, 3; Syriac, Barbarānā: Kugener, in *Oriens Christi*, 1907, p. 408—412), was at first defended against the Saracens only by fortifications of no great strength; Justinian is said to have been the first to surround it with proper walls (probably before 542 A.D.) (Procop., *De aedific.*, ii. 9, 3; 9), a statement which however the results of modern archeological research show to be exaggerated (Herzfeld in *Sarre-Herzfeld, Archäol. Reise*, i. 138; Geyer, *bibl.*, ii., 28, 37). Justinian also built bazaars and other fine buildings and large cisterns to provide the town with water (Procop., *De aed.*, ii. 9, 6 sqq.).

Khusraw I, who on his campaign to Syria in 530 had been promised by Kambis, bishop of Sergiopolis, 200 pounds of gold for the ransom of 12,000 captured inhabitants of Sīra on the Ephrates, in his third campaign in 541 took the bishop, who had come to meet him to make excuses for not carrying out his promises, and sent a force against the town, which had however soon to withdraw on account of the lack of water (Procop., *Bell. Pers.*, ii. 20, 9—14). Half a century later, the story was already told of the miraculous rescue of the defenceless city by St. Sergios and his heavenly forces (Euagrius, *Hist. eccl.*, iv. 28).

About 570 there were five bishops under the metropolis of Sergiopolis (*Notitia Antiochena*, in *Byz. Zeitschr.*, xxv. 1924, p. 75, 83). Besides the already mentioned bishops Marinianos and Kambis we know of the following metropolitans: in 524 Sargis (Sergios) of Beth Rosfā (Guildi, in *Atti della R. Accad. dei Lincei*, 1881, p. 507); in 550 Joseph, bishop of the Sacred Monastery of Rasfīnā (Assemani, in B.O., i. 117), 553 Abrahimios (Mansi, ix. 390; Wright, *Catal. syr. MSS. Brit. Mus.*, ii. 797), between 793 and 986 Michael Syrus (Chron., transl. Chabot, iii. 451 sqq., 501 sq.) mentions eleven further Jacobite bishops and from inscriptions we know of a certain Sergios (between 910 and 922; cf. Mich. Syr., iii. 462, N°. 18) and Simeon, who, in 1093, restored the great Basilica (Musil, *Palmyrene*, p. 160, 267 sq.).

The veneration and pious awe which was generally felt with regard to the sanctity of the place is shown with particular clearness in the fact that the *Ghassānīd al-Mundhir* b. Ḥārith only dared to meet the Byzantine envoys here (summer of 578) as he felt himself safe nowhere else from their treachery (Johann. Ephes., vi. 4; Noldeke, in *Abh. Pr. Ak. W.*, 1887, p. 24). At this time the town was apparently not in the possession of the *Ghassānīd*; the inscription ascribed to him (on the basilica, which was found at the "Central Church *extra muros*" also indicates that the inner town was still Roman at this date.

In the sanctuary of Sergios at a later date among the gifts dedicated to the saint was shown a richly decorated cross given by Justinian and Thaddæus, then taken to Persia by Khusraw I after the plundering of Kallinikos and Barbalissos (Mich. Syr., iv. 296), but given back by his grandson Khusraw II with another cross and a gift, both of which bore long inscriptions (*Euagrius, Hist. eccl.*, iv. 28; vi. 21; Niceph. *Kallist.*, *Hist. eccl.*, xviii. 21 sq.; Theophyl. *Syr.*, vi. 13; Firdawsī 1946, in Noldeke, *Tabari*, 287; note 1; C. de Boor, in *Zeitschr. f. Kirchengesch.*, v. 315—322). On his flight to the Byzanitans Khusraw II lived in 590 in Edessa in the house of the general Johannes Rūṣāfāyā, a member of the family of the Bēl Rūṣāfāyē (Mich. Syr., ii. 380, 412; Barhebraeus, *Chron. eccl.*, i. 271). The cistern built by Justinian and later destroyed by a Lakhmid is said to have been restored by the *Ghassānīd* Nuʾman b. al-Harīth b. al-Alham (Hamza al-Isfahānī, *Taʾrikh*, ed. Gottwald, p. 120;
Yaqūt, ii. 784; against Noldeke, in *Abb. Pr. Ak. W.*, 1887, p. 51, who says al-Hārith b. Djabala, cf. E. Herzfeld, *Arch. Reise*, i. 138, note 5; *jahrb. d. Preuss. Kunstsammlungen*, 1921, p. 112 sq.). It was because of the desert town sprawling up to the edge of the caliph Hīşām b. 'Abd al-Malik, who as a prince had moved his bādiyya from the mide-flanked Euphrates thither, made it his residence in 105 (723–724); he died and was buried here in 125 (743) (al-Ṭabarī, Taʾrikh, ed. de Goeje, i. 1467, 1729 sq., 1731 sq.; al-Balādhurī, ed. de Goeje, p. 179 sq., 186; H. Lammens, in *M. F. O. B.*, iv. 94 sq.). The town therefore received the name of Rūṣafat Hīşām (al-Balādhurī, op. cit., to distinguish it from Rūṣafat Baghdād, the eastern suburb of Baghdād with the palace of the same name, cf. vol. i., p. 565); it was also called Rūṣafat al-Shā'īm. Whether Hīşām did a great deal of building is doubtful (cf. E. Reitemeyer, *Die Städtegründungen der Araber*, p. 72).

Fisher Umayyads also lived occasionally in this town; for example Marwān, Sulaimān b. Hīşām and Muḥammad b. al-Walīd (al-Ṭabarī, ii. 1897, 1908; iii. 95, 98; Yaqūt, ii. 786; Herzfeld, *Arch. Reise*, i. 139). Shortly after Hīşām's death, his successor al-Walīd ordered the confiscation of all his predecessor's property in al-Rūṣafā (al-Ṭabarī, ii. 1751). Sulaimān b. Hīşām gathered an army in al-Rūṣafā in 127 (745), and then encamped opposite Marwān II's army at Kinnsarīn; after his defeat he came back to al-Rūṣafā (al-Ṭabarī, i. 1896 sq., 1908; Mich. Schry., ii. 505). The ʿAbbāsid ʿAbd Allāh b. ʿAmmār came in 132 (749–750) to al-Rūṣafā and dishonoured and burned the embalmed body of Hīşām (al-Ṭabarī, ed. Houtsma, ii. 427 sq.). ʿAbd Allāh b. ʿAmmār (q. v.) spent a night here when fleeing before the army of his nephew Abū Dīʿār al-Manṣūr in 754 (Ṭabarī, iii. 98).

In the spring of 244 (858) Mutawakkil came from Damascus to devastate the town in order to see the palaces of Hīşām and Sulaimān and the old Byzantine monastery (al-Bakri, ed. Wüstenfeld, p. 379). The sons of Zikrwa b. Mīhrwālī al-Karāmāt fell upon the town in 289 (902) along with the bāni al-Qabāgh by order of Subk al-Dailāmī, a mawla of the caliph Muḥtaṣib, murdered the inhabitants, burned the mosque and laid waste the neighbouring villages (Ṭabarī, iii. 2219). Ibn al-Fakhrī (in 295 = 908) again mentions al-Rūṣafā as a flourishing town. Saif al-Dawla passed in 344 (955) from Sulaimān via Tadmūr, ʿUrd and al-Rūṣafā to al-Raḵkā (M. Canard, *Sagy al-Dawla*, Algiers–Paris 1934, p. 226, 230).

The Arab geographers describe al-Rūṣafā as situated in the middle of barren desert land; its inhabitants drank only water from cisterns within its walls or when this failed they had to bring water from the Euphrates 3–4 farsākh distant. Al-ʾAsmaʾī, who died in 215 (830), tutor of Hārūn al-Rashīd, identifies the town with al-Zawārā and mentions the wonderful monastery there. The inhabitants had to pay tribute to the Banū Khafṣāja in return for which they were protected. The rich inhabitants were merchants or landowners, the Beduins were labourers. As a flourishing domestic industry the weaving of woollen garments is mentioned (al-ʾAsmaʾī in Yaqūt, ii. 784); in addition to articles of clothing, bags and sacks were manufactured (al-Kazwīnī, *Agāʾīb*, ed. Wu-

stenfeld, ii. 132 sq.). According to Ibn Butlān (in Yaqūt, ii. 784 sq.), Kaṣr al-Rūṣafā was smaller than the Dar al-Khilāla of Baghdād. He describes the church, the outside of which was adorned with gold mosaics, and says it was built by Constantinian son of Helen. Below this church and of the same dimensions was a subterranean cistern panelled with alabaster slabs. The inhabitants of the fortress were for the most part Christians who earned their living by guarding caravans and transporting merchandise, but they also made bargains with thieves and robbers. The desert around al-Rūṣafā is so flat that one can see to the horizon on all sides. According to al-ʾIṣrāḍī (transl. Jaubert, i. 137), the town in his day (1154) had a flourishing market; a much used road led from there through the desert to Salāmā and Ḥims. Yaqūt was still able to see in the centre of Rūṣafat Hīşām the monastery of al-Rūṣafā which, on account of its architectural beauty, he describes as one of the wonders of the world (Yaqūt, ii. 660 sq., s.v. *Dair al-Rūṣafā*). Abu ʿl-Fidāʾī (ed. Reinaud, p. 271) gives the distance of the towns from the Euphrates as less than a day's journey.

In 1240 the Khārīzmians on their return from Syria came via Salāmā to al-Rūṣafā; troops from Ḥalab followed them and fought them at Ṣifīn (Abu ʿl-Fidāʾī, *Annales Musulm.*, ed. Reiske–Adler, iv. 458). In 668 (1269) the inhabitants of al-Rūṣafā fled for fear of the Mongols to Salāmā; henceforth the town remained uninhabited (B. Moritz, in *Z. G. Erdh. Berl.*, xiii. 174 sqq.; *M. S. O. S. A.*, i. 1898, p. 144).

In 1300 al-Dimīšqī (ed. Meheren, p. 205) includes Ṣifīn and Rūṣafā Hīṣām, which, as he knew occupied the site of a Greek city, in the district of Bālīs, while Ḥājjī Khaṭīfī (Stambul 1445, p. 593) includes Bālīs and al-Rūṣafā in the province of Kinnsarīn with Ḥalab as capital. The imposing ruins of the town date almost entirely from ancient times. They have in modern times been several times surveyed, thoroughly examined and fully described.

**The Encyclopaedia of Islam, III.**
Ar-Rušafa, Serviopolis; Antonin Mendl, A re-

RUSČUK, capital of a district and port on the Danube in Bulgaria (often wrongly written and pronounced Rusčuk) in Bulgarian Ruse (Pyzê; Roussé), is situated at the junction of the eastern Lom (Turk. Kara Lom) and the Danube, here 1,400 yards wide, opposite Grugria (Ujegorod, Turk. Ver Kold), in part high on the low plateau, on the state railway from Rusčuk to Varna (since 1866) and Rusčuk to Tarnovo and is one of Bulgaria's nine ports on the Danube (with about 50,000 inhabitants).

After the decay of the medieval Červen some 15 miles inland, which survived as the name of a Bulgarian eparchy and the ruins of which could still be seen in the xvith century (cf. Hadjidji Kjalifa, Rumići i Bana, transl. J. von Hammer, Vienna 1812, p. 44), the new Ruse arose on the Danube half a day's journey away. The Turkish name Rusčuk, by which the town is still almost exclusively known outside of Bulgaria, is undoubtedly a diminutive from Ruse (Ruse = Rusčuk; cf. the name of the island of Rhodes, Turk. Rodos and Rodosčyk for Rodosto; q. v.), but only seems to have come into being in the first third of the seventeenth century. In the two treaties concluded between the Porte and Hungary on Aug. 20, 1503 (cf. J. H. Hammer, G. O. K., 33, 1911, and the text on p. 618: Ruse = Ruse) and April 1, 1519 (cf. Theiner, Monumenta Hungariae, ii. 624: Rusčuk for Ruse) and in Mercator's map of 1584 the Bulgarian form still appears. The town must have already attained considerable prosperity in the xviith century. It quickly developed under Turkish rule and became an important centre of traffic, trade, industry and strategy in Danubian Bulgaria and surpassed the two fortified towns of Nicopolis [q. v.] and Silistria which played the leading part there at the beginning of Ottoman rule (cf. A. Birkov, Bulgaren, Land und Leute, Leipzig 1917, ii. 102 sq.). The French travelier Pierre Lescoloply, who reached Rusčuk on June 14, 1576, in his valuable journal, which has only been published in part, describes Rusčuk as a populous town: ceste ville est peuple et y a quantité de marchandises de toutes sortes et des vivres en abondance et a bon prix (cf. Ruse de l'Histoire d'Amérique, vol. xxxvi., Paris 1921, p. 49). Shortly before, the famous Ottoman architect Sinâr [q. v.] built a mosque there for the grand vizier Rustem Paša [q. v.] still admired in the xviith century, presumably in the north at the water's edge. The figure given for the population for as mosques varies; of the latter Rusčuk had at one time a considerable number. The Franciscan Peter Bogdan Bakić, later archbishop of Sofia, in 1640 found in Rusčuk 3,000 Turkish houses with 15,000 inhabitants and 10 mosques of stone (fate die piatra bianca), and 200 Armenian houses with over 1,000 inhabitants and a citadel with five towers (cf. Eug. Fermejour, Acta Bulgaricæ ecclesiasticae = vol. xviii. of the Monumenta specimina historiam Slavorum meridionalium, Agram 1887, p. 74). In 1659 Filip Stanislavov counted 6,000 Turkish wooden houses with over 30 mosques (ibid. p. 203; cf. also p. 7, 10, 26, 31, 38, 137, 299 [Russi o

Rudieh: 1685], 300 with further particulars) Ewliya Čelebi (Sevjetnâme, ili. 313 sq.); cf. the Bulgarian transl. by D. G. Gadzanov, in Periodičeska spisanie na bulgarskoto kniževno društvo v Sofija, vol. lxx., Plovdiv 1909, p. 554 sq.) about the same time mentions 2,200 houses of wood, also three Christian quarters, the mosque of the Rustem Paša, baths and three caravan-serais in "Rusčuk". The only Jews, he says, were those who visited the place on their trading journeys. The people, whom he praises for their hospitality, lived by commerce and spoke Bulgarian as well as the "language of Wallachia and Moldavia". Ewliya Čelebi says the pumpkin (pumpkin) there was particularly good, to be sold for 1 pen(e) (5 of which = 1 Vienna groschen or 3 kreuzers, 150 = 1 taler).

Rusčuk is regularly mentioned in the many records of travel on the Danube in the following centuries. References to the town in the xviiith and first half of the xixth century are in general agreement. The inhabitants seem at all times to have conducted a busy trade in wool, cotton, silk, leather and tobacco, which at an earlier period was for a considerable part in the hands of Ragusan merchants, who had a settlement there from 1673 to 1755. The English clergyman R. Walsh (1827) estimated the population at 18—20,000 souls. The streets of the town, which was surrounded by walls on three sides after the manner of Turkish fortresses, as a rule sloped steeply to the Danube which part was partly undefended. Turks, Greeks, Bulgars and Armenians lived in some 7,000 houses and conducted a busy trade (cf. R. Walsh, Narrative of a Journey from Constantinople to England, London 1828, p. 207). Helmuth v. Molthe who visited Rusčuk in 1835 and described it (cf. Briefe über Zustände und Begegnungen in der Türkei, Berlin 1877, p. 11 sqq., 132 sqq., 424 sqq.) was surprised that "this important Turkish fortress with its long, dominated and enfladed lines without outer works, half armed and defectively planned" could offer the enemy such resistance. As an important frontier fortress Rusčuk suffered a great deal in course of centuries. Sieges, conflagrations and bombardments (the last by the Rumanians during the world war on Aug. 28, 1916) continually altered the appearance of the town which with its regular streets and large open spaces no longer has anything of an oriental appearance. In the Turkish period Rusčuk was the residence of a sanjak-bey, at one time of a pasha (about 1840, when Bulgaria was divided into the three pashals of Rusčuk, Vidin and Silistria), until in 1864 it became the capital of the new Danube willyat (Tûns wilîyet) with the so-called tava's of Rusčuk, Varna, Vidin, Tulba, Tarnovo (Tarnovo), Sofia and Nik, created and administered by the reformer Midhat Paša [q. v.] and formed out of the eyâlets of Silistria, Vidin and Nik [q. v.]. A special printing press was instituted and in addition to a newspaper a salâmâne (Tûns Wilîyetê Sâlimâne) annually published, which gives a good survey of the administrative measures. After the devastation wrought in the Russo-Turkish wars of 1811 and 1828, Rusčuk attained new prosperity as the official residence of a governor (valîât). In 1854 Boucher de Perthes estimated that Rusčuk had about 30,000 inhabitants in 4,000 houses (cf. Voyage à Constantinople, vol. ii., Paris 1855, p. 413 sq.); the German physician C.
W. Wuterz who became acquainted with Rustück in the governor-generalship of Sa'id Mehmed Pasha, thought that the population was only 24—25,000. The number of mosques in Rustück is very variously given by travellers. In 1840 F. Hacklender says 29, C. W. Wuterz in 1856 only 16. The fact is that many mosques were destroyed in the fighting. Nowadays (1935) Rusçük has 19 mosques (See p. 308), 9 small mosques (naşırı) and the monastery of the Şahdilli darwishes founded in 1252 (1836). While in the great battle that raged on July 4, 1811 around Rusçük the fortune of war decided in favour of the Turks under the grand vizier Ahmed Pasha, and the Russians under Kutusov blew up the defences of the stronghold and retired across the Danube after setting the whole town on fire, in the Russo-Turkish war of 1877—1878 on Feb. 21, 1878, the Ottomans under Kaiserlich Ahmed Pasha had to surrender the town and fortress to the Russians after a long siege. The defences, renewed for the last time in 1877, were razed to the ground in 1881. Since that date the town has been a Bulgarian possession.

Rustück was the birth-place of the grand vizier Celebi-zade Sheriff Hasan Pasha (d. 1205 = 1791; q.v.), of the khârîjî Amâni Celebi (d. 1000 = 1591, according to J. v. Hammer, Geschichte der Osmanischen Dietkunst, iii. 83) and of the famous Ottoman author Ahmad Sheriff Hasan Midhat Bey (1841—1912; cf. F. Babinger, G.O.W., p. 389 sq.)

G. Popov, Opisanie na Rusčük. Russe 1928 (contains an account of the state of Rusçük in 1860—1879); Mihajl Hadži Kostov, Miniatol na Rus, Rusçük 1929; the periodical, publ. in Rusçük and now defunct, Litopis in its second year, Nrs. 4, 5, 7, 8 and 9 contained contributions to the history of the town; Johs. Gellert, Rustück, in Mitteilungen des Vereins für die Geschichte der Universität Leipzig, Heft 14—15, Leipzig 1936; Sâmî Bey Frashëri, Kâmîs Al-Âlâm, iii. 2323. — The bookseller Simeon Simeonov in Rusçük in 1929 published a guide (96 p.) Rusce w miniatolu i dinni, historitski, geografski i statistitski bitelá z to k buti paid little attention to Rusçük’s past.

(Fromz Babiners)

RUSTAMIDS, a dynasty of Ibad Khâridjids of Tahtert. The first of the Rustamid imâms, Abd al-Rahman b. Rustam, of Persian origin, had been made governor of Kairawan when the Khâridj Berbers of the Djebel Nefusa, led by Abu ‘l-Khattâb al-Ma‘farâ [q. v.] seized the town in 141 (758). Three years later (144 = 761), Muhammad b. al-A‘bâb at the head of a strong Arab army recaptured Kairawan. Ibn Rustam fled to the west and founded Tahtert [q. v.] in a region where the Khâridjids must already have been very numerous. Fifteen years later, the Ibadis conferred the imâmâte upon him. Six members of the same family in turn succeeded him. The chronology of their reigns is however rather uncertain. With certain gaps it may be arranged as follows:

Abd al-Rahman b. Rustam 160—168 (776—784)
Abd al-Wahhab b. Abd al-Rahman 168—208 (784—823)
Sa‘id al-Afâlah b. Abd al-Wahhab 208—258 (823—871)
Bakr b. al-Afâlah, dethroned 258? (871?)
Abu ‘l-Ya‘qûn Muhammad b. al-Afâlah 281? (894?)
Hàtim ‘Usuf b. Muhammad, dethroned 281? (894?)
Ya‘kûb b. al-Afâlah, dethroned . . . . ?
Abû Hàtim ‘Usuf, restored . . . . ?
Yâkûb b. al-Afâlah, restored 294—296 (906—908)

The history of the foreign relations of the Rustamids, all that authors like Ibn Khalûdûn, Ibn ‘Idhârî or al-Bakrî, knew of them, is limited to a few facts. Although the kingdom of Tahtert was surrounded by enemies (the territory of the Aghlabids of Kairawan included the Zâb [q. v.] and the Idrisids of Fass were successors of the Idrisids [q. v.]), its existence was not directly threatened for 150 years. We find the second imâm, Abd al-Wahhab, associated in the attack by the Khâridj Berbers (Huwwâra and Nefûsa) on the town of Tripoli which was under the Aghlabid amirs. At the same time the Rustamids, who could not recognise the ‘Abbâsîd caliphate and had to defend themselves against the Aghlabids who were vassals of Baghûdâd, seem to have sought the friendship of the Umayyads of Cordova. Ibn ‘Idhârî under 207 (822) mentions the magnificent reception given by the Umayyad Abd al-Rahâm II to an embassy from Tajert which included the son of the imâm Abd al-Wahhab. We also know that this Umayyad had a Rustamid among his viziers (information supplied by E. Lèvi-Provençal) and that in 239 (853) al-Afâlah received a present of 100,000 dirhems from the
Umâyid Muḥammad I. The reign of this imām al-ʿAflah saw a conflict between the Rustamids and the Berbers of the region of Tlemcen, partisans of the Idrisids of Fās, in which Tāhert was victorious. Lastly we know how in 926 (989) the kingdom of Tāhert collapsed in a few days before the onslaught of the Kutāma Berbers led by the Shīʿi missionary Abū ʿAbd Allāh [q. v.]. Several Rustamids were put to death and their heads sent to Raqqāda and carried through the streets of Kairawān. Others, among whom according to some authors were the imām Yaʿkūb and his son Abū Sulamām, were able to escape and reach the oasis of Wargla.

What is of more importance than the relations with the other powers of Spain and Barbary is the internal life of the Rustamid state which our usual sources ignore but of which we get a glimpse from Ibn Ḥaḍīr chronicles like Abū Zakāriyyā'.

Although hereditary, the succession of imāms was in theory regulated by the vote of the lāhāt community. The imām, regarded as the most worthy, most honourable and best educated man, the temporal and spiritual chief of the state, whose prestige extended to the communities in the east, was in reality under the control of the religious castes: thūrāt, mathāʾīkh, ṭalāhā, the guardians of the strict observance of the laws of the sect.

In a theocratic state of this kind, crises naturally took the form of schisms. The most serious took place during the reign of the second imām, Abū al-Wahhāb. At the instigation of a rejected candidate, the majority of malcontents demanded that the elected imām should rule with the control of a regular assembly. This innovation was put to the lāhāt doctors in the east, who rejected it. The advocates of the reform separated from the community and formed the sect of the Nukūṭāris [q. v.].

A second schism took place in the region of Tripoli on the death of a governor of the province and the question of his successor designated by the imām of Tāhert. Cass's last serious which seem however to have been more of the character of dynastic rivalries disturbed the peace of Tāhert from the fourth imāmate. The claimants to the throne gained the support of an opposition formed of diverse elements.

No less than the religious prestige of the imāms, the resources of the region and the activity of its commerce attracted to Tāhert foreigners from Persia, the ancestral home of the Rustamids, or from different parts of Barbary, Arabs from Ifrīqiyya, Naftīsa from Tripoli, and Christian Berbers. The Zenāta nomads of Ifrīqiyya and the Central Maghreb frequented its markets and grew rich in them. Among these heterogeneous groups, some, like the Nefūsas, Persians and Christians, showed themselves regularly the supporters of the established authority; while others, the Arabs in particular, and very often the Muslimas, were disposed to encourage the ambitions of pretenders.

Exposed to the troubles stirred up by its guests and its neighbours, this ideal state had then a somewhat agitated existence. The dynasty included able politicians, like Abū al-ʿAflah who, using the maxim dividi et impera, secured peace and whose reign marks the apogee of Rustamid power. Several Rustamids were learned imāms, caring less for their tasks as rulers than for theological speculations. not to mention profound studies like astronomy. Their surprising tolerance of foreigners, even those hostile to the sect, encouraged the entrance of disdained elements into the administration and prepared the way for the collapse of Tāhert and the annexation of the kingdom by the victorious Shīʿīs.

**RUSTEM PASHA**, Ottoman grand vizier and historian, was born in 1500 in the vicinity of Sarajevo [q. v.; cf. the report of the Bali of Navagero in Albéri, *Relazioni degli ambasciatori recenti al senato*, ser. iii., vol. 3, p. 89: *d’un cavalier approfittò il servaggio da Bosma, i.e. Bosna-Serab*y, either in Bonom or perhaps on the western border of Sarajevo province [cf. Č. Truhelka, in *Bosnische Post*, Sarajevo 1912, no. 80, who comes to this conclusion because Rustem Pasha built a bridge with 15 arches over the Željenzica of which remains still exist], of parents probably originally Christian. In a *sidjill* of the Sherfīt court in Sarajevo. "Nefīsa Khana, daughter of Muṣṭafā and sister of Rustem Pasha" in the middle of Shāhān 964 (June 1557) sold through her agent Ḥādīdī Abī Beg b. Khair al-Dīn, *mītrūwil* of Rustem Pasha’s bēstisān in Sarajevo, her house there; this gave the name of the father Muṣṭafā. The family are said to have been originally called Opan, while Č. Truhelka, op. cit., says the name was Čigalic. The local tradition of Sarajevo knows Nefīsa Khana as a sister of Rustem Pasha and daughter of a Muṣṭafā Beg or Pasha. Rustem Pasha’s brother was the kūpadan pasha [q. v.; grand admiral] Sinān Pasha. As a boy Rustem entered the school for pages in Stambul and then the service of the court. He became stirrup-holder (*rihiḥādār*, q. v.), gained the favour of the sultan and was appointed governor of Dīyarbakr [q. v.], later of Anatolia in 1553 he became third and in 1541 second vizier. On Dec. 1, 1544 he received the imperial seal for the first time. In 1553 at his own request Rustem Pasha was relieved of office and retired to Scutari where his wife Miḥrān Māh [q. v.; a daughter of Sultan Ibn Khān], had built a palace. But by 1555 he was again grand vizier, and held this office until his death in July 10, 1561 (26th Shawwāl 968; of the various dates given, this must be the right one, v. H. Mordtmann, in *M. S. O. S.* xxiii, 2 (1929), 28; however, gives the 26th Shawwāl 978 ([July 8, 1561] as the day of his death). He was buried in his own splendid *türbe* in Stambul beside the Shāhāde mosque (cf. *Hadīkh al-Wusūr* p. 28 sqq.)
and Husain b. Isma'il, Ḥadiḥat al-Djawa'māt, i. 16; wrongly in Sīdīlī-i īṣāmān, ii. 378). In addition to the many buildings, notably mosques, which he erected with his vast wealth in various parts of the empire and for which he employed the great architect Sinān, Rustem Paşa made a reputation for himself by a chronicle of the Ottoman empire, Tawāriḵ-i Alī-ʾi Othmānī, which goes under his name. In the completed version that has survived, it comes down to 968 (1560–1561). The narrative, as regards the earlier period, closely follows the anonymous Tawāriḵ-i Alī-ʾi Othmānī, and the Annals of Muhýi al-dīn Yjemāl and Neqšā (q. v.). It is only from the reign of Mehmed II the Conqueror, that it shows a certain independence, although perhaps here also an original source may be found. It only becomes important when it describes the events of his time. Although Rustem Paşa is known to have encouraged historical studies (c.f. F. Babinger, G. O. W., p. 82, note), it is by no means certain whether he is himself the author of the Chronicle that bears his name or whether he only had it compiled. A German translation of part of it was published by Dr. Ludwig Forrer under the title Die osmanische Chronik des Rustem Pascha in der Türkische Bibliothek, xxii. (Leipzig 1923; cf. there, vol. II, 1925), p. 246 sq.; ibid. (1925), p. 154 sq., and Histor. Zeitschrift, vol. XXXVII (1928), p. 571 sq.).

RUYAN, a district comprising the western half of Māzandarān [q.v.].

Iranian tradition. According to Darasteteler, Avesta, ii. 416, Ruyan corresponds to the mountain called Raūtīa ("reddish") in Yagt, 19, 2, and Rūyān-i-mand in Bundakht, xii. 2, 27 (transl. West, p. 34). Būrūn, Chronologie, ed. Sachau, p. 220, makes Ruyan the scene of the exploit of the archer Arish (cf. Zahir al-Din, p. 18 (Yagt 8, 6. In this connection mentions the hill Aryūr-xshhān). In the letter addressed to the mobad Tansar by king Gushnasphāh (iiid century a.d.), the latter claims to be lord of Tabaristan, Paṭištahrār-gar, Gilan, Dailamān, Rūyān and Dāmāwand.

Geography. According to Ibn Rusta, p. 150, and Ibn al-Fakih, p. 504 (the latter cites Baladḫur as authority, but the passage is lacking in the Pahūṭ al-Baladān), Ruyan was at first an independent kūra attached to Dailam. It was conquered by "Omar b. al-ʾAlāʾ (after 141 = 758) who built a town there with a minārā and attached it to Tabaristan. Ruyan comprised an extensive area the districts of which lay between two mountains [Ibn al-Fakih: "between the mountains of Ruyan and Dailam"]; each township could supply from 400 to 1,000 soldiers [Ibn al-Fakih: in all 50,000]. The kharadji levied on Ruyan by Ḥārūn al-Raʾshid was 400,050 dirhams. The town of Ruyan called Kādijā was the headquarters of the wazīr. Ruyan was near the mountains of Ra'y and was reached via Ra'y. The text of the two authors above quoted suggests that between Ruyan and unsubjected Dailam was a region which formed the military zone from which operations were conducted against Dailam. To this zone belonged Shālūs ("Caïta"), a town called al-Kahira (situated opposite Kādijā), another (?) town called al-Muḥḍaṣa and lastly Muzn. [But on these frontiers see the Ḥudūd al-ʾAṣām and Zahir al-Din].

Iṣṭakhrī, p. 206, enumerates the mountains of "Dailam" [in the broad sense] as the following: Dīlāh Kārin, Dīlāh Shāhān and Dīlāh al-Rūyān (according to Barthold: al-Rūyānd = Ruyan). In these last named highlands there were formerly kingdoms (mamālīk); in the part adjoining Tabaristan the kings were of Tabaristan and in the part adjoining Ra'y were of Ra'y.

According to the Ḥudūd al-ʾAṣām (written in 372 = 982, ed. Barthold, fol. 30v), Nāṭil (according to Iṣṭakhrī, p. 217: one marhala west of Āmul) Čalūs, Ḳūḏān (= Ruyan) and Kalār (west of Čalūs) formed a province of Tabaristan but the authority there belonged to a king named Ustundar. Ḳūḏān produced red woolen materials for waterproofs and blue gilīn (a kind of carpet material).

Rustāmdār. From the Mongol period we find the geographical term Rustāmdār. According to the Naskat al-Kāfī, p. 161, the greater part of its territory was irrigated by the Šabārūd (=) and the Taʾrikh-i Khānī, ed. Dorn, p. 298, says that Taḵān (on the upper Šabārūd) adjoined Rustāmdār. On the other hand, Zahir al-Din gives the term a larger connotation and uses it sometimes as a synonym of Ruyan and sometimes with a special meaning. An examination of the passages leads R. Vasmer, op. cit., p. 123–124, to the conclusion that Rustāmdār in the proper sense was situated towards Kūḏār and Kalār while Ruyan primarily meant the country between Rustāmdār and ʿAskān (i.e. the country towards Ra'y). According to Zahir al-Din, p. 19–20, the eastern frontier of Rustāmdār was originally at Šīsangān (near the mouth of the river of Kūḏār), but in the time of the Šalduḵ Sangār was brought back to Alisā (near Āmul ?); the western frontier was at first at Malā (near Lengeri in Gilan), but in 590 (1193) was brought back to Sangīzar (on the eastern frontier of Gilan) and in 640 (1243) at Namak-evarūd (west of Kalārastāk). It is curious that Zahir al-Din, p. 17 seems to place the "town of Ruyan" (Kādijā of Ibn Rusta) at Kūḏār but the passage is not very explicit and the legend of the foundation of the town given by Zahir al-Din may belong to a period before the appearance of the term Rustāmdār.

The princes of Ruyan. The title attested for the dynasty is Ustundar (perhaps Ustāndar < Ūstāndar; cf. Tabarī, i. 2638). It is not clear if the dynasty also took the title of Pahūṭ al-Baladān (< pahūṭ al-baladān) in which Sāsānian terminology was first borne by the viceroy of the four great divisions of the empire, the prerogatives of which were lessened in time by the increase in power of the military commanders (pūṣhāh, cf. Christensen, L'empire des Sasanides, p. 41, 43). The fact is that in the passage in Iṣṭakhrī, p. 206, the mountain of Fāhūṭ al-baladān is mentioned separately and it seems, to the east of Rūyāndī but it is possible that the
two names only mean the two parts of "Ruyān" which at this time were under Ṣabāristān and Ra'y respectively. In any case, in the genealogy of the U'stundārs (Zahir al-Dīn, p. 146–154 and 320–321). Pāḏūsān appears as the personal name of the eponymous founder and of certain princes only. The eponym Pāḏūsān (towards the end of the 11th century) was regarded as one of the three sons of Gil-Gaḥbara, a descendant of the Sāsānian Ḥjamasp (who reigned 497–499). Towards the the beginning of the 12th century (Iṣṭahkī, p. 206 [see above]), the dynasty appears to have passed through a crisis which it survived. After the death of Djalāl-dawla Kāyāmuṭr b. Ḫusayn b. Gǔstāma in 857 (1453) his possessions were divided between his two sons: the line of Ka'ūs reigned in Nūr, in the valley of the left bank tributary of the river of Ṭāmūl (Ibaraz-pei), and that of Iskandar at Kudfūr, on the northern slopes of the mountains of Nūr.

On the feudal wars in Mazandaran see Zahir al-Dīn, ed. Dorn, index. The princes of Rūṣtantār retained their autonomy down to the time of the Safawīs. In 947 (1540) the expedition of Shāh Tahmāsp against Malik Djahānghīr b. Malik Kāūs who had shut himself up in the fortress of Lāridjān, was a failure (cf. Aḥsan al-Tawārikh, ed. Seddīn, p. 299). In 997 (1589) the maglis Djahānghīr b. 'Āzīz of Nūr and Djahānghīr b. Muḥammad of Kudfūr came to pay homage to Shāh 'Abbās but finally in 1003 (1594) they were both dispossessed of their lands: the ruler of Nūr submitted voluntarily while he of Kudfūr was seized by force (cf. 'Ālam-ārā̀, p. 265, 334, 354–357).

The names of the carpenters are Ahmad and Ḥusayn (?), cf. the name of Ahmad b. Ḥusayn who carved a gateway at Bārfūrūsh in 870, Rabino, op. cit., p. 115, and ibid., p. 79; Ḥusayn b. Ahmad who carved the gate of Buland-Imām, near Ashraf, dated 873 (1468).

V. Minorsky

Ruzzik R. Ṣalātī al-Malik al-ʿAdīd, Bādur al-Dīn Arūs Shūdhār, Māzūr al-ʿIlām, Fāṭimīd waṣīr, of Armenian origin, succeeded his father Ṣalātī [q.v.] after the latter's assassination on 20th Ramādān 556 (Sept. 12, 1164), and remained in office for fifteen months. The only event of importance during this period was a Berber invasion in 557 (1162) under Ḥusayn b. Nizār [see Nizār R. al-Mustansīr], who was captured and put to death. Ruzzik inherited the literary tastes of his father and is said to have governed well, but when, in the same year, he attempted to remove his rival ʿShawar [q.v.] from the governorship of the Upper Saʿīd, the latter, encouraged by the Caliph al-ʿAdīd [q.v.], rebelled and marched on Cairo. The waṣīr, deserted by his partisans (see ṢIRGHĀM), fled from the city (18th Muḥarram 558 = Dec. 29, 1162) but was betrayed, and executed by Taiby b. ʿShawar. The historian al-Makrizī remarks (Aḥṣaf, ii. 207–208) that Ruzzik was the last holder of the office of naẓīr al-maẓāmil in the Fāṭimid period.

P. 45, l. 63, instead of: Mākān, read: Mīkān.

P. 62b, l. 37, instead of: Siyat, rend Siyāt.

P. 76b, l. 1 and p. 77a, l. 6 from below, read Rūmiya, for Rūmiya.

P. 76b, add on l. 22 from below: From January to March 1928, L. Waterman conducted excavations in the region of Tell ʿUmair for the American Schools of Oriental Research (cf. their Bulletin, No. 30, 1928). The mound seems to conceal a sīggratu (tower built in successive stages) with a large temple adjoining it which continued to be used in the Graeco-Roman period; a Roman cemetery was laid bare in another part of the ruined area. From inscriptions found here the equation Akabak-Upt (Opis)-Seleucia is made quite certain. For Aksahak, cf. also the article by Unger in the Reallexikon der Assyriologie, vol. i., Berlin 1928, p. 64–65.

P. 77b, read iv. 447, 7 for v. 447, 7.

Add to the Bibliography of the article AL-MADĀʾIN: Apart from the already mentioned poem of Patchachy, unimportant in matter, in the periodical Lughat al-ʿArab, Baghdaḍ, ii., 1914, p. 393, cf. especially the articles by F. Djebrān in the same periodical, iii. 136–141 (with corrections by Kāẓim al-Duḍjailī, op. cit., p. 292–294) and Kāẓim al-Duḍjailī, op. cit., p. 282–294. Djebrān deals particularly with the present settlements of Arab tribes in the region of al-Madāʾin, al-Duḍjailī also gives an account of the latter and gives interesting also of the pilgrimages to the tomb of Salmān al-Fārisī, describes the interior of this “sanctuary” and gives notes on various mounds of ruins in the region of al-Madāʾin which form a welcome addition to Herzfeld’s topography.

P. 224a, l. 29 and 33, instead of: Maʿmūnīn, read: Maʿmūnīds.

P. 224b, l. 3, instead of: Farīghūnīs, read: Farīghūnīds.

P. 432b, l. 11 af infra, add: According to Ibn al-Athir (ed. Tornberg, i. 314, 375, cf. Yākūt, iv. 294) Kāwādīh destined al-Mundhar b. Maʿ al-Samāʿ because of his refusal to accept Mazdakism and appointed in his place the Kindīt al-Hāfīz b. Amr, who had embraced the new faith. Whatever may be the truth, the relations between the king of Persia and the Arab have been influenced by Mazdakism.

P. 496b, l. 11, 12 af infra, read: Timur who stayed in Balat (Milet) on his return from Smyrna in the winter after the battle of Angora (1402) (Ducas, p. 76, ed. Bonn, various reading).

P. 505b, l. 19, instead of: Nukāt, read: Nukāt.

P. 514b, art. MIRĀTH. To be added to the Bibliography: Peltier and Bousquet, Les successions agnaticques militées, Paris 1935.

P. 640, art. AL-MUBĀHDHĪN. Add: In modern times the name Muhādjiyīn has been applied to those Muḥammadan emigrants who, as a result of the transfer of Muḥammadan territory to the non-Muḥammadan rule left their native land and went to a Muslim country in order not to be impeded in the exercise of their religious duties. For example, towards the end of the xviith century and in the xviith century large bodies of such emigrants abandoned lands occupied by the Russians and sought a new home in Turkey. A similar phenomenon
accompanied the liberation of the Balkan peoples from Turkish rule and the rise of the independent Balkan states. The Muhammadans deported to Turkey from Greek territory after the Treaty of Lausanne (1923) as a result of an agreement with Greece were always called Muḥāǧirūn, even in official language. Their affairs were regulated by a "General Office for Nomads and Emigrants (Ashābir wa Muḥāǧirūn Muḍāriyya) umumiyiyiṣ)."

In modern Turkey the Muḥāǧirūn constitute an important domestic and cultural problem. Their settlements which are distributed over the whole of Anatolia are as a rule centre for the advancement of Turkish culture. The word Muḥāǧir also plays an important part in place-names in Turkish territory as an element in names, mainly of recent origin.

P. 673b, l. 22, instead of: 1101, read: 1108.

P. 674a, l. 43, instead of: Ghazar, read: Guillar.

P. 674b, l. 54, instead of: Sā'ūn, read: Sām.

P. 686a, l. 45, instead of: Wāḳi'ahīnigār, read: Wāḳi'ā nigār.

P. 688a, l. 43, 55, 63, instead of: Mrr, read: Mere.

P. 688b, l. 68, instead of: in May 1624, read: in May 1624m.

P. 691b, l. 23, to be added: Ḥal al-djawhar al-thamin (extract in L. Massignon, Recueil p. 171, note 1).

P. 692a, l. 29, to be added: He has been buried at the feet of the poet Niyaż Miṣrī at Kastoria ( Limnos), where his tomb was still shown in 1916 (cf. L. Massignon, Recueil, p. 164).

P. 701a, l. 48, to be added: In an early period Turkish has also known the form mulāz (from Sumerr it muvara, mong. mūza, cf. W. Bang and A. von Gabain, Türk. Turfan-Texte, v. 53)."

ALTBABYLONISCHE PERSONENMIETE
UND
ERNTEARBEITERVERTRÄGE

VON

Dr iur JULIUS GEORG LAUTNER
Ord. Professor an der Universität Zürich

1936. xxii and 264 pp. With 1 plate. 8vo. price 10.— guilders

STUDIA ET DOCUMENTA AD IURA ORIENTIS ANTIQUA PERTINENTIA VOLUMEN I

Contents:

I Personenmiete und andere Verträge über Arbeitsleistung im Keilschriftrecht.

II Die eigentliche Personenmiete des altbabylonischen Rechts. 
   1. Terminologie. Der Aussteller der Urkunde und das Vertrags-
   schema 2. Die Rechtsnatur des agaru-n-Vertrags. 3. Die Parteien
   und die Vertragsabreden bei der Personenmiete.

III Die Erntearbeiterverträge des altbabylonischen Rechts. Gattungs-
   miete.

IV Hybride Formen der Personenmiete.

From the Preface:

"Die genaue Feststellung des rechtsgeschäftlichen Typus der Ernte-
arbeiterverträge und der Unterscheidungsmerkmale der beiden Ver-
tragsarten liess das Vorkommen bisher überschener Mischformen
erkennen. Der günstige Stand der Quellen ermöglichte es, von den
verschiedenen Arten rechtsgeschäftlicher Verwertung menschlicher
Arbeitskraft für einen wichtigen Zeitabschnitt Babyloniens ein anschau-
lisches Bild zu entwerfen, dessen Lebendigkeit durch Heranziehung
von Wirtschaftstexten erhöht werden konnte, die uns Aufschluss über
Arbeitsorganisation, Arbeitskontrolle und Lohnverrechnung gewähren".
